THE general opinion entertained and expressed that the late fatal occurrence on the London and Brighton Railway was attributable to over-driving appears to have made some impression on the Directors, as they have issued an official notice stating that the "engine-drivers of every train have received orders to take an extra quarter of an hour in the performance of every journey during the winter months." This arrangement, it appears, took effect from Wednesday last. Is not the speed even now too great? On this point we call attention to an able letter in another column signed "Cautus." We are glad to find that the Directors are about to follow, to a certain extent, the example of the York and North Midland Company (adverted to in an article in our journal of to-day) relative to alterations in their time-tables. It is announced that "an altered time-table in conformity with the above will be issued prior to the 1st of November, and any future alteration which may become necessary will be made *only on the first of the month.*"

—o—

SOME very judicious regulations have been adopted for the convenience of the public, as regards the cabs and coaches plying for hire at the London and Birmingham Railway station in Euston-square.

Digitized by Google

The basis of these regulations is, that the owners of the vehicles to which the privilege of entering the Company's premises has been granted, bind themselves to conform to certain rules for the due conduct of the traffic, and deposit a sum of money for the payment of such fines as may be inflicted upon their servants for a breach of the regulations. These fines extend to drunkenness, insolence, refusing to show their number, neglecting to give up articles left in their vehicles, and various other particulars—reserving, we should suppose, to the parties aggrieved, the right of bringing the offenders before the ordinary tribunals. Each coach proprietor, moreover, pays a small amount weekly towards the expense of a clerk's attendance to see the arrangements carried into effect. The whole is under the superintendence of Messrs. Horne and Chaplin, the well-known coach proprietors, as agents for the Railway Company, and works, we are told, exceedingly well for all parties.

—o—

The *Staffordshire Gazette* states, that the recent lowering of the fares between Wolverhampton and Birmingham, on the Grand Junction line, has resulted in a considerable increase in the daily number of passengers; and expresses a hope that the Company will now be induced to make a further trial of their reduced scale of charges throughout the line.

—o—

It appears from a statement in the *Preston Chronicle*, that the population of Fleetwood-on-Wyre, as alluded to in our last number, has been greatly under-rated. Instead of a population of 1,500, it seems that this recently-erected and beautiful town contains 2,833 souls. So much for railway facilities!

—o—

The churchwardens and overseers of Leamington have, in consequence of a requisition numerously and most respectably signed, called a public meeting for Monday next, to consider the expediency of supporting the proposed Warwick and Leamington Union Railway, "as conducive and essential to the interests of the town." We sincerely hope that the project will be taken up with the energy and zeal which it so well merits.

—o—

We announced a short time back that several of the proprietors of the Great North of England Railway had claimed to be registered as Parliamentary voters, in virtue of their interest in that undertaking. Their claims have, however (as we anticipated at the time) been disallowed, on the ground that the parties are members of an incorporated company, and that the shares are declared by the Act to be personal property. This may be law, but what says equity?

—o—

It is stated that Earl Spencer has given the entire deodand (300*l.*) accruing to him as lord of the manor of Wimbledon, from the South-Western Railway Company, to the relatives of the poor Irish girl who was killed by the accident which occurred at the Nine Elms terminus last year. If so, the fact is very creditable to his lordship.

—o—

We find from the Glasgow and Edinburgh papers, that meetings are being held almost daily in those parts of Scotland, to endeavour if possible to prevent the running of trains on the Edinburgh and Glasgow Railway on Sunday. The details it is not necessary to give, but we hope next week to be able to find room for a short extract from a very sensible article on this subject, which appeared a short time since in the *Scotsman*, an Edinburgh journal, conducted with great talent. We regret to see that too many of the Scotch newspapers tacitly encourage this anti-Sunday-travelling agitation.

—o—

The following "important if true" announcement is made by the *Newcastle Journal*:—"A mechanic at Stockton, named Hobson, has invented a means by which an engineman may adjust the railway switches while the train is in motion; also, a method of instantly liberating the engine from the train."

—o—

It appears that the wanton villainy that has been exhibited of late in the attempts made to overturn railway trains has, in Ireland, been directed against stage coaches, although *there*, perhaps, plunder was the object. The *Nenagh Guardian* states, that in the vicinity of that town, two barriers of large stones, within a quarter of a mile of each other, were thrown across the Limerick road, between the hours of half-past seven and half-past eight o'clock on Thursday night week, for the purpose of obstructing and upsetting the mail coach on its route to Dublin. Fortunately the driver had his lamps lit, and discovered the obstructions before he came in actual contact with either of them, which in all probability was the means of saving the lives of the passengers. The guard having prepared himself both for the offensive and defensive, should an attack be made by the miscreants who raised the barriers, the passengers and driver succeeded in clearing a passage sufficient for the coach.

—o—

South Eastern Railway.—The works on this line between the Brighton Railway and Tunbridge are fast drawing to a close. There is in no part of this distance a length of a quarter of a mile in which the embankments are unfinished. The Bletchingly tunnel has about a fortnight's work left undone. The ballasting is proceeding with dispatch. A part of the permanent way was laid on Saturday last, and it is fully expected that the line from Tunbridge to Edenbridge will be completed by the middle of December, while the remaining portion to the Brighton Railway will be completed by the end of February. The great advantages of a winter's rains will add materially to the security of the embankments, which on this line are six feet wider at formation level than on any other line of the same gauge. There is no doubt that the Directors will be able to open the line for traffic by the first week in May, and from the state of preparation beyond Tunbridge, the line will in all probability be ready in the latter part of September next for opening to Ashford. The utmost activity prevails in every department of this Company's affairs.

RAILWAY OFFENCES AND OFFENDERS.

We are sorry to say that an attempt was made on the 3rd instant to upset one of the trains on the Great Western Railway. The particulars are thus given in the *Wiltshire Independent*, in a notice of the Malmesbury Petty Sessions:—

"Robert Bassett, a railway policeman, informed the Bench, on oath, that being on night duty, stationed at Minety, on Sunday, the 3rd inst., he passed the down mail train from London, through the station, all right at midnight. At two o'clock on Monday morning the up mail train came in sight, and he put the signals for her—all right at the station; but he found directly that she threw her steam off; he heard a loud crash up the line from where he stood, and ran down towards them, a distance of nearly a mile and a half from the station. Before he arrived, the drivers had put back, to see what they had run over, and had commenced to put the steam on again, and passed him gently, and ordered him to go down the line to see what impediment remained, they having picked up, and got with them, a copper dome or cap, belonging to an old engine, which stood on the siding. Witness went on, and found three transoms, a lot of stone, and one length of metal on the up line, which metal, by the concussion, had been cut in two; the stones had been partly knocked off by the engine-guard, and the remainder were ground down under the engine. The wooden transoms were very much split and cut about; they were laid across the railway; one of them had been cut in the centre—the transom now produced is similar to those which were found—[it appeared like a beam of 6 or 7 feet in length, and as much as one person could carry]—and the piece of metal now produced is for showing the general quality of that which was found. [This appeared a ponderous piece that had formed part of the works of an engine.] The engine had kept driving it for a space of 50 yards from the place where it had been laid. The witness found it cut in two; the other part was forced above a foot into the bank, at some distance; witness understood it had belonged to the Vesta engine. As soon as witness had cleared all the obstructions on that line he turned to the down line to see if that was correct; there he found that three very large stones had been laid upon it; one was cut asunder, and the others ground in pieces; one of them weighed nearly a quarter of a hundred weight, and a couple of transoms were found cut in pieces similar to the others. After calling the constable whose beat it occurred on, we looked about for foot marks, and found the prints of two persons round about the *Vesta* engine, and the materials which lay near it.

"John Brown, of Minety, stood charged on the oath and information of Thomas Burton, Inspector of Police on the Railway, with suspicion of being concerned in the above offence. A considerable amount of evidence was adduced against him, but the magistrates did not think the evidence strong enough to warrant a committal, and the prisoner, who denied the charge, but acknowledged that he was at the railway on the Sunday evening, was dismissed. The Company's Solicitor attended."

We learn from the *Halifax Guardian*, that on Monday week Mr. Higham, of Brighouse, appeared before the local magistracy to support an information preferred by the Manchester and Leeds Railway Company, against William Jenkinson, of Leeds, an engine-driver, for being drunk on Sunday week, at Brighouse station. Mr. Caulkwell, the clerk, stated that the defendant came down with a pilot engine to assist in taking up a luggage train, and on being informed by Mr. Robert Forester, the inspector, of the state in which Jenkinson was, he ordered him into custody. Mr. Higham stated to the bench that he hoped they would convict Jenkinson in the highest penalty, as the Company were determined to punish all such conduct to the utmost. *The magistrates convicted the defendant in a penalty of 10l., and in default of payment, he was sent to Wakefield House of Correction for two months to hard labour.* The sentence was an exceedingly proper one, and the Managers of the Company deserve great credit for the pains they take to bring such cases forward.

On Monday a man named Baker, was charged at Worship-street police-court, with riding on the Northern and Eastern Railway for a greater distance than the ticket he had taken out warranted. The case was not an aggravated one, and the man was fined in a nominal penalty, and ordered to make good double the difference of fare between the two points.

A gross and heartless attempt at extortion was, as we learn from the Durham papers, recently made at the terminus of the Stockton and Darlington Railway. We are happy to find that it was not successful. The particulars are as follows:—Mr. J. Tweddle, of the Refreshment Rooms at the Stockton and Darlington Railway Station, appeared before the Darlington magistrates in answer to a summons charging him with selling a glass of brandy and water, not having a licence. John Kemp Stone, the person who laid the information, went into the house of Mr. Tweddle, and, complaining that he was very unwell and cold, asked Mrs

Digitized by Google

Tweddle (her husband being from home) for a glass of brandy and water, who replied that they had no licence, but as he appeared to be unwell, she had no objection to give him a little. Having some in the house which she had been using with salt, as a medicine, she, out of compassion, supposing Stone to be unwell, poured him out a glass, and inquired if he would like a little cold or warm water. He replied cold, and threw down a shilling, which Mrs. T. refused to take, and said it was too much; he urged her, and she took sixpence, saying it would pay for the sugar and water. Mrs. Tweddle's servant corroborated the statement of her mistress in a very lucid and correct manner, and, though cross-examined minutely, her evidence was not to be shaken, and in fact called forth the commendation of the Rev. J. W. D. Merest, one of the magistrates sitting on the bench. The Bench, after a full investigation of the circumstances, consulted together, and very properly dismissed the case, much to the disappointment of the informer and his colleagues.

Last week four persons were summoned before the magistrates for trespassing by walking on the Preston and Longridge line of Railway, one of whom was fined in the penalty of two pounds and costs; the others were discharged on paying the expenses, and promising not to offend again.

RAILWAY DIVIDENDS.

A CORRESPONDENT sends us the following calculations of the receipts per cent. per week upon the returns of our last week's Traffic Table:—

	Dividends per cent. per annum. £ s. d.	Receipts per cent. per week. s. d

York and North Midland ..	9 0 0	8 4½

The receipts from the principal railways during the past week are as follows:—London and Birmingham, 17,445*l.* 14s. 9d.; Great Western, 13,285*l.* 0s. 5d.; Grand Junction, 9,174*l.* 3s. 2d.; London and South-Western, 5,873½ 1s. 8d.; Manchester and Leeds, 4,668*l.* 1s. 11d.

BRISTOL AND EXETER RAILWAY—MR. BRUNEL AND MR. GRAVATT.

To the Editor of the Railway Times.

SIR,—As you have published extracts of Mr. Gravatt's letter to the shareholders of the Bristol and Exeter Railway in which he brings most serious charges against Mr. Brunel,—charges of too great importance to be passed over without inquiry, I think that in justice to the shareholders a meeting should immediately be held, and a Committee appointed to make inquiry into those charges. This is certainly more than a personal dispute, for the interest and welfare of the undertaking are in a measure involved in it. In the letter of your correspondent "H. V." in your last journal, he says that because Mr. Gravatt was disposed to ascribe Mr. Brunel's supposed delinquencies to "a too sanguine disposition," the charges were thus virtually abandoned. But Mr. G. has *not* abandoned them, as his letter shows; and surely because an engineer is troubled with a "too sanguine disposition" it is not to be made an excuse for squandering the money of a Company in the way Mr. Brunel has done, supposing the charges brought against him are in any degree correct.

I am, Sir, your most obedient servant,

S. D. T.

October 8, 1841.

BRISTOL AND EXETER RAILWAY—MR. BRUNEL AND MR. GRAVATT.

To the Editor of the Railway Times.

SIR,—I have, though late, perused Mr. Gravatt's letter to the shareholders of the Bristol and Exeter Railway, and never did I conclude any thing with so great a disgust, not only as to the matter, but the conduct, of the man who in writing, says "This was not a state of things under which I, as a considerable shareholder, could sit quiet, and I did not sit quiet under it; I endeavoured to be heard, but could not obtain a hearing." Yet this very man for years was quiet—aye, not only quiet, but *confirmed the reports, the estimates* and *the contracts* which he drew out, for the small consideration of 600*l.* or 700*l.* a year!! but which, when "having materially reduced" the weight of the bridges, to save his dismissal, resigned his appointment, and then, and not till then, declares himself the guardian of the "best interest of his brother shareholders." Surely more need not be said to expose such conduct than his own deeds, which are so faithfully expressed in the following lines:—

"Now mark me, how I would undo myself:
With my own breath release all duteous oaths;
My acts, decrees and statutes I deny."

I will conclude by asking you, Mr. Editor, to give your honest opinion of what temper, fairness, and perfect good faith we may expect from one who has thus disgraced the profession which you so laudably uphold.

I remain, Sir,
Your obedient servant, and constant reader,
A SHAREHOLDER.

Wanborough, October 14th, 1841.

[Our "honest opinion" is, that Mr. Gravatt by conniving so long at the (*alleged*) delinquencies of his superior, has justly brought suspicion upon his "temper, fairness, and perfect good faith;" but the question for the Bristol and Exeter shareholders to investigate, is not the comparative personal merits of Mr. Brunel and his accuser, but whether their property has been culpably or carelessly squandered away, and more than all, whether the same course is still to be pursued in the operations which are now in hand.—ED. R. T.]

REFRESHMENT STATIONS ON RAILWAYS.

To the Editor of the Railway Times.

SIR,—As your paper is avowedly a corrector of abuses, and an improver of railway facilities, it is the proper medium (by your kindness) through which to make the following suggestions:—

On both the great lines, northward and westward, the London and Birmingham and Great Western—there have been established resting places, say Wolverton and Swindon, at which passengers are allowed to alight and refresh themselves. The time allowed, and punctually adhered to, is "ten minutes" only—which may be quite enough, as a general rule, for gentlemen, but which I contend is quite insufficient for ladies and children, and on behalf of the latter I would plead for an additional five minutes, to enable them to resume their journey in comfort. The public would not complain of the detention of a quarter of an hour during a journey from Birmingham, or Bristol, when the extra five minutes is conceded for their exclusive benefit, and to the Railway Company it is quite immaterial whether ten minutes or a quarter of an hour be allowed.

The prices demanded at these resting places for refreshments are rather high, and savour strongly of monopoly. As a sample, what do you think of eight-pence being the established price for a pint bottle of ale?* No smaller quantity is allowed, and consequently you may be, in the majority of cases, compelled to pay for more than you can drink. Why should not malt liquor be kept on draught as it is at every inn in the kingdom—for what are the refreshment rooms on the railways but inns?

I am, Sir, yours, obediently,

MERCATOR.

Highgate, 12th October, 1841.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—The receipts of the Great Western Company for the present month (October) may be fairly estimated, after allowing for the rent and mileage of the branches, at—

	£	s.	d.
Per week..... £12,000	0	0	
In Oct. 1844, there will probably be an increase of 50 per cent.	6,000	0	0
	18,000	0	0
In Oct. 1844, the receipts of the branches above the rent and mileage, will be at least.....	1,230	15	4½
	19,230	15	4½
In 1844, the year's revenue, taking October as a fair average for the whole year, will be.....	1,000,000	0	0
In 1844, the expenses upon so large a gross receipt will probably be 30 per cent.....	300,000	0	0
	£700,000	0	0

If, therefore, the cost of the entire line, with every alteration and improvement, and possibly an extension at the London terminus, with suitable offices, should by 1844, reach seven millions, this estimated revenue would pay 10 per cent. dividend to the shareholders, even supposing the whole cost were capitalised and raised by shares instead of loans.

If it be thought that the assumed increase of traffic at 50 per cent. is too great; take the increase at 25 per cent., and the expenses at 35 per cent., and the dividend will then be nearly 8 per cent. upon 7 millions, all capitalised.

But, considering that the branches are but partially opened, and the main line but three months opened, and that experience shows an increase in traffic upon finished lines of 23 per cent. between the first 8th and 20th months; it is not extravagant to expect an increase of 50 per cent. upon the entire line and its branches, in three years, from the present time.

L.

October 7, 1841.

* Our correspondent is not very fortunate in his instance of high charges. The "pint bottle of ale" would cost sixpence at the commonest pot-house in London; and although an addition of some 33 or 34 per cent. is "high" enough, some of the charges at these places are much higher. We have frequently paid sixpence for a cup of very indifferent, lukewarm, coffee, a better article than which could be had elsewhere for half the money. It is right to add, that at *both* the stations named by our correspondent the refreshments are *good*, whatever exception may be taken to the price.—Ed. R. T.

THE LATE ACCIDENT ON THE BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—Few persons can have read the account of the late accident on this line without attempting to discover the real cause from which such frightful consequences resulted as those detailed in your report of Saturday last. The evidence disclosed at the inquest is anything but satisfactory, and while it establishes nothing but the fact of the death of four persons, it aims by means as indirect as they were unsupported by the evidence of competent and unquestionable authority at the destruction of a system of railway engineering, than which none has been found to work with greater precision, regularity and success, and at the same time attended with less loss of life. I am not prepared to support four-wheeled engines at the cost of six-wheeled, nor the reverse of the proposition. I know, however, and so do many of your readers, that the question of advantage as to four and six-wheeled engines, has undergone great discussion, not only among scientific and practical men, but in the various Committees which have sat on the subject of railways in both Houses of Parliament. What those inquiries have failed to produce, a Sussex "*Coroner's Quest*" jury has thought proper to determine on the evidence of parties whose conduct ought to have been the subject of investigation at their hands. The verdict of this jury may, *de jure*, be held to be conclusive, but there must be inquiry into the real facts of the case, and I consider it the duty of every friend to railways to promote a rigid and searching investigation of the whole subject.

It is well known that the rains of the week in which this melancholy accident occurred had caused either on Thursday night or early on Friday morning two obstructions to the traffic, one by the subsidence of a considerable portion of the *down* line near the Merstham station, and the other by the fall of a part of the brickwork at the entrance of the Hayward's Heath tunnel. In the latter case an engine had been thrown off the line and the trains impeded for more than two hours.

Referring to these two circumstances on the day immediately preceding the fatal accident, and to the fact that in the course of Friday an immense fall of rain had succeeded, I would inquire in the first place whether any and what instructions had been issued by the Directors or their Engineer to slacken speed generally in the passage of the trains over a line, the earthworks of which were in a state requiring the most watchful vigilance.

It has been reported that Sir Frederick Smith had volunteered his opinion that the Brighton was the best executed line he had ever inspected. I would here ask, did his professional duties call for such an expression of his opinion? I would further ask, was his examination of the line as minute as has been reported of his inspection of the Clayton and Hayward's Heath tunnels?

Every one acquainted with railways is aware that the consolidation of the earthworks, more especially embankments, is the most essential ingredient towards securing passengers from danger, and it will occur to many of your readers that until the line of the Birmingham Railway had become consolidated by at least 12 months' use, the speed was restricted to something less than 20 miles an hour.

What is the course pursued on the Brighton line? The Directors on the first day of opening the whole line advertise an "Express Train" to carry passengers to or from Brighton in 1¾ hours, being at the rate of about 30 miles an hour. I would here ask what precautions had been taken to insure the free passage of this train on its down journey, and whether, as it passed the Croydon station at the speed of 30 miles an hour, it was not turned in on the siding? I would further ask, whether in the Brighton line, which opened on the 21st September, the earthworks were more consolidated than those of the Birmingham line, which, even at this time, has not ventured to proceed at the rate of 30 miles an hour on its through journey? If the works of the Brighton line are not in better heart and condition than those of the Birmingham, upon what pretence can the Directors justify their rate of speed?

One of the witnesses, Goldsmith, the engine-driver, stated at the inquest that except on the Greenwich and Croydon lines there was no restriction as to speed (vide *Times* newspaper.) If this be so, the cause of accidents is easily accounted for. It must be borne in mind that the cause arises in a cutting, and the accident is consummated as the train emerges from it. The almost incessant rains which had fallen during the last week of September, and the portion of October antecedent to the accident, had materially affected the earthwork and base of the cuttings, and from the peculiarity as well as variety of soil prevailing throughout this line, the greatest vigilance in watching the subsidence of banks or the slopes of cuttings, was necessary. It was still more incumbent to limit the rate of speed, and I have no hesitation in giving it as my opinion that the real cause of the accident was over-driving, not relatively as such, but as compared with the existing state of the road.

The same speed which urges on the train seems also to accelerate the proceedings at the inquests. Looking at the date of the accident and the hour of holding the inquisition, I have no hesitation in stating that the inquest was not only held, but its proceedings closed, before any officer of the Board of Trade was made acquainted with the accident.

This indecent haste leads to strengthen the necessity of some such efficient control over railways as was contemplated in the last session of Parliament, and it is hoped that the present Government will not lose sight of that object.

A few weeks back, the Brighton papers teemed with a high-flown eulogium by the Chairman of the Directors on himself and his colleagues. Let him not in future halloo until he is out of the wood. Let him reflect *sic transit gloria mundi*.

It is a strange course of reasoning, that because an accident has arisen, the machine, or in this case the engine, causing it, is no longer fit for use. Upon the same course of argument I would assert, that because an accident has arisen on the line, the Engineer is no longer fit for his office. I would ask where were the watchful eye and thinking head of this Engineer, when he allowed seven out of eighteen engines to be constructed on four wheels, and to put them to work on the line when he can so unceremoniously, and without a tittle of evidence from himself, or any duly qualified person (beyond a Sussex jury, proverbial at all times for its sagacity) condemn their future use? He knew full well that none other than four-wheeled engines had been used on the Birmingham line. He knew that those engines had been for years at work on that line. I would again ask, is the experience of years of use of four-wheeled engines on the Birmingham line to be thus suddenly overthrown by the mushroom experience of a few days, on a line the embankments of which have not had even one winter's rains to consolidate them? Such a proposition is too monstrous to be indulged in.

Was it fair and candid to Mr. Bury to permit their condemnation at the hands of this sapient jury to rest on the bare testimony of an engine-driver, who for aught I know might have been induced to colour his testimony, in order to save himself?

Why did not Mr. Rastrick manfully step forward, and either fearlessly support the principle of the four-wheeled engines, which he had ordered for use, or if not ordered at least sanctioned their use, or candidly admit that he was wrong?

By whose instructions was a four-wheeled engine yoked on to a six-wheeled in driving a passenger train?

In short, Sir, the engine is made the scape-goat by the proceedings which have been adopted. It is impossible the inquiry can rest where it is. I feel confident that a searching investigation will take place, and I have equal confidence that the result will be that, considering the state of the road, over-driving was the cause of the accident.

I am, Sir, &c.,

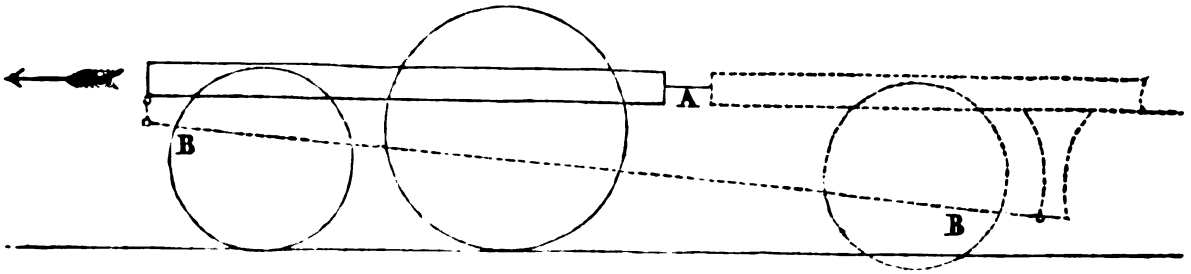
CAUTUS.

London, October 11, 1841.

FOUR-WHEELED AND SIX-WHEELED LOCOMOTIVES.

To the Editor of the Railway Times.

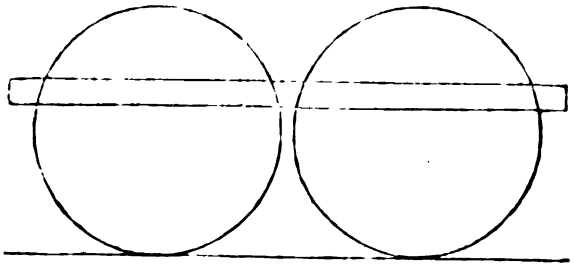
SIR,—In your remarks on the late accident on the Brighton Railway, you express a wish for a discussion in your columns of the comparative merits of four-wheeled and six-wheeled locomotives. I will therefore add a few remarks to my former communication, which was accompanied by a diagram, in No. 140 of the *Railway Times*. For the sake of clearness to your unprofessional readers, I send you some other diagrams, probably occupying less space than a letter-press description would take up with less clearness.



I have before remarked, that the question is one of wheel carriages—moved by internal power—and the safety, or the want thereof, as to the moving on the rails, is governed by the same laws which should rule the construction of other wheel carriages, and which may be summed up under one general head—*the due adjustment of the gravity, with efficient leverage to maintain it*. I insist the more strongly on regarding the locomotive as a wheel carriage, because the term "locomotive engine" is apt to confuse the ideas of the mass of mankind, and not unfrequently those of professionals, who build engines with as little regard to the form of the carriage it should be attached to, as though it were merely intended for a steam-boat or a workshop. They plan the engine first, and then adapt the carriage to it, mistaking the means for the end.

The distinction between a steam-carriage and a stage-coach is, that the former is an agent, the latter a patient—the former hauls, the latter is hauled. In the case of horse draught, the power is gained through the adhesion of the horses' feet: in steam draught, by the adhesion of the driving wheels; a slippery road, in either case, will impede progress. In proportion to the weight of the horse, and in proportion to the weight on the driving wheels of the steam-carriage, will be—*cæteris paribus*—the power of draught. If the steam-carriage be disposed to oscillate, owing to the centre of gravity being placed too high, power will be lost, because the pressure on the two driving wheels will be constantly varying, and this will tend to generate a rocking lateral motion, which the four-wheeled engine, with the greater part of the weight on the hind or driving wheels, has no power to correct, in the mode of attaching the train at present used.

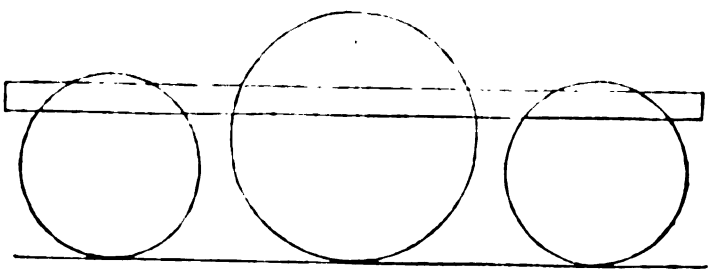
In a stage coach, drawn by the external power of horses, it is on the contrary desirable to reduce the adhesion of the wheels to the minimum, in order to facilitate draught, and those who work for close profits carry this principle to the extreme verge of safety—occasionally beyond it—by raising the centre of gravity so high that the coach is in a constant state of lateral oscillation, the weight being thrown from one wheel to the other with every irregularity of the road, precisely on the principle of a "clod-hopper" who balances all his weight on one leg, while he gyrates with the other, and so on alternately, getting thus over ground which by any other process would exhaust his strength. A "knowing" horse drawing a loaded cart up hill, does a similar thing, drawing one wheel round in a circle, to which the other serves as a pivot, and alternating his movements from side to side, whereby he moves his load one-half at a time.



The following diagram illustrates the four-wheeled passenger engine of the London and Birmingham, drawing the train in the direction of the arrow, the point of attachment to the tender being at the centre of the frame A.

Digitized by Google

If the load on the driving wheels be 5½ tons with half a ton on the front bearing wheels, it is obvious that the weight of the train will have a tendency to lift the front wheels from the rails, with a power proportioned to the height of the frame above the axle of the driving wheels. This effect would be very probably produced by a jerking action, as when the train were descending an incline by its own gravity with the engine kept slightly ahead by its steam power. If in addition to this the engine were placed so high in the frame as to produce lateral oscillation or rocking, the almost infallible effect must be to run off the line.



The annexed diagram is the London and Birmingham goods engine.

In this case all four wheels are of a height, and are what is called coupled together, *i. e.* they are all connected to the engine, and produce progress by their adhesion to the rails. In this case the weight is supposed to be nearly equally distributed, and therefore there would be no tendency in the front wheels to lift up, even though undue height of the centre of gravity might produce lateral rocking. These engines have been in common use on the London and Birmingham to assist the passenger engines, but in such cases Mr. Bury states in his evidence before the Committee of the House of Commons, "it is necessary to uncouple the wheels, as they will not work at high speeds, coupled together." It is difficult to understand why this should be, if the workmanship be accurate, unless the power be inadequate and it is manifest that there must be a considerable loss of adhesion, if the weight be distributed over all four wheels, and only two be used.

In your Editorial remarks, you state that "the proscribed engines have worked safely and efficiently on the London and Birmingham, Midland Counties', and many other lines." This may arise from other causes, tending to lessen the evils of faulty construction. On the London and Birmingham, the passenger engines are of comparatively small powers, and the same principles of safety may obtain as when a heavy carriage prevents a vicious horse from running away. The fact of using two engines to a train, seems an evidence of want of power, and this would appear to be corroborated by the fact—if the report be correct—that the builder has lately been constructing an engine of greater power. If the increased heating surface be attained by increasing the diameter of the boiler and thus raising it in height, top-heaviness would be produced with all its mischievous results. This has evidently been the case with the four-wheeled engines on the Brighton line.

The following diagram illustrates the six-wheeled engine.

This is simply the four-wheeled engine with two additional wheels added, the utility of which is obvious. Whatever tendency there may be in the front wheels to rise by the jerk of the load, is neutralised by the resistence of the hind wheels on the rails. The six-wheeled engine may also be subject to oscillate from the centre of gravity being placed too high, and thus lose power, but the lateral rocking or wagging of the wheels on the rails will be prevented, by being converted into extra friction. It is therefore clear that in point of safety the six-wheeled engine is immeasurably superior to that on four wheels, though it may involve a greater amount of steady friction unless ample space be left between the flanges and the rails.

But there is another essential advantage with the six-wheeled engine; owing to its greater length a larger boiler and greater heating surface may be obtained, without raising the centre of gravity, while any amount of pressure may be obtained on the driving wheels without disturbing the balance.

That nearly all the weight of the machine rests on the driving wheels of the passenger engines on the London and Birmingham may be gathered from the fact that on one occasion an engine brought the train a considerable distance on three wheels, one having been broken by accident.

It is rumoured that it is intended to use the top-heavy four-wheeled engines of the Brighton line, for goods and other purposes. This would remove immediate, but not collateral risk. For example, if an accident were to happen with a goods train, it might cause a collision with a passenger train.

It is probable that nothing can remedy the top-heaviness of the engines, but the other defects will admit of remedy. The best mode would be to apply a third pair of wheels beneath the fire-box. The next best mode would be to project the front wheels farther forward, and load them with more weight. This would counterbalance the tendency to rise from the rails, by a jerk of the train.

In the case of making no alteration in these engines from a wish to avoid expense, there is a simple mode of preventing the rise of the front wheels. When a horse has a habit of throwing up his head inconveniently, a martingale is used to keep it down, and a ship's bowspit is prevented from rising by similar means. On turning back to the diagram of the London and Birmingham passenger engine, a portion of the tender will be seen represented by a dotted line. If the martingale brace B B be drawn tight from the front of the engine to a strong bracket beneath the centre of the tender, so that it hauls the train, the result will be, that every jerk of the train will have the effect of pressing the front wheels closer to the rails, instead of lifting them upwards. If this plan be found effective in practice, of which I have little doubt, it will be a very cheap mode of remedying a glaring evil.

There is one other point in all engine carriages which has been most unaccountably disregarded—the inefficiency of the springs. If a four-wheeled engine has to pass over a sunken rail, the risk of going off is very great, unless the springs be sufficiently flexible to equalize the pressure on all the wheels. Had the engine on the Brighton line been efficiently sprung, the public would not now have been discussing the fatal result, nor would the Directors be labouring under the distrust generated by errors so obvious that the discussion of them appears like stringing together a series of truisms, neither would the shareholders be labouring under a loss of property, amounting probably to many thousand pounds. It is a question both of mechanical and mercantile economy.

There is yet another point—the importance of a buffer carriage between the tender and the train collapsing through a sufficient space to expend much of the momentum of the train, when, by any accident, the engine does get off the line. This also is a question of economy. When an accident does occur, a heavy pecuniary loss is sustained. It would be better to lay out the money previously, in a mode to prevent the loss. At a future time I will forward you a plan to accomplish this object.

I remain, Sir, yours obediently,

WILLIAM B. ADAMS.

LONDON AND BRIGHTON RAILWAY—FARES.

To the Editor of the Railway Times.

Sir,—I have waited some time in the hope that some more able correspondent would bring to your notice the glaring inconsistency and injustice of the Directors of the London and Brighton Railway, who after taking great credit to themselves last year on the opening of the Shoreham branch, for the lowness of the fares (which it was then said were adapted to the means of all classes), have instead of carrying out this praiseworthy principle through the whole extent of the line, determined to fix the fares so high, that persons of moderate means cannot travel by it. The injustice of fixing their fares 30 per cent. higher than any other railway issuing from London for equal distances, loudly calls for

Digitized by Google

some legislative enactment, and now that other conveyances have pretty generally been thrown off the road, the sooner Lord Seymour turns his attention to this point the better for the public. It is not alleged, I believe, by the Directors of this line, that it has any peculiarity which entitles them to demand higher rates from the public than any other line. If there be any good ground for these apparently unreasonable charges, why not publicly state them, instead of leaving the point open to all sorts of surmises. They cannot surely intend to make it an exclusive line, adapted only for my Lady Jane this, or my Lord Henry that, to keep up the respectability of Brighton. Why the Directors must know that the coaches, when there has been an opposition, have brought passengers to Brighton for 5s. and under a head, without any ill consequence to the public. The hazard to the lines of the passengers is as great on the Brighton line as on any other (if not greater); then why are the fares higher, is a query that will recur to every one having only a common interest in the matter. If it was good to have fares adapted to the means of all classes on the Shoreham branch, the same principle will hold good all the way to London, and the public are intitled to the full benefit of it. If the Directors are influenced by a tenderness of vested interests (that of the coach proprietors), is it a legitimate mode of charity to protect them by their high fares at the expense of the public? Have the public not being sufficiently taxed by the exorbitant charges of the latter class in many cases, that it should continue to be taxed under any such pretence? Have the Brighton coach proprietors not had sufficient warning to wind up their concerns? If the Directors of the Brighton Railway imagine that they will conciliate these parties by any such consideration, they will find themselves egregiously mistaken. In proof of this assertion, I have only to point at a recent circumstance. Who exaggerated the disaster of Saturday last, 2nd instant, but these parties? Who wished that five hundred had been killed instead of five, but some of their establishment? Who circulated a report of an accident on the line on Tuesday last (5th instant), by which a gentleman was said to have been killed, but these parties; and for what purpose, but to fill their coaches, in which object they have succeeded for a week to come? Taking all these things into consideration, I hope the Directors will re-consider their determination respecting high fares, by which they conciliate nobody, and surely make enemies in many of the public.

Before I conclude, I beg to remark, that the system of secrecy adopted on railway lines (particularly in the case of the last accident near Hayward's Heath, at the Brighton terminus), when accidents occur, gives a great scope for the most alarming rumours, so that the publication of even short authentic particulars would in such case be far preferable.

I am, Sir, yours,

A. B.

Brighton, 8th October, 1841.

LONDON AND BRIGHTON RAILWAY — ACCIDENTS TO LABOURERS.

To the Editor of the Railway Times.

Sir,—Permit me, through the medium of your excellent journal, to ask "Verus" what proportion of the 200 railway patients admitted into Brighton Hospital, were able to resume their usual employment after leaving that institution; also what proportion of them were so much injured as to be unable to do so, and whether in the event of any of them being seriously mutilated, what provision is made for their future support?

The cold callousness with which "Verus" dismisses the case, by stating that "they did not arise from the *trains*, but were *labourers* injured in working, as they might have been, employed on a building," and his promptitude in holding forth the generosity of the Directors, naturally suggests to a benevolent mind the question; does all liability of Directors end, when an injured or mutilated servant has received all the benefit a hospital can afford?

"Verus's" answer to these, will much oblige,

A. B.

London, 12th October, 1841.

THIRD-CLASS CARRIAGES—GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

Sir,—I beg to trespass on your columns with a few observations on the present high fares and insecure mode adopted by the Great Western Railway Company in the conveyance of their third class passengers. By the adoption of railways, the public have been virtually deprived of their old means of conveyance on the common road, and as that has been accomplished as well for the general good as for private emolument, it is but fair that a little should be given up on both sides, to encourage this new mode of transit. A real reciprocity of interests, not a one-sided one, will always be found most conducive to the success of any national or private undertaking, and, on experiment, eventually productive of the greatest amount of profit. Now, Sir, had the Great Western Company been guided by the principle above laid down, I am certain they would never have attempted to put in practice the degrading method of conveying third class passengers which they have adopted. They may, it is true, imagine that should they add to the comfort and security of their third class carriages, and reduce the fares, some narrow-minded persons would avail themselves of it, and thus avoid paying the second class fare. No doubt that would be the case to a certain extent; it happens now, and would not be materially increased by adopting a more liberal policy; but it must be remembered that people *can and do still walk*, and thus avoid paying anything to the Company, and it is to induce them to ride that a reduction of fares is necessary. We must recollect, too, that this, as well as other Companies, have established a monopoly, and therefore it is our duty to watch their proceedings narrowly and with anxious suspicion, lest in their attempts to realise dividends for their proprietary they inflict on large classes of the community gross and palpable injustice. It must be borne in mind, that the humbler classes in particular have been deprived of their usual means of conveyance: the convenience and comfort which they heretofore enjoyed in travelling have been entirely destroyed, and by Railway Companies generally utterly disregarded.

I have been led to make these remarks by observing the construction and disposal of the third class carriages on the Great Western Railway. Without the least covering over head to shelter them from the pitiless storm, and worse than that, from the flakes of fire that continually issue from the engine —these unfortunate third class passengers are purposely placed nearer the engine than any others, and frequently without any other carriage between them and the tender, to which they are attached. Thus should any accident occur, their destruction is almost inevitable. Imagine a poor woman travelling with three or four little children thus situated. What must her anxieties be as she sees the sparks of fire falling around her? Now, I ask, is this right—that a great and wealthy Company should thus treat a body of their fellow countrymen, who have no means of resisting the injustice, because the Company have the sanction and powers of an Act of Parliament? By thus disregarding the accommodation of the poorer class of passengers, they go in direct opposition to the principle which they adopt to induce people to go by the first class. Carriages have been constructed in the most costly and luxuriant style for those who have plenty of this world's goods already, whilst the accommodation and comforts of the poorer passengers have been totally disregarded. Indeed, Railway Companies seem to act upon the principle of "To him that hath shall be given, but from him that hath not shall be taken away even that which he seemeth to have." They forget that we are all one family. Look at the multitude of persons all influenced by the same motives, impelled by the same inducement to travel, if you afford them a safe, and comparatively comfortable, mode of transit, but who will rarely travel at all whilst exposed to the inconvenience to which they are now subject. What great inducement is there held out to women and children to travel by railway, who may wish to visit their friends in Bristol and London for instance, if they continue exposed to even the bare chance of being seriously burnt by the fire from the engine? Have there not been several instances where the mail and goods' trains have been set on fire and totally consumed, without the possibility of being extinguished, owing to the difficulty of communicating with the driver; and did not the guard narrowly escape with his life? To expose a number of human beings even to the bare possibility of so frightful a calamity as that of being burnt to death, is really fearful to contemplate, and ought to influence the Directors of every railway to take the case of their third class passengers into their humane consideration.

There is another point, too, which requires, for the interest of the proprietors as well as the public, a careful revision, and that is the amount of the third class fare. It is too high—it is unjust—it is impolitic, which all injustice is. And how do I prove that it is so? Why thus. The common stage waggon, which this railway has superseded, used to convey these third class passengers between London and Bristol *in* 48 *hours*, at the low charge of *seven or eight shillings per head*, and half price for children. And what accommodation, it may be asked, had they? I reply, far better and more confortable than that by railway. Compare the third class railway carriage with what was called the old broad-wheeled *flying waggon*, with its *woollen tilting covered with tarpaulin to shelter their passengers from weather, with inside a plentiful supply of clean straw to sit or lie down on at pleasure.* I say that the third class is nothing to be compared to them, especially for women and children, and these form a numerous class of the humbler sort of passengers, as may be every day seen at the stations. I have stated that the waggons charged 7s. or 8s. a head; the railway charge is 12s. 6d. Where is the justice of such disproportionate fares? I may be told that what they lose in price they gain in time. That I deny. They are nine hours going by railway, which destroys one day, and then there remains the other day as compared with the old waggon. But where are the men who get 4s. 6d. or 5s. 6d. per day; and the women and children do they ever get it? Then where is the inducement to the great body of the working classes to travel by this railway? Let the Great Western and all other Companies adopt a liberal policy towards *all their customers*, and they will assuredly find it conducive to their interests. Let the comfort of the humbler classes be considered, and let them no longer be huddled together, with no better accommodation than swine or a flock of sheep. Let at least a covering of some sort be put over their heads, and never let them be placed nearer the engine than cannot possibly be avoided.

I have the honour to remain, Sir,

Your obedient servant,

W. B.

Bristol, October 10, 1841.

EDINBURGH, LEITH, AND NEWHAVEN RAILWAY.

To the Editor of the Railway Times.

Sir,—In addition to the observations already made upon Mr. Richard Dawson's extraordinary Circular of the 1st October instant (inserted in the *Railway Times* of Saturday last,) the following facts are worthy of notice.

Mr. Dawson therein states that 20*l.* per share have been paid on "the 1615 *forfeited* shares," which the Directors now propose to re-issue at 10*l.* discount. Now, the utter absurdity—not to say falsehood—of such an assertion, is evident on the face of it. The *total* amount payable on each share is 20*l.* If that sum has been actually paid

Digitized by Google

up (as Mr. Dawson alleges to be the case) it is impossible that the shares can have been "forfeited," as that could only have taken place in one event, viz. in *default* of that payment having been made. This is so obvious a truth, that the contrary assertion is inexplicable, and, in point of fact, the payments on the forfeited shares do not certainly average 5*l.* per share.

You have already exposed the plausible but untrue statement that *this railway* will be completed for the original estimate of 100,000*l.*, by showing that for that sum, the line was to be completed to Leith and Newhaven, and not (as now intended ONLY *to Trinity*. But you are probably not aware that *when this "breaking down"* of the original scheme took place, the shareholders were told by the Board that the small line to Trinity would be completed for *one-half* of the original capital; that is to say, for a sum of 50,000*l.* As a complete answer to their "Agent's" misrepresentation on this point, I here extract from the Directors' Report of the 31st January, 1838, the following announcement:—

The Directors had resolved to execute the line from the foot of Scotland-street to Trinity first, as being a complete line in itself, calculated to yield a remunerative revenue, independent altogether of the branch to Leith and of the tunnel to Prince's street. *These will be afterwards executed as funds come in, and as circumstances render expedient.* In the meantime the Directors propose to confine their exertions to Newhaven and Trinity. *This line, they apprehend, will be completed for about 50,000l.*

With regard to Mr. Dawson's gratuitous statement that the Directors "are all men of high honour and probity," in addition to the information already given on that subject as respects the Chairman and vice-Chairman (who omitted to pay their deposits and calls), the following is extracted from a publication emanating from *the Board of Directors*, and entitled, "Reply for the Directors of the Edinburgh, Leith and Newhaven Railway Company to Dr. Neill's Remarks."

Mr. Sprot was an original subscriber to the undertaking, and was appointed a member of the Provisional Committee on 12th December, 1835, at the General Meeting of the subscribers. He soon after requested his name might be withdrawn from the Committee; but, on the 15th January, 1836, he again subscribed for shares, and was appointed a member of the Committee. In March following, *when the shares were in great demand, and at a premium of about 3l.*, that gentleman applied for, and assisted as a Director in allotting himself thirty-five shares additional, making in all fifty shares, *which he obtained at par.* The whole of these shares he soon after sold, *at a premium of between 3l. and 4l. per share.* His last attendance was on the 7th April, 1836, when the Bill was in progress through Parliament.

As to the *veracity of* this famous Directory, some notion may be formed of it by the following announcement (made in their first Report of the 31st October, 1836), taken in connection with the now admitted fact that, "the whole 5,000 shares" had not been disposed of, and that "the deposit of 1*l.* per share, or 5,000*l.*" altogether, had never been paid; *for that the Chairman of the Company had never taken up the 50 shares appropriated to him, nor paid any deposit whatever thereon*; and this is the case up to the *present* moment!

The Directors shall now advert to the shares subscribed for, and on this subject they have the pleasure to report that so early as March last the whole 5,000 shares were disposed of, and the deposit of 1l. per share, or 5,000l. paid thereon.

Thus upon subsequent investigation it appears, that only 4,950 shares had been disposed of, and that deposits to the amount of only 4,950*l.* had been received. The earliest Report therefore opened with a falsehood, as is indeed admitted in the "agent's" Report of 27th February, 1839, in which it is expressly stated, that this number of shares (4,950), and this amount of deposit (4,950*l.*) was all that had been disposed of or paid thereon!

In this same Report no less than 331*l.* 6s. 3d. is charged in one item for "brokerage on shares,"—an item never before introduced into Directors' accounts. From this it would appear, that the shares were originally brought into the market, not in the regular way, by subscription, but as a speculation by means of brokers—a thing hitherto unheard of. I am, Sir, &c.,

A PROPRIETOR.

October 11, 1841.

GRAND JUNCTION RAILWAY.

To the Editor of the Railway Times.

SIR,—In the *Railway Times* of this date I see a letter signed "Observer," showing the loss sustained by the proprietors of the Grand Junction Railway Company through the monopolizing spirit of the arrangements of their Directors in the goods carrying department; and in the same paper there is a letter from a correspondent "S. D." in which there is a very just complaint, of the annoyances travellers between London and Dublin are subjected to, though accompanying the mail. This matter was alluded to in a former letter of mine, (which you were so good as to insert) and the remedy pointed out, but it would seem that nothing short of Parliamentary interference will induce the Grand Junction Company to do what is fair and just to the public, and afford facilities which ought to be *cheerfully* provided on so important a line of communication as that between the capitals of England and Ireland.

It is understood that a Bill will be brought in during the next Session for the regulation of railways, and I trust that one of its enactments will be, that a traveller shall be able to *book through*, and occupy the same carriage, where there is a *continuous* line of rails, whether the property of one or more Companies. This would meet the evil complained of by "S. D.," and would not be more than the legislature and the public have a right to require.

"Observer's" remarks on the goods traffic on the Grand Junction line, are calculated to draw the serious attention of the proprietors of that Company to the subject. Considering the country through which the line passes, and the important towns at and near its termini, their goods traffic is far below what they have a right to calculate upon, and is capable of a great increase, I should say, even to double its present amount. I will not lengthen my letter by entering into details, to show why the Grand Junction Company have not derived the returns they ought to have had from their goods' traffic. I will point out, however, one principal cause, and a very effectual remedy. It is well known that an agreement has been entered into between the Manchester and Liverpool and Grand Junction Companies, one clause of which prohibits the latter Company from using, or in any way benefiting, a competing line. This enactment was directed against the Chester and Birkenhead Company. The agreement *has been* profitable to the Grand Junction Company, but it is no longer so. It is evident that the Grand Junction are hampered in the goods' carrying department by their connection with the Manchester and Liverpool Company. The distance is great, the gradients very bad, and the trade subject to interruption by crossing some roads on the level; hence their intention to convey iron and heavy goods to Preston Brook only, and forward them thence by water to Liverpool. This absurd plan would not have been thought of if their traffic were not affected by the agreement referred to. Now, if they would use their own line to Chester, and the Chester and Birkenhead to the Cheshire side of the Mersey, for the conveyance of their goods (which the agreement prevents at present) the communication would be so direct, the gradients so good, and the advantage of having the terminus so near the Mersey and opposite the centre of the docks so great, as to insure a vast increase of traffic. This mode of transit is the more worthy their attention, from the certainty that a communication will shortly be made from the present terminus of the Birkenhead line to the river side, and goods may be then placed at once on the railway from barges or other boats in the river. Surely, then, it is better for the Grand Junction Company to come to a fair understanding with the Chester and Birkenhead Company, and assist the latter in completing their communication with the water side, and erecting suitable buildings for an important goods' traffic there, than to carry on such a *pitiful* warfare against it as throwing obstacles in the way of a few passengers adopting that line in their way to Dublin. If there were a goods' station at Birkenhead, and proper facilities afforded, the Grand Junction and Birkenhead lines would *engross* the whole of the carrying between Liverpool, and Wolverhampton, and Birmingham, and London—at least all that it would be worth their while to seek—and both the public and the Companies be accommodated and benefited. I feel justified in repeating, that their returns for the carriage of goods, Irish produce, and live stock, would be doubled, with very little, if any, increase in their expenditure.

I hope these hints will not be thrown away upon the *proprietors* of the Grand Junction. I fear the *Directors* are incorrigible, or too closely identified with the interests of the Manchester and Liverpool line, to attend to anything I have said.

I remain, Sir, your constant reader,

VERAX.

CHESTER AND BIRKENHEAD RAILWAY.

To the Editor of the Railway Times.

SIR,—I see in your last number an account of the traffic on the Chester and Birkenhead Railway, and in a note appended to it, you state the distance between the termini to be about sixteen miles, while in your weekly table of traffic you call it only fourteen and a half. If the former distance be the correct one, as I believe it is, the receipts per mile per week will be only 42*l.* 6s. 3d., instead of 46*l.* 13s. 10½d. But it appears to me, that even this is not a correct way of estimating the returns on this railway, as there is a most expensive establishment of packets and omnibuses kept, which must render that part of the distance which is not railway much more expensive to work in proportion than that which is railway. In order then to obtain a clear idea of the actual receipts per mile, I would beg to suggest the following plan:—

It is well known that even with the multitudes of persons crossing between Liverpool and Woodside and Birkenhead, two-pence per passenger will not pay the proprietors of the packets, without the most careful management. It is not, therefore, too much to suppose that with the comparatively limited number of fares by the railway packet, they will cost three-pence each to the Company, and the conveyance between the railway station and the river must be at least one penny more: this may appear too little, but as the third and fourth class passengers are not allowed to ride, I think it will be a fair average on the whole. We have then four-pence per passenger for expenses, exclusive of those legitimately belonging to the railway. In the Traffic Return in your paper of last week, the number of passengers is given as 8,180; these at four-pence each will be 136*l.* 6s. 6d., which deducted from the total receipts, leaves 540*l.* 15s. 6d., or 37*l.* 5s. 6d. per mile per week, on fourteen and a half miles.

As you are always anxious to afford a fair statement on every subject connected with railways, I trust to you to give this letter insertion, hoping that if I am in error, some one who knows better will take the trouble to correct me. If I am not in error, it is evident that the same mode of calculation must be used to discover the *net* weekly proceeds, thus instead of deducting 60 per cent., the least that can be taken for a short line with low fares, from 677*l.* it must be deducted from 540*l.*, making the probable profit for the week 216*l.*, which leaves about *one and a half* per cent. per annum on the paid-up capital, after the 5 per cent. on the amount taken up on loans has been deducted.

I am, Sir, your obedient servant,

P. S.—In looking over the above, I see I have omitted another source of expenditure not properly connected with the railway, viz., the separate office and establishment in Liverpool, there being one also in Birkenhead; these will of course further reduce the weekly receipts per mile, as well as the net annual revenue, and may be added to the four-pence as above.

October 8th, 1841.

YORK AND NORTH MIDLAND, BIRMINGHAM AND GLOUCESTER, MANCHESTER AND LEEDS, AND CHESTER AND BIRKENHEAD RAILWAYS.

To the Editor of the Railway Times.

SIR,—"A Railway Shareholder," in your last publication, wishes to be informed why the shares in the York and North Midland command in the market so large a premium, while those of the Birmingham and Gloucester are at so great a discount.

In my opinion, it is for the following reasons, viz.:—

The cost of the Birmingham and Gloucester is about one million and a half; the York and North Midland about one third of that sum. Yet the weekly receipts of the latter, are nearly equal to the former.

The York and North Midland, at their last half-yearly meeting, declared a dividend after the rate of 9 per cent., with the greatest certainty of that handsome sum being much increaeed in future. I believe the Directors of the Birmingham and Gloucester have not been in a situation to pay their shareholders any dividend at all. Now, as people naturally expect something in the shape of dividend for their investments, I think this alone is a sufficient reason to account for the difference of the price of those shares in the market.

"Jacob" is wrong, in making a comparison of the cost of coke on the Manchester and Leeds and York and North Midland, I believe there is but little difference in the cost of that necessary and expensive article on those two lines.

The Directors of the Chester and Birkenhead state, in their last Report, that the average rate of fares in the York and North Midland is 3d. per mile each passenger, the best contradiction I can give to this misstatement is to send you the fares as published, which are as follows, viz.:—

	s.	d.
From York to Leeds, 32 miles per rails—		
First Class	6	0
Second do.	4	6
Third do.	3	0
From York to Selby, 22 miles per rails—		
First Class	3	6
Second do.	2	6
Third do.	2	0

I am, Sir, yours very truly,

G. B.

York, 11th October, 1841.

BIRMINGHAM AND GLOUCESTER AND YORK AND NORTH MIDLAND RAILWAYS.

To the Editor of the Railway Times.

SIR,—A correspondent last week wishes to know why the York and North Midland shares last year should have commanded a premium of 30 per cent. when their takings were about 39*l.* per mile per week, while the shares of the Birmingham and Gloucester Company, who at the present time are taking about the same sum per mile, are at 43*l.* discount, the cost of that line being only 2,000*l.* per mile more.

The difference in price at that time can only be accounted for from the estimate of the respective merits of the two lines which was then entertained. The shareholders of the Birmingham and Gloucester have been as much deceived in the *cost* of the line, as they have been disappointed in the receipts, which are only one-half as much per mile per week as those of the York and North Midland, although the cost per mile is near 2,000*l.* more!

The capital of the Birmingham and Gloucester has been raised from 1,266,666*l.* to 1,576,666*l.*, although the former sum it was over and over again stated would be amply sufficient. Could the proprietors be assured that no further additions would be made to the capital, the present discount offers a fair investment for capital, but as it was stated at the late meeting, the present capital did not provide for the station that might be required at the terminus, there is as much uncertainty as ever respecting the *ultimate* cost of the line. There is also the misunderstanding with the Worcester corporation unsettled, which might lead either to the forfeiture of 70,000*l.* in the event of not constructing a branch to that town, or to the incurring what may be worse, a large expense in constructing one from which there can be expected but little profit. To pay 5 per cent. on the present capital of 1,576,666*l.* after deducting 40 per cent. for expenses, it would require a gross sum of 131,390*l.* per annum, or 2,524*l.* per week. The receipts for the present half year average about 2,100*l.* a week, and when it is considered that this average is not likely to be realised on the remainder of the year, I fear a beggarly account will have to be rendered to the shareholders at the next half-yearly meeting for the additional advance of capital.

It is to be regretted the meaning of "*cost* per mile" is not fully understood or defined. By some it is supposed to include the whole expenditure comprising stations, engines, interest of loans, &c., while by others it is limited to the mere outlay in constructing the railway, excluding purchase of land, stations, engines, &c. To this uncertainty the delusion respecting the cost of the above line may be attributed, as the reiterated boast of the extreme cheapness of the "cost per mile," was always regarded as the *ne plus ultra* of economy, and a pattern to all railway engineers. The "cost per mile" of this railway has *now* reached 30,000*l.* per mile although the shareholders were formerly indulged with the idea that something less than half would suffice, but those who were not to be deceived with fine promises, and trusted to their own senses, have fortunately escaped the ruinous depression to which the shares have fallen, and from which I fear they are not likely soon to recover.

The Chairman of the York and North Midland Company at the last meeting must have regarded the cost per mile in the *limited* sense above mentioned, as he stated the cost would not be more than 23,000*l.* a mile, whereas judging by the capital authorised to be raised, it will amount to 29,000*l.* These discrepancies, I hope, will be ultimately settled, and in railway parlance, a fixed and commonly accepted meaning will be given to the "cost per mile."

Your obedient servant,

A FORMER CONTRIBUTOR.

FLANAGAN'S RAILWAY BREAK.

A CORRESPONDENT sends us some strictures on the letter of Mr. Francis, of Brighton, which we gave last week. We publish an extract from our correspondent's communication, as we understand that the inventor of the break is at present absent from England:—

"Mr. Francis (says our correspondent) may, as he states, have had a working plan of a similar break for some months; but this will not render the idea the less original with Mr. Flanagan. Indeed, any merit or novelty in this break, you will see, consists in giving motion to the two arms in opposite directions by one and the same movement; as a break with one arm, and bearing on one side of the wheels, is and has been in use in Edinburgh for some years to nearly all the coaches belonging to the Messrs. Croales, between that place and Newcastle, Carlisle, York, &c., and something similar is also to be found in the French diligence. The objection of Mr. Francis as to the impossibility of "a right hand thread passing over a left hand screw," I take to be rather childish. As well might he be astonished at seeing the flanch of a mail-axle inside the collar, over which it cannot be passed unless you cut it or the axle, and which we all know is put on before the two arms of the axle are welded in the middle; so with this break the nuts can be passed on in the same manner, and which I take to be a much better plan than any joint. Indeed, any one who has the least taste in mechanics, will see that the same end may be accomplished in various ways.

"As to Mr. Francis' remark of "regret for this *Irish* oversight," I presume he can have no knowledge of Mr. Flanagan's nation or country, except judging from his name; and if a long residence and education would give him a claim, we may call him French.

"I am sure Mr. Francis would not consider it very courteous in me were I to conclude in a regret for his *English stupidity*.

SUNDAY TRAVELLING ON RAILWAYS.

WHAT has been called "the Voluntary principle" in religion, we take it, implies, That adoration—be it the adoration of a single aspiration, or the adoration of a whole life controlled by constant reference to the Divine will—to be worthy or acceptable, must be spontaneous; that the Church is an association of believers, having for its aim, by mutual example, inspection, rebuke, and exhortation, to keep all its members correct both in doctrine and conduct; that the entrance of a member into the Church, or his remaining in it, must be, like his faith, spontaneous—his own voluntary act—or it is worthless. The repudiation of State-interference by those who hold Voluntary opinions, and the mode of remunerating those who may be set apart for ministerial services in the church—such as teaching, administering the sacraments, &c. in which many seem to think consist the essence of Voluntaryism, are mere inferences from this fundamental principle, practical applications of it. "The Voluntary principle" has from the days of the first English Independents downwards been the creed of no inconsiderable number of the reflecting portion of society: but in general they have been contented to entertain it in silence, or have rested satisfied with simply declaring that such was their opinion. It is only since the commencement of the Voluntary movement in Scotland that an organized missionary system for the purpose of inducing all men to entertain these views regarding the institutions of the Church has existed. From a recent attempt in Scotland, in which some of the leaders of the Voluntary party have been active and prominent, to prevent the travelling of the mail by railroads on Sunday, we doubt whether they clearly understand their own principle. They have memoralized the Postmaster-General "not to require the transmission of the mails on the Edinburgh and Glasgow Railway on the Lord's Day," because it would give occasion to "a great increase of Sabbath-profanation." They have called upon the Government to interfere to prevent travelling on Sunday, which they are pleased to call "Sabbath-profanation." If they regard even a short excursion into the country on Sunday by the artisan or trader as profane, they are quite entitled to insist that all members of their own communion shall abstain from the practice, or quit the church; but they are not entitled, by invoking the interference of Government, to insist that those who think it innocent, and do not claim to belong to their church, shall abstain likewise. The burden of self-denial, which they exact from those of their own communion, must, if their principle is true, be voluntary, or it is worthless: they have no right to impose the burden upon those who differ from them in opinion. If they turn to their Bibles, they may read of Christ walking in the fields with his disciples on the Sabbath; nor from the context does it appear that they had any other object than recreation in view. If they say that this is not decisive on our side, they must admit that it is still less decisive on theirs. It is one of those cases in which (as in the controversy regarding the duty of abstaining from meat offered to idols) each must act upon his own judgment, and each tolerate his brother. If they can look dispassionately at the consequences of the strict enforcement of an external affectation of self-mortification on Sabbath, by the civil and ecclesiastical police of Scotland, they will find good reason to doubt its beneficial tendency. The demure air with which every one slinks from public notice on that day is no warrant of devotion. We believe that the Pharisaical denunciation of Sunday-walking in Scotland has driven more of the working-classes to the whiskey-shop than to private devotion. True religion would sanctify a man's Sabbath country-walk with his family: its austere substitute causes his mind to revolt against the re-

Digitized by Google

lity. The time selected by the Voluntary clergy in Scotland for making this movement is unhappy. The clergy of the Establishment have long been busy attempting to enforce a Pharisaical observance of the Sabbath; but till within these few weeks we have not observed any of the Voluntaries co-operating with them.—*Examiner.*

TO EXPORTERS, RAILWAY CONTRACTORS, ENGINEERS, SHIP BUILDERS, &c. &c.—The Patent Rolling and Compressing Iron Company having their works in full operation are ready to execute orders to any extent, for the undermentioned articles:—

Boiler and Tank Rivets of every description.

Bolts for Machinery, Architectural, Agricultural, Ship and Coach Building, Gas Water, and other works, &c.

Railway Pins, Hooks, Screws, &c.

Particulars may be obtained, and specimens seen, upon application to the Secretary, at the Company's Works, Upper Ordnance Wharf, Rotherhithe.

By order of the Board,

JNO. ATLEE, Secretary.

HALEY'S PATENT LIFTING JACK, Manufactured solely by Messrs. W. and J. GALLOWAY, Engineers, Manchester.

The attention of parties who employ Lifting Jacks, is respectfully requested to the superiority of the above over those hitherto in use. Having a claw the same as the "Rack Jack," it will lift either from the top or below, and is not more than half the weight and bulk. The handle may be let go with the lift on, and remains stationary, and quite safe.

Each working piece is Engine-cut and Case-hardened.

THE MINING JOURNAL, RAILWAY AND COMMERCIAL GAZETTE, published every Saturday, price Sixpence, contains Reports of the Proceedings of all Public Companies—Intelligence from the English and Foreign Mining Districts—Original Communications on subjects connected with Practical Mining and Railway Engineering, &c. &c.—Notices of New Inventions at home and abroad—Prices of Mining and Railway Shares—Railway Traffic Returns—Latest Authentic Prices of Metals with remarks on circumstances affecting the market—Sales of Copper and Tin Ores—Specifications of Recent Patents—a variety of Miscellaneous Scientific Intelligence, with a complete record of every occurrence during the Week calculated to interest the Capitalist or Speculator—The Extensive Arrangements entered into to ensure earliest authentic intelligence on the important subjects treated upon in the columns of the *Mining Journal*, make it an indispensable requisite to all parties connected with the Manufactures or Commerce of the Country.

*** The Advertisements inserted in the *Mining Journal* being confined to prospectuses of New Companies—Notices of Meetings, Calls, and Dividends—Sales of Mineral Property, or other matters intimately connected with the interest of the Capitalist, and the Proprietor in Joint Stock Companies,—form an interesting feature in its columns.

The *Mining Journal* is published every Saturday afternoon, at two o'clock, at the office, No 37, New Broad-street, City, price Sixpence, and may be had of all Newsvenders in town and country.

Mining Journal Office, 37, New Broad-street.

PILE DRIVING.—The Advertiser is ready to take Contracts for driving Piles by a New Machine, worked by Steam Power, at a very low rate, and expeditiously. The Machine progresses on the Pile foundation formed by itself, and is adapted for crossing rivers, or streams, reclaiming lands, &c., making docks, wharfs, bridges, piers, &c

Address to Joseph Cowdin, 31, Weymouth-street, Portland-place, London.

BITUMEN WORKS, Mill-wall, Poplar.—The PARISIAN BITUMEN COMPANY beg to call the attention of Engineers, Architects, Surveyors, Builders, and Railway Contractors, to the utility and superior quality of the BITUMEN manufactured by this Company. The Company can with confidence affirm and refer, that in the numerous cases where this Company's Bitumen has been applied to railway viaducts and arches it has been found to answer every purpose for which it has been required, entirely preventing the penetration of damp or vermin, and adding materially to the preservation of the brick and masonry work. It has also been very successfully used for vaults, cellars, terraces, pathways, kitchens, granaries, malt houses, warehouses, barns, court yards, tan rooms, catacombs, wharfs, stables, garden walks, &c.

For terms and information apply to Wm. Mackenzie, Superintendent.

TO COAL PROPRIETORS, ENGINEERS, and Others. To be SOLD by Private Contract, Four excellent double acting condensing STEAM ENGINES, of 28, 11, 6, and 4 horse power respectively.

The whole are in excellent condition, and have been recently at work.

For further particulars, or to treat for the purchase, application may be made to Mr. Woodhouse, Chinery brewer, Overseal, near Ashby de la Zouch.

October 13, 1841.

CHELTENHAM AND GREAT WESTERN UNION RAILWAY COMPANY.—Notice is hereby given, That the next Half-yearly General Meeting of the Proprietors will be held at the Subscription Rooms, in Stroud, on Thursday, the 28th day of October, 1841, pursuant to the Acts of Parliament.

The Chair will be taken at One o'Clock.

C. F. SAGE,
Chairman of the Directors.

*** The Transfer Books of this Company will be closed on Tuesday, the 19th of October, and will remain closed till after the meeting.

A. MERRICK, Secretary.

Cirencester, October 9th, 1841.

NORTHERN AND EASTERN RAILWAY.—SUNDAY TRAINS.—Notice is hereby given, That on and after Sunday, the 17th instant, the Half-past One o'Clock Down Train will be discontinued on Sundays.

WILLIAM BOURNE, Secretary.

Shoreditch, London, 13th October, 1841.

Omnibuses to and from every Train—Fare 6d.

Heavy Goods and Merchandise conveyed from the several Branch Offices, and Hainbro' Wharf, Thames-street, to most parts of the south and western railways.

TO BE LET, either together or in the following Lots, and may be entered upon immediately, those extensive Premises, situate in Chorlton street, in the centre of the town of Manchester, and near the new station of the Manchester and Birmingham Railway Company, having the advantage of a plentiful supply of excellent water for printing or bleaching purposes, and consisting of—

Lot 1. An Open Yard, 75 feet by 68 feet, to which there is access by, and large frontage to, both Canal and Street, and the surrounding Buildings of the following description:—

A large Warehouse of four stories, and Attic containing nine rooms, averaging 29½ feet by 27½ feet, and from 8 to 10 feet high; a one story building 36 feet by 24 feet, and 10 feet 8 inches high, with iron rafters, and beams laid for room above; a larged walled and slated shed 46 feet 8 inches by 32 feet, and 14 feet high to sloping roof; a one-story ditto, 76 feet by 44 feet 7 inches, and 17 feet 10 inches high, with rafters laid for flooring; a room above of same dimensions, 6 feet high to sloping roof. One story ditto, No. 1, 21 feet by 17 feet, and 16 feet high to Saltpie roof. One story ditto, No. 2, 43 feet by 31 feet, and 17 feet 8 inches high, with rafters laid for a roof above of the same dimensions, 6 feet high. One story ditto, 28 feet 4 inches by 21 feet, and 17 feet 8 inches high to sloping roof. Small room, 6 feet square, with three sets of offices, furnished with stoves, &c., and stabling for three horses, with various other conveniences.

And Lot No. 2, another open yard, 112 feet by 50 feet, adjoining the above-mentioned yard, and having similar access and frontage, with the brick and slated building, 109 feet by 27 feet, and 8 feet high, piggeries, stables, and other buildings on the South easterly and South-westerly sides thereof.

For further particulars apply to Messrs. Cooke, Beever, and Darwell, Solicitors, Salford.

LONDON AND BRIGHTON RAILWAY.—ALTERATION OF TRAINS.—OPEN THROUGHOUT from London to Brighton, for passengers, parcels, private carriages, and horses.

Down trains from London daily, except Sundays, at *three-quarters past 9 a.m.; at ☞ three quarters past 10 a.m.; *three-quarters past 1 p.m.; ¼ three-quarters past 2 p.m.; *three-quarters past 3 p.m.; ☞ three-quarters past 4 p.m.; and to Croydon only at 7 p.m.

Sunday trains down from London.—Mixed trains at *8 a.m., *three-quarters past 10 a.m.; and *7 p.m.; and to Croydon only at 10 p.m.

Up trains from Brighton daily, except Sundays, at *three quarters past 6 a.m.; ☞ quarter-past 8 a.m.; at three-quarters past 10 a.m.; at *three-quarters past 11 a.m.; at a ☞ quarter past 2 p.m.; at *4 p.m.; and from Croydon only at three quarters past 2 p.m.

Sunday trains up from Brighton, at *three-quarters past 7 a.m., at *4 p.m., and at *7 p.m.; and from Croydon only at 7 a.m.

The Trains marked thus * are mixed, that is, consist of first and second-class carriages, and stop at all the Stations on the line, performing the journey in two hours and three quarters. The trains marked thus ☞ consist only of first-class carriages, and stop only at Croydon, Red-hill, Three Bridges otherwise Crawley, and Hayward's heath, and perform the journey in two hours and a quarter. The trains marked thus † are mixed, but call only at Croydon, Red-hill, Three Bridges, and Hayward's-heath, and perform the journey in two hours and a quarter.

Fares to and from London and Brighton:—First class carriages, 14s. 6d.; second class, 9s. 6d.; children in second class, 6s. 6d.

Fares to Croydon:—First class, 2s.; second class, 1s. 6d.

Children under 10 years of age in first class carriages will be charged second class fare. No charge made for infants in arms.

Further particulars may be obtained on application at the offices of the Company, 10, Angel court, Throgmorton-street; at the termini, London-bridge, and Brighton; and at the booking-offices.

By Order,

THOMAS WOOD, Sec.

October 11, 1841.

LONDON AND BRIGHTON RAILWAY.—Notice is hereby given, That the Engine Drivers of every train have received orders to take an extra quarter of an hour in the performance of every Journey during the winter months, to commence from this day. An altered Time Table, in conformity with the above, will be issued prior to the 1st of November, and any future alterations which may become necessary will be made only on the 1st of the month.

By Order,

THOMAS WOOD, Secretary.

10, Angel court, Throgmorton street,
October 13th, 1841.

LONDON, EDINBURGH, AND DUBLIN GUARANTEED MUTUAL and PROPRIETARY LIFE ASSURANCE COMPANY, 3, Charlotte-row, Mansion House; St. Andrew's-street, Edinburgh; Fleet-street, Dublin.

DIRECTORS.

Alexander Anderson, Esq.	Kennett Kinsford, Esq.
John Atkins, Esq.	John M'Guffie, Esq.
James Bidden, Esq.	John Maclean Lee, Esq.
Captain F. Brandreth	J. Marmaduke Rosseter, Esq.
Vice-Admiral Robert Honyman	James Hartley, Esq.
Benjamin Hill, Esq.	Alexander Robertson, Esq., Managing Director.
John Johnson, Esq., Ald.	

Solicitors—Messrs. Palmer, France, and Palmer.

Secretary—F. Edgell, Esq.

Important improvements have been introduced into *Life* Assurance practice by this Company.

The Policies are indefeasible and indisputable, unless they have been obtained by fraudulent misrepresentation.

The Board of Directors satisfy themselves upon the various questions proposed before they enter into contracts of Assurance; and frame their Policies in such terms as to preclude all future questions as to their validity, and thus render them indisputable and negotiable documents of future debt against the Company.

Parties may be assured either upon the participating or non-participating plan; the assured are relieved of all responsibility, and the participating class is entitled to the whole of the profits upon that branch of the business.

Table to assure £100, with addition of Profits.

Age 25.	Age 35.	Age 40.	Age 45.	Age 50.	Age 55.
£2 2 7	£2 15 10	£3 5 0	£3 15 5	£4 10 7	£5 18 8

Persons interested in the Lives of Nominees or Debtors may, for a trifling extra Premium, be relieved from the risk of their Policies being forfeited by the parties going to foreign countries.

One-half of the Premiums may remain unpaid for seven years, affording a greater facility for loan transactions and family provisions than any other plan which has been suggested.

Credit Table to assure £100, payable at death.

Age 20.	Age 25.	Age 30.	Age 40.	Age 45.	Age 50.
£0 18 0	£1 0 7	£1 3 7	£1 11 5	£1 16 6	£2 3 9

The usual Commission allowed to Solicitors and Agents; and Medical Gentlemen are in all cases remunerated for their reports.

BRISTOL AND EXETER RAILWAY COMPANY.—TENDERS FOR LOANS ON DEBENTURE.—The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising therefrom, in sums of not less than £200. for terms of three, five, seven, or ten years, on interest at the rate of Five per cent. per annum, payable half-yearly at the Bank of Messrs. Glyn, Hallifax, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Prince's street, London, or Bread-street, Bristol.

By order of the Board of Directors,

J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol.

BRISTOL AND EXETER RAILWAY COMPANY.—INTEREST ON PAID UP CALLS.—Notice is hereby given, that the Interest on Paid Up Calls, for the Half-year ending on the 6th inst.. may be Received at this Office, on Monday, the 18th of this Month, or on any following Monday, between the hours of twelve and three.

Shareholders resident in London may receive their cheques after the 18th inst., at the office in Princes-street; those at Manchester, from Mr. Francis Parker; those at Exeter, from Dr. Miller; and those at Plymouth, from Mr. Alfred Hingston.

To those resident in other places the Interest will be remitted.

By order of the Directors,

J. B. BADHAM, Secretary.

Bristol, Office 30, Broad-street,
1st October, 1841.

NOTICE IS HEREBY GIVEN, that a Special General Meeting of the Proprietors of Shares in the YORK and NORTH MIDLAND RAILWAY COMPANY, will be held in the Directors' room, at the Railway Station in Tanner Row, in the City of York, on Tuesday, the 19th day of October, 1841, at 12 o'Clock at noon, for the purpose of taking into consideration a proposal that the said Company shall unite with certain other Railway Companies in taking a lease, upon certain terms to be submitted to the meeting, of a railway which is proposed to be made from Darlington, in the county of Durham, to join the Durham Junction Railway, in the same county, and of adopting such measures in reference thereto as may appear advisable.

GEORGE HUDSON,
Chairman of the Directors of the York and North Midland Railway Company.

Dated Sept. 30th, 1841.

BIRMINGHAM AND DERBY JUNCTION RAILWAY.—New Shares.—Fourth Call of £5 per Share, making £25 per Share paid up.—The Directors of the Birmingham and Derby Junction Railway Company having resolved that an INSTALMENT of £5 on each of the New Third Shares in this undertaking, created under the provisions of the Act relating thereto, passed in the session of Parliament (3 Vict. Capt. 51) payable on or before the 5th day of November next, should be called for, proprietors of such New Shares in this Company are hereby required to PAY, on or before that day, to any of the undermentioned Bankers, the sum of FIVE POUNDS on each of their respective New Shares:—

BANKERS.

London—Messrs. Glyn, Hallifax, Mills, and Co., Lombard-street.
Birmingham—The Birmingham Banking Company.
Manchester—The Manchester and Salford Bank.
Derby—Messrs. W. and S. Evans.
Burton-upon-Trent—The Burton, Uttoxeter, and Staffordshire Union Banking Company.
Sheffield—Messrs. Parker, Shore, and Co.

The bankers have been severally instructed to charge interest at the rate of £5 per cent. per annum, according to the provisions of the Act above referred to, from the 5th day of November next, on all sums which shall be tendered after that date.

(Signed) HENRY SMITH,
Chairman of the Board of Directors.
THOMAS KELL, Secretary.

Waterloo-street, Birmingham, Oct. 8, 1841.

EXTENSIVE SALE OF RAILWAY PLANT.—To be Sold by Auction by Mr. BARTRAM, on Wednesday the 27th of October, (if not previously disposed of by private contract,) the extensive and valuable railway plant used by Mr. Samuel Hemming in the construction of five miles of the Great Western Railway, comprising amongst other things, a capital Locomotive Engine, Tender and Tank; several hundred tons best Staffordshire flanged Iron Rails, 36lb. to 44lb to the yard; several hundred large Earth Waggons, 2 feet 6 inches wheels, 4 feet 8½ inches gauge; a number of Carts built on the best construction; several thousand Sleepers, Wheeling-planks, Wheelbarrows, Horse Run Poles, Wheels, Chairs, Centerings, and a great variety of iron work and timber.

The plant is lying principally near the Railway Station at Corsham, Wiltshire, where it may be viewed on application to Mr. Crawford; and further particulars may be obtained of Mr. Bartram, the Auctioneer, Bath, or of Mr. Samuel Hemming, Bristol.]

The following form of Bequest is recommended to those charitable individuals who may feel disposed to assist the Infirmary by Will:—

"I give and bequeath out of such part of my personal estate as may lawfully be applied for that purpose, the sum of £ to the Treasurer, for the time being, of the 'INFIRMARY FOR THE RELIEF OF THE POOR AFFLICTED WITH FISTULA, AND OTHER DISEASES OF THE LOWER INTESTINE,' established in London, which sum shall be for the use and benefit of the said Infirmary: and the receipt of the person who shall be Treasurer thereof at the time when the above Legacy is paid shall be a good discharge to my Executors for the same."

Subscriptions will be thankfully received by the Treasurer; at the Banking-houses of Jones, Loyd, & Co.; Barnard, Dimsdale, & Co.; and Messrs. Ransom, Pall Mall East; or. by W. B. Ogden, Esq., Honorary Secretary, St. Mildred's Court, Poultry.

TUESDAY'S SALE.—FIFTY-FIVE CART HORSES.

To Brewers, Distillers, Factors, Corn and Coal Merchants, Contractors, and Wharfingers, also the Nobility and Gentry.

TO BE SOLD BY AUCTION by Mr. DIXON, at his Repositlory, Barbican, on TUESDAY, October 19, 1841, commencing at 12 o'clock, 30 fine-shaped, active, powerful, seasoned CART HORSES, including a splendid entire Suffolk chesnut horse, the property of Mr. Thomas Hill, of Shenfield, sold in consequence of his having completed the Balcombe Tunnel and Hayward's Heath contracts, on the Brighton Railroad.

Twenty-five very superior, valuable, young, powerful Cart Horses, the property of Mr. John M'Kay, have been employed on the works of the Southampton Docks, sold in consequence of having partly completed that extensive contract.

☞ The above is a very superior stock of young Draught Horses, from 15 to 16 hands high, remarkable for power and activity,—are just taken from the work—without exchange or addition—and positively for sale without the least reserve.

Colours,—Bays, Greys, Chesnuts, Browns, and Blacks.

On view, and Catalogues had, two days before the sale.

THIRTY VALUABLE, YOUNG, SOUND CART HORSES.

TO BE SOLD BY AUCTION, by Mr. DIXON, at his Repository, Barbican, on FRIDAY, October 22, 1841, commencing at One o'Clock precisely, Thirty remarkably fine-shaped, young, powerful CART HORSES, the genuine well-known excellent stock of Mr. Thomas Hool, that have been employed on the Merstham Tunnel contract of the London and Brighton Railway. Sold in consequence of having completed it.

Colours—Bays, Blacks, Browns, Greys, and Chesnuts.

Among which are several calculated for Funeral Carriage Work, particularly a remarkably handsome Black Entire Horse, 6 years old, unequalled for beauty and action; also, an elegant Grey Cob, exceedingly fast, and clever in harness, and rides well in all his paces,—up to high weight either on road or field.

*** The above lot of superior seasoned Draught Horses, are worthy the attention of Brewers, Distillers, Wharfingers, Wholesale Warehousemen, Corn and Coal Merchants, Contractors, and all persons wanting them for immediate work, having been selected with great care and judgment, regardless of expense, and being now in fine working condition.

On view and catalogues had two days before the sale.

ON SALE.—TWO NEWLY-FINISHED SIX WHEELED LOCOMOTIVE ENGINES, with 12 inch cylinders, copper fire-boxes, 5 feet driving wheels, and of the usual gauge.

The engines embody all the latest improvements in their valve gearing and motions.

Canal street Works, Manchester.

NORTH MIDLAND RAILWAY.—SPECIAL GENERAL MEETING.—Notice is hereby given, That a Special General Meeting of Proprietors of the North Midland Railway will be held at the Railway Station, Leeds, on Friday, the 29th instant, at 12 for 1 o'clock, for the purpose of considering and determining on the expediency of authorising the Directors, in concurrence with the other Railway Companies interested in the completion of the line of railway between London and Newcastle, to adopt measures for forwarding an application to Parliament in the next Session for an Act to make a junction railway between the Great North of England Railway at Darlington, and the Durham Junction Railway, for which the requisite notices have been given, either by guaranteeing to the subscribers to such undertaking a certain amount of profit, or by such other means as may be considered best calculated to effect the desired object.

WILLIAM LEAPER NEWTON, Chairman.
JAMES HUBBARD, Deputy Chairman of the Board of Directors.
HENRY PATTESON, Secretary to the Board.

LONDON AND BLACKWALL RAILWAY COMPANY.—Second Instalment of £2 per Share, new issue.—Notice is hereby given, That in pursuance of a resolution of the Board of Directors, the proprietors of this Company are required to PAY a CALL of £2 per Share on each of their respective new Shares between the 16th and 19th of November next, both days inclusive, at the Company's Offices, 60, Fenchurch-street, and the memorandums issued for the new Shares must at the same time be left for registration.

WILLIAM ROUTH, Chairman,
JOHN WARMINGTON, Secretary.

Offices, 60, Fenchurch-street, October 20, 1841

BRISTOL AND EXETER RAILWAY COMPANY.—TENDERS FOR LOANS ON DEBENTURE.—The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising therefrom, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest at the rate of Five per cent. per annum, payable half-yearly, at the Bank of Messrs. Glyn, Halifax, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, 4a Prince's street, London, or Broad-street, Bristol.

By order of the Board of Directors,
J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol.

ANDREW SMITH'S PATENT WIRE ROPES, for STANDING RIGGING, LIGHTNING CONDUCTORS, STROPPING OF BLOCKS, MINING, RAILWAY, and GENERAL PURPOSES; about half the Size and Weight of Hempen Ropes, and 25 per cent. cheaper. Testimonials to that effect, with Specimens, may be seen, and every information obtained, at the Office, 70, Old Broad street, City; 62, Princes-street, Leicester-square; Manufactory, Mill-wall, Poplar; and also of the following Agents —

Robertson and Co., 12, Goree Piazzas Liverpool.
Mathias Dunn ..... Newcastle-upon-Tyne
Joseph Bothway ..... Plymouth.
John Thompson and Co. ..... Wigan.
J. T. Tregenas ..... Truro.
Thomas Mooney and Son ..... Dublin.
Coates and Young ..... Belfast.
James Kibble and Co. ..... Glasgow.
James Gunn ..... Leith.
John M. Beatts, 14, Clement's-lane, High street, Dundee.

This Rope has been in use for standing rigging in her Majesty's navy, and a great number of merchant vessels, for upwards of six years, and is giving the highest satisfaction. It is also employed in various mines and railways in different parts of the kingdom, but reference is particularly made to the London and Blackwall Railway, where it has been in use upwards of twelve months.—"It gives entire satisfaction, and has never broken."—*Vide extract of the Tenth Report, Thursday, 19th instant.*

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secrecy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

This day is published,

TUCK'S MAP OF THE RAILWAYS throughout ENGLAND and WALES to the Capital of Scotland, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s. 6d., in paper covers, 1s.; mounted on canvass, in cloth case, 2s. 6d.; on rollers, 3s. 6d.

Published at the *Railway Times* Office, 122, Fleet street, and sold by Groombridge, Panyer alley, and R. Tyas, Paternoster row; Hyde & Co. and G. Bell, Fleet-street, Mann, Cornhill; and by all booksellers and Newsmen.

ROBINSON'S RAILWAY DIRECTORY FOR 1841, containing the Names of the Directors and principal Officers of most of the Railways in Great Britain, derived from authentic sources, price 1s. *Railway Times* Office, Fleet-street.

Just published, a new Edition of ROBINSON'S

RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Map, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Price 1s., in cloth. *Railway Times* Office, and Hyde and Co., Fleet street.

Just published,

MAPS OF ALL THE LINES OF RAILWAY through ENGLAND and WALES, showing the country in their immediate vicinity on a larger scale than was ever before displayed in a sheet pocket map, with a compendium of Railway information. In paper cover 1s., in cloth 1s. 6d.

Published at the *Railway Times* Office, 122 Fleet-street, and sold by all booksellers.

EASTERN COUNTIES' RAILWAY.—CONTRACTS FOR RAILWAY CHAIRS.—The Directors are ready to receive TENDERS for the supply of from 500 to 1000 Tons of cast-iron Chairs, to be delivered at stated periods, according to specifications to be seen at the Engineer's Office, High street, Shoreditch, until the 8th November next, after which day no Tender can be received. Tenders to be sealed and addressed to the Directors of the Eastern Counties' Railway, High-street, Shoreditch, endorsed "Tenders for Chairs."

By order of the Board,
A. BULKELEY, Secretary.

Offices, High-street, Shoreditch,
20th October, 1841.

THE RAILWAYS OF GREAT BRITAIN AND IRELAND practically described and illustrated. By FRANCIS WHISHAW, Civil Engineer, M. INST. C. E.—The flattering testimonials which the author has received from various quarters, as to the utility of the first volume, which was produced at an expense of upwards of One Thousand Pounds, and Sixteen Months constant attention, induce him to propose to the railway public the production of a second volume, which, however, can only be done on the plan of subscription.

Railway proprietors, therefore, and others who would like to be in possession of much additional information on the important subject of railways, will be so kind as at once to forward to the author their names as subscribers to the Second Illustrated Volume which would be issued at the price of One Guinea.

THE RAILWAYS OF BELGIUM practically described and illustrated, in One Octavo Volume, price 10s. 6d., may also be produced in the same manner.

FRANCIS WHISHAW.

Gray's Inn, London, and Haverfordwest, Pembrokeshire, October 4th, 1841.

THE LONDON AND BRIGHTON RAILWAY GUIDE, illustrated by the Official Map and Section, and a full description of the Line and adjacent country; together with a Time and Fare Table, and a List of Hackney Coach and Cab Fares to the Stations, from all parts of London and Brighton.

London: Published by J. R. Jobbins, 3, Warwick-court, Holborn; R. Tyas, 8, Paternoster-row; Tilt and Bogue, Fleet-street; J. Weale, Architectural Library, Holborn; J. Cross, Holborn; Letts, Royal Exchange; H. S. King, Stationer and Bookseller to the Queen Dowager, 1, North-street, Brighton; and at the *Railway Times* Office, Fleet-street. Price One Shilling, bound in cloth.

Just published, price 7s. 6d.,

A LIST OF ALL THE PATENTS FOR INVENTIONS IN THE ARTS, MANUFACTURES, &c. &c. By ANDREW PRITCHARD.

To Inventors, Patentees, and Manufacturers, this work will be found of great utility, as by it they will be enabled to ascertain all the Patents taken out on any particular article, the names of the Inventors, the date of the Patent, and consequently the time it will remain in force. To Solicitors engaged in making assignments, licenses, &c of Patents, it will be valuable for reference. It contains 6,277 Patents.

Also, price 30s.,

A HISTORY OF INFUSORIA, Living and Fossil, with 500 coloured Engravings.

Also, price 1s.,

A LIST OF 2,000 MICROSCOPIC OBJECTS, with remarks, &c.

Whittaker & Co., Ave Maria-lane; Pritchard, 162, Fleet-street.

Just published.

TO AGRICULTURISTS, LANDOWNERS, AND SURVEYORS.—MODEL MAPPING as Suggestive of a general and economic System of Drainage and Irrigation. Royal 8vo., with Plates, price 2s. 6d.

John Weale, Architectural Library, 59, High Holborn; and Wm. Grapel, Church-street, Liverpool.

REPORT OF THE SELECT COMMITTEE OF THE HOUSE OF COMMONS ON 11TH CLAUSE OF THE RAILWAY REGULATION BILL.

MINUTES OF EVIDENCE.

(*Continued from page* 1059).

1195. Do you remember the next question that was put: "Do you think it would be possible to give a discretionary power of any value to the Board of Trade, which, if exercised without common sense, might not produce the most injurious results to the Railway Companies? It is impossible to conceive of such a regulation being issued."—No; I cannot say that I carry it in my mind. What I have stated is with regard to the Government having the power. But besides the electric telegraph, there is a regulation which we have on the Greenwich Railway for the prevention of accidents, which would be exceedingly expensive upon many railroads where the receipts are less than ours. In cases of thick fog, we have men stationed so near one another that they can hear one another talk. That would be very expensive upon a railway where the receipts are very small per mile. Our receipts are 250*l.* a mile a week. There are some railways where the receipts are not more than 20*l.* per mile. It appears to me, also, that this power, if entrusted to the Board of Trade, would have the effect of operating as a bar to improvements in the general arrangements and management of the railways. With reference to that, Mr. Brunel stated something with regard to the improvement of signals; and it appears to me that there is another case in point, in regard to the use of four-wheeled and six-wheeled engines. In the first instance, four-wheeled engines were used on the Liverpool and Manchester Railway for some time; subsequently the six-wheeled engines were adopted, and were generally used till the London and Birmingham began to use four-wheeled engines, which they have used exclusively. Now, after a trial of both those sorts of engines for 10 years, the opinion is still far from being settled which is the best; some advantages have been found in each, and it is quite clear that a matter of this kind cannot be ascertained by a few experiments; it must be tried upon a large scale. Now, if you can imagine the Board of Trade to have had this power, they would probably have given an order upon the subject before these experiments had been tried by the London and Birmingham; and even if they had not, the mere apprehension of their power to disallow the four-wheeled engines would probably have prevented their going to such an expense as was necessary to ascertain which was the best, and you would never have had the mass of facts you have with regard to the comparative merits of the two engines. I believe that is all I have to say with respect to general objections to the discretionary power.

1196. Chairman—Will you now state what you have to say with respect specially to your railway?—In the first place, with regard to the adoption of time-tables, that cannot be applied to the Greenwich Railway; our traffic upon Sundays and holidays is such that we are obliged to go as soon as the trains are filled.

1197. Mr. Labouchere—A limitation of 15 minutes is obviously inapplicable to any short line, such as the Greenwich!—It is, and it is obviously inapplicable on longer lines where the stations are very near one another.

1198. That would probably be only the case upon short lines?—Upon some of the long lines the stations are near each other where there are large towns.

1199. Chairman—Have you any time-tables upon your railway?—To this extent we have time-tables; we run every quarter of an hour upon week days, and we do the same upon Sundays and holidays, except when the crowd becomes great.

1200. What regulations have you for the trains that come upon your railway from the Croydon line?—The trains that come upon our railway from the Croydon line are started at fixed times, and have fixed time-tables.

1201. Have they not fixed times to come upon your railway?—As far as they can keep them according to those time-tables.

1202. What is the rule which you have with reference to their coming upon your line of railway; do they stop at the point of junction till one of your trains has passed, or do they come on without knowing whether one of your trains has passed, or is immediately going to pass?—It depends upon a signal given at the switches.

1203. If you have no time-table with reference to your own train, how can the man with the signal know whether a train is coming or not!—He can see to a considerable distance.

1204. As long as there is no fog he can see for a considerable distance, but in cases of fog what means have you then?—We have men stationed along the line at such a distance as to see a train coming, and to give a signal to one another.

1205. In a fog, you station so many men along the the point of junction that they can communicate to one another the approach of a train?—Yes.

1206. Lord Granville Somerset—Do you mean to state that you trust entirely to the men along the line to inform the signal-man at the Croydon junction of the coming up of a train, in case of a fog?—I am not aware that we have any other mode.

1207. How near is each man to another?—About 40 or 50 yards.

1208. How many men have you between the Croydon junction and Greenwich?—Upon occasions like that we have about 10 or 15 men; they are near the stations; they are not in the intermediate part.

1029. What is the distance from the Croydon junction to the London station!—A mile and three quarters.

1210. What is the distance from the Croydon junction to the Greenwich station!—About two miles.

1211. What do you mean by 10 or 15 men; does that apply between the Croydon junction and London, or between the Croydon junction and Greenwich?—I think it would be the same either way.

1212. Is there not a great deal of difference, upon such an occasion as that, between the number of 10 and the number of 15, as to practical communication?—The thickness of the fog would make some difference; I am including what we have both at the Croydon junction and at the London station also.

1213. Is it the same after dark?—Not after dark; they see the lights of the train.

1214. You say that in case of fog you station men to give intelligence, and that upon the intelligence they give, the prevention of collisions between your trains and the Croydon trains depends?—Yes, mainly.

1215. How many men are distributed between the junction of the Croydon Railway and your Greenwich station, in the case of a serious fog!—I think there would be about eight or ten men at the entrance of the station just before the switches, at the London end, and about as many more at the junction of the Croydon and Greenwich Railway.

1216. How are the men at the switches to tell what trains there are coming up?—From those men being in advance of them; they extend over a space of a quarter of a mile.

1217. Then your prevention is this, that there is a line of a quarter of a mile of those men on either side of the junction, who are to inform the persons at the junction that a train is coming or not coming!—Yes.

1218. Do you think that a sufficient prevention!?—I think so; we have never had any accident at the junction, and about 70,000 trains have passed over that point since the Croydon Railway was opened.

1219. Do you mean to say that since the Croydon Railway has been opened, and using your line, there has been no collision!—I do not say that; there was one accident close to the London station, in a thick fog.

1220. Were those men placed as you now describe, at that time?—I believe they were; the accident arose from the neglect of our engine-driver not observing the signal, for which he was discharged.

1221. The first train was stopped by some accident, was it not?—I think it was; there was one Croydon train and two of ours.

1222. Was the Croydon train first!—No; ours was first.

1223. Was not the third very near coming in collision, as well as the second?—I think it did come into collision. The first collision arose from the Croydon train going at its full speed to the London terminus; instead of which, knowing it was behind its time, and that the Greenwich train, which ought to have been behind it, must be in advance of it, it ought to have slackened its speed; and by that means it ran into the first train, just at the station. The third train was a Greenwich special train, dispatched with soldiers.

1224. Was there not some discussion as to whose fault it was!—We admitted that it was the fault of our engineer, but we said it was the fault of theirs also.

1225. With regard to night, in the dark, what means have you of giving information to the Croydon Railway whether a train is coming or not?—We have signal lights.

1226. Are they always safe?—I consider so.

1227. You have had no accident the last six months, have you?—We had an accident not very long ago.

1228. What were the circumstances of that accident!—It was the breaking of an axle of an engine.

1229. How soon did the next train come after that?—It must have been a quarter of an hour.

1230 If the train had been within five minutes, what would have been the result?—I do not think the result would have been at all different, for there was time enough for the conductor of the train to go back with lights to stop the train coming up.

1231. Where did they stop the second train?—I cannot say how near to the other, but they stopped it before it came to the other.

1232. But then they had time to go some distance?—Yes.

1233. As you allow an interval of a quarter of an hour, that interval of a quarter of an hour afforded them time to go back and meet the next train?—Yes.

1234. Supposing the next train had started within five minutes, would that have been sufficient?—I have no doubt it would; because we have had the same thing on a Sunday evening, when they started every five minutes.

1235. Can you state how far the men went back before they stopped the other train!—I cannot state that; we have had similar occurrences with trains that have started between those intervals.

1236. In the dark?—In the dark.

1237. How have you prevented accidents in those cases?—By sending men back with lights to caution them.

1238. When the Dover Railway is finished their trains will have to travel upon three different lines besides their own!—Yes.

1239. They will have to travel upon the Greenwich, the Croydon, and a portion of the Brighton?—Yes.

1240. Under what regulations will that be done?—I am not aware that any regulations have been adopted yet; neither the Brighton nor the Dover Railway is in sufficient forwardness to use the line.

1241. Has the Dover Railway any power of making conditions with you as to their traffic? Suppose the Dover Directors should be such extraordinary people as to suppose that there must be a quarter or an hour interval between each train, what power have they to enforce it, so far as your portion of the line is concerned!—I apprehend the owners of the railway would have the power of regulating the intervals.

1242. That is to say, that whatever the Dover Directors might feel upon the subject, you would have the power of sending your trains five minutes after theirs, or five minutes before, it you liked it?—I think so.

1243. And you think that is a power which ought to be left perfectly uncontrolled by any other party!—Yes; I do not see what good could be obtained by attempting to control it.

1244. Mr. Labouchere—You said that although you were of opinion that a large police force upon a short railway, such as yours, conduce to public safety, yet you thought the amount of that force should be determined very much with reference to the receipts of the Railway Company, as it would be hard to force upon a railway that was not in the receipt of so much money as yours is the same precautions which are taken upon your railway!—Yes; I instanced that as a case where the regulations of one railway might be too expensive for another.

1245. Supposing a railway, the receipts of which were small, were in consideration of that circumstance very greatly to reduce the police force upon it to a degree which was manifestly inconsistent with the public safety, do you think that would be a proper state of things to be allowed!—No, I think not; but I think there is the greatest security that that would not be the case. The great interest of the Company is to ensure safety, and it would be the most certain way of forfeiting that were they to reduce their police force greatly.

1246. You stated before that it was reasonable to suppose that in determining the amount of police force to be placed upon any railway, the Company would take into consideration the state of their receipts?—Large receipts evidently involve a large quantity of traffic; if they have less receipts, they must have less traffic, and less necessity for such a police force; but the Board of Trade might think differently, and if they did they would have the power to enforce it.

1247. Mr. Greene—In the arrangements made between the Greenwich, the Croydon, the Brighton, and the Dover, you all act as independent parties?—Not in every instance. The Croydon, the Brighton, and

Digitized by Google

the Dover are going to have a joint station, in which they will be joint proprietors, at London Bridge, and the Greenwich Railway Company are not proprietors with them in that.

1248. With respect to the times at which the carriages of one Company shall enter upon the line of another, that must be matter of private arrangement among yourselves?—At present we have none but the Croydon using the line. The Committee are probably aware that within a few months the Greenwich Railway, which is now in progress of being widened, will be double the width, and then those three railways will go upon entirely separate rails from the Greenwich traffic.

1249. But you will be obliged to come to arrangements among yourselves upon a great variety of other points?—Yes.

1250. Supposing that any one of those railways made terms which the others thought extremely unreasonable, is there any power of controlling that in any shape or form?—I think the Greenwich Railway Company, as proprietors of the road, have the power of objecting to anything which might be dangerous, such as the trains starting too near one another, or having objectionable engines.

1251. Supposing that, in making their terms with the other Companies, they were to do anything which the other Companies thought extremely unreasonable, is there any mode of settling the differences between those Companies?—I am not aware that there is; no such difficulty has arisen.

1252. Supposing such difficulty to arise, do you apprehend there would be any objection to having some impartial persons—the Board of Trade, for instance—who might arbitrate in the matter?—I think there would.

1253. What would be the objection?—I think it would be very doubtful whether they would thoroughly understand all the details to be considered in the matter.

1254. If the Greenwich, for instance, should make terms which the others may think extremely unreasonable, what is to happen then?—I should imagine that the result would be that the traffic would fall off very much indeed, if the Greenwich were to object to any reasonable arrangement; but that would obviously be so much against their interest, that it cannot be anticipated.

1255. Have not those several Railway Companies come before a Committee upon one occasion, and complained of the difficulties which they found in making their arrangements with the Greenwich Company?—No, that was not the cause; they did not come to complain of the difficulty of making arrangements; they came to Parliament to request it to allow them to take land from the Greenwich Company to build upon it

1256. Was not that in consequence of the Greenwich Company insisting upon terms which they thought were unfair?—I am not aware to what you refer.

1257. Was not there a dispute as to the sum which they were to be charged for passing over the Greenwich Railway?—That was not the origin of their coming to Parliament: the origin of their coming to Parliament was a recommendation from a Committee of this House that some steps should be taken to prevent the four Companies using the Greenwich viaduct, without some further arrangement being made to ensure safety; and both parties came with their own plan.

1258. Lord Granville Somerset—Was there not evidence given on both sides, before a Committee which sat two years ago upon the subject of railroads, with reference to a disagreement between the Croydon and the Greenwich?—Yes, they were both before Parliament at that time.

1259. Mr. Labouchere—Did not the Croydon, the Brighton, and the Dover Railways enter into an arrangement by which they voluntarily bound themselves to appeal to the Board of Trade if they could not agree?—I was not a Director of the Brighton Railway at that time, and cannot answer for what they did.

1260. Lord Granville Somerset—How long have you been a Director of the Greenwich Railway?—Two years.

1261. You are not aware that there was a very serious disagreement between the Greenwich and the Croydon, and that evidence was given with regard to that before the Committee which sat upon railways in 1839 and 1840?—I do not at this moment recollect the subject of the disagreement you refer to.

1262. Mr. Loch—Were you connected with the Greenwich Railway when an application was made by them to Parliament last session?—Yes.

1263. You are therefore aware that the House referred it to a Committee to consider the disagreements which existed between them and the other railroads, and that the Committee interfered in arranging the matter?—Yes, I am aware of that perfectly; that was regarding the different mode in which the two Railway Companies proposed to satisfy the requirements of the Railway Committee.

1264. Was not there a disagreement about the station, for one thing, and did not the Committee insist upon the station being altered?—I think both Companies were aware that it was desirable to change the stations.

1265. Are you not aware that there was a disagreement, and that the Committee insisted upon the station being altered?—That was when they were before Parliament.

1266. Have they not gone on disputing ever since; the Greenwich Railway and those other three railways?—No.

1267. Have they come to any amicable arrangement?—We have not definitively fixed everything yet, but we are far from having any disagreement.

1268. As to the rate of payment at which those three railways are to travel over your line, is there no disagreement?—No, that has not been mooted at all.

1269. Was there not a disagreement upon that subject, previous to that arrangement made under the authority of the Committee?—Yes, the Croydon Company wanted to take the land of the Greenwich Company, and widen the road themselves. The Greenwich Company proposed to widen it, if Parliament would give them extra toll.

1270. Mr. Labouchere—Have accidents occasionally happened upon the Greenwich Railway by trains running off the line?—Not accidents to life or limb, but trains have got off the line.

1271. How do you account for that?—I cannot say; we do not go the full speed that they go upon most other railroads; but I do not know that that would have any great effect.

[The following papers were delivered in and read.]

Railways Committee Room, Whitehall,
March, 1841.

My Lord,—The Committee at the meeting held at Birmingham on the 19th January, 1841, which was adverted to in the evidence taken before the Select Committee on Wednesday last, beg leave to state distinctly, through your Lordship, that no power whatever was conferred upon them to bind Railway Companies in their communications with Government; which indeed is obvious, not only from the resolutions (a copy of which is enclosed) under which they were constituted, but from the fact that different deputations from several Railway Companies waited upon, and were received by the President of the Board of Trade, and expressed their respective views upon the subject of the Bill now before Parliament.

They are anxious also, with the consent of Mr. Labouchere, to record the admission which he has been good enough to make, that the Committee objected throughout to the principle of any discretionary power being vested in the Board of Trade; and that it was upon his suggestion only, and merely as an alternative in case of such discretionary power being forced upon them, that certain limitations of that power, which he subsequently declined to admit, were submitted to his consideration.

We have, &c.,

(Signed) GEO. CARR GLYN.
C. RUSSELL.
W. CHAPLIN.

To the Chairman of the Select Committee
on Railways.

Birmingham, 19th January, 1841.

At a numerous meeting of Railway Directors, held this day at the large room, Queen's Hotel, Birmingham; George Carr Glyn, Esq., in the chair.

Moved by Charles Hood, Esq., seconded by Robt. Garnett, Esq.—

Resolved unanimously—

1. That it be recommended to all Railway Companies that a permanent Committee be formed for the purpose of watching the interests of railways; and that such Committee shall have full power to call a general meeting of delegates from the different Companies, where and whenever it may be deemed necessary; or to communicate, by circular or otherwise, any proposition which they may consider desirable. That such Committee shall have liberty to engage proper officers, who shall receive adequate salaries, or remuneration; which, together with any and all other requisite expenses, shall be defrayed from a fund to be raised by a *pro rata* subscription from the Railway Companies that shall approve of such arrangement.

2. That it is desirable that such Committee consist of resident Directors of railways terminating in London.

3. That George Carr Glyn, Esq., Charles Russell, Esq., and William Chaplin, Esq., be the Committee, with full powers to carry into effect the objects above stated.

4. That a copy of the above resolutions be transmitted to the different Railway Boards, soliciting their concurrence, and requesting the favour of an early reply, addressed to Richard Creed, Esq., Euston Station, London.

GEORGE CARR GLYN, Chairman.

(To be continued.)

LONDON AND BIRMINGHAM AND GREAT WESTERN RAILWAYS—GOODS' TRAFFIC.

Receipts.

Birmingham.—Week ending October 26, 1839, 13 months open throughout	£1,815 0 0
Great Western.—Week ending October 17th, 1841, 15 weeks open throughout	2,127 0 0
Increase over the Birmingham	£312 0 0

—*From a Correspondent.*—[Yes; but look at their respective lengths. The Birmingham, with its branch, is 119¼; the Great Western 169¼ miles.—ED. R. T.]

RAILWAY LABOURERS—EASTERN COUNTIES' RAILWAY.

In the neighbourhood of Ingatestone (Essex) upwards of 300 railway labourers have, in consequence of the bad weather, been for some time past out of work and in great distress, and many fears have been in consequence excited in the neighbourhood, though hitherto the poor men have behaved remarkably well. Some of the Essex magistrates have written to the Eastern Counties' Railway Company, calling on them, as they had brought the men there, to do something to prevent them from starving, and to add to their police force, which the Company declined to do, alleging that the men belonged to the contractors, and that, as regarded the police, their scale of expenditure was more ample than that of any other railway. This matter was brought before the Essex Quarter Sessions, and excited some discussion, which, as is usual in such cases, ended in no result; but one remark was made by Mr. Round which, if correct, shows that, either directly or indirectly, the public can call upon the Railway Companies to indemnify them for the danger which the incur under such circumstances. Mr. Round said, it was difficult to see how the Court could interfere, but he thought Mr. Disney was right in saying that the Company was bound to relieve the men. By the 4th and 5th Wm. IV. a provision was made, that wherever public works were going on (railways or other works), if the public peace was endangered by a multitude of persons being collected, and it was thought necessary that more persons should be appointed to keep the peace, the magistrates should have power to swear in constables and call on the Company to pay them. This showed that the Railway Company was in some sense responsible for these people. A gentleman seeing 400 persons in this peculiar situation might call on some of those very persons to assist in keeping the public peace, and call on the Company to pay them. The Railway Company ought not to have returned so ungracious an answer. A sufficient number of the men might be sworn in to make it dearer for the Company to pay them than to make a reasonable provision for the others.—*Morning Post* of this day.

A special meeting of the Brandling Junction Railway Company is to be held on the 25th October, to consider the terms upon which the Junction is to take place, in continuation of the Great North of England Railway.—*Eastern Counties Herald.*

COACH ACCIDENT.—On Friday last the Dundee and Perth coach was on her way to the latter town, and when near Inchture, the leader became restive and sprang over a dyke at the road side. The coach was overturned and one side considerably damaged. There were some passengers on at the time, but they escaped without injury. The driver was considerably hurt.—*Perth Courier.*

YORK AND NORTH MIDLAND RAILWAY COMPANY—SPECIAL MEETING.

[From the *Yorkshire Gazette* of this day.*]

On Tuesday last a special meeting of the proprietors of this Company was held at the Railway Station in York, for the purpose of taking into consideration a proposal that the said Company should unite with certain other Railway Companies in taking a lease, upon terms to be submitted to the meeting, of a railway which is proposed to be made from Darlington, to join the Durham Junction Railway, and of adopting such measures in reference thereto as might appear desirable.

The meeting was very numerously and respectably attended; Geo. Hudson, Esq., the Chairman of the Company, took the chair.

The notice calling the meeting having been read,

The Chairman said, it would probably be the readiest way, as the meetings hitherto held on this subject had not been open to the public, that he should state to them the steps which he had taken, in association with a number of other gentlemen, who had been called together by him, to attend a meeting in York, to consult on the best plan for the extension of the line of railway to Newcastle. In compliance with his circular, a number of gentlemen did him the honour to attend, and he would in the first instance call on Mr. Baker to read the resolutions which had been agreed to, at the two meetings which they had held. After that he would endeavour to state, briefly and fairly, the course which he took in reference to the matter, and the comparative prospects of the eastern and western lines. He commenced this undertaking in his individual capacity, and he thought that the more proper course than for him to have then acted as the Chairman of this Company. He was happy to say that the plan had since been fully considered by the Directors of the Company now assembled, and that they had given it their unanimous sanction and approval.

Mr. Baker then read the following Report of a meeting of Directors of several of the Railway Companies interested in promoting the extension of railway communication from Darlington to Newcastle, held at York, on Monday, the 6th of September last—present, Mr. Hudson (Chairman of the York and North Midland Railway Company) in the Chair; Mr. Dycey, Mr. Oakes, and Mr. Bell, from the Midland Counties' Railway; Mr. Hubbard, Mr. Stansfield, Mr. Houldsworth, Mr. Pease, and Mr. Frost, from the North Midland Railway; Mr. Barstow, Sir J. Simpson, Mr. Davies, Mr. J. Richardson, and Mr. Backhouse, from the York and North Midland Railway; Mr. Oxley, Mr. Plews, Mr. Meynell, Mr. Smales, Mr. Pease, and Captain O'Brien, from the Great North of England Railway; Mr. Clayton, and Mr. Woods, from the Durham Junction Railway; Mr. Brandling and Mr. Longridge, from the Brandling Junction Railway; Mr. Fenwick and Mr. Wood, from the Newcastle and Carlisle Railway.

Mr. Hudson having, on the motion of Mr. Joseph Pease, seconded by Mr. Hubbard, been called to the chair, submitted to the meeting the following resolutions, which were passed unanimously:—

1st. That this meeting is strongly impressed with the necessity of making every exertion to extend the line of railway communication from Darlington to Newcastle, as the best means of ultimately securing a continuous eastern line from London to Edinburgh.

2nd. That such extension is not only of great importance to several of the existing railways both north and south of York, but public convenience imperatively requires the additional accommodation that would be thereby afforded.

3rd. That the most advantageous mode of attaining this object would be to adopt the projected continuation of the Great North of England line (for which an Act is already obtained) from Darlington, for about 15 miles; and then to form a new line (for which plans have already been lodged) to the Durham Junction Railway, from which point to Newcastle there is now a communication by existing railways.

That from the Report of Mr. R. Stephenson it appears [illegible] cost of the proposed railway will not exceed [illegible]

[illegible] though this meeting is perfectly satisfied that [illegible] from the comparative cheapness of its [illegible] the large traffic it must necessarily com[illegible] a profitable undertaking to its proprietors;

[illegible] much indebted to the courtesy of the Editor of the *[illegible] Gazette* for forwarding us proof slips of this [illegible] Ed. R. T.

yet, in the present depressed state of the money market, it does not seem probable that the requisite number of shares would be taken, if offered in the ordinary way, by the public at large; and, under these circumstances, they recommend the following plan for forming a proprietary, and raising the necessary capital:—

1. The capital to be 500,000*l.*, to be divided into 20,000 shares of 25*l.* each.

2. The under-mentioned Companies to take a lease of the new railway for a term of ten years from its opening, and to guarantee the rent in the proportions hereinafter specified, and each Company to have shares allotted to it, to offer to its respective shareholders, in proportion to the amount of rent to be guaranteed by each Company, which is as follows:—

York and North Midland	£8,000
North Midland	6,000
Manchester and Leeds	3,000
Midland Counties	3,000
Great North of England, Newcastle and Carlisle, Durham Junction, Brandling Junction	10,000
	£30,000

N.B.—The four last Companies to settle amongst themselves their respectives quotas of guarantee previously to the adjourned meeting.

3. The rent reserved by the lease to be sufficient to pay 6 per cent. to the shareholders, and interest after that rate to be paid out of the capital to the shareholders upon each call from the time of its being paid.

6th. That it is desirable that application be made to Parliament in the ensuing session for an Act for the proposed new railway.

7th. That the Chairman and two of the Directors of the York Board and one of the Directors from each of the other Boards form a provisional Committee for forwarding the objects of the above resolutions

The Chairman continued. In furtherance of these resolutions we returned to lay the matter before our respective boards, and at our next meeting on the 27th September, the result was stated in the resolutions which the Secretary would now read.

Mr. Baker next read the proceedings at the adjourned meeting of Directors of Railway Companies, interested in promoting the extension of railway communication from Darlington to Newcastle, held at York on Monday, the 27th of September, 1841, at which meeting were present, Mr. Hudson, Chairman of the York and North Midland Company, in the chair; Mr. Dycey and Mr. Oakes, from the Midland Counties' Railway; Mr. Hubbard, Mr. Stansfield, and Mr. Pease, from the North Midland Railway; Mr. Gill, from the Manchester and Leeds Railway; Mr. Barstow, Sir John Simpson, and Mr. Backhouse, from the York and North Midland Railway; Mr. Oxley, Mr. Plews, Mr. Smales, and Mr. Elsley, from the Great North of England Railway; Mr. Wood, from the Newcastle and Carlisle and Brandling Junction Railways; Mr. Harrison, from the Durham Junction Railway; Mr. Blanshard, from the Clarence Railway.

"The Chairman read a letter from the Board of Trade, in answer to an application he had made, from which it appeared that the President of that Board saw nothing in the proposed method of raising the capital to prevent its being a fair subject for an application to Parliament. He also reported that the York and North Midland Railway Board fully concurred in the sentiments expressed in the resolutions passed at the former meeting, and cordially approved of the mode thereby proposed for accomplishing the new line, and that that Board would recommend the plan to their shareholders. Mr. Oxley stated that the Great North of England Railway Board agreed to the general principles of the plan proposed at the former meeting, subject to certain stipulations, contained in resolutions which they had passed. Mr. Hubbard reported that the North Midland Railway Board concurred in the resolutions passed at the former meeting. Mr. Wood reported that the Brandling Junction Railway Board agreed to the resolutions; and that the Newcastle and Carlisle Railway Board had not been able to have a meeting, but that one would be held next day, and he had no doubt of the plan receiving their approval. Mr. Harrison stated that he was authorised to inform the meeting that the Durham Junction Railway Board concurred in the resolutions. Mr. Gill stated, that as no Director of the Leeds and Manchester Railway Board had been able to attend the former meeting, the subject had not yet been regularly brought before that Board, but that he trusted the resolutions would have their concurrence. Mr. Dicey stated that though he, with the Deputy Chairman, and some of his colleagues in the Midland Counties' Railway Direction, highly approved of the plan, and considered it would be very beneficial to that Company, he found it would be useless to bring the subject before their Board, in consequence of the great number of Midland Counties shares held by gentlemen in Liverpool, who were favourable to the plan.

The stipulations under which the Great North of England Railway Board proposed to give its sanction, were then considered *seriatim*, and the following resolutions were passed:—

1. That this meeting dissents from the first and second stipulations, and that the following be adopted in lieu thereof, namely—That the Chairman and two other Directors of the York Board, and Mr. Hubbard, Mr. Gill, and Mr. Wood, be appointed a Committee, to confer with the Directors of the Great North of England Railway Board, in order to ascertain the nature and extent of their claims consequent upon the abandonment of their line north of Darlington, and if practicable, to arranze the amount, and to report the result to the next meeting.

2. That the following, being the third and fourth stipulations, be agreed to, namely—That the Great North of England Railway Company having provided a quantity of blocks, and rails and chairs, for the construction of the northern portion of their line, the Northern Union Railway Company shall take these materials off their hands at a fair valuation: That in the Act to be obtained by the Northern Union Railway Company, a clause shall be inserted authorising the relinquishment by the Great North of England Railway Company of such portions of their line as shall not be required under the new arrangements, and that all claims that may be made on the Great North of England Railway Company, in consequence of this relinquishment of the aforesaid portions of their line, shall be paid or otherwise satisfied by the Northern Union Railway.

3. That the fifth stipulation be rejected.

4 That the sixth stipulation be altered as follows, and agreed to in such altered form, namely—That if the Northern Union Railway Company carry on their works under the powers of the Great North of England Railway Company's Act, previously to obtaining their own Act, the Northern Union Railway Company shall guarantee the Great North of England Railway Company from any pecuniarly or other responsibility arising therefrom, and shall furnish the requisite funds for carrying into execution any contract which the Great North of England Railway Company shall enter into, for the prosecution of the same, and which shall be required by the Northern Union Railway Company.

5. That the resolution, proposing that the Great North of England Railway Company shall guarantee the sum of 8,000*l.* per annum, and that not less than three Directors of that Company be members of the Provisional Committee, be agreed to.

6. That in the Act of Incorporation, provision be made for the exaction of an equal mileage rate for passengers and goods from any one point of the lines in connection to any other point, such rate to be determined from time to time by a Committee of Management, composed of a member from such Board.

7. That the Provisional Committee, appointed at the former meeting, shall consist of the Chairman and three other Directors of York Board, three Directors of the Great North of England Board, two Directors of the North Midland Board, one Director of the Manchester and Leeds Board, and two Directors from the united Boards of the Newcastle and Carlisle, Brandling Junction, and Durham Junction Railways.

8. That the Directors of the several Companies, proposing to contribute to the guarantee, be requested to call special meetings of their proprietors, for the purpose of their sanctioning the same at an early period.

9. That the Provisional Committee be authorised in the meantime to take such steps as may be necessary, by giving notices, or otherwise, for forwarding the application to Parliament in the next session.

10. That after the special meetings have been held, the Chairman shall call another meeting at York, for the purpose of advising on and adopting further proceedings."

The Chairman continued—He believed that he had now put them in possession of all the proceedings which had taken place up to this time. The shareholders of this Company were not as yet, in any manner, involved in the matter, and if the plan which he had now to submit to them was opposed by the majority, then the trouble and anxiety which they had taken to advance the interests of this Company would be ineffectual. He looked forward, however, to a different result. He hoped to show that the undertaking of the proposed responsibility would be a benefit to this railway, as it would enable them not only to retain, but also to increase, their receipts. (Hear.) This, as he conceived, resolved itself into a commercial question. They were, as shareholders in the York and North Midland Railway, engaged in a business—he was happy to say a profitable business. Some gentlemen might say that they were content to do well. True: that was a good position to take sometimes; but here they were possessed of advantages, which, unless they embraced, others would readily wrest from them. By the plan proposed, he considered that the guarantee they were called upon to give was perfectly nominal—that the risk was extremely trifling—and that the prospects of increased benefits were so ample and great, that they would abandon the principles of British merchants if they were not to embrace it. (Applause.) First, as to the risk. It was to guarantee 8,000*l.* a year for 10 years. After most carefully estimating the traffic, he was of opinion that not only would the line make 6 per cent., but, as in the instance of the Leeds and Selby Railway, this Company would have a handsome sur-

Digitized by Google

plus to divide among its shareholders. Let them look at the line; it would be the great connecting link between the north and the south. It had an enormous population living upon it, and it abounded in minerals. If it was economically executed, there could be no doubt of its success. The estimates were very satisfactory, and they had put a considerable sum upon them, in addition to the Engineers' calculations, to avoid the unpleasantness of any further calls on the shareholders. He knew that Engineers' estimates were now regarded with considerable distrust, but he had great confidence in them in the present case, as the line was not attended with any difficulties whatever. He believed that the Durham Junction Railway, which adjoined this line, was executed for 15,000*l.* a mile; and taking those statements which he had made to be borne out by facts, he was convinced that the risk of this Company, in its guarantee, was perfectly nominal. (Hear.) Not only should they look at it as a link to Newcastle, but also as the great connecting link to Edinburgh. (Hear.) Last week a meeting had been held at Carlisle, to forward the western line, when a somewhat similar principle was recommended, as is proposed to be adopted by this meeting. The North Union, the Grand Junction, and the Lancaster and Preston lines, are to unite in forwarding a line to Glasgow. The Grand Junction is to subscribe 200,000*l.* to the line, the North Union 50,000*l.*, and the Lancaster and Preston 50,000*l.* more; and it was calculated that the London and Birmingham would also subscribe 300,000*l.*, but he believed that they were mistaken as to any support from that great and influential Company, who would not show partiality to either of the proposed lines, but leave the competing parties to make the best progress they could. He was satisfied any little advantage which the London and Birmingham Company might derive from conveying traffic for a few more miles would never induce them to join the western party in hostility to their eastern friends. (Hear.) The Mayor of Carlisle, at this meeting, had said that he did not at present propose to go farther north than Newcastle; and so, continued his worship, they would still leave unaccomplished the great object of uniting Scotland with England. He would observe upon this remark, that they were in the habit of acting and not talking, and that when they had got the Act for the line to Newcastle, they would then adopt active measures for extending the line to Edinburgh. As to the comparative distances of the two lines:—by the western line the distance from Lancaster to Carlisle is 70 miles, from Carlisle to Glasgow is 101 miles, and then the branch from Symington to Edinburgh is 31 miles more, being a total distance of 202 miles. But on the Eastern line, when they got to Newcastle they would only have 116 miles of railway to make to reach Edinburgh, whilst their western opponents would be burthened with 202 miles. Nor were the advantages in favour of the eastern line confined to distance merely. The western line will have to be carried through works, the like of which have rarely been attempted and never have been accomplished. They would have a granite tunnel on that part between Lancaster and Carlisle a mile and a half in length, and commencing at a depth of 90 feet. Yet they ventured to say, that this portion of their line would be completed for 1,200,000*l.*, which upon the most moderate computation, he was given to understand, could not be done for less than 2,500,000*l.* The Commissioners, in recommending the western line, have done so under the supposition that antecedently to its construction the railway shall have been formed between Lancaster and Carlisle, or that both lines shall be undertaken simultaneously. The Commissioners admit that whichever line first reaches Newcastle or Carlisle, that must be the one to be ultimately carried forward to Edinburgh. They say, "if any parties should be ready to undertake the execution of the proposed western railway, they would certainly be entitled to every facility the Government could afford, provided security were given of a *bona fide* intention of completing the whole line from Lancaster. This condition seems essentially necessary, otherwise a mere pretence may be made, which would lead to no result beyond that of paralyzing any attempt at an east coast route, and thus deprive Scotland altogether of the advantage of railway communication with England. If, however, no parties should be found willing to execute a railway by this western route, under the conditions above stated, and within some definite time, then the east coast line, whether deviated or not, would in our opinion be entitled to the next preference." Such were the opinions of the Commissioners, and he had no doubt that if this Company, and the other Companies interested in the eastern line, sanctioned the proceedings which he had this day offered to their notice, that they would completely paralyze the exertions of those in favour of a western line. On the east line they could do in two years what the western people could not accomplish in seven.

Mr. STEPHENSON—Say ten years.

The CHAIRMAN—He had no doubt that they could reach Newcastle in two years, and he understood that the Edinburgh people were ready to come to Dunbar, a distance of 28 miles, whilst he had no doubt the line from Newcastle to Berwick-on-Tweed, a distance of 60 miles, being remarkably easy of formation, would be taken up by the town of Newcastle, and thus only about 28 miles would remain to complete the whole line to Edinburgh, and that remaining portion was not of a very difficult character. Then as to the gradients on the east line, they are most admirable, but on the western line it as far different; the Commissioners say "That the gradients on Mr. Locke's line are, it is true, of an unusual character; the principal plane being an almost continuous slope of 1 in 123 for a length of 18 miles," or 43 feet per mile; and there is another plane south of Edinburgh 12 miles long, and rising at the rate of 46 feet per mile, or 1 in 113½. It is true that Captain Huish, the Secretary of the Grand Junction Railway, makes very light of these gradients—he considers these extraordinary planes as presenting little difficulties—he imagines that locomotives will be found to run up the hill of Cumberland with facility. If Mr. Stephenson, whose experience as an Engineer is indisputable—if he would vouch for the accuracy of Captain Huish's statements at the Carlisle meeting on this subject, then he (the Chairman) might think there was something serious in them, but that he did not expect, and he knew that Secretaries were like poets, they were allowed to soar a little in their imaginations. (Laughter.) Looking at the character of the two lines, considering that by the eastern line Carlisle would be accommodated as well as Newcastle, bearing in mind the productive, rich, and populous district traversed by the eastern line, remembering the excellent gradients which it would possess, he must say that he was unable to account for the decision to which the Commissioners had arrived, and their Report certainly had no tendency to increase his respect for the productions of gentlemen appointed as Government Commissioners. He did not know that there were any other observations called for by him; by entering on this undertaking this Company would incur little risk, whilst they would be securing a fair prospect of extending the line to Newcastle and Edinburgh—and would thereby secure that traffic which legitimately belonged to them. Every one knew that until very recently the mails and coaches between London and Edinburgh all came by way of York, whilst the mail from London to Glasgow passed so near York as Boroughbridge. He was certain that if the western people possessed the advantages which the eastern country presents they would not lose a single day in commencing the railway; but they know that their position is one of much difficulty. From the extensive nature of the works which they would have to undertake to get from Lancaster to Carlisle he had little doubt they would cost at least 35,000*l.* per mile, or in the whole about 2,500,000*l.* (Hear.) The York and North Midland line at present was a very valuable property, and he had no doubt that its extension northward would vastly increase its value. But not only would the extension add to the benefit of this Company, but it would also confer advantages on this city, and of course, whilst he, in his capacity of their Chairman, made the interests of the Company his first consideration, he at the same time must feel with his fellow-citizens an anxiety to benefit the town which they inhabited. There was one subject on which, probably, some question might arise. It might be said, why does this Company propose to guarantee for 8,000*l.* which is a greater sum than any other line undertakes to do? His answer was, that he considered this Company was in a better position than any other, and that it would derive greater benefit from the increased traffic. They would secure all the traffic from Hull to the north; also all the traffic from south of Normanton, from Lancashire, and from Leeds for Scotland, which would pass over their line. So satisfied was he of the advantage and importance of the undertaking, that were he left to himself, and were he of sufficient responsibility he would gladly take the entire risk himself, and thereby derive the advantage which he was sure must be very large. (Hear.) There were a large number of shareholders residing in London, and knowing it was inconvenient for many of them to leave home, he went up to town and met them on the subject, when a unanimous resolution was come to in favour of the scheme. He might add, that by the resolution of the previous meetings the shareholders of this line, although they would be offered shares in the new Company, would not be bound to take them, and he had no doubt that if any remained the public would gladly avail themselves of them. A word as to the amount of the guarantee. Two plans suggested themselves. One was to guarantee five per cent., the shareholders of the new Company taking the surplus profit, if any; the other was to guarantee six per cent. certain, which it was thought would be the more preferable mode. In conclusion the worthy Chairman moved a resolution, which will be found below.

Mr. LAYCOCK inquired if it was known why the Commissioners appeared to give a preference to the western line in their Report?

Mr. STEPHENSON, C.E., said, he considered the Commissioners had given no opinion at all on the point submitted to them—they ought to have given a decided opinion, taking the present extent of existing lines, which was the most practicable line, the eastern or western. Instead of that, they overlooked the difficulties to be encountered in getting to Carlisle, difficulties which he believed could never be overcome. The eastern line from Newcastle to Berwick was over a very easy country, and from Berwick forward to Edinburgh the works required would not be heavy. On the other hand, the western line would have to be carried over valleys by bridges such as never had been made in England, nor probably in the world. Across the Avon would be a viaduct of 120 feet high, the Mill Burn 103, Dalserf Burn one of 70, and another of 85 feet, Crossford Burn 98 feet, Gilbank Burn 98 feet, and Nethan water 232 feet!!! Never, he believed, had such a piece of masonry been put together as this projected bridge over the Nethan Water—it would be about twice the height of the celebrated Menai bridge. It was preposterous to carry such a line forward, and he was satisfied that if once a line was completed from Darlington to Newcastle, it would be certain to be continued forward to Edinburgh. It would then embrace the whole of North Britain, and also secure no inconsiderable traffic from the North of Ireland.

T. BARSTOW, Esq., observed that the western towers of York Minster were about 220 feet in height—they might therefore imagine the description of a bridge, the piers of which would have to be carried even beyond that height.

JOSEPH PEASE, Esq., said he saw clearly that the line to Scotland must be on this side the island. He wished to know what would be the distance of the proposed line from Darlington to the Durham Junction, exclusive of the branch to the city of Durham? and what calculation had been made as to traffic?

The CHAIRMAN—About 22¼ miles; and accord-

ing to the calculations of Mr. Harrison, engineer of the Durham Junction, if they only doubled the existing passengers' traffic, they would have an income of 66,000*l.* They would remember that the York and North Midland Company, when in Parliament, calculated that the existing number of passengers likely to use the railway were about 120,000 or 130,000, and that after their railway and the others in connection with it were fairly established, they would amount to about 260,000, but this very year, which might be considered an imperfect one, as the Great North of England and the Manchester and Leeds were not opened till March, the number of passengers would be about 400,000.

Mr. PEASE—Did Mr. Harrison's estimate include receipts from minerals?

The CHAIRMAN—Yes, 5,000*l.* only is set down under that head. Giving that, and allowing 30 per cent. for working the line, there would remain 10 per cent. profit on the cost.

Mr. STEPHENSON said that from London to Edinburgh, by the eastern route, there was no part of the gradients which exceeded 20 feet a mile, which was a remarkable circumstance in a distance of above 400 miles.

Mr. PEASE said, that no man was better acquainted with the north country than George Stephenson. He was bred and brought up there, and he knew every hill and valley. He (Mr. Pease) also had some knowledge on the subject, and he was satisfied that if, in their valour, the promoters of the western line made a beginning, they would never get to the end. There was little or no traffic through the country on which the western line must pass—its population was very limited—and the engineering difficulties were such, that for it to be selected in preference to the eastern line, reminded him of a certain personage's rule for buying a horse—he said "buy a horse with broken knees, for then he will never fall again if he can help it." (Laughter.)

The CHAIRMAN then put the following resolution to the meeting:—

That this Company approve of the plan of uniting with several other Railway Companies in taking a lease of an intended new railway to connect Darlington with Newcastle, at such a rent as will pay the shareholders in the projected undertaking at 6 per cent., and the Directors are authorised to guarantee such proportion of the rent and adopt such other measures in reference thereto as may appear advisable.

The motion was then put and carried unanimously.

Mr. LAYCOCK complained of the apparent apathy of the Newcastle people, who had a vital interest in the success of the eastern line.

The CHAIRMAN said, he quite agreed with Mr. Laycock that it behoved Newcastle to take a prominent part in forwarding by active measures, this important project, by which that great and influential town would be retained in the direct line between London and Edinburgh.

A vote of thanks to the Chairman was then passed for his conduct in the chair, and the able manner in which he conducted the business of the meeting. This motion was carried unanimously, and Mr. Laycock during the meeting also paid a high compliment to Mr. Hudson for the energy and talent which he displayed in managing the affairs of the Company—equal if not superior to any other man.

The meeting, which was one of the most unanimous description we ever witnessed, separated about two o'clock.

EDINBURGH AND GLASGOW RAILWAY.

THE near approach to completion of this great undertaking, and the prospect of its being in a few weeks open for traffic throughout its whole extent, thus placing the cities of Glasgow and Edinburgh at only one-third of their present distance from each other, must render notices of the progress of the works a matter of some interest. We consequently took a glance this week at the state of the railway from the terminus at the north end of Queen-street, as far out as the point at Cowlairs, where the Company have erected their workshops, their engine depot, and the stationary engine which is to be applied to the dragging of the carriages up the inclined plane. On entering, from Queen-street, within the limits of the Company's grounds, the visitor cannot fail to be struck with the peculiar suitableness of the situation for the terminus of a railway to connect the eastern with the western metropolis of Scotland. A more happily situated station could not be desired. It is but a few hundred yards removed from Argyle-street, the principal thoroughfare of the city, along which flows the vast torrent of human beings, disgorged by steam-boats at the Broomielaw, and by railway carriages at the terminus of the Ayr and Greenock lines of railways. On the other hand, it is but at a short distance from the terminus of the Garnkirk Railway, thus bringing within its grasp the population of Airdrie, and other towns to the eastward. It is almost close to the Royal Exchange, adjoins a number of the principal inns, opens into George-square, graced with the monumental tributes of our citizens, to the memory of Sir John Moore, Sir Walter Scott, and James Watt, and which yet may be adorned with the monument to the "greatest captain of the age," the illustrious Wellington. So far, therefore, as situation is concerned, no site could have been more appropriate or more calculated for the general convenience of the community. The space at the terminus is of great extent, and affords ample room for all the necessary buildings, stores, sheds, and other requirements of such an undertaking. The station-house, a building of three storeys, is situated on the left of the entrance, having in front, and along its whole length, a piazza for the protection of passengers before entering the ticket offices. A large hall, occupying at least two-thirds of the length of the building, is devoted to the purpose of issuing tickets, the first-class passengers entering by a separate door from those of the second and third classes, and emerging from the office into the carriage shed, also by separate doors. On the east and west of this public hall are rooms for passengers who may have occasion to wait the departure of the carriages; and in the second flat are the committee room, rooms for the clerks, managers, &c.; and on the third flat is a variety of rooms for the guards and other servants belonging to the establishment. Immediately behind the station-house is a shed of vast dimensions, under which are placed the carriages for passengers, and which are only a few yards from the opening of the tunnel, where the inclined plane commences and proceeds about 2,300 yards from the starting point. The slate roof of the shed is supported by iron couples of a very light and elegant construction, and on the whole has an admirable effect. Under the shed are five different lines of railways, while a great number of places are ready, immediately to the west of the rails, for the reception of goods, carriages, &c. A broad paved way is on either side of the rails, by which the passengers will approach or leave the carriages. A vast number of houses for stores, &c. are erected in other portions of the depot, and there is no lack of room for others, should such be required. Immediately to the north of the large passenger shed is the entrance of the tunnel; the retaining wall above the arch being ornamented with balustrades. The entrance is arched above and below, and the height between the centre of the upper and lower arches is about 50 feet, the roadway being about 25 feet below the centre of the upper one. There is a slight curve from the shed under which the carriages are placed into the tunnel, which from 60 feet wide at the extremity is very ingeniously narrowed in the course of a few yards to the necessary width for the two permanent lines of rails. This stupendous work is cut through a hill of considerable elevation, known by the name of Bell's Park, then under the Lunatic Asylum, now sold to the Directors of the Town's Hospital; then under another rising ground, and below the cut of junction which joins the Forth and Clyde with the Monkland Canal, and ends near to Keppoch-hill, being a distance of about 1,300 yards. The greatest credit is due to the enterprising contractor, Mr. Marshall, for the admirable manner in which this immense undertaking has been carried on, and the substantial and tradesman-like manner in which it is executed. In the course of its progress a great length of it was cut through freestone rock, and where this occurred no building was necessary, but by the other portions, passing to some extent through old freestone quarries, the contractor was enabled to found his arch on the solid rock, which must of course materially add to its stability. At the end of the first 300 yards of the tunnel there is a large opening or eye, and another occurs about the same distance further on; and it deserves to be noticed as a proof of the substantial nature of the building throughout, that only in one or two places is there to be found a water drop, and these only to such a trifling extent as to be with little difficulty got rid of. In the excavation of this part of the line, the contractor had no fewer than six steam-engines employed, and two horse gins; and, excepting two very small portions of loose rock, left to the last to facilitate the removal of the debris, the whole length of the tunnel has the permanent way laid, and very nearly the whole of the two lines of permanent rails. From the vigilance exercised by the workmen, it is confidently expected that in the course of next week a locomotive engine will be able to make the journey from the station-house up the inclined plane to its termination near the fixed engine station at Cowlairs, a distance of 2,400 lineal yards (rise 1 in 40). Besides the tunnel, there are beyond it four bridges carrying country roods across the railway; and at Cowlairs there is a long arch connecting the pleasure grounds attached to Cowlairs House. On reaching the top of the incline, which terminates near Springvale, a few yards further onwards leads to the house containing the stationary engine. The situation of the building being on boggy ground, the foundation was excavated to the depth of about 14 feet, at which depth the upper limestones were found, and a solid foundation obtained. The engines are furnished by Messrs. Kerr, Neilson, and Company, and are getting rapidly forward, they are high pressure, of 80 horse power each, and are to be supplied with steam from eight boilers of moderate size, but without flues or pipes in their construction. They are to be employed in dragging the trains up the incline by an endless rope, drawn over pulleys, supported in sheaves placed between the rails at a distance of about 20 feet apart. The rope is taken twice or thrice round an immense pulley, fixed on the main shaft of the engine, which gives it the motion, and means are adopted for keeping the rope at the proper degree of tension. Judging from the appearance of the engines, so far as they are already fitted up, we are inclined to prognosticate that they will do credit to the engineers who have constructed them. On the opposite side of the railway from the stationary engine are the workshops of the Company, and the depot for the locomotives. These form a very extensive range of buildings. The upper flat, which is on the level of the railway, is allocated for the locomotive engines. The centre of the area of a very lage room is laid with *tables*, on which the engines are placed, and turned into berths on the one side or the other as required. These berths consist of a bearing wall under the engine wheels, on each side of a pit, into which the ashes from the engine furnaces are drawn out, and when necessary the water from the boiler, which finds its way by a cess-pool, with a sort of pepper-box grating over it, into a sewer beneath. The lower flat is destined for the various operations of engine making, carriage making, &c., and large premises adjoining are devoted to the storing of coke. Above the coke store there is an immense cistern, into which the water is pumped by the engine, and from whence the locomotives are to be supplied with water. These latter buildings, as well as the engine-house, are most substantially built, and seem admirably adapted for the purposes intended; and necessarily lead to the impression, that the Directors are determined that what they do shall be well done. To return again to the tunnel: workmen are at at present engaged in whitewashing the whole interior with Irish lime; and under the able superintendence of Mr. J. B. Neilson, of the Glasgow Gas Works, gas has been

Digitized by Google

introduced for the purpose of lighting the tunnel day and night. The gas is obtained from the main pipe which supplies Cowlairs, and is conveyed down one of the eyes, through a meter, from which a three inch pipe leads out to the workshops at Cowlairs, and another pipe of two and a half inches diameter, is led towards the terminus. The tendency of iron pipes to corrode when laid in sand-stone rock or moisture, Mr. Neilson has obviated by boring the pipes in clay, which will have the double effect of preventing corrosion and leakage. The lamps are to be placed at distances of eighty feet, one being placed alternately on each side of the tunnel. They are triangular, with reflectors behind, which, while they throw a strong light on the rails, enable the lights to be seen from both ends. The burners used are what are called fan-lights—an improvement in burners, for which the public are indebted to Mr. Neilson—and which not only give an extra light, but at the same time are, from their construction, more than usually economical in the consumption of gas. Part of the lamps were lighted on Wednesday night, and the effect was all that could be desired.

The carriages, engines, &c., are in a state of great forwardness; and every exertion is making to have the line opened on as early a day as possible. Every improvement which experience, in connection with other lines, has shown to be for the public benefit, the Directors show every anxiety to adopt; and, among others, they have resolved to adopt Cooke's electrical telegraph, to communicate between the station-house at the south end of the tunnel, and the stationary engine-house at Cowlairs. The communicating wires are contained in a small iron pipe, carried along the side of the tunnel, and will be used for securing an instantaneous correspondence by signals between the two places—in order to prevent accidents, as well as to give orders as to setting on and stopping the engines; and to give intimation of the arrival of the trains at the head of the inclined plane, or their readiness for starting. By means of galvanic troughs fitted up in the manner described by Mr. Cooke and Professor Wheatstone, a bell is rung—to call attention—and then an index is made to point to certain figures, the purport of which signal is given in a printed schedule containing the communications most commonly required.—*Glasgow Constitutional.*

THE LATE ACCIDENT ON THE HULL AND SELBY RAILWAY.

An inquest was held before E. D. Conyers, Esq., on Friday week, at the Railway Tavern, in Brough, on the body of John Hreatm, a gatekeeper on the Hull and Selby line, an account of whose death appeared in the *Railway Times* of last week. The further circumstances attending this melancholy accident will be found detailed in the evidence, as given in the *Hull Advertiser*.

George Boothby, a policeman on the railway, deposed—I was on duty at the Brough station on Wednesday evening last. The train from Selby to Hull arrived at Brough about 20 minutes past nine, and remained there about four minutes. Francis Howard was the engine-driver; he sounded his whistle previous to starting from Brough. I went into the station-house to take in my light which I had hung out before the arrival of the train as a signal for it to stop. I came out again immediately, and looked down the line after the train towards Hull. The gates at which the deceased was on duty are about 400 yards from the Brough station in that direction; I observed that the lamp at the gates showed a red light, which was a signal that the gates were closed. I heard no alarm except the whistle, and then the lamp fell to the ground. I hastened to the place, and found that the gates were broken to pieces, and that the train had passed on. I went forward on the line, and about ten yards below the furthest gate I found the deceased laid; his head was near one of the rails, and was most dreadfully crushed; he was quite dead. I found afterwards a portion of his skull on the line of the railway between the two gates. Deceased had come on duty about six that evening.

Mr. William Bridle Bray, the Resident Engineer, deposed—The appointment of gate-keepers is vested in myself. Deceased was appointed about six weeks ago. There are two gate-keepers at the place; they serve twelve hours each on duty; the day and night duty is performed between them every alternate week. The wages which the gate-keepers receive are 16s. per week, so that they will have no occasion to follow any other occupation for a livelihood. The deceased was between thirty and forty years of age, and in full possession of all his faculties; there was no complaint against him whatever previous to his death. The train at night carries lights; the fire is also seen. The white light, which is a signal that all is right, could be seen a mile each way. There is not a clock at the gate-keeper's house; it is the gate-keeper's duty to be continually on the look out; he has nothing else to attend to. If the deceased saw the train at the time he ought to have done he would have had ample time to open the gates. The gates are 24 chains from the Brough station, but after stopping there the train would not get to full speed before it reached the gates. Francis Howard was the driver of the engine at the time. There is a lamp fixed on the gate post, and if the gates were shut a red light would be seen; on the line a red light by night, or a red flag by day, is always a signal to stop; the engine-driver would see this light when at the Brough station. The engine-driver has a combined duty to perform—attention to his engine and to his signals; he certainly could have stopped his engine between the station and the gates. Howard has been on the line since the opening. I consider him one of our steadiest drivers, and perfectly competent to perform his duties.

Francis Howard, the engine-driver, was then called in, and having been cautioned by the coroner that he was not bound to say anything that might criminate himself, said—I am 27 years old, and have been fifteen months on the line as a driver. Previously I was on the Manchester and Liverpool Railway—principally on the luggage trains. My duty is to attend to the proper working of the engine, and to the signals on the line. I have a perfect knowledge of all the signals. On Wednesday night I left Selby at half-past eight, and arrived at Brough station twenty-one minutes past nine. I observed a signal to stop, and did stop there about four or five minutes. After the stop there the average speed for the first half-mile would be eleven miles an hour. When I was about 80 yards off the gate I observed the red lamp was up, which was a signal the gate was shut. I called out to my fireman, "Oh! Dick—the gates are shut." He flew to his break; I clapped one hand on the regulator and the other on the whistle, but before the engine could be stopped she was through the gates. I saw no gate-keeper, nor heard any one cry out. I looked at each side of the engine, and seeing that all was right I turned on the steam, and went forward at my usual pace. I had no idea that any one was injured. When I got to Hull I reported to Mr. Locking, the Secretary, what I considered a neglect of duty in the gate-keeper. I will explain the reason that I did not see the red light until I was near the gates. Before I got to Brough I heard an unusual noise in the engine, which convinced me something was wrong. I examined it when I stopped, but could not discern anything; and after I had set it in motion again, my fireman held the light whilst I examined it, and found a spindle loose. I could not have discovered this if the engine had not been in motion, and I thought it a good place to make the examination, as we were going slowly, and I knew there was a man at the gates whose soul duty it was to attend to them. When I had finished my examination I lifted up my head and saw the red light. Previous to leaving the Brough station I whistled twice. The whistle could be heard, I should think, two miles such a night as it was. I have had to whistle the deceased out twice before.

Richard Smith, the fireman, corroborated the statement of Howard.

Christopher Pearson, a labourer, had been in Company with the deceased at the gate-house, and parted with him about an hour before the accident happened. He was then perfectly sober.

Mr. Locking, the Secretary of the Company, gave Howard an excellent character for steadiness, and several of the jurymen who had been in the habit of travelling on the railway, also stated that they considered him the steadiest and most careful driver on the line.

Mr. Grey, the Superintendent of the locomotive department, was also in attendance, and he, as well as Mr. Locking and Mr. Bray, expressed themselves ready to give any information.

The above being the whole of the evidence,

The Coroner observed, that he considered it necessary to make a few remarks on the case. There could not, he apprehended, be any doubt that the death of the deceased had been caused by his being struck by the engine or some of the carriages on the night in question. No person could say precisely how the accident happened, but the probability was, that the deceased, from drowsiness or some other cause, had not been aware of the approach of the train until he heard the whistle, and had then rushed out to open the gates, but too late; such being the case, his own negligence would be the primary cause of the accident. At the same time he (the Coroner) did not consider that the engine-driver was altogether free from blame; he knew that the red light was the signal to stop in every case. When he left the Brough station he could see the red light at the gates, which were only 400 yards distant, and the light was in view the whole way. It had been stated that, at the speed the train would be then going, it would have been stopped in 150 yards, and the driver ought certainly to have looked out when he was about 200 yards from the gates, to see whether they were open or not. He had given an explanation why he had not done so, which was, that something was wrong in the engine which he could not discover until it was set in motion—that it might have been something very serious, and that he considered it his principal duty to attend to his engine—that he did not apprehend any danger from the slow pace at which the train was going, and his knowledge that there was always a man at the gates to attend to them. The jury would say whether this explanation was satisfactory to them; they would bear in mind the excellent character the driver had received, not only from the officers of the Railway Company, but also from several of their own body. He (the Coroner) must say that his own opinion was, that although there was a certain degree of negligence in the driver, it did not amount to anything criminal. He would, however, leave the matter in their hands, and he had no doubt they would come to a correct decision.

The room was then cleared, and the jury remained in deliberation above half an hour, when they returned a verdict of "Accidental death," and requested the Coroner to admonish the engine-driver and fireman on the necessity for caution and watchfulness, which he accordingly did.

The deceased was a married man. He was writing a sermon, or a commentary, on that portion of the 19th chapter of St. Luke which relates to Zaccheus having climbed up a sycamore tree in order to get a sight of Christ. By some it was supposed that he had become so much absorbed with his subject as not to notice the approach of the train until the fatal moment, when he rushed out, and was knocked down by the engine or some of the carriages.

Great North of England Railway.—From the very heavy rains that fell on Friday last, the 8th inst., a part of the line of this railway, betwixt Darlington and Northallerton, was covered with water, from the overflowing of the rivulets, which caused the mail train going southward on the afternoon of that day to be retarded a full hour or more betwixt the two towns.—*Leeds Intelligencer.*

STOPPAGE OF THE MAILS ON SUNDAY.

[From the *Scotsman*, Edinburgh paper.]

At a time when so much is said by so many weak and well meaning persons in favour of stopping the mails on Sundays, we are happy to be enabled to lay before our readers a document of great value on the opposite side of the question.

In 1829, a system of petitioning similar to that which now exists in this country was got up in the United States of America, praying that the running of Sunday mails might be stopped by legislative interference. The petitioners were so numerous and influential, that the Senate of the United States appointed a committee to report. This report we now reprint entire. We understand it produced so great an impression in America, that the mouths of the agitators were completely stopped, and the public feeling turned in the opposite direction. The reaction has been so strong and effective, that any person now advocating the stoppage of Sunday mails in America would be considered unfit to be reasoned with. The disciples of Sir Andrew Agnew would be well to consider this able and candid report with that care and attention which a subject of so much importance demands. It appears to us to exhaust the question, and also to prove in the most conclusive manner the impolicy and injustice of civil rulers interfering with matters of religion, except to protect the rights of conscience.

The members of Government should watch with great jealousy the Judaizing, intolerant spirit, which should force on a reluctant community the stoppage of the mails on Sunday, in order to minister to the Pharisaical spirit manifested by a comparatively small portion of the Scottish clergy and their creatures. If the mails be stopped, or in any way impeded in Scotland, on the ground contended for, that it is a violation of the law of God, surely the same rule should be applied to other parts of the empire; for what is sinful in Scotland cannot be sinless in England. We suspect that the Government have already yielded too much to the demands of these zealots. They would do well to consider the question in all its magnitude, before taking any other steps on the subject.

In the Senate of the United States, January 19, 1829, Mr. Johnson of Kentucky (Chairman of the Committee) made the following report:—

"The Committee to whom was referred the several petitions on the subject of mails on the Sabbath, the first day of the week, report, that some respite is required from the ordinary vocations of life is an established principle sanctioned by the usages of all nations, whether Christian or Pagan. One day in seven has always been determined on as the proportion of time; and in conformity with the wishes of the great majority of citizens in this country, the first day of the week, commonly called Sunday, has been set apart to that object. The principle has received the sanction of the national legislature so far as to admit a suspension of all public business on that day, except in cases of absolute necessity, or of great public utility. This principle the Committee would not wish to disturb. If kept within its legitimate sphere of action, no injury can result from its observance. It should, however, be kept in mind, that the proper object is to protect all persons in the enjoyment of their religious as well as civil rights, and not to determine for any, whether they shall esteem one day above another, or esteem all days alike holy.

"We are aware that a variety of sentiment exists among the good citizens of this nation on the subject of the Sabbath day, and our government is designed for the protection of one as well as for another. The Jews, who, in this country, are as free as Christians, and entitled to the same protection from the laws, derive their obligation to keep the Sabbath-day from the fourth commandment of their decalogue, and, in conformity with that injunction, pay religious homage in the seventh day of the week, which we call Saturday. One denomination of Christians among us, celebrated for their piety, and certainly as good citizens as any other class, agree with the Jews in the moral obligation of the Sabbath, and observe the same day. There are also many Christians among us who derive not their obligation to observe the Sabbath from the decalogue, but regard the Jewish Sabbath as abrogated. From the examples of the Apostles of Christ, they have chosen the first day of the week, instead of that day set apart in their decalogue, for their religious devotions. These have generally regarded the observance of the day as a devotional exercise, and would not more readily enforce it upon others than they would enforce secret prayer or devout meditations; urging the fact that neither the Lord nor his disciples, though often censured by his accusers for a violation of the Sabbath, ever enjoined its observance. They regard it as a subject on which every person should be fully persuaded in his own mind, and not coerce others to act upon his persuasion. Many Christians, again, differ from those professing to derive their obligation to observe the Sabbath from the fourth commandment of the Jewish decalogue, and bring the examples of the Apostles, who appear to have held their public meetings for worship on the first day of the week, as authority for so changing the decalogue as to substitute that day for the seventh. The Jewish government was a theocracy, which enforced religious ordinances; and though the Committee would hope that no portion of the citizens of our country could willingly introduce a system of coercion in our civil institutions, the example of other nations should admonish us to watch carefully against its earliest indications.

"With these different religious views, the Committee are of opinion that Congress must interfere. It is not the legitimate province of the Legislature to determine what religion is true or what is false. Our Government is a civil and not a religious institution. Our constitution recognizes in every person the right to choose his own religion, and to enjoy it freely without molestation. Whatever may be the religious sentiments of citizens, and however variant, they are alike entitled to protection from the Government, so long as they do not invade the right of others.

"The transportation of the mail on the first day of the week, it is believed, does not interfere with the rights of conscience. The petitioners for its discontinuance appear to be actuated from a religious zeal, which may be commendable if confined to its proper sphere, but they assume a position better suited to an ecclesiastical than to a civil. They appear in many instances, to lay it down as an axiom, that the practice is a violation of the law of God. Should Congress, in their legislative capacity, adopt the sentiment, it would establish the principle that the Legislature is a proper tribunal to determine what are the laws of God. It would involve a legislative decision in a religious controversy, and on a point on which good citizens may honestly differ in opinion without disturbing the peace of society, or endangering its liberties. If this principle is once introduced, it will be impossible to define its bounds. Among all the religious persecutions with which almost every page of modern history is stained, no victim ever suffered but for the violation of what Government denominated the law of God. To prevent a similar train of evils in this country, the constitution has wisely withheld from our Government the power of defining the divine law. It is a right reserved to each citizen, and while he respects the equal rights of others, he cannot be held amenable to any human tribunal for his conclusions.

"Extensive religious combinations to effect a political object, are, in the opinion of the Committee, always dangerous. The first effort of the kind calls for the establishment of a principle which, in the opinion of the Committee, would lay the foundation for dangerous innovations upon the spirit of the constitution, and upon the religious rights of the citizens. If admitted, it may be justly apprehended that the future measures of Government will be strongly marked, if not eventually controlled, by the same influence. All religious despotism commences by combination and influence, and when that influence begins to operate upon the political institutions of a country, the civil power soon bends under it, and the catastrophe of other nations furnishes an awful warning of the consequence.

"Under the present regulations of the Post-office department, the rights of conscience are not invaded; every agent enters voluntarily, and it is presumed conscientiously, into the discharge of his duties, without intermeddling with the conscience of another. Post-offices are so regulated as that but a small proportion of the first day of the week is required to be occupied in official business. In the transportation of the mail on that day, no one agent is employed many hours. Religious persons enter into the business without violating their own consciences or imposing any restraints upon others. Passengers in the mail stages are free to rest during the first day of the week, or pursue their journeys at their own pleasure. While the mail is transported on Saturday, the Jew and the Sabbatarian may abstain from abstain from any agency in carrying it, from conscientious scruples. While it is transported on the week, another class may abstain from the same religious scruples. The obligation of Government is the same to both these classes; and the Committee can discover no principle on which the claims of one should be more respected than those of the other, unless it should be admitted that the consciences of the minority are less sacred than those of the majority.

"It is the opinion of the Committee that the subject should be regarded simply as a question of expediency, irrespective of its religious bearing; in this light it has hitherto been considered. Congress have never, at any time, legislated upon the subject. It rests as it ever has done, in the legal discretion of the Postmaster-General, under the repeated refusals of Congress to discontinue the Sabbath mails. His knowledge and judgment in all the concerns of that department will not be questioned. His intense labours and assiduity have resulted in the highest improvement of every branch of his department. It is practised only on the great leading mail routes, and such others as are necessary to maintain their connexions. To prevent this would, in the opinion of the Committee, be productive of immense injury, both in its commercial, political, and in its moral bearings.

The various departments of Government require, frequently in peace, always in war, the speediest intercourse with the remotest parts of the country; and one important object of the mail establishment is to furnish the greatest and most economical facilities for such intercourse. The delay of the mails one whole day in seven would require the employment of special expresses at great expense, and sometimes with great uncertainty.

The commercial, manufacturing, and agricultural interests of our country are so intimately connected, as to require a constant and the most expeditious correspondence betwixt our seaports, and betwixt them and the most interior settlements. The delay of the mails during the Sunday would give occasion for employment of private expresses to such an amount, that probably ten riders would be employed where one mail-stage is now running on that day, thus directing the revenue of that department into another channel, and sinking the establishment into a state of pusillanimity incompatible with the dignity of the Government of which it is a department.

"Passengers in the mail stages, if the mails are not permitted to proceed on Sunday, will be expected to spend that day at a tavern upon the road, generally under circumstances not friendly to devotion, and at an expense which many are but poorly able to encounter. To obviate these difficulties, many will employ extra carriages for their conveyance, and become the bearers of correspondence, as more expeditious than the mail. The stage proprietors will themselves often furnish the travellers with those means of conveyance, so that the effect will ultimately only stop the mail, while the vehicle which conveys it will continue, and its passengers become the special messengers for conveying a considerable proportion of what would otherwise constitute the contents of the mail.

Nor can the Committee discover where the sys-

Digitized by Google

tem could consistently end. If the observance of a holiday becomes incorporated in our institutions, shall we not forbid the movement of an army, prohibit an assault in time of war, and lay an injunction upon our naval officers to lie in the wind while upon the ocean upon that day? Consistency would seem to require it. Nor is it certain that we should stop here. If the principle is once established, that religion or religious observances shall be interwoven with our legislative acts, we must pursue it to its all ultimatum. We shall, if consistent, provide for the erection of edifices for the worship of the Creator, and for the support of Christian ministers, if we believe such measures would promote the interests of Christianity. It is the settled conviction of the Committee, that the only method of avoiding these consequences, with their attendant train of evils, as to adhere strictly to the spirit of the constitution, which regards the general government in no other light than that of a civil institution, wholly destitute of religious authority.

"What other nations call religious toleration, we call religious rights. They are not exercised in virtue of Government indulgence, but as rights of which Government cannot deprive any portion of c tizens, however small. Despotic power may invade those rights, but justice still confirms them. Let the National Legislature once perform an act which involves the decision of a religious controversy, and it will have passed its legitimate bounds. The precedent will then be established, and the foundation laid for that usurpation of the Divine prerogative in this country which has been the desolating scourge to the fairest portions of the old world. Our constitution recognises no other power than that of persuasion for enforcing religious observances. Let the professors of Christianity recommend their religion by deeds of benevolence—by Christian meekness—by lives of temperance and holiness. Let them combine their efforts to instruct the ignorant—to relieve the widow and the orphan—to promulgate to the world the Gospel of their Saviour, recommending its precepts by their habitual example; Government will find its legitimate object in protecting them. It cannot oppose them, and they will not need its aid. Their moral influence will then do infinitely more to advance the true interests of religion than any measures which they call on Congress to enact.

"The petitioners do not complain of any infringement upon their own rights. They enjoy all that Christians ought to ask at the hand of any Government—protection from all molestation in the exercise of their religious sentiments.

"Resolved—That the Committee be discharged from the further consideration of the subject.

PROGRESS OF RAILWAYS.

THE rapidity with which this great iron revolution is extending over space is wonderful and unparalleled, except by the strangeness and speed of transit which has itself been achieved by the iron road (*chemin de fer*) and the vulcanian Pegasus, that most wonderful and most perfect of all man's creations. Ten years ago a railway was all but unknown; a tram-road of iron, sufficient to guide a few coal-waggons from the coal-hill to the port of delivery, and to enable them to follow the track of an old horse at the rate of two or three miles an hour, was what the small number of us, who knew anything at all about a railway, understood to be meant by the phrase. It was the joint necessity and impossibility of an additional canal from Liverpool to Manchester which first compelled the merchants of that enterprising port to entertain the project of a railway on a great scale; and it is to their spirit and determination that we owe much of the advantage now obtained. In 1826, when they applied to parliament, even their own engineers seem d to entertain very little idea of their present results. Mr. Stephenson, who has since become so eminent as a railway propagandist, held out the expectation, that on this railway, locomotive engines carrying thirty or forty tons might possibly be able to travel at the rate of six miles an hour with safety and security. The author of the "Railway Treatise" thought that the rate of twelve miles an hour would be a dangerous and useless speed. Mr. Rastrick reported, that by improvements on the engine, forty tons might be carried along a railway at the rate of six or even twelve miles an hour, but that the latter rate was decidedly unsafe! At this moment twenty-five miles is the regular slow speed, beyond which the conductors of engines are forbidden to travel, although the double of what it was has been often attained; while, instead of thirty or forty tons, the weight of a train is one hundred to two hundred tons.

Ten years' experience now does all this safely and well, daily, hourly, and everywhere. Twenty-five hundred miles of railways, almost all of them double lines of road, traverse our little island, connecting all the principal towns and provinces with the great centre of money and of mind. Now, indeed, we may boast of an "iron-bound" rock of ocean. A chain of iron links firmly to this great head, in close and intimate union, the great members of our body politic, commercial and literary. We all think, feel, and act more closely in union. Provincial disadvantages and distinctions rapidly wear away; local antipathies become forgotten; and the great unit of British industry, commercial enterprise, wealth, and wisdom, is becoming more firm, more energetic, more powerful, and more promising of prolonged health and permanent stability. Dissension, discord, division, dismemberment, must become less and less possible in direct proportion to the intimacy of connexion and facility of communication among its component parts. More than fifty millions of capital are already devoted to the creation of new railways; and in return for this investment, something like five millions will every year be created and returned into the treasury of our capitalists, for re-investment and the extension of its powers and our privileges. Not only do these railways facilitate trade and commerce, and give increased activity to mercantile interests in general, but if we consider that the expenditure of a railway consists principally in the tear and wear of machinery, the produce of human labour, the great part of which is dug from the bowels of the earth, and formed by human skill, we shall see that many new and important departments of commerce and trade are created and fed by this new economic and social power. The new social element is extending the range of action so fast and so far, that there will soon cease to be any section of the community, or any individual in society, sufficiently severed from its interests to be altogether beyond the sphere of its immediate influence. Noblemen, men of property, merchants, and traders, will almost all be soon embraced in the multitudinous constituency of railway directors or holders of railway stock; while the saving of the wear and tear of human life by the wholesale means of economical transport thus provided, has in many districts rendered the most laborious and the poorest portion of the community not only the class on whom the greatest benefits have been conferred, but that also which has contributed most abundantly to the success of such undertakings, as thousands now travel by this most rapid conveyance who were not able to avail themselves of any. This subject is, therefore, one which must sooner or later, come closely home to the interests of every member of society.—*Athenæum.*

RAILWAY ACCIDENTS.

ACCIDENT ON THE GREAT WESTERN RAILWAY.—On Friday week an accident occurred on the line of the Great Western Railway at Southall, about eight miles from the Paddington terminus. It appears that in the course of Thursday night the luggage train, in its way to town, left a truck containing 14 sheep at the Southall Station, to which neighbourhood they were consigned; and after the train had proceeded on to Paddington, the truck was placed on an additional line of rails, which had been prepared for the convenience of unloading cattle intended for Southall market, where it was left, as it was supposed, perfectly safe. The event, however, proved otherwise, for the wind being very high, and blowing strong gales from the west, forced the truck (the wheels of which had been neglected to be scotched) with its contents forward on again to the main line of the railway, traversed by the in-coming trains, without any of the servants of the Company being at all aware of the circumstance. About five o'clock the in-coming mail train reached the station at Southall with safety, and seeing no signal exhibited of any obstruction on the line, proceeded on towards Ealing, but had not progressed many hundred yards before a violent collision took place, which almost immediately stopped the train. Lights being procured, the cause was ascertained by the unfortunate truck being discovered completely smashed to pieces, while, of its contents, 12 sheep were found to be killed, one so injured as to require being killed immediately, and the remaining one, which had escaped injury, had run off. The mail train as well as the passengers, escaped injury, and the latter, with the exception of the fright they had sustained, after some delay during the clearing of the line from the broken truck, reached Paddington in safety towards seven o'clock.—*Daily Papers.*

ACCIDENT ON THE SOUTH WESTERN RAILWAY.—Shortly before five o'clock on Saturday morning a collision took place on the Southampton Railway. A very heavy luggage train, which left Southampton, ought to have arrived in London at two o'clock, but on arriving about half-way between Thames Ditton and Kingston, it was found impossible that all could proceed. Eight of the carriages were left in charge of a guard, and the remainder came on to London. The guard attached a large red light to the last carriage, and on hearing the mail train coming, he ran about a mile and a half along the line, calling out to the engine-driver to stop, and also held out a red flag. No notice, however, was taken of his signals, and the train came in collision with the eight carriages with such force that they were all more or less injured, and the engine shaken severely. The mail train was got back a sufficient distance to be crossed over to the other rail, and proceeded on its journey, and arrived at Vauxhall a few minutes after its usual time. It is said that the driver asserted that no light had been placed on the last carriage, but on search being made a lamp was found on the engine. One of the guards received a slight bruise on his cheek, but beyond that no person received any injury, as far as our informant could learn. The damage done is said to be considerable.—*Daily Papers.*

THE LATE ACCIDENT ON THE ULSTER RAILWAY.—An inquest has been held on the body of the gentleman whose death on the Ulster Railway we noticed last week. The evidence and the verdict remove all doubt that the Company's officers were wholly blameless. The unfortunate occurrence arose entirely from the imprudence of the deceased himself.

SUCCESSFUL CHASE AFTER A RAILWAY TRAIN.—A few days ago, a gentleman, who appeared anxious to reach Darlington with the least possible delay, applied at the Derby station for a special train to convey him. Not being able to procure one, he proceeded by the mail train, and arriving at the Castleford station, near Wakefield, he alighted and asked one of the porters how long the train would remain. The porter understanding him to mean the Hull train, told him about twenty minutes. The traveller then left the platform, and on his return, his surprise and vexation may be imagined on finding the train, which contained the whole of his luggage, had started. He immediately ordered a chaise and four post horses, but was only able to obtain two, and started in chase of the train towards York, a distance of 20 miles, where it was to remain 40 minutes, 50 minutes being allowed it to reach that station. He arrived at the York station just as the train was starting—the engineer's whistle having been sounded as he came within sight. Fortunately the chaise driver made a signal, which was observed by the guard of the train, and our hero was enabled to take his place in the railway carriage he had quitted at Castleford.—*Derbyshire Courier.*

DURHAM AND SUNDERLAND RAILWAY.

To the Editor of the Railway Times.

"Immaculate Directors! kind, considerate, generous shareholders! It were a thousand pities to disturb a connection between parties so deserving on the one side, and so confiding on the other."—*Railway Times*, 9th Oct., 1841.

SIR,—I have read with much pleasure your manly remarks upon the proceedings of the last half-yearly meeting of the Durham and Sunderland Railway Company, and in the name of several suffering shareholders I tender you their warmest thanks.

It is to hoped that many of your brother journalists, in the counties of Durham and Northumberland, will have the courage to re-print in their columns the whole of your valuable observations.

But I have small hopes of any amendment in the affairs of that Company; and you will probably agree with me when you are informed, that "the Contractors" to whom Mr. Singers' motion refers, are not "*tradesmen*" whose profits may be more studied than dividends as "proprietors," but wealthy coal-owners and ship-owners, and that the conveyance of their coals along this railway amounted during the last half-year to the sum of 13,825*l.* 4s. 4d., and the other traffic only to 3,840*l.* 5s. 4d.!

It has been said of old, "Ye cannot serve two masters." Whether these Directors prefer our interest to their own, I have not the means of ascertaining, but their resistance to the reasonable proposal made by Mr. Singers has certainly created some suspicion in my breast.

I will not trespass further on your columns at present, but with your permission will in some future number resume the subject.

I am, Sir, yours, &c.,

AN UNFORTUNATE SHAREHOLDER.

Newcastle-upon-Tyne, Oct. 16, 1841.

The following article in reference to this matter appeared in the *Northern Times* of Saturday last. We have elsewhere alluded to the subject:—

"Our talented contemporary, the *Railway Times*, inserts a report of the proceedings at the late meeting of this Company, from the *Northern Times* of October 1, in its columns this week, and also gives a rather lengthened comment on the system of management. We think its attacks on the directory violent and unjust; indeed, the only apology or defence for its remarks is, that they are founded on misconception. In the first place, the contractors who sit on the directory, as it is assumed to the number of five or six, are not contractors for the supply of articles for the use of the railway, but coalowners and landowners on the line, who have contracts with the Company for the carrying of their coals to Sunderland or for way-leaves through their land; and when we add, that these gentlemen, with a degree of liberality which does them honour, actually consented to a considerable increase in the charge for conveyance of coal to Sunderland on the one hand, and a considerable diminution of rent for way-leave on the other, only six months ago, although they had legal agreements with the Company by which they could have insisted on the continuance of the old prices, we are sure the *Railway Times* will agree with us that it would have been but a very poor return, on the part of the shareholders were they to expel them from the directory by such a resolution as that proposed by Mr. Singers. The sneer respecting the dividend is utterly unworthy our contemporary. The speech of Mr. J. J. Wright is an ample answer to that part of the question. "You have made a railway which cost 250,000*l.* (said that gentleman), and you have only 156,000*l.* to pay it with." To render this still more intelligible, we may state that Mr. Forster was the engineer employed in the construction of the railway, and that the cost far exceeded the estimate. The consequence of this is, that the formation of the railway is now to be paid for out of the profits of the concern; and thus, unless the shareholders will subscribe more capital, they cannot have a dividend for four years. We now come to the declaration of the dividend out of the capital of the Company, a practice certainly altogether indefensible; but it is neither fair nor honest of the *Railway Times*, when it states that one proprietor had been deluded into purchasing shares by this means, to conceal the fact, that the gentleman himself admitted that he was not certain whether he was present or not on the occasion. The defence set up at the meeting was, that it was the shareholders who declared the dividend, and that at the meetings at which these dividends were declared, the Directors certainly recommended the declaration of a dividend; but, at the same time, openly avowed that there was not sufficient profit to pay a dividend, but that they hoped the revenue in future years would more than compensate for the difference. We are happy to state, in conclusion, that, had our contemporary interfered some years since, it might have effected some beneficial results; but that, at present, every shareholder in Sunderland and Durham is perfectly satisfied with the economy and activity evinced in the management of the concern. There is now, at all events, no attempt at concealing any part of the society's position, as the publication of the "Formation Account," in the last report, amply testifies. On the whole, we have no hesitation in declaring that the Durham and Sunderland Railway must eventually become a prosperous and lucrative concern; and, in the meantime, quarrels and bickerings between the Newcastle shareholders and the Directors will not, we are sure, accelerate its progress."

THE PROPOSED RAILWAY IN BRAZIL.

To the Editor of the Railway Times.

SIR,—I have lately observed in your paper several accounts relative to the project of a railway of some extent in Brazil; but expecting that some one connected with that country, better able than I am, would offer you some information about it, till this moment I have remained silent on the subject.

The projected line, for which an exclusive privilege has been obtained by a Dr. T. Cochrane, is to extend from the city of San Paulo to the metropolitan city of Rio de Janeiro, a distance of 150 miles, the object being to facilitate the traffic, and diminish the cost of transport along this line—a traffic which we are led to suppose must be considerable. Had the project of this railway been kept entirely on the other side of the water, I should never have troubled you on the subject, but as statements have been handed to you, in the hope I conceive, through your columns, of raising subscriptions for shares in England, I feel confident you will give the matter a full inquiry, as I am sure on such a topic you are the last person desirous of taking a one-sided view of the case.

From the accounts furnished in your paper of the 2nd inst., we are led to infer that the cost of conveyance upon the existing land traffic between the city of St. Paulo and the metropolis, amounts to the large sum of 10,300 Contos de Reis, which sum is set down as equivalent to 2,500,000*l.* sterling, but which your correspondent, Mr. Jordan, has very properly corrected, by showing that such an amount of Brazilian currency cannot equal more than 1,288,000*l.* In spite of the details there given, the exactness of which may be greatly questioned, I venture to assert that the cost of transport upon that line does not equal one-tenth part of the sum stated, and am ready to show,—

1st. That neither the existing population, nor the present amount of traffic, can possibly support the expences of such a line; and—

2ndly. That the nature of the country forbids all hope of its being carried into effect.

It is true that the privilege has been granted by the legislature upon the hope of accruing advantage, but upon no showing of any kind as to the probability of effecting its execution; and it is equally true that the Emperor of the Brazils, his ministers, and many others in the country, figure in the list of subscribers, no doubt, in hopes of the project being realized, for they have all heard of the wonderful results obtained in Europe and in the United States by this novel mode of conveyance, and naturally enough desire to see in their own country the realization of the same advantages. But it is not from them that the capital is ever likely to be derived; the British capitalists must be appealed to if the whole amount be ever really sought for. I have inquired as yet in vain for the names of any British mercantile houses connected with Rio de Janeiro, as coming forward to give their countenance to the scheme, so that I think the intended company may be looked upon with some suspicion, especially as subscriptions are sought for in Rio before any engineer has examined the line, or pronounced any opinion upon its practicability.

The chief produce raised in the province of San Paulo is sugar, but it is of a particular quality, and adapted only for a particular market, the export place of which is in the harbour of Santos, distant only twelve leagues from San Paulo. Not one cwt., therefore, of this chief produce of the province is ever likely to be transported by land to Rio de Janeiro. In the northern portions of the province, bordering the confines of the province of Rio de Janeiro, a considerable amount of coffee is raised, but this is chiefly carried to the sea coast, near at hand, and thence transported in small craft to the harbour of Rio. Cattle, for the supply of the metropolitan city, forms another of the chief items of traffic from San Paulo to Rio de Janeiro, but the total amount of cattle raised in the province is not calculated at more than 30,000 head, of which amount, after deducting the quantity consumed in the province, only a certain portion passes to the market of Rio; and indeed were the quantity greater the expence of railway conveyance would offer little chance of encouragement from this item of trade. Tobacco is another principle article transported by land carriage to Rio, but the total quantity sent in one year from the province in all directions, does not exceed 100 tons, of which only a very limited proportion is forwarded by land to Rio.

The *return or inward traffic* to the province of Saint Paulo is but trifling in amount, and by far the greater bulk of the trade is conveyed by sea to the port of Santos for the consumption of the capital and its neighbourhood, and the small quantity required by scarcely a dozen little towns, hardly larger than our villages, is all that is conveyed by land carriage upon this high road. These in reality form the only prospect of revenue at present offered from internal traffic, the truth of which is supported by the fact that the total annual revenue and expenditure of the whole province in 1839, did not exceed 250 contos or 31,250*l.*!

Let us now look to the chances of revenue from passenger traffic; for it is to be observed that up to this day, such is the small account of population, such the backward state of the mechanical arts in the interior, and such the natural obstacles of the way, that even a common cart road has not yet been constructed along this route, the only mode of conveyance both for travellers and goods being by mules or horses. The number of persons, therefore, who travel from San Paulo to Rio de Janeiro by land is exceedingly small, by far the principal number preferring the less tedious, more easy, and cheaper conveyance by sea, especially since of late small steam boats have been established for this purpose. Now the returns collected in 1838 of the number of passengers coming and going between Rio de Janeiro and the several ports of Santos Iguape, Cananea and Paranaguà show that the total number, including slaves, did not amount to 400 persons during the whole of that year. From these facts I leave you to judge of the prospects of the projected Railway, and whether it is not by far of too gigantic a magnitude for the trade likely to exist for some time to come. Railways to pay any corresponding revenue for the capital sunk must be supported by an amount of traffic corresponding to their length and cost, and can exist only on a large scale where large populations are to be met with. They may however be applied in particular localities even in thinly populated districts where a concentration of traffic is known to be, but in the case in question, you may judge of the probable chance

Digitized by Google

of success from what I have stated—a conclusion corroborated by the actual population of that department of Brazil. The total population of the province of San Paulo is calculated at 250,000 souls spread over a surface of 17,500 square miles, or 14 persons per square mile, including women, children, and slaves. The total number of houses is about 40,000, or 3 families per square mile, and if we except the houses of those residing in the chief towns, there will hardly remain 2 families on an average for each square mile. From this, the amount of produce raised, may be estimated, and we can form some notion out of that limited amount how small a fractional part of this is ever likely to be conveyed by railway. The truth is that Brazil, though of enormous geographical extent, and offering immense prospect of advantage to the industry of its inhabitants, and the employment of the capital engaged therein, is yet but in its infancy. British capital and enterprise have already done much towards the enrichment of the country and the developement of its resources, and there is no doubt it is in a very flourishing condition. As I am a sincere well-wisher to that country, I should much regret to see a speculation of this kind set on foot, by the failure of which, I conceive, many persons may become involved in ruin, and the character of Englishmen, which at present stands deservedly high throughout Brazil, be by such cause lowered in estimation, as having given rise to so lamentable a result. I will therefore, if you permit me, in another communication point out to you the extremely mountainous nature of the country and the many serious engineering difficulties that, in my mind, render all expectation in regard to the realization of such an enterprise quite hopeless of success.

I remain, Sir, your most obedient servant,

H. R. FOREST.

London, October 13, 1841.

[We shall be glad to hear further from our correspondent. He does us no more than justice in believing that we would not willingly mislead.—Ed. R. T.]

RAILWAY DIRECTIONS.

To the Editor of the Railway Times.

Sir,—Some strictures on this subject have lately appeared in your journal, and it seems to engage much attention. One distinguished Director and Chairman resigns his seat because (as he himself states) he does not reside near the line. Some months ago I took part in a discussion carried on in your columns on this subject. My object was to show that until the management of railway affairs was placed on the same footing with that of any strictly private enterprise, as the timber trade, cloth making, &c., railways would rarely be in a prosperous state, or at any rate would not yield such a return as they are capable of affording. I shall not now repeat what was introduced in the course of the discussion referred to. It seems clear that the Directors should be few in number, in order to avoid too much dividing the responsibility. Suppose them to be five. One might take the department of maintenance of way; another that of trains; a third that of locomotives; a fourth, that of finance; while the fifth, the Chairman should exercise a general superintendence over all matters.* Each Director should be held responsible for his particular department. The Directors should not be required to hold more than a small share in the railway. They should be bound to reside near the line—within three miles perhaps—to devote their whole time to the railway, and not to be Directors on more lines than one. The salary should of course be adequate to the service, and it would be earned twenty times over as compared with the present anomalous state of things. The proceedings should be all checked by the annual appointment of Auditors chosen from among the Shareholders.

* This is the Birmingham and Gloucester plan. Time will show how it works.—Ed. R. T.

It is not in the nature of things, that gentlemen who attend occasionally only, residing perhaps at a distance and occupied with other pursuits, should make efficient Directors for such a concern as a railway. Effectual Direction demands constant presence and unremitting attention. Parents would breed up their children to the profession of Directors, and such Directors would doubtless introduce many improvements, each in his department. An entire revolution in the matter is demanded. If shareholders persist in the present absurd system of a sort of volunteer, almost unpaid, Direction, and the members little qualified for their work, they must not complain of small dividends. Their affairs are necessarily entrusted to servants. Let them ensure the services of good and efficient ones. A really competent and useful Director must (with respect be it spoken) be considered as a chief foreman able to guide, and answerable for his underlings. Under the present system the Director does not feel a sufficient responsibility, nor has he adequate motives for exerting himself to the uttermost.

I am, Sir, your obedient servant, C. D.

October 18, 1841.

DIVISION OF HEAVY TRAINS.

To the Editor of the Railway Times.

Sir,—In consequence of the late melancholy accident on the Brighton line, public attention is again directed to some means of obviating a recurrence of such disasters, and of enabling trains to keep their times without risk to passengers.

I think the following plan would have such effect; and not alluding to four-wheel engines or the greenness of the line, let us consider whether *two* engines to one train cannot be dispensed with, without additional danger, by multiplying the trains. On the Liverpool and Manchester line (according to Mr. Booth's evidence), one train follows another at an interval sometimes of not more than five minutes, and this is done without accident.

Now, might not heavy trains on all the lines be divided, the first part containing only the through passengers on such portion as might be necessary. This train having no occasion to take up or set down passengers, would go through without stoppages, but *not* to arrive at the terminus before its proper time. A particular signal should be attached, to show this is a *divided* train. The switchmen, and others on the line, would thus know that another train was close behind, and that such second train would make the usual stoppages. A certain interval, say 10 or 15 minutes, to be maintained between the two trains, and at each station the second driver to be informed how long the first train had passed.

By this plan no additional risk would be incurred, and instead of the *whole* train arriving *after* its time, the first portion would be punctual, and the second only about 10 or 15 minutes behind, and this could be readily accomplished, not so much time being lost in starting and stopping as with a heavy train, even if drawn by two engines.

I am, Sir, yours, &c.,

JOHN FRANCIS.

No 5, Charles-street, Brighton,
October 12, 1841.

GREAT WESTERN, BIRMINGHAM, GRAND JUNCTION, AND NORTH MIDLAND, RAILWAYS.

To the Editor of the Railway Times.

Sir,—I by no means coincide in the opinions expressed by your correspondent "L." in your last number that the receipts on the Great Western Railway for the present month can be *fairly estimated* upon the 7th (the date of his letter) nor yet that the line and its branches can ever be worked at 50 per cent. even with a gross income of a million per annum.

Your readers can judge of the past income for themselves, but that "L." does not over exaggerate by any means when he calculates that in the year 1841, the income will have increased by 50 per cent., a reference to the results upon other railways will most abundantly testify, and for this purpose I beg leave to request your insertion of the following returns.

The London and Birmingham line has now been opened for four years. Its receipts have progressed as follows:—

	1838.	1839.	1840.	1841.
For week ending Sept. 22 .	£10,769	£13,963	£16,918	£18,771
" Sept. 29 ..	11,059	14,150	17,250	17,447
" Oct. 6	10,841	13,982	16,406	17,542
" Oct. 13 ..	10,714	13,854	15,114	17,446
Total	£43,323	£54,929	£65,688	£71,006

The Grand Junction line has been opened for five years. Its receipts have progressed as follows:—

	1837.	1838.	1839.	1840.	1841.
For week ending Sept. 23	5,449	6,917	8,505	9,072	9,017
" Sept. 30	5,004	7,039	9,089	9,398	9,389
" Oct. 7	4,745	7,004	8,893	9,029	9,066
" Oct. 14	4,402	7,288	8,516	9,009	9,174
Total.....	19,640	28,248	35,264	38,278	37,486

The North Midland line has been opened for two years. Its receipts have progressed as follows:—

	1840.		1841.	
For week ending	Sept. 19....	£4,298	Sept. 18....	£5,539
"	Sept. 26....	2,861	Sept. 25....	4,852
"	Oct. 3.....	3,553	Oct. 2.....	4,778
"	Oct. 10....	3,067	Oct. 9.....	4,639
Total		£13,899		£19,808

I need not occupy your valuable space by making calculations of the per centages of increase which the above returns show. Your readers who have an interest in the matter can easily do that for themselves. Your columns will also give them the returns for the Great Western Railway and its branches for the corresponding weeks of the present year, and arguing from analogy the statement made by your correspondent "L." that the income will probably, in 1844, amount to a gross sum of a million has every appearance of being anything but exaggerated. Various other railways would bear out a similar impression, and only two or three of very minor importance show different results. I must, however, remark, that as respects the Grand Junction line, its traffic for 1840 and 1841 includes the receipts from the Chester and Crewe purchase, which has turned out unprofitably as a source of revenue. The income on the line has been materially diminished since the opening of the North Midland, a great proportion of the northern traffic now taking the eastern route.

I am, Sir, your very obedient servant,

H. H.

GREAT WESTERN RAILWAY—USE OF TWO ENGINES.

To the Editor of the Railway Times.

Sir,—After the accident on the Great Western Railway about six weeks back, I cannot but think it very injudicious on the part of the Company, that they should persist in the use of an engine behind the train as well as in front. I have travelled up three times during the last month from Bath. At the entrance of the Box Tunnel, an engine was placed behind the train. Twice out of three times I was in the Company's carriage next the engine, the third time, my own carriage was placed between the Company's carriage and the engine. Now, in case of any accident to the first engine, what could save the carriage adjoining the second engine from destruction? Surely an empty truck ought always to be placed between the engine and carriages.

G.

London, October 16th, 1841.

South-Eastern Railway.—The description of sleeper now used upon this line, and invented by the Company's Engineer, is worthy of that gentleman's ingenuity. It is different from anything of the kind hitherto used. These sleepers are one quarter of a balk, 13 inches square, cut the angular way, so as to form a wedge in the ground. Their merits will be immediately tested when a sufficient distance is laid down to give them a trial. Sleepers are generally half round pieces, 9 feet long, but vary in substance. For instance, they are on the Hull and Selby 9 + 1½, while on the Eastern Counties they are much larger, namely, 12 + 6.—*From a Correspondent.*

RAILWAY SHARE-LISTS.

The London Prices are taken from Mr. Wetenhall's List; those at Liverpool are furnished by Mr. C. J. Townley, Sharebroker, and are the closing prices on Thursday. The quotations marked * are the latest Edinburgh prices; those marked † the latest Glasgow prices. The former are supplied by Mr. Robert Allan, of St. Andrew-square; the latter by Mr. J. Watson, of Frederick-street.

2. Toll to London and Birmingham 156*l.* 2s. 8d., to be deducted from gross receipts.

7. Receipts include the Northern and Eastern toll, &c. The dividend is from the time of opening.

9. The part between Glasgow and Paisley was made at the joint expense of the Glasgow Paisley and Greenock, and Glasgow Paisley and Ayr Companies, but each Company's receipts in respect of that part are now merged in the general returns of each.

10. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester line, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 114 (83+31.)

12. The 5,231,527*l.* 9s 10d. is the amount actually raised according to latest balance-sheet. The receipts include those derived from the Cheltenham and Exeter branches; the former opened for 18 miles, and the latter for 33. The divisor employed to ascertain the daily receipts per mile is therefore 169½ (118½+18+33.)

14. The 33*l.* 18s. 9d. from goods, &c. is for toll only.

15. Ten per cent. is the maximum dividend allowed by the Company's Act.

16. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. On the quarter shares the dividend is at the rate of 42½ per cent. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

18. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table.

19. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company.

20. Capital of 993,300*l.* includes new capital for widening the line, &c. The dividend mentioned does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table is exclusive of Brighton and Croydon toll.

21. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount.

23. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

24. The 4,494*l.* 19s. 6d. are the receipts after deducting omnibus charges, and payments to other Companies. The dividend is from the time of opening.

25. The receipts for goods, &c. include, carriages, 50*l.* 2s. 0d.; horses, 17*l.* 14s. 0d.; dogs, 2*l.* 16s. 0d.; parcels, 107*l.* 17s 3d.; cattle, 75*l.* 5s. 6d; corn, 5*l.* 8s. 9d; heavy goods, 478*l.* 14s. 11d.; coal, 134*l.* 11s. 9d.—Total, 972*l.* 10s. 2d. The dividend is from the time opening.

27. The dividend includes a sum of 31,786*l.* earned previous to the last half-year.

28. The receipts stated are after deduction of Liverpool and Manchester toll.

29. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 26 miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

30. The capital of 500,000*l.* includes that provided for harbour and works as well as railway. The dividend is from the commencement.

32. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

Railway Salaries.—*We have received at least a dozen letters on this subject in the course of the week, but at present we cannot find room for more upon this subject than will be found elsewhere. This to* An Old Railway Clerk, Juvenis, T. C. L., and others.

Justice. *Regent's Park.*—*We suppose the "system" is not adopted by any of the Companies, because they do not believe in its superiority. If our correspondent can show that it is superior we shall be glad to hear from him.*

A correspondent assures us, that on a recent occasion one of the Directors of a railway (the whereabouts of which we shall not at present particularise) disguised himself and went upon the line, "for the purpose of questioning a novice porter." Can this be true? Our correspondent seems to think that the gentleman who had recourse to this "ingenious device" might pick up some useful, if not very pleasant, information, were he to pay a similar visit to the Dens of the establishment.

We feel obliged to our Basingstoke friend, but it is quite unnecessary, we think, to give the details.

The Cornish Engines.—*Mr. Weale, of Holborn, has just published "An Experimental Inquiry concerning the relative power of, and useful effect produced by, the Cornish and Boulton and Watt Pumping Engines, and Cylindrical and Waggon-head Boilers," by Mr. Thomas Wicksteed, Engineer to the East London Waterworks. This work, which originally was intended for the Institution of Civil Engineers, of which the author is a member, contains in small compass a great deal of useful information, and many valuable calculations. Like all the books that issue from Mr. Weale's establishment, this one is beautifully "got up."*

We have to acknowledge the receipt, through the same publisher, of a pamphlet by Mr. J. B. Denton, Surveyor, on "Model-mapping," as suggestive of a general and economic system of Drainage and Navigation. We recommend it to the notice of practical men.

W. K. T., Christchurch.—*The gross receipts of the South-Western Railway, from 1st July to the 17th instant, were £103,798 19s. 11d. The accounts were made up to the 30th June.*

One of the Subs.—*Previous to receiving his note of yesterday, we had struck out a considerable part of his communication, the publication of which we were sure would have advantaged neither him nor his cause. At his urgent request, we now suppress the article entirely. The other letter to which he refers in his note has not reached us.*

Justice, who writes in reference to the North Midland line, must find some other medium for his personalities.

A Liverpool correspondent W. B. M. wishes us "to intimate to the Directors and Managers of the various railways, the necessity of having servants employed to clear off the earth and any refuse that remain on the lines, as working men and other people who walk across them are sure to leave on the rails a portion of dirt that adheres to the sole of the foot, and that more in wet weather." Accidents, he says, have arisen from this piece of neglect. Would it not be much better to prohibit the parties referred to from walking on the rails, or stepping upon them, in crossing from one side of a line to the other?

A Railway Shareholder begs to acquaint G. B., of York, that the inquiry relative to the respective prices of shares of the York and North Midland and the Birmingham and Gloucester Railways, was not made by the individual who for some years past has written in the Railway Times under that signature.

R. H.—*The plan proposed is ridiculous.*

Mercator.—*We specially excepted the two lines referred to.*

J. K. Z.—*The facts will be very acceptable. If any one of the Directors has so far forgotten his position as to make use of the threat hinted at by our correspondent, all we can say is, that if the statement can be substantiated, the offender shall hear more of it than he will like.*

W. P. *Liverpool.*—*We have struck out from our correspondent's letter the concluding part as it does not bear upon the main point treated of. Will he discuss the subject in a separate article?*

J. J. *Edinburgh.*—*Apply to the Secretary. We have not the means of furnishing the required information.*

An Engineer.—*It is only a "modern instance" of the old saw, sic vos non vobis. We shall be happy to be furnished with further details.*

We dissent very materially from the sentiments expressed in a private note from Bristol, to which we need not more particularly allude. Investigation is a much better answer to grave charges than contempt. Our respected correspondent will recollect, that we have carefully abstained from expressing any opinion as to the validity of such charges.

Our Yeadon correspondent may rely upon it that we shall not hesitate to speak out when occasion seems to require it.

Four-wheeled Engines.—*We give elsewhere Mr. Hood's first letter on this subject. A second letter appeared in the Times of yesterday, but we cannot publish it this week. It is principally in refutation of the positions of Mr. Seaward, which one of our correspondents has to day taken in hand.*

Manchester and Leeds Railway.—*In the calculations of a correspondent in our last number the dividend of the Manchester and Leeds line was stated to be 4l. per cent. per annum. It ought to have been 3l. 14s. 4d. the same as given in our Traffic Tables.*

D. Reigate.—*The scheme has been attempted more than once, and has always miscarried. Shall we save his MS. for him?*

P. P. P.—*Any time after November 6.*

We beg to direct the attention of our readers and correspondents to a letter on the Rating of Railways, which appears in another column under the signature of Vicarius. Will any of our legal friends supply the information required?

THE RAILWAY TIMES.

SATURDAY, OCTOBER 23, 1841.

It is not many weeks since the public mind was painfully excited by a lamentable accident on the North Union Railway, the primary cause of which was the crossing of a common road on a level. Last week we had to record a somewhat similar case upon the Hull and Selby line, which, although fatal only to the party through whose negligence it was occasioned, shows how undesirable and dangerous it is that such a mode of construction should be sanctioned. To-day we extract from a local contemporary some particulars of the evidence adduced at the inquest, in which the circumstances of the occurrence are more minutely detailed.

It appears that about 400 yards from the Brough station, the railway crosses a highway on a level, and that as usual gates are erected, at which keepers are stationed. On the night of the accident, the keeper, Hebsom, instead of attending to his duty had, it seems, *been writing a sermon (!)* until the train had just reached the gate, when it is supposed that hurrying out of the house, he was knocked down by the train, which had dashed through the barrier, and was killed. The man, it is clear, brought his fate upon himself, but there are two or three points in connection with the catastrophe upon which we think some further explanation must be given before the engine-driver, Howard, can be acquitted of all blame.

The gate is visible from the Brough station, at which Howard stopped for four or five minutes, and at the time it was surmounted by a red light, the signal of danger, but which light Howard says he did not observe until too late to pull up. The reason he gives for not perceiving it *may* be correct; if it be not, it is certainly very plausible and ingenious. "Before I got to Brough (he says) I heard an unusual noise in the engine, which convinced me something was wrong. I examined it when I stopped, but could not discern anything; and after I had set it in motion again, my fireman held the light whilst I examined it, and found a spindle loose. I could not have discovered this if the engine had not been in motion, and I thought it a good place to make the examination, as we were going slowly, and I knew there was a man at the gates whose sole duty it was to attend to them. When I had finished my examination I lifted up my head and saw the red light. Previous to leaving the Brough station I whistled twice. The whistle could be heard, I should think, two miles such a night as it was." Howard, it appears, bears an excellent character for general steadiness and propriety of conduct, and so far therefore his statement may be regarded as correct; but it is not to be forgotten that in such a case as this the temptation is extremely strong to deviate from the truth. A driver's character, perhaps his very subsistence, depends upon his satisfying his employers that he has not been neglectful of his duty, and as dead men tell no tales, we fear that the odium of many an unpleasant occurrence of this kind has been thrown, not merely by drivers but by their superiors, upon those who could not stand forward to clear themselves, or contradict the representations made by parties who were much more in fault. As respects this particular case, we quite agree in the very sensible observations of the Coroner that there was "a certain degree of negligence in the driver," and that as his engine at the speed it was then going at could have been stopped in 150 yards, he ought to have looked out when he was about 200 yards from the gate, to see whether they were open or not.

The necessity for such a precaution is still more obvious when it is recollected that according to the driver's own voluntary statement he had had "*to whistle the deceased out* twice *before.*" We learn from the evidence of Mr. Bray, the Resident Engineer, that Hebsom had only been "about six weeks" in office, or (as there were two keepers) not more than three weeks on actual duty, and yet he had twice been guilty of neglect! The driver states, that when he got to Hull after the accident, he reported to Mr. Locking, the Secretary, what he considered a neglect of duty in the gate-keeper. This was very proper; but did Howard wait for the smashing of the gates (for it seems he did not know at the time that the man was killed) before he made this representation to the Secretary? Did he report on the first or second occasion of offence, the negligence of Hebsom either to the Secretary or to the Resident Engineer, in whom it appears the appointment of gate-keepers is vested? If he did not, *he* is greatly to blame; if he did, the blame must fall upon others. That he did *not* is pretty clear from Mr. Bray's evidence, who states that there had been no complaint whatever against deceased previous to his death.

Mr. Bray's evidence shows that "there is no clock at the gate-keeper's house." This we take to be an unfortunate omission. It is true, as Mr. Bray observes, that "it is the gate-keeper's duty to be *continually* on the look out," but nevertheless the possession of a clock or a watch would be of service in inducing additional vigilance, not merely as regards the railway but the common road, when the period was approaching at which a train became due. Even when gate keepers are not engaged in sermon-writing, they are apt "to take no note of time" sufficient to regulate the opening or shutting of the gates with due accuracy—as witness the late instance on the North Union line. By the way, it would seem as if it were the practice on the Hull and Selby line to keep the common road open, and the railway (nominally) shut, except upon the passing of a train. Would it not be much better to keep the road shut and the railway open? If it be the duty of the gate-keeper to be constantly on the look out, he would merely have to open the gates when a common road vehicle approached, and a few seconds' delay would in that case be of

Digitized by Google

little importance, whereas with a railway train the obstruction of the gates is shown to be of no practical service, while, as in this case, the arrangements with respect to them may lead to a fatal result.

It appears, further, from the evidence of Mr. BRAY, that the wages of a gate-keeper on the Hull and Selby line are 16s. per week, for a day or night service of twelve hours. Mr. BRAY is of opinion that with such a remuneration the keepers "will have no occasion to follow any other occupation for a livelihood." With every allowance for the difference between Yorkshire and London, as regards cost of living, we confess that we think the amount of wages to parties occupying so responsible a situation considerably too small. We would have all the servants of a Company well paid, and *then* would insist upon a most rigid discharge of their several duties. It does not appear that HERSOM turned theological writer for the sake of gain, but he might have had recourse to shoe-making (had such been his craft) with a similar purpose. We would equally interdict both avocations.

These, accidents, painful as they are, will not, we trust, be without some good results. The following circular on this subject has recently been issued by the Railway Department of the Board of Trade, to all Companies whose lines are in operation:—

"Sir,—The recent accidents on the North Union and Bristol and Exeter Railways having shown that the precautions necessary to ensure safety at crossings of public roads on a level, are not always adopted, the Lords of the Committee of Privy Council for Trade direct me to call the special attention of the Directors of the ——— Railway Company to the subject, and to request that returns may be furnished to the following questions:—

"1. How many turnpike roads and highways are crossed on a level by the ——— Railway?

"2. Are good and sufficient gates erected across each end of such turnpikes or highways at each of such crossings, in conformity with the 2nd and 3rd Victoria, cap. 45?

"3. Are gatekeepers stationed at each of such crossings, in conformity with the said Act?

"4. What wages do such gatekeepers receive? how many hours do they remain on duty? have they any other employment?

"5. Are positive instructions given to such gatekeepers to keep such gates constantly shut across the roads, unless when opened by the gatekeeper to allow carriages, &c., to cross the railway?

"6. What other instructions are given to such gatekeepers?

"7. What instructions are given to engine-drivers as to precautions to be observed on approaching crossings?

Some of the questions above proposed, (which were issued previous to the Hull and Selby accident) bear upon the points referred to by us and in the evidence before the Coroner. We anticipate much valuable information from the Companies' answers. It is true that the Board of Trade have no means of compelling the several Managements to give the information desired, but none of them, we venture to say, will be so churlish as to refuse it.

IT will be seen from the following circular, which has lately emanated from the Railway department of the Board of Trade, that a good deal of useful information on the much-agitated question of four-wheeled or six-wheeled engines may shortly be looked for, as well as upon other matters incidentally involved in the late melancholy occurrence upon the Brighton Railway:

"SIR,—The late accident on the London and Brighton Railway, having suggested the importance of collecting information of the respective merits of the different description of locomotive engines employed upon railways, I am directed by the Lords of the Committee of Privy Council for Trade, to request the Directors of the ——— Railway Company to furnish them with returns to the following questions:—

"1. What number of engines are employed upon the ——— Railway?

"2. What is the construction of such engines, specifying the number of wheels and their diameter, —the weight of the engine,—the weight on the front wheels,—the construction of the axles and bearings, and any other particulars bearing upon the question of safety?

"3. What are the names of the makers of such engines?

"4. What description of engines have the Directors been led by their experience to prefer, and for what reasons?

"5. Have the Directors been led by their experience to consider any particular description of engine as peculiarly dangerous, and if so, for what reasons?

"6. Are extra engines ever employed upon the ——— Railway in propelling trains?

"7. If so, is the extra engine applied in front of the train or behind?

"8. Have the Directors been led by their experience to consider the use of an extra engine, either in front or behind, as an additional source of danger?

"9. Are engines ever allowed to run tender foremost upon the ——— Railway?"

The course taken in this instance by the Board of Trade we conceive to be the proper one, namely, of "*collecting information*" upon so important a subject. Any ulterior step, such as compelling Companies to use engines of a particular description (whether four-wheeled or six-wheeled), we should most strenuously oppose. Whenever the practical superiority of the one description of machine over the other can be clearly demonstrated, we are quite sure that the better of the two will be at once and generally adopted. Why should it not? Directors are for the most part too deeply interested in the pecuniary results of their several speculations not to adopt any feasible means of adding to their resources, by diminishing their expenses, and giving increased confidence to the public in the efficiency and safety of their arrangements. To imagine for a moment that they could feel indifferent upon such a matter, were monstrous; but while scientific and practical men are divided as to the comparative merits of two different descriptions of locomotive, it would be highly dangerous, and in reality obstructive of all further improvement, for any external body to enforce the adoption of either the one or the other. We are convinced, however, that the Board of Trade have no such object in view.

WE felt it our duty to remark, in our last number but one, upon the extraordinary predominance of Contractor-Directors in the management of the affairs of the Durham and Sunderland Railway Company. Our strictures, we see, have called forth from the *Northern Times*—a paper published in Sunderland—a notice of (for we cannot regard it as in any way an answer to) our animadversions. We give in another column the observations of our contemporary; and those of our readers who do us the honour to recollect the scope of our remarks, will at once see that they have been neither fairly nor fully met.

We deemed it most monstrous and wholly inconsistent with the spirit, if not the letter, of Railway Acts, and so we deem it still, that five or six at least of the members of a Board should be engaged in contracts with the Company whose affairs they profess to conduct; and what is our contemporary's justification? He states, generally, that our remarks are founded on misconception, but how does he prove it? He says, the contractors who have a seat at the Board "are not contractors for the supply of articles for the use of the railway, but coalowners and landowners on the line who have contracts with the Company for the carrying of their coals to Sunderland or for way-leaves through their land!" Could anything show more clearly than this statement of our contemporary the exceeding impolicy of having such Directors? He has strengthened our case most materially, and all the arguments which we previously used now acquire tenfold force. Here are a set of gentlemen whose interest it needs must be to get their coals conveyed upon the Durham and Sunderland Railway at the least possible cost, and who have the uncontrolled power of fixing what rate of charges they please; and is it for a moment to be imagined that any dividend, which under any circumstances is ever likely to be realised in a year from the working of that line, is at all to be compared to the saving which these coalowners might, and we have no doubt do, effect in one half that time, by having an opportunity of charging themselves just as much as they please and no more? The supposition is ridiculous. Were these Contractor-Directors common tradesmen "for the supply of articles for the use of the railway," we are ready to admit that bad as the case would even then be, it would not appear nearly so suspicious as it does under the explanations given by our contemporary. A Tradesman-Director supplies a certain article to a Railway Company, and so far as he can induce his colleagues to award an undue preference, has, as it were, a temporary advantage over the Company. It is different, however, with coalowners using a line of railway. Their interest is diametrically opposed to that of the Company who accommodate them, nor is that interest other than permanent. The tradesmen may never have an opportunity of entering into a second contract; the coalowner is constantly reaping the benefit which an undue favouritism may have conferred upon him. We do not say that the Durham and Sunderland Directors *have* taken advantage of their position to forward their own interests at the expense of the interests of the Company whose representatives they profess to be,—but this we say, that no man anxious to avoid even the appearance of evil, would voluntarily place himself in such a position as every one of these Contractor-Directors does. Our contemporary seems to think that all suspicion of unfair dealing is removed by the fact, that the Contractor-Directors "actually consented to a considerable increase in the charge for conveyance of coal to Sunderland on the one hand, and a considerable diminution of rent for way-leave on the other, only six months ago, although they had legal agreements with the Company by which they *could have* insisted on the continuance of the old prices." "*Could* have insisted," doubtless! But would it have been prudent or politic so to insist? We can easily imagine a case in which it would be far more profitable to surrender a part than to be forcibly deprived of the whole. Was the conduct of the Durham and Sunderland Directors of this kind? Did they consent to an increase of charge on the one hand, and a reduction of

Digitized by Google

rent on the other, rather than enforce a legal agreement, which in that case would never have been renewed, and might even then have been disputed? The answer of our contemporary is no answer at all, and until we can learn how much more profit the coalowners, who are Directors, receive from their several pits than they can ever reasonably look for from the railway, we shall not regard their so-called "liberality," in consenting to an increase of charge in any other light than as a mere decoy to the shareholders at large.

We are glad to find, that our contemporary gives up as "altogether indefensible" the declaration of a dividend out of capital. We wish he had gone somewhat further, and characterised it, as it certainly is, as a piece of unmixed knavery—as a wanton deception practiced upon innocent proprietors, which ought to be sufficient to drive from all decent and honest society those who could for a moment countenance or connive at it. We are charged with unfairness and dishonesty for having, as is alleged, concealed the fact that the gentleman who complained of having been duped by the declaration of a non-existent dividend, was himself present at the meeting where such dividend was declared. We beg to say that we concealed nothing. We gave the account of the meeting precisely as it appeared in the columns of our contemporary, and we did not then, nor do we yet, see how the presence or absence of an individual proprietor can meet the allegation that subscribers had been entrapped into the concern by the publication of fraudulent documents. Even had the particular proprietor referred to been present when a dividend was shamelessly declared out of capital, it is not likely that he would have been able to unveil the deceptive dealings of the Directors, nor, if we may judge from what was elicited at the last meeting, is it likely that any exposure of their misconduct would have had much influence with the long-suffering and apparently contented shareholders.

We need not pursue this subject further. We are sorry that the *Northern Times*—a paper which in general displays so commendable a feeling of independence and public spirit—should from *any* motive (we are willing to ascribe it to an unconscious local bias) have been led to lend its influence to conduct such as that upon which we have unwillingly been led to comment. It is quite true that "quarrels and bickerings between the Newcastle shareholders and the Directors will not accelerate the progress" of the undertaking; but it is equally true that until the cause of complaint is removed, there can be no solid ground for future prosperity nor for the remedying of evils that are past.

We regret that our contemporary did not do us the justice to quote in full the article upon which he has chosen to comment. It might have opened the eyes of some of the proprietors of the Durham and Sunderland Railway who may not be in the habit of seeing our journal.

Our last week's notice of the memorials of the North Midland Railway Clerks has brought us a letter from Mr Patteson, the intelligent Secretary of the Company, in correction of an error into which we had fallen. We give Mr. Patteson's communication elsewhere, as well as another upon the general question.

It appears that we were wrong in assuming that the advance to individual Directors had not been reduced simultaneously with the salaries of the subordinates. Mr. Patteson informs us that the Directors' remuneration has been reduced from 100*l.* to 50*l.* a year each, and we are extremely glad to learn that such is the fact. Not that 100*l.* or even 200*l.* would be by any means an excessive remuneration to a Director who really and truly does his duty, but because a voluntary abandonment of their pecuniary privileges will relieve the North Midland Board from all suspicion of seeking to cut down the salaries of others for the purpose of saving their own. The main question, however, remains precisely where it was—namely, is it judicious—is it just—that the hard working servants of the Company should have their wages curtailed before every effort has been used to lop off superfluous offices or reduce the allowances of the *ornamental* members of the establishment—if so, we may term those whose services are more showy than useful? Even supposing all this to have been done, would the Company profit in pocket by the comparatively trifling so called) saving which it is now proposed to effect? We think not. To introduce murmuring and discontent into an establishment is not the way to render men attentive to their duties: to screw down a servant to a scale of wages which must harass and distract his mind as to how his family and himself are to be provided for, and then to expect that he will enter heart and soul into the interests of his employers—toil cheerfully for them—make his duty a pleasure—be enthusiastic in the discharge of his office (for without a certain degree of enthusiasm no man, ever played his part in the business of the world well)—to hope that two such contrary moods of mind can be combined, is to know very little of human nature as exhibited in the customary avocations of life. Place a man in a position in which with all his efforts he can barely stem the tide of want, and what is the result? He becomes hopeless—heartless—careless—reckless; if he go so far even as to do his bare duty, he does no more; he has little to lose, nothing worth caring for to preserve, and he becomes restless and dissatisfied, a burden to himself, and a plague to all about him. On the other hand, let a servant know that his employers are concerned for his comfort—that with care and good conduct he may be, and ought to be, placed beyond the depressing influence of poverty, and his spirits rise with the occasion. "Chill penury" no longer "represses his noble rage," nor "freezes the genial current of his soul;" he becomes active, energetic, devoted. He has the strongest of all motives—the consideration of his own personal advantage—to attach him to his situation; he fears to commit a fault, lest he should deservedly lose what he has, in all probability, had great difficulty in attaining. He is not for ever on the look-out to "better" his condition: he is satisfied with a competence, and becomes—what we fear will be a rarity in a railway establishment if these reductions and low salaries are persisted in and become general—an old, a valuable, and a valued servant. We need not guard against what may be termed *too* liberal treatment, as tending to laziness; for the Companies are not likely to err upon that side, so far at least as the poor clerks are concerned.

We stated last week that Mr. Newton, of Derby, the present Chairman of the Company, was generally understood to be the author of the proposition for reduction. Mr. Patteson seems to imply that he is not. That such is the general impression out of doors we know to be true (we had it so stated to us last week from three different parts of the kingdom), but whether correct or not is of no moment. As Mr. Patteson observes, the act, with all its merits or imperfections, must be considered as the act of the Board at large. We are told that there were individual Directors who dissented from the scheme: but the majority, as a matter of course, carried their point.

Mr. Patteson says, "there seems to be much misunderstanding and misrepresentation relative to these proceedings," and that "probably the Board will publish the Report itself [of the Committee of Directors who recommended the reduction] for the information of proprietors as soon as a revision of it is completed." We hope this will be done. We do not think that *we* have misunderstood—assuredly we have not wilfully misrepresented—any part of the proceedings. We have endeavoured to argue the point without any further reference to the North Midland Board in particular, than was inseparable from the nature of the discussion. We have taken our stand upon the broad ground, that it is unworthy of a great Company to reduce the previously too narrow allowance of their servants, when the benefit to be *hoped for* under any circumstances is so trifling; and that, practically, the intended saving, while it operates cruelly upon a very deserving class of men, will in its effects prove injurious to the true and permanent interests of the Company. The North Midland is not, we regret to say, the only line upon which hard labour is most inadequately recompensed, but as the Managers of that noble undertaking stand, we believe, alone in the scheme for reduction, the general question has been, and necessarily will continue to be, discussed with more personal reference to them, than under other circumstances would have been the case.

In our last number we briefly noticed the state of the works on the South-Eastern Railway, from the junction with the Brighton line to Tunbridge. It appears, that during the late equinoctial gales, and the high spring tides, the works at Dover, particularly the sea wall, have been subjected to the most severe tests; and from information which has reached us from a valued correspondent, who visited that district on Saturday last, when there was the highest tide known for many years, the works have withstood the force of the sea, and present an appearance of solidity far beyond the expectations of the most sanguine supporters of the undertaking.

We understand that during the present week a *traité provisoire* between certain capitalists in Paris and the French Government, for the construction of a line of railway from Paris to Lille and to Calais, has been signed by the Council of Ministers preparatory to an application to the Chambers in the approaching Session. The object of this treaty is to secure within a very limited period the formation of these lines of railway, which will eventually become the property of the Government, and connected as they are with Calais, must secure the traffic not only to Paris but to Brussels the Rhine and Germany—thus forming a direct communication by means of the South-Eastern line between London and the Continent of Europe.

Professor Barlow has made his report to the Board of Trade in reference to the late accident on the Brighton line, but we have not as yet had the good fortune to see a copy of it. A notice in some of the daily papers states that the Professor "who was sent

Digitized by Google

down by the Board of Trade in the absence of Sir Frederick Smith, has, thoroughly examined the works, and handed in his report, which fully bears out the official document signed by the latter gentleman as to the substantial character of the works. Professor Barlow also awards great credit to the engineer of the company, Mr. Rastrick, for the manner in which he has directed the works through so so difficult a country. He recommends that more time should be taken in the performance of the journey, which suggestion the Directors had anticipated."—Next week we shall probably be able to give the Report itself.

—o—

A VERY large and influential public meeting of the inhabitants was held in Leamington on Monday, to consider the expediency of supporting the proposed Warwick and Leamington Railway. The matter was fully discussed, but the details have more of a local than a general interest. The following resolution was at last adopted unanimously:—"That this meeting being convinced that it is essential to the welfare of the town of Leamington, that they should have a direct communication by railway with the metropolis and the rest of the kingdom, has heard with the greatest satisfaction the measures in progress by the Warwick and Leamington Union Railway Company, for making a branch railway from the London and Birmingham Railway at Coventry."

—o—

A RAILWAY case which has been made a good deal of by a portion of the daily press, occurred at Croydon on Monday, when the Directors of the Brighton Company applied for leave to shut up a foot-path which crossed the railway on a level, and which it seemed was very little used by the public. It appeared from the explanations given that there were two archways at a very short distance, either of which might with very little inconvenience be crossed. The magistrates, however, were not content with refusing the application, but indulged in some characteristic sneers against railways generally. We do not much wonder at it; but at the same time should an accident occur at this part of the line, from the crossing of the footpath, we shall know *who* are to blame for it. Perhaps, rather than contest the point with their worships, the Company would do well to follow the example of the Birmingham Company, in a similar case near Kensall Green, by erecting a wooden footway arch over the line at the spot referred to.

—o—

A CORRESPONDENT states that the number of passengers who have travelled on the various English Railways from the 7th of September to the 4th instant, appears from the returns made to the Stamp-office to have been 68,809.

—o—

ON Monday afternoon, the tide in the Thames rose higher than had been known for the previous forty years. An immense deal of damage was the consequence. The working of the Blackwall Railway was stopped for a few hours, in consequence of an inundation at the lower part of the line; but we are happy to state that no serious injury was occasioned to the works.

—o—

THE *Athenæum* takes the same view which we did several weeks ago of that part of Sir F. Trench's scheme for improving the banks of the Thames which refers to a colonnade railway. "The clashing of public convenience with local interests, and the industry established on the river's banks, is [says our contemporary] completely obviated by Sir F. Trench's plan of a lofty arcade along the river side, leaving the embankment below to the wharf-owners, and supporting above, a causey, free from hindrance and turmoil. An arcade in such a situation might be easily made a very noble object, and would contribute not a little to advance the feeling for the fine arts in this country, by developing vigorously in the public mind the fundamental conceptions of symmetry and elegance. If handsome bazaars were erected on it at suitable distances, so as to form a covered way and afford shelter, they would add to the convenience and agreeableness of the causey, and might perhaps produce a considerable revenue. For beauty and utility we know of no metropolitan improvement which can vie with that proposed by Sir F. Trench. But as to his scheme of railways between the bridges, we can only say—

Unthought-of follies cheat us in the wise."

—o—

IT is stated in the *Carmarthen Journal* that Mr. Powell, a civil engineer, has suggested the plan of a railway from Merthyr to Brecon, and thence, passing near Hereford, to Worcester. This plan would afford direct steam conveyance from Uphill to Liverpool.

—o—

WE beg to call the attention of Railway Boards to a letter which appears in another column, signed "A Traveller per Rail," with reference to the hints which we threw out last week as to the time-bills of the various lines. The matter is of great importance. We have reason to believe that a scheme somewhat similar to that suggested by us last week will speedily be submitted to the Companies by a most respectable party.

—o—

SIR JOHN SEALE has placed on the Order Book of the House of Commons, "for the next session," a notice of his intention "that unless, in the mean time, some positive conclusion is come to by the existing Government on the Report of the three Commissioners appointed by the late Government to survey and recommend the harbour best adapted for the embarkation and disembarkation of the mails to and from the West Indies, and on which the then member for Falmouth moved a Committee of Inquiry in the last Parliament, which made an imperfect Report—to move for a fresh Committee, to which all evidence and papers placed before the former Committee shall be referred, with a view to conclude the inquiry."

—o—

WE have already stated, that the Directors of the Chester and Birkenhead Railway have recently determined to increase the charges over the Woodside Ferry, which is the property of the Company. The inhabitants of Birkenhead have taken the alarm, and on Monday a numerous and most respectable public meeting was held in the Town-hall, for the purpose of taking into consideration the propriety of the Commissioners purchasing the ferry, on behalf of the township, and of authorising the Commissioners to take the necessary steps for that purpose. The following resolution was passed unanimously:—

"The Commissioners, having maturely considered the advantages which the township would derive from the purchase of the Woodside Ferry from the Railway Company and F. R. Price, Esq., recommend such purchase to this meeting, resolved, that this meeting authorise the Commissioners to make the purchase on such terms as they may think proper, and that authority being given to apply to Parliament for an Act for regulating the said ferry, and for obtaining the funds required for the purchase, and that so soon as the draft of the Act is prepared, and before it is introduced to Parliament, the Commissioners do lay the same before a general meeting of the inhabitants."

The ferry we have always regarded as an incumbrance to the Railway Company, and shall be glad if they can dispose of it at a fair price, and under conditions for the due accommodation of their own traffic.

RAILWAY OFFENCES AND OFFENDERS.

Two boys were recently brought before the Sheriff of Renfrewshire, charged by the Superintendent of Police on the Glasgow and Greenock Railway with having thrown missiles at a train passing under the bridge which crosses the line at Cartburn Hill. The young delinquents admitted, to a certain extent, their guilt, (quibbling only respecting the missiles thrown,) and were very properly sentenced by the Sheriff to pay a fine of 5*l.* each with expenses, or be imprisoned for one month.

We are happy to find that a trespasser upon the same line has lately met with an adequate punishment. A woman, named Watson, was brought before M. Brown, Esq., Justice of the Peace for Port Glasgow, charged with trespass upon the railway, and obstructing a station officer at the time a train was due. She was found guilty, and *sent to Bridewell for two months.*

On the neighbouring line, the Glasgow and Ayr, a case of offence was not long since decided. A (so-called) "respectable" tradesman was brought before the Sheriff at Paisley, for violating the bye laws of the Company, in so far as he took his seat in a superior class carriage than that which he paid for. Having paid all expenses and acknowledged the kindness and liberality of the Directors in passing from all pecuniary claim, the case was abandoned.

On the 11th instant, at the Coventry Police-office, James Barnacle was charged by an officer of the London and Birmingham Railway Police, with having trespassed upon that line. Barnacle, who is an old man, pleaded guilty to the charge, and said he went on for the purpose of gathering water-cress, which was growing in the drains by the side of the road. Fined 10s. and costs, or in default of payment to be committed to prison for fourteen days.

A man named Beadle, one of the guards on the Brighton Railway, was on Wednesday charged before the Croydon magistrates with assaulting a female passenger. It appeared that on the previous Sunday, a girl named Tyrrell had taken out a second-class ticket at Horley, when the prisoner induced her to enter a first-class carriage. No sooner was the train in motion than the fellow commenced taking indecent liberties with the girl, who resisted him, and on arriving at the next station, he was unmanly enough to thrust her from the first-class carriage. The girl, when she arrived at Croydon, complained of his misconduct, and Mr. Rallet, the superintendent of the Company, very properly instituted the present charge. The offender was fined 40s., which of course was "immediately paid." We presume that he was instantly dismissed from the Company's service.

A person named Crouch was charged on Tuesday

Digitized by Google

at the Marylebone Police-office, with having travelled on the Great Western Railway beyond the place for which he had taken a ticket. There was a doubt as to whether the man had contemplated a fraud, and under the circumstances he was liberated on paying the difference of fare. It was stated that such frauds were by no means uncommon; and in truth we can scarcely wonder at it, when we know that the tickets are collected on entering the Company's carriages, instead of the usual practice, on leaving them.

CHELTENHAM AND GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—I perceive you have announced the half-yearly meeting of the Cheltenham and Great Western Railway to be held at Stroud. Being a shareholder in the line, I should hope all who are able will attend the meeting, as I fancy the question of further pursuing the line from Swindon through Stroud to Gloucester, may be wished to be entertained by some of the proprietors who may still desire to sacrifice the small remainder of the capital, in the hope of benefitting their own property in the Stroud Valley and Gloucester.

I am aware that a statement was confirmed at the last meeting that the Directors would not proceed further until they could distinctly perceive that they had a sufficiency of funds in hand left to carry the line through, *nor even then*, until it had been again surveyed and a new estimate taken of the probable expense of the *tremendous tunnel* and wide gauge road, and that on so miserable a traffic as appears on the present road.

The great slip on our present line I consider a God-send; and I think it very probable, after the great quantity of rain we continue to have that there may be another to provide for on our present line, and which I should be thankful for if it proves the means of swallowing up the money and prevent any further extension of the line. At present there may be chance of an unfortunate shareholder getting a ten pound note for what has cost him sixty-two pounds ten shillings, but after that he would not be able even to give it away. A small return may be looked for from the present bargain with the Great Western for the next five years. After that time I have my doubts of that being continued at the present price.

By inserting the above, penned with the sole desire of assisting the unfortunate shareholders, you will be doing a public service, and oblige a constant reader and admirer of your useful paper.

HOMO.

Chester, October 21, 1841.

RAILWAY RECEIPTS AND DISBURSEMENTS.

To the Editor of the Railway Times.

SIR,—I beg leave to hand you a statement of the traffic receipts and disbursements on twenty-one of the principal lines of railway, together with the cost per cent. on the gross receipts (exclusive of interest on loans) of working the several lines, made out from the accounts published at the late half-yearly meetings. I shall be glad if this statement should be found worthy of a place in your next publication; perhaps, too, the per centage on the gross receipts may afterwards be allowed a column in your weekly Traffic Returns, inasmuch as if placed there, week after week, it might shame the Directors of the mismanaged lines, and tend to bring about the so much to be desired railway reform, as regards economy of management, without which but few of the lines of railway will ever answer the expectations of the proprietors; yet, with the requisite economy, most of them would at once pay a handsome dividend. That much remains to be done in this respect is every day more clear; in proof of it we have only to look on the one hand at the Lancaster and Preston Railway—a short line of some 20 miles in length, with a traffic little exceeding 500*l.* weekly, worked at no greater charge than 25 per cent. on the gross receipts.

On the other hand the Chester and Birkenhead, and Glasgow, Paisley, and Greenock, it appears, cannot be worked for less than 60 per cent.; the North Midland 61¾; the Durham and Sunderland 65½; the Hull and Selby 66; whilst the London and Croydon actually takes 88 per cent. on the gross receipts to work it!

I am, Sir, your most obedient servant,

ŒCONOMICUS.

RATING OF RAILWAYS.

To the Editor of the Railway Times.

SIR,—I should be glad to be informed in your columns of the mode of rating railways—whether there is any definite principle in rating them, and how in fact they are actually rated on the chief lines, the Birmingham, Great Western, and South-Western.

I wish to know it for the benefit and guidance of a parish through which the Cheltenham Railway runs for nearly five miles. This line is completed from Swindon to Cirencester, about 18 miles, and is leased to the Great Western at 17,000*l.* per annum; the parishioners, therefore, in vestry assembled, considered this sum as a good criterion for levying the amount of rates on that line, and proposed to make an assessment at the estimated value of 500*l.* per mile.

As there were many opinions as to the amount which ought to have been required—some thinking it too high and others too low—I should be obliged to any correspondent of your paper who may be competent, to give his opinion on the subject.

I should also wish to know what would be the result to the parish rate, were the Cheltenham Railway Company disposed to litigate the matter, whether it would not have the effect of quashing the rate altogether.

I am, Sir, your obedient servant,

VICARIUS.

LONDON AND BIRMINGHAM AND GRAND JUNCTION RAILWAYS.

To the Editor of the Railway Times.

SIR,—Your recent correspondent "W.," may be correct in stating, that the London and Birmingham and Grand Junction Railway shares would pay according to the last rate of dividend declared, and at their present prices, 5¼ per cent. to a purchaser.

Such a statement does not, however, by any means do justice to these concerns, both of which it is evident to every one who studies such matters, will at their next half-yearly meetings be in a position to divide at least a ½ per cent. more on their shares than they did in August last. Besides this increase of dividend, a great portion of the means for which are already in hand, a very considerable increase of future traffic may also be calculated on by the extension of the line from Lancaster to Scotland; a Company for undertaking which is now in process of formation.

In lately perusing a work by Dr. Granville, on the Spars of England, I felt not a little surprised at meeting with a very severe philippic against the management of one of these Railway Companies, which is almost universally admitted to be one of the best conducted concerns in the kingdom.

The learned Doctor is, it may be hoped, a much better judge of chalybeate waters, than he is of iron railways, and when he indignantly asks, why the London and Birmingham Company charge a higher price for travelling an equal distance than the Grand Junction do, he, as a writer of two chapters on railways, surely ought to have known that the one has cost twice as much per mile as the other.

Had Dr. Granville, instead of complaining of the clerk who issues train-tickets, for declining to enter into a rambling conversation with him to the neglect of other travellers, but applied up stairs to the excellent Secretary of the Company, he might very easily have obtained *correct* information sufficient to have furnished another chapter for his book.

I am, Sir, yours, &c.,

C.

Edinburgh, 20th October, 1841.

RAILWAY TO THE NORTH OF SCOTLAND.—The preliminary steps to obtaining a railway to Aberdeen, communicating with the Edinburgh and Glasgow Railway, by Strathmore and Strathearn, have commenced at the northern end. The line in Aberdeenshire is proposed to run up the Deeside to to Banchory-Ternan, and thence be carried across to the head of Strathmore, near Laurencekirk, thereby avoiding the hilly country in the neighbourhood of Stonehaven, which interposes an insuperable barrier to the formation of a line along or near the coast. We hope this will stir up those interested individuals along the proposed line in the intermediate counties of Kincardine, Forfar, Perth, and Stirling, to communicate on the subject. There cannot be the slightest question that the main railway from the south to the north of Scotland can only be carried along the line referred to; and that, although individual interests may have led to the suggestion of others, such can only have the effect of impeding the establishment of any. On this very account, perhaps, the matter ought to be referred to Government, as in the case of the Lancashire and south of Scotland line, and the report of its engineer be made conclusive. Wherever, as in the case of the proposed Fife and Perth Railways, local interests call for any connecting line, such should be made subservient to the more important object, viz., that of obtaining a main line of communication between the south and north of Scotland. We were led to understand that steps for the survey of the southern portion of the proposed line to Aberdeen had been taken, that is from near Falkirk by Strathearn to Perth, but we have not been able to ascertain the result, nor in what stage the proceedings now are.—*Perth paper.*

BIRMINGHAM AND GLOUCESTER RAILWAY.—We are much pleased to hear that the Directors of this line have at last determined to have such regulations, as regards the omnibuses, that will in future prevent those numerous complaints which have hitherto been preferred. The coachmen and conductors are to be dressed in livery—a time is to be specified for performing the distance from the hotels (20 minutes) and each omnibus is to take one direct road to and fro, calling at all the hotels—the charge is not to exceed 6d. including luggage, except above 75 lb. in weight, penalties are to be inflicted upon the conductors for every minute which they are behind time.—*Cheltenham Chronicle.*

FOUR-WHEELED AND SIX-WHEELED ENGINES.

To the Editor of the Railway Times.

SIR,—A letter from Mr. Edward A. Seaward, having appeared in the *Times* newspaper of the 19th instant, on the subject of "Four-wheeled and six-wheeled locomotives,"* I would feel particularly obliged if you would allow the insertion in the *Railway Times* of the 23rd inst. of these my remarks, in reply thereto.

In the first place, he says—

"In a four-wheeled engine as constructed by Mr. Bury, of the London and Birmingham Railway, the only maker of eminence in England, who now adopts this method of construction, the engine has only what are termed inside framings; that is to say, the engine is entirely supported by resting on the axles, at points inside the wheels; in a six-wheeled engine the principal points of support are outside the wheel. The distance between the points of support is thus much greater in a six than in a four-wheeled engine. Now, no one at all acquainted either with the theory of machinery or the practical construction and working of machines, can be ignorant that the greater the distance between the bearings or points of support the greater the steadiness of a shaft, be it driven by any manner whatever. This observation is more particularly true, when any disturbance of the smoothness of the motion is to be sought for, not in external circumstances, but in the nature of the forces acting on the machine. This is the case in the locomotive engine."

In answer to this, I must remark in the first place that Mr. Seaward does not seem to understand the subject he has taken in hand, as at the first start he makes a blunder in supposing that in lengthening the axles, he gives steadiness to the engine, since the width of the rails is the base on which the engine runs, and if the axle were projected 10 feet beyond the present length it would not make the engine at all steadier. For if this were the case, why does not Mr. Seaward get the paddle-boxes of the ships into which he fits engines widened out 30 or 40 feet in the same manner to steady them?

Again, in the engine with outside frames there are six bearings or steadyments upon an axle not more than seven feet long. Does Mr. Seaward think he can key this shaft up true? If he does, then he is the first mechanic I ever heard allow it; but on the engine with inside framing there are only two, which are so arranged as to require no keying at all.

In the next place the weight of the boiler is carried on the journals of the axles, on the inside and close to the naves of the wheels, and the power of the engines being exerted, between these two journals, the weight so placed has a tendency to bend the axles (supposing the axles were flexible), down in the centre, and consequently to press the flanges of the wheels against the rails. Then when the engine is going round curves the flanges of the wheels force her round, as the cone given to the wheels is not sufficient for that purpose, and you will therefore observe that the flanges would strike hard against the rails, and tend to bend the axle up in the centre. This action is effectually counteracted by the insistent weight of the boiler, on the journals inside the wheels, and prevents the axles being hurt by these contrary actions. In the engine with outside framing, the case is the reverse. As the bearings for carrying the insistent weight of the engine are outside the wheels, the weight of the boiler tends to bend the axle up in the centre, and the strain on the flanges of the wheels acts in the same direction, and in addition to it; and this is fully proved by the fact that the numbers of crank axles which break are ten to one less in the four-wheeled engine with inside framing than in the six-wheeled engine with outside framing. Another advantage possessed by the inside bearings is this, which is proved by fact. An engine with inside framing, with four wheels, will, on breaking a crank axle, take the train into the next station without exhibiting the least tendency to come down, which results from the flanges of the wheels pressing against the rails; but in a six-wheeled engine with outside framing the engine has to be propped up, and cannot proceed but by being supported by other wheels than her own: and the engine, if not instantly stopped on the breaking of the axle, might get off the road, and considerable damage be done. And whatever play is allowed in the journals of the axles in the six-wheeled engine with outside framing, still, what is called the biting motion is going on between the fore-wheels and the rails in going round curves. This is what I suppose a late writer on the subject terms a steady friction: and I would here observe, that one-fourth of the length of all railways taken together, in England, are curves.

The next objection is couched in the following terms:—

"It is generally assumed, that the oscillating and unpleasant motion of a locomotive engine, and which is the cause of its quitting the rails, is caused by the unevenness and bad repair of the road: this is only partially true, the real cause exists in the engine itself.

"Were the cranks of the driving axle placed on a line with the axis of the engine, the engine would have no tendency to move otherwise than in a straight line; as this is not the case, and the cranks are placed one on each side, and the engine does not act on each with equal force at the same instant the engine is dragged alternately from one side of the road to the other; it in fact progresses sideways. Owing to the reason just mentioned this motion is much less in a six-wheeled than in a four-wheeled engine; of this fact any once can convince themselves by five minutes' ride on two engines of different constructions."

I am not certain that I understand Mr. Seaward with regard to the oscillating motion on the road. Does he mean to say that the wheels shift on the rails laterally? If he does he is in a mistake. The force of adhesion between the wheels and the rails is too great to allow that, unless the rail is covered over with ice; and in the engines with inside framing, the centres of the cylinders are closer together by at least four or six inches, than in the engine with outside framing; and consequently, if there were any oscillating motion, there would be less in the four-wheeled engine than the six-wheeled engine, on account of the cylinders being closer together. In Mr. Seaward's eyes this would appear an advantage, although in his remarks he has not noticed it.

The next objection is thus stated:—

"There is another point in the construction of four-wheeled engines with inside framings, which renders them somewhat objectionable. Owing to the narrowness of the distance between the bearings, the eccentric gear is obliged to be placed more in the centre than is requisite in an engine with outside framings; to give room for the eccentric gear in the centre, the boiler has to be raised higher above the axle rendering the engine what is termed groggy, in common parlance top-heavy.

"These engines are thus more liable to upset than the six-wheeled, as was shown to be the case on the Brighton, and also in an unfortunate and fatal accident that happened some months back on the London and Birmingham Railway, and which will doubtless be in the recollection of your readers, from the deep excitement it caused at the time in the public mind."

I think I may safely say, that Mr. Seaward makes the travel of his pistons greater than that of his valves, as is the case with other people. If so, there is no necessity for Mr. Bury raising his boiler on account of the eccentric gear, the only point to be attended to, being the cotter of the connecting rod having sufficient room to clear the boiler, and in engines of the same length of stroke and size of wheels, whether the frame is inside or outside there will be very little difference in the height of the centre of gravity, and consequently little difference in point of steadiness; and in this case Mr. Seaward's remarks of top-heaviness go for nothing. By the bye, I wish to ask Mr. Seaward the simple question, was he ever on the top of a stage coach fully loaded, and running at the rate of ten miles an hour?

In my opinion, the accident on the Brighton line resulted from over speed on a bad part of the road, and also may have been assisted by the driver of the four-wheeled engine shutting his steam off all at once, when the friction of the pistons and other parts of the engine, would retard her progress, and the train going down an incline, under these circumstances would overrun the engine and knock her off the road. The same has happened with a six-wheeled engine.

Mr. Seaward says—

"The greatest argument against four-wheeled engines with inside frames is to be found in the fact, that although this was the original form of engine, only one maker of eminence (Bury) in this country continues to construct this sort of engine.

"In the United States only one firm, that of Messrs. Norris and Eastrick, adopt this plan; the first makers in that country, including Baldwin and Co., of Philadelphia, adopt the other form of engine."

I must beg to remind Mr. Seaward, that this form of engine was original with Mr. Bury, and on which plan the first locomotive with cranked axles and horizontal cylinders was constructed, and was, I believe, first used on the Liverpool and Manchester Railway in 1830; and which plan has been steadily adhered to by him ever since, except in minor points of detail, which have been much improved.

The fact of the four-wheeled engine being used with so much success on many railways in England, Scotland, France, Germany, and the United States, is a refutation of this objection; and moreover I have heard that one of the most celebrated makers of six-wheeled engines with outside frames, after ten years' experience, is changing from outside to inside framing, and he should, I think, be likely to know which is the best.

Mr. Seaward next asks—

"What are the inducements to employ such engines?"

He states—

"The principal one undoubtedly is their greater cheapness. An engine of Mr. Bury's build costs about 1,350*l.*, while a six-wheeled engine constructed by Sharp and Roberts, of Manchester, costs from 1,800*l.* upwards.

"On the London and Birmingham Railway, where 100 engines are employed, a saving is thus effected of from 40,000*l.* to 50,000*l.*, an inducement not to be readily overlooked by a commercial Company."

Without taking into consideration their greater cheapness, the four-wheeled engine with inside framing is much safer than the six-wheeled engine with outside framing, from less liability to accident from the breakage of axles, consequent on the difference of construction, as pointed out in a former part of this letter; besides the difficulty there is in the six-wheeled engine with outside frames of the engine-driver being able to see the machinery when at work, together with the difficulty of oiling and repairing. Moreover from the great expense incurred in taking them to pieces to repair, they are often allowed to run, till a failure actually takes place, the expense of taking the engine to pieces being frequently more than the actual cost of the labour employed in the repair required, which expense of labour is nearly all avoided by the use of inside framing. And when the driver is able (as is the case in the four-wheeled engine with inside framing,) to see all the parts of the engine at work, and can see as he goes along which parts want oiling, and the moment he stops at a station can lay his hand on any part of the machine, without going under it, it must strike Mr. Seaward that these are great advantages in keeping machinery in repair.

I hope Mr. Seaward will examine this for his own satisfaction.

Mr. Seaward next uses the following language:—

"In conclusion, although I acknowledge that, as Sir Roger de Coverley would say, much may be said on both sides, with respect to the merits of four and six-wheeled engines, yet I must observe, that there is but one opinion in the profession concerning engines with inside framings, viz. that they are decidedly objectionable, and even unsafe."

I do not know what Mr. Seaward means by the profession having but one opinion on the engines with inside framings. I do not think he knows one tithe of the profession, nor their opinion either; and as for his own I cannot say that I approve of it.

I could have used many more arguments in favour of the "four-wheeled engine with inside framing," but have confined myself to replying to Mr. Seaward's mis-statements, and erroneous opinions in the hope that some one, (among the numerous professors of the same opinions as myself,) with more leisure time on his hands, will take up the subject, and treat it as fully as it deserves.

I am, Sir, your obedient servant,

NICHOLAS B. JONES,
Mechanical Draughtsman.

Liverpool, October 21, 1841.

FOUR-WHEELED AND SIX-WHEELED ENGINES.

THE following is the letter addressed to the Editor of the *Times*, by Mr. C. Hood, of Earl-street, Blackfriars, to which we alluded in our notices to correspondents last week:—

SIR,—The recent accident on the Brighton Railway has called public attention to the question of the comparative safety of four-wheeled and six-wheeled engines. This subject is of great importance: for railways now perform so prominent a part in the internal communications of the country, and are so greatly connected with the national prosperity, that such an important part of their practical working as the safety of the machinery employed upon them must be a matter of the first consideration, not only to the public who travel upon them, but to the railway proprietors themselves; for certain it is, that the interests of the public and of the proprietors are perfectly identical on the question of safety. But if prejudice be allowed to usurp the place of dispassionate judgment on such grave and important questions, it requires not much knowledge of the subject to foresee, that instead of increased safety in railway travelling, the probable consequence will be a vast increase in the number of accidents. To form a judgment of the best and safest mode of constructing locomotive engines, requires a very considerable degree of mechanical and scientific knowledge, and an intimate acquaintance with the practical working of railways. So many causes combine to modify effects which at first appear very simple in their operation, that, while the uninformed hesitate not to give an unqualified opinion on this difficult subject, those whose opinion can alone possess any real value are content to acknowledge the difficulty of arriving at a satisfactory conclusion—and refer to practical experiments as their only certain guide. I shall endeavour to place this subject in a popular point of view, and I think it will appear that the safest form of engine cannot be settled by any arbitrary rules, but that the peculiarities of the road on which it is to be used must greatly determine the question at issue.

The difference between four-wheeled and six-wheeled engines is not confined merely to the number of wheels. Both the weight and the length of the engines vary in a very great degree; in both these particulars the six-wheeled engine exceeds the other by upwards of 50 per cent., and another difference also exists between them in consequence of the wheels being exterior to the bearings in the four-wheeled engines, while in the six-wheeled engines the wheels are interior. But even among six-wheeled engines a vast difference exists, namely, whether the driving wheels have or have not flanges on their interior edge, a distinction which, while it would escape the observation of 99 per cent. of ordinary observers, is of quite as much importance as the simple though obvious fact of the engine possessing four or six wheels.

Although the motions which occur among railway carriages and engines appear to be very various, they are principally reducible to three, independent of the direct motion along the rails—namely, first, an oscillating or rocking motion, caused by differences in the levels of the two rails; second, an horizontal oscillation, transverse to the line of rails, produced by the flange of the wheels striking against the rails, in consequence of changes in the direction of the road, and by the cone of the wheels constantly correcting the effects of this action and of that arising from small deviations in the gauge of the rails; third, a vertical, or pitching motion, produced by the preceding motions, by the deflection of the rails, by the sinking of any small portions of the road, and by inequalities at the points of junction of the several rails.

These several motions occur in different degrees in engines with four and with six wheels. The last of these motions, in so far as it is produced by inequalities in the rails, is greater in four-wheeled than in six-wheeled engines; but as this kind of motion is in a great measure produced by the second, which affects six-wheeled engines much more than the others, the result will be, that in a perfectly straight road the six-wheeled engines will be the steadiest, but in any road possessing curves, the four-wheeled engines will in that part of the road have greatly the advantage. As regards the first-mentioned motion, all engines, whether with four or six wheels, are equally affected by it, and it is principally to the second motion that we have to attend, not only because it is the chief motion which occurs ordinarily on railways, but because it greatly affects the last-named motion, and this, it is generally supposed, more particularly operates on four-wheeled engines.

It must be quite obvious to every one, that any body of the parallelogram form, moving in curved lines, must be more easily moved in proportion to its shortness, as it then adapts itself more readily to the curvature. Now, in the case of locomotive engines, the extreme points of support in four-wheeled engines, are about six feet apart, while in six-wheeled engines they are nearly eleven feet. To avoid the difficulty which arises from this great increase of length, the gauge of the wheels is made much smaller than the gauge of the rails, which will evidently increase the second kind of motion above-mentioned by allowing more of the lateral sway. But in order to avoid a portion of this difficulty, some manufacturers make their six-wheeled engines without any flanges on the centre or driving-wheels. The policy of this plan, however, may well be questioned, as some most disastrous accidents have occurred from it. For if the fore-axle of the engine happens to break, the engine still continues to run for a considerable distance upon the remaining axles; and the driving wheels, which then become also the running or guide-wheels, having no flanges to retain them in their proper course, inevitably run off the rails, and produce probably the very worst species of accident that can happen upon a railway, by running down an embankment and drawing the train after it, as experience has unfortunately proved may sometimes occur with this form of engine. But even when this does not occur, the increased weight and length of six-wheeled engines render them particularly liable to fracture the axles. For it is clear that the strain upon the axles, in moving round a curve, is exactly in proportion to the momentum (or the weight multiplied by the velocity) and to the distance between the extreme points of support; and, accordingly, experience has proved that the number of accidents from broken axles has been very considerable with six-wheeled engines, while with four-wheeled engines such accidents are comparatively unknown.

In any mode of constructing six-wheeled engines, the great increase in length already mentioned necessarily produces a greater tendency to run off the lines at curves—a tendency which is increased by the fact, that, owing to the vertical deflection of the rails, the whole of the six-wheels are scarcely ever actually in contact with the rails at any one moment. When it is considered that the depth of the flange, which alone retains the engine in its right tract, is only about an inch and a quarter to an inch and a half deep it will scarcely be contended that the far greater liability of six-wheeled engines to run off the rails at curves, is not a much more serious drawback to safety than any additional pitching motion produced on four-wheeled engines by the sinking of the rails or unevenness at the joints, seeing that in the former case the cause is in constant action throughout almost every portion of the line, while in the latter it ought never to occur in a well-constructed and duly maintained railway.

But, perhaps, the most convincing proof of the safety of four-wheeled engines may be obtained by direct reference to facts. The number of four-wheeled engines at present employed is very large. The following are some of the principal lines which use this form of engine:—

	Number of engines with four wheels.
London and Birmingham Railway	90
Midland Counties' Railway	30
North Union Railway	13
Eastern Counties' Railway	19
Lancaster and Preston Railway	6
Manchester and Bolton Railway	8
The Runcorn Gap and St. Helen's Railway	6
Brighton Railway	6
Glasgow and Ayr Railway	nearly the whole.
Edinburgh and Glasgow Railway, one half the number are four-wheeled, and the remainder six wheeled.	
Also the Newcastle and Shields Railway, the Newcastle and Carlisle Railway, besides several others in England on the Continent, and in the United States, which adopt this form of engine.	

Of all this large number of four-wheeled engines, not less than 250 to 300 in number, not one single accident has ever been traced to any failure of the machinery; and the only accident which has been alleged to have arisen from this peculiar form of engine, which would not have happened with any other engine in the same circumstances, is the recent occurrence on the Brighton Railway. I might, I think, show that in this case also the accident did not arise from the engine having only four wheels, as the rocking to which it has been ascribed is precisely the same both in four and in six-wheeled engines, under like circumstances. But this accident may well be conceded to the advocates of the six-wheeled engines, when I state that in addition to the numerous accidents from six-wheeled engines running off the rails, there have been, on one railway alone, in the course of twelve months, nineteen broken crank axles belonging to six-wheeled engines; while on the whole of the above-named railways using four-wheeled engines, only nine broken axles are known to have occurred in a period of nearly four years, and in no one instance has the fracture produced the slightest injury to the train. On one railway alone in the above list (the London and Birmingham) upwards of 3,000,000 miles have been run by these engines with perfect safety.

We find, then, that both theoretically and practically the balance of safety appears to be in favour of four-wheeled engines. If, however, a perfectly straight line of railway were to exist, six-wheeled engines would there possess the advantage. The Great Western Railway is the straightest long line of railway in the kingdom; and there six-wheeled engines are, no doubt, judiciously employed. But the more a railway departs from perfect straightness, the less desirable do six-wheeled engines become.

There are several other points connected with this subject as well as on the question of using two or more engines to one and the same train, which I am forbidden entering upon now, in consequence of the length to which this letter has extended. If, however, these remarks shall be deemed worthy of insertion in your paper, I will in a few days resume the subject.

I am, Sir, your most obedient servant,

C. HOOD.

Earl-street, October 13, 1841.

The following letter appeared in the same journal on Tuesday last, and is referred to above:—

SIR,—The discussion on the subject of four-wheeled and six-wheeled engines, which has been hitherto confined to the profession, having been recently taken up by the public press, it appears desirable to place the subject in a more just point of view than it has hitherto been regarded in by the public; and in furtherance of this I beg leave to offer the following remarks:—

In a four-wheeled engine (as constructed by Mr. Bury, of the London and Birmingham Railway, the only maker of eminence in England, who now adopts this method of construction) the engine has only what are termed inside framings; that is to say, the engine is entirely supported by resting on the axles at points inside the wheels; in a six-wheeled engine the principal points of support are outside the wheels.

The distance between the points of support is thus much greater in a six than in a four-wheeled

Digitized by Google

engine. Now, no one at all acquainted either with the theory of machinery or the practical construction and working of machines can be ignorant that the greater the distance between the bearings or points of support the greater the steadiness of a shaft, be it driven in any manner whatever. This observation is more particularly true when any disturbance of the smoothness of the motion is to be sought for, not in external circumstances, but in the nature of the forces acting on the machine. This is the case in the locomotive engine. It is generally assumed that the oscillating and unpleasant motion of a locomotive engine, and which is the cause of its quitting the rails, is caused by the unevenness and bad repair of the road. This is only partially true; the real cause exists in the engine itself. Were the cranks of the driving axle placed on a line with the axis of the engine, the engine would have no tendency to move otherwise than in a straight line; as this is not the case, and the cranks are placed one on each side, and the engine does not act on each with equal force at the same instant, the engine is dragged alternately from one side of the road to the other; it, in fact, progresses sideways. Owing to the reason just mentioned this motion is much less in a six-wheeled than in a four-wheeled engine; of this fact any one can convince himself by a five minutes' ride on two engines of different construction. There is another point in the construction of four-wheeled engines with inside framings, which renders them somewhat objectionable; owing to the narrowness of the distance between the bearings the eccentric gear is obliged to be placed more in the centre than is requisite in an engine with outside framings; to give room for the eccentric gear in the centre the boiler has to be raised higher above the axle, rendering the engine what is termed groggy, in common parlance top-heavy. These engines are thus more liable to upset than the six-wheeled, as was shown to be the case on the Brighton, and also in an unfortunate and fatal accident that happened some months back on the London and Birmingham Railway, and which will doubtless be in the recollection of your readers, from the deep excitement it caused at the time in the public mind.*

The greatest argument against four-wheeled engines with inside framings it to be found in the fact, that although this was the original form of engine, only one maker of eminence (Bury) in this country continues to construct this sort of engine. In the United States only one firm, that of Messrs. Norris and Eastrick, adopt this plan; the first makers in that country, including Baldwin and Co., of Philadelphia, adopting the other form of engine.

It may then be asked, what are the inducements to employ such engines? The principal one undoubtedly is, their greater cheapness. An engine of Mr. Bury's build costs about 1,350*l.*, while a six-wheeled engine, constructed by Sharp and Roberts, of Manchester, costs from 1,800*l.* upwards. On the London and Birmingham line, where 100 engines are employed, a saving is thus effected of from 40,000*l.* to 50,000*l.*; an inducement not to be readily overlooked by a commercial company.

In conclusion, although I acknowledge that, as Sir Roger de Coverley would say, much may be said on both sides with respect to the merits of four and six-wheeled engines, yet I must observe that there is but one opinion in the profession concerning engines with inside framings, viz., that they are decidedly objectionable, and even unsafe.

I might, perhaps, have begged the insertion of these observations before, had I not only just now returned from a professional visit abroad. Should you consider them worth inserting you will greatly oblige,

Your obedient servant,
EDWARD A. SEAWARD.

Blackwall, Oct. 17.

* To what accident is it that Mr. Seaward alludes? He must, we think, be confounding the Birmingham line with the Eastern Counties' and the sad occurrence which last year took place upon the latter railway. The returns requested by the Board of Trade (as alluded to elsewhere) will supply more certain data than are possessed at present on which to rest arguments for or against four-wheeled engines. There is an old proverb that one should praise the bridge which has borne him safely over, and by that test will the comparative security of four or six-wheeled engines be eventually settled by the public.—Ed. R. T.

NORTH MIDLAND RAILWAY—THE LATE REDUCTION OF SALARIES.

To the Editor of the Railway Times.

Sir,—Without feeling called upon to enter into any detailed discussion relative to the general remarks in your paper of last week, which were founded upon certain memorials addressed to the Board of the North Midland Railway Company, I consider it my duty to rectify at once, one erroneous statement, viz., that the "reduction of salaries began at the wrong end;" whereas the Report of the Committee of Inquiry, instituted by the Directors, which recommended a reduction of 10 per cent. from all salaries exceeding 100*l.* per annum, at the same time recommended that the appointments of the Directors should likewise be reduced one-half, viz: from 100*l.* per annum to 50*l.* per annum. Both these recommendations were adopted by the Board, and are now in operation.

I will likewise make one remark upon the subsequent observation in your paper, viz., that "Mr. Newton, of Derby, is generally understood to be the author of the proposition," which arises probably from the circumstance of Mr. Newton having signed the Report as Chairman, but which act was done entirely in that official capacity, and the whole proceeding must be considered as emanating from the Board.

There seems to be much misunderstanding and misrepresentation relative to these proceedings, and probably the Board will publish the report itself for the information of proprietors as soon as a revision of it is completed.

I am, Sir, your obedient servant,
H. PATTESON, Sec.

Secretary's Department, Derby, October 20th, 1841.

RAILWAY SALARIES.

To the Editor of the Railway Times.

Sir,—As the subject of Railway Salaries is one of considerable importance, and to which, every week, increased attention is drawn, perhaps it may not be out of place for me to offer a few observations upon this question.

I could not but regret that "An Old Clerk" should have conceived it to be his duty to comment so warmly, and in no very measured terms, upon a letter which appeared in the *Railway Times* of the 9th instant, from "A Friend to the Subs." That letter certainly had *truth* for its basis, and contained nothing which called for any uncourteous strictures. "An Old Clerk" seems to have forgotten that the only way to arrive at a correct conclusion on this subject,—as indeed on all others,—is to discuss it in a calm and temperate manner, abstaining from recrimination and personal remarks, which can only have the effect of converting a public question into a private quarrel.

It needs but little consideration to convince any one of the vast amount of business weekly transacted by the various Railway Companies, and of the great care and expence requisite to conduct it in an efficient manner. If we reflect a moment upon the great number of persons who are continually being conveyed to and from various parts of the United Kingdom, and of the large sums which must necessarily daily pass through the hands of railway servants, it must appear evident that their responsibilities are great, and their duties arduous. They are expected to be persons of good education, gentlemanly manners and address, and respectable appearance. Their duties moreover usually require their attendance from an early hour in the morning until late at night, and they are, in many cases, compelled to brave all the vicissitudes of the weather. And for this how are they rewarded? With a paltry pittance, varying from 60*l.* to 100*l.* a-year,—a less sum than is earned by the greater part of those who work at the commonest mechanical trades. I would ask if this is a fair and reasonable remuneration? Is this the liberal treatment which one is naturally led to expect at the hands of the Directors of great and important undertakings?

I am myself a Railway Clerk. My duties generally oblige me to attend from eight o'clock in the morning till ten at night, and I am not even allowed the privilege of which the very humblest artizan can boast,—that of exemption from labour on Sundays. During the week several hundreds of pounds pass through my hands, and for all this labour and responsibility I am remunerated at the magnificent rate of about 4s. per diem!! Yet, for this scanty pittance I am expected to devote myself body and mind to the interests of the Company which I serve.

I read with much pleasure your remarks in reference to the case of the clerks on the North Midland Railway, and now you have once taken up the subject of Railway Salaries, I sincerely hope you will continue it, and endeavour to impress upon the minds of Directors the necessity of rewarding their servants in a manner more proportionate to their duties, since it must be acknowledged that "the labourer is worthy of his hire."

Reserving other remarks for a future letter,
I am, Sir, your obedient Servant,
C.

October 19th, 1841.

ARRANGEMENTS WITH RAILWAY TIME-BILLS.

To the Editor of the Railway Times.

Sir,—I am much pleased with your remarks on the inconvenience occasioned to parties who wish to travel by railway from London. I am one of those who occasionally come to London on business, and wish to mix with it a little pleasure—for instance, a trip of a day or two to Brighton, the Isle of Wight, or Bath or Cheltenham. This was the case with myself and friend a fortnight ago; but when we should have fixed we could get no *positive* information at the hotel as to time of starting; the time-tables were old, and some of them torn, and the only answer we could get was, "the bills were not to be depended upon, they made so many changes." The consequence was, we could not decide, and gave up the journey altogether. Now, Sir, when we consider that, according to very good authority, it is calculated that at all times there are 120,000 strangers residing *for a few days only* in the metropolis, the majority of whom are of the respectable middle classes, I say, Sir, is it not desirable that this large money-spending class of railway travellers should have every information and every inducement held out to them to take a trip by railway? This might be done, as you say, by having an office or two, but would not it be a deal better if each Company once a week or so, inserted a short advertisement in the *Times*, which is read by every one. Thus, for instance, Great Western Railway—London to Bristol—Trains: Morning, 7, 9, 9½, 10, 11, 12; Afternoon, 2, 3, 4, 6, 7, 8½; just as the case might be; three or four lines being quite enough, and I should think five or six shillings would be as much as it would cost.* Again, each of the long railways might join and have time bills printed in this short way, one bill to take in all the railways, say, to Bristol, Southampton, Brighton, and Birmingham, each Company taking, say, 3,000 cheap bills, and distributing them as they thought proper, thus accommodating all. In conclusion, I will venture to say that no money is so well laid out by Railway Companies as that paid for advertising, and I think if Messrs. Horne and Chaplin did not find the advantage of it, they would not continue to do it so frequently as they do at their own expense. Thanking you for calling the attention of the Directors to this point,

I remain, &c.
A TRAVELLER PER RAIL.

* This might answer with the Great Western, where second class carriages go in every train; but in other cases would not so brief a notification tend to mislead?—Ed R. T.

LONDON AND BRIGHTON RAILWAY—THE LATE ACCIDENT.

To the Editor of the Railway Times.

SIR,—Having carefully perused the evidence with the Editorial remarks, and those of several correspondents, which have appeared in the last two numbers of your able journal, relative to the late melancholy accident on the London and Brighton Railway, by which four human beings were prematurely hurried into eternity, and by which the prosperity (which judging by the first week's large traffic, promised to be very great.) of a mighty and useful undertaking has been materially arrested, I beg leave, through the medium of your impartial columns, to record, for the sake of furthering the ends of truth and protecting important and legitimate interests, my opinion touching the reasons of that lamentable catastrophe.

It plainly seems to my mind that the accident arose not from over driving of itself, since thirty miles an hour, the extreme speed stated in evidence to have been attained, cannot properly be so termed; but from two other causes, viz., a slight tenderness of a portion of the railway, and considerable top-heaviness of the four-wheel engine, produced by the undue size of the diameter of the boiler, in order to effect increased power, which can safely be accomplished only by a prolongation of the boiler and the placing it on six wheels. It must be evident to all unprejudiced persons that six-wheel engines, notwithstanding somewhat augmented friction, obstruction in meeting curves, and risk of the fracture of an axle, attending them, are *when the power of both is great and equal*, safer than four-wheel engines, in consequence of the boiler of the former being longer, less deep, and therefore less high than that of the latter, and of the former engine having four wheels instead of merely two not directly acted upon, like the driving wheels, by the propelling force, and of its being from the possession of two additional wheels, more likely in general, and even in the case of a broken axle to keep the rail.

This view of the comparative safety of six-wheel and four-wheel engines, respecting which much discussion has arisen, cannot be affected by the undeniable and pleasing fact of the latter travelling with extreme security on the London and Birmingham, and Midland Counties Railways, if the assertion be correct that they have less power, therefore shallower boilers, and if any, less top-heaviness than those engines laid aside on the London and Brighton Railway.

There need however be no doubt that the four-wheel engines rejected on the last mentioned railway, as regards the passenger traffic, may without impropriety or danger, be used for the conveyance of merchandise at a speed not greater than fifteen miles an hour. In reply to the unmerited abuse—the unjust cause of unnecessary panic—passed upon the state of the road, in direct opposition to the disinterested report of Sir Frederick Smith, it may be observed that the trifling subsidence and decadence, which have occurred, but which are unlikely to happen again as the works become gradually consolidated, have not exceeded what might reasonably be expected in excessively wet weather upon a newly constructed road, which the lapse of every day will render more sound and satisfactory. It must be admitted that the arrangement of the Directors for placing a luggage van between the tender and the first carriage of every train is a judicious one.

Let me extol the admirable proposition of Mr. Adams, contained in the last number of your journal, for inserting a spring or buffer vehicle, specially contrived for this laudable object, between the tender and the first carriage of every train and let me exhort the Directors of the London and Brighton Railway, (of which I confess myself to be a proprietor) who seem, from using additional precautions subsequent to the late accident, to be particularly disposed to study the safety and convenience of the public, to set the worthy example, which in the present instance, economy and humanity (rare combination!) alike dictate, of immediately adopting Mr. Adams's simple plan for the probable prevention, but certain diminution, of injury to passengers and property in the unusual case of accident, and for imparting confidence to the former, and thereby inducing an enlarged traffic.

I am, Sir, your's respectfully,

W. F.

Liverpool, October 18, 1841.

LONDON AND BRIGHTON RAILWAY—THE LATE ACCIDENT.

To the Editor of the Railway Times.

SIR,—As an old admirer and supporter of your paper, and one who hailed with delight the late change which took place in the Editorship, by which I had been led to hope that that system of personality which would soon have rendered your journal a disgrace to the Press, would have been for ever discarded from its pages, both as it applies to yourself and those whose letters you publish, I observe with extreme regret that you have allowed a correspondent ("Cautus") in your last number, to make an attack on the Chairman of the Brighton Board, as unnecessary for the purposes of elucidation, and not called for as a part of your duty, as the conservator of railway interests, as it is unmerited by Mr. Harman, who happily requires no apologist to relieve him from such ungenerous insinuations as those urged by the writer I complain of. The sentence I object to is the following:—

"A few weeks back the Brighton papers teemed with a high-flown eulogium by the Chairman of the Directors on himself and his colleagues. Let him not in future halloo until he is out of the wood. Let him reflect *sic transit gloria mundi.*"

Now, if you can show me what the objected part has to do with the question under discussion, "the late accident on the Brighton Railway," and when Mr. Harman would be considered entitled to speak in praise of his colleagues, if not on the festive occasion he did, at what time you and "Cautus" would think him justified in doing so, I will absolve you from all blame in not having passed your pen through that, the publication of which can do no cause you or your correspondent writes on any service, and may give pain to a gentleman who not only does not deserve an unkind remark, but is entitled to the highest consideration as an honourable and excellent man.

Do, I pray you, adhere to your rule—no personalities from Editor or correspondent—and then you will not be dreaded for your power of mischief, but loved for the good you effect. If you are, as I believe you, a just man, you will publish this; if not, why then,

I PITY YOU.

October 19, 1841.

[We "publish this" very cheerfully; but have yet to learn that any offensive personality was directed against the able Chairman, or any other officer of the Brighton Company. We are quite sure that such was not the intention of "Cautus," and certainly not of ourselves, who have great respect for Mr. Harman and his colleagues. Public men are public property, and we do not believe that the gentleman referred to is so thin-skinned as our correspondent's strictures would imply. We beg our present castigator, and all other parties, to understand that we do not hold ourselves responsible for any thing that appears in our pages avowedly from correspondents. At the same time our columns are at all times open to the correction of erroneous statements.—ED. R. T.]

LONDON AND BRIGHTON RAILWAY—THE LATE ACCIDENT.

To the Editor of the Railway Times.

SIR,—The following remarks would have been sent earlier had I been at home, and they are sent at this late period only because it is the duty of every one who is or has been connected with railway works to endeavour to account for any accident that arises, in order to prevent its recurrence.

The true cause of the late fatal accident on the Brighton line appears to me to be very imperfectly understood, and causes are assigned that have no connection with it. Thus, two engines dragging the train, then one engine having only four wheels, the greasy state of the rails, in fact everything but the real state of the case is considered.

Now, I am clearly of opinion (and I think it must be manifest to all persons conversant with railway works), that the accident arose solely from the imperfect state of the rails and nothing else, a fact fully borne out by the evidence before the jury wherein the two distinct motions of the train and engines are described, the one an oscillating of the train, the other a pitching of the engines. These two motions are caused only by the irregularity of the rails, and that frequently so slight as not to be perceived, even by an experienced eye.

The oscillating effect is produced by the rails being depressed from the level on alternate sides, producing a waive line upon the centre of the axles of the carriages, and causing them to rock from side to side. The pitching or jumping motion is caused by both rails being depressed for some yards—the adjoining portion remaining firm on the level, thus giving a succession of "chucks" or checks as often as it occurs, and jerking persons on the foot board of an engine off their feet; and these checks, if very bad, will throw any engine off the rails, whether of four or six wheels, and in fact is the chief cause, if we except tightness of gauge.

Having had frequent occasion to be with a ballast engine, at a time when the rails being fresh laid were very imperfect, I have been led to examine carefully, to account for the pitching and rocking of the engine, in consequence of the ballast waggons at times running off the rails, and have invariably found that it arose from a bad state of the rails, or tightness of the gauge, and as these defects were removed, our rocking and pitching diminished also.

These defects on the rail arose from subsidence, bad drainage or springs, bad packing, bad ballast, the joining of different ballast, and not unfrequently from a difference of sub-soil, for instance when strata of sand, loam, or clay, lay in juxta-position to rock, gravel, or rocky marl.

Having frequently traversed a line at a rate of 56 or 60 miles an hour, I never perceived any danger at these high velocities, where the way was perfect, but of course the steam was shut off, and the break applied, when approaching an unsound portion of the line; and had this precaution been adopted in time, the accident on the Brighton line would not have happened; and that the line was known to be in a bad state is evident, by a man being ready with a signal to "slack" the train over this portion, and had he strictly done his duty he would have been further in advance to meet the train.

The idea of greasy earth on the rail obstructing a train, except to check its speed by preventing the wheels "biting" the rail is preposterous, and ascribing danger because two engines are used to DRAG the train, is pretty nearly the same thing. Had the second engine behind, then it would undoubtedly have been dangerous.

It is also too bad to blame the four-wheel engine, for if it had had fourteen wheels it must have gone off; the only difference in safety between four and six wheels is, that if an axle or wheel breaks, the four-wheeled engine *must come down*, the six wheels *may not*; but the four-wheeled is the best traveller on the rail.

The interposing a carriage between the engine and passengers ought always to be done; but why not have an intervening carriage made in a solid form, ALL CORK, or cork and bow springs.

I am, Sir, yours respectfully,

AN OLD HAND.

King's Norton, October 19, 1841.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—As the late accident, and the undue speed by which it is thought to have been occasioned, have had considerable effect upon the bulk of the

Digitized by Google

visitors of Brighton, of whom at least two-thirds are women and children or persons to whom an hour more or less is of no consequence, will you allow me, through the medium of your paper, to suggest to these gentlemen, to run a train for a month or two as an experiment, to be called emphatically *the slow train*, which should not be allowed to exceed the rate of 17 miles per hour, exclusive of stoppages.

My firm belief is, that many persons who at present, to my own knowledge, put themselves to great inconvenience to avoid travelling by the railway as at present arranged, would not hesitate to trust themselves to it if they knew that they might rely upon being carried at a rate which every one would admit to be safe. Although a commercial man myself, to whom time is occasionally precious, I should not hesitate, in the present state of the road, to avail myself of the *slow train*.

I am, Sir, your most obedient servant,
A PROPRIETOR OF THIS RAILWAY SINCE 1837.

LONDON AND BRIGHTON RAILWAY—FARES.

To the Editor of the Railway Times.

SIR,—I am very much surprised the Directors of this line still continue to keep the fares at their present high rate. The consequence is, that *fourteen* daily coaches to and from London are always full; even places are booked a week on, while the the trains run often nearly empty. The coach fares are 8s. out and 12s. to 16s. inside. No doubt the late accident may deter a few from going by railway, but the general complaint here is, that the fares are too high. Let the charges be reduced to 5s. third class, 8s. second class, 12s. 6d. first class. It is also stated, that the Directors intend charging 3s. per cwt. on general merchandise, and 3s. per ton on heavy goods. Now, the vans and waggons will deliver goods at 2s. to 2s. 6d. per cwt., and heavy goods by water may be delivered at your own door for 18s. per ton, giving a profit to the carriers. You have always advocated low charges as the best means for quickly developing the resources of a railway, and I hope our Directors will follow your advice before it is too late.

I am, Sir, your most obedient servant,
A SHAREHOLDER AND RESIDENT.
Brighton, October 14th, 1841.

LONDON AND BRIGHTON RAILWAY—PRICE OF SHARES.

To the Editor of the Railway Times.

SIR,—The late accident on this line has called forth many remarks, and it is not my intention to enter into the merits or demerits of the four and six-wheeled engines, though it appears to me to be pretty evident that that has nothing to do with it, and that it arose from over-driving alone and the want of caution from the subsidence, in consequence of the excessively heavy rains. The immediate object of the present letter is to protect my brother shareholders against the practices now used for stock-jobbing purposes, to depress the shares to the most extreme extent. I think in the late case with Mr. Alderman Humphery it was stated that any person who possessed 100 shares might go and influence the market as he pleased, and which to "*knowing ones*" is no mystery. To explain the thing more intelligibly, I may state that at least many of the sales now made are not intrinsically *bona fide*, but done to obtain a low quotation; and this, as has been seen, has been continued since the accident, that it may alarm the timid shareholder, and induce him to sell at any sacrifice; and then these stock-jobbers will come in cormorant-like, and purchase all they can at the low quotations, by which they are sure very shortly to reap a most abundant harvest; for they are well aware that the line itself is perfectly sound, and is sure ultimately to have the greatest passenger traffic of any in the kingdom. Though no criterion, still I would have the shareholders bear in mind the *very high prices* the shares were at, before a spade was put in the ground, and I am satisfied we shall by and by have a very ample return for our capital. I have been a shareholder from the commencement, and have not parted with one of my shares, nor will I. I would only have my brother shareholders to be equally firm, that they may secure those benefits to which they, as *bona fide* shareholders, are entitled. The present quotation in the London market is perfectly absurd, and I trust no sane person will be so silly as to part with his interest at these prices.

I am, Sir, your very obedient servant,
A SHAREHOLDER.
Liverpool, 20th October, 1841.

RAILWAY COMMUNICATION WITH SCOTLAND.

THE report of the proceedings at the meeting recently held in Carlisle, has, as we expected it would, excited the most lively interest throughout the whole line, and in many parts of the kingdom. Perhaps of all the Railway projects ever yet broached, this may, with greatest truth, be called "national." The union of England and Scotland, fraught as it has already been with so many blessings, requires but this connecting link to secure all its happy consequences. We trust we have now before us the fair and reasonable prospect of witnessing this consummation.

The cost of this undertaking, as our readers are aware, is calculated at three millions; and of this sum it has been shown that one-third may be raised before issuing a prospectus or asking the public to take a single share; and this fact alone shows that the necessity for such a Railway is felt, and that those best qualified to judge of its capabilities feel confident in its becoming a remunerating line.

It may be useful, before entering into the details of the project, to remind our readers of its origin and of the claims it possesses to the attention and confidence of the public. Two or three years ago, a number of schemes were broached for connecting London with Glasgow and Edinburgh; and on the motion of Mr. Hodgson Hinde, in 1839, Government appointed Commissioners to inspect these various lines, and report as to which would be most useful to the public at large, without reference to mere local interests. The principal projects to which their attention was directed, were

1. A line continuing the Great North of England from Darlington to Newcastle, and thence by the east coast to Edinburgh. This, for shortness, may be called Stephenson's line.
2. A line which, after reaching Newcastle from Darlington, should take advantage of the Newcastle and Carlisle line as far as Hexham, and thence proceed inland to Edinburgh. This is the line recommended by Mr. Blackmore.
3. A line from Lancaster across Morecambe Bay to Whitehaven, Maryport, and Carlisle, and thence by Dumfries and Kilmarnock to Glasgow. This we may call the Morecambe Bay and Nithsdale line.
4. A line from Lancaster to Carlisle by the valleys of the Kent and the Lune, connected by the Gravrig Junction, and from Carlisle by Beatock to Glasgow, with a branch from Symmington or Thankerton to Edinburgh.

There were in all twenty-two different projects laid before the Commissioners, but those we have named were of the most importance, and it was upon them their ultimate decision was formed. The Commissioners were Sir Frederick Smith and Professor Barlow, assisted by Lieut. Amsinck, as their Secretary. They examined the whole of the lines, plans, and estimates, with great care and minuteness. The Morecambe Bay project they dismissed as wholly untenable. They then came to consider the comparative merits of the two great trunks, east and west.

One clause of this Report has put parties in the east fairly upon up their metal; and a scheme has been broached for bringing forward the line from Darlington to Newcastle, by "connecting together certain existing lines in the county of Durham, originally intended for the conveyance of coals." To raise the requisite capital for this purpose, the several existing railways—the London and York and the Great North of England, &c. have offered to guarantee payment of interest upon the capital advanced at the rate of 6 per cent. per annum, for a period of 10 years. This will undoubtedly secure the required amount of money; but the reader will see that the conditions of the Commissioners are not complied with—that the project embraces only the comparatively short distance between Darlington and Newcastle, and leaves wholly untouched the most important part of the undertaking on which the Commissioners were called on to decide—namely, communication with Scotland. Nor can it be believed that the public will be satisfied with a line so circuitous, dangerous from the many coal lines it must necessarily cross, and annoying the passengers from the changes of carriages to which they must be subject, owing to the number of independent railways which they must pass along.

On the west side the proposition now before the public carries out to the full extent the wishes of the Commissioners—it not merely contemplates the formation of the line from Lancaster to Carlisle, but one continuous line from Lancaster to Glasgow—and places the proprietors in precisely that position in which the Commissioners say, "they would certainly be entitled to every facility the Government could afford."

One mighty advantage which the western possesses over the eastern line, is the greater facility it affords of communication between those immense hives of industry, Manchester and Glasgow. The mercantile and trading communities of those places require frequent and rapid intercourse with each other, and in a commercial point of view, this is of much more importance than even a direct communication between the seat of Government and the western capital of Scotland. It is in this point of view that the superiority of the western line is most conspicuous.

As much has been said in disparagement of the western line, on account of its alleged unfavourable gradients, we must add a word or two on this part of the subject. No doubt there are some gradients upon the line not of the best description; but gradients have ceased to be so formidable in the eyes of Engineers as they were at one time; and there are lines now in active operation, with gradients much more objectionable than any thing on the line from Lancaster to Glasgow, on which engines, with heavy trains, regularly perform 20 miles an hour. An instance of this we have at our own doors, in the Newcastle and Carlisle Railway, where there is a rise of nearly four hundred feet in little more than ten miles. Almost every engineer of eminence is now satisfied that high gredients are of little consequence compared with the cost of avoiding them. —*Carlisle Journal.*

ACHILLES BRITISH AND FOREIGN LIFE ASSURANCE ASSOCIATION AND LOAN BANK—to be empowed by Act of Parliament; Capital £500,000. in 20,000 shares, at £25 each; Deposit £2 10s. per share.

DIRECTORS.

George Henry Brown, Esq. | Arthur Holland Field, Esq.
Thomas R. Davison, Esq. | John King, Esq.
Edward Chas. Eddrup, Esq. | John Milner, Esq.
Robert Embleton, Esq. | George Tanqueray, Esq.
John Baker Wright, Esq.

With power to add to their number.

Auditors—Thomas L. Davison, Esq.; John Partridge Makeham, Esq.

Bankers—Union Bank of London.

Physicians—James Arthur Wilson, M. D., 28, Dover-street, Piccadilly; Richard H. Goolden, M. D., 8, John-street, Adelphi.

Surgeons.—Thomas Blizard Curling, Esq., 1, Mount-place, London Hospital; William B. Langmore, Esq., Finsbury-square.

Standing Council.—Edward Younge, Esq., 1, New-square, Lincoln's Inn.

Solicitor.—Thomas Butts Tanqueray, Esq., New Broad-street.

Secretary.—Dr. Adolphus Courvoisier.

Every description of Assurance may be effected, either with or without participation in profit.

Table of rate *with participation in profits*, for assuring £100 on a healthy life *for the whole term.*

Age	15	25	35	45	55
At premium per cent.....	1 15 3	2 4 6	2 16 6	3 8 17 5	5 13 9

Premiums may be paid yearly, half-yearly, or quarterly.

Loans are granted on real or personal security to individuals assuring their lives with this Association.

Prospectuses to be had, and application for the remaining shares, and for agencies, to be made to the Secretary, at the temporary Offices, 35, New Broad street, City.

SCOTTISH (WIDOWS FUND) LIFE ASSURANCE, Founded A. D. 1815, on the Original basis of the LONDON EQUITABLE, Head Office.—Edinburgh, 5, St. Andrew square.—Present accumulated Fund exceeding One Million and Forty Thousand Pounds.—Annual Revenue exceeding One Hundred and Eighty Thousand Pounds.

The Ordinary Benefits of Life Assurance, without any special reference to the peculiar advantages afforded by this Institution, are of themselves amply sufficient to induce those who have relatives or families dependent on them, and who are duly impressed with the uncertainty of life, to have recourse to it, no less as a matter of duty than of interest. In illustration of this a few actual cases are here quoted from the Society's books, which will be found to place in a very strong view the benefits of Life Assurance, particularly as they may be secured through the medium of a connection with this Society, viz.:—

Age at Entry.	Date of Assurance.	Date of Decease.	Interval between Assurance and Decease.	Original Sum Assured.	Amount of additions by way of BONUS.	Total Sum Paid.
			y.	M.	£.	£. s. d	£. s. d.	£. s. d.
43	1815, Jan.	1837, Feb.	22	1	500	258 16 1	758 16 1
55	1816, Mar.	1834, Nov.	18	8	100	45 9 11	145 9 11
51	1817, Nov.	1831, April.	13	5	500	186 14 0	686 14 0
65	1818, June	1832, April.	13	10	800	313 16 9	1113 16 9
53	1821, Mar	1835, Dec.	14	10	885	207 17 9	1092 17 9
36	1822, Apr.	1832, Oct.	10	6	1500	250 17 6	1750 17 6
25	1823, Dec.	1842, Dec.	9	—	2500	380 1 3	2880 1 3

The causes which have led to the extraordinary prosperity of this Office, and which have enabled it to declare so large additions, may be easily traced:—

It was founded and has all along been conducted on the sure basis of calculation.

The safety of the data from which its Tables of Rates are deduced, had been amply proved by the long and successful experience of the Equitable.

The selection of Lives has been rigidly attended to.

Its Funds have been successfully invested.

It has been uniformly prompt and liberal in its settlements.

It is wholly free from the burden and conflicting interests of a Proprietary.

While from the operation of these causes, this Office has been enabled to economise to the utmost in behalf of the Assured, the cost at which the valuable benefits of Life Assurance are obtained, its advantages are by no means limited to this:—

Its large and rapidly increasing Capital and Revenue have long since opened up, and still secure to it, in a progressively increasing ratio, all those sources of profitable business which the most favoured Proprietary Bodies, or Trading Insurance Companies, can command.

The important difference is to be found, and to be found only in the Application of the Profits:—

In Proprietary Companies their operation is exhibited in increasing the value of the Proprietor's Stock and raising their Dividends.

In this Institution as the profits belong wholly to the assured, their operation is seen in those large additions, which, as in the case of the London Equitable, will undoubtedly render a Policy opened in this Office, and steadily kept up during the whole period of a prolonged life, a very valuable inheritance indeed.

The Assured, if not seafaring by occupation, are allowed to pass during peace by sea from one part of Europe to any other part of Europe, without license or extra premium.

JOHN MACKENZIE, Manager.

Edinburgh, September, 1841.

HUGH Mc KEAN, 7, Pall Mall, Agent for London.

PARISIAN BITUMEN COMPANY, Millwall, Poplar.—The Directors of the above-named Company beg to call the attention of Engineers, Architects, Surveyors, Builders, and the Public generally, to the applicability of the BITUMEN manufactured by them, as a pavement or flooring; also for its use in covering arches for the prevention of damp and preservation of the masonry.

They beg also to state that it has been used very successfully as a cement for masonry on the weirs of the Upper Medway, and is particularly applicable to hydraulic works and foundations of heavy buildings.

They beg to submit the following list of prices, and to state that they will guarantee the durability and efficiency of any work executed by them.

	s.	d.
Covering viaducts or arches of bridges, vaults, terraces, &c., 1½ inch thick, per square yard	4	6
Paving pathways, kitchens, cellars, granaries, malt houses, warehouses, &c. 1½ inch thick	4	6
Paving barns, court yards, tan rooms, wharfs, stables, &c. 2 inches thick	5	6
Paving walks, &c. ½ inch thick	3	6

The above charges are exclusive of the cost of carriage, which must be borne by the parties by whom the work is required.

W. MACKENZIE, Superintendent.

GUARANTEE SOCIETY.—To afford Security to Bankers, Merchants, Commercial and Trading Communities in general, is the *first* object of this Society. To relieve Relatives and Friends from painful obligations and responsibilities the *second*.

The experience of the first year (during which the Society has been eminently successful) already numbers amongst its patrons the principal Bankers, Merchants, and Public Institutions in the metropolis, and provincial districts, and by providing Guarantee for their integrity, has secured a competency for several hundred individuals.

DIRECTORS.

Thomas Attree, Esq.	G. Palmer, Esq.
David Cannan, Esq.	Major Prosser, F. G. S.
James Colquhoun, Esq.	James Row, Esq.
William Croft, Esq.	G. Scovell, Esq.
James Law Jones, Esq.	G. E. Shuttleworth, Esq.
John F. Maubert, Esq.	Henry Vaughan, Esq.
Lieut.-Col. Moody, R. E.	B. G. Windus, Esq.

STANDING COUNSEL—R. Ryder Dean, Esq.

SOLICITORS—Messrs. W. & S. Cotton, No. 76, Basinghall-street.

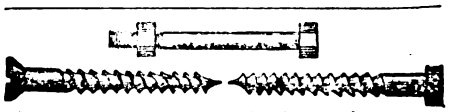
This Society presents to the Public (and particularly to Bondsmen) the following advantages:—

1. No individual need hereafter incur the responsibility of becoming security for the integrity of another.

2. Individuals who are already surety for the fidelity of others, may immediately protect themselves from loss by insuring with the Society.

3. The expense and painful obligation of obtaining approved Sureties, or of replacing them when removed by death or otherwise will be altogether obviated.

4. All risks attending irresponsible sureties will be removed.



5. The submission to the loss, or the distressing alternative of instituting legal proceedings against the friends who are surety, will be avoided.

Also to Agents, Travellers, and Clerks holding, or being desirous of holding, confidential and responsible situations, the Guarantee Society presents immediate facilities, where for a moderate premium, surety for integrity may be acquired.

The Prospectus, Form of Application, and other particulars, may be obtained at the Office, No. 28, Poultry, London

By order,

THOMAS DODGSON, Secretary.

T. H. RYLAND AND CO., OZELL'S STREET, BROAD-STREET, BIRMINGHAM, Patentees and Manufacturers of Wood Screws and Screw Bolts, for Railways, &c

The quality of these Screws is acknowledged to be superior to that of any other maker, and T. H. R. and Co. have, by their improved means of manufacture, so greatly reduced the price, that they will be found not to exceed in cost the common driving pin; and that they are more efficient for the purpose will be obvious, from the fact that one of these screws will require a force equal to from 2 to 4 tons weight, to tear it from the wood.

T. H. R. & Co. have to dispose of

A 12-horse high-pressure engine, metallic piston, with or without boiler.

Two boilers, quite new, 18 feet by 4 feet.

TO RAILWAY DIRECTORS, SHARE PROPRIETORS, AND THE PUBLIC.—Collisions on Railways neutralized, whereby the lives not only of the passengers but the engineers will be preserved, and but little or no damage done to the locomotives and the carriages.—Mr EDWARD BURRELL is induced further to publish a suggestion (he has long since made) of a simple, feasible, and not an expensive REMEDY for PREVENTING ACCIDENTS by collisions on Railways, in any way, even in a similar case to the awful crash and melancholy catastrophe resulting from a recent occurrence where the locomotives were propelled off the rails. The inventor is desirous of superintending the plan (which is approved of by many scientific persons) himself, to prove its practicability and efficacy, feeling confident that the result will be successful. By the adaptation of his suggestions a great expense will be saved to the Companies, as the application of them will entirely supersede the necessity of the buffer springs. Plans may be seen and further information obtained by addressing letters, pre paid, as above, at 5, Kew Terrace, Camberwell Green.

TO EXPORTERS, RAILWAY CONTRACTORS, ENGINEERS, SHIP BUILDERS, &c. &c.—The Patent Rolling and Compressing Iron Company having their works in full operation are ready to execute orders to any extent, for the undermentioned articles:—

Boiler and Tank Rivets of every description.

Boats for Machinery, Architectural, Agricultural, Ship and Coach Building, Gas Water, and other works, &c.

Railway Pins, Hooks, Screws, &c.

Particulars may be obtained, and specimens seen, upon application to the Secretary, at the Company's Works, Upper Ordnance Wharf, Rotherhithe.

By order of the Board,

JNO. ATLEE, Secretary.

TO BE SOLD by AUCTION, by Mr. FROST, on Wednesday, the 27th of October, 1841, and following days, on the premises, near the Summit Tunnel, Littleborough, by order of the Directors of the Manchester and Leeds Railway Company, the whole of the nearly new TEN STEAM-ENGINES, Boilers, Buildings, Stone Observatories, Apparatus and Engineering Implements, used in the working and construction of that immense undertaking—the Summit Tunnel; consisting of, amongst other articles, ten nearly new high-pressure steam-engines, used for either winding up materials or pumping, all especially constructed for this undertaking, by the very best makers in the country, including one 20-horse power engine, with boiler and winding apparatus, by Naysmith and Co.; one 12-horse power engine, with boiler, and winding and pumping apparatus, by Horsley and Co.; one 20-horse power engine, with boiler, and winding ditto, by Naysmith and Co.; one 12-horse power engine, with boiler, and winding ditto, by Rothwell and Co.; one 20-horse power engine, with boiler, and winding ditto, by Naysmith and Co.; one 20-horse power engine, with boiler, and winding ditto, by Naysmith and Co.; one 12-horse power engine, with boiler, and winding and pumping apparatus, by Rothwell and Co.; one 12-horse power engine, with boiler, and ditto, by Rothwell and Co.; one 6-horse power engine, with boiler, by Copeland; one small steam engine and boiler, at the Littleborough station. Also, all those 10 several engine-houses and buildings, with the chimneys, boiler seatings and engine foundations; four stone engineers' observatories; 1,600 yards of fishbelly rails, with chairs for them; 1¼ mile of single railroad, with sleepers and chairs complete; 500 yards square pump rods with iron joints; 16 6-feet square, 3-inch plank tanks or water cisterns; one large tank, 12 ft. 6 in. by 11 ft. 4 in. by 8 ft. 8 in.; 800 sleepers for temporary rails, a quantity of round timber, 600 yards of 2-inch gas piping with screw joints, a quantity of zinc, six tons of flat and round ropes, two sets of winding sheaves; 3, 4, 5, 6, 7, 8, and 9-inch iron pipes; a quantity of water troughs, iron pumps, working barrels, top trees, delivering pipes, straight and elbow pipes, cast iron pumping shafts and cranks, cast metal wheels, L legs, pedestals and weights, 30 or 40 tons of cast and wrought metal for various purposes about the works, with other valuable articles. Also, to be Sold by Private Contract, one planing machine, 60 feet long and 4 feet deep; three side lathes for carriage wheels, 6 feet diameter, all new.

Sale to commence each day at 11 o'clock precisely.

Further information may be had from the Auctioneer, 30, Oldham-street, Manchester. Descriptive Catalogues will be ready eight days before the Sale, and may be had from the Agents at any of the principal stations on the line, or the Auctioneer as above, who will also forward them to any part of the country, if applied for, per post.

TO WHARFINGERS, BUILDERS, RAILWAY CONTRACTORS, HORSE DEALERS, &c.—Thirty remarkable fine-shaped young powerful CART HORSES, selected as the best portion from the valuable Stock of Mr. Thomas Brassey (the Gosport Junction Contract being completed).

Mr. D. NICHOLSON will submit to public competition, at the Railway Terminus, Nine Elms, London, on Tuesday, November 2nd, 1841, at Twelve o'Clock, Thirty seasoned Draught Horses, well adapted for London trade, in strength combined with activity, and in keeping for immediate work.

Colours,—Blacks, Browns, Bays, Greys, and Chesnuts; also, an excellent Hackney Mare 15¼ hands high, and a handsome Cob, sound and quiet, fit for saddle or single harness, together with an assortment of useful harness.

The whole is taken direct from work, and will be submitted without any reserve.

On view Monday and Tuesday previous to the Sale, Catalogues had at Mr. Watkins', Three Goats' Heads; Nine Elms, and at the Auctioneer's Offices, Wandsworth, Surrey.

THE THAMES TUNNEL IS OPEN DAILY, (Sunday excepted) from Nine in the morning until six in the evening, and is brilliantly lighted with gas.

Entrance on the Surrey side of the river, close to Rotherhithe Church. The foot passengers' Shaft at Wapping, and the remaining portion of the Tunnel, in order to form a junction with the said Shaft, are now in active progress towards completion. Admittance 1s. each.

J. CHARLIER, Clerk to the Company.

Company's Office,
2, Walbrook Buildings, City,
October, 1841.

N.B. Conveyances to Rotherhithe, by Omnibus, from Piccadilly, Charing Cross, Fleet street, and Gracechurch-street; and by steam-boats from Chelsea, Vauxhall, Lambeth, Hungerford, Old Shades Pier, and London Bridge, to the Tunnel and Shadwell Piers at Wapping. Books, with Plates descriptive of the works, are sold at the Tunnel, Price One Shilling.

TO COAL PROPRIETORS, ENGINEERS, and Others.—To be SOLD by Private Contract, Four excellent double-acting condensing STEAM ENGINES, of 25, 11, 6, and 4 horse power respectively.

The whole are in excellent condition, and have been recently at work.

For further particulars, or to treat for the purchase, application may be made to Mr. Woodhouse, Colliery Viewer, Overseal, near Ashby-de-la-Zouch.

October 12, 1841.

MANCHESTER AND BIRMINGHAM RAILWAY.—Contract for Carriages.—NOTICE is hereby given, That the Directors of the Manchester and Birmingham Railway Company will meet at their offices, No. 43, Piccadilly, Manchester, on THURSDAY, the 28th of October instant, to receive Tenders for the supply of first and second class carriages.

Drawings and Specifications will be ready for inspection on and after Thursday, the 21st instant, at the office of the Engineer-in-Chief, No. 5, Grove Street, Ardwick, Manchester, where printed forms may be had. The Tenders must be delivered at the above mentioned office, No. 43, Piccadilly, Manchester, at or before Twelve o'Clock on the said 28th of October instant, addressed to the chairman, and endorsed "Tender for Carriages."

THOMAS ASHTON, Chairman.

Manchester and Birmingham Railway Offices, No. 43, Piccadilly, Manchester, 15th October, 1841.

SOUTH-EASTERN RAILWAY.—TO CONTRACTORS FOR FENCING.—The Directors will meet at their Office, 10, Coleman street, London, on Tuesday, the 2nd day of November next, at half-past One o'Clock in the Afternoon precisely, to receive TENDERS from parties willing to CONTRACT to FENCE OFF the LINE of RAILWAY with post and rail fencing from the Bethersden and Hothfield turnpike road, in the parish of Bethersden, to the Foord Valley, in the parish of Folkestone, being a distance of 18 miles or thereabouts.

The specification and conditions of Contract may be seen on application to Mr. John Wright, Resident Engineer, Railway Office, Dover, to Mr. P. W. Barlow, Resident Engineer, Railway Office, Tunbridge, and at the Office of Mr. Thomas Thurston, Land Surveyor, at Ashford, on and after Thursday, the 21st instant.

The Directors will not consider themselves bound to accept the lowest Tender, nor will any Tender be received after One o'Clock on the day appointed for receiving the same.

By order of the Directors,
J. S. YEATS, Secretary.

Railway Office, 10, Coleman-street, October 19, 1841.

OMNIBUSES TO AND FROM EVERY TRAIN—FARE SIX-PENCE.

Post Horses for hire, may be had on application at the above Offices, to convey Carriages to or from the Railway and any part of London (within Five Miles,) including the Driver, 10s. 6d. each pair.

EXPERIMENTAL COURSE OF NATURAL PHILOSOPHY.—PROFESSOR POTTER'S Lectures will be delivered on Tuesdays, Thursdays, and Saturdays, from 9 to 10, a. m.

SUBJECTS.—1. Mechanics, including Statics, Dynamics, Hydrostatics, and Hydrodynamics. 2. Accoustics. 3. Optics, including the nature of Light. 4. Electricity. 5. Astronomy.

This course will occupy the whole session, terminating at the end of June, but will be divided into two parts, of which the first will be concluded in the month of April. Fee for the Session £6, for the first Division, £4.

This Class may be attended by persons not intending to go through any other course of study at the College.

The MATHEMATICAL COURSES of Professor Potter will be as follows:—Junior Class, for all Students who have already acquired a knowledge of Euclid, Books I. to IV and VI., and the more elementary parts of Algebra and of plain Trigonometry; Mondays, Wednesdays, and Fridays, from 4½ to 5½. Fee, £7.—Senior Class, for Students who have a knowledge of Geometry, Algebra, Trigonometry, Conic Sections, and the more elementary parts of the Differential Calculus; Mondays, Wednesdays, and Fridays, from 9 to 10, a. m. Fee, £7.

Extra Class, for Students well versed in the Differential Calculus and Differential Equations.

N. B. Students entering to the Senior or Junior Mathematical classes of Natural Philosophy may attend the Experimental Course without additional fee.

Professor Potter commences on Thursday, 21st instant, at 9, a. m.

R. G. LATHAM,
Assistant Dean of the Faculty of Arts.
CHAS. C. ATKINSON,
Secretary to the Council.

University College, London, 19th October, 1841.

LONDON, EDINBURGH, AND DUBLIN GUARANTEED MUTUAL and PROPRIETARY LIFE ASSURANCE COMPANY, 3, Charlotte-row, Mansion House; St. Andrew's-street, Edinburgh; Fleet-street, Dublin.

DIRECTORS.

Alexander Anderson, Esq.	John Johnson, Esq., Ald.
John Atkins, Esq.	Kennett Kinsford. Esq.
James Bidden, Esq.	John M'Guffie, Esq.
Captain F. Brandreth	John Maclean Lee, Esq.
James Hartley, Esq.	J. Marmaduke Rosseter, Esq.
Vice-Admiral Robert Honyman	Alexander Robertson, Esq.,
Benjamin Ifill, Esq.	Managing Director.

Solicitors—Messrs. Palmer, France, and Palmer.

Secretary—F. Edgell, Esq.

Important improvements have been introduced into Life Assurance practice by this Company.

The Policies are indefeasible and indisputable, unless they have been obtained by fraudulent misrepresentation.

The Board of Directors satisfy themselves upon the various questions proposed before they enter into contracts of Assurance; and frame their Policies in such terms as to preclude all future questions as to their validity, and thus render them indisputable and negotiable documents of future debt against the Company.

Parties may be assured either upon the participating or non-participating plan; the assured are relieved of all responsibility, and the participating class is entitled to the whole of the profits upon that branch of the business.

Table to assure £100, with addition of Profits.

Age 25.	Age 35.	Age 40.	Age 45.	Age 50.	Age 55.
£2 2 7	£2 15 10	£3 5 0	£3 15 5	£4 10 7	£5 18 8

Persons interested in the Lives of Nominees or Debtors may, for a trifling extra Premium, be relieved from the risk of their Policies being forfeited by the parties going to foreign countries.

One-half of the Premiums may remain unpaid for seven years, affording a greater facility for loan transactions and family provisions than any other plan which has been suggested.

Credit Table to assure £100, payable at death.

Age 20.	Age 25.	Age 30.	Age 40.	Age 45.	Age 50.
£0 18 0	£1 0 7	£1 3 7	£1 11 5	£1 16 6	£2 3 9

The usual Commission allowed to Solicitors and Agents; and Medical Gentlemen are in all cases remunerated for their reports.

TO ENGINEERS, FOUNDERS, MACHINE-MAKERS, STEAM-SHIP BUILDERS, &c.—FOR SALE, an extensive and Valuable MANUFACTORY for the construction of Steam-engines, Boilers, General Machinery, Chain Cables, Anchors, Foundry Goods, Forged Goods, and General Blacksmith Work, well known as the FOOTDEE IRON-WORKS, Aberdeen.

These Works occupy nearly four acres of freehold ground, at a very moderate feu duty or ground-rent, and are situated at Footdee, in the populous city of Aberdeen, within 300 yards of the Harbour Quay.

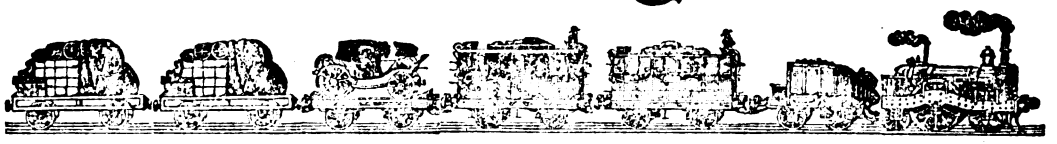
The Engines, Boilers, and Machinery of several of the large class of steam-ships have been wholly constructed and fitted up at these Works, which afford unusual facilities to parties engaged in that branch of business, and such as exist in few other establishments in the United Kingdom. The foreign and coasting trade of the port of Aberdeen is very extensive, and has rapidly increased for several years past, whilst the steam trade to London, Hull, Leith, Inverness, Orkney, Shetland, &c., is carried on to a very considerable extent.

Immediately adjoining the Iron-works, and belonging to the same Proprietors, is an extensive rope, sail, and felt work, which will also be disposed of, either with or without the Iron-work, as may be agreed upon.

To a party desirous of engaging in the building and equipping of steam or sailing vessels, the construction and repairing of Steam-engines, Sugar mills, and General Machinery, these Works, from their local situation and peculiar facilities within themselves, will be found particularly well adapted.

The whole of the Buildings are substantial, commodious, and suitable for the respective trades carried on within them. The machinery is of the first class, and in excellent order, the whole having been erected at considerable expense.

In the mean time, the work will continue to be carried on in all its branches, and orders executed as usual.



A plan and specification of the premises have been printed, which may, with all particulars and further information upon the subject, be had upon application to Messrs. Johnston and Farquhar, Solicitors, London; John Jopp, Esq., W. S., Edinburgh; or Messrs. Jopp and Shand, Advocates, Aberdeen, in whose hands the title deeds of the property are.

CRANES AND HOISTING TACKLE of every description, of the best materials and workmanship, and capable of lifting from 5 cwt. to 20 tons and upwards, with or without steam power, made by ELLIS & NOTON, who take this opportunity of respectfully soliciting an inspection of their Drawings and Patterns, at the IRWELL FOUNDRY, Salford, Manchester.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate-street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Bride's, Fleet-street, Middlesex.—Saturday, October 23, 1841.

JOHN WARMINGTON, Secretary.

Offices, 60, Fenchurch-street, October 20, 1841.

BRISTOL AND EXETER RAILWAY COMPANY.—TENDERS FOR LOANS ON DEBENTURE.—The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising therefrom, in sums of not less than £200. for terms of three, five, seven, or ten years, on interest at the rate of Five per cent. per annum, payable half-yearly at the Bank of Messrs. Glyn, Hallifax, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Prince's street, London, or Broad-street, Bristol.

By order of the Board of Directors,
J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol.

To Wharfingers, Brewers, Distillers, Corn and Coal Merchants, Contractors, and others.

VERY SUPERIOR CART HORSES.

TO BE SOLD BY AUCTION, by Mr. DIXON, at his Repository, Barbican, on Friday, November 5, 1841, commencing at One o'Clock, precisely, about Twenty-five valuable, young, seasoned, CART HORSES, the genuine property of Mr. William Hoof, off the Clayton Tunnel contract, on the London and Brighton Railway. And sold in consequence of the contract, on which they have been working, being completed.

Fifteen useful, powerful, seasoned CART HORSES, Brick and Rubbish Carts, Harness, &c. The genuine property of Mr. Faulkner, sold in consequence of having completed his contract on the Eastern Counties' Railway.

☞ The above lot of fine young, seasoned, Draught Horses, are worthy the attention of Brewers, Distillers, Wharfingers, Wholesale Warehousemen, Corn and Coal Merchants, Contractors, and all persons wanting them for immediate work, being in remarkable fine condition, and positively for sale without reserve.

Colours—Bays, Blacks, Browns, Roans, and Greys.

On view, and Catalogues had, two days previous.

A great variety of New and Second-hand Carriages, of every description, always on Private Sale at this Establishment, remarkably cheap.

ANDREW SMITH'S PATENT WIRE ROPES, for STANDING RIGGING, LIGHTNING CONDUCTORS, STROPPING OF BLOCKS, MINING, RAILWAY, and GENERAL PURPOSES; about half the Size and Weight of Hempen Ropes, and 25 per cent. cheaper. Testimonials to that effect, with Specimens, may be seen, and every information obtained, at the Manufactory, Mill-wall, Poplar; and also of the following Agents:

Robertson and Co., 12, Goree Piazzas Liverpool,
Mathias Dunn..... Newcastle-upon Tyne
Joseph Bothway..... Plymouth.
John Thompson and Co..... Wigan.
J. T. Tregellas..... Truro.
Thomas Mooney and Son..... Dublin.
Coates and Young..... Belfast.
James Kibble and Co..... Glasgow.
James Gunn..... Leith.
John M. Beatte, 14, Clement's-lane, High-street, Dundee.

This Rope has been in use for standing rigging in her Majesty's navy, and a great number of merchant vessels, for upwards of six years, and is giving the highest satisfaction. It is also employed in various mines and railways in different parts of the kingdom.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secresy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

This day is published,

TUCK'S MAP OF THE RAILWAYS throughout ENGLAND and WALES to the Capital of Scotland, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s. 6d.; in paper covers, 1s.; mounted on canvass, in cloth case, 2s. 6d.; on rollers, 3s. 6d.

Published at the *Railway Times* Office, 122, Fleet-street, and sold by Groombridge, Panyer-alley, and R. Tyas, Paternoster row; Hyde & Co. and G. Bell, Fleet-street; Mann, Cornhill; and by all booksellers and Newsmen.

ROBINSON'S RAILWAY DIRECTORY FOR 1841, containing the Names of the Directors and principal Officers of most of the Railways in Great Britain, derived from authentic sources, price 1s. *Railway Times* Office, Fleet-street.

Just published, a new Edition of ROBINSON'S RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Map, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Price 1s., in cloth. *Railway Times* Office, and Hyde and Co., Fleet-street.

Just published,

MAPS OF ALL THE LINES OF RAILWAY through ENGLAND and WALES, showing the country in their immediate vicinity on a larger scale than was ever before displayed in a sheet pocket map, with a compendium of Railway information. In paper cover 1s., in cloth 1s. 6d.

Published at the *Railway Times* Office, 122 Fleet-Street, and sold by all booksellers.

THE RAILWAYS OF GREAT BRITAIN AND IRELAND practically described and illustrated. By FRANCIS WHISHAW, Civil Engineer, M. INST., C. E.—The flattering testimonials which the author has received from various quarters, as to the utility of the first volume, which was produced at an expense of upwards of One Thousand Pounds, and Sixteen Months constant attention, induce him to propose to the railway public the production of a second volume, which, however, can only be done on the plan of subscription.

Railway proprietors, therefore, and others who would like to be in possession of much additional information on the important subject of railways, will be so kind as at once to forward to the author their names as subscribers to the Second Illustrated Volume which would be issued at the price of One Guinea.

THE RAILWAYS OF BELGIUM practically described and illustrated, in One Octavo Volume, price 10s. 6d., may also be produced in the same manner.

FRANCIS WHISHAW.

Gray's Inn, London, and Haverfordwest, Pembrokeshire, October 4th, 1841.

(TESTIMONIAL.)

Cabinet du Roi. Neuilly, le 21 Mai, 1841.

Monsieur,—Un exemplaire de votre ouvrage sur les chemins de fer de la Grande Bretagne, est venu au Roi par l'entremise de son Ministre des Affaires Etrangères. Déjà, quelques jours auparavant, Sa Majesté avait reçu la lettre que vous lui avez écrite pour lui en faire hommage.

L'intérêt du Roi est toujours acquis, Monsieur, aux travaux qui, comme les vôtres, ont pour lui et pour résultat le progres des arts utiles; aussi cet hommage a-t il reçu l'accueil qu'il méritait. Sa Majesté m'a chargé de vous transmettre ses remercimens, a j'ai l'honneur de vous prévenir que par son ordre, votre savant traité apris place dans la Bibliothèque particulière du Palais Royal.

Veuillez agréer, Monsieur, l'expression de ma considération très distinguée.

Le Secrétaire du Cabinet,
CAMILE FAUY.

Monsieur Whishaw.

TO EXPORTERS, RAILWAY CONTRACTORS, ENGINEERS, SHIP BUILDERS, &c. &c.—The Patent Rolling and Compressing Iron Company having their works in full operation are ready to execute orders to any extent, for the undermentioned articles:—

Boiler and Tank Rivets of every description.

Bolts for Machinery, Architectural, Agricultural, Ship and Coach Building, Gas Water, and other works, &c.

Railway Pins, Hooks, Screws, &c.

Particulars may be obtained, and specimens seen, upon application to the Secretary, at the Company's Works, Upper Ordnance Wharf, Rotherhithe.

By order of the Board,
JNO. ATLEE, Secretary.

TO COAL PROPRIETORS, ENGINEERS, and Others.—To be SOLD by Private Contract, Four excellent double-acting condensing STEAM ENGINES, of 26, 11, 6, and 4 horse power respectively.

The whole are in excellent condition, and have been recently at work.

For further particulars, or to treat for the purchase, application may be made to Mr. Woodhouse, Colliery Viewer, Overseal, near Ashby de-la-Zouch.

October 12, 1841.

GRAND JUNCTION RAILWAY.—CHESTER BRANCH CONTRACTS.—The Directors are ready to receive Tenders for the maintenance of the Railway and Works extending from the main Line at Crewe to Brook-street, Chester. The Resident Engineer will attend at Crewe, on Monday, the 8th proximo, at 10 o'Clock, for the purpose of showing the works, and any further information may be obtained on application at the Company's Offices, Lime-street, Liverpool.

By Order,
MARK HUISH, Secretary.

Liverpool, 27th October, 1841.

THE NORTHERN UNION RAILWAY.

MEETING AT LIVERPOOL — MIDLAND COUNTIES' RAILWAY.

[From the *Liverpool Standard* of yesterday.]

Yesterday (Thursday) a meeting of the Liverpool proprietors in the Midland Counties' Railway Company, was held in the Clarendon Rooms, South John-street, Liverpool, for the purpose of considering the propriety of acceding to the proposition involved in the following circular:—

Leicester, 22nd October, 1841.

SIR,—I am directed to inform you, that a Special General Meeting of the Proprietors of the Midland Counties' Railway Company will be held at the Railway Station, Derby, on Friday, the 5th of November next, at one o'clock, for the purpose of considering and determining on the expediency of authorising the Directors, in concurrence with the other Railway Companies interested in the completion of the line of railway between London and Newcastle, to adopt measures for forwarding an application to Parliament in the next session for an Act to make a junction railway between the Great North of England Railway at Darlington, and the Durham Junction Railway, for which the requisite notices have been given, either by guaranteeing to the subscribers to such undertaking a certain amount of profit, or by such other means as may be calculated to effect the desired object.

Shareholders who do not attend the general meeting in person may vote by proxy, each of such proxies being a proprietor of one or more share or shares; and each proxy must be transmitted to the secretary of the company five days at least before the holding of the meeting at which such proxy is intended to be used.

I am, Sir, yours faithfully,

J. F. BELL, Secretary.

J. CROPPER, Esq. was called to the chair; and he commenced the proceedings by reading the advertisement convening the meeting, after which he read the above circular, issued by the Directors of the Midland Counties'. The circular, the Chairman added, contained the following explanations of the scheme:—

The projected Junction Railway to which the above notice relates will commence at the present terminus of the Great North of England Railway at Darlington, and will for the first fifteen miles (as far as Sinclift) adopt a line for making which powers have already been granted by Parliament, in the Great North of England Railway Act. From Sinclift a new line will be taken, which partially adopting the Durham Junction Railway, will join the Brandling Junction Railway at a point nearly equidistant from Newcastle, South Shields, and Sunderland, to each of which towns the Brandling Junction already affords adequate means of railway communication. At Newcastle a union will be effected with the Newcastle and Carlisle Railway, and thus the only link will also be furnished which is now wanting to complete the chain of railway between Carlisle and the South of England.

The cost of the projected railway, according to an estimate very carefully made by Mr. Robert Stephenson, will not exceed 500,000*l*. The necessary plans have already been lodged, and the requisite notices given.

It is proposed to raise the capital in 20,000 shares of 25*l*. each, and in order to induce capitalists to come forward at once to take the shares without delay, a dividend will be guaranteed to the shareholders at the rate of 6 per cent. per annum for the first 10 years from the opening of the railway, up to which time interest at the same rate on the capital advanced will be paid out of the capital. In giving this guarantee, the York and North Midland, the North Midland, the Manchester and Leeds, the Great North of England, the Newcastle and Carlisle, the Durham Junction, and the Brandling Junction Railway Companies, propose to join with the Midland Counties' in certain specified proportions, and the share of the guarantee for which it is proposed that the Midland Counties' Railway Company shall be responsible is 1-10th of the whole.

The CHAIRMAN then observed, that no statement was here made of the length of the proposed junction. Could any gentleman supply the information?

Mr. MILLER said, it would be 22 miles, and that the expense would be 22,000*l*. per mile.

The CHAIRMAN believed the object of the meeting was to consider the propriety of the Directors, generally, whether it would be desirable for the Midland Counties' Railway proprietors to take an interest in a railway far north, in the mode proposed, not in shares, but in guaranteeing an income to those who would, so as to induce persons to take it up, as the railway itself would not produce anything equal to the capital invested in it.

Mr. JONES said the projectors thought otherwise. They had no doubt it would pay, but they thought that in the present state of the money market capitalists would not be induced to take it up.

The CHAIRMAN asked whether there was any gentleman who could tell the amount to be raised by subscription?

Mr. MILLER said, it would be 30,000*l*. per annum, one-tenth of which would be 3,000*l*., and that amount it was proposed the Midland Counties' should subscribe.

A PROPRIETOR—That is, supposing the railway to be made for 500,000*l*.

Mr. MILLER produced a statement of the amounts agreed to be contributed by the different Companies named.

The CHAIRMAN read this statement, from which it appeared that it was intended that the Companies agreeing should take the proposed line on a ten years' lease. This, he continued, was rather more than was stated in the proposition.

Mr. PARSONS said, the Companies combining rendering themselves liable to the several payments would be partners in the intended line; and if any portion of the partnership failed in paying, their quota must bear the additional burden. He disapproved of the idea of a partnership.

Mr. GILFILLAN said, if the proprietors consented to this proposition, they might be called up to aid in making a line still further north, on the ground that it would be requisite, in order to secure the prosperity of this.

Mr. PARSONS said, it would be most unadvisable to agree to this project, when it was considered that the shares of this Company were at a discount, and it was intended to make an attempt to raise money to carry it out still further. They could not limit their responsibility if they once entered upon this undertaking. Mr. Stephenson's estimate for making the line was 500,000*l*., but it was well known how fallacious engineers' estimates were—that there was scarcely one line in the country which had not cost nearly double the amount estimated; and he should be much surprised if this was completed under a million and a half. He thought Mr. John Ripley's plan was the best if the proprietors were to engage in the undertaking at all—namely, to limit the liability of the Midland Counties' Railway to 3,000*l*. a year, to commence after the line was made, and to be contingent upon the other Companies coming forward. Nevertheless he thought it would be better to oppose the plan *in limine*.

Mr. WOODS explained that Mr. Stephenson had allowed for the interest on the capital sum in his estimates.

The CHAIRMAN expressed an opinion that the most important question was, whether 500,000*l*. would be enough to complete the line. He feared not.

Mr. PARSONS said, there was something very suspicious as to this point. The circular said, in the first instance, that the estimated cost would not exceed 500,000*l*.; but in the closing clause of the proposition these words were carefully introduced—"The share of the guarantee for which it is proposed that the Midland Counties Railway Company shall be liable is one-tenth of the whole."

Mr. WOODS read a letter from Mr. Theodore Rathbone and Mr. Cropper, two Liverpool Directors of the Midland Counties Railway, who were unable to attend, to the effect that they thought it would be better not to come under such engagements as those proposed if the other Companies had taken a similar view. As it was, they greatly doubted, now that the other Companies had determined to join in the guarantee, whether it would be wise and prudent for the Midland Counties Company to be the only exception.

The CHAIRMAN said, it was quite clear from this letter that the judgment of the Liverpool Directors was against the plan.

Mr. PARSONS repeated, at considerable length, his objections to the plan, at the same time complaining that so little time had been given by the Directors for the consideration of the subject.

Mr. JONES thought the proprietors ought to have more information before they decided.

Mr. HEALEY explained that the proposed arrangements would not involve a partnership, as the line would be let on lease, and the parties would only be severally bound.

Some further discussion took place, at the close of which

Mr. PARSONS moved the following resolution:—

"That this meeting having taken into consideration the proposition that the Midland Counties' Railway proprietors become parties to a lease of a proposed railway, to be constructed between Darlington and Newcastle, resolved, that they recommend the proprietors of this railway not to accede to such proposal."

Mr. JAMES HEYWORTH seconded the motion.

Mr. RIPLEY moved an amendment to the effect that the Midland Counties' Railway proprietors become parties to paying the sum of 3,000*l*. a year to the guarantee fund from the time the line is completed, but be no parties in going for an Act, or in making a line or working it.

The amendment was not seconded.

Mr. HEALEY thought the Midland Counties' line would not yield an additional traffic to compensate for the outlay of 3,000*l*. a year.

After some debate,

The CHAIRMAN put the question, when Mr. Parson's motion was carried with only one dissentient.

A vote of thanks was then presented to Mr. Cropper for his conduct in the chair, and the meeting separated.

It will be necessary for those proprietors in Liverpool who intend to vote on this question at the special meeting to be held at Derby, on the 5th of November, to send their proxies not later than this evening (Friday), as each proxy must be in the hands of the Secretary five days previous to the meeting.

RAILWAY LABOURERS—EASTERN COUNTIES RAILWAY.

THE almost unceasing rain has had the effect of checking those extraordinary exertions which the Company made when the fine weather permitted. The inevitable consequence of the discouraging weather has been to throw out of employ, temporarily, a number of labourers, who, but for this circumstance, would have been hard at work on the line. This event is certainly to be deplored; but as no human foresight or provision could have averted the misfortune the only course that is left is to wait for more auspicious times. We have been told that about 300 workmen are thrown out of employ through the weather. This is a very unpleasant occurrence, but we do not see that the Directors are in the remotest degree responsible for the event, or that they can fairly be called upon to provide for the wants of this large mass of labourers. It must be recollected that the railway works, in consequence of the large body of men which they employ, must have already proved no slight benefit to the different localities through which they have been carried. Now, it must have been no small advantage to such a place as Ingatestone, the fact of a 1,000 men in their vicinity, employed for so many months, and likely to remain some months longer. This ought to be taken into consideration, and, we think, those places which have so largely participated in the profit, ought not to grumble when an unavoidable misfortune of this passing character takes place. The circumstances of the railway labourers being out of employ was alluded to by Mr. Disney, at the Quarter Sessions meeting at Chelmsford. We think Mr. Disney's remarks were by no means dictated in the spirit of fairness. Mr. Disney stated he had written to the Company, calling on them to do something to prevent the men from starving. We do not see what right Mr. Disney had to take upon himself this proceeding. We are willing to grant him all the advantages which may arise from allowing that benevolence dictated the application; but we would beg to suggest to Mr. Disney that he would be doing more real service, and assisting the unemployed more effectually, if he turned his talents to the task of persuading the influential portion of the Essex gentry to take a warmer interest in the progress and success of this noble undertaking. It is a perfect disgrace to the

Digitized by Google

county that sufficient public spirit cannot be found in it to carry on a national work of this sort without assistance—and that it should be planned and executed by others who have no connexion at all with the country. We feel satisfied that the very parties who now look coldly on the undertaking will be the first to rush forward to grasp a share of those immense benefits which will ensue when the entire project is completed. We notice that Mr. Disney complained that the Company had not "appointed two policemen as they had promised;" where did Mr. Disney get his *mis*-information from? We are quite sure Mr. Disney is incapable of inventing a charge, but we are satisfied, from the inquiries we have made, that no promise has been given, on the part of the Company, which has not been rigidly redeemed. We will whisper in Mr. Disney's ear, he being a gentleman of some influence in his neighbourhood, to do everything he can to promote a good understanding between the rural police, which is under his control, and the railway police, which is *not*. Petty jealousies between these public officers may do much mischief, and more especially if these are, in the remotest degree, fostered or encouraged by magisterial approbation. —*Essex Mercury.*

ACCIDENT ON THE MIDLAND COUNTIES' RAILWAY.

On Monday week an inquest was held before Mr. Swann, at the Victoria Hotel, Beeston, touching the death of William Hofton, aged 49. Job Kirk, of Derby, engineer, deposed that he is in the employ of the Midland Counties' Railway Company. On Sunday morning last, about half-past three o'clock, witness started with the mail train from Derby to Nottingham, having three carriages besides the *Dragon* engine and tender. When the train got about a quarter of a mile past the Beeston station witness perceived something running from the south to the north side of the line; the morning being dark, witness could not distinguish whether it was a man, boy, or an ass; they were then travelling from 20 to 26 miles an hour; the train was but a very short distance from the object when he first saw it, and it was quite impossible to stop in time, or even to shut the steam off before the buffer of the engine struck it; the engine then seemed to lift the body up and propel it for about twenty yards, when the engine, tender, and carriages passed over it. Witness had then shut the steam off, and told the fireman to put down the break. Witness set his foot on the break, and stopped the train in about a quarter of a mile distance, and got down, and told the guard that he believed he had run over a man or something else. The guard went back for some distance to see what it was, but came back and said he could see nothing. Witness then put the train back to within ten yards of where the object lay. The guard got down and saw it was a man. He was lying with his head and one of his hands close to the rail, near Beeston. All the body lay within the rails upon its back. The guard had his lamp down to him, when the witness saw that the head, toes, and one hand were severely cut, and that he was quite dead. The guard and a policeman got a door, and the deceased was carried up to the Victoria Hotel. He had neither hat nor shoes on when found. Henry Watson, of Woodford-place, Nottingham, after corroborating the evidence of the previous witness as to the time and place where the accident took place, said the deceased's neck was cut quite through except a small portion of the skin. His right foot was terribly smashed, and his left arm appeared to be smashed all to pieces. His lower jaw was cut off, and one side of his face cut completely open. One of his coat pockets was torn off and lay three or four yards from him; a handkerchief, containing some butter, lay between the pocket and the body. Joseph Peet, of Beeston, deposed that he had known the deceased for six years, and during that time he lived at Arnold, and was a framework-knitter, and has left a wife and seven childen. John Lee, of Arnold, deposed that on Saturday night last, about a quarter past eleven, he went to the Forest Tavern public-house, on the Mansfield-road, Nottingham, and saw the deceased sitting in a chair in the bar. About ten minutes to twelve he got up and went out of the house, and witness did not see any more of him. He was in the habit of amusing people at public houses by reciting pieces to them, but he could not that night as he was too much in liquor. Verdict—Accidental death.—*Nottingham Mercury*

BRISTOL AND GLOUCESTER RAILWAY.

To the Editor of the Railway Times.

Sir,—Perhaps you or some of your readers can inform me whether the Bristol and Gloucester line of Railway is still in course of construction. I am a constant reader of your valuable paper, and can never see even a line on the subject, or a quotation of the shares. It strikes me that if this affair were in abler hands that the railway would be a more prominent investment than it is at present. It is a trifle to look at, but it is a most important link, and one which should be executed with all the dispatch possible.

Other Companies make calls, and why should not the Bristol and Gloucester? If a disposition were shown to push on the works, there is no doubt whatever that the "needful" would soon freely find its way into the deposit bank, and its neighbour, the Birmingham line would sooner be nearer par than 50 per cent. discount!

Your well-wisher, and a subscriber,

G.

Manchester, October 26, 1841.

THAMES HAVEN DOCK AND RAILWAY.

To the Editor of the Railway Times.

Sir,—I am an unfortunate shareholder in the Thames Haven Railway, and a few days since received a letter, of which the following is a copy:—

"Sir,—I am directed to forward to you an extract of the minutes of the Court of Directors of the 21st instant, together with two resolutions then passed, upon which the Directors are determined to act. In consequence of the expressed wish of some of the shareholders, the first resolution was passed, but the Directors by no means wish that the shareholders should forfeit their interest, but the call must be paid, the liabilities cleared off, and the Directors must know how they are to stand as to the proprietors for the future carrying on of the concern.

"The letters of Mr. Potter, of Manchester, of the following dates, viz., 24th, 25th, 28th September, and the 6th, 16th, and 20th October, having been read to the Board, conveying the wishes of the shareholders at Manchester to forfeit their shares with a view to be discharged from further liabilities.

"It was resolved—

"That every shareholder who shall pay up the present call of 2*l.* 10*s.* per share on or before Saturday, the 30th day of October instant, and shall at the same time execute a transfer of his shares to the Secretary of the Company on behalf and for the use of the said Company, shall be relieved from all further liability in respect of such share.

"It was further resolved—

"That legal proceedings shall be taken forthwith to enforce payment of arrears against every shareholder who shall not have paid up the call of 2*l.* 10*s.* now due, with any former arrears on the said 30th of the present month.

"I am, &c.,

(Signed) "HENRY AMSINCK, Sec."

As you are ever the friend and adviser of the unfortunate, I should feel much obliged if you could give me any information and advice. I am aware I ought to have written you earlier, but it did not occur to me till this morning.

I am, Sir, yours respectfully,

W. T.

RAILWAY DIRECTIONS — BIRMINGHAM AND GLOUCESTER RAILWAY.

To the Editor of the Railway Times.

Sir,—Your Correspondent, "C. D.," appears to think his suggestions of an Executive Board of Directors is a new proposition; and no doubt your remarks to his letter will call his attention to the fact that it has been in practice for nearly twelve months on the Birmingham and Gloucester line, and has resulted in disappointment to the proprietary. Each of the restricted Board (of five members) takes a particular department, and being able only to devote a small portion of his time to the duties, they are consequently badly performed, as every thing connected with the line makes apparent. The traffic is bad, and the trains notoriously irregular. No better proof need be adduced of the inability of Directors to take the proper officers' duties, than the circumstance that when their late Superintendent was on the line, the trains were regular in their arrival, and now just the reverse.

I quite agree with you in your very sensible and urgent recommendation, that Boards of Direction should (to be made good business councils) be reduced to a moderate number, confining themselves to their proper province, viz., masters, leaving their orders to be carried out by servants, and not endeavour ineffectually to do it themselves. My opinion is that you may carry the reduction of the acting members of the Board to an evil, giving thereby one man amongst a few, probably the Chairman, a desire to be a dictator and not an adviser. Indeed, in practice this has been shown to be an evil, producing ruin and destruction to proprietaries, as in the case of joint-stock banks, paying dividends of 10 per cent. in January, and, being found insolvent in June; and this was attributed to a too much confidence in a Director and Manager.

Railway management, like other things, will work its own remedy; but I, in common with others who looked forward for dividends, feel disappointed; and until shareholders as a body look better after their own affairs, little chance will arise of our having any legitimate profits.

I am, Sir, your obedient servant,

A SHAREHOLDER.

Birmingham, October 28, 1841.

Railway Accident in the United States.—Springfield, Tuesday evening, October 5.—This afternoon the eastern and western passenger-trains of the Western Railroad (both going at great speed) met in a curve about four miles west of Westfield, and the effects were shocking and disastrous. Westfield depot is the place for meeting and passing, but as the train from the west was behind its time, the other train went on, the conductor hoping to arrive at the next turn out before meeting the other train. The baggage cars of each train were behind, of course bringing the passenger-cars directly behind the locomotives and tenders. The two locomotives and two or three passenger-cars of each train were smashed to a complete wreck. The passengers were jammed and tumbled together in the ruins in dreadful confusion. We are informed that 18 or 20 have limbs broken, and as many more are severely bruised and lacerated in various ways. Mr. Warren, the conductor of the train from the West, is shockingly mutilated, but his life is not despaired of. The engineer of that train escaped without much injury. Mr. Moore, the conductor of the Springfield train, narrowly escaped by jumping off. Mr. Taylor, the engineer of that train, is badly wounded. A young lady, niece of Major Whistler, is said to be dangerously hurt. Colonel Harvey Chapin is much bruised, but not dangerously, as is now hoped. The Rev. S. Elliott, an episcopal clergyman from South Carolina, and family, who left here this noon, were brought back to the United States Hotel this evening in sad condition. The ladies were not seriously hurt; but his two sons were wounded—one scratched and bruised, and the other had his leg broken above the knee. These are all the particular cases of which we learn. We are not sufficiently informed of the circumstances of this sad accident to make any comment. It is reported that Mr. Warren, mentioned above, died this morning.—*Globe.*

Taff Vale Railway.—The Taff Vale Railway is now in full operation, with the exception of the three branches not yet complete. There are now nine engines at work on the railway, and four passenger trains every day, and two on Sundays, to and from Merthyr. Coals and iron are also brought down daily.—*Carmarthen Journal.*

THE TOLL QUESTION ON RAILWAYS—CROYDON AND GREENWICH COMPANIES.

THE following observations have just been given to the world, in the form of a fourpenny Pamphlet, by W. A. Wilkinson, Esq., Chairman of the Croydon Board. The pamphlet is published by Messrs. Smith, Elder & Co., of Cornhill:—

The Railway system is extending itself so rapidly over all the principal lines of communication in the kingdom, as to bid fair to usurp almost entirely the functions of the present highways. Every thing, therefore, which tends to the improvement of that system, every thing which renders its advantages more available to the public at large, must be well worthy of all attention. Safety and rapidity of transit are, perhaps the chief elements of these advantages, but cheapness is the means by which alone these advantages can be extensively enjoyed. That the railway should be the poor man's railway as well as the rich man's railway—and that its most extended use, by the most liberal administration of its management, is most for the interest of those who have embarked their capital in its formation, are the opinions which it is the purpose of the following observations upon the toll question, to establish.

I do not presume to think that I have anything new to state upon this subject, but having taken an active share for the last two years in the management of the London and Croydon Railway, I have found so much misapprehension to exist upon the question of fares and tolls, not only among railway proprietors, but even in the minds of those intrusted with the conduct of their affairs—indeed I am so conscious of my own ignorance two years ago of what I now consider to be some of the first principles of railway management, that I am inclined to think that the mere record of the results of every thinking man's experience may be very conducive to the spread of sound knowledge of these principles.

I have still another excuse for these remarks, which is of a somewhat personal character. Holding the opinions which they have constantly advocated, the Directors of the Croydon Company have yet been constrained to adopt in the management of the Railway with which they are connected, a course of action apparently opposed to these opinions, and they have been constrained to the adoption of this course by the very misapprehension or want of sound knowledge to which I allude. If, for example, high fares are charged upon the Croydon Railway by those who hold the opinion that low fares, particularly on short lines in the neighbourhood of a large population, are most conducive to profit, I am naturally anxious to explain that this is because of the peculiar position of the Croydon Railway, which is controlled in its charges by those of the line into which it runs, whilst it is my firm belief that the interests of that line, if properly understood, demand a co-operation in, rather than an opposition to, the establishment of low charges, both of toll and fare.

It is perhaps necessary to premise that the word toll is used to express that part of a railway charge which is intended to remunerate the cost of forming and maintaining the railway itself; while the word fare represents, likewise, the cost and profit of conveying the passengers. In what manner the latter of these charges is influenced by the former, it is my present object to shew.

The question of tolls is so inseparably connected with that of fares, that it is impossible to consider one without the other; indeed in the generality of railways these charges are blended together, or to speak more correctly, the one is included in the other. The toll or charge in respect of construction and maintenance of way, is included in the fare, or whole charge for conveyance. It is only where a Railway Company carries its passengers over a line belonging to another Company, that this charge is divided, as regards the Companies; and it is of the equitable mode of its division that we have now to treat.

Intimately, however, as the charge for construction and maintenance of way is connected with that for conveyance alone, there is this essential difference between them—that the one partakes much more largely than the other of that quality of railway expenditure which consists in a constant diminution of the cost per passenger in proportion to the number of passengers passing over the line. Nobody doubts, I believe, that within certain limitations, the lower the fare charged, the greater is likely to be the number of passengers. When, therefore, we are to determine as to the policy of charging high or low fares, we are first to consider the cost of conveying the passengers, and if we find, by experience, that it costs 10*l.* to carry 1,000 passengers a certain distance, 12*l.* to carry 2,000, and 15*l.* to carry 4000, we have only to find, likewise by experiment, what reduction of fare, from any supposed ordinary charge, will double, and what further reduction will quadruple, the number of passengers, in order to ascertain what rate of fare it is, under the circumstances, expedient to charge. Now although the cost of conveyance of each individual passenger, diminishes constantly with the numbers to be carried, it is certain, nevertheless, that the cost of conveying a large number is greater than that of conveying a small number; in other words the cost does increase with the numbers, but not in the same proportion. In making a charge, therefore, for fare, which includes cost of conveyance, this rate of increase must always be borne in mind. But the cost of construction, and the cost of maintenance of way, are affected in a much less degree, the first, and most material, scarcely at all, by the numbers of passengers passing over a railway. In making a charge, therefore, for these items alone, or for toll, the question of increase of cost as respects numbers, may be almost wholly disregarded, and the only consideration remaining will be what rate of charge will produce the greatest amount of money receipts.

Into such a consideration it is manifest that the quantity of capital expended in the construction of a railway cannot enter. An attempt at a higher rate of charge per passenger, on account of superior cost of construction might, and in all probability would, produce a diminution of gross money receipts; and the most costly railway that has ever been constructed, might find its best remuneration in the lowest rate of charge per passenger that has ever been imposed. At all events it is clear that the railway must be made, and the capital expended, before the rate of fare can be levied; and that when the railway is made and the capital expended, however large this latter may have been, that rate of fare should be levied which will bring in the largest net revenue; and if it be true that low rates of fare may, in some cases, bring in larger net money receipts than high rates, then, in all such cases, it must be true that a higher rate of fare or toll, levied for the purpose of repaying extra cost of construction, will fail of its object, and may produce the opposite result.

From this view of the subject it will be seen that if we are to consider the whole charge, made for railway passengers, to be compounded of two parts, the remuneration for cost of conveyance, and the remuneration for cost of construction and maintenance of the road, almost the whole risk of any experiment, made by a trial of low rates, will fall upon the carrying Company, and very little upon the proprietors of the road. If therefore we are right in assuming that, as the whole cost of carrying passengers on a railway increases in a very slight proportion with the numbers to be carried, so it is expedient to make such a charge only to the public as will secure the greatest numbers, together with the largest gross income; how much more expedient must it be for the owners of that part of a railway interest which concerns construction and maintenance only, the cost of which is scarcely affected at all by increase of numbers, that the whole charge should be thus diminished. The main object then of a toll receiving Company, should be to induce its customers, the toll paying Companies, to charge such rates to their passengers as will bring the greatest numbers, and as the only inducements which can be offered are cheapness and convenience, so ought the toll to be as low, and the accommodation as great as these rates will warrant. But if on the other hand the toll paying or carrying Companies should insist upon charging high fares to their passengers, thereby limiting the numbers, then will the toll receiving Company require a high toll to make up for the deficiency of these numbers.

In order to understand fully the injustice and impolicy of a fixed toll in railway charges, let us examine into the manner of its operation. The object of toll in general can only be to give an interest to the toll receiving Company, or owners of the road, in the success of the toll paying or carrying Company, or to constitute a sort of partnership in profits between the two. How does a fixed toll effect this object? If the toll be fixed upon the presumption of a certain charge of fare to be made to its passengers by the toll paying Company, and it be an axiom of railway practice that the rate of fare determines the number of passengers, then, if the toll paying Company shall charge more than this presumed rate, it will limit these numbers, and the toll being fixed per passenger, the toll receiving Company will receive less than its fair proportion; if, on the other hand in order to obtain a larger income, the toll paying Company shall charge less than the presumed rate, it will increase these numbers, and the toll receiving Company will receive more than its fair proportion; in either case an injustice will have been committed, and it follows from this that the toll should always bear some certain proportion to the fare charged, and that where this does not take place, *i. e.* where a fixed toll prevails, a fair partnership in profits is not constituted between the toll paying and toll receiving Companies.

But if a fixed toll be inconsistent with a fair arrangement between one Company and another, and it be conceded that the toll should always bear a certain proportion to the fare charged to its passengers by the toll paying Company, it may be fairly demanded what this proportion should be. The rule proposed by the Croydon Company for determining such proportion is founded upon the following postulates:—

That any fixed charge per passenger is contrary to proper principles on railways where the charges per passenger ought to diminish in proportion to the numbers carried.

That the rate of fare has a constant tendency to regulate the numbers to be carried, and consequently the cost of conveyance per passenger.

That every line of railway ought to be able to regulate its own fares without reference to any other line over which its traffic may pass.

That every Company carrying on its own line, is fairly entitled to all profit to be derived from any traffic in its passage over such line.

The plan which is believed to be capable of effecting these objects is—

That in all cases where the journey is over two or more lines of railway, in respect of which journey one fare only is charged—the proceeds of such fare, after deducting the cost of conveying the passengers, shall be divided between the several lines in proportion to the respective lengths of each line passed over.

Let us apply these principles to the case of the Croydon and Greenwich Railways. The latter of these was the first constructed, and it was proposed that the former should use a part of it, in its approach to London Bridge—and in order to induce such use, an agreement was made in limitation of the parliamentary right to charge a certain toll per passenger, and this limitation was fixed with reference to a supposed charge to be made by the first named Company to the public, such charge to be compounded of fare and toll. But it is found by experience that this supposed charge is not the charge that will bring to both Companies the largest revenue, and it is proposed to lower it for the purpose of increasing their joint income. As this can only be done by increasing to a great extent the numbers of the passengers—and as the toll is fixed, and levied per passenger, it follows of course that

Digitized by Google

the Greenwich Company will receive a much larger proportion of the gross income than was contemplated in the original agreement between the Companies, and this without any of the expense incurred in carrying these additional numbers, the whole of which will fall upon the Croydon Company, and there will no longer be a just division of profits between them.

In order to see this clearly let us imagine 300,000 passengers carried at an average fare of 1s. 6d., upon whom the toll levied shall be 3d.—the Government duty 1d.,* and the cost of conveyance 50 per cent., and let us likewise suppose that by reducing the fare one-half, the numbers might be quadrupled and the cost of conveyance reduced to 40 per cent., and then let us observe the result of a fixed toll and duty.

Passengers.	Fare.	Gross receipts.		
300,000..	1s. 6d. ..	£22,500	Cost of conveyance at 50 per cent. ..	£11,250
			Toll at 3d. per passenger	3,750
			Duty at 1d. per passenger	1,250
				16,250
			Profit.....	6,250
		£22,500		£22,500

Passengers.	Fare	Gross receipts.		
1,200,000....	9d. ..	£45,000	Cost at 40 per cent.	£18,000
			Toll at 3d. per passenger.....	15,000
			Duty at 1d. per passenger.....	5 i 00
				£38,000
			Profit	7,000
		£45,000		£45,000

It will be seen, in the latter case, that while the profit of the toll-paying Company has only been raised from 6,250*l.* to 7,000*l.*—that of the toll-receiving Company and the Government duty, have been raised respectively from 3,750*l.* to 15,000*l.* and from 1,250*l.* to 5,000*l.*, whereas if the toll and the duty had remained at one-sixth and one-eighteenth of the gross receipts, as in the first case, the result would have been as follows :—

Passengers. Fare.	Gross Receipts.		
1,200,000.... 9d. ..	£45,000	Cost of conveyance at 40 per cent....	£18,000
		†Toll being 1 6th of gross receipts....	7,500
		Duty 1-18th of ditto	2,500
			£28,000
		Profit	17,000
	£45,000		£45,000

and something like a fair division of profits would have been maintained between the parties. In the last case the toll-paying Company, which has the regulation of its own affairs, would find sufficient inducement to run the risk of increasing its business by lowering its fares,—in the former case no such inducement can exist.

But is is argued that greater cost of construction, either original or subsequently incurred, will entitle the Company incurring such cost to more than a rateable share, according to distance, of the profits of the joint income. Let us examine upon what grounds.

If it be contended that because A has expended a larger sum per mile than B upon a railway used by both, that therefore A ought to receive a larger share per mile of the whole income—this may be readily conceded provided the speculation of A be equally well founded; that is, if it be based upon the expectation of a larger traffic in proportion to the larger sum expended: but if upon this greater number of passengers A were to receive likewise a greater rate per passenger, he would be paid twice over for the same thing. If it can be shown, therefore, that the most costly line must of necessity receive the largest amount of traffic, it will not be expected that such traffic must be likewise charged at a higher rate. Now, this is precisely the position of the Greenwich and Croydon Railways, for considering the 1¾ miles of the former as one-sixth part of the Croydon line, it is evident that the whole of this one-sixth must be traversed, and of course paid for, by every passenger to the Croydon Railway—while on the other hand very many of those using and paying for the whole of the Greenwich portion will only use and pay for half of the Croydon portion—and very many even for less than half. Nor is this all, for a vast number of passengers, exclusively Greenwich, and in which the Croydon Company has no interest, must also pass over the Greenwich portion. The Greenwich Railway, which has cost the largest sum per mile, will thus receive, even at the same rate of charge, the largest sum per mile in the way of remuneration.

But, although the Greenwich Company, if it could secure its fair proportion of all the traffic which abuts upon it might be one of the most profitable lines, in regard to its length, in the kingdom, yet it is possible that the Greenwich speculation might not have been well founded—the Greenwich Company might have expended more than any conceivable traffic could justify. There is no reason why the public or the other Companies should be made to pay for this supposed miscalculation of the Greenwich Company, and accordingly we find that this Company has no power to enforce such payment. Let us suppose that the Greenwich Company had obtained the right by Act of Parliament to charge a toll of sixpence or ninepence per passenger for 1¾ miles of railway—the Companies called upon to pay this toll would levy such an additional charge upon their passengers as would provide this increased toll, and compensate them besides for the loss of passengers which an increased fare would occasion—and this additional charge would so limit the numbers as to reduce the whole amount of income receivable from toll, within the sum which a smaller rate upon larger numbers would produce, and might in the process so cripple the resources of the other Companies as to force them to abandon the Greenwich line. This case has partly occurred between the Greenwich and Croydon Companies, the latter of which finding the present toll excessive, has raised its fares, and thus so far diminished the number of its passengers, as to reduce the gross sum payable as toll to the Greenwich Company, from 5,900*l.* to 4,700*l.* per annum. And if the Greenwich Company should, by the imposition of a still higher toll, force the Croydon Company to a still further raising of its fares, the probability is, that the numbers of its passengers will be so much diminished as to render it necessary to stop short of the Greenwich line, and perhaps to abandon the traffic altogether, since this may be no longer worth conducting.

If this position be correct, and I do not see how it can be controverted, the method of increasing the amount of rent payable to the Greenwich Company is not by levying an additional toll per passenger, but rather by reducing the present toll, upon the simple condition that the parties in whose favour it may be reduced, shall proportionately lower their fares; and this is precisely the proposition which has been so often made by the Croydon to the Greenwich Company. In making this proposition there has been no intention to ask for any reduction of toll except upon the plea that such reduction shall be the means of bringing a larger revenue than can be otherwise obtained, into the treasury of the Greenwich Company. The Greenwich Railway belongs to the Greenwich Company, and, except in so far as it is a monopoly, the public or the other Companies have no right to ask for a diminution of such charge as the Greenwich Company chooses to impose. On the other hand, the public or the other Companies will employ their own discretion in the use they shall make of the Greenwich Railway, and this use will no doubt be in proportion to the charge imposed. The Act of Parliament which limits this charge on the part of the Greenwich Company, was intended to be an Act of protection to the public—not a gauge of the profits of the Company. The Croydon Company has not the slightest intention to question the right, but it doubts the policy, of keeping up the Greenwich charges to this limit. The question proposed is not only whether the present rate of toll charged brings in the greatest possible amount of revenue to the Greenwich Company, but also whether even the present revenue can be maintained at the present, or an increased, rate of toll. It is notorious that the Croydon Company derives scarcely any profits from its own traffic; that it works almost for nothing; that there are no surplus funds, out of which to pay an increased toll. To demand this increased toll from the public in the shape of an increased fare, would infallibly diminish the traffic and defeat the object.

Is then the traffic between London and Croydon to be lost to the Greenwich Company? It has been said that the Brighton Company will carry it on with greater economy, if the Croydon Company should give it up; but the Brighton Company has to pay the Croydon toll of 1s. as well as the Greenwich of 3d.—together 1s. 3d., and no economy of expenditure can compensate for such a toll, where the passengers have to be carried at a low fare. The traffic therefore would be abandoned almost entirely if given up by the Croydon Company, which has no interest in carrying it on, under the present circumstances; and the only way therefore to save it to the Greenwich Company is to reduce the nominal toll, or the rate per passenger, in such a manner as to enable the Croydon Company, by a reduction of its fares, to make the traffic profitable to both parties.

All the experience of the Croydon Railway points to the superior policy of low fares. Whenever the fares of this line have been raised, the traffic has been diminished, and its progress checked. Wherever the fares have been lowered, even under the least favourable circumstances, and the toll has not interfered, the increase of traffic has more than repaid the reduction.

It is too much the practice with those engaged in Railway Management to hamper themselves with prejudices derived from other and different modes of conveyance, where the cost increases almost in the same proportion with the numbers to be carried, whereas the chief characteristic of a railway is its dependence on the opposite principle. On a railway, as in a cotton mill, a large cost is incurred in the first instance for the sake of producing a large supply of the required commodity at a cheap rate—a large supply requires a corresponding demand, only to be obtained by this cheapness of rate—and although some railways, in peculiarly favourable positions, may return large dividends upon high fares, these will form the exception and not the rule, for it is becoming more and more apparent every day, that railways in general cannot pay, unless a much more numerous class than the present travelling class, can be induced to the habit of locomotion; and it is evident that this can only be effected by a considerable reduction of the present charges.

I am conscious of having argued this question with reference to the particular case which has engrossed my own attention; but the case of the Greenwich and Croydon Railways must be sooner or later, if it be not already, that of many other Companies somewhat similarly situated. I cannot help thinking, therefore, that the subject is of great importance to the railway world, and that at all events the arguments here stated are well worth the deep attention of the proprietors of both the Companies now mentioned, and to their calm consideration, and to that of the public, I shall for the present leave them.

At the quarterly meeting of the iron-masters of Yorkshire and Derbyshire, held in Sheffield, on Wednesday, the following prices were fixed for pigs:—No. 1, 4*l.* 12s. 6d.; No. 2, 4*l.* 7s. 6d.; and No. 3, 4*l.* 2s. 6d. It was represented that the market was firmer in Staffordshire.—*Sheffield Iris.*

* The mode of fixing the Government duty per passenger is just as objectionable as that of fixing the Greenwich toll, and is only less intolerable because it is less in amount.

† It is not intended here to illustrate the "plan" above mentioned—but merely to show the effect of a fixed charge upon a large reduction of fare. If the plan were adopted, there would have to be deducted, from the toll, the cost of conveyance for one sixth part of the distance.

EDINBURGH AND GLASGOW RAILWAY—RUNNING OF MAIL-TRAINS ON SUNDAY.

In addition to the meeting we recently referred to, a demonstration of a more public nature took place at Glasgow on Wednesday last, against the proposed running of mail-trains on the Edinburgh and Glasgow Railway on the Sundays. On this occasion the admission was by ticket, 3d. each; and the report states that the church in which the meeting was held was crowded in every part by a highly respectable audience. Among those who appeared on the platform or approved of the proceedings by letter, were some of the leading clergymen of the city, both Churchmen and Dissenters, together with several laymen distinguished for piety and benevolence. A meeting so constituted possesses strong claims to respect, and opinions put forth with its sanction are entitled to deliberate consideration. It is understood that the proprietors of the Edinburgh and Glasgow Railway intend to run two mail-trains on the Sunday—one in the morning and one in the evening, so as not to encroach on the ordinary hours of divine service. This proposition was denounced by the various speakers as fraught with danger to religion and morality, and likely to lead to a general desecration of the Sabbath. As other meetings are about to be held for the same purpose, we think it is the duty of the independent press, whether Whig, Tory, or Radical, to raise its voice against an attempt to deprive the people of Scotland of privileges they have hitherto enjoyed, and which are enjoyed without molestation by every other people in Europe.

There is no law in Scotland against travelling on the Sabbath. The Act of 1661 prohibits hiring for shearers, fishing for salmon, working mills or saltpans, holding markets, "carrying of loads," or merchandising on that day, but not making journeys, either on foot or horseback, or in vehicles. Any law indeed treating this last as an offence, would be too absurd to be practically enforced. Persons who live at a distance from the church must travel to it; men must travel to see their sick or dying relations; physicians must travel to visit their patients; and in this, as in other cases, it never can be possible to draw the line betwixt what are works of necessity and mercy, and what are not. Let us add, that a journey on the Sabbath may be a work of necessity to the poor man who is constantly employed on the other days of the week, while it would be the reverse to a rich man who has abundance of leisure.

The law has wisely left it to every man's conscience to travel or not on Sunday, as he deems it proper. Let clergymen, then, and pious laymen, use their best exertions to enlighten the people as to their duty on this point. Let them persuade all whom they can persuade, to abstain from making journeys on the Sabbath. It was well observed by Mr. Wardlaw, that "he knew no subject on which human legislation was more difficult, delicate, or embarrassed; and it was his decided opinion that Sabbath observance must be *regulated by public opinion*, and that in maintaining their views every thing must depend on being able to maintain in the minds of the community right impressions of its nature and benefits. He presumed that their great object was to bring an expression of enlightened public opinion to bear on the attainment of the end they had in view, and he prayed earnestly that the expression given might be such, both in matter and manner, as by the blessing of God, would produce the desired result."

Now, though it is right to enlighten public opinion on this subject, we must condemn every attempt to bully individuals, or public companies, or functionaries such as the Postmaster-general, into measures of which they do not approve, by denunciations suited only to acts of flagrant vice or crime. A man of sober sense must be disgusted with the rabid fury of Dr. Forbes, who asserted, that "the destruction of souls which would follow the adoption of Sabbath railway travelling would exceed in extent the number of those who fell beneath the wheels of Juggernaut!!" We call this bullying, because the tendency of such language is to stir up feelings of intolerance and hatred in the breasts of narrow-minded bigots, and make them look upon a man who is quite as honest as themselves, but less rigid in his views of Sabbath observance, as a monster not worthy to live in a religious community. Such persons do not address themselves to a man's intellect, but to his fears; instead of persuading him to do what they deem right, they endeavour to terrify him from acting upon his own convictions, by unchaining the furious prejudices of his ignorant neighbours against him. Bishop Horsley, who was no less distinguished by orthodoxy than intellect, held sentiments respecting Sabbath observance, which, we dare say, would lead Dr. Forbes to denounce him as a "destroyer of souls." The Bishop says—

"Among the Jews, the absolute cessation of all animal activity on their Sabbath had a particular meaning in reference to their history; it was a standing symbolical memorial of their miraculous deliverance from a state of servitude. But to mankind in general—to us Christians in some degree, the proper business of the day is the worship of God in public assemblies, from which none may without some degree of crime be unnecessarily absent. Private devotion is the Christian's daily duty; but the peculiar duty of the Sabbath is public worship. As for those parts of the day which are not occupied in the public duty, every man's own conscience, without any interference of public authority, and certainly without any officious interposition of the private judgment of his neighbour, every man's own conscience must direct him what portion of this leisure should be allotted to his private devotions, and what may be spent in sober recreation. Perhaps a better general rule cannot be laid down than this,—that the same proportion of the Sabbath, on the whole, should be devoted to religious exercises, public and private, as every man would spend of any other day in his ordinary business. The holy work of the Sabbath, like all other work, to be done well, requires intermissions. An entire day is a longer space of time than the human mind can employ with alacrity upon any one subject. The austerity, therefore, of those is little to be commended, who require that all the intervals of public worship, and whatever remains of the day after the public duty is satisfied, should be spent in the closet, in private prayer and retired meditation. Nor are persons in the lower ranks of society to be very severely censured—those especially who are confined to populous cities, where they breathe a noxious atmosphere, and are engaged in unwholesome occupations, from which, with their daily subsistence, they derive their daily poison—if they take advantage of the leisure of the day to recruit their wasted strength and harassed spirits, by short excursions into the purer air of the adjacent villages, and the innocent recreations of sober society; provided they engage not in schemes of dissipated and tumultuous pleasure, which may disturb the sobriety of their thoughts, and interfere with the duties of the day. The present humour of the common people leads perhaps more to a profanation of the festival than to a superstitious rigour in the observance of it; but, in the attempt to reform, we shall do wisely to remember, that the thanks for this are chiefly due to the base spirit of puritanical hypocrisy, which, in the last century, opposed and defeated the wise attempts of Government to regulate the recreations of the day by authority, and prevent the excesses which have actually taken place, by a rational indulgence.

"The Sabbath was ordained for a day of public worship, and of refreshment to the common people. It cannot be a day of their refreshment, if it be made a day of mortified restraint. To be a day of worship, it must be a day of leisure from worldly business, and of abstraction from dissipated pleasure; but it need not be a dismal one. It was ordained for a day of general and willing resort to the holy mountain; when men of every race, and every rank, and every age, promiscuously—Hebrew, Greek, and Scythian—bond and free—young and old—high and low—rich and poor—one with another—laying hold of Christ's atonement, and the proffered mercy of the Gospel, might meet together before their common Lord, exempt for a season from the cares and labours of the world, and be "joyful in his house of prayer."'

These are exactly our opinions; but there are men and good men too, who would carry the relaxation of the old puritanical rules still further. We do not agree with them; but neither do we think ourselves entitled to hold them up as "destroyers of souls."

Without the intervention of law, and merely under the influence of public opinion, the Sabbath, so far as concerns travelling, has been more strictly observed in Scotland than in any other part of Europe. Many think the observance of the day too rigid; many think it too lax; but what we contend is, that the one of these parties has no right to impose its opinions upon the other. The law allows me to travel on Sunday, if I think it right; the law allows another individual, or a company, carriages on roads or railways for my accommodation. Convert either of the parties, if you can, by argument: that is quite fair; but to vilify him, or hold him up to odium, for what he has done, is an attempt to deprive him of the freedom to which the law entitles him, and of the right of private judgment in religious matters which belong to him as a Protestant.

On the subject of Sabbath Observance, what law ought to restrain, and what public opinion ought to condemn, is indecency. By this word we mean, anything which outrages the feelings, not of a few very zealous persons, but of the sober and orderly part of the community generally. For instance, if any one were to exhibit fireworks on Sunday, or open a theatre, or set up Punch's opera in the streets, we would hold that to be an insult to the religious feelings of the country, and well we know that no law would be required to put it down; but the running of one or two mail, or even stage coaches, or of such a number as are really called for to supply the necessary wants of the public on that day, is, in our opinion, no indecency at all, and does not entitle the more religious part of the community to interfere.

Thus much on the subject of Sunday travelling, which is, however, merely a subordinate point in the question now at issue. The object of the present movement is to stop the conveyance of the mails on Sunday—altogether, if possible, but at any rate their conveyance by the railway. The advocates of this plan seem to forget the nature of the Post-office. It is an institution which economises labour to a prodigious extent. You cannot prevent men from feeling a strong interest in what concerns their fortunes, their friends, their families, and the community to which they belong; and while this is the case, you cannot prevent incessant and rapid communication between all parts of the kingdom. Now, the Post-office is a happy invention, that makes ten men do the business which would otherwise employ a thousand, in carrying messages and expresses; and to stop the conveyance of the mail, even for one day in the week, would put many more hands into activity than it would relieve from duty.

Does a mail sent by railway occasion greater desecration of the Sabbath, then one sent per coach? In our opinion it is just the reverse.

The mail-coach in passing from this city to Glasgow, is five hours on the road, and employs, we believe, sixteen horses, a guard and a driver, and at least five ostlers, with probably as as many stable-boys and as many waiters. The mail sent by railway, so far as we can see, would employ only a guard, an engineer, a stoker, and a man at the fixed engine; and being only two hours on the road, it would leave these persons ample leisure to attend church. The halts made would be fewer, and opportunities for drinking would be at an end. Surely, also, the saving of one day's labour in the week to the poor horses, is an advantage worthy of consideration.

Travelling, we have said, is often a work of necessity and mercy; and as the two mail-coaches afford means of conveyance for passengers to a limited extent, we think the railway carriages which take the mail should do the same. We are not content-

Digitized by Google

ing for full trains, but one or two coaches the public are entitled to; otherwise they will be losers by the change. If the number of passengers is restricted, the fares must of course be raised: and in this case the plan adopted on some English railways, of doubling the charge on Sunday, would be no more than reasonable.

All the English railways, without exception, have a limited number of trains on Sunday. We have no wish to carry the practice so far as they do; but it is absurd to say, that the rule as to the mails, which have been acted upon without challenge for half a century, is now to be abandoned; and it would be equally absurd to say, that though they are still to be carried on Sunday, the slowest and worst conveyance is to be preferred. All we desire is, that the Post-office authorities, the proprietors of the railway, and other parties interested, will not suffer themselves to be bullied by a few ill-informed or over-zealous persons, into measures injurious to themselves and the public at large. We were inclined to believe that Sir Andrew Agnew's Quixotism had now been dead and buried, but we have been mistaken. We must say indeed, that while we see mails running at present during service on the common road—while we see steamers starting from Leith to London, or from Glasgow to Liverpool, to pursue their voyage on Sunday—while we see cabs and hackney-coaches ready at all times to rescue the church-goer from the annoyance of a passing shower—while we hear the rattling of gentlemen's carriages disturbing the Sabbath stillness of our streets, or see them standing in glittering rows at our church doors—while we see all this endured with scarcely a murmur, we must say, we are at a loss to account for the extreme alarm with which the moderate proposition of the railway proprietors is regarded.—*Scotsman.*

PRIVATE BILLS IN THE HOUSE OF COMMONS.

The form of passing private Bills through the House, is similar to that adopted with public Bills. A private Bill is required when, for the purpose of effecting any change in roads [railways], canals, &c., it is found necessary to interfere with private property. This can only be done by Parliament. The parties who are desirous of obtaining the Bill apply to a functionary, called a Parliamentary agent, who prepares it, and gives the necessary notice on the books of the House, at what is called the Private Bill Office of the intention of the parties to introduce the Bill on a particular day. In the case of a private Bill it is not necessary for a member to have leave from the House to introduce it; but some member must always take charge of the measure after its first introduction. If there be no opposition to the measure it passes as a matter of course; but, in order to guard against abuse, the parties advocating the Bill are compelled to give notice to all those whose property or interests will be affected by it, in order that they may oppose it if they think fit. The form of proceeding with a private Bill is exactly the same as that with a public Bill up to the Committee; but instead of its being considered by a Committee of the whole House, it is referred to a Select Committee, or, as it is sometimes called, "a Committee up stairs"—or, in other words, to fifteen members selected for their local knowledge of the subject, who inquire into the merits of the Bill, and report to the House what amendments they think necessary. The mover of the Bill is generally made Chairman, and he prefaces the report. Five of the members are sufficient to form a quorum and to transact the business; they examine witnesses, whose attendance they can compel, and they have also power to call for all papers, &c., which they may require. With the exception of the difference between this Select Committee and the Committee of the whole House, all the other proceedings on private Bills are exactly similar to those adopted with public Bills, and they have the same authority. Great abuses, however, prevail in the details of these proceedings, and the attention of the House has recently been directed to their removal. The evils are of several kinds, but all referable ultimately to the system on which the tribunals that decide on private Bills are constituted. One main evil is the enormous expense that attends the proceedings before Committees; but this can scarcely be obviated by any system, however good, so long as the cupidity of agents and witnesses continues to prevail. The great fault of the system consists, however, in the influence it gives to private interest to obtain the passing of Bills inimical to those of the local public. Unfortunately, where custom sanctions departures from the strict course of integrity very little political or private honesty can be found; and it is no unusual thing to find members making a tool of their position as members of a Committee on a Private Bill to advance or to obstruct some object which is advantageous or disadvantageous to themselves. Private and personal considerations, also, are too often allowed to influence members. It often happens, too, that the majority of the members of a Committee are absent, and that they leave the management of the Bill in the hands of the remainder, who are generally those personally interested in the Bill, or who have some interest to advance with their constituents, by promoting or retarding the measure. An extensive system of canvassing for votes of members on the second or third reading of a Bill also prevails, and he is usually most successful as a parliamentary agent, who has the most means of influencing members. They frequently come down and vote upon a measure, *pro* or *con*, of which perhaps they never heard the name before. Such a system could not long prevail, and attempts have already been made to remedy it. On the 7th September last, Mr. Ewart, with the concurrence of the Speaker, and Mr. Greene, moved resolutions to the effect that such Committees be approximated more nearly to judicial tribunals, and exempted as much as possible from motives of local and personal interest; and that the number of members be reduced to seven; each member declaring that he is not through his constituents, or himself personally, interested for or against the Bill. The subject was for various reasons postponed, but it will be resumed the first thing next session.—*Britannia.*

EDINBURGH, LEITH AND NEWHAVEN, AND EDINBURGH AND GLASGOW RAILWAYS.

(CIRCULAR.)

Dear Sir,—I have very great satisfaction in forwarding to you the following extract of a letter received this morning, the effect of which must be highly beneficial to the future prosperity of the Edinburgh, Leith and Newhaven Railway, and that you may avail yourself of the opportunity of securing all the advantages the debenture system holds out to you, and original proprietors in the railway, *I should consider myself wanting in attention* if I did not immediately communicate this intelligence, which is of the utmost importance to the future welfare of all the railways connected with Edinburgh. Under these circumstances, I would strongly urge upon you, *the necessity of your immediately writing to the Secretary, to secure* (!) the number of debentures corresponding with the number of shares you may hold in this concern (!!)

I remain your faithful servant,
RICH. DAWSON, Agent.

Liverpool, October 22, 1841.

Extract of a letter from Mr. Andrew Bannatyne, Solicitor to the Edinburgh and Glasgow Railway Company, dated Glasgow 19, 1841.

"I know you will be delighted to learn that our disputes with the Edinburgh Committee, in the Edinburgh and Glasgow Railway Company, have been *amicably* and *satisfactorily* settled. At a meeting of the Board to-day, Mr. Learmonth announced that he was authorised by the Edinburgh Committee to state, that in the new Act they would agree—

1st. To the abolition of the Edinburgh and Glasgow Statutory Committees.

2nd. To the Board sitting in Glasgow, being recognised as possessing both *deliberative* and *executive* powers, and being enabled to appoint whatever Committees in Edinburgh and Glasgow it saw fit.

3rd. To the number of the Directors being reduced to *fifteen*, of whom *six* should be resident in Glasgow, *four* in Edinburgh, and the remaining *five* from the shareholders at large.

Five members to form a quorum of the Board.

I think you *could desire nothing more complete*,* than this. The good spirit which is thus evinced will be met with a similar feeling by the Directors here."

SOUTH-EASTERN RAILWAY.

Last week we gave an authentic statement of the state of the works at Dover, upon this important undertaking. About the same time an article appeared in the *Times* daily paper, headed "Encroachment of the Sea," which has called forth from J. S. Yeats, Esq., the able and indefatigable Secretary of the Company, the following communication, which appeared in the *Times* of Monday last:—

"Sir,—My attention has been called to an article which appeared in your journal of Thursday last, under the above title.

"While I admit that a quantity of chalk, forming what is technically termed a spoil bank, being the excavation from the east face of the Shakspeare Tunnel, has been washed away by the exceedingly high tides which occurred during the last springs, I beg most distinctly to deny that the platform referred to in the above article forms any part of the line of railway, and further that any injury has been done to the works in connexion therewith.

"It is rather ambiguously hinted that the damage has been aggravated by the subtraction of beach or shingle, which it is alleged the Company are using in the formation of the sea-wall. This is a matter of opinion, which, as an unprofessional man, I am not competent to argue; I can, therefore, only meet it with facts.

"The prevalence of south-west winds this year has been much greater than usual. This is the only quarter which brings beach to the mouth of the harbour. The bar has been more frequently a perfect barrier to the free use of the harbour, and therefore the sluices have been "run" to a greater extent this year than in any year since their completion. It so happened that on Saturday night the Ostend and Calais mail packets were unable to enter the harbour, and yesterday morning the English mail packet for Calais was unable, within an hour after high-water, to get out of the harbour, in consequence of the bar, and yet it is alleged that no beach, in comparison with other years, has come eastward of the great fall of Round Down Cliff.

"I have to apologise for intruding to this extent on your columns, and also for the tardiness of my notice; but I felt that nothing short of personal examination and inquiry could be put in competition with a statement published in so influential a journal as the *Times*.

"I am, Sir, your obedient servant,
"J. S. YEATS, Secretary.

"South-Eastern Railway Office, 10, Coleman-street, October 25, 1841."

French Railways.—The system to be adopted for railways, as proposed by the Minister of Public Works, is stated by the *Moniteur Parisien* to be as follows:—"That the districts through which the lines are to pass are to provide the land required, the state undertaking all the works of embankment and excavation. The companies are to find the rails, the *materiel*, and the buildings, and are to have the benefit of the lines which may be adjudged to them, the duration of the grants of privilege and the rates of charges being fixed by the government."

* Oh, yes! we could desire that, 4thly, the line should be carried on (as promised) to join the Edinburgh, Leith, and Newhaven Railway; *without which the resolutions amount to nothing as* AFFECTING THE LATTER RAILWAY, for it stands just as it did before, and no man knows this better than this same "Agent," who seems to be so fond of circular writing, and whose zeal we are inclined to think not unfrequently outruns his discretion.—ED. R. T.

FOUR-WHEELED AND SIX-WHEELED ENGINES—BUFFER CARRIAGES.

To the Editor of the Railway Times.

SIR,—Having been absent in the country, I find on my return that Mr. Nicholas Jones has, in his criticism of Mr. Seaward's letter to the *Times*, corrected many of that gentleman's errors on the subject of engines, pointing out the advantage of inside framings to the engines, as commonly used in those with four wheels. I am glad to see this done, because so many persons assume that four-wheeled engines must necessarily be of a different construction from those on six-wheels. It is quite obvious that a four-wheeled engine well constructed may be a far better and safer engine than one on six-wheels, and on the contrary, a six-wheeled engine may be more safe than one on four-wheels, and all this without reference to the number of wheels. There are certain points which make six-wheeled-engines preferable to those on four wheels, but one chief reason in their favour is that the six-wheeled engines are longer engines than those on four, though there is no reason why the four-wheeled engines should not be made as long as those on six, and thus be considerably improved. If your readers will turn back to your number 140, of last year, they will find that it is not the number of wheels but the length of the engine which is insisted on; and the means of adopting great length to curved lines of rails were there pointed out. At a future time I will forward you a diagram showing how any existing engine may have its bearing wheels adapted to follow curved lines on railways, at a very trifling expense, or that the axles will form true radii to the centres of the curves, and thus remove the solitary objection to length.

As regards inside framings or bearings no sound mechanic will question their advantage. The nearer the bearing points are to the centre of the carriage the less will be the oscillation, and the stage-coach builders perfectly understood this, and carried the principle to the extreme when they first balanced their bodies on springs bearing on a central point.

I inclose you the diagram of a buffer carriage on two wheels intended to collapse against the tender through a space of nine to ten feet.

A is the hinder part of the tender; B strong iron staples rivetted to the sides to allow the sliding frame C to pass freely through them with sufficient lateral play to accommodate curves. D are bars framed solidly into the side timbers; E are bars which slide length-long in the side timbers, secured by the iron plates F. A series of shifting fulcrum springs formed of two plates tapering in width from seven inches to four by nine-sixteenths in thickness, and hooped together at their broad ends, are represented by C. Supposing the engine and tender suddenly stopped, the momentum of the train would cause the springs C to collapse, and the side framing C would strike in the staples B. The hind wheel of the tender is denoted by H. The hind end of the frame is supported by a pair of single bow-springs at I, which are attached to the bottom of the axle guard. This plan would also serve for a stationary buffer at termini. A ratchet to prevent recoil may be applied if required.

These springs have been applied already as carriage buffers on several railways, and their working thoroughly tested with great satisfaction. Their economy is considerable, as they may be applied to the ends of the carriage direct, without the aid of buffer rods, saving weight as well as expence, and serving the joint purpose of buffing and traction springs.

The upper part of the frame might be advantageously employed to carry light packages, such as in case of collision, would neither be deranged, nor prevent the collapse of the frame. The springs are retained in their frames by pins in their ends which work in iron slides. This buffer would occupy the place of the truck at present placed between the engine and train.

It will be in the recollection of your readers that at a general meeting of the London and Croydon Railway Company, the Chairman spoke in terms of deserved praise of the experiments made by Mr. Ricardo, for the purpose of attaching a collapsing buffer carriage on four wheels to the rear of the train, to moderate the concussion of collision arising from one train overtaking another. The object of the present diagram is to moderate the concussion of the carriages immediately arising from the sudden retardation of the engine, and collaterally, that of the collision of an overtaking tain, and at the same time to economise space and weight in the buffer machine, by making one pair of wheels serve instead of two, and the length of the tender body available for the collapse. If powerful buffer springs were also placed in front of the engine the effects of collision would be minimised.

I remain, Sir, yours obediently,

WILLIAM B. ADAMS.

October 22, 1841.

FOUR-WHEELED AND SIX-WHEELED ENGINES.

To the Editor of the Railway Times.

SIR,—Amid the discussion now going forward respecting the comparative merits of six and four-wheeled engines, the chief cause why there are such things as six-wheeled engines, and the great defect of both kinds appear to be completely lost sight of, that is, the cranked axle, than which a greater defect does not exist in the locomotive engine. With the very best material, and the soundest workmanship, combined with a disproportionate bulk, it is nevertheless owing to its form, the weakest part of the whole machine, and with all the disadvantages of exterior cylinders, which are, however, but very few, such engines are much preferable to those whose construction renders a cranked axle necessary. In short, it is the very weakest and most defective form that could be devised for any purpose, and it is rendered infinitely worse from its use and position requiring that it should have the greatest strength and most perfect form. It is like a man with a *weakness* in his *right* arm. I am not much surprised to find from the communication of one of your correspondents that cranked axles so frequently break, as it is precisely what might be expected to occur; but I do feel astonished that any Railway Company, however wealthy, should persist in using them after having had broken no less a number than "nineteen in the course of twelve months!" The enormous cost of locomotive steam power will not excite surprise if such a system is at all general, and will in some measure account for there being so many railways without dividends.

Notwithstanding its defects, which, however, are far from being irremediable, I have a strong predilection for the four in preference to the six-wheeled engine; one cause of which is, that it is the most simple in its form and construction, and it is a conclusion which, sooner or later, all engineers arrive at, that simplicity of form and construction not only constitutes true beauty, but eventually true economy. Hence I look on the third pair of wheels of a locomotive engine in something of the light of the fifth wheel of a coach, which can be exceedingly well dispensed with so long as the four remain perfect.

As to the superior steadiness with which a six-wheeled engine moves as compared with a four-wheeled one, it may easily be proved to be little better than moonshine. How, in the first place, does it arise when not caused by the irregularities in the road? Much will probably be said in answer about "inside bearings," "top heaviness," and so forth; but in fact, with the power applied in a direction at right angles to the vertical motion of the axles, and to wheels of equal diameter, it could not occur, unless the axle suffered from the effects of torsion, and that it does occur is to me a proof that the axle is too weak—not certainly from insufficient size, but from the form in which it is necessarily made.

If interior cylinders and their necessary evils, cranked axles, continue to be persisted in, they should be made so that the cranks should be at the contrary end of the engine, compared with the present, and then by means of a single transverse spring the heavy end of the boiler would be brought within a few inches of a straight, sound and strong axle, instead of the present clumsy, unmechanical, and ill-arranged monstrosities, and thereby render a third pair of wheels comparatively useless.

I am, Sir, yours respectfully,

A RAILWAY ENGINEER.

FOUR-WHEELED AND SIX-WHEELED ENGINES.

THE following is Mr. C. Hood's second letter to the *Times*:—

Sir,—In my former letter on this subject,* I endeavoured to show what were the peculiar features

* See *Railway Times* of last week.

Digitized by Google

both of the four-wheeled and six-wheeled engines, and that the safest forms of engines could not be decided by any arbitrary rules, but must have reference to the prevailing characteristics of the road on which they are to be used. I propose in the present letter to pursue this subject still further; but a correspondent having, in a letter in your paper of the 19th instant, controverted several points contained in my letter, it is necessary first to reply to his statement.

No objection is taken to a single fact which I have stated; but, in opposition to my arguments, he endeavours to establish the following positions:—

1. That the framing and bearings of six-wheeled engines being outside the wheels, this form of engine is steadier and safer than four-wheeled engines, which are always made with inside framings and bearings.

2. That the lateral motion is greater in a four-wheeled than in a six-wheeled engine, owing to a difference in the position of the cranks with regard to the axis of the engine.

3. That the boiler must necessarily be raised higher in four-wheeled engines, in order to give room for the eccentric gear, which causes such engines to be top-heavy.

4. That no engine-maker of eminence, except Mr. Barry of Liverpool, and Messrs. Norris and Co. of the United States, now makes four-wheeled engines.

5. That economy is the only motive which causes railway companies to adopt four-wheeled engines, the difference of cost between four-wheeled and six-wheeled engines being 450*l.* and upwards.

6. That "although much may be said on both sides of the question with respect to the merits of four and six-wheeled engines, there is but one opinion in the profession concerning engines with inside framings," from which latter expression it would appear that this discussion differs from every other that has preceded it; as it has always hitherto been found that where much could be said on both sides of a question there has always existed much difference of opinion.

I believe I have fairly stated all the points in your correspondent's letter. I shall reply to them *seriatim*.

1. The outside bearings of six-wheeled engines would undoubtedly, when considered simply by themselves, and without reference to other causes, give greater steadiness. But so many causes combine to destroy this advantage, that although it has long been a very characteristic feature in the six-wheeled engine, it is likely that it will soon cease to be so. The enormous number of broken axles which occur with six-wheeled engines, and which is principally owing to the increased strain in consequence of the outside bearings, has led several engineers to adopt, as far as possible, inside bearings to the six-wheeled engines, and there have been many instances lately where the crank axles of six-wheeled engines have been made with inside bearings, which entirely destroys what your correspondent states to be the most important advantage that six-wheeled engines possess. Engineers would not, I think, throw away this advantage unnecessarily, if it really existed; and for the truth of my assertion I may refer to the Liverpool and Manchester Railway, the Grand Junction, the Dundee and Arbroath, the Glasgow and Ayr, and other railways where this experiment is now trying, with the avowed purpose of remedying the vast evil which arises from the large number of broken axles; to avoid which engineers are now adopting, as far as the circumstances will permit, the identical plan of the bearing which is urged as the great objection to four-wheeled engines.

2. The position of the cranks is not necessarily different in four-wheeled and in six-wheeled engines. In both the cylinders may be placed nearly close together, but in neither of them can the action be exactly in the axis of the engine. The unequal motion which your correspondent describes occurs in all locomotive engines, but is greatest in those which have outside cylinders, in consequence of the greater distance of the cranks from the axis of the engine. But in this particular the six-wheeled engine has no advantage over the four-wheeled, and the assumed superiority must clearly be founded in error.

3. The boiler of a four-wheeled engine does not require to be raised in order to give room for the eccentric gear. The eccentrics never require more height than the cranks, couplings, and keys; and therefore they need not necessarily raise the boiler higher, and of course cannot be the cause of an engine being top-heavy.

4. Although Mr. Bury has undoubtedly had more experience in the manufacture of four-wheeled engines than any other engine-builder, there are many other eminent engineers who make this description of engine,—e. g., Messrs. Braithwaite, Milner & Co., Messrs. Maudslay & Field, Messrs. Jones, Turner, & Evans, Messrs. Tayleure & Co., Messrs. Mather, Dixon, & Co., Mr. Hawthorn, Mr. Hick, Mr. Rothwell, and I believe several others.

5. The railway companies are far too deeply interested in promoting by every means in their power the safety of railway travelling, to allow any consideration of expense to influence them in deciding upon the plan of their engines. Suppose, as your correspondent states, the saving to the London and Birmingham Railway Company were 50,000*l.* by adopting their present form of engines, what is that sum compared with the 5,500,000*l.* that they have laid out in the construction of their road, and which expenditure would become wholly useless as a profitable speculation, unless the public were sufficiently assured of their safety to induce them to travel upon the road? But the saving in expense is not near so much as here stated. The highest price of six-wheeled engines is quoted against the lowest price of four-wheeled, and the average difference does not exceed 100*l.*

6. Having answered the five principal objections, the sixth, I think, I may safely leave for the benefit of the advocates of six-wheeled engines.

There are two other objections, however, which I have heard made to the remarks in my former letter. First, it is asserted that the gauge of the wheels of a six-wheeled engine is made quite as close to the gauge of the rails as that of a four-wheeled engine. If railways were perfectly straight lines, there is no reason why the wheels should not fit as accurately to the rails in one case as in the other; but as the engines have to traverse curves of every possible radius, from a quarter of a mile upwards, it is perfectly obvious that engines which have to traverse such curves must necessarily be made smaller in the gauge of the wheels in proportion as the length between the extreme points of support of the engine is increased; and though isolated cases may possibly be found where four-wheeled engines have not been made of a fuller gauge than six-wheeled, it is certain that the general fact is as I have stated; and it is to general, and not to particular cases, that I refer.

A second objection is, that although it would be true that the whole of the wheels of a six-wheeled engine would not be in contact with the rails at the same moment, if the engine had no springs, the action of springs counteracts this effect, and causes all the wheels to press upon the rails simultaneously. This question can best be settled by a reference to facts. Do the wheels of a six-wheeled engine have as strong a bite or adhesion upon the rails in proportion to its weight as the wheels of a four-wheeled engine? The far greater expenditure of fuel in working six-wheeled engines, compared with equal loads on four-wheeled engines, will, I believe, negative this question, and proves, therefore, my original position.

The greater liability of four-wheeled engines to *pitch* when any inequalities occur at the joints of the rails, or when there is a series of small sinkings in the rails, has been admitted. On this subject there are some exceedingly just remarks in an editorial article in the *Railway Magazine* of the 9th instant, in which it is shown, that to produce this motion requires a combination of circumstances which can but very seldom occur, and which can be obviated by ordinary care, and are not sufficient grounds of objection to the use of four-wheeled engines. One more subject only I think it is necessary to mention respecting four-wheeled engines. I have stated that the top-heaviness of an engine does not depend upon the position of the eccentric gear, as has been asserted. The position of the centre of gravity depends upon a great number of circumstances; the height and position of the wheels—the size of the cylinders—the height of the steam chamber—the depth of the firebox—the position and strength of the springs, and many other causes, all bear upon this important question; and their correct adjustment requires the greatest care and judgment in the manufacturer.

Before concluding this letter I think it necessary to make some remarks upon the subject of using two engines to one train, upon which the public appear to entertain some very erroneous notions. On the occasion of the late melancholy accident on the Brighton Railway, the engine-driver, when examined before the Coroner's jury, stated that when two engines were used together they ought both to have the same length of stroke, his idea evidently being that the wheels of both engines ought to rotate exactly in the same time. If this man be so uninformed in this matter, we cannot wonder that the public also should entertain erroneous notions on the subject. The absurdity, however, of this notion must be apparent on a moment's consideration. As well might it be said that the fore and hind wheels of a coach must rotate in the same time, which it is evident they rarely ever do, as their diameters are almost always unequal. The peripheries of the wheels must of course all move at the same rate when travelling together; but in order to accomplish this, in the case of two engines, it is perfectly immaterial how many strokes of the engine be made, or how many revolutions the wheels of one engine shall make, compared with similar effects in the other engine. For if the peripheries of the wheels of one engine move faster than the other, the fastest engine will drag the whole of the load; the other engine, then, being thus relieved of its proportion of the load, will immediately begin to move faster, while, at the same time, the other engine, in consequence of its increased load, will at the same moment begin to move slower; and thus a constant tendency to an equality of motion is produced, which must inevitably follow, however great the difference of power of the engines may be, and however various the sizes of their wheels. Neither can there be any possible danger from using two engines together in front of the train. It is by far the safest mode of carrying large and heavy trains, and less liable to accident than dividing the train into two, and each engine separately conveying its load, at a short interval of time apart from each other. I am not aware of any argument which can be used to show greater danger to a train when drawn by two engines than by one, although there may be greater wear on the works of a railway by this mode, in consequence of the increased weight of the moving mass.

In concluding this letter I would observe, that any discussion on the merits of four and six-wheeled engines, at least in as far as the public is concerned, should be, not by theoretical opinions, but by facts. I am quite aware that many ingenious arguments may be brought forward against several of the points in dispute. But I have stated facts which clearly show that four-wheeled engines are less liable to accidents than six-wheeled on railways of the usual construction. If these facts can be controverted they are open to correction; but to controvert facts by arguments is not the way to arrive at truth in a matter which admits of proof by reference to experimental demonstrations of the most extensive and conclusive character. To attempt then, to argue against the position I have advanced, without first disproving the facts, will not, I think, advance the cause, and cannot certainly tend to elucidate the truth.

I am, Sir, your most obedient servant,

CHARLES HOOD.

Earl-street, October 20, 1841.

Digitized by Google

Mr. Seaward thus replies to Mr. Hood, in the *Times* of Wednesday:—

SIR,—A letter from a correspondent, and which is intended as an answer to mine of the 19th inst., having been inserted in your journal yesterday, I must request the insertion of the present letter in explanation of the former one, and in answer to some of the positions which your correspondent has taken up.

Before, however, proceeding to notice the objections raised by Mr. Hood to the remarks contained in my letter, I may mention that that letter was not written in reply to Mr. Hood's previous one, of the existence of which I was ignorant till yesterday on reading his letter, the only notice of the subject under discussion which I had seen in your journal being in the accounts of the accident on the Brighton Railway, contained in some back numbers, which, on my arrival in England, and on hearing of the accident, I took the trouble to procure.

I am the more anxious to notice this, as from the tone of your correspondent's last letter, I should fear he considers that my observations were wanting in courtesy towards him; of this I could scarcely be guilty, at least intentionally, ignorant as I was of his having made any communication to your journal, and of Mr. Hood personally I know nothing more than that he is, I believe, the author of a useful treatise on ventilation, the merits of which I very willingly acknowledge.

Your correspondent has taken six principal objections to the points urged in my letter, and gives it to be understood that my assertions are far from really obtaining, and are disproved by the observations he has made, and the experience he has had in the management of locomotive engines.

Of these six objections I shall first notice the one which is last on his list.] In my former letter, I observed, that though much difference of opinion might exist as to four-wheeled engines, there was none as to the inexpediency of inside framings: "from which expression," remarks your correspondent, "it would appear that this discussion differs from every other that has preceded it, as it has always been found that where much could be said on both sides of a question, there has always existed much difference of opinion." Your correspondent does not here put the matter in exactly a fair point of view. He tacitly assumes that every engine has inside or outside framings, according as it has four or six wheels. This is not in reality the case. Four-wheeled engines are not unfrequently built with outside framings, and six-wheeled engines, with only inside framings, are, or were, occasionally to be met with. Some four-wheeled engines with outside framings have been constructed by Mr. Bury himself, for the Liverpool and Manchester Railway, and some few are (as I am informed) in use on the Birmingham Railway; while again, six-wheeled engines, with merely inside framings, have been tried in considerable numbers on the Great Western Railway, but not having been found to answer, have been totally discontinued.

Although I admit that the two questions are intimately connected with each other, yet they are certainly not identical.

Your correspondent lays great stress on the increased strain on the crank-axle, consequent on the greater width between the bearings in six-wheeled engines; yet, were this, though undoubtedly objectionable, productive of all the ill consequences which he attributes to it, it might be expected that on that railway, where the distance between the bearings is necessarily greater than on any other, it would be particularly desirable to employ engines with inside bearings; nevertheless, the contrary is the case, for, after a fair trial, it has been considered necessary, as stated above, to relinquish the employment of them.

Your correspondent remarks, that in both four-wheeled and six-wheeled engines "the cylinders may be placed close together, but in neither of them can the action be exactly in the axis of the engine." If by this Mr. Hood means that the bearings of the connecting-rods on the crank axle cannot be in the axis of the engine, I perfectly agree with him; most certainly they cannot, since the axis of both cylinders cannot very well be both parallel to, and in the same plane with, the axis of the engine, nor did I ever assert that they could; I only spoke of the position which the cranks necessarily occupy as the cause of that lateral oscillation which every one must immediately notice when on an engine while working. That this oscillating motion occurs in all engines I am perfectly aware, having never driven any engine which did not rock in that manner more or less, whether four-wheeled or six-wheeled, whether with inside framings or with outside ones; but, so far as my own experience goes, this oscillation is much greater in an engine with inside framings and four wheels, than with a six-wheeled engine with outside bearings.

The six-wheeled engines are, I know, occasionally as uneasy as the four-wheeled; but this is always owing to the mal-adjustment of the springs; and in this respect six-wheeled engines have an advantage over the four-wheeled ones, as the adjustment is in the six-wheeled engines readily effected, but not so in the four-wheeled, in these latter the springs having to be altogether removed in order to render the adjustment of the weight of the engine more easy and stable.

Your correspondent states that in my former letter I "endeavoured to establish that the lateral motion is greater in a four-wheeled than in a six-wheeled engine, owing to a difference in the position of the cranks, with regard to the axis of the engine." By reference to my letter it will be seen that I have assigned no such cause for the superior steadiness of six-wheeled engines, and have neither asserted nor assumed that such a difference in the position of the cranks exists.

I dare say that Mr. Hood's experience as a railway engineer, is far greater than what I am ever likely to acquire, and I shall therefore quote, in support of my views on the subjects just touched on, a practical authority, which I am indebted to a friend for pointing out. The extracts are taken from a paper by Mr. E. Woods, resident engineer on the Liverpool and Manchester Railway, and for a long time superintendent of locomotives on that line. This gentleman, from his great experience as a railway engineer, and his well known abilities, is certainly entitled to rank high as an authority on this subject. "The advantages obtained," says Mr. Woods, "by the application of a third pair of wheels were almost immediately apparent. The engine lost in a great degree its peculiar rocking motion, as also the unsteadiness arising from lateral undulations, which latter effect was in like manner attributable to the diminution of the angle of which the oscillations were capable. . . . . "Lastly, though not of least importance, an inherent sense of safety was superadded in the diminished liability of the engine to run off the rails in the event of the crank-axle breaking. Instances in which this quality has been put to the proof have occasionally occurred."

"They have invariably demonstrated the high importance of the application as an especial security to passengers and the attendants, and in consequence the principle introduced was not abandoned." On the subject of outside framings, Mr. Wood's opinion is decidedly favourable. "The axle, with its double crank, is urged by two independent forces, not operating simultaneously, but periodically, opposed to each other; and the consequence ensues, that the axle, wheels, and, finally, the engine itself, are thrown into a state of vibration; the angle of which is precisely in the inverse ratio of the distances between the bearings. Hence those engines whose bearings are only four feet asunder (engines with inside framings) soon acquire play in the brasses; and, unless frequently examined and repaired, become unsteady, and even dangerous at rapid speeds."

That the views developed by Mr. Woods, and which, from the above extracts, it will be seen, are analogous to those which I have supported, received the approbation and assent of some of the most eminent members of the profession, may be presumed from the fact, that the Council of the Institution of Civil Engineers, in awarding to him the Telford medal, took occasion to remark that his "communication would ever bear a prominent place among the records of practical science."

In an interesting little work (*Guide du Mecanicien, Conducteur, &c.*) recently published by M. M. Flachat and Petiet, I find these remarks of Mr. Woods and myself completely borne out by the experience of the authors on the French railways.

After enumerating several advantages peculiar to six-wheeled engines, these gentlemen proceed as follows:—

"Les autres avantages de l'addition de deux roues aux machines à quatre roues c'est qu'elles ont cessé degaloper, que leurs déviations latérales, résultant principalement de l'affaissement inégal à droite ou à gauche des traverses, ont perdu de leur intensité; . . . . . enfin, en cas de rupture de l'essieu condé, il n'y a pas de danger qu'elles sortent de la voie.

"Une question fortement agitée sur le meilleur choix des dispositions à donner aux machines locomotives a été celle du châssis en dehors ou en dedans des roues. L'expérience a decidé pour les châssis extérieurs, d'accord en cela avec les principes."

I think I have fairly stated the comparative cost of the two classes of engines. What Mr. Roberts's price now is I cannot exactly say; three years ago it was 1,700*l*., and I find that Mr. Bury, in his evidence given in July, 1839, before the Select Committee on Railways, states that on the London and Birmingham Railway "the contract price for the passenger-engine is 1,250*l*., and the contract price for the luggage-engine is 1,400; 150*l*. difference."

The cost of engines has increased since the period to which this statement refers, but I believe the price of the six-wheeled engines has gone on increasing in a more rapid ratio than that of the four-wheeled. Your correspondent remarks that the saving of 50,000*l*. to the London and Birmingham Railway would be perfectly insignificant when compared with the enormous capital of that Company. This observation is just, but we must remember that while the works on which the principal part of the capital is sunk do not require to be renewed, but only kept in repair, the capital expended in the purchase of engines becomes soon destroyed, as the stock requires not only to be repaired, but also recruited by the purchase of new engines; an additional outlay of 40,000*l*. or 50,000*l*., when it has to be repeated every few years, is thus an object not so trifling and insignificant as it at first appears.

With respect to the price of six-wheeled locomotives, I may mention that some considerable time back an order for several such engines, given to one of the first engineering houses in London, was refused, the price offered for the engines being 2,000*l*.

Again, not only is the original cost of six-wheeled engines greater, but they are also more expensive to work, your correspondent himself remarking, "the far greater expenditure of fuel in working six-wheeled engines, compared with equal loads on four-wheeled engines;" when we add to this, that the cost of the coke consumed on the London and Birmingham Railway is one-half of the whole expenses of the locomotive department, it will be seen that the six-wheeled engine is really a very costly machine, and that without good reasons for preferring it it is not probable it would be so generally adopted as it is by railway companies.

Your correspondent has mentioned the names of several gentlemen, including those of Messrs. Hawthorn, Rothwell, &c., as makers of four-wheeled engines; several of the gentlemen named have, I know, constructed a good many such engines for the London and Birmingham Railway, but your correspondent has named in his list several engineers who, I believe, never construct four-wheeled engines unless such are specially ordered.

On one point Mr. Hood has misunderstood me, although I grant the mistake is, from the expression employed, very pardonable, in stating that in some four-wheeled engines the boiler is raised rather higher above the axis than in the six-wheeled; I

Digitized by Google

did not intend to say that this was on account of the room actually taken up by the eccentric gear. That the fact is, as I have stated, I believe to be the case from the examination of some engines; but the reason I have understood to be the desire to render the gear in these engines more accessible for examination and repair.

Some remarks have been made with respect to the danger of six-wheeled engines going off the rails in case of the axle of the leading wheels breaking, and the driving wheels being unprovided with flanges; whatever be the real amount of danger arising from this cause, it is not likely that the case should occur very frequently, this improvement of Mr. Stevenson's being, if I remember right, protected by patent. In general, in the case of the axle of the leading wheels breaking, a six-wheeled engine is much the most secure, as if this occur to a four-wheeled engine it necessarily causes the fall of the engine.

I fear that I have already extended this letter to too great a length, and I must therefore conclude, although I leave unnoticed many points to which I would wish to advert, and from my own ill health and the pressure of other engagements, I shall not resume the discussion. The subject is now under the notice and investigation of the Government commissioner, Professor Barlow, a gentleman in every respect perfectly qualified for the task.

In conclusion, I may state that I am in nowise concerned in the manufacture of locomotives, have no pecuniary or personal interests to serve, and I believe that what I have said on the subject has been with that unprejudiced spirit and simple desire of eliciting truth which I hope is, and I trust will ever continue to be, a prominent feature in the character of our profession.

To the ability with which Mr. Hood supported the cause of the four-wheeled engines, I willingly bear witness, and their advocates have reason to rejoice on the accession to their ranks of so zealous an advocate.

Your obedient Servant,
EDWARD A. SEAWARD.

October 24th, 1841.

MANCHESTER AND SHEFFIELD RAILWAY.

The progress made on the Manchester and Sheffield Railway at this end of the line will enable the Directors, we understand, to throw it open from Manchester to the viaduct over the turnpike road at Godley toll-bar, a distance of from eight to nine miles, in the course of a few weeks only from the present time. Indeed, all that is wanting to complete this portion of the railway is a short portion of the embankment necessary to form a junction with the Manchester and Birmingham line at Chancery-lane, over which line, it is well known, they are to run as far as the station in Travis-street, and ultimately to the splendid new joint station of the two Companies erecting on the coal wharfs in Piccadilly, and extending across Store-street; and this junction, we understand, would have been effected so as to have enabled the Company to open immediately but for the late inclement weather, which has driven the labourers upon the embankment from their work.

We are enabled therefore to congratulate the public on the speedy prospect which is held out to them of as rapid and convenient communication with the populous districts which this portion of the Manchester and Sheffield line traverses as with the other large towns of our neighbourhood, including Stockport, Bolton, Rochdale, and Heywood. The portion of the Manchester and Sheffield Railway about to be opened, indeed, traverses a district studded with populous manufacturing towns and villages, and amongst them we may mention, as the most important Gorton, Openshaw, Audenshaw, Hooley Hill, Fairfield, Ashton-under-Lyne, Stalybridge, Dukinfield, Tintwistle, Hollinwood, Newton, and Hyde. From its junction with the Manchester and Birmingham Railway at Chancery-lane the line runs on a considerable embankment for about a mile and three quarters, where it enters a cutting at Openshaw, and passes under the Stockport Canal, a little distance from Messrs. Orrell's factory, and under Lee street; from thence it passes, with a few exceptions of fillings hardly worth mentioning as embankments, through cuttings or upon the surface of the ground the whole remainder of the distance; so that it may be presumed there is little likelihood of any interruption after it is once opened from slippings, settlings or other accidents to which embankments are liable.

The embankment we have mentioned at the Manchester end of the line has, with the exception of the small portion at the junction referred to above, been formed a considerable time; the permanent rails have been laid down, and locomotive engines and heavily laden waggons have been running on it for some time, so that it may be said to have settled down, and its permanence, solidity, and safety are placed beyond a doubt. The first station on the line is the Fairfield station, at the head of Gorton reservoir. The station for the accommodation of Ashton is established at Guide Bridge, about three-quarters of a mile from the new church; and this station will also accommodate the traffic with Hooley Hill and neighbourhood. At Dukinfield there is another station, situated at Dog-lane, near Dukinfield Hall. The line passes through this township, and traverses the extensive coal-fields of Messrs. Swire and Lees, and of the Dunkirk Coal Company. The station here will be the point also at which the traffic of Staylybridge and neighbourhood must come upon the line. The next station is Newton Green, established for the convenience of the populous townships of Newton and Hyde. The next station is Godley, on the Mottram and Hyde turnpike-road, for the present the terminus of the line; and here the traffic of Tintwisle, Hollinwood, Glossop, &c., will come upon the line, and arrangements have been made by which the Sheffield coaches and carriers will meet the trains there, for the accommodation of the "through" traffic.

The works, most worthy of notice on the line, are the three viaducts, the Dukinfield, Harewood, and Etherow, the latter of which, though nearly completed, is on a portion of the line not included in that about to be opened. The Dukinfield, or Tame Valley viaduct, is a handsome brick erection of five arches, each of considerable span, crossing the River Tame, and exhibits the appearance of a firm, substantial, piece of masonry. The viaduct at Godley, is of nine arches, one of which crosses the Mottram and Hyde turnpike. The Etherow viaduct is an erection of three lofty and beautiful arches, with stone piers, crossing the river Mersey. The centre arch is of 150 feet span, and the other two are of 120 feet each. The gradients on this line, though the railway passes through a country offering many natural obstacles, and where it might be imagined that considerable inclines could not be avoided, are very favourable, the greatest inclination being 1 in 100, or less than the principal one on the Manchester and Liverpool line—(the Sutton incline being 1 in 89)—and this incline is only 64 chains in length, the other gradients between Manchester and Godley being respectively 1 in 132, 1 in 330, 1 in 176, 1 in 193, 1 in 140, and 1 in 511, while some portion of the line runs on a dead level.

The carriages and locomotives, we understand, are in course of delivery on the line, so that the working department is almost in complete readiness. The locomotives are said to be of a very powerful description, and well fitted for the heavy trains which may be expected to traverse the line. The carriages will be of three classes, evincing the disposition of the Directors to afford every possible accommodation to the working classes who may be disposed to make use of this mode of conveyance, and whose time is, of course, at all periods a consideration to them; as well as to the middle classes, who have the means of paying for the comforts of a second class, or the luxuries of a first class carriage. The first class carriages are of the same construction as those used on the Grand Junction Railway; the second are of a description which have not yet been introduced into this part of the country, and known only to our northern travellers who may have traversed the Glasgow and Greenock Railway. The third class are "stand-ups," of similar construction to those used by the Manchester and Birmingham, and now running between this town and Stockport.

We are not prepared to give a list of the tolls, but we believe they are to be very low, and that the public will not have to be dissatisfied on this head.

As we have before stated, the present station in Travis-street, erected by the Manchester and Birmingham Company, is only for temporary use; the extensive erections for stations extending thence over Travis-street to Piccadilly, and thus approaching the heart of the town, being in rapid progress. This continuation of the line consists of upwards of thirty arches; the buildings intended for the booking and other offices have so far advanced as to give an idea of the design. The progress of the works here has been temporarily retarded by the misunderstanding between the contractor and masons; but there are a vast number of workmen employed upon the erection, and the works exhibit a scene of bustle and activity which gives promise of rapid progress. This station, when completed, will be one of the finest and most extensive in the kingdom. —*Manchester Times.*

RAPID TRAVELLING ON THE GRAND JUNCTION AND THE LONDON AND BIRMINGHAM RAILWAYS.

As the *Caledonia* would, it was expected, be the bearer of important intelligence from the United States and Canada, and as the *Britannia* had been delayed to give Government an opportunity of receiving and answering despatches, the Postmaster-general ordered Mr. Banning, our respected postmaster, to send the letter-bags by an express train, should they reach the Post-office after the departure of an ordinary mail train, so that not a moment might be lost in the time of their reaching London. On Tuesday night the bags were placed in a railway carriage at the Edge-hill station. All being ready, the train, consisting of the engine and one carriage only, which bore two gentlemen, one of whom had come by the *Caledonia*, a messenger for the *Times*, and the Post-office guard, started at 10h. 45m., and reached Birmingham at 1h. 35m., having completed the distance, 97 miles, in 2h. 50m. From this time must be deducted 15m. lost in waiting until a luggage train was moved off the line; so that, including stoppages to take in coke and water, the journey was accomplished in 2h. 35m. The train left Birmingham at 2h. 5m., and reached the Euston Station, London, at 5h. 30m., thus completing the distance, 112 miles, in 3h. 35m., including the time lost in replenishing coke and water. The whole journey from Liverpool to London was thus accomplished in less than six hours, at an average speed of thirty-five miles per hour, though, on certain parts of the line, the speed must have been, at least, sixty miles in the hour! The news, conveyed so rapidly by this express, was printed at full length in the *Times*, copies of which were in Liverpool by seven o'clock on Wednesday evening, just twenty hours from the time the news was despatched from the Edge-hill Station!—*Liverpool Albion.*

Great Western Railway—Box Tunnel.—On Wednesday night a man was killed in this tunnel by becoming entangled in the engine which assists the train up the incline. It appears that the engine was not quite close to the train (the mail train), and two men recklessly crossed the line immediately the train had passed, when they both fell, and one of them became so entangled in the wheels of the engine that he was dragged more than 100 yards, and killed on the spot. The other escaped with a few slight bruises.—On Tuesday last a portion of the viaduct which conveys the Great Western Railway over the road at Chippenham gave way. The injury is probably owing to the late heavy rains, but it has occasioned no obstruction to the usual course of the trains.—*Bristol Journal.*

RAILWAY SHARE-LISTS.

The London Prices are taken from Mr. Wetenhall's List; those at Liverpool are furnished by Mr. C. J. Townley, Sharebroker, and are the closing prices on Thursday. The quotations marked * are the latest Edinburgh prices; those marked † the latest Glasgow prices. The former are supplied by Mr. Robert Allan, of St. Andrew-square; the latter by Mr. J. Watson, of Frederick-street.

* Toll to London and Birmingham 151*l.* 3s. 4d., to be deducted from gross receipts.

7. Receipts include the Northern and Eastern toll, &c. The dividend is from the time of opening.

9. The part between Glasgow and Paisley was made at the joint expense of the Glasgow Paisley and Greenock, and Glasgow Paisley and Ayr Companies, but each Company's receipts in respect of that part are now merged in the general returns of each.

10. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester line, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 114 (83+31.)

12. The 5,231,527*l.* 9s 10d. is the amount actually raised according to latest balance-sheet. The receipts include those derived from the Cheltenham and Exeter branches; the former opened for 18 miles, and the latter for 33. The divisor employed to ascertain the daily receipts per mile is therefore 169½ (118½+18+33.)

14. The 34*l.* 12s. 8d. from goods, &c. is for toll only.

15. Ten per cent. is the maximum dividend allowed by the Company's Act.

16. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. On the quarter shares the dividend is at the rate of 42½ per cent. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

18. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table.

19. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company.

20. Capital of 993,200*l.* includes new capital for widening the line, &c. The div dend mentioned does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table is exclusive of Brighton and Croydon toll.

21. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount.

23. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

24. The 4,348*l.* 11s. 5d. are the receipts after deducting omnibus charges, and payments to other Companies. The dividend is from the time of opening.

25. The receipts for goods, &c. include, carriages, 462*l.* 7s. 0d.; horses, 13*l.* 16s. 6d.; dogs, 3*l.* 1s. 0d.; parcels, 225*l.* 3s. 11d.; cattle, 93*l.* 10s. 0d.; corn, 6*l.* 11s. 3½d.; heavy goods, 468*l.* 17s. 0d.; coal, 86*l.* 19s. 2d.—Total, 944*l.* 5s. 10½d. The dividend is from the time opening.

27. The dividend includes a sum of 31,756*l.* earned previous to the last half-year.

28. The receipts stated are after deduction of Liverpool and Manchester toll.

29. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 26 miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

30. The capital of 500,000*l.* includes that provided for harbour and works as well as railway. The dividend is from the commencement.

32. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

Durham and Sunderland Railway.—*We have replied to one of our Newcastle correspondents by post.*

Hydraulic Railway.—*We have in a previous number given in a few words our opinion of this scheme and see no reason from the circular now sent us to qualify it in the smallest degree.*

Mr. D. *(Reigate).*—*The MS. shall be preserved as requested and should a favourable opportunity occur shall not be forgotten. Our correspondent is mistaken in supposing that the scheme was not tried in the City. The failure elsewhere we are induced to attribute to other causes than that adduced by our correspondent.*

J. G. *(Edinburgh).*—*The salary usually varies from 60l. to 100l. per annum. We suppose much about the same proportion will hold good on the line named. We do not think there is much chance of promotion; and beyond what may be realized from benefit societies there is no provision for old age or infirmity.*

Inquirer—*About 30,000l. per mile; certainly not less. Let our correspondent beware.*

West London Railway.—*In answer to* A Quondam Shareholder, *we can only say, that a few days ago we saw the cutting at the crossing of the Hammersmith-road about half full of water. Any representation to the contrary is therefore not to be depended upon. For an answer to his other question he must apply to the Secretary (Mr. Thompson), Abchurch-lane, City.*

London and Brighton Railway.—*In the letter of* A Shareholder and Resident *which we published last week, instead of 3s. per ton the charge for goods should have been stated at 30s.*

R. P.—We *instituted no comparisons; we merely showed wherein our correspondent's comparison was defective. Certainly we did not desire to detract from the merits or probable results of the line referred to.*

Continental Railways.—*A correspondent, under the signature of* Father Luke, *would be glad to know who are the parties in this country who are connected with the proposed railways from St. Petersburgh to Moscow, in Russia, and from Dresden to Vienna, and others in Germany.*

Mr. J. D.—*With much pleasure. There is no charge whatever.*

M. D. *(Birmingham.)*—*Trafalgar-square, Charing Cross.*

Railway Passengers.—*In our last number a correspondent stated that the number of passengers on the various English railways, from the 7th of September to the 4th of October, had been 68,809. This was so manifestly a mistake, that we have no doubt our readers have themselves corrected it. We have not the MS. at hand, but probably the number above stated is a misprint for 688,090.*

Mr. W J. *(Manchester).*—*We should think not. Better ask the Secretary.*

Observer S. *should send his strictures to the journal in which the article commented upon appeared.*

P. C. N.—*The gradient is 1 in 300.*

G. C.—*The Bill was not thrown out on the grounds represented to our correspondent, although we can readily guess why such a representation should have been made to him. We would advise him to be on his guard. He may rely upon our vigilance and secrecy.*

Cheltenham and Great Western Railway.—*The general meeting was held on Thursday, but at the time of going to press no report of the proceedings had reached us. We shall give a full report in our next.*

Urbanus.—*Our correspondent appears to be ignorant of the fact, that the gentleman whom he names was not the original engineer of the Company. A great portion of the expenditure was incurred before his connection with the Company. Why, then, should he be made answerable for the errors of others?*

Four-wheeled and Six-wheeled Engines.—*Our Dundee correspondent's letter, in answer to Mr. Seaward, came too late for this week. We shall probably give it in our next.*

Query.—*A line between the two towns was surveyed (we think in 1839), but no further steps have since been taken. We doubt the paying properties of such a work.*

THE RAILWAY TIMES.

SATURDAY, OCTOBER 30, 1841.

In recurring to the mode in which the affairs of the Durham and Sunderland Railway Company are conducted, we need scarcely take the trouble to disclaim every feeling of hostility towards the members of the Direction, individually or collectively; or to state that we select that undertaking simply as exhibiting the working of vicious principles carried to extremes. Generalities are far less convincing than individual instances, whether in the way of warning or as examples for imitation. We might declaim for months against the impolicy of appointing Contractor-Directors, or the iniquity of declaring dividends out of capital, and some of our readers might assent to our propositions, while others would probably look upon our fears as visionary, and deem our strictures uncalled for; but when we can set before them the operation of those principles in all their deformity, as shown in the experience of a particular Company—when we can point to the Durham and Sunderland Railway, to its present position and future prospects, and to the dissatisfaction which has very naturally sprung up amongst its proprietors—when we can do this and say, "behold the effects of the system which we condemn," who is there that will not, if he have none but honest and honourable purposes to promote, deprecate that system, and do what he can to correct or extirpate it, or at least to check its further progress?

With these views, we beg to call the particular attention of the railway public to two letters, which appear elsewhere, in reference to the Durham and Sunderland line; and here we may observe, that the communications in question are but samples of the letters which have poured in upon us since we first took this matter in hand. Some of the statements forwarded to us are so incredible—attributing to individuals acts so totally inconsistent with their official position—that we cannot, without further inquiry, venture to give them to the world, but our correspondents may rest assured that they shall not be lost sight of. Having once entered upon this business, we shall not cease till, if we cannot reform the Management, we have at least fully exposed its delinquencies.

The original grounds of complaint which we adduced against the Durham and Sunderland Board were two—first, that a large proportion of the Directors appeared to be contractors with the Company; and, secondly, that at least one dividend had been declared out of capital, to the delusion of the shareholders. With respect to the former of these points we certainly were not prepared for the statement made by both our correspondents, and confirmed to us from other quarters, that out of fifteen members of the Board not fewer than TEN are parties having interests diametrically opposed to those of the proprietors at large! To one of the letters is appended a list of the present Directors, their connection with the Company as land proprietors or coal owners, and the amount of their several holdings in the railway. It is worthy of remark that the largest proprietor who has a seat at the Board is Mr. JOSEPH PRICE, who holds 213 shares, while some of his colleagues hold but 13, 14, 15, 16, 18 or 19 shares, these latter being Contractor-Directors, while Mr. PRICE appears to hold no such relation to the undertaking. It is further deserving of notice, that while the Directors generally have been opposed to the publication of the accounts, and on one occasion, according to our correspondent, even went so far as to treat with contempt a resolution of the proprietors that the accounts should be published, the name of Mr. PRICE appears affixed, with those of other proprietors, to the printed letters alluded to by our other correspondent, in the last of which letters the motions of Mr. SINGERS, for limiting the number of Contractor-Directors, and for the publication of the accounts previous to the half-yearly meetings, are brought forward and their adoption strongly recommended. With the solitary exceptions of Mr. PRICE, who holds, as before said, 213 shares, and of Mr. BENJAMIN PARKER who holds 70, and who seems like Mr. PRICE, to be concerned in no contract, or to own any land required by the Company, not one of the Directors appears to hold more than 40 shares, while the average is very much under that number. We do not think that in general, the number of shares held by a Director is any valid test of his fitness for office; but in this case, when their duties as members of the Railway Board, and their interests as coal proprietors clash, it is essential for the sake of avoiding suspicion of improper motives and partial acts, that the holding of these parties should *not* be small.

We have not room for the publication of the documents of which mention is made in the letters of our correspondents, nor if we had, would the details be of any great interest. The general results we have already indicated. In one of the statements of account sent us, we find that from one colliery the receipts of the Railway Company were during the last half-year 4,615*l.*, from another 3,449*l.*, and from a third 2,615*l.* As the names of the collieries only and not of the proprietors, of them are given, we have no means of connecting these amounts with the holders of 13, 15, or 18 shares; but will any one venture to affirm that if Directors hold such disproportionate interests in two undertakings, they will not naturally forward the success of the one at the expense of the other, when the two cannot be combined—will any one take upon himself to assert that these coal owners will not cheerfully give up all hope or expectation or desire for dividends, if they can secure even so small a reduction as one halfpenny per chaldron in the conveyance of their coals as compared with the charges on neighbouring lines, more especially when we find that some of them send by the railway from 20,000 to 40,000 chaldrons a year? That the charges for the carriage of coals even after a recent addition of a halfpenny per chaldron, are still lower than they ought to be, is shown in one of the printed letters already mentioned, where it is stated that had the charges upon the Durham and Sunderland Railway been the same as those on the Stanhope and Tyne, an adjoining line, the annual income of the former Company would have been increased by 4,200*l.*, and this although the Directors of the Stanhope and Tyne Railway have founded *their* charges insufficient to maintain their line and to yield a profit, and contemplate an addition at the commencement of the ensuing year, of one-fourth to their present rates! In short, the whole management of the Durham and Sunderland Railway appears to be pervaded with this system of divided and adverse interest; for we find in a statement now before us of "way-leave" rents, paid by

Digitized by Google

the Company, the name of Mr. JOHN GREGSON, the late clerk to the Company, and father of the present clerk, as receiver of 450*l.* per annum, as the rent of 24 acres of land!

As regards the declaration of a dividend out of capital, we can add nothing to what we have already said, in condemnation of this most iniquitous proceeding. We do not wonder that our correspondents complain bitterly of having been duped by so unwarrantable a course, and how any body of men can venture to hold up their heads in society after having knowingly been guilty of such conduct we cannot imagine. The flimsy excuse which has been adduced in extenuation, namely, that it was the *shareholders* who declared the dividend, only adds to the enormity of the offence; for, what can be worse, than first to refuse the publication of the accounts, and then to *recommend* a dividend, as if these accounts were in a satisfactory and business-like condition?

We hope and believe that the practice of knowingly declaring fraudulent dividends is not common with Railway Managements. At the same time care must be taken that deception of a similar kind is not incurred through incaution, or from any other cause. The declaration of a dividend without making allowance for depreciation of stock, cannot in our opinion be regarded as other than fallacious. Some Companies, we fear, are running out their perishable stock, thereby exhibiting an appearance of a low scale of expenditure, and a rate of dividend not warranted by the profit really made, and thus leaving a succeeding set of proprietors to make up from their income the replacing of the exhausted stock It is quite a mistake to suppose that the Liverpool and Manchester Company make no provision for this (although the *name* of depreciation fund is not found in their accounts), as we shall show hereafter. In the meantime we again call attention to the correspondence which has given rise to these few remarks.

"JUSTICES' *justice*" is proverbially very different from that which other parties than the great unpaid, or paid, dispensers of the law would deem or designate such. Justices' caprice, justices' bigotry, justices' stupidity—all these are but too often synonymous with justices' justice, and never so much so, as when a Railway Company apply for redress. The scandalous inadequacy of the punishments (if such a word as punishment can be justly used) in cases of trespassing upon English railways, has been to often recorded in our columns to be at all a matter of surprise to our readers. We had imagined, however, that these matters were better managed on the other side of the Border, but this notion has been dispelled by an instance in which the Glasgow and Ayr Company were concerned, and which has within the last few days been brought under our notice. As the decision referred to is, we understand, but a specimen of the sort of justice which this spirited Company have recently experienced from the same quarter, we have deemed it desirable to take the case from the portion of our journal usually appropriated to similar "offences," and to notice it more prominently.

It appears that a person named ROBINSON, the son and foreman of one of the contractors on the Kilmarnock branch of the Ayr line now in the course of formation, had been in the habit of walking upon the main line in going to and returning from his work. One of the witnesses had seen him thus trespassing twice, another four times; and on one occasion he had walked upwards of a mile upon the railway. The Directors of the Company had very properly given orders to the police to prevent the workmen from walking upon the line, and the man ROBINSON had been repeatedly warned, and threatened with a prosecution, but in vain. He openly set the police, and even the engineers of the Company, at defiance, till at last it was found absolutely necessary to summon him before the bench of magistrates sitting at Irvine. The original depositions taken in the case are now lying before us, in which the above facts are clearly established, and, moreover, that great damage had been done to the Company's fences from these and similar intrusions. One would naturally imagine, but for past experience of the peculiar kind of justice which is meted out by magistrates, metropolitan and provincial, that so daring a trespasser as this person who from his situation could not but know that his conduct was contrary to law—likely to occasion danger in the working of the line—and certain to set a bad example to workmen of an inferior grade—one would reasonably have expected that such a person would have been dealt with somewhat sharply; but no! Their worships in their wisdom amerced him in the magnificent sum of just *half-a-crown*, while the cost *to the Company* of instituting the proceedings, was, we are given to understand, at least SIXTEEN TIMES that amount! And this is justice as dispensed, not to the Ayr Company and by Ayrshire magistrates only, we regret to say, but to almost every Railway Company, and by almost every magistrate, in the United Kingdom. Is it any wonder, that under such circumstances, the officers engaged on these national undertakings should become careless of bringing offenders before the constituted authorities—is it at all ground for surprise that parties such as this person ROBINSON should laugh at the attempts made by the Companies to preserve their own property, and protect the lives of the public, when they find those whom a recent Act of Parliament for the "regulation" of these great works *requires* to take due cognizance of cases of trespass and damage, practically connive at violations of the law? Magistrates, and Squires, and landowners of every degree, are ready enough to cause the Companies to pay dearly for the privilege of expending their money in prosecuting a public improvement, and equally inclined to follow the advice so freely given in certain quarters, and make the proprietors *smart* in the shape of deodands, when any unfortunate casualty occurs upon any of the lines that are in operation—aye, although it may be clear to all, save the sapient jurors themselves, that the parties thus mulcted are, legally as well as morally, blameless; but when these same parties come forward as complainants—when they prove clearly that the property which they have purchased at so costly a rate is wilfully and wantonly damaged—when they show that their anxious endeavours to avoid one great cause of accident are, day after day, frustrated by the conduct of headstrong and insolent trespassers—do the justices and jurors extend their co-operation and assistance, and the protection of the law to check the oft-recurring offence? Let these half-crown penalties supply an answer.

The only attempt at an excuse which ROBINSON brought forward was, that there was no other road than the railway by which he could get to his work. What have the Company to do with *that*, allowing the fact to be as represented? When he or his father took the contract referred to, they are presumed to have satisfied themselves as to the state of the neighbourhood. As well might they seek to make use of the railway, supposing the materials to be in that direction, for the passage of their horses and carts in carrying the stone employed in the erection of the bridge for which they have contracted.

We have already intimated that cases of trespass are not uncommon upon the Ayr line. In fact, we are credibly informed that so much has this been the case, that the fences are in many places completely destroyed, and every facility given to cattle to stray upon the railway! Can this be matter of surprise when it is known that two or three cases of the same character as that upon which we are commenting have come before the same court, and in none of them has the decision been so *favourable* to the Company as in this!

Other workmen who may be placed in the same position as ROBINSON with respect to the Ayr Railway, now know precisely how much they may shorten their daily journeys (for we dare say the real cause of the trespass was this), by making a footpath of the railway. They now know that for half-a-crown they may make use of the line for days—may insult and bully the officers of the Company—and moreover enjoy the satisfaction of putting these officers to much personal inconvenience, in having to dance attendance upon the Midases of Irvine, and the Company who employs them to very considerable expense. We shall look for the fruits of the Irvine decision.

THE Directors of the Edinburgh and Glasgow Railway Company have at last determined upon doing that which, if they had done at first, would have saved their constituents some expense, themselves much obloquy, and the railway interests no little scandal;—they have resolved, it seems, to settle their differences amicably. This we state upon the authority of a letter quoted in a circular which appears in another part of our present number.* We take some credit to ourselves for having helped to shame the opposing parties into a more decorous course than that which they have recently been pursuing, and which some of them threatened to pursue still further, by getting up the edifying spectacle of a Parliamentary opposition to their colleagues and co-proprietors. They have done well to pause in time, for we are assured that some of the principal non-resident shareholders were about to take steps that would have resulted in giving the belligerents an opportunity of settling the claims and feuds of their respective cities, in any character but that of Directors of the Edinburgh and Glasgow Railway.

The basis of the arrangement proposed by the Edinburgh Committee is stated to be, that in the new Act of Parliament, which, on other grounds, must be applied for next session, they will consent—

1st. To the abolition of the Edinburgh and Glasgow Statutory Committee.

2nd. To the Board sitting in Glasgow, being recognised as possessing both *deliberative* and *executive* powers, and being enabled to appoint whatever Committees in Edinburgh and Glasgow it may see fit.

3rd. To the number of the Directors being reduced to *fifteen*, of whom *six* shall be resident in Glasgow, *four* in Edinburgh, and the remaining *five* from the shareholders at large.

---

* It has since been confirmed from a quarter upon which we can place the utmost reliance.

Digitized by Google

Five members to form a quorum of the Board.

These proposals appear satisfactory enough, except as regards the number of Directors and their future places of residence. What need is there for *fifteen* Directors to manage the affairs of a railway not fifty miles in length? Twelve or ten would be ample; nay, with due precautions as to auditorship, and strict and personal responsibility, half that number would, we conceive, be found much more efficient in practice than the unwieldy Direction which has involved the Company in these unhappy squabbles. Then as to the localities of the future members of the Board. We are strongly in favour of Directoral residence upon or in the neighbourhood of a line the affairs of which they profess to conduct, and think that in general this should be a *sine quâ non* in determining their qualifications for office. So far, therefore, we approve of the scheme for fixing the abode of the majority of the members of the Edinburgh and Glasgow Board at one or the other terminus; but why specify the particular number at each, making it a rule that six shall be resident in Glasgow and four in Edinburgh? We are of opinion that this arrrangement, if carried out, will be productive of inconvenience. Suppose that not more than five really qualified Directors (and when we speak of qualifications we do not use the word in merely the Parliamentary sense, for *that* comprehends but a very small amount of the merits that a Director ought to possess)—suppose we say, that not more than five efficient candidates could be on some particular occasion be found at Glasgow, and not more than three in Edinburgh, are the sixth and fourth places at the Board to be filled up by unqualified and inefficient men? Or suppose that there are eight shareholders resident in Glasgow, any one of whom would as a Director contribute more to the prosperity of the undertaking than any two of the Edinburgh section, are six only to be selected from the former, for the mere purpose of preserving "the balance of power?" Again, with regard to the "remaining five" Directors, who it is proposed shall be chosen "from the shareholders at large," will residence at Edinburgh or Glasgow disqualify such parties? If it should, then the old objection of selecting not the fittest men, but men placed in a particular locality applies with double force; if it should *not*, the proportion of Edinburgh and Glasgow members, and of what may be called their neutral colleagues, is at once upset; for it is clear that with sufficient influence there might be *eleven* Glasgow to *four* Edinburgh Directors, or *nine* Edinburgh to *six* Glasgow, or in any intermediate ratio.

These, however, are comparatively trifling matters, and can be modified or corrected hereafter. The great point to be secured is the reconstitution of the Board upon the principle which prevails in the English Companies, and we congratulate the proprietors that this is now likely to be attained with much less trouble than was at one time expected. Attained it must have been sooner or later, but it is on every account far better that it should be secured at once and amicably.

The *Glasgow Courier* of Tuesday, received since the above was in type, thus adverts to the subject, and supplies some interesting details as to the state of the works:—

We have learned with sincere pleasure, that the unfortunate differences existing between the Edinburgh and Glasgow Committees of Directors have at length been amicably adjusted. At a recent meeting of the General Board, attended by members of both Committees, the alterations in the constitution of the Board recommended by the last General Meeting of Shareholders were taken into consideration, and the following changes, which had been previously approved of by both Committees, were unanimously agreed to, and will be embodied in the new Bill for which the Company have occasion, on other accounts, to go to Parliament.

The Edinburgh and Glasgow Committees, as existing under the present Act, are to be abolished, and the whole powers, both of management and execution, are to be vested in the Board of Directors, who will meet, as at present, in Glasgow, and consist of fifteen members (instead of twenty-four as at present,) of whom six shall reside within twenty miles of Glasgow, and four within twenty miles of Edinburgh; the Board to have power to name Committees in Edinburgh and Glasgow, and delegate to them such powers and functions as they think proper.

This proposed modification of the constitution of the Board is, we understand, to be submitted to the shareholders, and will, we have little doubt, be cordially approved of by them. Both the interests of the public and of the Company are concerned in this result; for however much the Directors have hitherto held their differences in abeyance in everything connected with forwarding the works on the line, yet these differences were of a nature that rendered harmony at the Board doubtful, and unity of management impossible. The unseemly spectacle will also be prevented of a contest in Parliament among parties who should never appear before that tribunal disunited.

We understand that Sir Frederick Smith, the Government inspector, was recently here, and examined minutely the state of the works along the line from end to end. We have not as yet seen any official Report published, but we understand that he was highly pleased with the substantial manner in which the finished portions of the works were constructed. With regard to the time of completing and opening the railway to the public, it is understood that Sir Frederick considered it likely that the whole works, including the great whinstone cutting at the Croyridge, might be ready for traffic by the middle of November. From the energy with which the unfinished parts are pushed forward, we have little doubt that this might be the case with average weather, but taking into account the unfavourable season which we have had from the beginning of August down to the present time—certainly the most rainy season that has been experienced in this part of the country for many years—our wonder is rather that so much has been accomplished than that something yet remains to do. Should November, however, prove more auspicious, it is expected that by the beginning of December the wishes of the public will be realised. One advantage, at least—and that not a small one—has resulted from the wetness of the season. Much of the subsiding and slipping of the embankments, which might otherwise have happened at a future period, has already taken place, and the consolidation of the works has thus been greatly matured before the line is opened for traffic. Upon the whole, therefore, considering the increased security to the public, the delay is not so much to be regretted; because whatever tends to inspire greater confidence in the community in the safety of the line, will ultimately be for the true interest and benefit of the railway.

YESTERDAY week a party of Directors of various lines of railway were invited by the Chairman of the Manchester and Leeds Railway to take an excursion in a carriage of a novel construction, built according to his own plan and design; and we think very great credit is due to Mr. HOULDSWORTH for his invention. The under framing is of the usual construction, but the body is unique. The floor is considerably wider than ordinary, and the sides curve outwards till they join a circular roof, the greater part of which is fitted with wire gauze to give air, but capable of being instantaneously covered with waterproof material by the action of an inside handle, so that sun and rain may be shaded out at pleasure. The sides are fitted throughout with plate glass, and ranges of seats occupy the floor, leaving passages on either hand. Tents are also contrived in the sides, which close at will by spring action. The effect of the interior, resembles the inside of a conservatory. During the progress of the party through the very beautiful hill scenery to Todmorden and Hebden Bridge a collation was partaken of and the wine-cup circulated, the members of the party moving about in groups, conversing as though in a fixed apartment, or rather a steamer's cabin. It must be a most satisfactory reflection to the shareholders of the Manchester and Leeds Railway to have a Chairman so well versed in mechanical arrangements. On the road some experiments were tried with a self-acting break, the invention of Messrs. Nasmyth of Patricroft, intended to obviate the necessity of guards to a train by rendering the breaks automatic, and consequently certain. We could not ascertain what was the opinion of the Directors as to its eligibility.

WE have not yet had the good fortune to see a copy of Professor BARLOW'S Report to the Railway Department of the Board of Trade, in reference to the late fatal accident on the London and Brighton Railway; but we understand from a quarter on which we can rely, that the Professor has abstained from pronouncing any opinion as to the comparative merits of four-wheeled and six-wheeled engines.

We regret to say that another accident occurred on this line on Thursday last, which, although only of a character common to all new lines, and more particularly to be looked for after the late (and present), unprecedented rains, has, in the mean time, caused some interruption to the traffic. It appears that a considerable quantity of chalk has slipped in a cutting near Merstham tunnel, and for the present blocked up that part of the line, so that for a short distance the passengers are conveyed by horse coaches. Yesterday Sir Frederick Smith left town by the two o'clock train, to inspect the scene of the occurrence.

Accidents of this kind are beyond the foresight of any Railway Management, or any Engineer, however skilful or however careful, and we trust that the late slip will not prove to any great extent injurious to the present trade of the line.

A CORRESPONDENT calls our attention to the arrangements of the day mail to Edinburgh. It now, it appears, leaves London at a quarter before ten, and goes down to Lancaster at the rate of about 25 miles an hour. It is forwarded thence by coach, and arrives in Edinburgh at

Digitized by Google

two o'clock the next day. Now, argues our correspondent, if a mail train were dispatched *for Darlington*, to leave Euston-square at the same hour, viz., a quarter before ten, and travel at the rate of 25 miles an hour, the journey could be performed in eleven hours, the distance being 264 miles. There would be allowed a quarter of an hour for refreshment at Derby (and the day mail to Liverpool is only allowed that time at Birmingham), and this would bring them to Darlington at a quarter before nine at night. The remainder of the journey to Edinburgh is performed by the day coach in fifteen hours, and it of course stops somewhere to give the passengers time for dinner, which a mail travelling at night need not do. But if a mail coach performed the journey from Darlington to Edinburgh in fifteen hours (and there is no reason why it should not), leaving Darlington at nine at night, it would reach Edinburgh by twelve the next day, which is two hours earlier than it does at present; and two hours saved in the middle of the day at a time when people are on 'Change is a matter of great importance, particularly as this mail takes all the morning newspapers from London.

If the people at the Post-office were to exert themselves, this train might leave Euston-square at half-past 9. Surely three hours of a morning, from 6 to 9, is time enough to sort letters; and they might close the boxes at half-past seven instead of eight, as it is not likely that people will get up so early to write letters, but write them over night. This would allow them another quarter of an hour on the journey.

We are given to understand, that under the new Administration Post-office matters are much better attended to than before, and therefore would we call attention to our correspondent's suggestions. That the Post revenue will increase in proportion to the facilities afforded is so clearly proved by past experience, that we need do no more than remind the authorities of the fact.

The *Bristol Journal* mentions a case which reflects much credit upon the arrangements of the Great Western Railway Company, and on the honesty of their *employeès*. "Yesterday [says our contemporary] we had a visit from a gentleman at Clifton, who speaks in justly merited terms of the system by which property is secured, though the owner be forgetful or negligent. On Friday last, our informant went to the terminus at Temple-gate in an omnibus, the driver of which seemed not to care whether his passengers were in time or not, and found the train just ready to start. In his hurry to secure his carpet bag and take his place, he left his purse on the counter, and did not discover his loss till an hour's riding had placed it 30 or 40 miles out of arms length. On arriving at the Slough station he stated the matter to Mr. Howell, the superintendent, expressing his belief that he must have left the purse on the counter where he paid his fare, and was promised that it should be inquired into. On the following day the purse and its contents were safely delivered to him at the Paddington terminus." We have reason to know that cases of this kind are not uncommon upon railways.

—o—

A contemporary thinks it may be useful to proprietors of railway shares, as furnishing some clue to the fluctuations which so often take place in the market price of their property, to know the following anecdote. Messrs. Thomas Cardwell and Son, of Manchester, lately received a letter, dated Coventry, signed Thomas Williamson, directing them to sell 55 shares in the Bristol and Exeter Railway, at 35 per cent. discount (which was below the market price) or "a pound or two lower if necessary," as he, Mr. W., "wished to get out of the concern." Messrs. Cardwell were directed, after making the sale, to send for the shares to Mr. Williamson, at an address given at Leamington. Messrs. Cardwell, having made the sale, wrote to Mr. Williamson as desired; but the letter was returned, no such person being known there. They wrote again with the same result; and at length one of the firm went to the place, and discovered that the letter was entirely a hoax, and probably the fabrication of some person who wished to purchase the shares under their value. The same trick, no doubt, has been played to some extent, as we (adds our contemporary) are in possession of the names of two respectable firms who have been victimised by precisely similar means into "paying the difference," one firm upon 70 shares, and the other upon 100.

—o—

The *Witness*, a religious paper published in Edinburgh, states that notice has been given to the Board by one of the Directors of the Edinburgh and Glasgow Railway for the 16th of November, that there be no travelling on the railway on Sabbath, unless compelled by Government. "The success of the motion," adds our contemporary, "will depend very much on the feeling expressed by the public on this subject, and the interest taken in it, and therefore we trust that every exertion will be used to let the Directors see how much any attempt to use the railway on the Sabbath will be opposed." *We* "trust that every exertion will be used to let the Directors see how much any attempt" to shut up the line on Sunday "will be opposed."

—o—

It appears from a statement in the *Perth Courier*, of Thursday last, that Mr. Errington (of the firm of Messrs. Locke and Errington) has now completed his survey of a line from Falkirk to Stirling, and thence to Perth, and that his Report will shortly be before the public. No difficulties of importance have presented themselves to the formation of a line through that district of country, and the opinion of this eminent engineer is, that it could be formed at considerably less expense than most of the lines lately constructed.

—o—

We regret to state, that on Thursday last, Mr. Thomas Phillips, a professor of music, met with his death on the Grand Junction line, near the Hartford station, while attempting to get into a carriage that was in motion. The deceased was old and infirm, and the accident appears to have originated solely from his own imprudence. On the same afternoon, a gentleman named Lowe was killed in jumping from a train at the Crewe station. This accident also is attributable entirely to the carelessness of the sufferer himself. We believe these are the first fatal accidents to any passenger on this line.

RAILWAY OFFENCES AND OFFENDERS.

At the York City Sessions on Tuesday week, a man named Mountain, was charged with having on the 24th of July last, stolen a quantity of printed calico, belonging to the York and North Midland Railway Company. The prosecutors in this case were the York and North Midland Railway Company. About half-past two o'clock on the morning of the 24th of July last, John Martin, an assistant officer of police, was at Holdgate Lane End, at no great distance from the station of the Railway Company, when he observed the prisoner at the bar and another man coming up. They were carrying something which on inspection looked like a truss. Some conversation took place between them, after which they went on and crossed the street, Martin following them. They walked towards Micklegate Bar, and went into the gateway of Alexander Park, who keeps a public-house on the other side of Blossom-street. Martin on going into the yard found the prisoner upon his knees with the goods in his possession, and on being asked something, fell crying. He was taken into custody, and while on the road said that the other man had requested him to go to the station for the purpose of assisting him to take away some goods. The jury found the prisoner guilty, but recommended him to mercy. To be confined in the House of Correction for two months with hard labour.

We noticed last week the case of a fellow named Beadle, a guard on the Brighton Railway, who for a gross and indecent assault on a female passenger, was fined by the Croydon Bench not more than 40s. which was immediately paid. The *City Chronicle*, in noticing the case says:—"The defendant immediately paid the fine. Of course he did, and ought to be deeply grateful to the bench for their leniency. But why was not the highest penalty inflicted in this case? Is it that the ruffian did not deserve it? or that there was any extenuating circumstance connected with the indecent outrage proved against him? Nothing of the kind, the magistrates only thinking it prudent to reserve the highest penalty for the next railway offender. Sapient justices—wise administrators of the law!" [It will be seen from our advertising columns that Beadle has been dismissed].

A notice of an aggravated case of trespass on the Ayr line will be found in another column.

Accident on the London and Brighton Railway.—Brighton, Thursday.—The non-arrival of the early train at the usual hour, produced a considerable sensation here this morning. An hour and a half elapsed, and the greatest suspense was manifested. At length a train arrived, bringing the London morning mail, and on inquiry we ascertained that a slip of earth had taken place in the vicinity of Merstham, which stopped the progress of the train, but which fortunately was discovered in time to prevent accident.

The following official communication appears in our advertising columns of this day:—

"The Directors regret extremely the inconvenience and delay experienced by the passengers on this line yesterday, in consequence of a fall of earth in the cutting at Merstham, occasioned by the excessive rains.

"They are happy to add that no accident occurred, and that in the course of a few days the trains will again run throughout. In the meanwhile every possible arrangement has been made to accommodate the public with carriages between Merstham and Hooley House, a distance of four miles.

"By order,

"Thos. Wood, Secretary.

10, Angel-court, Throgmorton-street, Oct. 92, 1841."

FARES ON RAILWAYS.

To the Editor of the Railway Times.

SIR,—In reference to the unfounded and unreasonable complaints of monopoly and extortion on the part of Railway Directors, pertinaciously and perpetually repeated in the public prints, I beg leave through the medium of your widely circulated journal, to make a few brief remarks on the question of railway fares and accommodation, which will eventually be solved by the conviction that the duty and interest of railway proprietors accord, and that their interest, and that of the locomotive public, are nearly synonymous.

It may be well to remind you, that the limitation of tolls by the different Railway Acts positively prevents extravagant charges, and that the public, who if paid for travelling would from the force of habit still cavil and complain, are now carried by railway, at less than two-thirds of the cost, and with more than double the safety, celerity, and comfort, with which they were conveyed by coach. It need scarcely be added that strong evidence of the truth of this statement is afforded by the undeniable and universal fact of the opening of a railway being speedily succeeded by the desertion of the parallel common-road, notwithstanding the desperate but futile proceeding of reducing by one-half or one-third the previous coach fares. Permit me here to allude particularly to the case of the London and Brighton Railway, which immediately after its recent thorough opening, where a melancholy accident temporarily checked its usefulness and prosperity, was attracting the entire traffic between the metropolis and the queen of watering places, in spite of a great reduction of fares, on the part of the coach proprietors, produced by the cheapness of travelling by the railway, a cheapness, be it observed, very remarkable, when compared with the former charge by coach, and especially striking when added to the superior speed, security, and comfort enjoyed on the railway compared with the common road.

It may safely be asserted, that eight or ten per cent. is not an exorbitant dividend to be obtained in return for much risk, enterprise, anxiety, and the accomplishment of national benefit, upon the original cost of a railway, constructed with what cheapness, existing engineering science, and the unconscionable and insatiable rapacity of legislating landowners permitted: but it should at the same time be allowed that this dividend should if possible be raised by such a *graduated scale of fares, and varied supply of accommodation, as would best meet the reasonable wants of all classes of the locomotive public.*

Sincerely impressed, from a sense of humanity, with feelings of regret at the serious accidents which occasionally happen by railway, and perfectly convinced that the system of railway travelling admits, with suitable precautions, of extreme security to life and property, I cannot conclude this letter without earnestly exhorting the railway proprietary in general, and that of the London and Brighton Railway in particular, to incite their several Directions, to adopt Mr. Adams's simple and efficient plan of invariably attaching to every tender a spring or buffer vehicle as specially adapted to soften collision in case of accident.

I have the honour to be, Sir, yours, respectfully,

W. F.

Liverpool, 25th October, 1841.

PAYMENTS OF RAILWAY DIVIDENDS QUARTERLY.

To the Editor of the Railway Times.

SIR,—I am persuaded it would be highly advantageous to the railway interests as well as to the public, if the meetings and payment of dividends were *quarterly* instead of half-yearly. It would be a great accommodation to a large class of shareholders, and no doubt have a strong tendency to divert investments from the 3 per cent. (half-yearly paid dividends) consols, now nearly 90, to railways, that even at their present premiums, are some of them paying 6 and 7 per cent., particularly if these last dividends were paid quarterly.

At the end of every three months, the Birmingham line must have two or three hundred thousand pounds in the Directors hands! Does this carry interest? The Grand Junction, Great Western, &c., must be in proportion. This is a point you and all friends to railways cannot advocate too strongly.

CLIO.

25th October, 1841.

NORTH MIDLAND RAILWAY.

To the Editor of the Railway Times.

SIR,—The following estimate of the prospects of the North Midland Railway for the current half-year may prove of interest to its proprietary. In making my calculations I have taken my data from the accounts published in the *Railway Times*, August 28. By these accounts the working expenses appear to have been for the half-year ending June 30th, 49,251*l.* or rather more than 55 per cent. of their receipts. I have taken the expenses for the current half-year at 54,711*l.*, or at only 50 per cent. of their estimated receipts. And when we reflect that about 6,000*l.* more will be incurred for maintenance of way this half-year than was paid last half-year, I do not think I have taken the working expenses at more than will be paid.

*Estimated receipts for current half-year		£109,422
Deduct interest on loans, say 905,130*l.* at 5 per cent. per annum.....	£22,645	
Ditto working expenses at 50 per cent..	54,711	
		77,356
Surplus to divide.....		£32,066

Or very nearly 1½ per cent. on a paid-up capital in shares of 2,150,876*l.*

WM. SIMPSON, Sharebroker.

Leeds, 10th month, 22, 1841.

*The actual receipts to this date have been 75,844*l.*, leaving an estimated average of 3,052*l.* per week for the remainder of the year.

THE NORTHERN UNION RAILWAY—YORK AND NORTH MIDLAND RAILWAY.

To the Editor of the Railway Times.

SIR,—I perceive by your last number that the motion of Mr. Hudson was carried unanimously at the meeting of the York and North Midland proprietary, at York, last week. From the very loose manner in which the resolution is worded, it is difficult to understand what is the precise nature of the proposition to which that meeting assented. Is the rent guaranteed, to be a fixed rent of 30,000*l.* per annum? Or is it to be 6 per cent. upon the actual cost of the projected railway—consequently less or more than 30,000*l.*, according as the cost of the railway falls short of, or exceeds, the estimate of 500,000*l.*? If the latter, I beg to inform Mr. Hudson that however highly I may appreciate the industry and talents which he has hitherto exerted, and I am free to confess successfully exerted, in the affairs of the Company, the proposed measure will be opposed—before Parliament if necessary.

From some passages in Mr. Hudson's speech it would appear as if that gentleman thought if he succeeded in obtaining the consent of the majority of his Company, that no further opposition was to be apprehended. As a man of business, it is a little extraordinary he should have fallen into such an error; but if he does not know it, the legal advisers of the Company can inform him that in a question like the present, entirely out of the scope of the Acts of Parliament to which the Company owes its existence, *the determination of the majority does not bind the minority.*

The proposed measure can be legally carried out only by an Act of Parliament; and this Act of Parliament it will be difficult, not to say impossible, to obtain if opposed by any proprietor.

Mr. Hudson says, he feels great confidence in the estimates of surveyors. So do not I.

The present Chief Engineer on the York and North Midland line is Mr. George Stephenson—second, perhaps, to none of the profession in his reputation for talents and for honourable conduct. Take his estimates. Take the estimates made by this great Engineer—this man of splendid talents and unsullied honour, and compare them with the actual cost of the respective railways.

Then again, for the expected profits—for the wonderful traffic which is to flow along the projected line. What railway, I will ask, was a greater favourite among the men of *metier* than the North Midland? From what line were greater profits expected by those who might reasonably be supposed the best qualified to judge in such cases, than the North Midland? Was it not *par eminence* the *pet* line of engineers? Did not Mr. George Stephenson predict that it would pay 10*l.* per cent. to its fortunate proprietors? And what is the actual state of the case? The North Midland line has been open nearly a year and a half, and is now paying not quite 4*l.* per cent.!

There is one party, Mr. Editor, who has not hitherto, at least openly, taken any share in this discussion, but who has reason to look with peculiar complacency at the proceedings at the meeting at York, and that party is the Northern and Eastern Railway Company.

I have the honour to be, Sir,

Your obedient servant,

A PROPRIETOR OF THE YORK AND NORTH MIDLAND RAILWAY.

October 25, 1841.

P. S. Mr. Hudson seems to attribute to the London and Birmingham Company either extraordinary disinterestedness or extraordinary stupidity, in supposing that they will stand neuter on this occasion. The certain and immediate effect of the formation of the eastern line will be to take away the Scotch traffic from the portion of their line between Rugby and Birmingham; and its probable and ultimate effect will be to deprive them of it altogether, by inducing the prolongation of the Northern and Eastern Railway to York.

The *Yorkshire Gazette* thus speaks of the meeting to which our correspondent refers:—

"As citizens of York we feel deep interest in the project of Mr. Alderman Hudson, for continuing the present line of railway to Newcastle, and thus securing beyond doubt its ultimate extension to Edinburgh, and the retention of the traffic between north and south on the eastern lines of railway. We believe that the northern portion of the Great North of England line would have been a very costly work, and it has therefore been wisely suggested that the most advantageous mode of extending the line of railway communication from Darlington to Newcastle will be to adopt the projected continuation of the Great North of England line for about 15 miles only, and then to form a new line to the Durham junction (a distance of only 7½ miles), from which point to Newcastle there is now a most complete communication by existing railways.

"This admirable plan, there is no doubt, will be carried into effect, and thus will be conferred an important advantage upon the city of York, and an augmentation of revenue to the existing railways in this neighbourhood, the amount of which must be enormous. To the shareholders in the new undertaking it will also, beyond doubt, be a most profitable investment.

"Of the 22½ miles of railway to be formed, an act already exists authorising the formation of 15 miles, and for the remaining 7½ miles plans have been deposited and the necessary steps taken to enable the projectors to go before Parliament next session. This new line possesses an advantage of which the original line of the Great North of England was destitute—it opens a ready communication with Sunderland and Shields, two towns of great and increasing importance. It is, however, in a more extended view that we see the advantages which it must confer, by securing the direct route between London and Edinburgh. We refer our readers to a most interesting meeting of the York and North Midland Railway Company on this subject, which was held during the present week, and at which there was that unanimity of feeling and determination of purpose which augurs well for success. The

Digitized by Google

shareholders appeared to place the most unlimited confidence in their Chairman (Mr. Hudson), to whose perseverance and energy the citizens of York will be indebted for the great advantages which the city must derive from this great national work. He has received the cordial co-operation of his brother Directors, and the ultimate success of the undertaking will show the advantages resulting from a united and zealous directory. We strongly recommend our readers to peruse the statement made by Mr. Hudson at the meeting, which renders what would otherwise be to many a complicated and intricate affair, at once clear, distinct, and intelligible."

THE PROPOSED RAILWAY IN BRAZIL.

LETTER II.

To the Editor of the Railway Times.

SIR,—Having in my letter of the 13th instant stated some of the circumstances that go to prove, to my mind, the small hope of success likely to emanate from the projected railway from Rio de Janeiro to San Paulo, either by the transport of goods or passengers, I now proceed to point out some of the formidable natural obstacles that appear to me to render the execution of such a project next to impracticable.

This railway, as you originally announced, is proposed to commence in the bay of Rio de Janeiro, and is to penetrate at once into the interior by way of Iguassù, thence to strike through the heart of San Paulo by way of Pirahy, Barramansa, Rezende, Campobello, &c., and terminate in the capital of that province, forming a distance of 130 miles.

Any idea of forming a communication by railway along the coast from Rio de Janeiro to Santos, would be hopeless, owing to the very bold and rocky line of coast which presents so many abrupt jutting points at the lateral ramifications of the very lofty chains of mountains there called the *Serra de Mar*. This range originates far from the northward, and extends uninterruptedly through 20 degrees of latitude, nearly parallel with and contiguous to the line of coast, and terminates on the confines of the province of Rio Grande do Sul, after skirting in its extent the provinces of Bahia, Espiritu Santo, Rio de Janeiro, and San Paulo, thus intercepting in its course the capital of this latter province from the sea coast. The city of San Paulo, which is, as you are no doubt aware, at an elevation of 2,400 feet, is separated from its sea-port of Santos, distant only 12 leagues, by a portion of this same mountain range, called the *Cubatao*, which it is necessary to surmount by a tedious zigzag road, the summit of that pass being upwards of 3,000 feet above the level of the sea. The route you have therefore indicated appears to me the only probable course, if indeed any be practicable. This however is not attainable without surmounting in the onset the great range before named, where, within view of the proposed place of ascent (Iguassù), the Organ Mountains, making part of that range, and forming so picturesque an outline to the magnificent bay of Rio de Janeiro, there attain an elevation of 7,000 feet. Behind Iguassù, however, it is said there exists the most gentle ascent, but I doubt much whether any penetrable point will be found lower than 2,000 feet; indeed, I seriously believe that none exists at a lower elevation than 3,000 feet, for the pass of *Estulla*, only a few miles distant upon the main road to Minas Geraës, was chosen as the most eligible point for penetrating the range, and which pass we know from good authority is 3,376 Paris feet above the level of the sea. From Iguassù, at the foot of the mountain, and near the margin of the bay, an elevation which I conceive will be found to be about 3,000 feet, must be gained within a direct length of a distance probably of 20 miles, and even where the ridge is at last attained, the aspect of the country beyond presents the same peculiarity of feature that is met with throughout the whole length of this immense range of mountain. The peculiarity to which I allude is the extensive tract of table lands, called *Taboleiras*, which, stretching far to the westward, are *comparatively* level, though from the entire chain being composed of granite or gneiss, it cannot fail to present a series of very rugged lines, which must naturally offer considerable engineering difficulties in a work of this magnitude. I cannot, therefore, be satisfied as to the likelihood of forming the railway suggested until I see a Report of a survey made by some Engineer, for at present it appears to me there exists no small exaggeration in the accounts as yet before the public as to its feasibility, when it is notorious that the obstacles offered by the nature of the country, and the thinness of the population have hitherto prevented the formation of a common cart road!

Putting aside, however, the mechanical question of these obstacles, and assuming for a moment that the engineering difficulties are not so great as I have represented them to be, I cannot but think that, in a statistical point of view, the estimate of 10,000*l.* per mile, including machinery, &c., is far below the probable cost over a country where internally the most ordinary mechanical arts are almost unknown, and where no labourers can be obtained except SLAVES, who must be taken from the very profitable employment of cultivating coffee, sugar, and Indian corn. These productions, it is well known, have for many years past yielded so large a profit to the Brazilian farmers, that many of them have been induced to mortgage their property, subject to an annual interest of 20 per cent., in order to raise the means of augmenting the number of their slaves, and in order to increase the productive power of their estates to the fullest extent of their credit. Judge, then, of the difficulty the contractors for this railway would have to encounter in procuring manual labour, the mass of which is under the sole control of a few, thus enabling them to fix their own price. Consider, likewise, the number of men requisite for the completion of a railway of 130 miles in length; and when you have drawn your conclusion, I apprehend the known scantiness of population will induce you to believe that the practicability of such a road as that projected is far more illusory than real.

I have mentioned the high rate of interest paid by the Brazilian farmer, and I may here add, that at present the lowest rate of interest upon the first mercantile paper at Rio is 10 per cent., in order to show that if such an enterprise be attempted little chance exists of its being effected, either by the means of the Brazilian capitalist or by the resident foreign merchants. If I can judge from the indications already shown, the advances will be sought from British capital raised *here*, where people are contented to sink their money upon a much smaller rate of prospective dividend, and where the means of procuring information respecting the soundness or the adventure are not so easy of access as in the Brazils.

Although I have animadverted on the proposed railway between Rio de Janeiro and San Paulo, I by no means question the *possibility* of forming railways in the Brazils, but then smaller ones must be first attempted. Too large undertakings, in a new country, often retard by their failure that progress to advancement which the best wishers of a country would rejoice at seeing realised. Holding this opinion, I fain would hope that both the British and Brazilian public will pause ere they countenance by their subscriptions the projected railway between Rio de Janeiro and San Paulo.

In concluding these remarks it is my earnest wish that they may be understood as a proof of my ardent desire to benefit a country where I have passed several years; I have no other. That railways may do the Brazils good, I cordially think, and hope to witness some day realised, but then fewer obstacles must await them on the outset than those that now beset the present projected one.

I am, Sir, your most obedient servant,

H. B. FOREST.

London, October 21, 1841.

WORKING EXPENSES OF RAILWAYS—THE CHESTER AND BIRKENHEAD RAILWAY.

To the Editor of the Railway Times.

SIR,—A correspondent in your last week's number (Oct. 23), who signs himself "Œconomicus," has called the attention of your readers to the receipts and disbursements of several railways, showing what proportion of the gross income has been absorbed in the working expenses, and bestowing praise or censure upon the Directors and managers accordingly.

I have long been aware that this mode of comparison is very generally adopted, and although it needs but a slight knowledge of arithmetic to see the fallacy of it, I am not aware that any of your correspondents have ever touched upon the subject, neither should I have thought it necessary, but for the observations of "Œconomicus," who talks about "shaming the Directors of the mismanaged lines of railway," &c.

There are many circumstances over which the economical spirit and good management of railway executives can have little or no control, such as the price of the important item of coke for the locomotive engines, which costs upon the North Midland and Manchester and Leeds Railways 12s. or 13s. per ton, whereas the Chester and Birkenhead Railway, even under a favourable contract, cannot be supplied under 21s. per ton.

The expenses of the general stations' establishment must necessarily press heavier upon a short line than upon a long one, and a great and constant traffic can manifestly be conducted at a less outlay pro rata per passenger than one with a limited amount of business.

But the chief thing I wish to explain is, that no value whatever is to be attached to the calculations and remarks of "Œconomicus," for they form no means (or measure) for judging of the economy exercised in the management of the respective railways, *unless the rates of fares charged to their customers were alike on each line*, and it is quite notorious that this is not the case. For instance—

The Birmingham and Gloucester Railway Company state in their last Report (see *Railway Times*, 28th August last), that the fare derived from their passengers averaged 2¼d. per mile, and the London and Birmingham Railway Company, by their last Report, show a receipt of 262,893*l.* 2s. 6d. upon a traffic of 23,399,936 passengers over 1 mile, which divides out to 2¼d. per passenger per mile; whereas the Chester and Birkenhead Railway, so prominently thrust forward by "Œconomicus," only receive 1¼d. per passenger per mile (even excluding the distance they are conveyed by steam-boat and omnibus), being exactly half the London and Birmingham fares.

It is, therefore, clear that if that great Company with their great traffic, have with every attention to economy and good management, expended 39 per cent. for working expenses, if their income for the same traffic was cut down one-half, then these same expenses would be 78 per cent.!! And on the other hand, if the Chester and Birkenhead Railway Company had received 2¼d. instead of 1¼d. per passenger per mile, their income with the present number of passengers would consequently have been doubled, and then their working expenses would only have been half the amount inserted in "Economicus's" tabular statement, namely, 30 per cent. instead of 60.

But I must beg "Œconomicus" to refer to the printed reports of the last general meeting, wherein he will find that for 12 months ending 30th September, the expenses, exclusive of interest on loans, is 55 per cent. on the income, and not 60; or, deducting the cost of omnibuses and ferry-boats, it is 45 per cent. upon the present low fares. Therefore, if fares equal to the London and Birmingham had been received, the expenses would only be 27½ and 22½ per cent. respectively, and consequently upon a par with the line which he would have us to infer exceeded all others in good management.

The Lancaster and Preston Railway paid for

Digitized by Google

mileage duty for passengers 523*l.* 11s. 10d., see their half-year's Report, July 6, 1841, *(see Railway Times*, 21st August,)—which, at the well known rate of 1-8th of a penny per passenger per mile, shows their traffic to have been equal to 1,622,576 passengers over one mile, and the receipts in the coaching department to 12,155*l.* 15s. 2d., which divides out to fully 2¼d. per passenger per mile, showing that their charges are amongst the highest. Then, touching the lowness of the working charges, I apprehend they have coke at a low rate, being in a coal country; but an extract from the said Report shall conclude my observations:—"The North Union Railway Company have given notice of their intention to discontinue the arrangements with them for the joint working of the locomotive power, alleging that the amount of remuneration they derive is not sufficient."!!!

Every railway is peculiarly circumstanced some way or other; and I have little doubt but similar explanations might be given respecting other railways, but conceiving the foregoing is sufficient for the present,

I remain your obedient servant,
JOHN DIXON, C.E.

Birkenhead, October 26, 1841.

WORKING EXPENSES OF RAILWAYS.—THE GLASGOW AND GREENOCK RAILWAY.

To the Editor of the Railway Times.

SIR,—I approve of the suggestion of "Œconomicus," which appeared in your last paper, but beg leave to point out an error into which that writer has, no doubt inadvertently, fallen, in naming our Greenock and Glasgow Railway as a mismanaged line, because the expenses run away with a very large slice of the revenue. I admit that the expenses of managing railways ought to be much the same throughout the kingdom, but the profit must in a great degree depend upon the rates whether they be high or low. For instance, let us take the York and North Midland, as it is about the same length of the Glasgow and Greenock. That railway gets for every passenger, on an average, 2s. 10¼d. for the journey, or 1¼d. per mile, and in six months collected for 160,000 passengers the sum of 23,289*l.*—whereas our Greenock Railway can get only 1s. 2¼d. on an average for the journey, or 5-8ths of a penny per mile, and in six months from 383,376 passengers collected only about the same money, say, 23,199; so that the latter concern must carry annually 440,000 more passengers than the former to give the same amount of revenue; hence the per centage of working must appear much greater.

I beg that your correspondent will not put down the Greenock Railway as a *mismanaged concern*, although from circumstances over which the Directors have no control the fares are so exceedingly low, that a most extraordinary extent of traffic will be necessary to enable them to pay a decent dividend.

I am, Sir, your obedient servant,
A GREENOCKIAN.

Greenock, 26th October, 1841.

RATING OF RAILWAYS.

To the Editor of the Railway Times.

SIR,—I was glad to see the letter signed "Vicarius," with regard to the rating of railways, in the last number of your valuable newspaper, because I consider it a subject the discussion of which will be beneficial; and I am induced to offer the following remarks principally in order to promote that discussion.

In the first place, I conclude that railways should be rated precisely as the other property in the neighbourhood, and I think the clearest way of drawing a comparison will be by taking the gross produce in each case. Let us suppose a farm for example. The gross produce of the land is (we may suppose in round numbers) divided into three equal parts; one-third pays the rent, one-third the profit to the farmer, and the remaining third the expense of cultivation, &c. Now the farmer is rated for the land he occupies according to his rent, after having deducted from it for repairs, insurance, and some other charges mentioned in the Act; consequently, I consider that to act equally towards the railway, it should be rated at one-third of the gross revenue, after having deducted from that third, for the repairs, (properly so called) and the other items.

In some parishes the farmers are rated at much less than their actual rent, and in such cases I think that the railways and other property should be rated accordingly.

I am not aware how canals and other similar property are rated; probably they would be an additional guide.

I am, Sir, your obedient servant,
R. R. R.

October 26, 1841.

CARRIAGE OF GOODS ON THE GRAND JUNCTION RAILWAY.

To the Editor of the Railway Times.

SIR,—Much has been said of late relative to the exclusive manner in which the Grand Junction Railway] Company transact their business. Some of your correspondents seem not to be practically acquainted with the carrying business, whilst others prove by their remarks that they are fully conversant with the subject. In your No. 197, I observe a letter by "Observer S.," stating that the Grand Junction Railway Company wish to effect an arrangement with the Bridgewater Trust to convey iron from Preston Brook to Liverpool. On this subject I would remark, that an agreement has been effected between the parties, and I believe the trustees of the late Duke of Bridgewater will erect a suitable place on their Canal Bank at Preston Brook, and the Grand Junction Railway Company are to do the same on the side of the railway at that portion of the Duke's Canal, called the Cottons-bridge, which runs within a few yards of the railway, and is very suitable for the purpose, having already been used for transhipping coke. There is little doubt but it was with a view of ultimately effecting this that the Grand Junction Railway Company obtained a piece of land between Wolverhampton and Birmingham, for the purpose of receiving iron, &c., to forward by rail after being collected by boats from the iron works. It is well known that the iron masters consume a large quantity of limestone, which is principally obtained from the proprietors of the Trent and Mersey Canal Company, at Froghall, at a trifling cost, and from Wales by the Ellesmere and Chester Canal, who allow it to pass free of tonnage to Nantwich; but these advantages have been offered under the impression of having the manufactured iron returned along their canals. The important question here arises—Have the Grand Junction Railway Company any limestone on their property? If not, how will they supply the iron-works with this article, which is indispensable in making iron? It cannot be expected that the Canal Companies, who suffer the loss of their tonnage on the iron thus carried by rail, will allow the limestone to pass their canals free of tonnage, unless they get the carriage of the iron in return. I am certain that the proprietors of the Ellesmere and Chester Canal, who will be the principal sufferers, will take such steps as to best defend themselves against this new opposition. They can easily reduce their rate of tonnage on iron from 1d. to 1½d. per ton per mile, and charge a tonnage on the limestone, and thus try whether they or the Railway Company can carry for the least money. It has been said, that the Directors of the Grand Junction Railway consider that they can convey goods from Birmingham to Liverpool for 5s. per ton; as they have certain contracts which prevent their expenses increasing with an increase of traffic. This may do for a time, but notwithstanding, I believe their calculations to be erroneous. Although the interests of the Grand Junction Railway Company and the Liverpool and Manchester Railway Company are closely connected, I do think the Liverpool and Manchester Railway Company, as a body, cannot like the iron going from Preston Brook by the Canal and River to Liverpool, instead of passing on their line from Newton Junction to Liverpool.

I am, Sir, &c.
A MERCHANT.

Liverpool, October, 1841.

RAILWAY COMMUNICATION WITH SCOTLAND.

To the Editor of the Railway Times.

SIR,—It gives me great satisfaction to observe that the consideration of the extension of the two great lines of railway from their present termini (Darlington and Lancaster) to the metropolis of Scotland, engages the serious attention of the public interested in both lines. It does appear to me, that however much we might be benefited by both being executed, we can hardly anticipate more than one of them to be prosecuted forthwith.

Being a resident in the county of Durham, it might be thought that I should naturally incline to forward the views of those favouring an east coast line, but being a man of business, I hold it of little importance whether I proceed from Newcastle by way of Edinburgh or Carlisle for Glasgow, and with three-fourths of those that travel between the two countries a similar feeling will exist—the comparative distance being of no importance in railway travelling, where a few minutes only make up the difference.

Those promoting the east coast line have adopted the principle of using portions of existing lines to reach Newcastle, as being the most economical; and state in page 1,108 of the last week's *Railway Times*, that their plan is to follow very nearly the parliamentary line of the Great North of England Railway, from Darlington to Shincliffe, and thence by a new line to the Durham Junction Railway, from which point to Newcastle there is now a communication by existing railways.

I am induced to suggest to those parties that they ought to extend further south than Rainton the mode of adopting parts of present railways. Thus make the new railway from Rainton to Thrislington Pass, from that point use the Clarence Railway to Morden, when a short new portion would be necessary to join that railway again at How Hills, thence proceeding along it past Kirkmill Mill to the Great North turnpike road, where a new line may again be adopted to join the Stockton and Darlington Railway at Aycliffe-lane station. This portion might be in use in six months from the time it was begun to be made, would reduce the amount of capital they contemplate being necessary by nearly 200,000*l.*, and be only a few miles from Durham city.

I am, Sir, &c.
AMICUS.

Stockton-on-Tees, Oct. 25, 1841.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—I observe with pleasure in your number of the 16th instant, a letter from your intelligent correspondent "L.," relative to the probable dividends of the Great Western Railway, taken for the year 1844.

I fully concur with him as to the probable increase of traffic calculated by him for that year, that being moreover strongly corroborated by the actual increase during the last three years, experienced on the London and Birmingham, as follows:—

Receipts on 119¼ miles (including Aylesbury) for five weeks, ending—

1838—20th	October	£58,809
1841—16th	„	97,807
Increase		£33,998

equal to 63 18·100 per cent.

This surely furnishes a fair and safe ground of argument that the increase during the next three years on the Great Western will not be less than the 50 per cent. calculated by "L."

Agreeing with him thus far, I must however beg leave to protest most decidedly against the supposi-

Digitized by Google

tion involved in his calculation, that the cost may by possibility extend to the extravagant sum of seven millions! whilst I protest equally against another supposition that its whole cost, or anything like it, need be or can be capitalised (and at par only) by so premature a date as 1844.

The said seven millions is an idle rumour without foundation: it is a mere phantom, raised in a manner indicating that its motives are much to be suspected; a mere random guess, unsupported by a single fact or reason, and the authors of it (for anything they apparently know on the subject) might as well have placed it at eight or nine, or any other number of round millions which their fancy or malevolence might dictate. Though I do not contend that eventually a moderate addition to the 6,300,000*l.* may not possibly be expedient, it is confidently hoped that an addition so monstrous as 700,000*l.* beyond the 550,000*l.* is utterly out of the question, considering that the latter was announced as final after the line had been opened throughout, and (with one single exception) after all accounts of unsettled demands had been obtained. A sum of 700,000*l.* added to the 550,000*l.*, would be equivalent to an excess of no less than 127 per cent. and upwards! Is this credible?

The addition now of such a sum even as one hundred thousand pounds should, under the circumstances, be deemed large, and even this would be no slight reproach to the authorities, occurring, as it would, at so late a period of their proceedings, and after the manner in which they pledged themselves in opinion to the limit of 6,300,000*l.*

With respect to capitalisation, and at so early a date as in 1844, there is not the slightest reason or right to capitalise so prematurely more than the amount of debentures issued in anticipation of calls falling due to that period, viz.—

£300,000 in 1843, being on 37,500 fifth shares at	£ 8
250,000 in 1844, being on 25,000 shares at	10
£550,000	

the effect of which would be to change the present proportions of—

£3,025,000 received from calls.	
3,275,000 received and in the course of receipt from loans, at 5 per cent. interest,	163,750*l.*
£6,300,000	

to the following proportions:—

£3,575,000 from calls.	
2,725,000 from loans at 5 per cent.	
Interest,	136,250*l.*
£6,300,000	

Adopting the net traffic calculated by "L," viz., 700,000*l.*, this would yield dividends of not less than 15 per cent. per annum (with an annual surplus besides of 27,500*l.*), instead of 10 per cent. per annum, the result of his calculations for 1844.

This appears by the following statement, viz.—

Per calculation of "L." net traffic		£700,000
Interest on 2,725,000*l.*		136,250
Net revenue		563,750
Dividend on £3,075,000 at 5 per cent.		536,250
£6,300,000	Surplus....	£27,500

which would be adequate to the payment of interest on above half a million additional cost, if, contrary to my impressions, that should be needful.

As to capitalisation finally, it would be excessively profuse and wasteful to capitalise any part of the loans obtained not on deferred calls at the unfavourable rate assumed by "L." of par, by converting them into shares, which at the time of conversion were yielding considerably more than 10 per cent. per annum in dividends, and therefore the Company may confidently pass a resolution not to convert into shares any loans not raised in anticipation of calls, except at a premium commensurate with the co-existent dividends.

A statement of the years wherein the debentures issued in anticipation of calls will become due, as explained in the Half-Yearly Report of February last (see *Railway Times*, 27th February, 1841), is subjoined.

Yours respectfully,

F.

Statement—

Year 1843 on 37,500 fifth shares at £8		£300,000
1844 on 25,000 shares	10	250,000
		£550,000
1845 on 25,000 shares	5 .. £125,000	
37,500 fifth shares	8 .. 300,000	425,000
1846 on 25,000 shares	5	125,000
1847 Nil.		
1848 on 25,000 shares	5	125,000
1849 on 25,000 shares	10	250,000
On deferred calls		£1,475,000
Not on deferred calls—		
One-third of £2,500,000	£833,333	
One-third of 1,250,000	416,666	
Further	550,000	1,800,000
Total loans		£3,275,000
Raised by calls not deferred—		
25,000 shares at £65	£1,625,000	
25,000 half do. at 50	1,250,000	
37,500 fifth do. at 4	150,000	3,025,000
Present capital		£6,300,000

Bath, 21st October, 1841.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—I beg to offer a few remarks on the letter of your correspondent "H. H." in your number of 23rd inst. It is most satisfactory that he coincides with your correspondent "L." as to the traffic amounting in 1844 to one million, and considers that it has the appearance of being "anything but exaggerated."

With respect to his objection that the 7th inst. was too early for "L." to form an estimate for the month, it has occurred peculiarly to the Great Western that its traffic in passengers and also in goods has improved as the month has advanced, notwithstanding the approach to winter and much unfavourable weather, the week ending the

3rd	Oct. having produced	£13,115
10th	" " "	13,285
17th	" " "	13,545
24th	" " "	12,992
Together		£52,937

As regards working expenses, the 30 per cent. estimated by "L." is certainly low, but much good may be expected during the next three years from the continual improvements and economy occurring in locomotives, fuel, consumption of fuel, &c. &c. In order, however, to meet this objection of "H. H." suppose 35 per cent. to be allowed, and suppose also, as a concession to those who want confidence in the limit of 6,300,000*l.* capital that 200,000*l.* be added thereto, making six and a half millions, there would still result dividends in 1844, equal to 14 per cent. per annum, with a surplus besides of 2,700*l.* The calculations for this are subjoined.

Yours respectfully,

F.

Bath, October 27, 1841.

Calculation—

Gross traffic estimated by "L."		£1,000,000
Working expenses—allow 35 per cent.		350,000
Net traffic		650,000
Interest as per former statement, on 2,725,000*l.*	£136,750	
Further interest on additional 200,000*l.* allowed	10,000	146,750
Net revenue		503,250
Dividends per annum 3,575,000*l.* at 14 per cent.		500,500
Surplus		£2,750

COMPARATIVE SPEED OF RAILWAYS.

To the Editor of the Railway Times.

SIR,—I have annexed a Table showing the relative rate of speed upon English railways of more than 50 miles in length, which may be useful to some of your readers as a means of comparison.

The data upon which the calculations are founded are taken from the latest edition of "Bradshaw's Railway Companion"—in which, by the way, there is an omission in the table relating to the Great Western Railway, the time of arrival of the down trains at *Bristol* not being given.* The particulars of the South-Western and Brighton Railways not being given in this work, I have gathered them from their own Time Tables.

The Directors of the latter line, the London and Brighton, have announced an *express* train, stopping only once in the whole distance of 50 miles, and of course performing it in a much less time than the other trains. This is an experiment which I think might be beneficially introduced upon other railways. For instance, an express train each way upon the Great Western, in the middle of the day, calling only at Reading, Swindon, and Bath, and performing the distance between London and Bristol in three hours, would be of great advantage. Similar trains, also, between London and Liverpool, upon the London and Birmingham and Grand Junction Railways, might be arranged in the same manner. Your pages contain sufficient evidence, in notices of performances both on the Great Western and other lines where expresses have been needed for any particular purpose, to show that these fast trains could be arranged with ease as to time, were they considered otherwise expedient; and I therefore trust that the Brighton experiment will prove successful enough to induce others to follow the example.

I am, Sir, your most obedient servant,

G.

Bristol, October 25, 1841.

SUNDAY TRAVELLING ON RAILWAYS.

To the Editor of the Railway Times.

SIR,—On the 16th October there appeared in your paper an article from the *Examiner* against those persons of the voluntary system in Scotland who wished all Sunday traffic to be done away with on railways (and indeed altogether.) The wish of these parties, I doubt not, originates in a good intention, but they should consider Sunday, as regards mechanics and others of this stamp, that it is the only day afforded to a very great mass of the people to breathe the fresh air of the country, and thus very materially increase their stock of health. But on the other side, the Directors of Railway Companies should consider a little their clerks, police, &c., and cause their trains to run at such times, as should their servants feel disposed, they might attend a place of worship; and surely out of the numbers employed on railways some would take advantage of the time thus given and attend their church; should 1 out of 100 go, it would yet be something gained. We hear of clergy being employed during the formation of lines to preach to the labourers; then why, let me ask, when the work is finished should their servants be, as it were, prohibited a place of worship? Some Companies look, I believe, to this, but not all, and some look to the times the trains leave the termini, but do not consider at what time they reach the intermediate stations. Again, the police can never leave their stations, and thus are entirely debarred access to the church. Surely the Companies might arrange so that they should be relieved for three hours on a Sunday during service. You may answer—would they then go to church? I reply—the opportunity is afforded; the sin if they go not rests on themselves.

I am, Sir, your most obedient servant,

A LAYMAN OF THE CHURCH OF ENGLAND.

October 24, 1841.

RAILWAY SALARIES.

To the Editor of the Railway Times.

SIR,—Your correspondent "C." seems to have taken umbrage at my note, which you published in your paper of the 16th instant, as commenting with "undue warmth on a letter which appeared in your columns signed 'A Friend to the Subs.,'" which letter he asserts had "*truth* for its basis." I am very sorry, indeed, to find what I had considered an atrocious calumny, confirmed by the testimony of one whose situation, as a "Railway Clerk," should afford him daily opportunities of being well informed on the subject, and I must therefore come to the conclusion that "conductors and contractors" are quite ready to unite with unprincipled clerks in attempting to increase that remuneration for their services which they had voluntarily agreed to receive, by defrauding their employers. Directors and Managers of Railways will doubtless look to this, and adopt such precautions as will protect the property of which they are the guardians.

I will endeavour to avoid converting a public question into a private quarrel, by refraining from indulging in remarks which your correspondent "C.'s" letter is well calculated to call forth; but I would beg to remind him, and every one similarly situated, that the remuneration for their services will always be regulated by the relative supply and demand at market; and whilst every clerk has a perfect right to value his services at the highest price which he can obtain, his employers unquestionably possess the equal right of securing that help which they require on the most favourable terms. I believe the fact to be, that no one situation in or about a railway office is filled by any person who has not had competitors equally qualified to discharge the duties, and who would gladly have hired themselves upon the same terms; and if "C.," who gets paid at the "magnificent rate" of 4s. per diem, is dissatisfied with the "paltry pittance," he has only to intimate as much personally to his employers, and I will venture to assure him that he will neither be compelled nor entreated to remain much longer in so despicable a situation. Mr. "C." may take my word for it, that his true policy is, so to discharge the duties of his present situation as to qualify and recommend him to a better; and that any one who endeavours to make him and his fellow-servants discontented with situations which, but very lately, they were solicitous to obtain, is no friend to either subs or superiors.

I am, Sir, yours, &c.,

AN OLD CLERK.

October 27, 1841.

LONDON AND BRIGHTON RAILWAY—THE LATE ACCIDENT.

To the Editor of the Railway Times.

SIR,—Several letters have recently appeared in your paper relative to the alleged causes of the recent accident on the Brighton Railway, some ascribing it to the imperfections of Bury's engine, others to the bad state of the works, the subsidence of the road, &c.; but on looking over the evidence given at the inquest we learn that the road was in a good state of repair, the rails true to the gauge, and the only evidence we have of the defects of the engine, is that of the engine-driver, whose *scientific* knowledge in the matter appears to me to be very limited.

Now I am of opinion, in the absence of more direct proof, that the true cause is to be assigned to the not laying down the rails on a curve with the proper inclination, that is, to keep the outer rail of the curve sufficiently higher than the inner rail to counteract the centrifugal force of the train, which must have been very great at the rate of speed they were in the habit of going, and I think the fact of their engines getting off the rails twice within the week previous, so far justifies me in coming to this conclusion. This is a point much overlooked by the contractors employed to lay down the permanent way works, and which the engineers do not enforce owing to the great hurry consequent on the opening of their railway to the public, but indulging the hopes of being able to accomplish it at some future period by packing up the blocks to the proper level and inclination. From my own personal experience in the execution of railway works, I have frequently observed contractors' waggons get off the rails when the tramroad was nearly perfect in every other respect but in this particular, and when not going above three miles an hour.

You are aware that the liability to accidents increases with the velocity of the train, and in a great measure from the circumstance of the train leaving the rails in the direction of the tangent of the curve when there is nothing to counteract this tendency; and therefore I say that particular attention should be paid to the laying down the permanent way on a curve with the proper inclination. The formula for finding out this difference of level between each line of rails, I beg to lay before your railway readers; viz., first let V, equal velocity of train in miles per hour, R = radius in miles; g = gravity per second; w = gross weight of train; D = width of gauge between rails.

The centrifugal force $C = \frac{V^2}{R} \times \frac{5280}{3600^2 g} \times W$

$$C = \frac{1}{79012} \frac{V^2}{R} \times W$$

Then as $1 : \frac{1}{79012} \frac{V^2}{R} \times W :: D$ to the difference of level of rails.

Or in a simpler form, thus:—divide the velocity in feet per second by the constant, 4.01, and the square of the quotient by double the radius of the curve; the result multiplied by the weight of the train will be the centrifugal force at that velocity of the train; then as 1 is to the centrifugal force of the train, so is distance between the rails or gauge, to the difference of height of each line of rails in decimal of a foot.

Your constant reader,

JACOB.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—I hope I may be permitted through the medium of your valuable publication, to call the attention of my brother shareholders to the errors that I conceive have been committed, and from an advertisement in this day's newspapers. I fear will further be committed, in the management of the affairs of this Company.

I think in the first place the fares, particularly the second class fares, were fixed much too high. Having a powerful coach interest to contend against, they should have been at least fixed at something less than the coach fares, instead of being screwed up to the very highest point allowed by law. I know of no better guide than the Manchester and Liverpool Railway, a railway in proportion quite as expensive as the Brighton, and which has flourished upon the system of low fares. If the first class had been fixed at 12s. 6d., the second at 7s. 6d., and passengers carried in the goods train at 5s. or 6s., I have no doubt most of the coaches would have been withdrawn at once. It is only in my opinion with low fares that the railway has any chance of success; it is upon the middle classes that our main reliance must be placed.

With respect to the lamentable accident I have no wish to throw blame upon the Directors, as it may be presumed they acted upon the advice of their Engineer in the speed used on the railway, still that speed was the main cause of the accident, there can be no doubt on a line newly made and amidst such incessant rains. On the Birmingham line, I recollect the speed was not more than 18 or 20 miles an hour, for many weeks or months after the opening.

I have little to say on the Patcham Tunnel entrance, but I think the laconic letter of the worthy Secretary tended rather to increase than allay fears; "a quantity of chalk," without qualification, was the very worst expression that could be used.

I now come to the proposed alterations. First

Digitized by Google

it is proposed to carry passengers in the goods' train, at 7s. As the best Brighton coaches carry them now at 8s., and the inferior coaches at 1s. or 2s. less, I presume few will be found to travel in a goods train at such a fare.

As to the system of day tickets proposed in the advertisement, I approve much of it, if adopted in the spring or summer months, but at this season of the year the effect I fear would be to cause a diminution instead of an increase in the Company's receipts, as not many at this season would be tempted to spend a day at Brighton. The privilege, therefore, would be principally used by those who have business either at London or Brighton, and who would travel by the Railway whether there was a day-ticket system or not. The scale is also very much open to objection,—first-class passengers 20s., second-class passengers 15s., only 5s. difference. This is much too little. Would not 12s. or 13s. for second-class be much better? I am aware the object is to drive passengers into first-class carriages, but this may be carried too far, as it is possible in straining it too much, to lose second-class passengers altogether.

I am, Sir, your

CONSTANT READER & SUBSCRIBER.

28th October, 1841.

DURHAM AND SUNDERLAND RAILWAY.

To the Editor of the Railway Times.

SIR,—Accept my most sincere thanks for the course you have taken in reference to the Durham and Sunderland Railway Company, which has met with the approval of the most influential parties in this district, not of course including the Contractor-Directors of that line. Such remarks will do much to open the eyes of the shareholders, who have been so disgracefully imposed upon by them. In this place, Sir, I beg to remark, that the name of the Company should be changed to the Sunderland and Houghall Railway. It was originally entitled to its present appellation by the first Act, which received the Royal Assent 13th August, 1834, and which stated the terminus to be in Gilligate-street, Durham. But lo! on the 30th June, 1837, these parties obtained an Act to alter and abandon part of the line which led to Durham, and to close their operations in another direction, viz.—"to commence at a field called Broomside, in the township of Pettington or Pittington, Hallgarth, and to terminate in a field in the township of Elvet Barony."

Some malevolent parties have been kind enough to hint that this was done for the purpose of bringing the line near to some property belonging to Thomas Bowlby, one of the Directors; the coal under which had been taken by Mr. Backhouse, and some other of the Directors, at a place they call Houghall, the expense of making which you will perceive, on reference to the account herewith enclosed, so that the line will now terminate about a mile and a half or better from the city of Durham. To give, however, the Directors credit for their own assertions, this deviation was for the purpose of getting near a contemplated line of the Great North of England Railway, to enable them to reap some of the profits from that undertaking, but they must have considered this object either not desirable or not attainable, for at neither of the meetings held lately where deputations from different Companies have attended, so as obtain a completion of this line to Newcastle, has a Director or a deputation attended from the Durham and Sunderland Railway to look after this fancied interest.

Having now disposed of the title of this Railway, I beg leave to enclose for your use copies of authentic documents which have fallen into my hands, and will furnish you with more subsequently, by which you will see what a notable lot of managers (I will not say for themselves) there is among the Directors, and how necessary it was that such a motion (or even a much more stringent one) as that proposed by Mr. Singers should have been carried. I crave your attention to the list of Directors, and the *immense* number of shares the Contractor-Directors hold in the undertaking. You will observe there are ten at the least out of the fifteen who are contractors, and if properly probed, I have no doubt there would be found more. I solicit your notice to the exorbitant rate of discount charged by Mr. Backhouse to his brother Directors, and know I shall be met by the wily Quaker, stating, "friend, if thou likest not my way of doing business, thou art welcome to remove thy account, only thou must first pay me my money, or I will take thy line." I trust, Sir, having once begun with this business, you will not let it drop until you have accomplished the emancipation of the majority of the suffering shareholders from the hands into which they have been precipitated by an over-blind confidence in the apparent money-respectability of the Contractor-Directors. I have given you sufficient, I think, to digest at present; but soon I will return to the subject again, expressing my thanks for your independent observations.

I am, Sir, your most obedient servant,

TALWIN.

Newcastle upon Tyne.

PRESENT DIRECTORS.

Edward Backhouse, 31 shares, banker, (Durham and District Bank) and coalowner.
Christopher Bramwell, 14 shares, Hendon-house, landowner.
William Bell, 28 shares, Fordhouse, coalowner.
Caleb Wilson, 15 shares, Bishop Wearmouth.
Turner Thompson, 40 shares, Bishop Wearmouth.
Thomas Robson, 25 shares, Bishop Wearmouth, ballast contractor.
Thomas Wood, 19 shares, Bishop Wearmouth, ballast contractor.
William Kirk, jun., 30 shares, Bishop Wearmouth, coalowner.
Joseph Price, 213 shares, Gateshead.
Andrew White, 16 shares, Bishop Wearmouth, coal-owner.
Richard White, 13 shares, Bishop Wearmouth, ditto.
John Mounsey, 18 shares, Bishop Wearmouth, ditto.
John Scott, 15 shares, Bishop Wearmouth.
Benjamin Parker, 70 shares, Bishop Wearmouth.
Thomas Bowlby, 20 shares, Bishop Wearmouth, owner of the land which Messrs. Backhouse and Co. rent as a colliery at Houghall.

And there is another Director, not contemplated by the Act, called David Jonassohn, a ballast contractor, who takes, as a matter of course, a seat at all meetings.

DURHAM AND SUNDERLAND RAILWAY.

To the Editor of the Railway Times.

SIR,—I take the liberty of inclosing copies of two letters addressed to the shareholders of the Durham and Sunderland Railway, the first previous to the General Meeting in September, 1840, and the other in September, 1841. As I happen to be one of the unfortunate shareholders, I beg to tender you my best thanks for the very able and independent remarks contained in your numbers of October 9th and 23rd.

The *Northern Times*, I observe, has attempted a defence of the Directors. On this defence I have a few observations to make. They say, "the contractors who sit in the Directory, as it is assumed to the number of five or six, are not contractors for the supply of articles for the use of the railway, but coalowners and landowners on the line, who have contracts with the Company for the carrying of their coals to Sunderland, or for wayleases through their land." Now, I would simply ask in what respect these differ from smaller contractors, who may have articles to supply. They make a bargain *with themselves*, and as you very justly remark, while Mr. A., a Director, lets his land at an exorbitant rate to the Company, it is overlooked by Mr. B., another influential Director and coalowner, on the understanding that his coals shall be carried at a certain rate. Can anything be more improper, not to say, dishonest, than this?

The Directors also claim the merit of liberality to the shareholders, inasmuch as they "actually consented to an increase (of a halfpenny per chaldron,) on the conveyance of their coal to Sunderland, on the one hand, and a considerable diminution of rent for way-leave on the other." A little explanation may throw some light on this very "honourable" conduct alluded to by the writer of the article in the *Northern Times*. These Directors had involved the Company in a very large debt, a considerable part of which was advanced by the Northumberland and Durham District Bank, one of the Directors of which, is not only a Director of the Railway Company, but also a very large coal-owner, and consequently from his connection with the Bank, has considerable influence with the other Directors. Some time ago finding the debt inconveniently large for the Bank, he threatened to seize the railway, unless some means were devised to extricate them from their difficulties. As the money, from the bad repute of the concern, could not be borrowed in the ordinary way, a plan was proposed to the shareholders to advance the sum of 15*l.* per share; and, as an inducement for such additional advance, the rates for carriage of coals were advanced from 3d. to 3½d. per chaldron, while the way-leave rents were simultaneously reduced. This, however, was to be for a limited period only, and when the affairs of the Company were in a better plight, the former rates were again to be recurred to. Now, Sir, what we complain of is, that the charge for the conveyance of coals is, *even yet*, extremely low, while the charge for way-leave rents, in many instances, is exorbitantly high. It is for these acts of *generosity*, which in fact had become absolutely necessary, otherwise the railway must have been laid in (which would have suited the coal and land-owners even worse than the shareholders), that the Directory claim so much merit.

The next charge against the Directors is, their declaring dividends out of the capital stock of the Company, and not out of the profits, as prescribed by the Act of Parliament. I know many of the unfortunate shareholders, who were induced from this circumstance to embark their capital in this undertaking, on the faith that not only would there be a continuance of these dividends, but every prospect of an increase of them was reasonably to be looked for. It is but a very lame defence for the Directors to say, that such dividends were approved of by the shareholders. In the first place, the shareholders had no means of judging whether such dividends were proper or otherwise, as there was no publication of accounts. It is well known that the Directors always objected to any publication of the accounts of the concern, and in one case they even took upon themselves not to carry the resolution of a meeting of the shareholders into effect, after such resolution had been regularly passed, that the accounts should be printed for distribution, thus placing themselves in direct opposition to the wishes of the shareholders. When they thought fit therefore to *recommend* a dividend, it is quite absurd to suppose that the shareholders who were kept in profound ignorance of the affairs of the railway would have objected to receive it. The Directors are, therefore, clearly chargeable, having practised a *delusion* on the shareholders.

I am, Sir, &c.

A SHAREHOLDER IN THE DURHAM AND SUNDERLAND RAILWAY.

Newcastle on-Tyne, Oct. 26, 1841.

P.S. There are either 14 or 15 Directors, *no fewer than ten of whom* are Contractors with the Company, and who have an interest diametrically opposed to that of the shareholders.

BIRMINGHAM AND GLOUCESTER RAILWAY.

To the Editor of the Railway Times.

SIR,—As you were so obliging to insert my last communication about five or six weeks ago, on this subject, I have again to request the insertion of the following, especially as inquiries have since been instituted in your paper as to the reasons of the great depression of these shares, compared with the York and North Midland, &c., and especially as the calculations I furnished you with have never been impugned from any authority, and the lapse of time *has more than realised* both the true and assumed data. The only reason, therefore, that can be assigned for the high discount is, the great scarcity of money, or attempts of prejudiced or interested parties in their depression, as the annexed table of returns, for 16½ weeks, will show that the shares

Digitized by Google

are paying at present *more than consol interest*, at the original price of 100*l.* per share, after paying 5 per cent. on the borrowed capital: therefore, as the market price would give nearly 7 per cent. to purchasers, with the probability of their reaching par at no distant day, no shareholder would be so infatuated but for want of money, I conceive, as to part with them.

I am, Sir, yours, &c.,
AN ORIGINAL SHAREHOLDER.

Birmingham, October 28, 1841.

Birmingham and Gloucester Railway. Statement of Traffic and Revenue, from June 30, 1841, *to October* 22, 1841, *being* 14½ *weeks.*

Reserved fund, June 30, 1841, of undivided profits					10,000	0	0
Net revenue, Oct. 22, 1841					£28,897	4	0

P.S. Nearly half, if not quite half, of these shares are firmly held in this locality.

My former calculation was 4 per cent. dividend, on 2,000, week average to Christmas, with the reserved fund. The preceding, shows 1,358*l.* over to the present time, towards any deficiency for the next 10 weeks.

The new traffic arrangements with the Grand Junction, for goods between Liverpool Manchester and Bristol, *via* Birmingham and Gloucester Railway, commence on Monday next, which promises 500*l.* per week when developed.

COACH ACCIDENT.—On Sunday evening, when the up mail from Louth and Boston was near Gosberton, the horses took fright, and started off at their utmost speed, notwithstanding the exertions of the coachman to check them; the animals continued their career until they arrived at a bridge, over a drain, against which they dashed the coach, and by the concussion the passengers were precipitated into the drain, from which, we are happy to add, they were all safely extricated. The mail-bags and passengers were forwarded in an omnibus. —*Boston Herald.*

COKE.—THE LIVERPOOL AND MANCHESTER RAILWAY COMPANY are desirous to receive TENDERS for the supply of COKE, of the best Quality, suitable for Locomotive Engines. The term, six months certain; and the quantity, 50 to 100 tons per week; to be delivered on the Railway, either at Manchester, Parkside, or Liverpool, day by day, in quantities proportionate as nearly as practicable to the weekly supply. The deliveries to commence on the 1st of January next.

Tenders, at a price per ton, delivered, must be sent to the Directors, Lime-street Station, Liverpool, on or before Friday, the 12th November; and a trial of the Coke will be required before making a Contract.

Further particulars, if required, may be had on application to the Treasurer.

By order of the DIRECTORS.

Liverpool, 25th October, 1841.

HALEY'S PATENT LIFTING JACK, Manufactured solely by Messrs. W. and J. GALLOWAY, Engineers, Manchester.

The attention of parties who employ Lifting Jacks, is respectfully requested to the superiority of the above over those hitherto in use. Having a claw the same as the "Rack Jack," it will lift either from the top or below, and is not more than half the weight and bulk. The handle may be let go with the lift on, and remains stationary, and quite safe.

Each working piece is Engine-cut and Case-hardened.

LONDON AND SOUTH-WESTERN RAILWAY.—In consequence of numerous representations that the proposed discontinuance of some of the Trains now running, would inflict serious inconvenience to parties travelling by the Line, the Directors have determined to continue running the present trains at the accustomed hours until further notice, viz.:—

DOWN TRAINS FROM VAUXHALL.

By Order of the Directors,
ALFRED MORGAN, Secretary.

29th October, 1841.

ACHILLES BRITISH AND FOREIGN LIFE ASSURANCE ASSOCIATION AND LOAN BANK—to be empowed by Act of Parliament; Capital £500,000. in 20,000 shares, at £25 each; Deposit £2 10s. per share.

DIRECTORS.

George Henry Brown, Esq. | Arthur Bolland Field, Esq.
Thomas R. Davison, Esq. | John King, Esq.
Edward Chas. Eddrup, Esq. | John Milner, Esq.
Robert Embleton, Esq. | George Tanqueray, Esq.
John Baker Wright, Esq.

With power to add to their number.

Auditors—Thomas L. Davison, Esq.; John Partridge Makeham, Esq.

Bankers—Union Bank of London.

Physicians—James Arthur Wilson, M. D., 28, Dover-street, Piccadilly; Richard H. Goolden, M. D., 8, John-street, Adelphi.

Surgeons.—Thomas Blizard Curling, Esq., 1, Mount place, London Hospital; William B. Langmore, Esq., Finsbury-square.

Standing Council.—Edward Younge, Esq., 1, New square, Lincoln's Inn.

Solicitor.—Thomas Butts Tanqueray, Esq., New Broad-street.

Secretary.—Dr. Adolphus Courvoisier.

Every description of Assurance may be effected, either with or without participation in profit.

Table of rate *with participation in profits*, for assuring £100 on a healthy life *for the whole term.*

Age	15	25	35	45	55
At premium per cent.....	£1 15 3	£2 4 6	£2 16 6	£3 17 1	£6 13 9

Premiums may be paid yearly, half-yearly, or quarterly.

Loans are granted on real or personal security to individuals assuring their lives with this Association.

Prospectuses to be had, and application for the remaining shares, and for agencies, to be made to the Secretary, at the temporary Offices, 35, New Broad street, City.

TO WHARFINGERS, BUILDERS, RAILWAY CONTRACTORS, HORSE DEALERS, &c.—Thirty remarkable fine-shaped young powerful CART HORSES, selected as the best portion from the valuable Stock of Mr. Thomas Brassey (the Gosport Junction Contract being completed).

Mr. D. NICHOLSON will submit to public competition, at the Railway Terminus, Nine Elms, London, on Tuesday, November 2nd, 1841, at Twelve o'Clock, Thirty seasoned Draught Horses, well adapted for London trade, in strength combined with activity, and in keeping for immediate work.

Colours,—Blacks, Browns, Bays, Greys, and Chesnuts; also, an excellent Hackney Mare 15½ hands high, and a handsome Cob, sound and quiet, fit for saddle or single harness, together with an assortment of useful harness.

The whole is taken direct from work, and will be submitted without any reserve.

On view Monday and Tuesday previous to the Sale, Catalogues had at Mr. Watkins', Three Goats' Heads; Nine Elms, and at the Auctioneer's Offices, Wandsworth, Surrey.

TO RAILWAY DIRECTORS, SHARE PROPRIETORS, AND THE PUBLIC.—Collisions on Railways neutralized, whereby the lives not only of the passengers but the engineers will be preserved, and but little or no damage done to the locomotives and the carriages.—Mr. EDWARD BURRELL is induced further to publish a suggestion (he has long since made) of a simple, feasible, and not an expensive REMEDY for PREVENTING ACCIDENTS by collisions on Railways, in any way, even in a similar case to the awful crash and melancholy catastrophe resulting from a recent occurrence where the locomotives were propelled off the rails. The inventor is desirous of superintending the plan (which is approved of by many scientific persons) himself, to prove its practicability and efficacy, feeling confident that the result will be successful. By the adaptation of his suggestions a great expense will be saved to the Companies, as the application of them will entirely supersede the necessity of the buffer springs. Plans may be seen and further information obtained by addressing letters, pre paid, as above, at 5, New Terrace, Camberwell Green.

Just published.

TO AGRICULTURISTS, LANDOWNERS, AND SURVEYORS.—MODEL MAPPING as Suggestive of a general and economic System of Drainage and Irrigation. Royal 8vo., with Plates, price 2s. 6d.

John Weale, Architectural Library, 59, High Holborn; and Wm. Grapel, Church-street, Liverpool.

THE LONDON AND BRIGHTON RAILWAY GUIDE, illustrated by the Official Map and Section, and a full description of the Line and adjacent country; together with a Time and Fare Table, and a List of Hackney Coach and Cab Fares to the Stations, from all parts of London and Brighton.

By order,
THOMAS WOOD, Sec.

No. 10, Angel-court, Throgmorton-street,
October 27, 1841.

LONDON AND BRIGHTON RAILWAY.—

The Directors regret extremely the inconvenience and delay experienced by the passengers on this line yesterday, in consequence of a fall of earth in the cutting, at Merstham, occasioned by the excessive rains.

They are happy to add that no accident occurred, and that in the course of a few days the trains will again run throughout.

In the meanwhile, every possible arrangement has been made to accommodate the public with carriages between Merstham and Hooley House, a distance of four miles.

By Order,
THOMAS WOOD, Secretary.

10, Angel-court, Throgmorton-street,
29th October, 1841.

SOUTH-EASTERN RAILWAY.—TO CONTRACTORS FOR FENCING.—The Directors will meet at their Office, 10, Coleman street, London, on Tuesday, the 2nd day of November next, at half-past One o'Clock in the Afternoon precisely, to receive TENDERS from parties willing to CONTRACT to FENCE OFF the LINE of RAILWAY with post and rail fencing from the Bethersden and Hothfield turnpike road, in the parish of Bethersden, to the Foord Valley, in the parish of Folkestone, being a distance of 18 miles or thereabouts.

The specification and conditions of Contract may be seen on application to Mr. John Wright, Resident Engineer, Railway Office, Dover, to Mr. P. W. Barlow, Resident Engineer, Railway Office, Tunbridge, and at the Office of Mr. Thomas Thurston, Land Surveyor, at Ashford, on and after Thursday, the 21st instant.

The Directors will not consider themselves bound to accept the lowest Tender, nor will any Tender be received after One o'Clock on the day appointed for receiving the same.

By order of the Directors,
J. S. YEATS, Secretary.

Railway Office, 10, Coleman-street, October 19, 1841.

PARISIAN BITUMEN COMPANY, Millwall, Poplar.—The Directors of the above-named Company beg to call the attention of Engineers, Architects, Surveyors, Builders, and the Public generally, to the applicability of the BITUMEN manufactured by them, as a pavement or flooring; also for its use in covering arches for the prevention of damp and preservation of the masonry.

They beg also to state that it has been used very successfully as a cement for masonry on the weirs of the Upper Medway, and is particularly applicable to hydraulic works and foundations of heavy buildings.

They beg to submit the following list of prices, and to state that they will guarantee the durability and efficiency of any work executed by them.

	s.	d.
Covering viaducts or arches of bridges, vaults, terraces, &c., 1¼ inch thick, per square yard	4	6
Paving pathways, kitchens, cellars, granaries, malt houses, warehouses, &c. 1½ inch thick	4	6
Paving barns, court yards, tun rooms, wharfs, stables, &c. 2 inches thick.....	5	6
Paving walks, &c. ¾ inch thick	3	6

The above charges are exclusive of the cost of carriage, which must be borne by the parties by whom the work is required.

W. MACKENZIE, Superintendent.

BIRMINGHAM AND DERBY JUNCTION RAILWAY.—New Shares.—Fourth Call of £5 per Share, making £25 per Share paid up.—The Directors of the Birmingham and Derby Junction Railway Company having resolved that an INSTALMENT of £5 on each of the New Third Shares in this undertaking, created under the provisions of the Act relating thereto, passed in the session of Parliament (3 Vict. Capt. 51) payable on or before the 5th day of November next, should be called for, proprietors of such New Shares in this Company are hereby required to PAY, on or before that day, to any of the undermentioned Bankers, the sum of FIVE POUNDS on each of their respective New Shares:—

BANKERS.

London—Messrs. Glyn, Hallifax, Mills, and Co., Lombard-street.
Birmingham—The Birmingham Banking Company.
Manchester—The Manchester and Salford Bank.
Derby—Messrs. W. and S. Evans.
Burton-upon-Trent—The Burton, Uttoxeter, and Staffordshire Union Banking Company.
Sheffield—Messrs. Parker, Shore, and Co.

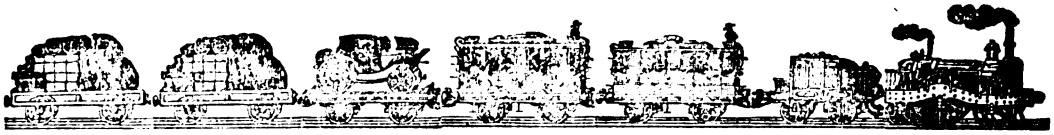
The bankers have been severally instructed to charge interest at the rate of £5 per cent. per annum, according to the provisions of the Act above referred to, from the 5th day of November next, on all sums which shall be tendered after that date.

(Signed) HENRY SMITH,
Chairman of the Board of Directors.
THOMAS KELL, Secretary.

Waterloo-street, Birmingham, Oct. 8, 1841.

GLASGOW, PAISLEY, KILMARNOCK, and AYR RAILWAY.—The Directors of this Company will receive applications for the OFFICE of SECRETARY until Wednesday, the 24th day of November next. Salary, £400 per annum.

It is requested that letters of application shall contain testimonials, and references as to qualifications, and be addressed to "The Directors of the Glasgow, Paisley, Kilmarnock, and Ayr Railway," and left at their office here.



Railway Office, Glasgow, 21st October, 1841.

CRANES AND HOISTING TACKLE of every description, of the best materials and workmanship, and capable of lifting from 5 cwt. to 20 tons and upwards, with or without steam power, made by ELLIS & NOTON, who take this opportunity of respectfully soliciting an inspection of their Drawings and Patterns, at the IRWELL FOUNDRY, Salford, Manchester.

"Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 201. Vol. IV.—No. 45.] SATURDAY, NOVEMBER 6, 1841. [Price, 6d.

PROPOSED PLAN for the establishment of a GENERAL OFFICE for the use of TRAVELLERS BY RAILWAY and STEAM NAVIGATION, where the public could readily obtain every species of information that might be useful to or required by Travellers, either on business or pleasure, by any of the various Railway and Steam NavigationConveyances throughout the United Kingdom, more especially as relates to the hours of departure and arrival, the scale of fares, and the different regulations of each, for conveying Passengers and Goods; to be formed under the sanction and patronage of the several Boards of Direction and Management of the Companies now in existence.

It is proposed that a complete Register be kept of all the Railway Conveyances, systematically arranged for the convenience of immediate reference, setting forth every station at which the trains stop on the respective lines, and the several stations and booking offices from whence passengers and goods may be conveyed.

That the proposed Office be furnished with the printed placards and hand-bills from all the different Companies, for reference and distribution to the public, who should receive gratuitously every information required.

That a like Register be kept of all the Steam Navigation Conveyances, and a similar distribution be made of the hand bills of the different Companies, and every information respecting them be given in the same manner.

That a communication be opened for correspondence with the respective Secretaries to enable the Manager of the Office to give answer to such inquiries as might arise, and which their printed hand-bills do not furnish, and that the Secretaries would from time to time give the Manager immediate notice of every alteration affecting the conveyance of passengers and goods.

The Manager of the Office would undertake to transmit by post any hand-bill or specific information, which might be required by persons residing in the country, and who could not conveniently attend personally to obtain it.

That such Office be fixed at some centrical point (being a public thoroughfare) at the West End of the Town, holding connection with a similar establishment in the City, and to be open to the public every day, Sundays excepted, and that the Office shall be furnished with geographical maps and plans of the Railways.

It is proposed that arrangements should also be made which would embrace an extension of the plan, by collecting information of the various establishments on the Continent of Europe and elsewhere, for conveyance by Railway and Steam Navigation, as it is considered that by centralizing these various objects at one place, a complete Emporium will be formed for obtaining that general information which Travellers so much require, and this concern founded upon such an enlarged and comprehensive scale as would ensure the contemplated benefit and advantage to the several Companies interested, as well as for its becoming a medium of the greatest public utility.

NATHANIEL W. SYMONDS.

Lombard Street Chambers, Clement's Lane,
27th October, 1841.

*** Any suggestion to improve or add to the usefulness of the above plan will be thankfully received.

ANDREW SMITH'S PATENT WIRE ROPES, for STANDING RIGGING, LIGHTNING CONDUCTORS, STROPPING OF BLOCKS, MINING, RAILWAY, and GENERAL PURPOSES; about half the Size and Weight of Hempen Ropes, and 25 per cent. cheaper. Testimonials to that effect, with Specimens, may be seen, and every information obtained, at the Manufactory, Mill-wall, Poplar; and also of the following Agents:

Robertson and Co., 12, Gores Piazzas Liverpool,
Mathias Dunn..... Newcastle-upon-Tyne
Joseph Bothway..... Plymouth.
John Thompson and Co. ..... Wigan.
J. T. Tregellas..... Truro.
Thomas Mooney and Son..... Dublin.
Coates and Young ..... Belfast.
James Kibble and Co. ..... Glasgow.
James Gunn..... Leith.
John M. Beatts, 14, Clement's-lane, High-street, Dundee.

This Rope has been in use for standing rigging in her Majesty's navy, and a great number of merchant vessels, for upwards of six years, and is giving the highest satisfaction. It is also employed in various mines and railways in different parts of the kingdom.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secresy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 230, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

This day is published,

TUCK'S MAP OF THE RAILWAYS throughout ENGLAND and WALES to the Capital of Scotland, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s. 6d.; in paper covers, 1s.; mounted on canvass, in cloth case, 2s. 6d.; on rollers, 3s. 6d.

Published at the *Railway Times* Office, 122, Fleet-street, and sold by Groombridge, Panyer-alley, and R. Tyas, Paternoster row; Hyde & Co. and G. Bell, Fleet-street; Mann, Cornhill; and by all booksellers and Newsmen.

ROBINSON'S RAILWAY DIRECTORY for 1841, containing the Names of the Directors and principal Officers of most of the Railways in Great Britain, derived from authentic sources, price 1s. *Railway Times* Office, Fleet-street.

Just published, a new Edition of ROBINSON'S

RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Map, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Price 1s., in cloth. *Railway Times* Office, and Hyde and Co., Fleet-street.

Just published,

MAPS OF ALL THE LINES OF RAILWAY through ENGLAND and WALES, showing the country in their immediate vicinity on a larger scale than was ever before displayed in a sheet pocket map, with a compendium of Railway information. In paper cover 1s., in cloth 1s. 6d.

Published at the *Railway Times* Office, 122 Fleet-street, and sold by all booksellers.

BRISTOL AND EXETER RAILWAY COMPANY.—TENDERS FOR LOANS ON DEBENTURE.—The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising therefrom, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest at the rate of Five per cent. per annum, payable half-yearly at the Bank of Messrs. Glyn, Halifax, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Prince's street, London, or Broad-street, Bristol.

By order of the Board of Directors,

J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol.

SHEFFIELD, ASHTON-UNDER-LINE, AND MANCHESTER RAILWAY.—Call for Twelfth Instalment.—The Directors of this Company having resolved to make a CALL under the provisions of the Act of Parliament for an Instalment of Ten Pounds per Share, Notice is hereby given, that the several Proprietors in the Capital Stock of the said Company are required to pay the said call or Sum of Ten Pounds on each of their respective Shares on or before the 7th day of December next, to one of the undermentioned Bankers, viz.:—

Sheffield—Messrs. Barker, Shore, and Co.

Manchester—The Manchester and Liverpool District Bank.

London—Messrs. Rogers, Olding, and Co.; and Messrs. Smith, Payne, and Smith.

Interest after the rate of 5 per cent. per annum will be charged by the Bankers on all such sums as shall remain unpaid after the said 7th day of December next, until payment thereof.

The Directors take this opportunity of stating, that £5 per cent. per annum is allowed on all sums paid in advance.

By order of the Directors,

JOHN PLATFORD, Secretary.

15, Piccadilly, Manchester, November 3, 1841.

TWENTY CART-HORSES, BRICK AND RUBBISH CARTS, HARNESS, &c.

TO BE SOLD BY AUCTION, by Mr. DIXON, at his Repository, Barbican, on Friday, November 12, 1841, commencing at Twelve o'Clock, Twenty fine, young, seasoned CART HORSES, Four large and Three small BRICK CARTS, with Tall and Fore-Ladders, Harness, &c., the property of Mr. J. Rhodes, sold in consequence of his having disposed of his Brick Fields.

The above are worthy the attention of Brick-makers, Contractors, Wharfingers, Wholesale Warehousemen, Brewers, Distillers, Corn and Coal Merchants, &c., being mostly young, powerful, and active—from constant work—and for unreserved sale.

Colours—Bays, Greys, Roans, Blacks, and Browns.

On view, and Catalogues had, two days previous.

CHIPPENHAM, WILTSHIRE. — EXTENSIVE SALE of CAPITAL DRAUGHT HORSES, HARNESS, &c.—Messrs. Mansell and Kayns have been favoured with instructions from the Proprietor, to Sell by Public AUCTION, in the Market Place, Chippenham, on Friday, the 12th day of November, 1841, at Twelve o'Clock to a minute, 26 valuable and very powerful young Draught Horses, 40 Sets of Harness, a very strong Spring Cart, equal to a ton and a half weight, Chaff Box, &c., the genuine property of Mr. R. Brotherhood, whose orders are to sell without the least reservation, in consequence of the ballasting on the Great Western Railway between Wootton Bassett and Chippenham being completed, in which work Mr. B. has been engaged.

The Horses may be seen from 9 o'Clock on the morning of sale, at the Bear Inn stables, Chippenham, where Catalogues may be had, and of the Auctioneers, Malmesbury and Chippenham.

GREAT WESTERN RAILWAY.—A First Floor to Let, Furnished, and a Bed-Room for a Single Gentleman, No. 8, London-street, near the Terminus

REPORT OF THE SELECT COMMITTEE OF THE HOUSE OF COMMONS ON 11TH CLAUSE OF THE RAILWAY REGULATION BILL.

MINUTES OF EVIDENCE.

(*Continued from page* 1107).

Samuel Laing, Esq., called in; and Examined.

1272. Mr. Labouchere—What situation do you hold in connexion with the railway department of the Board of Trade?—I conduct the legal department, and general business and correspondence.

1273. Were you present when the solicitor of the Grand Junction Company made a statement to this Committee upon the subject of a correspondence which has taken place between the Board of Trade and that Company?—I was present; and, with the permission of the Committee, I have a statement I wish to make respecting the course adopted by the Board of Trade upon that occasion. The proceedings of the Board of Trade, with reference to the case of Pickford and Co. *versus* the Grand Junction Railway Company, have been as follows: Mr. Baxendale, on the part of Pickford and Company, addressed a memorial to the Board of Trade, complaining that the Grand Junction Company had, with a view to obtaining a monopoly of the carrying trade between Lancashire and London, exceeded and infringed the provisions of their Acts of Parliament, and acted in an oppressive and illegal manner towards his firm. He further stated, that from the evidence given by Mr. Moss, the Chairman of the Company, before the Select Committee on Railways of last session, he was led to believe that the illegal conduct of which he complained resolved itself into certain acts of partiality shown towards another firm of carriers, Messrs. Chaplin and Horne, and that under that impression he applied to the Queen's Bench for a mandamus to compel the Company to treat all parties using their line alike, in conformity with the provisions of their Acts. That this application was dismissed upon a preliminary point of form, and that from the affidavits filed by the Company in the case, it assumed a new aspect, viz., that Chaplin and Horne were not carriers using the railway, but agents of the Company, and therefore that the illegality consisted in a systematic violation of the provisions of their Acts on the part of the Company. That under these circumstances, he had been advised that redress could not be obtained by renewing his action, without difficulty and delay; and he submits that the case is one which the Board of Trade ought to take up, under the clause of Lord Seymour's Act which empowers them to make Railway Companies conform to the provisions of their Acts.

1274. Lord Granville Somerset—Is the statement you have made of Mr. Baxendale's communication to the Board of Trade a summary of his memorial, or was it an oral communication made by Mr. Baxendale in person to the Board of Trade?—It is a summary of his memorial, officially addressed to the Board of Trade. The Board of Trade sent a copy of this memorial to the Company, with a letter, calling upon them for explanation upon the points in respect of which they were alleged by Pickford and Co.'s memorial to have acted illegally. These points were, first, the general charge of having acted illegally, by assuming functions unauthorised by their Acts; secondly, certain specific charges, which, if established, would show that the Company had indirectly charged unequal rates, in order to favour themselves as carriers. These points were specified in the letter, in order to get rid of a great deal of irrelevant matter contained in the memorial, which would probably have led to a long and useless discussion upon the general question discussed before the Committee last year, of carrying upon railways. It was considered to be most desirable for the Company, as well as for the Board of Trade, at once to separate the specific allegations of illegal conduct, upon which alone there was any possibility of the Board being called upon to act, from the general arguments upon the carrying question, which could lead to no result. It was stated to the Company that the Board of Trade pronounced no opinion upon these points until both parties had had an opportunity of laying their statements fully before it, and that future proceedings would be guided mainly by the opinion the Board should then form as to whether Pickford and Co. had succeeded in establishing their case. The Grand Junction Company objected to this proceeding on the part of the Board of Trade, and although it is believed that these objections were founded upon a misunderstanding which has since been explained, and that the Company no longer entertain the feeling which has been expressed relative to the course taken by the Board of Trade; still, as these objections have been stated before the Committee, and as they involve several points which are very material with reference to the construction of Lord Seymour's Act, and to the future proceedings of the Board of Trade under it, it is thought desirable to submit the following statement to the Committee. The objections raised before the Committee, rested, as it is understood, upon two grounds: first, the particular ground, that the Company was called upon to furnish evidence that might be prejudicial to it in certain legal proceedings then pending; secondly, the general ground, that the case was not one in which the Board of Trade ought to have interfered under the provisions of Lord Seymour's Act. With regard to the first objection, it seems sufficient to say, that the memorial of Pickford and Co. states, that the action which they had commenced had been dismissed upon a point of form, and was then out of court altogether, and the application to the Board of Trade to prosecute is founded expressly on the ground that the case had assumed a more general aspect, which rendered it not advisable for Pickford and Co. to renew their action. Of course, if the Board of Trade had entertained Pickford and Co.'s application, it would have made it a condition of undertaking the prosecution, that Pickford and Co. should bind themselves not to prosecute on their own account. If there were actions pending between the Company and Pickford and Co., (of which the Board of Trade had no knowledge until it was so stated before the Committee), the Company had only to state the fact to the Board of Trade, together with the reasons why they conceived that the circumstance of an action being then pending rendered it unnecessary and inexpedient for them to furnish the explanation asked by the Board; and they may depend upon it that such statement would have been fully and fairly considered by the Board of Trade before any step was taken adverse to the interests of the Company, or uncalled for by the circumstances of the case. The only remaining objection under this head is, that as the Board of Trade might ultimately decide on prosecuting, it was wrong to ask the Company for information which might be used against them. them. The answer is, that it would be quite inconsistent with the principles upon which the Board of Trade has always acted, to commence a prosecution against a Railway Company upon an *ex parte* statement, without having in the first place considered any counter statement the Company might have to make; and, in the second place, if convinced that the Company was in the wrong, tried every means of effecting an amicable arrangement. This is clearly the intention of Lord Seymour's Act; for it is expressly provided that no certificate shall be given to the Attorney-General, with a view to commencing a prosecution against any Railway Company, until 21 days after notice of the intention to issue the same shall have been given to the Company; a provision which is obviously intended to give the Company an opportunity of making a statement in reply, and to afford time for making an amicable arrangement. In the present instance, moreover, the information asked for by the Board of Trade could not by any possibility have prejudiced the Company, inasmuch as the Company have of their own accord given publicity to their case, by publishing the affidavits filed in the late action in the Queen's Bench, in a railway newspaper.

1275. Lord Stanley—Did those affidavits of which you have spoken accompany the memorial to the Board of Trade?—No. Secondly, with regard to the general point, that interference on the part of the Board of Trade in such a case as that raised by the memorial is not justified by a fair construction of Lord Seymour's Act. It has been asserted that the operation of that Act was intended to be confined to points bearing upon the question of the public safety; and, in support of this construction, the preamble has been appealed to, which states "that it is expedient for the safety of the public to provide for the superintendence of railways." No principle of law is more certain than that the preamble does not control the express words of an enactment, and can only be looked to as a means of ascertaining the intention of the legislature when the construction is doubtful. In the present case it is evident that the preamble cannot be resorted to as a means of constructing the Act, inasmuch as several of the most material clauses, as, for instance, those relating to returns of tolls, traffic, &c., and to supervision of bye-laws, have obviously no relation to the question of safety; moreover, in the clause which empowers the Board of Trade to institute prosecutions for the enforcement of the provisions of Railway Acts, the words "public advantage" are used, and it is declared that the Attorney General shall proceed "to recover such penalties and forfeiture, or to otherwise enforce the dues performance of the said provisions by such means as any person aggrieved by such non-compliance might employ under the provisions of the said Acts." Even if the terms of the Act had been less decisive, the Reports of the Select Committee on Railways, and the proceedings in Parliament upon Lord Seymour's Act, would have set the question of intention at rest. The Act was introduced in conformity with certain resolutions of the Committee, which recommend the establishment of a general superintendence and control over railways, on the ground, not of public safety, but of "the absence of any effectual check from the operation of free competition," and the possession on the part of Railway Companies "of a practical monopoly." The fifth resolution, upon which the clause in question is grounded, is to the following effect, "that it is the opinion of this Committee, that it should be the especial duty of this department to see that the several provisions contained in all Acts of Parliament, having reference to railways, are duly observed, so far as the public interests are concerned; and this department shall be authorised to institute legal proceedings, at the public expense, in cases where such provisions have not been complied with." The 11th clause of Lord Seymour's Act was framed upon this resolution; and so far from its being conceived that the Act was intended to bear exclusively upon the question of the public safety, in the different discussions which took place upon the Bill in the House of Commons, the subject of the prevention of accidents (which had then attracted but little attention, and had been very little discussed before the Committee) was hardly mentioned. The chief subject of discussion was the propriety of enabling the Board of Trade to call for returns which would distinguish the charge made for toll from that for locomotive power. Admitting, however, that the case in question comes within the legal construction of Lord Seymour's Act, it is said that it is not a proper case for the interference of the Board of Trade, because it is the case of a private individual, or Company, and not one of public interest. Looking at the language of Lord Seymour's Act, which declares that the Attorney-General shall proceed, under the certificate of the Board of Trade, to enforce the provisions of Railway Acts by such means as any person aggrieved by non-compliance with such provisions might have resorted to, it is evident that the Legislature contemplated interference in the case of private persons; that, in fact, it considered that the protection of private persons against illegal acts on the part of powerful corporate bodies might in some cases afford a sufficient public reason to justify interference. This view was clearly taken by the Committee on Railways, as is proved by the following passage in their Report (Second Report, 1839, p. xiv):—"Your Committee do not hesitate to repeat their opinion, that some such superintending Board will be required for the purpose of protecting the weak against the strong, and counteracting the evils incident to monopoly." In the present instance, however, the case raised by Pickford and Co.'s memorial is pre-eminently one of a public nature; that memorial being the only document before the Board of Trade, and the only question could be, whether, upon the face of the memorial, the Board of Trade ought to have refused to have anything to do with it. The following remarks, therefore, must be taken as relative only to the case raised by that memorial, and not at all to the case as it may ultimately appear when the counter-statement of the Grand Junction Company has been received and considered. The allegation of Messrs. Pickford and Co. is, that the Grand Junction Company having undertaken a business which they are not authorised to do by their Acts, viz. that of general carriers of goods between London and Lancashire, have, for the purpose of obtaining a monopoly in that business, refused to carry goods upon the railway between London and Lancashire, unless the parties who employ them as carriers upon the railway, employ them also, or pay them if they do not choose to employ them, for distributing the goods from the terminus to their destination. This charge may be true, or it may not, but there can be no question that it is one of a public nature; in fact, a great part of the Reports of the Committee on Railways consists of evidence upon this very point. Petitions, signed by merchants, manufacturers, and other parties, were presented, stating, that they viewed with great alarm the prospect of Railway Companies obtaining a monopoly of the carrying trade, and that they greatly preferred employing private carriers. It was even pressed that Railway Companies should be prevented from acting as carriers at all. The Committee rejected this proposal, and reported to the House, "that at the present time any legislative interference for the purpose of preventing Railway Companies obtaining a monopoly of convey-

Digitized by Google

[illegible] objectionable;" but in the whole course of the discussion it was never even hinted that Railway Companies were to be allowed to obtain this monopoly by denying to carriers using their line (and therefore virtually to the public, who preferred employing such other carriers) the rights guaranteed to them by the Acts of Incorporation of the Company; which, whether truly or falsely, is the charge alleged against the Grand Junction Company by Pickford and Co. This charge being made, and the interference of the Board of Trade being formally called for, there were only three courses which it was possible to adopt. First, to refuse to interfere; or, secondly, to refer the memorial at once to the Attorney-General; and if his opinion was favourable upon the points of law, to commence a prosecution; or, thirdly, to communicate the memorial to the Grand Junction Company, and call upon them amicably for an explanation upon the points in which their conduct was alleged to be illegal. The first of these courses, it is conceived, the Board of Trade could not have adopted without a manifest dereliction of the duty imposed upon it by the legislature. The second course would have been justly subject to the imputation of acting with an undue degree of harshness and precipitancy towards the Railway Company. The third course, which is that which has been actually adopted, appears under these circumstances to have been the only one which could have been pursued with a due regard to the interest both of the public and of the Grand Junction Company itself.

1276. Has the question been since disposed of between the Board of Trade and the Grand Junction Company?—I cannot say that it has been officially disposed of, for the statement of the Grand Junction Company is not officially before the Board of Trade; but it has been stated by the Grand Junction Company, and I have no doubt of the fact, that an action is pending which involves one of the principal points raised by Mr. Baxendale, which we had no knowledge of at the Board of Trade.

1277. While the action is pending, of course it is not the intention of the Board of Trade to interfere?—I should think not.

1278. Lord Granville Somerset.—Will you state how the department which has been in the habit of attending to the concerns of railroads since the passing of the Act of last Session, is constituted: will you first state the gentlemen upon whom more particularly the duty is devolved, and then state how it is carried out?—It is devolved principally upon me and upon Sir Frederic Smith; it has devolved upon me to carry into effect the principles laid down by the President of the Board of Trade, and to conduct the correspondence. The engineering department has been of course with Sir Frederic Smith, since his appointment as permanent Inspector-general attached to the Board of Trade.

1279. Since when has Sir Frederic Smith had that appointment?—It was in December, I think.

1280. Various other engineer officers were employed by the Board of Trade, as well as Sir Frederic Smith?—In the first instance.

1281. Since Sir Frederic Smith's appointment, has the whole engineering department been placed under his superintendence?—Yes.

1282. And the legal department under yours?—The legal department and general department. In fact Sir Frederic Smith and I have conducted the whole business of the railway department, under Mr. Labouchere.

1283. What does Mr. Porter do, with regard to this particular business?—Mr. Porter was engaged at Paris in a commercial negotiation for a considerable time after the Bill passed, and on that account he was not able to take an active part in it at first, and he has many other engagements at the Board of Trade, and therefore he has not taken a very active part; he has confined himself principally to the statistic department.

(To be continued.)

RAILWAY ADJUDICATIONS.

MORRIS *v.* THE PRESTON AND WYRE RAILWAY COMPANY.

Court of Queen's Bench, Nov. 3.—Mr. KNOWLES moved in this case for a rule to show cause why a verdict should not be entered for the plaintiff upon the count for work and labour done. It was an action brought by the plaintiff against the Company for certain work done upon their line of railway. The case was tried before Mr. Justice Wightman at the Lancashire Assizes, and a verdict entered for the plaintiff upon the count for goods sold and delivered, and for the defendants on the other counts, with liberty to enter a verdict for the plaintiff on these counts for such sum as an arbitrator might deem proper. The defendants pleaded that they were never indebted, payment, and a set-off. It appeared that there was a special contract entered into with the plaintiff to prepare a certain portion of the line for the locomotive engines, and this was marked upon a plan signed by the principal engineer, Mr. Stephenson. Shortly after the contract was commenced the plaintiff discovered that one part of the line was in such a state that it would require a great deal more work than was originally estimated, and that he would be obliged to throw up the contract, which would prevent the line being opened at the time which was originally contemplated. It was then agreed that Mr. Stephenson and some of the Directors should go over the line, and see how the difficulty might be obviated. It was proved in evidence that Mr. Stephenson himself, after going over the line, had made an alteration in the plan with his pencil, and it was agreed that the plaintiff should execute that, as though it had been the line originally marked out; and further, it was agreed that for the work which the plaintiff had done upon the original line, and which it would be necessary to undo, the plaintiff was to be paid. The plaintiff now sought to recover a verdict upon the count for work and labour done—namely, for doing and undoing certain work upon the part that had been rendered useless. It was clear that the plaintiff's claim for that work could not be included in the special contract, because the line was opened on the 1st of May, and at that time all the work under the contract had been executed; but the portion of the work to which he now referred, was not completed till the 27th of May.

The Court thought it would be desirable to see the original contract before giving its decision.

THE QUEEN *v.* THE SHERIFF OR UNDERSHERIFF OF MIDDLESEX.

Court of Queen's Bench, Nov. 4.—The Attorney-General applied for a rule to show cause why a *mandamus* should not be issued to the sheriff of Middlesex, or his deputy, commanding him to proceed with the hearing of this case, which was a precept issued to him to ascertain the amount of compensation to be given to a Mr. Walker for the deterioration of his premises by the making of the Blackwall Railway. The Company was not compellable to purchase any dwelling house which was situated at more than fifty feet distance from the railway. Mr. Walker, who conceived that his property had been injured by this railway, went through the usual proceedings, and issued a precept to the sheriff to summon a jury for the purpose of assessing his compensation. When the jury had been assembled the defendant's counsel objected that the under-sheriff had no power to proceed with the investigation, inasmuch as the whole of the house was not within fifty feet of the railway. The case was argued on this objection, for a part of the house was within the distance, but the under-sheriff adopted the objection. Application was made that to save expense the jury should be called on to give a verdict, so that if the court should think that the investigation ought to have been proceeded with, the expense of coming down again might be avoided; but this application was refused, and the matter was dismissed. It was plain that the under-sheriff had mistaken his course in this proceeding.

The court granted a rule to show cause.

SHARPE AND OTHERS *v.* THE GREAT WESTERN RAILWAY COMPANY.

Court of Exchequer, Nov. 3.—This action was tried before Mr. Justice Wightman, at the late Liverpool Assizes, when a verdict was found for the plaintiff, with 662*l.* damages.

Mr. Wortley now moved for a rule to show cause why that verdict should not be set aside, and a new trial had on the ground of misdirection. He said the plaintiffs were eminent machine makers at Manchester, and had entered into a contract with the Directors of the Great Western Railway Company to make for them ten engines, with their tenders, of the best materials and workmanship, at the respective prices of 1,850*l.* and 450*l.* By the contract, the plaintiffs were to be held liable for the engines during a month's trial, and while they ran 1,000 miles. The engines were all delivered, were tested according to the contract, and settled for with the exception of the above balance. Subsequent to the engines having been accepted, the fire-box of the engine, called the panther, burst. According to the specification, that part of the engine was to be 7-16ths of an inch thick, but this one was found to be no more than 3-16ths. He did not impute any fraud or carelessness to the plaintiffs, but he was prepared to show at the trial that they had got some copper, which was so impregnated with some foreign matter, that by some chemical process, it had worn away by the oxygen of the water. He contended at the time that he was at liberty to enter into these particulars, but the counsel for the plaintiff objected that by the terms of the contract the makers were released from all liability the moment the engines were tested by running 1,000 miles, and the expiration of a month; and his Lordship, upon being pressed, acceded to his view of the matter. He contended that the meaning of the contract was that the engines should be tested as to their working condition and strength, and the defendant could not be concluded by their acceptance of them, when, as in this case, they found there had been a departure from the terms of the contract and specification. When the engine burst it was found that the boiler had iron fastenings, or rivets, in place of copper ones. His Lordship would have allowed him to go into that, but he (Mr. W.) refused to enter upon any single part of his case. He submitted that he was entitled to a rule.

The Court was opinion that, according to the true meaning of the contract, after the engines had been on trial for one month, and had performed 1,000 miles, if they were then perfect and accepted by the Company, they were concluded from all challenge afterwards. The contract was fulfilled and the plaintiffs released. They were of opinion that the learned Judge was right, and therefore refused the rule.

BRISTOL AND GLOUCESTER RAILWAY.

To the Editor of the Railway Times.

Sir,—Your correspondent "G." in your journal of the 30th ultimo, wishes to be informed why "calls" are not made on the proprietors of this railway. I apprehend that he cannot be so uninformed as not to know, that calls have been made; the reason why not more recently is, that the funds in hand have been sufficient.

Whether designating himself "A Subscriber" is intended to apply to the railway or to your periodical I do not know; but if to the former, I beg to inform him that the works are proceeding with all necessary dispatch, and that his anxiety on the subject of "calls" will speedily be satisfied.

I am, Sir, yours, &c.

LOCKING RAILWAY CARRIAGE DOORS.

To the Editor of the Railway Times.

Sir,—As many complaints have been made on the subject of the Great Western Railway locking the doors of their carriages, allow me to call the attention of parties so complaining to the two recent fatal accidents on the Grand Junction, which would not have happened had the Great Western mode of locking the carriage doors been the established rule. When railway carriages are in motion, whether fast or slow, it is dangerous in the extreme for passengers to attempt getting in or out; the doors are then at least best locked.

When the train halts, any passenger can ask to be let in or let out, and if prevented by the police or porters, surely it is better than risking being killed.

LACHESIS.

2nd November, 1841.

CLARENCE RAILWAY COMPANY—SPECIAL MEETING.

A SPECIAL MEETING of the proprietors of the Clarence Railway Company was held on Tuesday, at the "George and Vulture" Tavern, Cornhill, to take into consideration various circumstances connected with the present portion of the undertaking; HENRY BLANSHARD, Esq., in the Chair.

The proceedings occupied upwards of four hours, but the various discussions were so irregular—embraced so much that was merely of a local interest—were so abundant in personalities, and entered upon so many of the points agitated at the meeting held in the same place in August last, of which we gave an account at the time, that a slight descriptive sketch of the business will suffice. The topics principally brought forward were three: first, the financial position of the Company at the present moment; secondly, a difference which has arisen with a neighbouring Company; and thirdly, the constitution and conduct of the Committee of Direction. All these were mixed up together at different stages of the proceedings, but it will contribute to brevity and render our notice more intelligible if we take them separately.

With respect to financial matters, it appeared that the original funds of the Company have long since been exhausted, and that various amounts have subsequently been raised among the proprietors bybonds. A sum of 11,000*l.* had also been advanced by the Exchequer Loan Commissioners, of which amount there had to be repaid on the 1st instant 6,000*l.* At the last meeting it was stated that 16,000*l.* would clear the Company from all their liabilities, or at least that it would go so far towards settling the claims upon them, that arrangements could be made with reference to the remainder, so as to obviate the necessity of any farther call upon the proprietors. Upon that occasion, therefore, the proprietors were strongly urged to come forward and further subscribe for bonds in proportion to the amount of their shares; but it appeared from the Report of the Committee read on Tuesday, that out of the 16,000*l.* not more than 4,940*l.* had been subscribed, namely, 3,595*l.* unconditionally, and 1,345*l.* contingent upon the sum of 8,000*l.* being raised. The Exchequer Loan Commissioners had the power of seizing upon the whole line, if the 6,000*l.* above mentioned had not been paid, and under these circumstances certain members of the Committee (who had previously rendered themselves personally liable for claims upon the Company), advanced the sum referred to. Mr. Deputy Blackett, (formerly a Committee-man), said, that he had advanced 750*l.*, and in doing so, he was perfectly satisfied that he ran no risk whatever—that his money was as safe in that investment as it could possibly be in any other, for that the Company were in a perfectly solvent state, and their prospects of revenue most promising, provided their present difficulties could be at once surmounted. The propriety of relieving from personal responsibility the gentlemen who had stepped forward to [illegible] the undertakiag, was strongly advocated by Mr. Arnold and other shareholders. Ultimately a resolution was unanimously passed, urgently recommending to those shareholders who had not yet subscribed (as already noticed) the policy and necessity of doing so without delay. It was stated that the present gross annual revenue of the Company was now at the rate of 27,000*l.* and the ordinary current expenditure about 18,000*l.*, the surplus of which would go to the Exchequer Loan Commissioners, who, it was explained, had behaved with much forbearance towards the Company. It was expected that the annual revenue would shortly be 40,000*l.*, while the expenditure would not exceed 25,000*l.* In reference to the lien which Government has on the line, it seemed to be the opinion of one proprietor that it would be better to let the Commissioners take possession of the railway at once than to be repeatedly calling upon the shareholders for more capital. To this it was answered that in that case the line would at once be sold to the highest bidder, and under present circumstances, would probably realize little more than the Government debt, and the other outstanding liabilities of the Company, in which case the whole of the shareholders' investments would be utterly lost. It was argued further, that to take such a step at the present moment would be an act of suicidal madness, now that the railway was completed, and a large and lucrative traffic was in prospect. It was adduced as an encouragement to perseverance and to the investment of a small additional sum, that the Stockton and Darlington Company had at one period been placed in circumstances of nearly equal difficulty, and yet the 100*l.* shares of that undertaking had lately been sold at 270*l.* each. It was explained that the Clarence Railway had cost only 12,500*l.* per mile, which, as the country through which it passed is a difficult one, was considered very cheap.

Another subject of discussion, and one which repeatedly called forth angry expressions from the various speakers, was the springing up of certain differences between the Clarence Company and the Stockton and Hartlepool Company, with respect to the haulage of coals. It appears that the Stockton and Hartlepool Railway was originally formed as an auxiliary to the Clarence, into which it runs, the one line terminating at the port of Hartlepool, the other at port Clarence. Up to the present time (as far as we could understand the relative position of the two Companies) it appeared the Clarence engines hauled the coals from the pits direct to the port of Hartlepool, when intended for that place of shipment, not only doing the work on their own line, but also on that of the Stockton and Hartlepool, that Company till very recently not having provided themselves with engines for that purpose. Lately, however, the Stockton and Hartlepool Company have contracted with the owners of certain collieries to take the produce of the mines direct from the pit to the port of Hartlepool, Mr. Jackson, having advised them they have power, under the Clarence Acts, to run on that line under certain conditions. It appears that Mr. Jackson, who is the solicitor to the *Clarence* Company, has taken an active part in carrying out this arrangement of the Hartlepool Company, Mr. Jackson being a proprietor in both lines. On one occasion an unfortunate *fracas* took place between the officers of the two Companies, in which Mr. Jackson was on the Hartlepool side. In their Report, laid before the Meeting on Tuesday, the Clarence Directors alluded to this circumstance in terms which might be construed into some imputation upon Mr. Jackson's motives. That gentleman indignantly repelled any such insinuations, and both by reading a very voluminous letter which he had addressed to the Committee of Management, and by verbal explanations, went fully into the case. He stated that he held exactly the same number of shares in both Companies, and that it was with a view to their mutual advantage that he had stirred in this matter. He reminded the Committee that at a late meeting they had stated that no profit was made by the haulage, and that their engine-power was insufficient, and thence argued that it was doing the Clarence Company a service for the Hartlepool Company to assist them. He mentioned that the coal-owners would complain of the detentions which would be occasioned by a change of engines, and said if the engines of the Hartlepool Company were not allowed to run throughout, the coal-owners would assuredly start engines of their own, as they had power to do. He argued very forcibly that the haulage could be done much more cheaply by one engine running throughout than by changing them at the junction. He complained of the mode in which his name had been mentioned in the Report, and said it was unworthy of the Committee to stand upon the mere form of the Hartlepool Company not having given legal notice of their intention to run upon the Clarence line, when such intention was virtually known to the officers of the Clarence Company. He said this was precisely the conduct which the Clarence Company had formerly reprobated in the Stockton and Darlington, although in the latter case the Company had no legal *locus standi* such as the Hartlepool Company had. He said it had originally been intended that the Clarence engines should work both lines, and that an agreement to that effect with Mr. Nicholas Wood had actually been drawn up, but at the request of the Clarence Committee a system of divided haulage had been substituted. He courted the fullest enquiry not only into that part of the transaction which related to himself, but into the matter generally, for he was convinced that it would be found best for all parties that both lines should be open to either Company. In answer to Mr. Jackson it was stated by the Chairman, by Mr. Morrice a member of the Committee, and other gentlemen, that the haulage had formerly not been profitable because the traffic had been comparatively small, and because they had not then a sufficient supply of engines. The traffic was now increasing and they had a sufficient stock of locomotives, some of which would be rendered useless if the Hartlepool Company were to work upon the Clarence line, and moreover that if the haulage were divided, neither Company would at times have an adequate load for an engine, thereby adding to the expense of working. Mr. Child, the Company's Superintendent, was about to reply to the letter read by Mr. Jackson, and the statements he had made with respect to the question of haulage and the steps taken by the Stockton and Hartlepool Company to force their engines on the Clarence line, but was opposed by Mr. F. S. Stokes, Manager of the Company, on the ground of his not being a shareholder. After a vast deal of discussion on this point, it was suggested by Mr. Gainsborough that these were points of detail which ought to be left in the hands of the Management, and ultimately the matter was dropped, Mr. Deputy Blackett earnestly recommending a speedy and amicable settlement of the dispute between two Companies whose interests were so closely identified.

The next matter brought before the meeting had reference to the constitution of the Committee of Management. It appeared that Mr. Jackson, and

Digitized by Google

others of the country proprietors, are anxious for the establishment of a resident Board of Management, and a meeting was to be held at Stockton on the 4th instant (Thursday last), to consider this subject. The Committee are resident in London, and at the last meeting had expressed their determination to resign, unless the money required to pay off the liabilities of the Company were forthcoming. In their Report of Tuesday, they stated, however, that at the urgent request of some of the principal proprietors they had consented to retain office for some time longer, more especially as they saw the attempt now making to secure a country Management. The appointment of such a Board they strongly deprecated, because among other reasons they feared that the interests of the Clarence Railway would be sacrificed to other interests, if the parties now advocating the change should succeed. They stated that a country Management had already been tried and found ineffective. It was further contended that London Directors being removed from local influence could best secure the prosperity of the undertaking. On the other hand, the retirement of Mr. Glyn and Mr. Hodgon from the Board of the North Midland Company, solely on the ground of non-residence, was quoted as a case in point. The conduct of the present Committee was commented upon in exceedingly strong terms by Mr. Rowley, who stated, that he had invested upwards of 7,000*l.* in the undertaking, and had never yet received a farthing's dividend. He said he had come 150 miles to attend the present meeting—the first he had ever attended. He charged the members of the Committee with extreme inefficiency, and with putting forth inconsistent and unintelligible and delusive statements. Mr. Yates spoke to the same effect. Mr. Gainsborough and several other gentlemen defended the Committee, and stated that the errors which had been committed had arisen from previous country Committees. The conduct of the Committee in making themselves personally responsible for the liabilities of the Company, was highly eulogised by several speakers. It appeared, that up to last year they had been acting gratuitously, and now receive only 350*l.* among them—which it was explained was not enough to pay their travelling expenses, and which some of the members expressed their willingness to give up at once. A vote of confidence in the Management was at last carried *nem. dis.*, and subsequently another resolution, appointing a deputation of three proprietors, and three members of the Committee, to attend the meeting at Stockton, and express such confidence, and the strong wish of the proprietors that the management should not be transferred to the country. In the course of the discussion, Mr. Jackson in answer to questions, distinctly affirmed the impossibility of any danger arising to the Clarence Company from any Board that could be formed in the country—even if the parties composing it had a larger interest in the Hartlepool Company than in the Clarence—as the coalowners would send their coals to any port and by any railway they pleased. Mr. Morrice and others anticipated much mischief from such an arrangement. Mr. Jackson took occasion to speak very favourably of the prospects of the line, though he thought the management might be greatly improved. He however imputed no dishonourable conduct to any member of the Committee. Mr. James Blackett spoke rather sharply of the interference of the professional adviser of the Clarence Company in matters which, if carried out, could not fail to turn to the disadvantage of his clients. Mr. Jackson reiterated that good, instead of mischief, would result, if the views which he had repeatedly urged upon the attention of the Committee were acted upon.

Another subject was brought before the meeting by Mr. Stokes, the present Manager of the Company. The Committee had stated in their Report that Mr. Stokes' office was to be abolished in February next, or at any rate that Mr. Stokes would then retire, having received due notice. Mr. Stokes in the course of the proceedings complained bitterly of what he designated as harsh and insulting behaviour on the part of the Committee towards himself. The matter, however, was not fully gone into, but it was clear that a great want of cordiality prevails between the parties. A member of the Committee explained, that to save the time of the meeting his colleagues were compelled to pass over in silence many statements, on this and other points, which they could easily refute. Under these circumstances we decline entering more fully into *ex parte* representations of the case, which, after all, would not interest the great body of our readers.

Three new Committee men were elected in the room of three who had resigned, and after a vote of thanks to the Chairman the meeting separated.

Previous to the commencement of the proceedings, Mr. Gainsborough wished the sense of the meeting to be taken as to the propriety of allowing our reporter to be present. It was not, he said, from any disrespect to the press that he did so, but because some persons (himself for one) did not like their names to be brought before the public, and might on that account be prevented from speaking so freely as they otherwise would. It was stated by the Chairman, that this point had been well considered by the Committee, and as they had nothing to conceal, they saw no objection to publicity being given to the proceedings. Dr. Arnold and others deprecated any attempt at excluding the press, and the subject dropped without any vote being taken.

In the above sketch we have purposely avoided entering into details, because, even were the matters discussed of general interest, we should be obliged, in justice to all parties, to give documents and counter-statements which would occupy more of our space than we can possibly devote to the subject. We shall notice the Stockton meeting in our next.

CHELTENHAM AND GREAT WESTERN UNION RAILWAY COMPANY—GENERAL MEETING.

The tenth half-yearly meeting of this Company was held in the Subscription Rooms, Stroud, on Thursday, C. F. Sage, Esq., the Chairman of the Company in the chair. There was a very numerous attendance of shareholders.

After the advertisement calling the meeting had been read by Mr. Merrick, the Secretary,

The Chairman expressed his regret that the Directors had not been able as on previous occasions to supply each proprietor with a printed copy of the report. The reason was that the report contained certain announcements which rendered it advisable not to allow it to be published till the latest possible period; and in consequence of the unavoidable hurry in the printing certain mistakes having run through the whole of the copies, the publication would have been prejudicial, and calculated to lead the proprietors astray. Under the circumstances he hoped the meeting would excuse the absence of printed reports.

Mr. Laurence, the solicitor, then proceeded to read the Report of the Directors, including an abstract of the expenditure, and the Report of Mr. Brunel the Engineer. For these see advertisement.

Several questions were asked in course of the reading of the reports as to the number of shares which had been forfeited, and also as to the amount of arrears which might be recovered.

The Chairman stated that 1285 shares had been forfeited and confirmed. Notices of forfeiture had been given to the number of 231, but the forfeiture could not be confirmed as the time had not expired, and it was possible that some of the parties might pay up their arrears previous to the expiry of the legal period. As to the arrears, it was estimated that 5,000*l.* would be recovered. The total number of shares was 7,500, and deducting 1,500 as the number of forfeits, 6,000 shares remained.

Have all the instalments been paid up on the 6,000 shares; and if not, what is the amount due?

The Chairman said that the instalments had not been all paid up, and it was difficult to say the exact amount which was outstanding, or the amount of arrears which might be recovered. It was estimated that 5,000*l.* would be recovered for certain. The best test, however, would arise from the applications made for the dividend, which he supposed the meeting would not hesitate to declare. (A laugh.)

The Chairman, after the Report had been read, said that it contained a correct statement of the Company's affairs; and in reference to the various points embraced, he would only trouble the meeting with a few remarks. And first as to the Swindon embankment. He regretted exceedingly having occasion to notice the very extravagant and unfounded reports which had been circulated on this subject, and he probably would not have adverted to them had a question not been pointedly asked him by a gentleman present as to whether the Directors intended to close up the line for the winter season. He (the Chairman) was happy to say that such an idea was never for a moment entertained—(applause)—and for himself, he could assure the meeting that he never anticipated that such a result could arise. He had inspected the embankment a week ago, and found every thing going on to his entire satisfaction. How such a report as that he had alluded to could have been spread abroad he was at a loss to account for, unless, indeed, the object was to frighten timid proprietors. The embankment had not yet been thoroughly completed, because there were some works going on on the sides, of a kind calculated to consolidate and strengthen it, and till these were completed the embankment itself could not be put in the complete state that it would ultimately be. Altogether the line on which the traffic was carried on was in an exceedingly good condition, and the idea of its being closed was altogether imaginary. (Applause.)

Mr. Varden said, that he had gone over the line about three weeks ago, and could confirm the statement of the Chairman as to its excellent condition. (Applause.)

In reply to a question as to whether any portion of the operations on the embankment had given way, it was stated that when the slip occurred some parts were filled up which did afterwards sink, but certain additional precautions had been adopted, and the consequence was that every part had stood, and as the various portions had been finished, the parts above had been filled up. A very short time would suffice to accomplish all that was necessary.

The Chairman said that he had seen the Sub-engineer a day or two ago, and he had informed him that the works were progressing most favourably, and he expected that the whole would be completed in four or six weeks. With regard to the application to Parliament recommended by the Directors he was fully aware that much difference of opinion existed among the proprietors with regard to future proceedings. Some thought that the intermediate line should be finished; some thought it would be imprudent to finish it; and others thought that a good direct communication betwixt Cirencester and Cheltenham would be desirable. It was not for him to say which of the three was the most advisable. He would only say that the time had

Digitized by Google

not arrived for the discussion of these points. When the time did arrive the Directors would be prepared to afford every information calculated to enable the shareholders to form a correct opinion. He was sure that the opinion of any shareholder, or of any body of shareholders, would be weighed with the utmost attention by the Directors. As for himself, he considered that he was the representative of every shareholder in the Company, (applause) and whatever opinion was expressed, it would be duly considered. He thought that if the proprietors looked to their own interest, a path would be pursued as to which little difference of opinion could exist. The Directors had simply asked the power of following up the Parliamentary notices which had been given. These notices were of a general character; and the particulars required only to be decided upon between this and the month of February; and ere anything definite was resolved upon, the proprietors would be called together, and their opinion taken as to any proposals the Directors might think fit to make. (Applause.) The notices given embraced the power of protecting the interests of the Company in the event of continuing and extending the works, and of treating with other companies for a transference of their powers, according as the opinion might be as to the best course to be pursued. Every existing Company was interested in the proposed application to Parliament, and opposition could scarcely be anticipated; but should opposition arise, the Cheltenham and Great Western Union Railway Company had only to adhere to the attainment of such powers as they were in equity entitled to. Any opposition, therefore, would not be of long duration, or attended with much expence. He therefore hoped, without entering into any discussion calculated to lead to difference of opinion, that the meeting would admit the prudence of giving the Directors the power asked for in reference to the Parliamentary notices, resting assured, as they might do, that ample opportunity would be afforded them of approving or disapproving of the terms of the bill to be introduced. He was not aware at that moment of anything which required to be adverted to in an especial manner. The pledge which the Directors had given as to non-procedure with the works on the intermediate line had been redeemed, and the pledge given as to retrenchment in the permanent expences of the Company in the management of that part of the line which had been completed had been fully realised. A considerable reduction in that department had been made; and he had peculiar pleasure in mentioning the extreme kindness and courtesy with which every executive officer had met the question of reduction; (applause,) and as to their chief engineer, he at once intimated that he would not draw any allowance for the time that the works should be interrupted. He (the Chairman) was sure that such liberality would be duly appreciated by the Proprietors. With regard to the expense of the line he had no doubt that the general impression was that it was excessive: but in connection with that expense he must observe, that a part of it was to be assigned to the expense incurred in the intermediate line betwixt Kemble and Cheltenham. The expense was not so excessive after all, as at first view it appeared to be. The total was 551,800*l.*; of that sum 365,845*l.* had been received from shareholders, and the lisbilities amounted to about 186,000*l.* Of that amount the line from Kemble to Cheltenham had cost nearly 70,000*l.*; and he should say that when expense was spoken of, it would be well to estimate the expense per mile over the whole extent. If the works were to be completely entered upon and carried out then the outlay from Kemble to Cheltenham would enter as an element of the general cost; but in fairness, at the present moment, it could not be carried to the account of the cost of the line betwixt Swindon and Cirencester. Taking this into view, it would be found that the cost did not exceed 26,000*l.* per mile.

A SHAREHOLDER said—May I ask you what the loss will be to the Company betwixt Cheltenham and Gloucester?

The CHAIRMAN said, he could not tell. He hoped there would be no less. Neither could he tell what part of the 26,000*l.* would be realised—the matter was under reference to Mr. Stephenson.

A question was asked as to whether the total cost of 456,000*l.* included the expense of repairing the slip which had occurred at Swindon?

The CHAIRMAN said, that it included every thing. He might again repeat that the line had been completed at the rate of 26,000*l.* a mile.

Does that average include the completion of the works?

The CHAIRMAN—Yes, it does. The length is 18 miles within a fraction.

The CHAIRMAN in reference to the call of 10*l.* per share, said that it was with extreme regret that the Directors had decided upon the necessity of making it. Every effort had been made to prevent it. The anxious wish of the Directors was to avoid it, and no personal labour had been spared to render it unnecessary. He did not think the circumstance of a call being made should deteriorate as some were inclined to suppose, the value of the shares. The dividend of 1*l.* per share was fully equal to the interest on the advance called for, and so large a dividend could not have been declared had the call not been made. He was extremely sorry that a further advance should be asked for, but it could not be avoided.

Mr. VARDEN referred to a paragraph in the last printed Report, which stated that the money expended in the purchase of land and works amounted to 352,170*l.* 16s. 4d., and that about 20,000*l.* remained due for rails and other materials. The partners were now told that the expense was 456,000*l.* He thought that some further explanation should be given as to how the difference arose.

The CHAIRMAN said, that the only explanation which could be given was, that at the time the Report referred to was made up a considerable amount of outstanding claims was not sent in, and the latter part of the paragraph referred to by the gentleman who had spoken expressed the great reluctance of the Directors to state what the actual expense might be. The contingencies not only embraced the expense of repairing the Swindon embankment, but also the extra expense connected with the works, as well as various other claims which had not, at the time, been anticipated.

A SHAREHOLDER asked if similar additions to the now estimated expense might not be apprehended?

The CHAIRMAN said, that he had no apprehension of anything of the kind. It might be that he was wrong, but he did not think it was at all likely that the estimate would be exceeded. Such was his decided belief, but he could state that on no occasion had he made calculations as to the expense of works without discovering that he had under estimated the actual cost; still he believed that on the present occasion the estimate might be regarded as sufficient.

A question was asked by Mr. WARNER—Will the amount cover the expense of the slip?

The CHAIRMAN—Yes, unless something occur that the Directors have no reason to anticipate.

In reply to questions as to how the additional expense in the cost of the line had arisen,

The CHAIRMAN stated, that the chief items arose from extra work done by the contractors, including the expense incidental to the slip at Swindon. The extra work ran throughout the whole undertaking, and the expense of it, which was paid according to a schedule, could only be ascertained after the operation was completed, and after an accurate measurement had been made. His opinion was that 186,000*l.* would cover the whole liabilities of the Company.

Mr. AVERY, of Gloucester, adverted to the great depreciation the shares had undergone since the last meeting of shareholders. For this he was at a loss to account. The sum received from the Great Western Railway Company for the use of the line from Swindon to Cirencester was equal to 3 or 4 per cent. on the outlay. Something must have arisen to lead to the depreciation. Was it from an apprehension that the lines would be completed, or was it from an apprehension of calls being made, or was it from an apprehension that the traffic would not be equivalent to the outlay? He thought the time had arrived for deciding whether the line should be carried from Cirencester to Gloucester; and he should like to ask, whether, supposing it was not resolved upon to complete the works, it was necessary to go to Parliament for new or increased powers?

The CHAIRMAN said, that as regarded the price of shares it was impossible for the Directors to exercise any control. At the present moment not a Railway Company could be mentioned whose shares were not below their real value. The shares of the Grand Junction Railway Company were at a price not equivalent to the dividend paid, and as to the Great Western Railway the shares had reached a lower price than they did before the line was opened, and when the prospect of a return did not rest upon so firm a basis as it did at present. He was satisfied that although the present Company should resolve to abandon the completion of the line it would not have the least effect upon the price of the shares, if any effect was produced it would be in the direction of a fall. He was satisfied, however, as he had already said, that the time was not come for entering into such a discussion. The Directors had no interest separate from the interest of the great body of the shareholders, but it was possible that some parties as a means of advancing their own individual interest were anxious to promulgate reports calculated to depreciate the value of the stock. He might mention that a few days ago he was called upon by a London proprietor who seemed to feel much alarm at the reports which had been promulgated as to the intentions of the Directors. He (the Chairman) had given that gentleman every information in his power, and so convinced was he that he had been misinformed, that he at once gave him (the Chairman) a proxy to act for him on the present occasion. He could assure the meeting that the Directors were actuated by the most sincere desire to promote to the utmost of their power the best interests of the Company. (Applause.)

Mr. AVERY asked if the Directors had come under any obligation to the Great Western Railway Company beyond the current contract, and whether any estimate could be formed of the amount of traffic on the line betwixt Swindon and Cirencester?

The CHAIRMAN said, that the Directors had come under no obligation to the Great Western Railway Company, and as regarded the traffic no correct estimate could be formed of it. All that could be ascertained in the meantime was the amount received at the Cirencester station. Correct data could only be supplied at much trouble to the Great Western Railway Company, and no advantage could arise from details. It could not be said that a fair trial had yet been made; but when the time came for entering upon a discussion as to the course to be adopted by the Company, better means of estimating the traffic would exist. He had been told that at the Cirencester station the drawings had been from 900*l.* to 1,000*l.* a week, but he could not say what proportion was to be assigned to the traffic betwixt Cirencester and Swindon. The line had only been open for five months and many circumstances had tended to render it less productive than it would be when a better communication existed betwixt Gloucester and Cirencester.

Considerable discussion then followed as to the propriety of entering upon the consideration of the particular course which the Company should adopt; but the prevailing opinion was that the interests of the Company would be best promoted by adhering to the course recommended by the Directors. The powers to be applied for to Parliament would embrace all that was required for carrying on and completing the works if such should be deemed advisable, or of treating with other Companies should that course be deemed preferable. Although any of the existing Companies were willing to treat with the Cheltenham and Great Western Union Railway

Digitized by Google

Company for a transference, it could not be carried into effect—their Parliamentary powers not extending so far. This however would be duly provided for in the Bill now recommended by the Directors to be applied for. Everything calculated to promote the interests of the Company would be carefully considered by the Directors, and ere the Bill was introduced the partners would be called together and ample opportunity afforded for discussing the various clauses. During this discussion a shareholder adverted to the circumstance of a new railway being projected through the Forest of Dean. The line had already been surveyed and the order given for the Parliamentary notices. This was considered by the meeting as a favourable circumstance for the Company. It would open up the immense resources of South Wales to the districts through which the lines run.

In reply to a question as to the manner in which the balance of the liabilities of the Company was to be met, the CHAIRMAN said, that the Directors anticipated that the call of 10*l.* per share now made would render a further demand unnecessary, the probability being that the remainder would be procured on debentures. It was with the greatest reluctance that the Directors had made the present call, but the difficulties in the way of borrowing money, arising from the peculiar state of the money market, had been insurmountable. In anticipation of the Directors being enabled to meet all the claims against the Company in the way proposed, the payments had been deferred. Some fell due in December, some in January, and others in March, May, and September. It was to meet the earlier payments that the call was made.

Some further explanations were asked for and given, the bearing of which was that the amount of expense stated in the Report might be regarded as correct; that the contracts entered into for the purchase of land on the line betwixt Cirencester and Gloucester were all conditional, with the exception of a portion for which from 7000*l.* to 8000*l.* had been paid; and that the actual cost of the operations had not exceeded 26,000*l.* per mile.

Resolutions confirmatory of the report, and authorising the payment of the dividend, were severally moved and seconded, and unanimously carried.

A vote of thanks was then moved by Mr. Hyett to the Directors for their exertions in behalf of the Company. In course of his remarks, Mr. Hyett mentioned that the Directors had reduced the sum allowed by the Company to defray their personal expenses one-half. (Applause.) He was satisfied that this allowance was not sufficient to meet the expenses, and that the Directors in their anxiety to cut down expenditure were actually sustaining a personal loss. As to this item of expense the Chairman stated that 1,000*l.* was the sum allowed to the twelve Directors. Six however had resigned, and it was deemed unnecessary to supply their places. The allowance had been reduced one-half but in consequence of there being only six in the Direction, 250*l.* had been agreed to as the sum to be allowed. (Applause.)

A vote of thanks was also passed to Mr. Brunel, the Engineer.

The business concluded by the passing of a vote of thanks to Mr. Sage, for the admirable manner in which he had presided over the business of the day. —*Gloucestershire Chronicle*, October 30.

NORTHERN UNION RAILWAY.

MEETING OF THE BRANDLING JUNCTION COMPANY.

ON Monday last, a Special General Meeting of the Brandling Junction Railway Company, was held at the office in Gateshead, "for the purpose of taking into consideration a proposal that the said Company should unite with certain other Railway Companies in taking a lease (upon certain terms to be submitted to the meeting) of a Railway proposed to be made from Darlington, in the county of Durham, to join the Durham Junction Railway, in the same county; and of adopting such measures in reference thereto as might appear advisable."

Mr. HEADLAM was in the Chair.

The CHAIRMAN read the notice convening the meeting, and called upon Mr. Nicholas Wood, the Company's Engineer, to bring forward the business of the day.

Mr. WOOD then rose, and said:—It would be in the recollection of the shareholders, that they subscribed, some time ago, in conjunction with the Durham Junction and Stanhope and Tyne Companies, towards the expense of making arrangements and depositing plans for a railway from the Great North of England line at Thrislington, to the Durham Junction Railway. That was partly done under a supposition that the Great North of England Railway Company would never execute their proposed line northward by Chester-le-street. Accordingly, when the Great North of England Railway was completed to Darlington, it became a question with that Company whether or not the line by Chester-le-Street should be adhered to or abandoned; and at the suggestion of their present engineer (Mr. Stephenson), it was determined that that part of the line should not be executed. A project was then set on foot, to establish an unbroken railway communication between Darlington and Newcastle, through the co-operation of certain Railway Companies, forming or interested in the eastern lines of railway from Rugby to Newcastle-upon-Tyne and Scotland; and several meetings had been held, in Newcastle, York, and Darlington, in promotion of this object. The shape which the plan had assumed was this:—That a distinct Company should be formed, to undertake the formation of a line from Darlington by Thrislington to the Durham Junction, along which they would pass to the Stanhope and Tyne Railway, and then onward to the Brandling Junction, and so on to Gateshead. The line from Darlington to the Durham Junction would be 22½ miles in length, and the cost was estimated at 500,000*l.* The Act of the Great North of England Railway would be taken so far as it went, and thus the new Company could go on with the execution of the line as soon as an Act was attained for financial purposes—which, most probably, would be in April next. And the plans, as before stated, were deposited for the remainder of the distance; so that the Act for the entire line might be obtained at the same time. The whole could be completed, Mr. Stephenson believed, in two years from the present time. The co-operating Railway Companies were to take a lease of the line for ten years from its opening, and guarantee such an amount of revenue as would yield the shareholders six per cent. per annum for the ten years in question. The shareholders would also receive six per cent. during the period of execution, but this would be paid from the capital. On the expiration of the lease the shareholders would take, of course, whatever per centage the traffic of the line might yield. The cost of the railway, he had stated, was estimated at 500,000*l.*, which, at 6 per cent., would require 30,000*l.* per annum.

The Midland Counties' Company were to guarantee	£2,000
The North Midland	6,000
The York and North Midland	8,000
The Manchester and Leeds	3,000
And the Companies north of York	10,000
Making the total sum of	£30,000

At an adjourned meeting of Directors from the foregoing Companies, held in York, the North Midland and the York and North Midland Companies gave in their adhesion to the proposed guarantee. The Directors from the Manchester and Leeds Company said that they had no doubt that the shareholders would join in the scheme. The Midland Counties' Company had not yet finally determined what course they would pursue; but if they declined to guarantee their assigned proportion of 3,000*l.*, other Companies would undertake to guarantee this sum, in addition to their proportions. Of the 10,000*l.* to be guaranteed by the Companies north of York, the Great North of England Company agreed to guarantee 8,000*l.*, leaving 2,000*l.*, to be provided for by the Newcastle and Carlisle, the Durham Junction, and the Brandling Junction Companies, as they might agree among themselves; and on Saturday last, at a meeting of the Directors of those Companies, (Mr. Brandling in the chair,) it was arranged that the Newcastle and Carlisle should guarantee 500*l.*, and the Brandling Junction and Durham Junction 750*l.* each; so that the whole amount of the guarantee was arranged, provided it met with the concurrence of the shareholders of the respective Companies. The Directors of the new Company were, in the first instance, to be appointed by the shareholders of the several co-operating Companies; and at the general meeting of Directors at York, it was resolved that the Brandling Junction, Durham Junction, and Newcastle and Carlisle Companies should have the appointment of two Directors, in such manner as they might think proper. But at the meeting of Saturday last, a resolution was passed to obtain, if possible, an additional Director—one for each of the three Companies. If this could not be accomplished, then it was considered that the Newcastle and Carlisle Company should appoint one of the two Directors, and the Durham and Brandling Junctions the others. At the expiration of the ten years' lease, the appointment of Directors would pass, of course, from the guaranteeing Companies to the shareholders of the new Company. Meanwhile, there would be twelve Directors, of whom the York and North Midland were to appoint four, the North Midland two, the Manchester and Leeds one, the Great North of England three, and (as he had already said) the Newcastle and Carlisle, Durham Junction, and Brandling Junction, two — or (if it could be effected) three. This arrangement, however, was subject to the approval of the several bodies of shareholders. He would now say a few words as to the nature and propriety of the guarantee. The parties advancing the money, he had previously stated, were to receive their per centage out of the subscribed capital, while the railway was in progress of formation. The guarantee was only to commence on the opening of the line for traffic; and if the line did not pay 6 per cent., then the difference between that per centage and the revenue actually realized, would be what the guaranteeing Companies would have to pay. He (Mr. Wood), in conjunction with Mr. Harrison, of the Durham Junction, had taken great pains to ascertain the probable amount of traffic on the line; and their joint opinion was, that the guarantee would be nothing—a mere name; for the concern, they fully believed, would pay at least 6 per cent. immediately. His (Mr. Wood's) own conviction was, that if the line could be formed for 20,000*l.* per mile—(and he believed it could)—the risk of the guarantee would be trifling indeed. He need hardly say, that the new line would be of peculiar advantage to the Brandling Junction Railway. Brockley Whins would become a central station of great importance, for Sunderland, Shields, and Gateshead. The line would give them thorough traffic to a great extent, and also open out to this Company a locomotive communication with all the surrounding district—Durham, Hartlepool, Stockton, &c. The income from this local traffic would be considerable; and if the thorough traffic were any thing like what it was on the Great North of England Railway, they would derive from this source about 30*l.* per mile per week.

The Rev. R. GREEN wished to know if the liability of the guaranteeing Companies would be confined to the sum of 500,000*l.*! If the line cost more, who would have to find the surplus?

Mr. WOOD — The demand upon the different Companies might fall short of 30,000*l.* a year—there was no likelihood of its exceeding that sum.

Mr. PLUES—In that case, there could be no objection to the guarantee; but the Brandling Company must insist upon the appointment of a Director.

Mr. BRANDLING—At the meeting in York, it was never contemplated that the guarantee should exceed 30,000*l.* a year.

The CHAIRMAN—And at the meeting of the Brandling Directors, this morning, it was fully determined, in accordance with the wish now expressed

Digitized by Google

by Mr. Plues, that this Company should have the appointment of one Director.

Mr. PLUES—If the line should cost double the sum estimated, would the several Companies be liable to pay 6 per cent. on the whole outlay?

Mr. R. W. BRANDLING—Oh no.

Mr. PLUES—The advantages of the line to this Company would undoubtedly be great. Even the short line to the Victoria Bridge had brought in 30*l.* a week to the Brandling Railway. How much more, therefore, would they not realise by the opening of a line to Darlington.

Mr. DONKIN—It would no doubt be the most important thing that had happened to the Brandling Railway. And the guarantee, he believed, would be nothing. He did not say this lightly: he had inquired into the matter with some attention.

The Rev. R. GREEN—The Companies, it was stated, were to have shares in the new line in proportion to the respective sums guaranteed. Was each Company to take these shares in its corporate capacity? or were the shareholders to take them individually?

Mr. DONKIN — The shareholders individually. They would have the first offer of the shares, but they might take them or not as they chose: there would be no compulsion.

Mr. WOOD (in reply to a shareholder)—The North of England Railway averaged 32*l.* per mile per week, by its thorough traffic. The Brandling Railway had fifteen miles in its three sections, each of which sections would take a portion of the additional traffic. If, then, they calculated upon 30*l.* per mile per week for five miles, this would give an income of 150*l.* per week, or nearly 8,000*l.* a year, exclusive of local traffic.

Mr. R. W. BRANDLING—And 15*l.* a week would more than cover the Company's guarantee.

The CHAIRMAN (after further conversation) stated, that the Directors had prepared a resolution for the consideration of the meeting, which he would read to the assembled shareholders:—

That this Company approve of the plan of uniting with several other Railway Companies, in taking a lease for ten years of an intended new railway, to connect Darlington with Newcastle, at such a rent as will secure to the shareholders in the projected undertaking 6 per cent. per annum, and the Directors are hereby authorised to guarantee such proportion of the rent, and adopt such measures in reference thereto as may be deemed advisable, provided that one of the members of this Company, to be chosen by the Directors thereof, be appointed a Director of the Company to be formed for carrying the said undertaking into effect.

Mr. PLUES suggested that something should be said about a communication with Newcastle—a bridge from the Brandling Junction to the Newcastle and Carlisle Railway. This should be made a condition.

Mr. JOHN BRANDLING—Not a condition, but it might be mentioned.

Mr. WOOD—It would be more desirable to omit the subject altogether. The great object, in the first instance, was to bring a railway direct to the station at Gateshead. The question of a bridge uniting it with Newcastle, more properly belonged to the extension of the railway into Scotland. At the present time there were various opinions as to the spot at which the bridge should cross the Tyne. Persons who were friendly to the new line from Darlington, differed on the subject of the bridge, and to name it in the resolutions of this meeting, would only, he feared, throw an unnecessary obstacle in the way of the present project.

Mr. MASON moved the adoption of the resolution read by Dr. Headlam, and Mr. Jackson seconded the motion.

The Rev. R. GREEN suggested the insertion of words limiting the responsibility of the several Companies to the payment of 30,000*l.* per year interest, and a short discussion having ensued, the words "upon the amount of their proposed capital of 500,000*l.*," were inserted after "six per cent. per annum." The resolution was then passed unanimously.

Mr. Mason rose to move a second resolution, namely:—

"That the Directors merit the approbation and warmest thanks of the shareholders, for the energy and ability recently displayed, by establishing a prudent system of economy, and by furthering every measure calculated to promote the interests of the Company."

Nothing (said Mr. M.) could be more honourable to the Directors than their refusal to accept the remuneration voted to them by the shareholders. He was one of those who had opposed that vote, but when the economical measures now in operation placed the Company in a condition properly to remunerate the Directors, he should be most happy to press upon them the acceptance of a recompense to which they would be justly entitled. (Applause.)

Mr. JACKSON having seconded the motion,

Mr. PLUES observed, that it was hardly relevant to the business of the meeting: he took this objection without any intention of disrespect to the Directors, he simply demurred to the relevancy of the motion, expressing no opinion upon its substantial merits, either one way or the other.

The meeting, however, overruled the objection, and the motion was carried *nem. con.*

The shareholders then separated.—*Gateshead Observer*, Oct. 30.

MEETING OF THE NORTH MIDLAND COMPANY.

ON Friday last a Special General Meeting of the proprietors of this Company was held at their Offices, in Leeds, "For the purpose of considering and determining on the expediency of authorising the Directors, in concurrence with other Railway Companies interested in the completion of the line of railway between London and Newcastle, to adopt measures for forwarding an application to Parliament in the next session, for an Act to make a Junction Railway between the Great North of England Railway, at Darlington, and the Durham Junction Railway, for which the requisite notices have been given either by guaranteeing to the subscribers to such undertaking a certain amount of profit, or by such other means as may be considered best calculated to effect the desired object."

The meeting was numerously and respectably attended.

WM. LEAPER NEWTON, Esq., Chairman of the Company, presided, and the proceedings were opened by the notice calling the meeting being read, and also a number of resolutions agreed to at a meeting of Directors of several Railway Companies, interested in promoting the extension of railway communication between Darlington and Newcastle, held at York, on the 6th and 27th September, 1841.

The CHAIRMAN then rose, and addressed the meeting at considerable length, pointing out the advantages which would accrue to the North Midland Company by carrying into effect the proposed new line of railway. He observed, that the great desideratum which the Directors wished to accomplish was, to bring Scotland into direct railway communication with London. To attain this object, two lines had been selected by the Government Commissioners, one or other of which would probably be fixed upon. The question was which of the two should be adopted. The proprietors of the North Midland Company, of course, felt it their interest to promote that route which would go along the eastern line, whilst those connected with the western line would be favourable to its going in that direction. In stating to the meeting what interest the North Midland Company had which should lead them to adopt the eastern line, and to carry their present line of communication further north, which was all they now proposed to do, namely, from Darlington to Newcastle, he should necessarily be obliged to advert to the difference between the eastern and western lines, and the advantages which the former possessed over the latter, for the proposed undertaking. He classed his observations under three separate heads; first, the comparative distance that would have to be completed on the eastern and western lines, in order to reach Edinburgh; second, the facilities of the two lines; and third, the time required for the execution of the project. With respect to the western line, the distance from Lancaster to Carlisle is 70 miles, from Carlisle to Glasgow 101 miles, and then the branch from Symington to Edinburgh is 31 miles more, being a total distance of 202 miles. On the eastern side, they would go from Darlington to Newcastle, a distance of 37 miles, and from Newcastle to Edinburgh 116 miles, making a total of 153 miles, so that the route on the eastern line would be less by 49 miles than that by the western line. He next spoke of the facilities of the two lines. By the western one, between Lancaster and Carlisle, there was a difficulty of a very serious nature to surmount, namely, a tunnel of a mile and a half in length, which would have to be cut through a bed of solid granite. This was an attempt which he believed had never yet been made in any engineering work in the country. The approaches to the tunnel were through cuttings of 90 feet, which would also be a very serious engineering difficulty. Then the gradients north of Carlisle were particularly bad, and were admitted to be so by the Government Commissioners, who spoke of them as gradients of "a most unusual character." The same observation would apply to the viaducts. Six of them might be executed at an enormous expense, but such a one as the seventh had never been attempted in this country, and, as he was informed, in the world. The one he alluded to was over Nethan Water, and would be 232 feet high, or in other words twelve feet higher than the western towers of York Minster! Mr. Newton next spoke of the facilities by the eastern line. By that route, they found no engineering difficulties of any serious amount. There would be no tunnelling, which was a material point, and the gradients, with the exception of one, were all of a favourable description. He was assured, and had reason to believe, that the line proposed to be adopted could be executed for 20,000*l.* per mile, and he did not found this opinion on any estimate made by engineers, because they all knew from experience how much such estimates exceeded the amount originally put down. Mr. Newton then referred to the Durham Junction Railway, which he observed passed through a country very similar to that through which it was proposed to carry the intended line. This railway in passing over a space of five miles, expended 85,000*l.* But this included a sum of 40,000*l.* for the bridge over the river Weare, and also the cost of obtaining the Act of Parliament and other expenses, so that the line of five miles on the Durham Junction Railway was made for about 17,000*l.* per mile. Judging, therefore of the sort of country through which the intended new line would have to pass, it was thought that the cost would not exceed 20,000*l.* per mile, and the reason why they considered this a correct estimate was, that the average amount of earthwork was about the same, or as nearly so as possible, as on the Durham Junction line, namely, 60,000 cubic feet per mile. Another important fact in favour of the Eastern line was, that no terminal stations would be wanted, and those who had looked over the accounts of the North Midland Railway, would be somewhat capable of forming a judgment as to the saving of expense on that head. With respect to the engineering and coaching departments, the outlay would be very small, as the line would be worked by other Companies. Then, again, there were only two turnpike roads to cross, and they were so circumstanced that the alterations required to enable them to carry the project into execution would make a very small expenditure indeed. This estimate was not presented to the proprietors as the mere estimate of engineers alone, but was formed from work already done on the more northerly part of the line, and therefore was one which might be fairly depended upon. The Chairman then came to his third proposition, namely, the time that would be required for the execution of the two lines, and he said he had been assured that if the eastern one was pushed forward with speed it might be completed in two years, whereas that by the western coast could not be accomplished in less time than seven years, in consequence of the great difficulties which had been pointed out. Here then were circumstances which combined together, en-

Digitized by Google

noted upon to look forward with great satisfaction to the completion of the proposed line northwards, long before it would be possible for the other to reach Carlisle, and then they would be further from Edinburgh than the eastern line. Mr. Newton dwelt, lastly, upon the probable amount of traffic which might be expected to result from the proposed undertaking. Referring to the advantages which had already been experienced from the opening of the Great North of England line as far as Darlington, the great increase of population in Newcastle, and other large towns, since the period when the Act for making that line was obtained, and to the traffic which would accrue from a nearer communication with Scotland, he contended that 48,000*l.* was not too large a sum to add to the amount of traffic proved before Parliament by the Great North of England Company in 1836, and admitted by the Committee, viz., 82,046*l.* The estimates made out upon the existing traffic, assuming the number of passengers to be doubled, and the expenses of working of the line to be only 33 per cent. on the receipts (which for reasons already given, are calculated at a lower rate than on other lines) show a probable return of 66,499*l.* net profit, equal to 9½ per cent. He concluded by saying, that the Directors of the North Midland Company were most desirous of acting in unison with the Directors of the York and North Midland, by whom a resolution similar to that which would be proposed had been passed. If, however, the proprietors should think that the facts which had been stated did not bear the Directors out in what they proposed to do, it would be for the meeting to decide in any other way they thought proper.

The SECRETARY then read the following resolution:—

"That this Company approves of the plan of uniting with several other Railway Companies in taking a lease of an intended new railway to connect Darlington and Newcastle, at such a rent as will pay the shareholders in the projected undertaking six per cent., and the Directors are authorised to guarantee such proportion of the rent, and adopt such measures in reference thereto, as may appear desirable."

P. W. BRANCKER, Esq., of Liverpool, opposed the resolution, on the ground that the shareholders had not sufficient information to show whether the proposed new line would be advantageous to the Company, and therefore he thought the consideration of the question ought to be deferred till a future period. He moved the following amendment:—

"That as the shareholders are very imperfectly informed upon a subject of so much importance to this Company, and which they are called to decide upon immediately, that the decision be deferred to the next half-yearly meeting in February, in order to give the proprietors at large an opportunity to consider the question more fully, and that before the 1st of February, 1842, circulars be sent to each proprietor, containing all the details of the proposed arrangement, with blank forms of proxy for and against the measure, on the plan adopted by the Midland Counties Railway Company."

A SHAREHOLDER seconded the amendment.

A lengthened discussion ensued, in which Capt. Watts, George Hudson, Esq., Chairman of the York and North Midland, Edward Baines, Esq., J. Rand, Esq., (Bradford), James Hubbard, Esq., Deputy Chairman of the North Midland, A. Titley, Esq., Joshua Bower, Esq., H. Leah, Esq., and other gentlemen took part. Strong arguments were advanced by several of these gentlemen in favour of the proposed measure, and

Mr. BAINES pointed to the fact, that those parties who are interested in the western line, were now making vigorous efforts to secure the traffic from the north, and if any indecision or delay were manifested by those who are favourable to the eastern line, those efforts might be successful, and thus the advantages now offered by the latter would be lost for ever. He also showed that, if they deferred the consideration of the question till February, although the delay might only be three months, the loss, in reality, would be a whole year, as there would not then be time to give the requisite parliamentary notices for the next session.

On the amendment being put to the vote, only seven hands being held up for it, it was negatived, and the original motion was carried unanimously.

Mr. BARTON then moved the following resolution, which was seconded, but he ultimately agreed to withdraw it.

"That the Directors as well as the Engineers, who are forcing this fresh liability upon the North Midland Shareholders shall enter into bonds, jointly and severally, that the shareholders in the North Midland Railway Company shall not be called upon, or be liable for any greater amount than 6,000*l.* per annum for rent for ten years, or 60,000*l.* in the whole. And also, that this projected Northern Railway shall be made and completed, with necessary stations, engines, locomotive engines, carriages, waggons, and utensils of every description necessary for its complete working, within the space of three years from the date of the first call made for the use of the projected Railway. And should there be any excess in the actual cost of the Railway, when in complete working order, beyond the estimate of 500,000*l.*, the interest to be paid upon such excess, shall not be deducted from either the gross or nett income of the Railway, but shall be paid by the parties who have signed the bond of indemnity."

Thanks were voted to the Chairman, and the meeting broke up.—*Derby Mercury*, Nov. 3.

ALLEGED NECESSITY FOR RAILWAY LEGISLATION.

THE following article appeared in the *Times* of Wednesday. We have briefly noticed it in our leading columns:—

Nothing is further from our wish than to act as alarmists upon any subject, and above all upon the subject of those triumphs of mechanical art which have done so much towards carrying the surface civilization of the present age beyond that of any previous generation. When we gave expression, as we did last year, to the feelings generally entertained by the public, and unhappily forced upon them by a series of frightful accidents, with respect to the defects of railway travelling, we were actuated solely by a conscientious regard for the common interest, and never thought of depreciating the advantages of that remarkable improvement in the means of communication. As soon, therefore, as we were satisfied that the influence of public opinion was acknowledged and feared, that the recklessness of monopoly had been stimulated into something like vigilance, and that the attention of Government was fairly attracted to the subject, we felt that we had accomplished our purpose, and ceased to offer any harassing opposition to the arrangements of the railway proprietors. Even, however, if we had been inattentive observers (which we were not) of what has passed since that time, the accidents of the last month must have reminded us that the effect of the experience and the warnings of a single year cannot be expected to last for ever, unless secured by some more trustworthy and controlling power than the wisdom of interested individuals.

Our readers will remember that a Bill was introduced into the late Parliament by Mr. Labouchere, by which large powers were given to the railway department of the Board of Trade, for the purposes of public protection. It is not, of course, to be supposed that any system of management can entirely divest this or any other mode of travelling of its attendant risks; but it is equally certain that by the adoption of proper precautions these risks may be diminished to an indefinite degree. The information collected by the late Government proved in the most conclusive manner (what, indeed, scarcely needed proof,) that most of the accidents which agitated the public mind during the summer of 1840, might have been obviated by such regulations and arrangements as an enlarged observation, joined to scientific knowledge and the absence of a pecuniary interest, would infallibly suggest. The recommendation, therefore, that sufficient powers to make and enforce such regulations should be given to a Board so constituted as to unite all these necessary qualifications appeared to follow from that information with the force of a corollary from a mathematical proof. Upon some points it was thought expedient even to anticipate this process, and to give travellers that security to which they were entitled by direct and immediate legislation; and it was particularly urged that a system of examination and license should be established, in order to prevent the employment of improper persons as engine-drivers.

The measure introduced by Mr. Labouchere for the sake of carrying these recommendations into effect, shared the fate of almost every other really useful bill which the Whigs brought forward during the last stage of their official existence;—it was postponed from time to time, while the house was occupied in the discussion of party questions, and was utimately extinguished by the premature dissolution of Parliament. The fact is remarkable, that during the whole period while this measure was hanging over the heads of the Railway Directors, not a single accident of serious consequence occurred. It was not till the summer was far advanced that symptoms of returning carelessness began to show themselves; and in proportion as the impressions produced by the threatened legislation have become fainter and fainter, railway travelling has since appeared to be growing more and more dangerous, till the evil has proceeded so far that we have had to record in our columns the sacrifice of six lives on different railways within a space of only three weeks.

We trust that Sir Robert Peel, who has sometimes betrayed an inclination to question the necessity or the prudence of giving Government any greater control over these matters than it now possesses, will appreciate the importance of this fact. If we look to *a priori* probability, it will scarcely be denied, on the one hand, that such a control, or the apprehension of it, has a real preventive effect; and, on the other, that without such an apprehension the system has an almost unavoidable tendency to lapse into negligence, with the certainty of involving, whenever it does so, a lamentable loss of life. If we look to natural probability, it will be allowed that winter is the season when railway accidents might be expected to occur with the greatest frequency, and with the least frequency in summer. Yet, in the summer of 1840, when the popularity of this new mode of conveyance was in its zenith, accidents became far more frequent and fatal than they had ever been before. Upon this the public became alarmed, the press remonstrated, and legislation was talked of. What was the consequence? The winter of 1840 passed over with scarcely one serious disaster, and during the following spring, while legislation seemed actually near, the same high degree of security prevailed. Again, in the summer and autumn of 1841, the prospect of external control and responsibility being much more distant, safety is much more visibly upon the wane.

Nothing can be clearer than that the public has an equitable right to impose upon the Railway Companies any conditions which may be necessary for its own protection. The Railway Companies have received from the public very large privileges and powers, which form no inconsiderable part of the capital on which they trade. Those privileges and powers, together with their mechanical appliances, have enabled them to compete with other classes of carriers so successfully as to encroach materially upon the comfort of that large portion of the people who have occasion to use the turnpike roads, and to endanger the interests of all owners of turnpike securities, and all ratepayers in parishes through which turnpike roads pass. The recent discontinuance of the practice of lighting the metropolitan roads by the Turnpike Commissioners, is but a sample of the manner in which local taxation is likely to be affected by the operation of the railway system, unless the public are willing to forego conveniences which custom has made necessary to them. Few persons have as yet arrived at any just conception of the price which the British nation has paid, or will have to pay, for the establishment of railways, And, besides displacing other modes of communication, the railway proprietors have acquired, through an unforeseen necessity, an absolute monopoly of the use of their own roads, which the legislature designed and bargained to throw open for general traffic, upon the payment of certain fixed and moderate tolls. It is therefore most

Digitized by Google

require from these Companies such a compensation for the advantages conferred upon them as may secure to the public, in the most beneficial manner, the safe use of that mode of conveyance which they have made such great sacrifices to obtain.

THE PROPOSED RAILWAY IN BRAZIL.

A CORRESPONDENT sends us the following as an extract from the *Jornal do Commercio* (Rio de Janeiro) of Saturday, August 21, 1841, in reference to a scheme, the merits of which have recently been canvassed in our columns. As we have not ourselves seen the journal in question, we cannot vouch for the fidelity of the translation:—

Session of the Legislative Chambers, August 20,
President, Senhor Henriquez de Regenda.

The following Report was read from the Minister of the Home Department:—

Most Illustrious and Excellent Sir,

Having submitted to his Imperial Majesty the resolution of the Chamber of Deputies of the 7th ultimo, requesting information from the Government on the subject of the assistance requested by the Imperial Brazilian Railroad Company that is about to form a railroad from Rio de Janeiro to the Provinces of Minas, Geraes, and S. Paul's, and which assistance consists of the following concessions:—

1st. That the Government become purchasers of 4,000 shares.

2nd. That the shares of the Company shall not be liable to any embargoes, mortgages, or judicial seizures, and shall be guaranteed in time of war.

3rd. All the machinery, steam carriages, utensils, and other articles imported exclusively for the use of the Company, shall be admitted free of duty for the space of five years, by orders of his said august Imperial Majesty.

It devolves on me to declare to your Excellency for the purpose of being submitted to the Chambers, that the Government being thoroughly convinced of the utility of the undertaking, which, in addition to the facility of transports and communication between these important Provinces, will introduce into the Brazilian Empire an industry hitherto a stranger to us, as well as materially increase our population with free and industrious labourers, it considers the requests of the Company worthy of the most favourable consideration; but taking into calculation the immediate state of our finances the Government approves of the propriety and policy of becoming holders of shares to the amount of 2,000, equal to 125,000*l*.

May God preserve your Excellency.

August 18, 1841.

CANDIDO JOSE DE ARANJO VIANNA.
SR. D. JOSE DE ASSIZ MASCARENHAS.

An exclusive grant is made for 80 years in favor of this Company, to be reimbursed at the expiration of this period, for outlay, by the Government, at a fair valuation.

The whole of the land on the line of road has been given gratuitously to the Company by the landowners; 8,000 shares have been subscribed for by the Brazilians, whose names are advertised in the public papers at Rio de Janeiro; and the Directors are resolved on commencing the railroad with the least possible delay, and on principles of the most rigid economy.

The British merchants at Rio have purchased a considerable number of shares.

BRANDLING JUNCTION RAILWAY.—The Directors of this undertaking are proceeding rapidly with the continuation of the line from the present terminus, near the high end of South Shields, to the Market Place, which is nearly in the centre of the town.—*Carlisle Journal.*—[We give elsewhere a report of a meeting of this Company, held last week.]

ENGINES.

To the Editor of the Railway Times.

SIR,—Among your several correspondents who have complied with your invitation to enter into a discussion on the comparative merits of *four* and *six*-wheel locomotive engines, I beg leave to offer a few observations on that important subject.

On looking over the evidence adduced at the coroner's inquest occasioned by the late fatal accident on the London and Brighton Railway, I find the following statement made by Charles Goldsmith, the driver of the first engine.

"By the Jury—The other engineman shut his steam off, and witness did the same, within half an inch. The large engine was not pulling at all; the whole of the work was done by witness's engine. The heavy engine, if not stopped very carefully, would cause a jumping motion, and would give the smaller one a jerk."

I am of opinion that this man has thus given in a very clear and simple manner a full account of the whole cause of the accident. For if the driver of the second engine was the first to shut off his steam, as is here stated, and he did so, as is too often the case, instantly, going at the rate of speed which is reported in the evidence, the engine in front would receive a sudden check, the whole weight of the train being thus thrown upon its powers. The first impulse would cause the leading engine to throw up its front wheels, and in coming down upon its springs would bounce and assume the "jumping" or pitching motion which the driver describes. He, then, seeing this action take place, and ascertaining that the driver of the second engine had shut off his steam, immediately shuts off the steam, or nearly so, of his own engine, when instantly the velocity and weight of the whole train comes butt upon the two engines and throws the unsteady one off the rails. All this would be the work of a very few moments.

Now this might have happened with a six-wheel engine under similar circumstances. I once saw a Grand Junction train proceeding towards Liverpool at the rate of 35 miles an hour, when suddenly the front wheels of the engine sprung from the rails to the height of about half a yard, and on coming down on their springs, made a succession of leaps for a considerable distance, until the engine could resume its balance. This was a *six*-wheel engine. The driver having had his steam shut off for a short time, most probably to check his high velocity, had thrown it on *instanter*, and caused the effect which I describe; for on examining the road there was nothing on or about the rails that could have given the engine such a check. Fortunately the train was on a fine straight piece of line or the consequences might have been disastrous.

Yet I am of opinion that a *four*-wheel engine will throw up its front wheels and become unsteady and unmanageable under such circumstances with greater freedom than a *six*-wheel engine, because a four-wheel engine assumes more readily the properties of a *lever*, the fulcrum of which is the crank axle; whereas in a six-wheel engine the hind wheels act as a back stay or prop; or at all events, if the hind wheels become the fulcrum of the lever, the leverage forward is so much increased that any impulse from behind is neutralised in proportion.

There are two actions arising from the working of locomotive engines on a railway, which are equally dangerous to the transmission of trains, and injurious to the construction of the way. The first is that which I have already noticed,—the pitching motion of the engine, which motion is constantly beating the rails out of their original level, and rendering the engine extremely liable to leap the rails, especially when on a curve and under the influence of high velocities.

The other action which an engine assumes when in operation is of an horizontal character—an oscillating or serpentine motion on the rails, arising from the beat of the pistons and the rotation of the crank axle. That it *does* arise from these causes I am prepared to assert from repeated observations and experiments; and it is surprising how some enis very much obviated by using the steam expansively and giving the valves as much load as they will bear, by which means a high degree of elasticity is given to the pistons in the return of their stroke, instead of that *hammer-like* impulse which otherwise the steam communicates. A balance weight also applied to the spokes of the driving wheels, diametrically opposite to the arms of the crank axle, will greatly prevent oscillation. It is likewise prevented by keeping the cylinders near together under the centre of the engine, and the gauge of the wheels wide, as is the case on the Great Western, where, perhaps, less oscillation is felt than on any other railway. It would also be entirely neutralised by the adoption of *four* cylinders instead of two,—two of their pistons beating at the same time, one on each side of the engine—thus relieving the passengers from an unpleasant sensation, the wheels from a dangerous tendency to climb the rails, and the rails from that violent lashing by which they must be seriously injured. In fact it is a motion that deranges the whole machinery of a train. Let any one, sitting in a railway carriage, observe when the driver shuts off his steam, if he does it suddenly, you receive a jolt either backward or forward according to the direction in which you are sitting; but if he shuts it off gradually (which should always be the case if possible) you receive no warning of this kind of what has been done, but you will immediately perceive the oscillation to cease, and the train to glide along the rails in a uniform right line.

That a four-wheel engine will oscillate more than a six-wheel engine must be obvious, inasmuch as the extreme distance between the axles of the former being less than the latter, admits of the body of the engine turning more upon a pivot, or on a centre of a less radius, and hence its greater liability to be thrown off the rails by an action of this kind.

I am, Sir, yours respectfully,
CHARLES TODD.

Railway Foundry, Leeds, October 28th, 1841.

FOUR-WHEELED AND SIX-WHEELED ENGINES.

To the Editor of the Railway Times.

SIR,—I find I have been anticipated by your Liverpool correspondent in my reply to Mr. E. A. Seaward's letter in the *Times* newspaper, wherein he professes to put the public right upon the merits of four-wheeled and six-wheeled engines. Although Mr. Jones has thoroughly refuted Mr. Seaward's statements on the points he refers to, yet if you should think the following remarks pertinent to the subject in dispute, viz., the preference of outside over inside framing, I will thank you to allow them a place in your columns.

Mr. Seaward sets out with assuming that the cause of an engine "getting off the rails," is lateral oscillation, arising from the action of the steam through the medium of the piston and connecting rods upon the crank shafts, and asserts that "were the cranks of the driving wheel placed on a line with the axis of the engine," or exactly on the centre of the driving shaft, "the engine would have no tendency to move otherwise than in a straight line." If this be true, and if it be true that, should we only allow the smallest distance possible between the centres of the cranks (viz., the diameter over the flange of the cylinder) an oscillating motion takes place, whereby "the engine is dragged alternately from one side of the road to the other," what are we to look for as the result, when the cylinders are placed outside the framing, and that framing too inside the wheels—the crank projecting from the nave or centre wheel? I dare say, Mr. Seaward would stare, and think there were some things that he had not yet dreamt of, were I to point out to him more railways than one, where engines of the above description have been used exclusively for the last three years, and though often running at a speed of thirty-five miles per hour, have not once run off the rails. But, *does*

Digitized by Google

the action of the steam upon the pistons, and through the piston and connecting rods upon the crank, produce that zig zig, or side-way progression, asserted by Mr. Seaward? I should think not. Action and re-action are equal and opposite. If steam is admitted into the bottom of the cylinder, a pressure equal to the area of the piston multiplied by the effective pressure of the steam is exerted through the intermediate connections to the crank, but an equal force is at the same time exerted against the bottom of the cylinder, and the axis of this force, if I may be allowed the expression, is parallel to the axis of the engine. Hence, if the thrust of the power applied upon the crank, had a tendency to push round that end of the engine at the crank, toward the centre of the rails, the re-action of this power upon the bottom of the cylinder, would have an equal tendency to push round the end of the engine at the carrying wheels, in an opposite direction, thus nuteralising the effect of the power applied to the crank, to produce oscillating motion upon the engine. But the supposition that such an effect can take place is in itself an absurdity, and requires no refutation. The action of the engine, (it matters not where the cranks are placed as regards the centre of the engine), has no other tendency than to pull the smoke-box and the crank-shaft toward one another, and to part them asunder during every revolution of the driving wheel. If Mr. Seaward will demonstrate the contrary, and make good his statements by placing an engine upon a delicately trimed turn-table, and apply a couple of screws as his medium of power between the centres of his cylinders and the cranks, and by screwing out the one and screwing in the other, can thereby make the engine and turn-plate turn round, or oscillate, I shall allow him full credit for his oscillating theory.

One word more with Mr. Seaward, and I have done. He states, as if he were the deputed representative of "the profession," that there is but "one opinion concerning engines with inside framing, viz., that they are decidedly objectionable, and even unsafe." I am afraid this is rather a wholesale assertion, without consulting the parties concerned, and is certainly a begging of the points at issue to boot; but without entering into the question of six-wheeled and four-wheeled engines, as they are without distinction brought under one sweeping condemnation if *within side framing*, I may say that Mr. Seaward has, in making these assertions, been rash, and also ungenerous, to those who differ from him in this matter, and by lending his name to such publications, can only alarm the minds of the timid traveller who is unable to weigh evidence and judge for himself. Your obedient servant,

THEODORE CRUCKSHANK.

Dundee, 27th October, 1841.

FOUR-WHEELED AND SIX-WHEELED ENGINES.

To the Editor of the Railway Times.

SIR,—The question of the four and six-wheel engine, I think lies in a nut shell. If one of the cranks of a six-wheel engine breaks, it has four wheels left to run on, and may not overturn from such an accident; the breaking of one of the cranks (no uncommon occurrence) of the four-wheel engine is the cause of an inevitable overthrow.

The secret of the present contest is, that many engine makers have very expensive models for four-wheel engines and none for six-wheel; and the six-wheel engines manufacturers are in a similar predicament as to having no casts or models for four-wheel engines. To abandon either system, and be at the enormous expense of new casts and models is the real cause of contest.

I ask only one question, viz., what equivalent can the four-wheel engine offer to compensate for the superior safety of the six-wheel engine? I will not admit that cheaper construction should be allowed to be put in competition with the safety of the public.

LACHESIS.

2nd November, 1841.

SOUTH EASTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—As a Proprietor in the above undertaking, I have read with pleasure the occasional notices which you have lately inserted in your valuable journal, of the state of the works, as they have been the means of conveying information upon the subject to my fellow-shareholders who reside at a distance from the scene of the Company's operations, and therefore have not an opportunity of seeing for themselves what is going on. Residing in the immediate locality of some of the heaviest works upon the line, with the exception of those at Dover, I have had continued opportunities of examining their progress, and with the same object I send you a few facts from personal observation, hoping that you will give them a place in your pages. Near the junction of the line with the Brighton Railway, there is a large cutting through sand; this work, together with the succeeding embankment, two miles in length, is nearly completed; further eastward is Bletchingly tunnel, which is finished except the ends, for which the earth is being excavated. The tunnel is succeeded by another long embankment, also nearly completed, and then follows about two miles of the line, quite ready for the b llast and permanent way which is collected on the spot to be laid down as soon as the weather will permit. From this point to Tunbridge the works appear to be in an equally forward state. Many portions of the line are not only ready for the ballast, but some have the ballast and permanent way laid down complete. On Saturday last, I had an opportunity of seeing the working of a locomotive engine employed in drawing ballast waggons along the line at Bow Beech, where the permanent road is completed for a considerable distance. The sleepers which are in the form of a triangular prism, with the vertex downwards, appeared to have suffered no disturbance from the heavy weights which had passed over them, and as far as I could discover, no moisture was retained under them (arising as I presume from their peculiar form), although so much rain had fallen during the week. The ballast which is obtained in the immediate neighbourhood, is most admirably adapted for the purpose. It is to all appearance the remains of a sea beach, probably the beach of the great estuary, which geologists consider to have once covered the space now known as the Wealden district. The peculiar form and position of the sleeper induced me to take a heavy beetle which lay near at hand, and to strike several blows on the top of one of them, with the utmost force I could exert, but it appeared to have no effect in driving it downwards. The materials and fastenings of the permanent way were some time since described in your columns in an extract from the Transactions of the Institution of Civil Engineers, and therefore I will not trouble you with it here; but as far as I could judge, I may say that the permanent way upon this line exhibits a degree of finish and perfection that I have seen upon no other. At our last General Meeting we were told that the line would be opened as far as Tonbridge next spring, and in all probability as far as Ashford in the following autumn, and from what I have seen of the works, I should say that there is every appearance that the promise of the Directors will be fully realised, and therefore we may confidently look forward to an early completion of this high road to the Continent of Europe.

I am, Sir, your obedient servant,

A SHAREHOLDER IN THE SOUTH EASTERN RAILWAY.

TRIANGULAR SLEEPERS — HULL AND SELBY RAILWAY.

To the Editor of the Railway Times.

SIR—In your number of the 23rd of October, I observe that a correspondent praises as a new invention of the Engineer of the South Eastern Railway, the *triangular form* given to the sleepers on that Railway. Whatever merits may attach to this plan, certainly does not belong to the gentleman referred to, nor would it, I believe, be claimed by him. Your correspondent evidently is not aware that longitudinal bearers of the *form* he describes were laid two years ago on part of the Great Western Railway, between Maidenhead and Twyford, and that the ingenious invention by Mr. Jno. Reynolds of cast-iron troughs or bearers is founded on an application of the same principle.

I was glad to observe in the same number the useful table of "Œconomicus," exhibiting the receipts and disbursements of the principal Railways in the last half year. The criticisms of your correspondents Mr. Dixon and "a Greenockean" as to the immense importance of attending to the *rates* of fare when comparing the per centages of expenditure, are very just and well-timed, and I wish that "Œconomicus" would improve his table by adding the average rate per mile received by the several railways for the conveyance of passengers. Some time since, a correspondent offered some remarks on what he justly termed the extravagant rate of expenditure on the receipts of the Hull and Selby Railway; and on the confused state in which the accounts of the last half year were stated in the Report. I am sorry to see that no explanation has yet been offered of the subject matter of his complaint. It has occurred to me on considering Mr. Dixon's statements that the very low rate of fare which the Hull and Selby Company receive will in some measure account for the high per centage of their disbursements, but the account of expenditure was so grossly involved, that nothing certain can be deduced from it. The discreditable rank which that railway, though nearly a dead level, and boasting of great economy in its locomotive department, has hitherto held among the highest in working expences, will I hope induce the Directors to look more narrowly into their expenditure, and at any rate to reform their statement of accounts, which in its present form is by no means creditable either to the Secretary and the Directors who sanction it.

I am, Sir, your obedient servant,

M. M.

November 1, 1841.

GLASGOW, PAISLEY, AND GREENOCK, RAILWAY.

To the Editor of the Railway Times.

SIR,—The following results will no doubt disappoint those shareholders who expected a nett dividend of 10 or 12 per cent.; but the more intelligent of our townsmen think it quite satisfactory, considering the infancy of the establishment, the unfinished state of the works, and the unprecedentedly low fares at which passengers are carried.

But a great augmentation of traffic may soon be expected from the opening of the Glasgow and Edinburgh Railway, and from the Liverpool and other deep sea steamers which are in future to load and discharge at the new timber wharf, now erected for their reception, rather than go up to Glasgow as formerly.

When these arrangements are completed, the traffic, especially of merchandise, will be increased to an enormous extent, and the Greenock and Glasgow Railway become a more profitable concern than its most sanguine promoters ever contemplated.

I am, respectfully, Sir, your obedient servant,

GREENOCKIAN.

Greenock, November 2, 1841.

Greenock Railway.—Probable result of first Year's Traffic:—

Traffic from commencement, 30th March, till 2nd October, taken from the weekly returns, 395,357 passengers	£23,937	8	3			
Suppose next half year, being the dull season, at 1¼ less or an average of 638*l.* weekly	15,958	0	0			
				39,895	0	0
Merchandise from weekly returns till 2nd Oct.....	1,868	19	6			
Suppose next 25 weeks to average 130*l.* per week	3,250	0	6			
				5,119	0	0
Gross Revenue for the first 12 months, being 7½ per cent. on 600,000*l.* (the cost of works &c. till end of May, 1841				£45,014	0	0

Expenses, interest on loans, depreciation, &c., not yet published.

1. Rail to London and Birmingham 142*l.* 6s. 3d., to be deducted from gross receipts.

2. Receipts include the Northern and Eastern toll, &c. The dividend is from the time of opening.

10. The part between Glasgow and Paisley was made at the joint expense of the Glasgow Paisley and Greenock, and Glasgow Paisley and Ayr Companies, but each Company's receipts in respect of that part are now merged in the general returns of each.

11. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester line, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 114 (83+31.)

13. The 5,231,527*l.* 9s. 10d. is the amount actually raised according to latest balance-sheet. The receipts include those derived from the Cheltenham and Exeter branches; the former opened for 18 miles, and the latter for 33. The divisor employed to ascertain the daily receipts per mile is therefore 169½ (118½+18+33.)

15. The 41*l.* 12s. 10d. from goods, &c. is for toll only.

16. Ten per cent. is the maximum dividend allowed by the Company's Act.

17. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. On the quarter shares the dividend is at the rate of 42½ per cent. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

19. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table.

20. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company.

21. Capital of 993,300*l.* includes new capital for widening the line, &c. The dividend mentioned does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table is exclusive of Brighton and Croydon toll.

22. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount.

24. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway.

25. The 4,141*l.* 5s. 4d. are the receipts after deducting omnibus charges, and payments to other Companies. The dividend is from the time of opening.

26. The receipts for goods, &c. include, carriages, 70*l.* 3s. 0d.; horses, 12*l.* 5s. 0d.; dogs, 2*l.* 15s. 6d.; parcels, 184*l.* 15s. 5d.; cattle, 63*l.* 6s. 6d.; corn, 3*l.* 6s. 6¾d.; heavy goods, 453*l.* 5s. 5d.; coal, 69*l.* 14s. 5d. — Total, 986*l.* 11s. 9½d. The dividend is from the time opening.

28. The details of the receipts are as follows:—Passengers, 2,508*l.* 1s. 4¼d.; parcels, carriages, horses, and mails, 330*l.* 17s. 4¾d.; merchandize 1,145*l.* 6s. 9d.; minerals, 251*l.* 1s. 0d.; cattle, 107*l.* 1s. 6¾d.—Total, 4,342*l.* 8s. 0d.; including North Midland proportion of Manchester and Leeds traffic, amounting to 154*l.* 1s. 11¾d The dividend includes a sum of 31,786*l.* earned previous to the last half-year.

29. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 26 miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

30. The capital of 500,000*l.* includes that provided for harbour and works as well as railway. The dividend is from the commencement.

32. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

A Heavy Shareholder.—*We will endeavour to comply with the wish of our correspondent. We have hitherto published the returns just as they reached us.*

We have attended to the request of our Cirencester correspondent.

Mr. S *(Uxbridge).—There are objections to the proposal which for the present prevent us from carrying it into effect, but it shall not be lost sight of. We feel obliged to our correspondent for his attention.*

M. D.—*It is not necessary at present.*

A Holder of a Hundred Shares *(County of Durham), will find what he wants in another column.*

A Shareholder *(Chelsea).—We are aware that the new shares were issued at a discount, but until the whole amount to be called for has been paid up, we cannot strike the average, as in the case of the Croydon and South-Western lines. Of course our correspondent knows that a dividend will be paid upon the* nominal *amount.*

W. *will see that another correspondent has entered more fully into the subject.*

Father Luke.—*A valued correspondent* (Mercator, *of High-gate), sends us the following answer to a notice which appeared in this part of our journal last week:—"A correspondent under the signature of* Father Luke *inquires, who are the parties in this country connected with the proposed railways from Petersburg to Moscow, &c.? There are no parties in this country, so far as I have learnt, who have yet any interest in the above railway project. The promoters of it are two individuals, members of firms in Leipsic, Mr. Dufour Feronce, and Mr Harkort; the former a Director, and the latter Director and Chairman, of the Leipsic and Dresden Railway; both highly talented, and both respectable in the mercantile sphere. The writer introduced Mr. Dufour Feronce in August last to Mr. Robert Stephenson, the Engineer, who has consented to survey the line from St. Petersburg to Moscow, about the construction of which route there appears no doubt."*

Chester and Holyhead Railway.—*A correspondent is anxious to be informed of the present position of this most important scheme, and what steps its promoters propose to take in the ensuing session of Parliament.*

Tyro *must indeed deserve the name, not to know that the parties are* not *"one and the same." They are father and son.*

A Shareholder from the Commencement.—*There was no help for it. The Company were compelled to come to the terms to which our correspondent objects, or they must have been thrown back for at least one session. It was a scandalous robbery nevertheless.*

F. R. S. *should address one of the Leeds journals. The matter is entirely one of local interest.*

A Distant Proprietor *is quite right in his supposition. The calumny had its origin in personal pique, and disappointment. But, would any good purpose be served by now re opening the matter? We think not, and so we doubt not will our correspondent upon a little further reflection.*

Georgius *is one of those very* in-*"constant readers" who give editors much trouble. Had he looked at our paper any week within the last two months, he would have saved himself the trouble of asking, and us of answering.*

The Toll Question.—P. Z., *in support of Mr. Wilkinson's views, shall appear next week. It came too late to appear to day. The matter mentioned in our correspondent's private note was merely an oversight of the printer.*

Peace.—*We believe the railway authorities* do, *as far as they can, prevent persons from crossing, or walking upon their several lines. They certainly* ought *to do so.*

L.—*The announcement was the Directors', not ours. We do not think there is any blame attributable to the Management in this instance, for we believe dismissal followed immediately upon conviction.*

We would gladly oblige our Liverpool friend, but cannot find room for the article from the Carlisle Journal—*at least not this week.*

We have to acknowledge the receipt of an ingenious little pamphlet, "On Measuring Distances by the Telescope: by Edmund Bowman." It is, we believe, the substance of a paper read at the late meeting of the British Association, which was well received by that learned body.

Lachesis.—*Much obliged for your courtesy, but we have a complete set.*

Brandling Junction Railway.—*We give to day, for the first time, the traffic returns, and hope to be favoured with them regularly. Our best thanks are due to the distinguished individual who has written to us on the subject.*

Edinburgh, Leith, and Newhaven Railway.—*Mr. Richard Dawson of Liverpool, "agent" to this scheme, has sent us a second copy (somewhat modified) of the letter of which a few weeks ago the Directors of the Company interdicted the publication. As the letter in question fills eight closely-written pages, surely Mr. Dawson cannot expect that we should* a second time *put it into type, and probably have* a second time *to cancel it. Why does he not imitate the magnanimity of his employers in disdaining to notice the effusions "of contemptible and anonymous scribblers?" We fear, that if the "agent" were to enter into the lists with a few of these same, he would come off second best, if we may judge from the style and substance of his present communication.*

Four-wheeled and Six-wheeled Engines.—*Mr. Gray's letter shall appear next week.*

C. *on Railway Salaries, and* C. D. *on Railway Directions, are in type, and shall be given in our next.*

THE RAILWAY TIMES.

SATURDAY, NOVEMBER 6, 1841.

We call the especial attention of our readers to a very able letter which appears in another page of this day's number of our journal, in reference to the Standing Orders of the House of Commons on Railway Bills. We differ very considerably from our correspondent on several points, but it cannot be denied that the facts which he adduces are of a very startling description, and as we know him to be thoroughly and practically conversant with the subject of which he treats, it is with the utmost deference that we venture to dissent in some measure from the conclusions at which he arrives.

The gist of our correspondent's argument is, that much mischief has resulted from what are called the New Standing Orders of the House of Commons, which, as our readers are aware, require that a twelvemonth's notice of new applications shall be given, and a deposit of 10 per cent. be paid into the Exchequer, before any particular railway measure can be introduced. The facts upon which our correspondent mainly rests his argument are these: that in the five years immediately preceding the enactment of these Orders, not fewer than 64 or 65 Railway Bills were passed, while in the four years that have followed, not one line of any importance has received legislative sanction. This state of things our correspondent attributes in a great measure, if not entirely, to the operation of the restrictive enactments already referred to, and no doubt they have had their effect; but we are of opinion that the cause of this remarkable diminution in successful applications to Parliament is to be sought elsewhere, namely, in the reaction naturally consequent upon the insane spirit of speculation which distinguished the few years immediately preceding the passing of the obnoxious Orders. Even before these Orders were in operation, the railway mania had much subsided. Thus we find that in 1836 as many as 29 Acts received the Royal Assent, while in the following session the number only reached 15, and we have little doubt that, even had matters remained on the old footing, the next year would have witnessed the passing of but a very few measures of the kind. The fact is, that all the principal routes in the kingdom had by that time become pre-occupied—a reason sufficient of itself to check the ardour of speculation, even had not calm inquiry into the real merits of more than one of the mad projects of the day tended to excite suspicion towards every scheme of a similar character, no matter how deserving in itself or how rapidly supported. When it began to be discovered that the 20, 15, or 12 per cent., the promise of which had been held out as a lure to the credulous and unwary, was not likely to be forthcoming, where was the chance that even a well-founded prospect of 8, or 6, or 5 per cent., would attract speculators? Sober-minded projectors were driven from the field, and those of another cast being no longer able to pursue with advantage their former course of deception and fraud, the railway system languished—and this without any particular reference to the restrictions which then, for the first time, Parliament in its wisdom thought fit to impose.

And what impression has the intervening period, and the experience of those lines that have been in actual operation subsequently to 1837, been calculated to produce? Has the average result of railway dividends been such as to tempt capitalists to invest their property in schemes of this character? Certainly not. A few—we regret they are so very few—lines have returned a moderate interest upon the money sunk in their construction; but taking the opened railways as a whole, there is scarcely any other mode of disposing of available funds that would not have proved more profitable than these works, particularly during the extreme scarcity of money that has for some time past prevailed. The enactment, therefore, of the new Standing Orders may rather be said to have chimed in with the results of experience derived from the progress of events, than to have of itself seriously impeded the prosecution of railway undertakings, much less to have, as our intelligent correspondent seems to contend, virtually brought them to a complete stand still. A far more pregnant source of mischief, during the last two or three years, has been the extraordinary discrepancies between the estimated and actual cost of completed lines, whether arising from the blunders of engineers or the extortions of landowners. In a word, we are of opinion that a case of profitable investment of capital having once been made, the present Standing Orders of Parliament would not materially interfere with the success of any railway scheme; and if a profitable application of capital can *not* be demonstrated, we do not think that the relaxation or abrogation of any rule of the House would be of much avail, while there are advantages resulting from these Orders which it would be unwise to overlook. We regard the case of the Chester and Holyhead project, referred to by our correspondent, and the proposed schemes for completing a railway communication with Scotland, as exceptions to the general rule. In such instances we would have formal enactments dispensed with, more particularly when it can be shown that no practical grievance would arise. We do not say that under the circumstances it was not absolutely requisite that the protection extended to landowners by the present Standing Orders ought not to have been granted, but we do say that the disposition evinced by the late Parliament, in refusing to relax the operation of such Orders when it was clearly shown that no real disadvantage or damage would accrue, was not merely most ill-judged in itself, but was calculated to induce a belief that private interest, rather than a regard for the public good and the public convenience, was at the bottom of these enactments. We quite agree with our correspondent that the lords of the soil, above all other

Digitized by Google

tion which they occupy with regard to railways. We think, and could easily prove, that taken as a body the land-proprietors of England have received much more than an equivalent for any invasion of their rights consequent upon the formation of railways; but at the same time we deem them entitled to every measure of precaution which can be contrived, consistently with a due regard to the advantage of the public, and to the private rights of those who have boldly embarked in schemes which may or may not tend to their personal and private advantage, but which, in any event, cannot fail to be beneficial to the nation generally.

There can be no question that the promoters of Railway Bills have good reason to complain, when they find that while *they* are placed under severe restrictions, parties interested in the formation of canals or common roads—which it must be admitted involve in general an equal infringement of private property—are subjected to so many fewer impediments. Why should not all be served alike? If the interests of the owners of property that may be required for the formation of a great national work like a leading line of railway, are to be so carefully studied, let the same invasion of vested rights be visited with the same penalties in different instances—let the same obstructions be thrown in the way of the successful prosecution of the one enterprise as of the other, or rather let every obstruction be removed from each. Why should two months suffice for notice in the case of a Canal Bill, and twelve months be indispensable in the instance of a railway? Such discrepancies are wholly unaccountable on any principle of sound policy or common sense.

While every facility is afforded to the prosecution of other schemes, not the most trifling improvement can be made in railway plans without a great and most unnecessary delay in carrying such improvement into effect. A railway cannot even be amended—cannot be rendered more convenient to the public and more profitable to the proprietors, without a special Act of Parliament, while every imaginable obstacle is thrown in the way of obtaining such Act. Ought such a state of things to exist? Our readers will answer for themselves. It seems to us that if Government and the legislature do not see fit to extend any special facilities to railway projects, they ought at least to offer no obstruction. There is not much fear *now* that speculations of this kind would be pushed too far.

Our correspondent appears to think, that the effect of the Standing Orders has been to divert native capital to foreign schemes. We doubt whether this has prevailed to any great extent. The instance of the Paris and Rouen Railway adduced by our correspondent is scarcely in point. We do not believe that English capitalists at large have evinced any particular disposition to embark in that scheme, although we look upon the project as intrinsically valuable, and although the proprietors of the South-Western Company may, for reasons easily to be conjectured, have so far consented to patronise it. If the operation of the English Standing Orders interfere with the judicious and profitable application of British capital, surely the difficulties and delays interposed by the regulations of the tribunal which in France has the management of these matters, must be looked upon as far more obstructive.

We do not argue that the existing Standing Orders have not been productive of mischief, or even mainly, that the present apathy in railway speculations is to be ascribed. At the same time, we should be glad to see even the semblance of obstruction removed. As regards the progress and extension of the railway system, it is scarcely possible that matters could be worse than, unfortunately, they are at present. If any means could be contrived for giving an impetus to such a mode of investing capital, we should hail it as a boon. Very forcibly does our correspondent put forward this view of the question. In the course of another year, active operations will have ceased, so far as a large body of men are concerned, on all the principal lines of railway, and what is to become of the parties who have been thus employed? Of course, we would not recommend, for the sake of any merely temporary relief from the "pressure from without," that dangerous or doubtful measures should be adopted, but in making the experiment of a return to the old system, in the matter of Railway Bills, no such apprehension need be entertained. The spirit of foolish speculation has long since died away of itself; and fostering measures, rather than restrictive enactments, are now required. While, therefore, we repeat that we do not attribute so much mischief as our correspondent seems inclined to do, to the operation of the present regulations, we heartily concur with him in wishing them repealed, and should be glad to see even increased facilities held forth, as well as all other needless restrictions removed, being convinced that in proportion as the internal communications of the country are improved, will its general prosperity, and the benefits resulting to individual members of the community, be promoted.

Our readers will remember how fiercely the *Times* newspaper assailed the Railway Companies at the period of the lamentable casualties of last year. If we may judge from an article which appeared in that journal on Wednesday last, a similar disposition is again about to be evinced, with this important difference however, that although the position now taken up is almost as untenable as was that previously contended for, there is much less rancour in the mode of supporting it. We give the article itself in another page, and may safely leave its arguments and inferences to the judgment of our readers, without the necessity of entering upon any lengthened comments.

The cause of this movement on the part of the *Times* is avowedly because there has been recorded in its columns "the sacrifice of six lives on different railways within the space of only three weeks." This is the old system of converting accidents upon railways into railway accidents—accidents peculiar to this mode of travelling, if not inseparable from it. Of course the *Times* includes in its list the fatal occurrences of last week upon the Grand Junction line—occurrences which it has been proved to the satisfaction of a Coroner's jury were occasioned solely by the imprudence of the sufferers themselves. Just as reasonable might the *Times* base a philippic against common road locomotion upon the fact recorded in its own columns of the same day, that an elderly lady of Kensington was, on the previous night, knocked down and killed by the *Rocket* Portsmouth coach! We have not been "inattentive observers" of events, any more than the *Times*, and yet we should be glad to know what accident, except that on the London and Brighton line, can fairly be designated a railway accident, within the last three weeks, North Union line clearly caused by carelessness, within the last three months.

The *Times* appears to think that the remarkable freedom from accident which characterized the spring of the present year, was attributable principally if not solely to dread of the impending measure of the late Government for the "better regulation of railways." Surely our contemporary cannot be serious. Does he not know that the Managers of Railway Companies have a much more immediate—a much more pressing—excitement to vigilance than the fear of any enactment which Parliament could possibly impose? Does he not know that the occurrence of every mischance upon a railway, no matter how occasioned, touches the proprietors in the most sensitive of all places—the pocket? Let him inquire of the Brighton Management, and he will find that fifty regulating or restrictive clauses in an Act of Parliament could not have inflicted one tithe of the pecuniary injury upon that undertaking which has arisen from one accident, the causes of which are even now hotly in dispute. One would imagine from these diatribes against Railway Boards, that Directors experienced a pleasure, and derived a positive profit, from being careless of the public safety, whereas the very contrary is so notoriously the case, that it is almost an insult to the understanding of our readers formally to refer to it.

Our contemporary's views of the "equitable right" of the public to impose whatever conditions they please upon the Railway Companies, must be taken with some considerable reservation. We have always maintained that the public safety and public convenience being paramount, it would be a dereliction of duty on the part of the legislature were it to omit the enforcement of any regulations which might tend to secure those objects, provided always that such regulations did not trench upon the private and pecuniary rights of the Companies, which, as we take it, ought to be looked upon as equally sacred with those of other corporations or other individuals. The regulation of external arrangements (meaning thereby arrangements for the safe conveyance of the public), is to a certain extent fairly within the province of Parliament; but neither Parliament nor Government, nor any there power, has the smallest right to interfere in the internal management of a Railway Company's affairs, or in other words, in any part of their proceedings which concerns themselves alone as commercial speculators, and does not affect the comfort, accommodation, and safe conveyance of the community.

We entirely agree with the *Times* as to the disgraceful postponement of really practical measures, (such as Mr. Labouchere's late bill), to the discussion and re-discussion of mere party questions. We denounced the system at the time, and shall continue to denounce it. Let us hope that should a similar measure again come before the legislature, it will meet with that earnest attention and calm deliberation and discussion which its importance so eminently demands.

Another accident, although happily unattended with the loss of human life, occurred last week on the North Union Railway, through the dangerous practice of crossing highways or pathways on a level. The particulars are given in the *Preston Pilot* of last Saturday, from which it appears that on Monday three horses had been put into a pasture field, a short distance from a place called Tur-

Digitized by Google

for which purpose there are side gates. These gates were left properly shut at nightfall. It so happened, however, that either by the neglect or culpable design of some individual, one of them had been opened and left in that state. The horses, it appeared, must have first strayed from the field in which they had been put, and had afterwards got upon the line by passing through the open gateway, and while there, the mail train came up, when two of them were killed on the spot, and the third very seriously injured. One of the two killed was absolutely cut in two.

Such an accident might, it is true, have occurred on almost any part of any line through defective fencing, (indeed many such accidents have so occurred), but it is manifest that the danger is much increased when, as in this case, the neglect of shutting a gate, or the opportunity afforded to a mischievous person of opening one, is likely to entail the most serious consequences.

Our Preston contemporary, while condemning in general terms the principle of *ex post facto* legislation, seems to recommend that the proprietors of lines already formed should be compelled "either to erect bridges or construct tunnels at every situation where any public or private road is crossed by a railway. And this regulation [continues our contemporary] would not only be an act of justice and humanity to the public at large, but would ultimately prove to be one of the best kind of economy to Companies, as the outlay, in most instances, could not prove so serious in amount as the cost for the permanent services of a watchman at crossing places where gates are used, and the attendance of such a person is clearly indispensable where the present objectionable system of having side gates prevails. We do hope [he adds], therefore, that Companies will consent voluntarily to give this proper degree of protection, or failing to do so, that the legislature, whose bounden duty it is to provide for the safety of the lives and properties of the public at large, will not hesitate to enforce the performance of so salutary a regulation." In the former part of this "hope" we cordially concur, and have no doubt an alteration of plan, wherever it is practicable (for in some situations it is *not*), would in the end prove to be true economy and sound policy. But we cannot agree with our contemporary, in thinking that Parliament ought in every case, without exception, to enforce the erection of bridges or the construction of tunnels, seeing that it was not without Parliamentary sanction, that lines were thus laid down. We certainly think that these "side gates" ought to be more carefully looked after than they appear to be, and so far Parliament would be justified in enforcing any reasonable regulation.

The *Derby Mercury* of Wednesday, publishes "an extract from a letter from an officer in charge of the Post-office between Birmingham and Preston," from which it appears that on the morning the horses above referred to were killed, the Liverpool train, which met the North Union train at Warrington ran over a cow, and cut her to pieces, and on arriving at Preston Brook, three sheep met with a similar fate. On returning next day, a dog was killed near the same spot! Is it not marvellous that under such circumstances accidents should be so rare? Surely the fencing of these lines should be more carefully attended to.

PREPARATIONS are now making by the Directors of the London and Blackwall Railway Company for the carriage of goods upon that line. Warehouses for the reception of the goods are in progress, and a contract to be completed on the 1st of January next has been entered into for the hoisting and lowering apparatus. The operations are to be confined in the first instance to the conveyance of heavy merchandise from the West India Docks —the great emporium of such commodities— to London; subsequent arrangements will extend throughout the whole line, namely, from the Brunswick Wharf at Blackwall to the terminus in Fenchurch-street. It is proposed to attach one or more loaded waggons to every passenger train (which, as our readers are aware, run every quarter of an hour throughout the day,) and arrangements have been made which will obviate the possibility of delay from this cause. The goods will be delivered at the door of the consignee in the same vehicle as will be used on the railway, the vehicle being lowered into the road so as to render unloading and reloading unnecessary. It is calculated that at least 200*l.* per week will thus be added to the Company's revenue —an estimate which we do not think is by any means overrated, when it is considered that no extra power will be required, and consequently no further expense incurred, except incidentally.

With respect to the passenger traffic, although it is yet far from being what it was expected to be, and what we are convinced it ultimately will be, the gradual and steady improvement which it has experienced, augurs well for its future results. The following are the returns for three months in the past and present years:—

	1840.		1841.
July.....	£2,351	....	£4,294
August.....	3,640	....	5,428
September	3,036	....	4,486
Total	£9,027	....	£14,208

thus exhibiting an increase of about 50 per cent.—a proportion which it is believed will be kept up during the ensuing winter months. The number of passengers conveyed during the last four months has been as follows:—

July.....	225,162
August	252,044
September	236,278
October	201,292

The total number of passengers carried on the railway in the sixteen months that have elapsed since its opening, has been upwards of 2,700,000, *and this without loss of life or limb, or any serious accident whatever.*

The number of passengers embarked and disembarked at the Brunswick Wharf, Blackwall, during the fifteen months ending in September last, was not less than 780,000! We have no doubt that next year even this large number will be greatly increased.

WE alluded incidentally last week to the neglect of some Companies in not making an adequate provision for depreciation of perishable stock. After the very full and lucid explanations of the true principles of a depreciation fund given by the able Deputy Chairman of the Eastern Counties' Railway, at the late half-yearly meeting of that Company, and subsequently repeated by the same gentleman at the meeting of the London and Birmingham Company, we are surprised that so much misapprehension should still exist upon this subject, as is shown by the frequent confounding of a *depreciation* with a *liquidation* fund—two totally dissimilar provisions.

The only argument adduced against the views taken by Mr. RATHBONE at the meetings referred to, and subsequently re-iterated in a letter to a contemporary, is founded on the remarkably equal percentage of expenses on the oldest of all lines, the Liverpool and Manchester, where it is alleged that no depreciation fund exists. Now, for years past, the whole stock of engines, carriages, waggons, &c., upon that railway has been periodically examined and carefully valued. Nay, whenever it has been found requisite (and there have been but very few half-years in which, as the accounts will show, it has *not*) some of the additional new stock of engines and carriages which from time to time have had to be provided, and which other Companies place to the account of *capital* have been charged to *revenue*, in addition to the regular current expenditure. There are few of the periodical accounts of that Company that will not show that some new engines, for example, have not thus been charged. A Company like the London and Birmingham, starting at once with their full stock of engines, and keeping up the number by repairs and restorations of parts as they are destroyed, have not the opportunity of *thus* setting aside out of revenue such sums, in addition to current expenses, as are requisite to meet the gradual destruction of parts that cannot be immediately replaced; and hence the necessity of adopting either their plan of a regular half-yearly per centage to provide a fund to meet these occasional heavy outlays, or the North Union plan of taking the exact sum which the valuation every half year shows to be required. Once, however, establish the practice of half-yearly revaluations of all perishable stock, and the rest must follow; for the proprietors cannot if they were so disposed, declare larger dividends than the real *bona fide* net profits of the half-year warrant. Instituting these revaluations would at once meet both the objections started at the Birmingham meeting above referred to, namely, first that the per centage taken was higher, and was consequently setting aside a larger sum out of revenue, than the actual depreciation required; and secondly, that the current repairs of each half-year ought to keep up, and would keep up, the value of stock of this kind at all times, if originally sufficient and complete. In this latter case, supposing the objectors to be right, the valuation would be satisfactory, as proving that *no* sum need be set apart for depreciation, but this clearly cannot always be.

In making these valuations there would be no difficulty whatever, provided a right principle were adopted. The market price or selling value of the articles should have nothing whatever to do with it, but the original cost of the stock being assumed as the starting point, the only consideration is the amount of depreciation from the wear and tear unrestored by repairs at the end of the period—the relative efficiency, and (if we may be allowed the phrase) the power of durability at the respective dates. If *that* should be less by one-tenth at the end of any particular half-year, as compared with the preceding half-year, then 10 per cent. on the value of the stock is the sum to be taken from the revenue, in addition to the amount consumed in current repairs, and out of which sum the heavy outlay of replacing the worn-out machines by new ones must come.

IN adverting in our last number to the terms which have been agreed to by the contending parties in the Edinburgh and Glasgow Railway

Digitized by Google

Direction, in respect of the new Act of Parliament to be applied for next Session, we took exception to the restriction of residence clause, as almost the only objectionable feature in the arrangement, and this rather as a matter of principle than from any practical inconvenience which is likely to result from it. We have reason to believe that the proposal of appointing (if it should appear fit) five Directors unconnected locally with either of the terminal towns, is intended to give the English proprietors (the great majority of the whole) an opportunity of putting into the Direction as many as five of their number to look after their interests, should it be deemed expedient.

In the original London and Birmingham Act there was a clause requiring ten of the Directors to reside within twenty miles of Birmingham, (where at present there actually are not, we believe, ten proprietors holding a qualification,) and ten within twenty miles of London, leaving the proprietors unrestricted as to four of the members of the Board. After long discussions between the Directors and proprietors, all restriction of residence was, by common consent, swept away in the amended Act, and now the Board may consist of any number between twelve and twenty-four members, without the smallest limitation as to locality.

THE Half-Yearly General Meeting of the Cheltenham and Great Western Union Railway Company was held last week, and a notice of the proceedings will be found in another column. It will be seen that a dividend of 1*l.* per share was declared out of the proceeds of the rent paid by the Great Western Company for the lease of that part of the line already constructed; and although unfortunately a further call, which has just been made, of 10*l.* per share will neutralise all immediate benefit to the proprietors from this source, it is so far satisfactory to know that upon the expenditure already incurred, the Company are in the receipt of interest at the rate of from 3 to 4 per cent. per annum. This is no very magnificent return certainly, but it is more than many persons anticipated from the undertaking in its earlier operations. We could have wished that further information had been given as to the traffic upon the Cheltenham line, which the Directors of the Great Western Company, greatly, we are convinced, to their own hurt, persist in mixing up with the results of the working of the parent line and of the Exeter branch.

It will be seen further, that the Company are yet undecided as to their future operations —whether they shall proceed to complete the line to Cheltenham, or stop short at Cirencester. We are by no means partial to the mutilation of undertakings for which Parliamentary sanction has been sought and obtained; but if a Company's funds will not admit of the completion of their original scheme what are they to do, especially if, as in this case, further capital could not be raised except on the most ruinous terms? The Cheltenham Directors have taken the most prudent course in the mean time—namely, to apply to the legislature for an extension of their powers and to watch the course of events. We trust that the prospects of the Company will ere long be more bright.

The rumours which had got abroad as to the condition of some of the works on the line which it was alleged would render the closing of it during the winter months indispensable, were most unequivocally pronounced by the Chairman to be without foundation. We are glad to hear that the works have suffered no more than might have been expected from the extraordinary weather with which we have of late been visited.

A FEW weeks ago we threw out a suggestion for enabling the public to secure, with greater readiness and less personal trouble and expense, particulars as to the times of starting of railway trains, their rates of charge, and other matters connected with locomotion. Our plan had reference to the establishment of what might be called a A TRAVELLER'S INFORMATION Office, in the city, and a similar office at the west end of town, at either of which the public might be furnished, without cost, with the fullest and most satisfactory details as to any particular route. It gives us great pleasure to find that our hint has been promptly taken, and that measures are in progress for carrying it into practical effect. In our advertising columns will be found a prospectus of such an institution, embracing not only railways but steam navigation, and in fact every species of conveyance. Mr. SYMONDS, whose name is attached to the announcement, is a gentleman for whose great respectability and thorough competence for the duty he proposes to undertake, we can conscientiously vouch; and we sincerely trust that the plan will at once secure the warmest patronage and support of the Companies. We do not see, indeed, what opposition it can possibly encounter, as it interferes with no existing arrangement either of Companies or booking offices, except to spare the authorities of the one and the servants of the other much trouble and annoyance. The benefit to the proprietors of railways from thus increasing the facilities offered to the public, are too obvious to require enumeration. We again strongly recommend the scheme to the immediate notice of railway authorities, in all parts of the country (for although situated in the metropolis, the effects of the institution will be felt over the whole kingdom), as securing a vast amount of good at a very trifling cost. It only requires to be once established to have its merits generally appreciated.

IT is stated in the daily papers, that in consequence of so many fires happening in different parts of the country, the Directors of the London and Birmingham Railway have ordered of Mr. Merryweather, the engine maker, Long Acre, London, a new and powerful fire engine, one of the largest size, which will be capable of throwing above 200 gallons of water per minute, fitted up in the first style, with railway wheels and buffers, to run on the line as the engines and carriages do. In case of fire on the line or otherwise, they will be able to attach it to an engine or train, and start it at a moment's notice.

—o—

INQUESTS have been held on the bodies of the two gentlemen who were killed on the Grand Junction Railway on Thursday week, as noticed in our last number. The evidence fully cleared the officers of the Company from all blame, and verdicts of "Accidental Death" were returned without the imposition of any deodand.

—o—

THE effects of coach-competition are thus noticed in one of the provincial journals:—"A few days ago a gentleman inquired of the driver of a coach which had just changed horses, and was on the point of starting from an inn on the road between Southampton and Weymouth, the price of the fare to the next town. It happened that the horn of a rival coach was within earshot, and rapidly appro[illegible] Coachee's answer was, 'What you please—anything—a glass of grog—nothing at all—jump up, sir!'"

—o—

THE *Staffordshire Gazette* mentions, that it having been ascertained that baskets of game sent by the Grand Junction Railway had been plundered to a considerable extent, and complaints on the subject reaching Mr. Booth, of the Station, in Stafford, he immediately wrote to the Directors of the Company, suggesting the following plan to prevent this species of robbery, and which we are glad to find has been adopted:—That every package should be weighed at the station at which it is delivered, and again on reaching the nearest point of its destination; and that gentlemen sending game be requested to have the weight or number affixed to the direction when they despatch the same. Orders to this effect have, it is said, been issued to every station on the Grand Junction line; and if the regulation be duly observed, and as far as the Railway Company are concerned it will be so, detection must be inevitable.

—o—

THE *Brighton Gazette* says:—"The town, notwithstanding what may be said by journals hostile to the railway, is overflowing with company, and that of a more fashionable description than we have had for some months."

—o—

THE Ulster railway will be further opened as far as Lurgan, on Monday next. A correspondent of a local paper recommends that a complimentary dinner be given to the Directors on the occasion, by the gentry and residents generally of the neighbourhood. We should be glad to see this mark of honour and respect to a body of men who so richly deserve it.

—o—

IN addition to what we stated last week respecting the Edinburgh day mail, we find that if a mail train left the Euston station at half-past nine in the morning, and went down to Darlington (264 miles) at the rate of 24 miles an hour (stopping a quarter of an hour at Derby for refreshment,) it would get to Darlington at a quarter before 9 at night. The *Chevy Chace* coach performs the remainder of the journey to Edinburgh in fourteen hours and a half, so that if a mail went forward from Darlington at the same rate, it would get into Edinburgh at half-past 11 the next morning, which is *two hours and a half earlier* than it does at present.

—o—

EASTERN COUNTIES' RAILWAY.—Much anxiety having been felt as to the injury which the long-continued rains were calculated to do the Eastern Counties' Railway, we have inquired into the subject, and we find that though some slips have occurred on the embankment between Brentwood and Romford, the whole line is at present perfectly safe. In an interview we had with one of the Directors, he assured us that he had himself inquired into the matter, and found no slip of consequence had occurred for a considerable time; and having ourselves passed up the line last week, we witnessed the care and caution which were observed throughout. The late wet weather of course suspended the progress of the works on the line towards Colchester; but the last few days being dry, the operations have been resumed at Witham, Hatfield, Kelvedon, and other places. Since writing the above, we have received a letter from Mr. Braithwaite, the Engineer, who states that the line of rails is in the *most perfect order*, and that the reports to the contrary which had reached his ears are entirely *without foundation*. —*Chelmsford Chronicle.*

RAILWAY OFFENCES AND OFFENDERS.

We have already referred more than once to the case of the man Beadle, late a guard in the service of the London and Brighton Company, who was convicted by the Croydon magistrates of a gross and most unmanly outrage on a female passenger, and sentenced to the paltry fine of 40s., which, as is usual in such cases, he immediately paid. We had the satisfaction of stating last week, that the man had been instantly dismissed the Company's service, and we are quite sure it will be some time before he obtains similar employment upon another line. Our object in again adverting to the case, is to notice the prompt and praiseworthy interference of the new Secretary of State for the Home Department, Sir James Graham, in reference to the punishment inflicted by the Croydon Bench upon Beadle. It appears that Sir James has expressed to the Croydon magistrates a strong opinion as to the inadequacy of the punishment, and the only excuse which their worships' plead is that the man was in addition to lose his situation. With all submission, *that* was a point with which the Croydon Bench had nothing whatever to do. They sat there to punish a particular offence, without reference to the present position or future prospects of the offender. It was for the Directors of the Company to determine as to his remaining in their service; all that the Bench had to do was to take cognizance of a particular act.

It gives us sincere pleasure to find Sir James Graham so vigilant in matters of this kind, and we trust the hint conveyed to the Croydon magistrates will not be lost upon their brother justices throughout the country. Interference of this kind was assuredly much needed.

A copy of a lengthy circular, addressed by Beadle to all the daily papers, has been forwarded to us, but it contains nothing that in the smallest degree alters our opinion of the case. Beadle may *not* have been guilty (although he brings nothing forward in proof of his innocence but vague assertion, intermixed with insinuations to the prejudice of the prosecutrix), but the Croydon Bench having been satisfied of his guilt, were we repeat very seriously to blame for awarding so trifling a punishment.

William Anderson, an engineer, was on Monday week brought before the magistrates at Warrington petty sessions, charged with riding in one of the carriages of the Grand Junction Railway Company, without paying his fare. On the arrival of the London and Manchester mail train at Warrington on the previous Sunday morning, two gentlemen, who occupied seats in one of the carriages, complained to the guard that some person was under the seat, and on the conductor and guard making a search, they found the prisoner lying at full length in the space between the bottom of the carriage and the seat, and he was immediately taken into custody by one of the railway police. The defendant must have ridden from Birmingham, if not further, as there had been no opportunity of his entering the carriage unobserved between that place and Warrington. In his defence, the prisoner stated he was employed on the Gloucester and Birmingham Railway, at Bromsgrove, and having been to Birmingham to make some purchases, had drunk more than he was accustomed to do, and could not tell how or at what place he had entered the carriage. The magistrates having commented upon the great danger of persons acting as the defendant had done, as, in all probability, had the carriage been occupied by females or nervous persons, they might, on discovering the prisoner's presence there, have thrown themselves out of the carriage and been killed, ordered him to pay a fine of forty shillings and costs, or be committed to hard labour for two months.

SLIP OF EARTH ON THE CROYDON RAILWAY.

A VERY serious slip occurred in the New Cross cutting of the London and Croydon Railway on Tuesday evening, shortly after eight o'clock. The spot where it took place is about a quarter of a mile from the New Cross station, and where the depth of the cutting is about 70 feet, with a batter of 2 to 1. At the bottom of the cutting there is a band of hard black sand with shells, and over it a stratum of strong blue clay about 14 feet deep; the top of this forms the floor of the slip, which is entirely of a porous yellow clay, abounding in septaria, sulphate of lime, and sulphur, and when saturated, almost of a semifluid character. Ever since the formation of the railway, this top stratum has been subject to considerable surface slips, which the late prevalence of rain had brought down over the floor, so as to require their removal by night.

On Tuesday evening a Brighton luggage train arrived just as an increased movement of the earth commenced; and it shortly appeared prudent to stop the succeeding trains, and within the hour the heavy fall took place. A large quantity of earth, extending for about 120 yards in length, and variously estimated to contain from 15,000 to 25,000 cubic yards, came gradually down from the top of the west slope in one mass, driving forward over the edge of the floor so much clay as to cover both lines of railway to a depth of nine or ten feet.

The Chairman and the principal officers of the Company met during the night to make arrangements for the working of the traffic on the ensuing day, and for the immediate commencement of operations for clearing the line. Several of these gentlemen were on the works for nearly the whole night, and before four o'clock Messrs. J. and T. Wheatley, the large coach-proprietors of Greenwich, were engaged to provide a sufficient number of four-horsed coaches to convey the passengers, travelling by the Brighton and the Croydon Railways, both ways, between the New Cross and Forest Hill stations. This assistance was supplied promptly and efficiently, and no effort or expense was spared by the Directors to diminish as far as possible the inconvenience arising from so unforeseen an accident. It has since been arranged for the trains from Croydon and London to meet at the slip, so that the passengers may pass and repass from one train to another, a distance of about 300 yards, on a gravelled or planked walk, up and along the slope opposite the slip. The Brighton passengers will continue to travel by coaches between the New Cross and Forest Hill stations, until the rails are cleared, which, if the weather is sufficiently fine, it is hoped will be effected in the course of a few days. Three engines and several horses are at work, and as large a force of men as can be effectually concentrated upon the spot are employed, day and night, to remove the earth. We understand that the Brighton and the Greenwich Companies, and their resident Engineers (Mr. Statham and Mr. Miller) instantly offered and afforded every assistance in their power. Sir Frederick Smith, and the Directors and Engineers of the Brighton and South-Eastern Railways, visited the slip early on Wednesday morning.

RAILWAY SALARIES, &c.

To the Editor of the Railway Times.

SIR,—I was in hopes that our "Friend to the Subs." would have met with a helper instead of an opponent in an "Old Clerk," as his letter was intended to awaken the proprietors and shareholders to the many difficulties that railway servants have to contend with, but I am happy to find that our friend "C." has taken up the cause so ardently. In the first instance, I beg of the "Old Clerk" to point out any one instance of insolence by a railway servant that has not been treated as it ought, either by a severe reproval or an immediate dismissal—the latter most likely. It is so on the line I am employed on, and I have no doubt it is so on others. But I must fully bear out the remark of "A Friend to the Subs." (from actual experience in the matter) of railway servants being open to every species of insult, and conduct almost unbearable from passengers, who well know they have no redress. Complaints from the servants of the Company would be thought nothing of by the Committee, but if on the other hand complaint is made against a railway servant, immediate dismissal (almost without a hearing) is the result. Such is the precarious state of a railway servant's situation. Why is it so? Because as the "Old Clerk" truly says (the only just remark I can give him credit for,) there are thousands looking out for situations, but not a tenth of them in the least manner competent to fill the situation they apply for. Let me ask him who are the successful applicants? The one that has the most influence with the superintendent or some of the Directors, not the person most competent. I could, if I dare, point out to the public many cases of such unjust conduct towards railway servants, to say nothing of their low salaries; but it is not all the servants employed on the railway that are badly paid. It is only those in subordinate offices, and those that have nothing to recommend them but their exertions. I am not so badly off in point of salary as our friend "C." I do receive a little more per diem than he does, but I am conscious my pay is not adequate to my exertions. I am required to be at my duty, and a very responsible one, from 6½ A. M. till 7, 8, and sometimes 9, P. M. Thus my whole life is engrossed in the Railway Company's interests, and for what? For 100*l.* per annum! I would ask "An Old Clerk" what can a man with a family save from 100*l.* per annum, and make a respectable appearance? Rent and taxes in the part where I reside exceed 35*l.* per year; firing at the high price it is in London, 5*l.* per year; living at a moderate rate 55*l.*; and 5*l.* per year to clothe yourself, wife, and family. In case of illness what resource is there then? You may live on the air for all that the Company care. If one cannot stand the inclemency of the weather another will. We want, say they, able-bodied men, and when you are old, or illness comes on, you may go where you like; we can fill your place with one that is young and vigorous. Ought this to be? I cannot boast of being "An Old Clerk," but beg to subscribe myself a young but experienced one, and a Sub.

M. D.

We understand that a reply to Mr. W. A. Wilkinson, the Chairman of the Croydon Railway Directors, on the subject of "The Toll Question, as exemplified in the case of the Croydon and Greenwich Companies," is in the press, and will be ready for publication at the beginning of the week.

THE STANDING ORDERS OF PARLIAMENT RELATIVE TO RAILWAYS.

To the Editor of the Railway Times.

Sir,—As your paper is devoted to the advocacy of railway interests, I shall make no apology for troubling you with a few observations on a subject which I have seldom found alluded to by your correspondents, but which I firmly believe is acting as a greater impediment to the further prevention of railways throughout the kingdom, than any other cause. I allude to the Standing Orders of the House of Commons, which require that plans shall be deposited and notices given in the newspapers a whole year prior to the introduction of any Railway Bill into Parliament, and that ten per cent. of the estimated capital shall be paid into the Exchequer before the Bill is introduced.

When I tell you that with two very unimportant exceptions, not one single railway Bill has passed the legislature since the framing of these orders in 1837, a period of four years, although in the preceding four years forty-seven Acts were passed, you will probably agree with me in thinking that they must have had some influence in checking those truly beneficial undertakings, for many attempts have been made in the interval to surmount the difficulties imposed by these orders without success. It is indeed manifest that parties will not embark their capital in a project which can only even be submitted to the sanction of Parliament twelve months after the plans relating to it have been matured and deposited, and, consequently, in most of those cases where the costs of the preliminary surveys had been incurred, it has been by speculative parties, in the hopes of afterwards establishing a Company to take up the Bill and raising a capital before the meeting of Parliament. Thus it happens, that measures are insufficiently got up, and speculative lines of railway laid down through properties, to the great annoyance of the landowners, who do not know for a whole year whether the measures will be proceeded with or not, and at length (although capital might be possibly raised if the undertaking had been well matured in the first instance) the preliminaries are found to have been so insufficiently fulfilled, that it is impossible to bring the Bill before Parliament, and so the measure falls to the ground. As a proof that I do not speak at random in this assertion, I beg to refer you to the return moved for by Lord Robert Grosvenor in the session before last, and which was published in your paper, from which it appears, that in the month of March of the first year after the making of the new orders, fifty-five railway plans were deposited, and notices of railway Bills given, of which one only passed, being a mere tram-road, involving an expenditure of 20,000*l.*

In the next year, twenty-five plans were deposited, and notices given of railway Bills, of which one only passed, viz., the West Durham Railway, with a capital of 45,000*l.* In the next year, thirty-six plans were deposited, and notices given, but not a single Bill passed!

I am not aware what notices were given of railway Bills for the session of 1841, as the return does not extend to that period; but only one insignificant Bill passed for a small Scotch railway.

It appears, therefore, that since 1837, when these new Orders were framed, not 100,000*l.* has been authorised by the legislature to be expended on new railways.

If we look to the period immediately preceding that year, we shall find by the same return, that in 1833, five railway Acts passed, including the London and Birmingham and Grand Junction Railways. In 1834, five, including the Southampton Railway. In 1835, eight, including the Great Western Railway. In 1836, twenty-nine, including the North Midland, the Midland Counties', the Birmingham and Derby, the Manchester and Leeds, the Eastern Counties', the South-Eastern, the York and North Midland, &c. &c. In 1837, fifteen, including the Chester and Crewe, Chester and Birkenhead, Manchester and Birmingham, Glasgow and Greenock, Glasgow and Ayr, &c. In 1838, the Edinburgh and Glasgow Railway Bill passed, subsequently to the framing of the new Orders, but it was only by means of a *dispensation from them*, on the ground that as the measure had been before Parliament in the preceding year, the Standing Orders did not apply to it, and without such dispensation the Act could not have passed!

Most of the great undertakings authorized by these Acts have now been completed, and their national benefits cannot of course be denied. They are immense and self-evident, yet most certain it is, that had the present Standing Orders been in existence at the time they were first projected, England would be without the benefit of the greater part of these railways at the present day. I can speak myself of the difficulty experienced in raising the capital for the London and Birmingham and Great Western Railways, in the latter of which, finding it impossible to raise money, with a deposit of five per cent., the Directors were obliged to reduce such deposit to 2*l.* 10s., and even then with great difficulty filled their subscription list. How then could they have obtained 10 per cent. as required by the present Standing Orders?

Can any one pretend to deny the immense advantages which must have accrued to the country from the outlay of the millions which these railways have cost in their construction? Yet, now they are nearly brought to a conclusion, where is the army of labourers who have been engaged on them to find employment? Let our legislators consider seriously the effect of disbanding such an army at a period of distress like the present, and I think they must come to the conclusion that it would be wise to adopt some means of continuing them in employment. What means, then, are so palpable as the encouragement rather than the suppression of railways—undertakings which pay doubly, inasmuch as the benefit arising during their construction is almost equal to their advantages when constructed? It is quite impossible to prove that, under the old system of Standing Orders, any evils existed at all commensurate with those which have resulted from the passing of the new ones. These latter have been framed principally for the protection of landowners, and for the prevention of modern speculation; but no one who has had anything to do with the carrying out of a railway, will consider that landowners have had much to complain of, and with regard to speculation, surely it is hardly necessary to place insurmountable obstacles in the way of beneficial undertakings, lest a few designing persons should profit by the weakness of others. The public at large can generally pretty well discriminate between good and bad undertakings, and it is for the public that Parliament should legislate, and not for the few.

The return obtained by Lord Robert Grosvenor to which I have above referred, was moved for by him on occasion of an unsuccessful attempt made by his lordship to procure a relaxation of these new Standing Orders, in favour of a railway from Chester to Holyhead—a measure, the public importance of which cannot be over-rated, and which, with a slight assistance from Government, might have been readily carried out, by a Bill which, had the Standing Orders been relaxed, would have been introduced in the last session. This return speaks for itself, and it behoves all who wish to see the railway system extended in England to apply themselves vigorously to obtaining a repeal of Standing Orders, which have been productive of so lamentable a suppression of these truly national undertakings. I should observe, that the House of Lords have refused to concur in the Order of the Commons requiring a deposit of 10 per cent. on the capital of Railway Companies, though they have adopted the Order requiring the deposit of plans a whole year prior to the introduction of any Railway Bill. It is only, however, to the unfortunate *railways* that this Order applies; for Canal Bills, or Dock Bills, or Road Bills, doing quite as much injury to landowners as a railway, may be introduced on depositing plans and giving notices of the application to Parliament, *two months* only before the introduction of the Bill.

This Order, requiring notices to be given and plans lodged, in the case of railways, a whole year before the application to Parliament, applies as well to deviations and amendments of railways already authorised, as to *new* railways; and it has been held in some recent cases, that you cannot alter the *section* of a railway, or even the *ascent of a bridge* over a railway, or any other work connected with it, without depositing a plan and giving notice of your intended application twelve months before it is made! The result, therefore, necessarily is, that inasmuch as the works cannot be stopped for a whole year, the railway is made on an inferior plan, which, if the rules of Parliament permitted, might, without injury to any one, be materially improved, to the permanent benefit of the public, for whom alone the railway is made. In the case of one important railway in the north, where it was determined to alter a portion of the line as at first authorised, the works were actually stopped for a whole year, to allow of the application to Parliament. During that time, the landowners on the original line, as well as on the proposed new line, were in a happy state of uncertainty as to which would eventually be sanctioned by Parliament; and as the property on both lines consisted principally of houses and building land, it may be readily supposed what injury they must have sustained by the doubt and uncertainty in which they were placed. Yet these new Orders were made principally for the better protection of landowners!

I should occupy too much of your valuable space if I were to enumerate the various instances of inconvenience and injury which have resulted from the above alterations of the old Standing Orders, but I have probably stated enough to show, that they are calculated most seriously to impede the development of the railway system in this country, and that they have already done so to an alarming extent. The necessary consequence has been, that English capital has been applied to the making of railways in foreign countries; and at this moment the principal railway in France, viz., from Paris to Rouen, is being made by means of English money, English engineers, and in a great measure by English labourers unable to procure employment at home! I could instance others in America also, in which English capital to a large extent has been embarked; and I would put it candidly to the consideration of all persons, whether any good which has resulted from these Standing Orders, is at all commensurate with the evils they have entailed. If not, surely it is time they should be repealed. In the Committees of the House of Commons, on the framing of the Standing Orders, evidence has been repeatedly given by the Parliamentary agents having most experience on the subject, of the great inconveniences which are felt from these Orders; and in looking through the printed Reports of those Committees, it does not appear that any one witness has given evidence of the remotest benefit derived from them!

To you, therefore, Sir, as the advocate of the railway interests throughout the country, I submit the foregoing statement, in the sincere hope that it may lead you to turn your attention to a subject of so much importance, and that by your assistance the old order of things may be restored, under which so many important railways have been brought to perfection.

I remain, Sir, your most obedient servant,

B.

THE TOLL QUESTION—GREENWICH AND CROYDON RAILWAYS.

To the Editor of the Railway Times.

Sir,—I have seen in your last Number the extract* from a pamphlet published by the Chairman of the Croydon Railway, in which he endeavours to prove, that the Greenwich Company have no claim to any extra charge per passenger per mile, for the use of their line, although it cost four or five times as much per mile, as the lines which run into it, the

* Not an extract—the pamphlet *verbatim*.—Ed. R. T.

Digitized by Google

traffic of which lines could not have come into London, unless that expenditure had been incurred, either by themselves or some other Company.

Now it strikes me, Sir, that the Companies which run into the Greenwich, will be most fortunate if they can persuade the Greenwich proprietors to allow their line to be used on any such terms, for in that case, while the London and Birmingham Great Western and Southampton lines will have had to pay the usual charges for coming into a city like London, these Companies will be able to get to the very centre of the city at the average cost of long lines, thus saving to those Companies the outlay and interest of several hundred thousand pounds. Truly, Sir, the Croydon proprietors will have occasion to congratulate themselves on their having such an efficient chairman, when this arrangement between the Companies shall have been carried into effect, the more so, as it will be the first time the principle sought to be established has been acted upon. In Lancashire, for instance, they do not appear to have half the penetration of the Chairman of the Croydon Company, as the Sheffield and Manchester runs upon the arches of the Manchester and Birmingham into the town of Manchester for three quarters of a mile, for which they are to pay the latter Company twopence toll for each passenger. This is more than the Croydon now pays to the Greenwich in proportion to the distance.

The only injury that can arise to the Croydon Railway is the loss of a fair amount of dividend upon a part of the line; but what of this. The Greenwich proprietors lose one per cent. for every five per cent. lost by the Croydon people, and that is quite sufficient to satisfy any reasonable person. There is a circumstance also which has occurred in reference to the Liverpool and Manchester, which bears some analogy to this subject, which I will also mention. For some years after the opening of that line the trains stopped at Edge Hill, which is a mile from Liverpool, but passengers are now carried into the centre of the town by means of a tunnel formed under the houses, and the Directors of that Company had the injustice to charge an additional sixpence upon every passenger after the tunnel was formed, to remunerate them for the great cost of the tunnel, instead of trusting for remuneration to the increase in the number of passengers which such an event was sure to create. Thus you see the same ignorance prevails in Lancashire as is manifested by the Greenwich Board, but it is a satisfaction to learn, which I do from the pamphlet referred to, that a brighter era is dawning upon us in reference to such matters.

I remain, Sir, yours truly,

A CONSTANT READER.

Hornhill, November 1, 1841.

[We have struck out several personalities from the above which we believe to be undeserved, and which at any rate could not have helped out our correspondent's argument.—ED. R. T.]

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—Having recently been called upon to advise in the matter of a considerable investment intended for the Great Western Railway, I have made a thorough and very minute inspection of the whole line, together with its branches, and having carefully examined all the Reports and proceedings of the Company up to the present time, I am led, seeing the very extraordinary statements recently made in your journal, to submit to you the result of my inquiry, and what is of far greater moment now, and at all times—the *grounds* upon which that result is based.

In the first place, my inspection of the line was satisfactory; I observed a considerable traffic in nearly every train to Slough, a fair traffic to Reading, and traffic as far as Steventon nearly equal to my expectations; and though that to Bath and Bristol was inferior to the long traffic on the other great lines, yet, that also will have some, though from the nature of the population not a corresponding, increase. The branch lines were also doing a fair business. The road itself has, from its greater breadth, an influence upon the mind not existing upon any of the great business lines; the traffic is safe and regular, and necessarily adds to the feeling of security and completeness which accompanies space. The works are, as far as Swindon, in fair working condition, though the embankments beyond Swindon, or rather from Wootton Bassett Road to the 88th mile-stone, are in places very insecure, and the tunnel exposed to some risk at the end nearest to Corsham. So far the traffic and the road itself, though they present no special feature, are equal to the average summer traffic of other pleasure lines, and would perhaps justify investment at par *now*, though a fair return to the original holders at par, including five years interest, or 125*l.*, is not to be expected, taking the cost to be that of the average of the other long lines in operation. The cost, according to the last Report of the Directors, is 6,350,000*l.*, and to this they do not pledge themselves to adhere, though their Engineer (whose estimates have been in every instance exceeded, in some, according to the evidence of Mr. Gravatt, his colleague, doubled) states, that he should consider 100,000*l.* in the course of the next year a large excess. With this admission, the actual and admitted expenditure may very safely be taken at 6,500,000*l.*; whilst the works stated as yet necessary to the completion of the railway, including amongst other matters, a station for London, suited by its magnificence to the character of the work, and a probable extension of the line at the London end, *cannot* be constructed for a less further sum than 500,000*l.*, nearly in the whole a grand total of 7,000,000*l.*

To this conclusion I have been compelled to come, not only by the necessity of the new works corresponding in their splendour, and consequent outlay, with the line itself and the edifices already constructed, but by the certainty that the outlay already indicated, as foreseen and necessary, will be greatly exceeded, and that the eventual cost or outlay will greatly exceed 7,000,000*l.*, and from this I see no possible escape, if the short traffic, which is on this line the most important feature, and to which numerous separate trains are devoted, is to be developed and extended.* I have dwelt upon the cost because in this will be found the great, the fatal, mistake, a mistake not peculiar to the Great Western line, though that has been more unfortunate than its brethren—that of confiding one set of interests to parties who have interests differing at least, if not always opposed to those confided to them. The true interest, purpose, and object of the Great Western Railway Company was the construction of a railway at the least possible cost, consistent with safety, speed, and efficient working; the object of their Engineer was, at any expense, and the greater the more efficient for his purpose, to write his name on the most magnificent and splendid work in the world, and *this he has done*, at an expense of not less than 7,000,000*l.* to the proprietors; whilst for a sum much less than 5,000,000*l.* a line equal in every respect might have been constructed from London to Bristol—a saving much more than equal to a traffic superadded to the present of 100,000*l.* or 200,000*l.* per week. I say much more, seeing that not only would bond interest have been saved to that amount, but all the services being on a more moderate and economical scale, would have been less costly at first, and less costly to uphold. The traffic, as I have said, I find fair though not remunerative, and the expenses of management, from all that I could ascertain from the various parties to whom I had access, not very greatly exceeding that of the Birmingham on the first year of its opening. To these points, however, I attach not so much importance. The expenses are capable of diminution, and the traffic of augmentation; but the first cost being in excess is irretrievable. It is a fixed quantity; it is immovable. All my experience gives me hope of gradually lessening expenses, and progressively increasing traffic; but with the original cost nothing can be done. There is nothing to sell but the road, and that can only be sold after the mode in which the other heavy cost lines have found their level by a very great fall in their value.

The question which I had to solve for my friend was the *actual present* value of the shares, judging from the experience obtained by the working of the four months it has been completed, irrespective alike both of any speculations upon contingencies, future increase or decrease, and of the price of the day, depending, as that does, upon speculation.

As it may be useful to give the facts upon which I found my conclusion, after the statements which have lately appeared in your paper, I submit them for the earnest consideration of all those who may contemplate investments in this line, influenced by the speed and safety attendant upon its services, and the magnificence (magnificence how dearly purchased!) of its exterior:—

Expenses per mile upon 169 miles, same as the Birmingham, which after 3 years experience are reduced to 2,600*l.* per mile	£439,400	
Rent to Bridgewater and to Cirencester	47,000	
Tollage additional to Bridgewater	13,000	
Interest on 3,500,000*l.* bonds	175,000	
		£674,400
Receipts, which in no event can exceed 12,300*l.* per week		639,600
Leaving a loss of		£34,800

These are facts, *not fancies*, and when coupled with a gradual and great decrease in the traffic for the next six months, are calculated to chill the expectations and sadden the hearts of those who, listening to their hopes and judging with their eyes, have, at the present value, become interested to the extent of 5,000 shares in one family.

I have said that the above statement is incontrovertible; but to prevent all cavil, I will explain that though neither receipt nor current expenditure can be stated with precision, yet the amount of gross receipts will assuredly be *much less* than 12,300*l.* per week on the average of the whole year. This must be obvious to those who, like myself, are accustomed to deal with facts not fancies, and who are aware that the *average receipts* on long lines bear the same proportion to their *highest* week as 6½ to 9, which upon a receipt of 15,000*l.*, the highest receipt on the Great Western gives an average of less than 11,000*l.* per week. The receipts, therefore, as given above, are obviously in excess, and very greatly in favour of the railway; whilst the current expenses, taken for the first year of the Great Western at the *minimum* reached by the Birmingham after three years' experience, upon a road less costly at the first, where all the works are economically constructed and administered, where the gauge is less, carriages and engines far less costly at first purchase and less costly to repair, where coke is far cheaper, and where the road being consolidated presents little scope for outlay, must, if fairly stated, *far exceed* the sum assigned to them.

Having thus shown that the only two amounts with respect to which any doubt could exist, are stated greatly in favour of the Great Western, it thus inevitably results that by no contrivance can a dividend be *fairly* declared.

I have stated that my examination applies to the present receipts and expenditure; but an obvious and inevitable *future* should notwithstanding be taken into account. I have therefore given my best attention to discover any rational ground for expecting any great increase, and I regret to say that after the most diligent inquiry I am compelled to come to an adverse conclusion. The existing traffic as far as Swindon has received its development, and the only portion of the traffic from which more than the ordinary increase can be expected is that from Bath and Bristol. The Exeter traffic, being entirely agricultural, is not susceptible of much increase, and may be expected to remain, like that on the Birmingham, nearly stationary after the first

*At present the stations short of Slough are useless, and a source of delay, seeing that whilst the distance is performed in from 10 to 15 minutes, it takes passengers on the average an hour to get to the place of destination.

Digitized by Google

sate for the influx in the first season, arising from novelty; whilst Bath and Bristol, though important places, do not comprise together a population of more than 200,000, thus offering a meagre pabulum to a line costing 7,000,000*l.* The after increase can therefore in no case be expected to exceed 50,000*l.* per annum from the line as at present opened to Bridgewater and Cirencester, a moiety of which will be absorbed by the additional interest upon capital yet to be raised. Taking into consideration the thinly-scattered population on this line as compared to the Birmingham, I rather view the existing traffic (totally inadequate as it certainly is) to be in excess, and to arise from the novelty of the experiment, than as the natural traffic giving ground for hope of increase; and feel certain from what I have ascertained on the line, as well as from information derived from authentic sources, that the increase on the second year will not much, if at all, exceed 1,000*l.* per week, which, as before stated, will not be an increase of more than 25,000*l. clear.*

I have not thought it necessary to advert to the extraordinary course adopted by the Directors, a course which has met with universal reprehension, that of giving the receipts of the Great Western, the Bristol and Exeter, and the Cheltenham, as the receipts on the Great Western alone. This is a matter between them and their proprietors, who will perhaps discover that had their receipts been stated openly and without disguise, they would sooner have known their true position, and have had the same opportunities for changing their investment that have been seized by those who have all along been aware of the true position of this concern. With the example of the Leeds and the North Midland before them, the sanguine holders of this line, hoping against hope, have a sad, a dreary future in store. The holders in the North Midland and the Leeds, misled by the sanguine and by the INTERESTED who were all the time selling their shares, wilfully shut their eyes, and at each pause in the downward descent considered themselves secure from further loss. Winter (dreary November) came at last, and the sanguine who refused 10 premium, were compelled by their wants, or impelled by their altered feelings and convictions, to sacrifice at 35 discount to the profit and advantage of the sinister deceivers, who, whilst selling their own shares at high prices were upholding those lines (as now the Great Western), as offering a certainty of dividend without equal. The same game of the sinister against the sanguine and confiding is now playing, and having ascertained beyond all question that great interests are at stake and are sought to be sub-served by the most unworthy means, I have deemed it a duty to bear my testimony, and to adduce the evidence of *facts and figures* in order to guard the well-intentioned and the hopeful against being again deceived; and as my time is more than fully occupied, I have devoted the first leisure to this communication, which I have made at great length, as I have considered it to be of the highest importance to your readers to have the whole case stated at once *fully* and *fairly*.

I am, Sir,
Your constant reader and admirer,
S. P.

Birmingham, Nov. 1, 1841.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—I am rather anxious to know from you whether the late loans raised by the Great Western will have their interest paid at the same time as the interest on the original money raised under the Act of Parliament, or whether the late loans will only receive interest in case of surplus.

The share capital of the Company is 4,500,000*l.*, in addition to which they are entitled to raise 1,500,000*l.*, or one-third more by the issue of bonds. The Directors have, however, as it appears to me, taken the very dangerous course of borrowing 1,500,000*l.* against calls not yet made, and are now trying to raise a further sum of 500,000*l.* on what they can, from motives only without the strongly opposed to, all legal sanction, which restricts them from raising more than one-fourth of their capital by loans.

Now, with falling receipts, I am apprehensive in the event of a deficiency that the Directors may, to save themselves from the consequences of the dangerous course they have adopted, try to pay all the holders of the bonds *pari passu*, or to make them all sharers in any deduction it may be necessary to make, and to this I am decidedly opposed, as I contend that the money lent under the sanction of the Act of Parliament must first be paid in full, and any deficiency must fall upon those who have lent their money upon the bonds issued by the Directors, which have no legal sanction whatever beyond that of the Directors in their individual character.

I am Sir, with much anxiety,
Your obedient servant,
J. D.

London, Nov. 3, 1841.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—In the printing of my letter of the 20th ult., inserted in your last number, two errors of the press have crept in, which renders the letter contradictory.

In my manuscript it is stated thus—

Net traffic		£700,000
Interest on 2,725,000*l.*		136,250
	Net revenue	563,750
Dividend on £3,575,000 at 15 per cent.		536,250
£6,300,000	Surplus..	£27,500

This is misprinted—

Net traffic		£700,000
Interest on £2,725,000		136,250
	Net revenue....	563,750
Dividend on *3,075,000 at *5 per cent.		536,250
£6,300,000	Surplus..	£27,500

The essential object of the figures was to show how 15 per cent. dividend was produced, but by this misprint it is reduced to 5 per cent., and on 3,075,000*l.* instead of 3,575,000*l.* It is hoped you will rectify this in your next.

Yours respectfully,
F.

Bath, November 2, 1841.

BIRMINGHAM AND GLOUCESTER RAILWAY.

To the Editor of the Railway Times.

SIR,—You have been so obliging as to insert the letters of "An Original Proprietor in the Birmingham and Gloucester Railway," and I doubt not but you will be alike courteous to one of a contrary opinion. The writer referred to is evidently of a most sanguine temperament, untaught by the past, and unconvinced by proof, for ever looking for what I am afraid will never be. Allowing the dividend to be declared at the next half-yearly meeting to amount to 2*l.* per share, this is only 2 per cent. per annum, and this too made up with partial openings of the line; but if we take the expenses of working at 50 per cent., and allow for a depreciation fund for perishable stock, the dividend will not exceed 30s. per share, and as this is made up from all appliances and means to boot, we have no reason to exult. It is reported, and I believe truly, that the nominal capital on which dividends will have to be declared, will exceed 1,700,000*l.* As to knowing the final cost we are not only enveloped in doubt and uncertainty, but in gross darkness. Then for the traffic, is it not evident to all that it is miserably bad? Although the line has been opened nearly a year, it amounts for the last week's published receipts only to a total of 1,862*l.* The expense of maintenance of way is enormous, and the gradients exceedingly *bad*. I will not offer an opinion as to investing a Board of Management of four Directors with uncircumscribed power. If the expense of working, be calculated at 50 per cent., value of consols where there is a perfect confidence. Your correspondent appears surprised that one-half of the shares are firmly held in the localities of Birmingham. If so, it equally surprises me the other half should be so weakly held that they are flying about in all directions. The present value of this stock, according to the prospective dividend, is only 30*l.* per share to pay at the rate of 5 per cent. per annum.

Yours respectfully,
A SEDATIVE.

2nd November, 1841.

NORTH MIDLAND RAILWAY.

To the Editor of the Railway Times.

SIR,—I observe in your last number an estimate made by Mr. W. Simpson, sharebroker, Leeds, of the dividend likely to be paid by the North Midland Railway Company for the current half-year, which is, in my opinion, decidedly erroneous, as he calculates the average receipts for the next ten weeks at not more than 3,052*l.* per week, whereas it appears to me more likely that the average will be 4,000*l.*, making the estimated receipt for the half-year near 120,000*l.*, instead of 109,422*l.*, which he puts down, which will make a considerable difference in the amount of profit. I should not have noticed this letter of Mr. Simpson's, but I know your excellent paper is so extensively circulated, that I fear such a loose statement might have its effect on distant shareholders already unjustly prejudiced against this course. I feel confident that if the Directors have confidence reposed in them, and we have an improvement in trade next year (arguing from the immense increase in the receipts during the present year, unprecedented for the stagnation of trade in the manufacturing districts,) this, coupled with the increased receipt arising from the conveyance of minerals on the line, a source of profit which requires time to fully develope, will enable the concern to divide a profit for Christmas, 1842, sufficient to satisfy all reasonable shareholders. The line has cost too much to realize the brilliant expectations at one time anticipated from it, but I feel confident that it will prove a safe and steady investment, and to any one who has money at command to buy shares at the present low price, it will pay very good interest indeed. I have spoken of this railway so far without reference to the increased traffic to be expected from the projected northern line to Newcastle, which (if carried into effect) must improve the prospects of the North Midland line most materially. The Directors have had immense difficulties to encounter, and have been most unjustly found fault with in many instances, but I am quite sure from my own observation that they have been, and are at the present moment working most strenuously for the interests of the shareholders, and are deserving of their fullest confidence. I entertain a strong opinion that an active managing Director *well paid*, and responsible to the Board of Directors, would be a most useful person on this and all other great lines, and that the money spent in this way would be many times repaid to the shareholders. However zealous the Directors of a railway may be (and none are more so than the present North Midland Board), we cannot expect them to pay their *undivided* attention to the working of a great line like this, without being adequately remunerated for their exertion.

Your obedient servant,
A NORTH MIDLAND SHAREHOLDER.

Leeds, November 1, 1841.

NORTH MIDLAND RAILWAY.

To the Editor of the Railway Times.

SIR,—Your last week's paper contains "an estimate of the prospects of the North Midland Railway for the current half year," by Mr. Simpson of Leeds. I agree with Mr. S. in his calculation, and he is correct in stating that the surplus which he makes out there will be to divide is equal to "very

Digitized by Google

nearly 1¼ per cent. on a paid up capital in shares of 2,160,876*l.*" But, Sir, it must be remembered that in this concern as in too many others a considerable portion of the *paid up* capital, has been realized by issuing shares at a discount. When the remaining call of 6*l.* 13*s.* 4*d.* per share on the third shares amounting to 150,000*l.* is paid up, the capital of this Company *in shares* will be represented by 3,000,000*l.* thus—

15,000	shares of	100*l.* each	£1,500,000
15,000	ditto	50*l.*	750,000
22,500	ditto	33*l.* 6*s.* 8*d.*	750,000
			£3,000,000

The surplus of 32,066*l.* will give upon this amount of capital only 1*l.* 1*s.* per cent. or a dividend of *one guinea* per 100*l.* share, and in proportion for the other shares. Let us see what it will take to make this concern pay 5 per cent. per annum on the whole capital, which is

In shares	£3,000,000	
Borrowed money	850,000	
	£3,850,000, 5 per cent. on this	£192,500
Working expenses (last half-year 55 per cent.) say, 45 per cent. on increased amount		157,500
		£350,000

or very nearly an average weekly receipt of 7000*l.* A good deal has been said of late about economising in the salaries, and by other ways on this line of railway, and really Sir, when we compare such a statement as this with the actual weekly receipts not averaging more than 4,200*l.* it is enough to make the shareholders look about them. Far too much money has been expended ever to allow the concern to become a very profitable one to the original subscribers, and it will be only by the best possible management including the *strictest economy*, that the North Midland Railway can be made to pay the shareholders even a moderate dividend.

A SUFFERER.

November 3, 1841.

THAMES HAVEN RAILWAY COMPANY.

To the Editor of the Railway Times.

SIR,—In reply to a letter from a correspondent, who forwarded for your inspection a circular which he has received from the Secretary of this Company, the most advisable course in my opinion for the shareholders to pursue is to call a general meeting of the proprietors to consider the most effectual means of winding up the affairs of the Company. The proprietors are at present totally ignorant of the state of those affairs, as I believe no accounts have ever been furnished by the Directors since the existence of the Company, and a call having been just made, the shareholders are afforded the pleasant alternative of paying up such call and forfeiting all their interest in the concern, or of paying the call and continuing subject to the unknown liabilities of the Company. The Directors say the call must be paid to free them from the engagements they have entered into, but they do not state what those engagements are, nor what disposable funds there are belonging to the undertaking, to meet their liabilties. It is rather too bad to expect the shareholders to agree to either alternative, without such information being afforded to them, and it is neither fair nor equitable for the Directors to attempt to take advantage of their own exclusive knowledge in making a bargain for property held in trust for others. Suppose the whole of the shareholders were to pay the call and forfeit their interests, it is more than probable that the Company would be at once broken up, and their property disposed of towards the payment of the demands upon them: and then what would become of the remaining surplus? The proprietors would not be entitled to touch a shilling of it; and the only use that could be made of it would be to divide it amongst those who devised so excellent a scheme for freeing the shareholders from future liability. To avoid this unjust division a dissolution must be immediately resolved on. It is generally called for on many grounds, and the sooner it takes place the smaller will be the loss to the proprietors. The amount of the Company's funds will be ascertained and most advantageously disposed of towards the liquidation of their liabilities; and as those liabilities, if properly inquired into, may not amount to near so much as is now held out, there may be a prospect of receiving something from the concern instead of having to pay the present call. How it is possible for the Directors to subject themselves to engagements so extensive without any progress having been made in the undertaking, I am at a loss to imagine. After the payment of the first call it was stated I believe, though not officially, that there was in hand nearly 4,000*l.*, after discharging the cost of obtaining the Act, and all preliminary expenses, and after meeting every engagement up to that time. Another call has since been paid, and it would be advisable to know what has been done with the money. The works have not advanced an inch, and if the Directors have contracted liabilities, they must have had value in return. If they have bought land or materials, the land and materials must both be in existence, and be available towards the claims on the Company. It is true an Act of Parliament was applied for in the last session, but as it did not reach the Committee of the House, the expenses of the application cannot amount to any large sum. On the whole, therefore, the only proper course to be adopted is to demand accounts from the Directors, and to proceed to close up the Company's affairs. To do this let a general meeting be held in London by the proprietors resident there, and any resolutions passed by them will be confirmed by the shareholders in the country, who will no doubt cheerfully commit their interests to the protection of the London proprietors if acting *bonâ fide*.

J. S.

SOUTH-EASTERN RAILWAY—HAWKHURST JUNCTION ROAD.

A MEETING was held at Hastings, on the 15th inst., for the purpose of adopting such measures as might appear to be best calculated to promote a junction with the South-Eastern Railway. Mr. Beecham, of Hawkhurst, addressed the meeting at great length on the advantages of the undertaking, which will complete a direct and good road from Hastings to the central station on the South-Eastern Railway at Staplehurst, being the great outlet by the railway into Kent and Sussex, and branching from thence to London and Dover. It will save three miles in distance between Hastings and Hawkhurst, and bring those places within an easy morning's drive of each. The Staplehurst station will be seven miles nearer to Hastings than any other, and it will be the only point to join the railway from Hastings to Dover and East Kent. It will open a direct and much shorter communication with Maidstone, Rochester, Chatham, and Gravesend, and the Essex coast.

Resolutions for carrying the intended road into effect, were proposed by Mr. Planta, M. P., Major Jeffries, and Dr. M'Cabe, which were unanimously adopted.—*Dover Telegraph*, Oct. 30.

MANCHESTER AND LEEDS RAILWAY.—Large quantities of grain are now conveyed by this line of railway, indeed in one direction (towards Manchester) the millers are very favourable to this mode of transit, it being cheaper and so much more expeditious than by the canals. A very large proportion of the corn from Wakefield market is now sent by railway, and must eventually be considerably increased, as in all probability when the present vessels become unserviceable, the millers and others who have hitherto had them for their own convenience, will, with the increased facilities offered by the Railway Companies, scarcely think it adviseable to go to the very large cost of building others.

TO CARRIERS, ENGINEERS, IRON FOUNDERS, COACH-BUILDERS, BLEACHERS, DYERS, &c. &c.—To be LET either together or separately, with immediate possession, extensive premises, buildings, and yards, with frontage to the Rochdale Canal and the street, and having the advantage of a plentiful supply of excellent water for printing or bleaching purposes, situated in Chorlton street, near the new station of the Manchester and Birmingham Railway in the centre of the town of Manchester.

For further particulars apply to
Messrs. COOKE, BEEVER, & DARWELL,
Solicitors, Salford.

TO ENGINEERS, FOUNDERS, MACHINE-MAKERS, STEAM-SHIP BUILDERS, &c.—FOR SALE, an extensive and Valuable MANUFACTORY for the construction of Steam-engines, Boilers, General Machinery, Chain Cables, Anchors, Foundry Goods, Forged Goods, and General Blacksmith Work, well known as the FOOTDEE IRON-WORKS, Aberdeen.

These Works occupy nearly four acres of freehold ground, at a very moderate feu duty or ground-rent, and are situated at Footdee, in the populous city of Aberdeen, within 300 yards of the Harbour Quay.

The Engines, Boilers, and Machinery of several of the large class of steam-ships have been wholly constructed and fitted up at these Works, which afford unusual facilities to parties engaged in that branch of business, and such as exist in few other establishments in the United Kingdom. The foreign and coasting trade of the port of Aberdeen is very extensive, and has rapidly increased for several years past, whilst the steam trade to London, Hull, Leith, Inverness, Orkney, Shetland, &c., is carried on to a very considerable extent.

Immediately adjoining the Iron-works, and belonging to the same Proprietors, is an extensive rope, sail, and felt work, which will also be disposed of, either with or without the Iron-work, as may be agreed upon.

To a party desirous of engaging in the building and equipping of steam or sailing vessels, the construction and repairing of Steam-engines, Sugar mills, and General Machinery, these Works, from their local situation and peculiar facilities within themselves, will be found particularly well adapted.

The whole of the Buildings are substantial, commodious, and suitable for the respective trades carried on within them. The machinery is of the first class, and in excellent order, the whole having been erected at considerable expense.

In the mean time, the work will continue to be carried on in all its branches, and orders executed as usual.

A plan and specification of the premises have been printed, which may, with all particulars and further information upon the subject, be had upon application to Messrs. Johnston and Farquhar, Solicitors, London; John Jopp, Esq., W. S., Edinburgh; or Messrs. Jopp and Shand, Advocates, Aberdeen, in whose hands the title deeds of the property are.

GUARANTEE SOCIETY.—To afford Security to Bankers, Merchants, Commercial and Trading Communities in general, is the *first* object of this Society. To relieve Relatives and Friends from painful obligations and responsibilities the *second*.

The experience of the first year (during which the Society has been eminently successful) already numbers amongst its patrons the principal Bankers, Merchants, and Public Institutions in the metropolis, and provincial districts, and by providing Guarantee for their integrity, has secured a competency for several hundred individuals.

DIRECTORS.

Thomas Attree, Esq.	G. Palmer, Esq.
David Cannan, Esq.	Major Prosser, F.G.S.
James Colquhoun, Esq.	James Row, Esq.
William Croft, Esq.	G. Scovell, Esq.
James Law Jones, Esq.	G. E. Shuttleworth, Esq.
John F. Maubert, Esq.	Henry Vaughan, Esq.
Lieut.-Col. Moody, R.E.	B. G. Windus, Esq.

STANDING COUNSEL—R. Ryder Dean, Esq.

SOLICITORS—Messrs. W. & S. Cotton, No. 76, Basinghall-street.

This Society presents to the Public (and particularly to Bondsmen) the following advantages:—

1. No individual need hereafter incur the responsibility of becoming security for the integrity of another.
2. Individuals who are already surety for the fidelity of others, may immediately protect themselves from loss by insuring with the Society.
3. The expense and painful obligation of obtaining approved Sureties, or of replacing them when removed by death or otherwise will be altogether obviated.
4. All risks attending irresponsible sureties will be removed.
5. The submission to the loss, or the distressing alternative of instituting legal proceedings against the friends who are surety, will be avoided.

Also to Agents, Travellers, and Clerks holding, or being desirous of holding, confidential and responsible situations, the Guarantee Society presents immediate facilities, wherefor a moderate premium, surety for integrity may be acquired.

The Prospectus, Form of Application, and other particulars, may be obtained at the Office, No. 28, Poultry, London.

By order,
THOMAS DODGSON, Secretary.

KYANIZING TANKS FOR SALE.—To be Sold, two Wrought Iron Cylindrical Tanks, each 70 feet long and 6 feet in diameter, with a double-acting Air-pump, Pipes, &c. for exhausting the air and forcing the solution into the materials to be kyanized, with a force of 100 lbs. on the square inch, together with appendages or supporting the tanks; the whole of the materials and workmanship being of the best description.

The longitudinal bearers and cross sleepers used for the Hull and Selby Railway were kyanized in these tanks; and, being peculiarly adapted for carrying out the process effectually, a favourable opportunity is presented for any person wishing to engage in the business of kyanizing timber for hire, or for any railway or other Company using large quantities of timber.

For price and other particulars apply to
GEORGE LOCKING, Secretary.
Railway Office, Hull, November 3rd, 1841.

LONDON AND BRIGHTON RAILWAY.—NOTICE.

—In consequence of a Fall of Earth on the Croydon Railway, passengers are conveyed to and from New Cross and the Dartmouth Arms Station, on the Croydon line, (2¾ miles,) by coaches, and the remainder of the journey by Railway, the Brighton line being now clear throughout. The last trains from London and Brighton will start at a quarter before 4 o'clock p.m., and no goods trains till further notice. Horses and carriages can only be conveyed on the Railway between Croydon and Brighton.

By order, THOMAS WOOD, Sec.

10, Angel-court, Nov. 3, 1841.

THE LONDON AND BRIGHTON RAILWAY GUIDE, Illustrated by the Official Map and Section, and a full description of the Line and adjacent country; together with a Time and Fare Table, and a List of Hackney Coach and Cab Fares to the Stations, from all parts of London and Brighton.

London: Published by J. R. Jobbins, 3, Warwick-court, Holborn; R. Tyas, 8, Paternoster-row; Tilt and Bogue, Fleet-street; J. Weale, Architectural Library, Holborn; J. Cross, Holborn; Letts, Royal Exchange; H. S. King, Stationer and Bookseller to the Queen Dowager, 1, Northstreet, Brighton; and at the *Railway Times* Office, Fleet-street. Price One Shilling, bound in cloth.

LONDON AND CROYDON RAILWAY.—

In order to afford the greatest facility for removing the obstruction on this railway, occasioned by the slip in the deep cutting at New cross, the following Trains only will run until further notice:—

Down Trains from Tooley-street.	Up Trains from Croydon.
MORNING.	MORNING.
5 minutes after 9 o'clock.	5 minutes after 8 o'clock.
5 minutes after 10 ,,	5 minutes after 9 ,,
5 minutes after 12 ,,	5 minutes after 10 ,,
	5 minutes after 12 ,,
AFTERNOON.	AFTERNOON.
20 minutes past 2 o'clock.	20 minutes past 2 o'clock.
20 minutes past 4 ,,	20 minutes past 4 ,,
20 minutes past 5 ,,	20 minutes past 5 ,,

SUNDAY, 7th November, 1841, the following Trains will run—

Down Trains from Tooley street.	Up Trains from Croydon.
MORNING.	MORNING.
5 minutes past 9 o'clock.	5 minutes past 9 o'clock.
5 minutes past 10 ,,	5 minutes past 10 ,,
AFTERNOON.	AFTERNOON.
20 minutes past 2 ,,	20 minutes past 2 ,,
20 minutes past 4 ,,	20 minutes past 4 ,,
20 minutes past 6 ,,	20 minutes past 6 ,,
20 minutes past 8 ,,	20 minutes past 8 ,,

The Directors regret exceedingly the inconvenience the public are subjected to in consequence of the slip; but in order to diminish the unavoidable delay in the passage to the Croydon Trains, arrangements have been made for passing the Croydon passengers only over the cutting, for this purpose it will be necessary that such passengers should walk a short distance over New Cross Hill.

By order,
R. S. YOUNG, Secretary.

CRANES AND HOISTING TACKLE of every description, of the best materials and workmanship, and capable of lifting from 5 cwt. to 20 tons and upwards, with or without steam power, made by ELLIS & NOTON, who take this opportunity of respectfully soliciting an inspection of their Drawings and Patterns, at the IRWELL FOUNDRY, Salford, Manchester.

T. H. RYLAND AND CO., OOZELL'S STREET, BROAD-STREET, BIRMINGHAM, Patentees and Manufacturers of Wood Screws and Screw Bolts, for Railways, &c.

The quality of these Screws is acknowledged to be superior to that of any other maker, and T. H. R. and Co. have, by their improved means of manufacture, so greatly reduced the price, that they will be found not to exceed in cost the common driving pin; and that they are more efficient for the purpose will be obvious, from the fact that one of these screws will require a force equal to from 2 to 4 tons weight, to tear it from the wood.

T. H. R. & Co. have to dispose of

A 12-horse high-pressure engine, metallic piston, with or without boiler.

Two boilers, quite new, 18 feet by 4 feet.

TO EXPORTERS, RAILWAY CONTRACTORS, ENGINEERS, SHIP BUILDERS, &c. &c.—The Patent Rolling and Compressing Iron Company having their works in full operation are ready to execute orders to any extent, for the undermentioned articles:—

Boiler and Tank Rivets of every description.

Bolts for Machinery, Architectural, Agricultural, Ship and Coach Building, Gas Water, and other works, &c.

Railway Pins, Hooks, Screws, &c.

Particulars may be obtained, and specimens seen, upon application to the Secretary, at the Company's Works, Upper Ordnance Wharf, Rotherhithe.

By order of the Board,
JNO. ATLEE, Secretary.

SCOTTISH (WIDOWS' FUND) LIFE ASSURANCE,

Founded A. D. 1815, on the Original basis of the LONDON EQUITABLE.—Head Office, Edinburgh, 5, St. Andrew square; London, 7, Pall Mall West; Manchester, Cross-street, King-street; Glasgow, 30, Royal Exchange square.

Accumulated Fund exceeding One Million and Forty Thousand Pounds; Annual Revenue exceeding One Hundred and Eighty Thousand Pounds.

This Institution is the oldest, and in point of business the most extensive, Life Office in Scotland.

A slight consideration of the following statements will abundantly satisfy intending Assurers that there is not at this time any other Life Office in the United Kingdom which, whether in respect of

The sound principles on which it is constituted,
The unprecedented prosperity of its course throughout,
The selection of its Lives,
The successful investment of its Funds, and
The uniform promptness and liberality of its settlements, can hold out more solid advantages, especially to that important class of Assurances effected as Family Provisions.

The Whole Surplus Profits belong to the Assured, and are divisible septennially.

As ascertained from the investigation at 31st December, 1838, these Profits were sufficient to secure—

1*st*, A Retrospective Bonus of Two per Cent. per Annum, or Fourteen per Cent. for the Septennial Period, not only on the Original Sum assured, but likewise on the Bonus Additions previously declared.

2*nd*. A Contingent Prospective Bonus of Two per Cent. per Annum, to be paid from 31st December, 1838, on all Policies of *Five* Years' standing that may emerge before 31st December, 1845, when next investigation takes place.

The Directors are empowered to grant Loans to Members, on the Security of their Policies, to the extent of nine-tenths of their *value* at the time, and also, on application to that effect being made by parties, to convert their Bonus Additions into an equivalent deduction from the future Annual Premiums, or to give them in ready money the value of the additions at the date of application.

Practical Illustrations of the above.—A, in January, 1820, being then 40 years of age, insured his life for £3,000, paying an annual Premium of £98 5s.

He is now 61 years of age, and has an actual vested Bonus or Addition, declared and attached to his Policy of £1,035 12s., which, with the £3,000, the original sum assured, shows the full amount of the sum presently contained in the Policy to be, £4,035 12s.

Were A to die after Payment of his Premium for the current year, the sum payable under the Policy would be, £4,277 14s. 9d.

Were he to die in 18-5, after payment of his premium for that year, the sum payable under the Policy would be, £4,600 11s. 9d.

Or if it were an object to him to reduce his present annual contribution, he might, by giving up his Bonus, reduce his future premiums from £98 5s. to £24 9s. 5d.

Or if he preferred receiving immediately the present value of his Bonus, he would, by surrendering it, be entitled to a sum of, £650 8s. 3d.

Assurances effected previous to 31st December, are entitled to participate in the Profits of the current year.

JOHN MACKENZIE, Manager.

Edinburgh, September, 1841.

HUGH Mc KEAN, 7, Pall Mall, Agent for London.

PARISIAN BITUMEN COMPANY, Millwall, Poplar.—The Directors of the above-named Company beg to call the attention of Engineers, Architects, Surveyors, Builders, and the Public generally, to the applicability of the BITUMEN manufactured by them, as a pavement or flooring; also for its use in covering arches for the prevention of damp and preservation of the masonry.

They beg also to state that it has been used very successfully as a cement for masonry on the weirs of the Upper Medway, and is particularly applicable to hydraulic works and foundations of heavy buildings.

They beg to submit the following list of prices, and to state that they will guarantee the durability and efficiency of any work executed by them.

	s.	d.
Covering viaducts or arches of bridges, vaults, terraces, &c., 1½ inch thick, per square yard	4	6
Paving pathways, kitchens, cellars, granaries, malt houses, warehouses, &c. 1½ inch thick	4	6
Paving barns, court yards, tun rooms, wharfs, stables, &c. 2 inches thick.....	5	6
Paving walks, &c. ¾ inch thick	3	6

The above charges are exclusive of the cost of carriage, which must be borne by the parties by whom the work is required.

W. MACKENZIE, Superintendent.

CHELTENHAM AND GREAT WESTERN UNION RAILWAY COMPANY.—TENTH HALF-YEARLY GENERAL MEETING OF PROPRIETORS.—At the Tenth Half-yearly General Meeting of the Cheltenham and Great Western Union Railway Company, held in pursuance of the Acts of Parliament, at Stroud, on Thursday, the 28th day of October, 1841;

CHARLES F. SAGE, Esq., in the Chair;

It was resolved,

1st, That the Report of the Directors be received and adopted, and printed for the Proprietors.

Digitized by Google

2nd, That a dividend of £1 per share be declared, payble on and after the 24th day of December next.

3rd, That the thanks of the Meeting be given to the Directors, for the candid information now given and their arduous services on all occasions.

4th, That thanks be given to the Chief Engineer of th Company.

5th, That thanks be given to the Chairman, for his very gentlemanly and efficient conduct in the chair.

C. F. SAGE, Chairman.

REPORT OF THE DIRECTORS.

Since the Directors met the Proprietors on the last occasion, the railway has been opened from Swindon to Cirencester, and they are happy in being able to add, that the traffic has been successfully carried on for five months, without the occurrence of any accident or interruption.

The Directors have now given their most attentive consideration to the future general prospects of the Company, regarding it as very important that some clear and definite course should be adopted, to secure to the Proprietors every advantage which future circumstances may offer.

The origin of the undertaking was to secure to Gloucester and Cheltenham, and to the towns and manufacturing districts of Gloucestershire, a continuous railway communication with the metropolis, and to render the Great Western Railway the direct thoroughfare for the traffic, not only from those towns, but also from the more remote parts of Herefordshire, Worcestershire, and South Wales, and also to facilitate the communication from the North of England with Bristol, and the south western parts of the kingdom.

Circumstances induced the Directors to recommend that the portion of the railway from Swindon to Cirencester should be completed, and rendered serviceable for traffic, before the works on the line of continuation to Gloucester should be undertaken; that object has now been realized, and the portion so completed is yielding a return upon the outlay.

They think it would be extremely unwise to neglect the present opportunity of enlarging the powers of the Company, by new Parliamentary enactments, calculated to secure greater advantages to the present Proprietors upon that outlay, by the grant of further time, and powers to make arrangements with those Companies who are unquestionably most deeply interested in the success of the undertaking.

The Directors, therefore, recommend that the notices given, with the sanction of the Proprietors, in February and March last, for an application to Parliament, should now be followed up, and that a Bill, embodying the powers which in the opinion of the Directors it will be desirable to apply for, shall be prepared and submitted to a special general meeting of proprietors for their approval, before it is submitted to Parliament; if such Bill shall be approved, there can be no doubt of obtaining the assent of the legislature, in furtherance of measures securing such important advantages to the public.

No further works between Kemble and Gloucester have been undertaken since the last general meeting, and the Directors adhere to their determination, expressed at former meetings, not to begin any without previously consulting the proprietors.

Every possible retrenchment in the annual expenses of the Company has been made, and the income arising from the portion of the line leased to the Great Western Company (after making due allowance for the permanent expenses, and for the interest which will be payable on the debentures now issued or which may be issued) warrants the Directors in recommending the Proprietors, at the present meeting, to declare a half-yearly dividend of one pound per share, to be paid on and after the 24th day of December next.

It will be seen by the Appendix to the Report, that the total expenditure of the Company, up to the 24th June last, amounted to the sum of £416,569 6s. 7d.; the subsequent expenditure to the present time has been £22,253 14s. 2d.

The total expenditure to complete the works in progress will be £551,800, as well as can be ascertained, of which the sum of £365,845l. 10s. 11d. has been received from the shareholders to the 24th instant, and to the remaining sum of £186,000 the Company are liable.

Towards meeting that liability, the Company has a claim of £26,800 for money expended on the line between Gloucester and Cheltenham, £5,000 good arrears due from sundry shareholders, also land and other available assets of uncertain amount.

The Directors, until very recently, relied on raising the necessary funds to meet these engagements by loans on debentures, as that appeared to be the wish of the Proprietors at the last general meeting; but the state of the money market, since that time, and the high rate of interest which it has afforded, have been very unfavourable to the operation. They have as yet received only £24,000, and it has therefore become necessary to make a call of £10 per share, to enable the Directors to meet the payments coming due in December and January next.

C. F. SAGE, Chairman.

ENGINEERS' REPORT.

GENTLEMEN,—Shortly after the last half-yearly meeting, at the end of the same month, the line between Swindon and Cirencester was opened for public traffic. At that time, the difficulties which we had experienced from slips in the Swindon embankment, and which were referred to in my report at that meeting, had so much diminished, and all movements in the slips so completely ceased, that there appeared no ground to anticipate any difficulty in maintaining the newly formed bank at the slips, and every precaution was taken to secure them. The movement, however, unfortunately recommenced, and the slips even extended themselves to the adjoining parts of the embankment; and the settlement of the east, or up line, was so considerable, and the quantities of materials required to maintain both lines in good order, was in consequence so great, that it became necessary to cross the traffic on to the west line at this point, and to devote the other to the carrying of material. By this means it has been comparatively easy to maintain the one line in good working order, while the work of repair upon the other has been carried on more quickly than it otherwise could be, and without any chance of interruption to or interference with the traffic. The line thus used for ballast waggons, and for the works generally, has not, of course, been maintained in levels and packing; and the appearance of it may consequently have given rise to exaggerated reports of the slips, and the state of the embankment; but the fact that the traffic has been carried on steadily, and without a single case of interruption at this point, ought to have been a conclusive and satisfactory proof, even to those unacquainted with the real state of the case, that the public were not sufferers by the difficulties which we had to contend with. The means taken to secure the bank have hitherto proved efficient; and had the weather been moderately favourable, the whole would by this time have been completed. At our present rate of proceeding, I apprehend five or six weeks must elapse before this can be effected; but if a change of weather, which after the long excessively wet season we have suffered under, should happily take place, a less time will suffice to bring both lines into good working order. The arrangements which have been made by the Great Western Railway Company for working this part of the line, with one train only at a time, has of course insured perfect safety to the public.

Upon the state of the whole of the rest of the line, I am happy to say I can report most favourably. Notwithstanding the very trying season, which has rendered it most laborious to maintain the lines upon all the railways in the kingdom, we have suffered less inconvenience than could have been anticipated; and we may fairly hope, when moderately fair weather returns, to have the line in exceedingly good order.

The heading at Saperton has proceeded very satisfactorily without any interruption, and without encountering any difficulty whatever. About five-sixths of the whole distance between shaft 2 and the Valley are completed; the half next the Valley is finished, and the remaining lengths will probably be joined in about two months. The material is good, and the drainage of the water is obtained into the lower Oolite, without pumping, at one of the intermediate shafts, and of course at the lower extremity of the headway.

I am, Gentlemen, your obedient servant,

I. K. BRUNEL.

ARREARS OF INSTALMENTS, 24th JUNE, 1841.

First instalment, or deposit, £2 10s. per share	£	0	0

GREAT WESTERN RAILWAY.—ALTERATION of TRAINS for the Winter.—NOTICE is hereby given, That on and after November 1, 1841, the Trains will leave Paddington for Cirencester, Bath, Bristol, and Bridgewater, as follows:—

H. M.		H. M.	
6 0	o'clock, a.m.	2 0	o'clock, p.m.
8 0	,, ,,	5 0	,, to Bristol only
10 15	,, ,, day mail	8 55	,, ,, mail
12 0	noon	4 30 a.m. / 9 30 p.m.	goods' train.

And from Bridgewater, Bristol, and Bath, to Paddington—

H. M.		H. M.	
7 0	o'clock, a.m. from Bristol	12 44	o'clock, p.m. from Bridgewater
8 40	,, ,, from do.	3 30	,, ,, from do.
9 30	,, from Bridgewater	11 40	,, ,, mail
11 30	,, ,, from do.	8 0 a.m. / 6 0 p.m.	goods' train

Up from Cirencester to Paddington.

H. M.		H. M.	
7 50	o'clock, a.m.	3 30	o'clock, p.m.
9 35	,, ,,	5 45	,, ,,
11 55	,, ,,	1 40	,, a.m. mail
1 40	,, p.m.	1 40 / 5 45	goods' train

Passengers may be booked to Cheltenham, Exeter, Plymouth, and Devonport, at the Railway Office, Prince's-street, Bank, or at the Paddington station.

Further particulars of Trains, and the stoppages at different stations, may be known by application at the Company's offices and stations.

October 29, 1841.

BIRMINGHAM AND GLOUCESTER RAILWAY.—ALTERATION OF TRAINS.—On and after MONDAY, the 15th of November, this Company's Trains will run as follows until further notice:—

From Birmingham.	From Gloucester.
12 44 a.m. (Mail.)	8 15 a.m.
3 10 a.m. (Mail.)	11 45 a.m.
8 45 a.m.	2 30 p.m.
12 15 p.m.	5 0 p.m.
2 45 p.m.	7 15 p.m. (Mail.)
6 15 p.m.	9 0 p.m. (Mail.)

Short Train, from Gloucester to Cheltenham, at 9 15 a.m.

Short Train, from Cheltenham to Gloucester, at 9 45 a.m.

Passengers may be booked in London for Worcester, Cheltenham, or Gloucester, by Trains leaving the London Station of the London and Birmingham Railway at 6 and 9½ a.m.; and from those places for London, by Trains leaving Gloucester at 8½ a.m. and 2¼ and 9 p.m.

By order,
GEORGE KING, Secretary.

12, Waterloo-street, Birmingham,
2nd November, 1841.

LONDON AND BIRMINGHAM RAILWAY.—ADDITIONAL TRAIN.—The Public are informed, that on and after Monday next, the 1st November, an Additional Train will leave the Wolverton Station at 8 o'Clock in the Morning, calling at all the intermediate Stations, and arriving in London about ½ past 10.

By order,
R. CREED, Secretary.

Euston Station, 29th October, 1841.

ARGUS LIFE ASSURANCE COMPANY, 39, Throgmorton-street, Bank, London. Established in 1838. Empowered by Act of Parliament.

DIRECTORS.

Thomas Farncomb, Esq., Alderman, Chairman.
William Leaf, Esq., Deputy Chairman.

William Baubury, Esq.	John Humphery, Esq., Ald. M.P.
Harry Barrett, Esq.	Rupert Ingleby, Esq. Manchester
Edward Bates, Esq.	Thomas Kelly, Esq., Alderman.
Thomas Camplin, Esq.	Jeremiah Pilcher, Esq.
James, Clift, Esq.	Lewis Pocock, Esq.

Rates reduced to the lowest possible scale that is compatible with the safety of the assured, and of the Company, whereby a certain and annual bonus is secured to every individual assured in this Office, in lieu of the deferred and sometimes delusive prospect of a periodical division of profits.

An ample Subscribed Capital, together with a large accumulated Premium Fund, invested in Government and other available securities, and perfect security without any responsibility, is thus given to the assured.

ANNUAL PREMIUM TO ASSURE £100.

Age.	For one year.			For seven years.			Term of Life.		
	£	s.	d.	£	s.	d.	£	s.	d.
25.....	0	19	7	1	0	7	1	15	1
30.....	1	1	3	1	2	1	1	19	0
35.....	1	2	9	1	3	8	2	5	10
40.....	1	4	6	1	6	2	2	13	9

In assurances for advances of money, as security for debts, or as a provision for a family when the least present outlay is desirable, the varied and comprehensive tables of the Argus Office will be found to be particularly favourable to the assured. A Board of Directors, with the medical officers, attend daily.

EDWARD BATES, Resident Director.

ULSTER RAILWAY.—This Railway will be OPENED TO LURGAN ON MONDAY, the 8th of November next, for the conveyance of Passengers and Parcels.

TIME TABLE.

UP.

Departure from Belfast.	Lisburn.	Moira.	Arrival at Lurgan.

SUNDAYS.			
9 30	9 45	10 0	10 25
6 0	6 15	6 30	6 55

An Extra Train, to Lisburn only, will leave Belfast every Tuesday morning, at Nine o'Clock, and return at half-past Eleven. This train, as well as others, will stop at Dunmurry.

FARES.

		s.	d.
BELFAST.	First-Class	1	0
	Second Class	0	9
	Third Class	0	6
LISBURN.	First-Class	1	0
	Second-Class	0	9
	Third-Class	0	6
MOIRA.	First-Class	0	10
	Second Class	0	6
	Third-Class	0	4
LURGAN.	First-Class	0	9
	Second Class	0	6
	Third-Class	0	3

Belfast to Lisburn ; Moira ; Lurgan ;

Children under ten years of age, in the First-class, will be charged Second-class fare; and those in the Second-class will be charged Third-class fare; those in the Third-class, half-fare.

First and Second-class Passengers will be allowed to take luggage, free of charge, to the extent of 56 lbs. weight; and Third-class Passengers, 36 lbs. weight.—Such luggage must, however, be personal baggage, and not merchandise. Overweight will be charged at the rate of 6d. for every 28 lbs.

Passengers will be careful to look after their own Luggage, as the Company will not hold themselves accountable for any Luggage, unless it be booked and paid for, according to its value.

No parcel or package will be forwarded by any particular Train, unless brought to the Office fifteen minutes before the starting of that Train.

The Tickets for each Station will be collected at the one preceding it; and Passengers are particularly requested to present their Tickets *unfolded*, as much inconvenience and delay will be prevented, by attending to this.

Passengers are required to take their places in the Carriages set apart and labelled for the station to which they are going; and they are also requested to alight at their respective destinations, immediately on the stopping of the Train.

The name of each Station will be called on the arrival of the Trains; and Passengers are particularly cautioned against attempting to leave a Carriage whilst in motion.

No Fees and Gratuities are allowed to be received by any of the Company's servants, on pain of dismissal.

The time allowed for stopping at each station is two minutes.

HIGH FARES OR LOW FARES ON RAILWAYS.—On Monday next will be published, in demy octavo, price 4d., A Reply to the Toll Question on Railways, Exemplified in the case of the Croydon and Greenwich Companies.

Pelham Richardson, 23, Cornhill

MANCHESTER AND BIRMINGHAM RAILWAY. — LOCOMOTIVE DEPARTMENT. — WANTED, a Person in every respect qualified to act as FOREMAN of the Locomotive Department. Applications, accompanied by testimonials, to be made by letter, addressed to the Engineer-in-Chief, at No. 5, Grove-street, Ardwick, Manchester.

Engineer's Office, No. 5, Grove-street, Ardwick, Manchester, October 29th, 1841.

GLASGOW, PAISLEY, KILMARNOCK, and AYR RAILWAY.—The Directors of this Company will receive applications for the OFFICE of SECRETARY until Wednesday, the 24th day of November next. Salary, £400 per annum.

It is requested that letters of application shall contain testimonials, and references as to qualifications, and be addressed to "The Directors of the Glasgow, Paisley, Kilmarnock, and Ayr Railway," and left at their office here.

Railway Office, Glasgow, 21st October, 1841.

LONDON, EDINBURGH, AND DUBLIN GUARANTEED MUTUAL and PROPRIETARY LIFE ASSURANCE COMPANY, 8, Charlotte-row, Mansion House; St. Andrew's-street, Edinburgh; Fleet-street, Dublin.

DIRECTORS.

Alexander Anderson, Esq.	John Johnson, Esq., Ald.
John Atkins, Esq.	Kennet Kinsford, Esq.
James Bidden, Esq.	John M'Guffie, Esq.
Captain F. Brandreth	John Maclean Lee, Esq.
James Hartley, Esq.	J. Marmaduke Rossester, Esq.
Vice-Admiral Robert Honyman	Alexander Robertson, Esq., Managing Director.
Benjamin Ifill, Esq.	

Solicitors—Messrs. Palmer, France, and Palmer.

Secretary—F. Edgell, Esq.

Important improvements have been introduced into Life Assurance practice by this Company.

The Policies are indefeasible and indisputable, unless they have been obtained by fraudulent misrepresentation.

The Board of Directors satisfy themselves upon the various questions proposed before they enter into contracts of Assurance; and frame their Policies in such terms as to preclude all future questions as to their validity, and thus render them indisputable and negotiable documents of future debt against the Company.

Parties may be assured either upon the participating or non-participating plan; the assured are relieved of all responsibility, and the participating class is entitled to the whole of the profits upon that branch of the business.

Table to assure £100, with addition of Profits.

Age 25.	Age 35.	Age 40.	Age 45.	Age 50.	Age 55.
£2 2 7	£2 15 10	£3 5 0	£3 15 5	£4 10 7	£5 18 8

Persons interested in the Lives of Nominees or Debtors may, for a trifling extra Premium, be relieved from the risk of their Policies being forfeited by the parties going to foreign countries.

One-half of the Premiums may remain unpaid for seven years, affording a greater facility for loan transactions and family provisions than any other plan which has been suggested.

Credit Table to assure £100, payable at death.

Age 20.	Age 25.	Age 30.	Age 40.	Age 45.	Age 50.
£0 18 0	£1 0 7	£1 3 7	£1 11 5	£1 16 6	£2 3

The usual Commission allowed to Solicitors and Agents; and Medical Gentlemen are in all cases remunerated for their reports.

COKE.—THE LIVERPOOL AND MANCHESTER RAILWAY COMPANY are desirous to receive TENDERS for the supply of COKE, of the best Quality, suitable for Locomotive Engines. The term, six months certain; and the quantity, 50 to 100 tons per week; to be delivered on the Railway, either at Manchester, Parkside, or Liverpool, day by day, in quantities proportionate as nearly as practicable to the weekly supply. The deliveries to commence on the 1st of January next.

Tenders, at a price per ton, delivered, must be sent to the Directors, Lime-street Station, Liverpool, on or before Friday, the 12th November; and a trial of the Coke will be required before making a Contract.

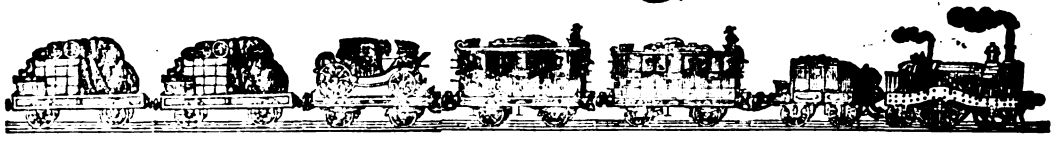
Further particulars, if required, may be had on application to the Treasurer.

By order of the DIRECTORS.

Liverpool, 25th October, 1841.

TO COAL PROPRIETORS, ENGINEERS, and Others.—To be SOLD by Private Contract, Four excellent double-acting condensing STEAM ENGINES, of 28, 11, 6, and 4 horse power respectively.

The whole are in excellent condition, and have been recently at work.



For further particulars, or to treat for the purchase, application may be made to Mr. Woodhouse, Colliery Viewer, Overseal, near Ashby de-la-Zouch.

October 12, 184..

The Railway Times.

"Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 202. Vol. IV.—No. 46.] SATURDAY, NOVEMBER 13, 1841. [Price, 6d.

PROPOSED PLAN for the establishment of a GENERAL OFFICE for the use of TRAVELLERS BY RAILWAY and STEAM NAVIGATION, where the public could readily obtain every species of information that might be useful to or required by Travellers, either on business or pleasure, by any of the various Railway and Steam Navigation Conveyances throughout the United Kingdom, more especially as relates to the hours of departure and arrival, the scale of fares, and the different regulations of each, for conveying Passengers and Goods; to be formed under the sanction and patronage of the several Boards of Direction and Management of the Companies now in existence.

☞ It is proposed that a complete Register be kept of all the Railway Conveyances, systematically arranged for the convenience of immediate reference, setting forth every station at which the trains stop on the respective lines, and the several stations and booking offices from whence passengers and goods may be conveyed.

That the proposed Office be furnished with the printed placards and hand-bills from all the different Companies, for reference and distribution to the public, who should receive gratuitously every information required.

That a like Register be kept of all the Steam Navigation Conveyances, and a similar distribution be made of the hand bills of the different Companies, and every information respecting them be given in the same manner.

That a communication be opened for correspondence with the respective Secretaries to enable the Manager of the Office to give answer to such inquiries as might arise, and which their printed hand-bills do not furnish, and that the Secretaries would from time to time give the Manager immediate notice of every alteration affecting the conveyance of passengers and goods.

The Manager of the Office would undertake to transmit by post any hand-bill or specific information, which might be required by persons residing in the country, and who could not conveniently attend personally to obtain it.

That such Office be fixed at some centrical point (being a public thoroughfare) at the West End of the Town, holding connection with a similar establishment in the City, and to be open to the public every day, Sundays excepted, and that the Office shall be furnished with geographical maps and plans of the Railways.

It is proposed that arrangements should also be made which would embrace an extension of the plan, by collecting information of the various establishments on the Continent of Europe and elsewhere, for conveyance by Railway and Steam Navigation, as it is considered that by centralizing these various objects at one place, a complete Emporium will be formed for obtaining that general information which Travellers so much require, and this concern founded upon such an enlarged and comprehensive scale as would ensure the contemplated benefit and advantage to the several Companies interested, as well as for its becoming a medium of the greatest public utility.

NATHANIEL W. SYMONDS.

Lombard Street Chambers, Clement's Lane,
27th October, 1841.

*** Any suggestion to improve or add to the usefulness of the above plan will be thankfully received.

ANDREW SMITH'S PATENT WIRE ROPES, for STANDING RIGGING, LIGHTNING CONDUCTORS, STROPPING OF BLOCKS, MINING, RAILWAY, and GENERAL PURPOSES; about half the Size and Weight of Hempen Ropes, and 25 per cent. cheaper. Testimonials to that effect, with Specimens, may be seen, and every information obtained, at the Manufactory, Mill-wall, Poplar; and also of the following Agents:

Robertson and Co., 12, Goree Piazzas Liverpool,
Mathias Dunn..... Newcastle-upon-Tyne
Joseph Bothway..... Plymouth.
John Thompson and Co..... Wigan.
J. T. Tregellas..... Truro.
Thomas Mooney and Son..... Dublin.
Coates and Young..... Belfast.
James Kibble and Co. ..... Glasgow.
James Gunn..... Leith.
John M. Beatte, 14, Clement's-lane, High-street, Dundee.

This Rope has been in use for standing rigging in her Majesty's navy, and a great number of merchant vessels, for upwards of six years, and is giving the highest satisfaction. It is also employed in various mines and railways in different parts of the kingdom.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secresy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

This day is published,

TUCK'S MAP OF THE RAILWAYS throughout ENGLAND and WALES to the Capital of Scotland, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s. 6d.; in paper covers, 1s.; mounted on canvass, in cloth case, 2s. 6d.; on rollers, 3s. 6d.

Published at the *Railway Times* Office, 122, Fleet-street, and sold by Groombridge, Panyer-alley, and R. Tyas, Paternoster row; Hyde & Co. and G. Bell, Fleet-street; Mann, Cornhill; and by all booksellers and Newsmen.

ROBINSON'S RAILWAY DIRECTORY for 1841, containing the Names of the Directors and principal Officers of most of the Railways in Great Britain, derived from authentic sources, price 1s. *Railway Times* Office, Fleet-street.

Just published, a new Edition of ROBINSON'S

RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Map, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Price 1s., in cloth. *Railway Times* Office, and Hyde and Co., Fleet-street.

Just published,

MAPS OF ALL THE LINES OF RAILWAY through ENGLAND and WALES, showing the country in their immediate vicinity on a larger scale than was ever before displayed in a sheet pocket map, with a compendium of Railway information. In paper cover 1s., in cloth 1s. 6d.

Published at the *Railway Times* Office, 122 Fleet-street, and sold by all booksellers.

BRISTOL AND EXETER RAILWAY COMPANY.—TENDERS FOR LOANS ON DEBENTURE.—The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising therefrom, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest at the rate of Five per cent. per annum, payable half-yearly at the Bank of Messrs. Glyn, Hallifax, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Prince's street, London, or Broad-street, Bristol.

By order of the Board of Directors,
J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol.

SHEFFIELD, ASHTON-UNDER-LINE, AND MANCHESTER RAILWAY.—Call for Twelfth Instalment.—The Directors of this Company having resolved to make a CALL under the provisions of the Act of Parliament for an Instalment of Ten Pounds per Share, Notice is hereby given, that the several Proprietors in the Capital Stock of the said Company are required to pay the said call or Sum of Ten Pounds on each of their respective Shares on or before the 7th day of December next, to one of the undermentioned Bankers, viz.:—

Sheffield—Messrs. Barker, Shore, and Co.
Manchester—The Manchester and Liverpool District Bank.
London—Messrs. Rogers, Olding, and Co.; and Messrs. Smith, Payne, and Smith.

Interest after the rate of 5 per cent. per annum will be charged by the Bankers on all such sums as shall remain unpaid after the said 7th day of December next, until payment thereof.

The Directors take this opportunity of stating, that £5 per cent. per annum is allowed on all sums paid in advance.

By order of the Directors,
JOHN PLATFORD, Secretary.

15, Piccadilly, Manchester, November 3, 1841.

FORTY FINE, YOUNG, SEASONED CART HORSES AND A CELEBRATED BAY TROTTING CHAISE MARE.

MR. DIXON begs to announce that he is instructed by Messrs. Earl and Pearce, to Sell by PUBLIC AUCTION, at the City Repository, Barbican, on FRIDAY, November 19, 1841, commencing at Eleven for Twelve o'Clock, precisely, Forty valuable, fine-shaped, powerful, active Cart Horses, being the first portion of their excellent Stock, that have been employed on the Harlow Contract of the Northern and Eastern Railway, and are sold in consequence of it being nearly completed.

Colours—Bays, Browns, Greys, Roans, Chesnuts, and Blacks; including several elegant Match Teams.

Also, a very handsome five year old rich-coloured brown Carriage Horse, and a fine-shaped extraordinary Trotting Bay Chaise Mare, one of the fastest and finest goers ever seen.

☞ The above lot of fine young seasoned Cart Horses are worthy the attention of Brewers, Distillers, Corn and Coal Merchants, Tradesmen, Agriculturists, Contractors, &c. being remarkable for their symmetry, power, and activity; and having now completed that part of the Contract on which they have been employed, will be positively sold without the least reserve.

On view, and catalogues had two days previous.

TO RAILWAY SHAREHOLDERS, ENGINEERS, CONTRACTORS AND OTHERS.

IMPORTANT RAILWAY CASE.—In the Press, and shortly will be published, price 2s. 6d., A Report of the Case, IRVING v. THE MARYPORT AND CARLISLE RAILWAY COMPANY, referred from the Carlisle Assizes to R. B. Armstrong, Esq. Q.C., and heard at Carlisle on the 7th of September, 1841, and the four following days, in which Mr. Thorpe, of Thorne, Yorkshire, appeared as Attorney for the Plaintiff; and Mr. Tyson, of Maryport, Cumberland, and Mr. Mounsey, of Carlisle, for the Defendants.

London: Whittaker and Co., Ave-Maria-lane.

When published, due notice will be given in the *Railway Times*, &c. &c.

NORTHERN UNION RAILWAY.

MEETING OF THE GREAT NORTH OF ENGLAND COMPANY.

On Tuesday (week) a special general meeting of the proprietors of shares in the Great North of England Railway was held at the Company's office in Darlington, for the purpose of taking into consideration and deciding upon a proposal that this Company should transfer to another Railway Company the powers and provisions contained in the Act of Parliament under which they are incorporated, and also for taking into consideration and deciding upon a proposal that the Company should unite with certain other Railway Companies in taking a lease of a railway proposed to be made from a portion of the Croft branch to join the Durham Junction Railway; and also for the purpose of adopting and deciding upon such measures with reference to these subjects as might appear advisable and for other matters; George Hutton Wilkinson, Esq., presided.

The Chairman opened the proceedings by calling upon

Mr. William O'Brien, the Secretary, to read the notice convening the meeting.

The Chairman—The main object for which the present meeting of shareholders in the Great North of England Railway Company has been convened is one of so much public notoriety at the present moment, and in which so deeply intense an interest has been taken, not only among the shareholders resident in the vicinity of the line, but also by others, as testified by the great number of proxies which I hold in my hands; and also from the circulation which has been given to the various discussions which have taken place at York and elsewhere, that I feel I should be trespassing upon your time by commenting on the object and the deep importance of this meeting. From the notices in the newspapers, and also from the pamphlets and circulars which have appeared on the subject before us, you are all as well acquainted as myself with the true state and position of the case as affecting the shareholders of the Great North of England Railway. I shall therefore content myself with calling upon the secretary to read the resolutions already passed by deputations from other Railway Companies upon the subject. In the first place, I call upon the Secretary to read to you the resolutions which were passed at a meeting at York, on the 6th September last, at which the Chairman of the York and North Midland Company (George Hudson, Esq.), whom I am happy to perceive among us on the present occasion, presided.

[The resolutions have already appeared.]

The Chairman—You are now in possession of all the resolutions that have passed at these meetings, at which there were deputations from several Companies who are very deeply interested in that which is the object of the present meeting, namely, the carrying on the line northward to Newcastle. You will observe, by the 8th resolution of the adjourned meeting, that the deputations of the several Companies are required to call special meetings of their proprietors, for the purpose of their sanctioning the extension of the line at an early period. In pursuance of that resolution, one main object of the meeting convened on the present occasion is to procure your sanction to such course. In addition to this meeting, at which there were deputations from various Companies, there have been various special meetings held, one of which was called by the York and North Midland Railway Company, the proceedings of which have been made public in the *Railway Times* and other public prints, in which you will find detailed the advantages to be derived by the various Companies from the proposed measures, stated by the Chairman of that Company whose presence we have the advantage of on the present occasion. I shall not occupy your time with any general comment on the subject of this meeting, but call upon Mr. Oxley to propose to you certain resolutions, which have been framed with a view to carry out the object of the meetings at which you have heard the resolutions agreed upon.

Mr. Oxley then rose to propose that the resolutions recommended be adopted.

The Secretary then read the Report of the resolutions given in one of our former numbers.

The Secretary then read the resolutions.

Mr. Priestman—I have always considered that the great object of the Great North of England Railway Company was to form the best communication they could between Newcastle and York, and also having reference to the leaving the best possible point where they terminated, for going northward to Edinburgh. I have observed with considerable jealousy this proposed deviation from what was the projected line of this Company when they first went to Parliament. I have rather a strong feeling for that line under certain modifications, and have entertained the opinion that it might have been carried out.

The Chairman—If any gentleman has anything further to offer, I shall be glad to hear him; if not, I will take the sense of the meeting.

A Shareholder—I beg to ask, is the gain on the sum stated, at what the line may cost?

The Chairman—I apprehend, upon the sum stated.

Mr. Barstow—I should apprehend on what the line may cost. If it should cost more, you will hardly give the parties larger interest. A few years ago, when railway estimates were made, the cost was not so well understood as at present. You are now going to work when many railways have been made, and the cost of them is known. These estimates were formerly made at the highest rate; there is now no risk of any excessive extra expense. Besides, there are now so few railways in construction, that competent individuals will be easily obtained. I think there is no risk whatever of the cost exceeding the estimate.

The Chairman—The present object is merely to obtain the sanction of the meeting to the future negociation.

Mr. Henry Pease—I feel particularly anxious that the gentlemen who are now present, and who are here so seldom, should fully express their sentiments on the present motions. I do not feel satisfied to give my sanction to these resolutions without the most decided and unanimous approval of the shareholders; for I feel that we are scarcely doing right to transfer the whole of these powers to a new Company without the final sanction of another meeting, when we consider that the negociations are of a very extended character; and, secondly, that the guarantee fund will amount to something like 8,000*l.* per year. We have at present a good revenue from the line, considering the time it has been in operation, and we have reason for thinking that that revenue will be considerably increased. I must confess, that as a Director, unless the unanimous concurrence of this meeting is very generally expressed, I do not feel that the resolutions should be passed at present. I am unwilling to sanction their adoption without that stamp of unanimous approval which has not yet been evinced.

Captain O'Brien—The observations which have now been made are very much like what was expressed at the late meeting held at York; it was surmised that the guarantee might fail, and the North Midland Railway Company would have to pay 6,000*l.* per annum, possibly. Their proportion, supposing that the railway paid five per cent., would be 5,000*l.* per annum; but if, on the other hand, by the new arrangement, that Company only get two passengers daily between Normanton and Derby, these two passengers, either way, would increase the present traffic, and make up that 5,000*l.* per annum. I think, therefore, that if we have to guarantee for the sum of 8,000*l.*, it does appear, and it will appear to those persons who may not have gone minutely into the calculation, to be a great deal of money. But supposing we should have to pay 2,000*l.* to that 8,000*l.*, why, gentlemen, that 2,000*l.* would be covered by the daily augmentation of five first-class and eight second-class passengers, I would ask you whether such towns in the county of Durham as Shields, with 15,000 inhabitants, Sunderland with 20,000 (more) Newcastle, together with Gateshead, which, according to the census of 1831, contained 68,790 inhabitants, and in all probability will now have about 90,000, with its large increase of shipping—(the population of the county of Durham alone has increased 58¾ per cent. from 1831 to 1841, which is 2¾ per cent. greater than the increase throughout England)—I would ask whether these large and populous places, with their thousands of inhabitants, still increasing, are not likely to give you something more than your five first-class passengers and eight second-class passengers daily between Darlington and York; and if they do that, the North Midland Railway Company may find themselves in a far better position by having to pay a thousand pounds on the one hand, when in all probability they will have to receive three on the other. I beg to make these observations in consequence of a meeting which has been held at Liverpool of the Midland Counties Railway Company, in which several statements have been made which are characterised by extreme ignorance of facts. I venture to make this statement, because on Friday next a second meeting will be held by these proprietors, and I think it will be a pity if it is supposed that what has been stated by them is all gospel, and what has emanated from us is not fact.

Mr. Oxley—I would make one remark with reference to the observation of Mr. Henry Pease, that he would scarcely give his sanction to passing the resolutions without their being confirmed at another general meeting. In the first place, gentlemen will understand that this is a special general meeting, called for a special business; and that business is to take into consideration the subject now before us. A circular has been sent to every shareholder, and proxies are in the hands of the Directors and other parties present, and every shareholder has had an opportunity of giving his opinion on the question now to be brought before us. I should, therefore, conceive that we could not have a more complete—a more thorough meeting of the constituency at large than is here present. There is also another part of the question more important. This is only one of a series of steps. There is no time to be lost in the formation of a new Company. (Hear.) It is necessary to ensure the confidence of the public, and that everything may be placed in as favourable a position as possible. I am sure that the gentlemen who have taken an active part in the formation of this new Company would not like to be acting without they saw clearly that the thing had already been confirmed by the several Companies with whom they have been brought into contact. And, therefore, if this question was to be decided at a future general meeting, these gentlemen would be acting in the dark, and it is not likely that they would move with the same energy as if they found all the difficulties had been cleared so far as they had gone. I hope this meeting will not hesitate upon that point.

The Chairman then put the resolutions, which were carried unanimously; the Chairman observing, it appears that that unanimity already exists which Mr. Henry Pease requires.

Mr. Henry Pease—No one rejoices more than I do at this unanimity. You will excuse me for putting the case clearly, which I have done in accordance with the wish of proxies which I have received, parties stating that they do not see the justice of guaranteeing 6 per cent., unless it can be shown that the line will yield 6 per cent.

Mr. Oxley—There is another resolution as a matter of form with reference to the arrangement of tolls to be received. (Mr. Oxley then read the resolution, together with a table of tolls, which were of a formal nature.) I beg to move that this table of tolls be adopted.

Mr. Plews seconded the resolution, which was passed.

Thomas Price, Esq., of York—I think we should ill discharge our duty without offering our thanks to the Chairman, for his kindness in presiding over us, and for his urbanity, and the manner in which he has conducted the business of the meet-

Digitized by Google

ing. I am, like many others present, one of the original shareholders of the Company, and I conceive that the line must be eventually beneficial, not only to ourselves, who have to work it out, but also to the country at large. I beg to propose the thanks of the meeting to the Chairman.

The CHAIRMAN returned thanks for the compliment paid him, and he esteemed it more particularly as it came from one who was not immediately connected with the Company. He went, naturally, along with the gentleman in the sentiments which he had expressed with respect to the issue of that proceeding. He felt certain that they had the game in their own hands, and had only to play the cards out with proper discretion.

They meeting then separated.

MEETING OF THE NEWCASTLE AND CARLISLE COMPANY.

A special general meeting of the Newcastle and Carlisle Railway Company was held in th Company's office, Newcastle, on Wednesday evening, to consider the proposal to unite with other Companies to extend the Great North of England line, and also to decide as to the raising of a further sum of money, under the powers of the Act passed last year. M. Plummer, Esq. was in the chair.

The CHAIRMAN explained the object of the meeting, and

Mr. J. CLAYTON then read the copies of the resolutions passed at meetings of deputies held at York on the 6th and 27th of September last, all of which were given in this paper last week. All that it is necessary here to repeat is, that an annual rent of 10,000*l.* was proposed to be raised, jointly, by the Great North of England, the Brandling Junction, the Durham Junction, and the Newcastle and Carlisle Railways. Mr. Clayton said, that the first of these railways had agreed to pay 8,000*l.*, and the Brandling Junction and the Durham Junction 750*l.* each, thus leaving only 500*l.* to be raised by this Company.

The CHAIRMAN thought it was unnecessary to trouble them with further details, but he might state that the Directors, at their last meeting, agreed to propose to the shareholders to give authority for this Company granting 500*l.* a-year towards the payment of the interest to the subscribers for the new shares for the purpose of making the proposed railway communication between Darlington and Newcastle. There could certainly be no doubt that the new line would be of great benefit to this railway, as, when it was completed—which, according to the engineer and gentlemen conversant with railways, would be within two years—there would be direct railway communication between London and Carlisle. Passengers to London, coming from Glasgow and the west of Scotland, and also from the immediate vicinity of Carlisle, would scarcely go 66 miles by coach, over Shap Fell, when they could get by railway without disturbing their luggage, except perhaps when removing it from one carriage to another. It was fair, also, to presume that the north of Ireland would take advantage of it. Therefore, he thought the grant which this Company had taken upon them would be very small in comparison to the benefit that would be derived.

Mr. JOS. HAWKS—The Company are to guarantee the payment of 500*l.* a-year, without any prospect of return beyond the increase of revenue?

The CHAIRMAN—It was to be supposed that there would be traffic upon the new line. They were to guarantee the payment of 500*l.*, being at the rate of six per cent. upon the capital, but then, as a set off, they would be entitled to receive their share of the revenue that would be derived from the railway between Darlington and Newcastle, or rather Gateshead.

Mr. CLAYTON—The guarantee would only extend to the deficiency between what the railway produces and the interest. This Company must go to the extent of 500*l.* a-year if the railway produced nothing.

The CHAIRMAN—If the revenue between Darlington and Newcastle produced only three per cent., of course this Company would contribute three per cent. as some drawback upon the benefit they would derive from the benefit of increased passengers to Carlisle. The Directors at their late meeting had turned the matter over very seriously, and they had desired him to say that they were of opinion that they had better take their share of the capital, so as to give the shareholders the opportunity of benefitting thereby, as there could be no doubt that the shares would be at a premium.

In answer to a question by Mr. Johnson,

Mr. CLAYTON said, the capital was calculated at 500,000*l.*, which was more than the estimate required; but some addition was made to allow of the payment of six per cent. until the opening of the railway, which, it was thought, it would not be difficult to accomplish within the two years.

Mr. WOOD remarked, that the mail which leaves London at half-past eight o'clock in the evening arrives at Carlisle at half-past three o'clock in the afternoon. The mail which leaves London at nine o'clock arrives at Newcastle at twenty minutes past one o'clock, making a difference of two hours ten minutes. When the projected line from Darlington to Newcastle is executed, a further saving of time of two hours will be effected, making altogether four hours ten minutes from London to Newcastle sooner than from London to Carlisle. Taking three hours from Newcastle to Carlisle, the mail, or a passenger will arrive from London in Newcastle, by railway, the entire distance to Carlisle, one hour ten minutes sooner than by the western line of railway, and by coach over the Shap Fells. The unfinished part of the western route is 66 miles of coaching road, and, according to the Commissioners, 78¾ miles of equivalent railway. The saving of time, reckoning 10 miles per hour in the one case, and 20 miles in the other, will be two hours forty minutes; from which deduct one hour ten minutes, leaving a saving of time from London to Carlisle of one hour thirty minutes only by the execution of from 70 to 80 miles of railway across the Shap Fells, at an expenditure of from two to three millions of money, and that in a competing line of railway. But suppose the projected line of railway (recommended by the Commissioners) executed through Cambridgeshire to York, a saving of 39 miles of distance, or 1 hour 58 minutes in time would be effected, which would throw the balance in point of time 28 minutes in favour of the eastern route to Carlisle, even if the line across Shap Fells is executed, the relative equivalent distances from London to Carlisle by the eastern and western routes (per Commissioners' Report) being 326 miles one chain, and 325 miles 55 chains. The distance per railway from Carlisle to London, *via* Newcastle, being only 26 chains, or 572 yards greater than by Shap Fells, it would appear a bold scheme to expend between two to three millions on a competing line of railway, where the distances are so nearly balanced; and the only practical conclusion which can be deduced from these facts is, that the effort of the capitalist should not be directed to execute competing lines of railway south from Carlisle, but that these efforts should be occupied in procuring the best line into Scotland north from Newcastle and Carlisle. With respect to the communication from Carlisle to Manchester, the time occupied at present from Newcastle to Manchester is 9¾ hours, or 12¾ from Carlisle. When the projected line from Darlington is executed, a saving of two hours will be effected, which will make 10¾ hours from Carlisle to Manchester. This is, he believed, the precise time occupied at present *via* Lancaster. Thus, when the projected line is executed, a person will travel the whole distance from Carlisle to Manchester by railway in the same time as by coach over the Shap Fells; and if the traffic from Carlisle to Manchester can be secured to the railway, then the whole of the traffic north and east of Carlisle, and south and east of Manchester will most assuredly be, and consequently the benefit to the Newcastle and Carlisle Railway will be very great indeed.

Mr. J. HAWKS then moved a resolution to the effect that the Company do unite as proposed, and on the terms already explained.

Mr. EBENEZER ROBSON seconded this, and it was adopted unanimously.

The meeting then proceeded to the other portion of the business, viz., the consideration of the proposal, under the powers of the Act recently obtained, to obtain the sum of 225,000*l.* by the creation of 2,250 new shares; and three resolutions were ultimately carried sanctioning such proposal.

Thanks were then voted to the Chairman, and the meeting separated.—*Newcastle Courant.*

MEETING OF THE MIDLAND COUNTIES' COMPANY.

ON Friday [week] a special general meeting of Proprietors of the Midland Counties' Railway Company, was held at the Railway Station, Derby:—"For the purpose of considering and determining on the expediency of authorising the Directors, in concurrence with the other Railway Companies interested in the completion of the line of railway between London and Newcastle, to adopt measures for forwarding an application to Parliament, in next session, for an Act to make a Junction Railway between the Great North of England Railway, at Darlington, and the Durham Junction Railway, for which the requisite notices have been given, either by guaranteeing to the subscribers to such undertaking a certain amount of profit, or by such other means as may be considered best calculated to effect the desired object,"—There was rather a large attendance of proprietors.

Mr. DICEY (Chairman of the Company), opened the business of the meeting by referring at considerable length to the comparative merits of the two projects for a line of railway to Scotland—the one by the western, and the other by the eastern parts of the kingdom, and showing most conclusively, that, in point of distance and facilities for the formation of a railway, there could be no doubt as to the great preference for an eastern line. [The details were similar to those already reported at length. The projected junction railway will commence at the present terminus of the Great North of England Railway at Darlington, and will for the first 15 miles (as far as Shincliff) adopt a line for making which powers have already been granted by Parliament, in the Great North of England Railway Act. From Shincliff a new line will be taken which, partially adopting the Durham Junction Railway, will join the Brandling Junction Railway, at a point nearly equidistant from Newcastle, South Shields, and Sunderland, to each of which towns the Brandling Junction already affords adequate means of railway communication. At Newcastle a Union will be effected with the Newcastle and Carlisle Railway, and thus the only link will also be furnished which is now wanting to complete the chain of railway communication between Carlisle and the South of England. It is proposed to raise the capital in 20,000 shares of 25*l.* each, and in order to induce capitalists to come forward at once to take the shares without delay, a dividend will be guaranteed to the shareholders at the rate of 6 per cent. per annum for the first 10 years from the opening of the railway, up to which time interest at the same rate on the capital advanced will be paid out of the capital. In giving this guarantee the York and North Midland, the North Midland, the Manchester and Leeds, the Great North of England, the Newcastle and Carlisle, the Durham Junction, and the Brandling Junction Railway Companies, propose to join with the Midland Counties' in certain specified proportions, and the share of the guarantee for which it is proposed that the Midland Counties' Railway Company shall be responsible is 1-10th of the whole.] Mr. Dicey then proceeded to point out the immediate advantages which must accrue to the Midland Counties' Company by supporting the object for which the present meeting of proprietors was convened; and then referred to the estimated expense of the proposed undertaking. Mr. Robert Stephenson had made a very careful estimate, from which it appeared that the cost would not exceed 500,000*l.*, and this estimate had been sanctioned by Mr. Wood. The Midland Counties' Railway had cost about 27,000*l.* per mile,

Digitized by Google

but the proposed line, which was 22½ miles long, was much less expensive, there being no expensive terminal stations required. Still he was ready, for argument's sake, to assume that the 500,000*l.* would be exceeded, although his own opinion was, that it would not; but, even if it cost 30,000*l.* a mile, there was evidence enough to show that their guarantee was merely nominal. He was fully satisfied the line would pay. The Great North of England Railway paid 5 per cent. immediately on its opening, and it could not be supposed that, in continuing the line as now proposed, any less dividend would accrue. But, even allowing that the project did not pay a shilling beyond the expenses of the working, still, was it not worth the notice of the proprietors of the Midland Counties' Railway to join in its formation at some risk on this head for the sake of a permanent traffic which would, of necessity, come upon their line? Besides, their liability was only for ten years after the opening, which would, according to Mr. Stephenson's estimate, take place in two years from the present time. If they did not adopt the present plan their rivals would be left to carry theirs, and the importance of an unbroken line of railway to Scotland was fully shown from the fact, that the Grand Junction, and North Union, and other Companies were endeavouring to carry out a western line, and were subscribing large sums of money to forward such a scheme—a scheme, too, immensely more arduous, with regard to engineering difficulties, than the one now under consideration. Mr. Dicey said the guaranteeing Companies stood as follows:—

The Midland Counties' Company were to guarantee annually, for 10 years	£3,000
The North Midland	6,000
The York and North Midland	8,000
The Manchester and Leeds	3,000
And the Companies north of York	10,000

These would be a new Company formed for the new line, and the Directors would be taken from the guaranteeing Companies, who would take any surplus beyond the 6 per cent. if there was any, and if not, then they would have to pay in their proper proportions the difference between that per centage and the amount of revenue actually realised.

Mr. Robert Stephenson said that he had very minutely gone into the question as to the estimate of 500,000*l.*, and it was his firm conviction that that amount would not be exceeded. Opinions of engineers he knew were liable to be doubted, although they were now better able to form them than they were some years since, as they had the benefit of experience, but, in the present case, there were facts which bore out his representation of the cost. The Durham Junction line was executed for 17,000*l.* a mile, including a most expensive bridge over the river Weare, and the Great North of England but little exceeded 21,000*l.* a mile, and that Company had paid large sums to landowners, which would not be necessary on the proposed line. Here then, were two Companies, one at the north, and the other at the south end of the line, the cost of whose works was sufficient to insure the correctness of the estimate of 20,000*l.* a mile, particularly when it was remembered that the projected line was over a more favourable country than they were. He could only repeat that he had the utmost confidence in the estimates named.

Mr. Evans, M. P., then moved the following resolution:—

"That this Company approves of the plan of uniting with several other Railway Companies in taking a lease of an intended new railway to connect Darlington and Newcastle, at such a rent as will pay the shareholders in the projected undertaking 6 per cent. and the Directors are authorised to guarantee such proportion of the rent, and adopt such measures in reference thereto, as may appear desirable."

He had no doubt that the intended line would not only be extremely beneficial to the public but very remunerative to the subscribers. He regarded the guarantee as merely nominal; and with regard to the estimates, after what Mr. Stephenson had said, and considering his high character and reputation, supported as they were by facts, he did not suppose any person could conceive it very probable they would be exceeded. What the Midland Counties Company were called on to do was only, in fact, to guarantee an amount little more than the cost of one mile of their own line; and this surely was very unimportant when the increased permanent traffic which would come upon it was remembered. Mr. Evans, at some length, entered into details of traffic, and then referred to the western project, and to the immense difficulties, owing principally to the mountainous character of the country, which, if it was begun, would follow. He thought it was most important for them now to take the proposed steps

Mr. Dawson (Whatton House) seconded the motion.

Mr. Hudson (Chairman of the York and North Midland Railway Company) said, having observed the great increase of traffic brought on the York and North Midland line after the great North of England Railway was opened, he became convinced it was highly requisite that all the railways north of Rugby should unite to make a further extension. To show the facts of this increase he would state what was the amount of revenue brought on the York line the first seven months of its opening, and the first seven months after the Great North of England line was in operation:—

FIRST SEVEN MONTHS.	
Receipts from passengers, carrying 11,837	£9,680
From horses, carriages, merchandise, &c.	17,742
From parcels	1,328
SECOND SEVEN MONTHS.	
Receipts from passengers, carrying 21,658½	24,833
From horses, carriages, &c.	36 893
From parcels	3,726

There was an increase the second seven months of 27 passengers per day, going south; and he inferred there was about the same northwards. If they agreed to the proposed plan, they would have on the Midland Counties' line, he did not doubt, a daily increase of 40 or 50. The traffic, he was sure, would be more than 6 per cent.; indeed, he thought it was likely to be nearer 10 per cent. than anything else, and would amply repay the shareholders when the 10 years were expired. The proposed line abounded with limestone, coal, &c., and the population was great. Shields had 20,000 inhabitants, Sunderland 50,000, Newcastle and Gateshead 90,000. With these large and populous places, still increasing, he would ask if there was any risk in the undertaking, remembering that the Great North of England, incomplete as it was, paid 5 per cent. at the present time. It was stated at the late Liverpool meeting that the line might cost a million and a half; but surely this was ridiculous; such statements were quite unfair, and ought not to be made. Something, too, was said about the carriages having to run over several lines, and difficulty was anticipated from this with regard to change of engines, &c.; now, he was authorised to say, that all the Companies on the line of country would agree to a clause in the Act of Parliament to prevent this, and to prevent any confusion arising at all from York to Newcastle. He saw no reason why the carriages might not run through. As to the estimates, he believed what Mr. Stephenson said would be completed verified. There was no tunnel to deceive an engineer; but traffic had usually exceeded anticipation. He (Mr. Hudson) had had a traffic case made out regarding the proposed line, and the estimated revenue was 66,499*l.* The shareholders, therefore, were safe; and indeed they ought to be assured that there was no risk. He was confident the railway would leave a surplus after paying 6 per cent. They had found that, with regard to the Leeds and Selby line, their risk was nominal, although doubts had been thrown out beforehand. Mr. Hudson concluded by saying, that it was clearly the interest of the proprietors of the Midland Counties' Railway to promote the object under consideration. When that was completed, they would find their line daily prospering.

In answer to a shareholder, it was said, that, with the exception of the Manchester and Leeds Railway (which Company was to have a meeting soon) all the other Companies had agreed to the plan proposed.

The Chairman then put the motion agreeing to the guarantee required, to the meeting, which was carried, the numbers being—

For the motion	52
Against it	2
Majority	50

The Chairman inquired if any shareholder called for proxies, but no one doing so, the meeting separated.—*Derby Mercury*, Nov. 10.

CLARENCE RAILWAY COMPANY—SPECIAL MEETING.

Two Special General Meetings of the Proprietors have been held this week—the first on Tuesday, at the George and Vulture Tavern, St. Michael's-alley, Cornhill, London—and the second on Thursday, at the Town-hall, Stockton-upon-Tees. The former of these meetings was held "to take into consideration, and to determine what steps should be taken to place the Committee of Management in adequate funds to complete finally the works upon the whole line, and to repay the temporary loans which the committee had obtained on their personal responsibility; also to consider the expediency of remodelling the Committee of Management, and to receive resignations, remove and displace all or any of the present members, and appoint others in their stead." The object of the latter meeting was "take into consideration the present state of the Company's affairs, and determine upon the best course to be pursued for the welfare and future management of the concern, under its existing circumstances."

The Stockton meeting was convened by gentlemen participating, we believe, in the views of the Company's solicitor, Mr. Ralph Ward Jackson, who, when requested, as a shareholder, to subscribe a further sum in aid of the undertaking, refused to comply, and addressed the Committee in the following terms:—

I have, for upwards of three years, given my utmost and best attention to the concerns and interests of the Clarence Railway; and I consider it is now my bounden duty to yourselves, to the general body of proprietors and to myself, not only as the Company's Solicitor, but as having a pecuniary interest of some moment in it, to declare my sincere conviction of the utter impracticability of your attempting successfully to manage its affairs, while you are residing upwards of 250 miles from it. I therefore think I should act very wrongly if I were now to withhold from you and the proprietors the full expression of my sentiments on the subject. It must surely be manifest to all who give the matter one moment's reflection, that where a railway is, there should be its seat of management. I believe I may confidently assert, that it is not only an unprecedented, but a ruinous system, for Directors, living at such a great distance off, to conduct the weighty and complicated affairs of an extensive railway merely by agents, who have to communicate only by letter with the Board upon the numberless important and intricate questions which are daily occurring, and which require gentlemen with local influence and information to decide and regulate—very often on the spur of the moment. * * * Being therefore now thoroughly convinced, after the most mature deliberation, that any prospect of the railway remunerating the shareholders is hopeless, if the entire Board of Directors remains in London, you will not, of course, be surprised at my not making any further pecuniary advance, so long as the present system is adopted."

The letter, of which the above is an extract, was written in August. In October, a meeting of the proprietors was held in London, when it appeared that the Committee had resigned.

At the meeting in Stockton, on Thursday last, H. Vansittart, Esq., of Kirkleatham Hall, was in the Chair. There were present—Messrs. Blanshard, Blackett, Morrice, Milton, and Rowley, of London; Messrs. W. Skinner, jun., Thomas Walker, R. W. Jackson, Thomas Richmond, Richard Walker, Robert Pulman, C. Wigham, A. Sanders, Richard Dickson, G. H. Swain, Joseph Laing, A. Brown, J. Langley, R. Watson, T. Jennett, W. Sleigh, and Joshua Byers, of Stockton; Messrs. W. and J. Page, of Norton; Messrs. Clark, Ord, Small, and Dixon, of Guisbrough; Mr. Salvin, of Croxdale; Mr. James Walker, of Whitby; Mr. J. P. Sowerby, of Stokesley; John Jackson, of Billingham; and other gentlemen.

Mr. William Skinner, jun., of Stockton, moved a resolution regretting the position in which the affairs of the railway were placed, and advocating an improvement in the management.

The resolution was seconded by Mr. James Walker, of Whitby, and led to a long discussion,

Digitized by Google

during which a Report adopted at the London meeting, and several resolutions founded thereon, were read and commented upon. On a show of hands, the motion was carried by a large majority.

Mr. Thomas Walker then moved a resolution in favour of conducting the management by a Country Committee, the Board meetings being held in Stockton.

Mr. Salvin seconded the resolution.

Another discussion followed, after which the resolution was passed by a show of hands; but when proxies were produced, the tables were turned, the numbers being—

For Mr. Walker's resolution	410
Against it	834
Majority	424

There was rather an uproarious dispute as to the validity of some proxies held by Mr. R. W. Jackson, which were finally set aside; but had they been admitted, the London interest would still have been predominant.

Yesterday, there was to be a second meeting in Stockton, to endeavour to effect an amicable arrangement.—*Gateshead Observer*, Nov. 6.

The following printed notice of the proceedings has been forwarded to us:—

At the special general meeting of the proprietors of the Clarence Railway, held at the Town Hall, in Stockton, on the 4th day of November, 1841, pursuant to the following notice:—

"Notice is hereby given, that a special general meeting of the Company of proprietors in the Clarence Railway will be held at the Town Hall, in Stockton, in the county of Durham, on Thursday, the 4th day of November next, at 12 o'clock at noon (when the attendance of the proprietors is particularly requested), for the purpose of taking into consideration the present state of the Company's affairs, and to determine upon the best course to be pursued for the welfare and future management of the concern under its existing circumstances. Dated the 16th day of October, 1841.

"Henry Vansittart	"Richard Dickson
William Thomas Salvin	John Page
Francis Henry Salvin	Andrew Sanders
William Skinner, Jun.	Robinson Watson
George Skinner	Cuthbert Wigham
Robert Rayson	Thomas Small."

[Here follows a list of names.]

After the Chairman had stated the objects of the meeting and expressed the hope that all the proprietors had come prepared calmly and dispassionately to consider the true interests of the undertaking, and without entertaining any thing like personal feelings against any member of the present London Committee:—

Mr. Blanshard proposed to read the proceedings of the special general meeting, held in London on the 29th ultimo, together with the Report of the Committee to it, which was acceded to. After it was read, and some clear and satisfactory observations were received from Mr. Rowley, Mr. Rayson, Mr. Jackson, and other proprietors on the subject, the meeting evinced its disapprobation of the incorrectness and impropriety of the statements and of the whole tenor of that Report, and also of the unfounded personal remarks and reflections which it contained.

It was then moved by William Skinner, Jun., Esq., and seconded by James Walker, Esq., and carried (after being very fully discussed)—

"That this meeting views with feelings of deep regret the unfavourable position in which the Clarence Railway Company is now placed, and deems it highly expedient that active measures be adopted to render the management of the affairs more economical and efficient, and more fully to develope its resources."

The following resolution was then moved by Thomas Walker, Esq., seconded by Francis Henry Salvin, Esq.:—

"That it is the opinion of this meeting that the interests of the Clarence Railway will be best promoted by the executive management being conducted in the country, that the Board meetings should, therefore, be held at Stockton, and that it is desirable now to take immediate steps for carrying this object into effect."

Upon which a very lengthened discussion took place, originating with the objections of Messrs. Blanshard, Morrice, Milton, Blackett, and Sangster, to the motion. On its being put to the vote, and a large majority present being in favour of it, the five London gentlemen claimed to put in proxies, which were of many years standing and the validity of which, for any purposes at this distant period, was much questioned. The following is the result:—

Votes in person:—

For the motion	356
Against the motion	86
Majority of votes in person	270

General proxies, principally of several years standing:—

It was stated that the gentlemen in the country, wishing merely to have the *bonâ fide* sense and candid expression of opinion of the whole proprietary on the subject of a country management, did not solicit for, or advocate the admission of, proxies; but, as proxies were claimed by the opponents of the motion, and as two of the advocates of it, recollecting that they possessed a few proxies of some date past, they formerly presented them; thus—

By Mr. Dickson	6
And Mr. Wm. Skinner	29
	35
*Mr. Rayson	8
	43

* This proxy was given specially by the Rev. Mr. Yates, on the 2nd Nov. inst. for this meeting.

Mr. Blanshard	496
Mr. Morrice	67
Mr. Milton	99
Mr. Blackett	10
Mr. Appleby	8
	670
	43
Majority of proxies	627

It was then agreed on both sides that the written answers of absent proprietors, which had been recently forwarded to Mr. Jackson, in reference specially to a country management (and in compliance with the request of the gentlemen calling this meeting) should be recorded as votes, subject to a future determination whether they can be considered legal appointments of proxies, or not, under the Act of Parliament, but, at all events, that they should be received as the expression of their opinions on the subject.

The following is the return of these letters:—

"Favorable" to a country management	327
Adding the votes of those gentlemen whose proxies, notwithstanding their recent letters approving a country management, were used by Mr. Milton against the motion, amounting to	50
	377
	6

	92

In consequence of the London deputation introducing such a number of unexpected proxies into this meeting, and thereby drowning the expressed sense of the majority of those present, on a country management, a discussion arose as to the expediency of bringing forward the other motions intended to follow up the propositions for a system of management in the country, but, on the London deputation still insisting upon opposing it with their proxies, it was thought inexpedient to urge the further motions at this period.

On a subsequent discussion as to the calling another special meeting at Stockton a month hence on the same subject, and the making a further appeal, in the mean time, for the sentiments and decision of every proprietor, it was proposed that, on the motion for such meeting being withdrawn, the London deputation would undertake to bring the subject before the proprietors at the general meeting of the Company in March next, and would then suggest and support the adjournment of such meeting to Stockton, on an early day, to take again into consideration the question of a country management, and the appointment, or confirmation, of a committee for the purpose.

HENRY VANSITTART, Chairman.

Mr. Vansittart having left the chair, it was moved by William Skinner, Jun., Esq., seconded by Henry Blanshard, Esq., and carried unanimously,

"That the best thanks of this Meeting be given to Henry Vansittart, Esq., for his able and impartial conduct in the chair."

*** At another numerous meeting of the proprietors, arranged at the above meeting to be held the following day at the same place, to consider and endeavour to reconcile points discussed on the previous day, (Mr. Vansittart being also in the chair), the London deputation fully and openly acknowledged the propriety (which had always been advocated by the Stockton and Hartlepool Company) of there not being any change of engine power at the junction of the Clarence and Stockton and Hartlepool lines, and that each Company should, subject to the rules of each railway, now haul coal uninterruptedly from the pits to the ports.

Coach Accidents.—On Wednesday last, as the Hereford mail was on its way to Brecon, and near Velin Vach, about four miles from the town, one of the fore wheels suddenly flew off, and Evans the coachman was thrown to the ground with great violence, while the hind wheel passing over his leg fractured it in a most frightful manner. The passengers fortunately clung to the coach, and escaped without injury, and were enabled to render immediate assistance to the unfortunate sufferer. A phaeton with two gentlemen in it, which had accompanied the mail nearly all the way from Hay, coming up in a few minutes after the accident, Evans was placed in it, and promptly conveyed to Brecon, where most able surgical aid was immediately procured; and it was found that amputation was imperatively necessary. The unfortunate man, who had only been married five weeks, and who has borne an excellent character for civility, care, and attention to his duties, bore the operation with great firmness, and is doing as well as can be expected. The accident is attributed by the passengers to the circumstance of the washer inside of the box of the wheel having worn down by the friction to which it was subjected, until it was too weak to sustain the pressure; and to clearly demonstrates the necessity of a strict and constant surveillance of every part connected with the wheels and axletrees of public conveyances.—*Silurian.* On Tuesday evening, the *Umpire* coach on its return from Bolton was upset at Fearnhurst Brow, nearly two miles from Blackburn. Several passengers were seriously injured, and a gentleman from Blackburn, of the name of Cowell, sustained a fracture of the leg.—*Halifax Guardian.*

RAILWAY COMMUNICATION WITH SCOTLAND.

[From the *Carlisle Journal.*]

THE Report of the meeting recently held in Carlisle to promote the formation of a line of railway from Lancaster by Carlisle to Glasgow and Edinburgh, appears to have startled, almost from their propriety, the parties interested in the line by the east coast to Edinburgh. To counteract the effect of that meeting, they are now working double tides, and displaying a degree of energy which one cannot but admire; at the same time, one cannot but regret that while they endeavour to exalt their own favourite scheme, they should find it necessary to depreciate that of their neighbours, by statements which look so very like wilful misrepresentations. Nor does it lessen one's regret to see a man of the high character of Mr. Stephenson, to whom science owes so much, lending himself to their propagation, and giving the sanction of his great name to disparaging opinions which he knows have no better foundation to rest upon than the jealous fears of a few greedy speculators.

The York and North Midland Railway Company have been the first to take the alarm; and a special meeting of the proprietors was held at York on Tuesday week, for the purpose of considering the plan referred to by us a fortnight ago for forming a junction of the various lines now in existence in the county of Durham, from Darlington to Newcastle. George Hudson, Esq., the Chairman of the Company, took the chair; and Mr. Stephenson, the Engineer, was present, and took an active part in the proceedings. One great object of the meeting seemed to be to cast ridicule upon the plan of a western line, and to impress upon the public mind the idea that the scheme is impracticable. The Chairman said—

"As to the comparative distances of the two lines:—by the western line the distance from Lancaster to Carlisle is 70 miles, from Carlisle to Glasgow is 101 miles, and then the branch from Symington to Edinburgh is 31 miles more, being a total distance of 202 miles. *But on the eastern line, when they got to Newcastle they would only have* 116 *miles of railway to make to reach Edinburgh, whilst their western opponents would be burthened with* 202 *miles.* Nor were the advantages in favour of the eastern line confined to distance merely. The western line will have to be carried through works, *the like of which have rarely been attempted and never have been accomplished.* They would have *a granite tunnel on that part between Lancaster and Carlisle a mile and a half in length*, and commencing at a depth of 90 feet. Yet they ventured to say, that this portion of their line would be completed for 1,200,000*l.*, *which upon the most moderate computation*, he was given to understand could not be done for less than 2,500,000*l.*"

It will at once be seen with what adroitness Mr. Hudson manages his argument. He endeavours to make it appear that the only question at issue between the competing lines is, whether it is a shorter distance from Newcastle to Edinburgh than from Preston to Edinburgh by way of Carlisle. "When they got to Newcastle," says he, "they would only have 116 miles of railway to make to reach Edinburgh, whilst their western opponents would be burthened with 202 miles." With an appearance of unconsciousness which one cannot but admire for the skill with which it is assumed, he seems never to have heard that one of the great objects for which the Commissioners were appointed by Government, at the request of the House of Commons, was, not how to establish the easiest communication between London and Edinburgh, but how the great manufacturing districts of Lancashire and those of Glasgow could be united.—Glasgow never enters into the worthy Chairman's calculation. His interest points to Edinburgh, and to Edinburgh only will he go. The Commissioners, however, had no private interest to promote: they had a duty imposed upon them which they were bound to discharge—and that was, in the words of the Address of the House of Commons, to report on the relative merits of all the projects for uniting England and Scotland. "not only in respect to London, but also the comparative facilities afforded to the communication by railway between the manufacturing districts of Lancashire and Edinburgh and Glasgow, and the north of Ireland;" and, therefore, it is probable their evidence as to distance, keeping the main object of the survey they were ordered to make strictly in view, will be received as somewhat more worthy of credence than Mr. Hudson's, who can see nothing in any project that does not promote the interests of the Company which has the fortune to have him at its head. Let us see, then, what the Commissioners say on this question of "distance," which Mr. Chairman Hudson thinks he can persuade the world is so much in favour of the eastern line. They say, in their 4th Report, p. 59,

"We must now consider the manufacturing districts of England.

"With reference to the accommodation of these districts with railway communication to Scotland, particularly with Glasgow, we must assume some mean point of departure, and, as we selected Manchester in our first report, we shall, for the reasons which then guided us, do the same on the present occasion.

"The distance from Manchester to Carlisle, and thence to Glasgow and Edinburgh by the western route may be stated as follows:—

	M.	CH.	M.	M.
From Manchester to Preston	30	50		
Preston to Lancaster	20	18		
Lancaster to Carlisle	70	17		
Total, Manchester to Carlisle	121	5		
Carlisle to Glasgow	100	74		
Manchester to Glasgow	221	79		
Manchester to Edinburgh, by Symington	218	49		
Total to both places			40	43
By the Eastern route—				
From Manchester, by the Manchester and Leeds Railway to York	73	7		
York to Newcastle	74	20		
Newcastle to Edinburgh by the coast deviated line	116	42		
Total Manchester to Edinburgh	263	69	263	69
Edinburgh to Glasgow	46	0		
Manchester to Glasgow			309	69
Total to both places			573	38

"Manchester, therefore, is nearer in actual distance to Glasgow by the western than by the eastern route by 87 miles 70 chains, and to Edinburgh by 45 miles 20 chains."

This, we think, will suffice to settle the question of distance. With respect to the nature of the works, which, as regards the western line, Mr. Hudson says, "the like of which have rarely been attempted and never have been accomplished," we shall show before we are done that if equally difficult works have not been "attempted," some of a still more formidable character must be "accomplished" before Mr. Hudson's favourite scheme can be carried into effect. On the western line, says Mr. Hudson, "they would have a granite tunnel on that part between Lancaster and Carlisle, a mile and a half in length, and commencing at a depth of 90 feet." Now, in making this statement, Mr. Hudson either wilfully stated that which he knew to be untrue, or he spoke about matters of which he knew nothing. He may take either horn of the dilemma he pleases: on one or the other he must be content to take his position. In the first place, if he ever saw the plans and sections published by the Commissioners in the Appendix to their Fourth Report, he must have known that the Orton tunnel of which he speaks, is not a mile and a half, but only a mile and 22 chains, the correctness of which measurement was tested and proved by an officer, Lieut. Hew Dalrymple Fenshaw, of the 12th Foot, specially appointed for the purpose, at the request of the Commissioners, by the Lords of the Treasury.

"This officer" say the Commissioners, 2nd Report, p. 12, "has completed the duty entrusted to him with great care, and in the most satisfactory and creditable manner, having had recourse to trigonometrical operations for determining the heights and distances, where the ground became too broken to admit of entire reliance being placed on the more ordinary but less accurate mode of ascertaining them by levelling. We may therefore conclude that the tunnel of the Kendal line would be 2¼ miles, and that of the Lune line" that is the line under discussion "only 1⅝ in length, as shown in the sections in the Appendix."

This is one-eighth of a mile less than Mr. Hudson sets down, and even this is reduced in the 3rd Report of the Commissioners, to one mile 22 chains, or nearly a quarter of a mile less than Mr. Hudson declares it to be. But, adds Mr. Hudson, it is "a granite tunnel," and how are you to get through even a mile and a quarter of granite? And certainly this would have been a poser, if such had been the fact. But it is not so, and Mr. Hudson must know it. Mr. Larmer, who surveyed the line, says the tunnel would be through a soft white sandstone, and a specimen of the rock now in our possession confirms this most fully. The Commissioners say:—

"We have already stated that, according to the best geological authorities, the Gate Scarth consists of a mass of green slate and porphyry, *while the Orton Scar is in the limestone formation.*"

Here, then, both as to the length of the tunnel and the quality of the rock through which it has to pass, we find Mr. Hudson making the most unwarrantable assertions; and after such specimens of his fairness, we may justly set his testimony aside as wholly worthless. At the same time we may remark, that if tunnelling be so serious an objection, it would have been well for Mr. Hudson, before he set that up as an insuperable bar to the formation of the western line, to ascertain what extent of tunnelling would be required on the eastern line. But as he has not thought proper so to do, we beg to call his attention to the facts, as laid down by the Commissioners. They state (4th Report, p. 62) the number of yards of tunnelling to be, on—

The Grayrigg line	2,244
East Coast line	3,522
Greater amount of tunnelling on East Coast line	1,278 yards!!!

And yet Mr. Hudson, the advocate of the east coast line, holds up his hands in horror at the amount of tunnelling on the western line!

We turn then to the speech of Mr. Stephenson, the Engineer, and upon it we shall certainly comment more in sorrow than in anger—in sorrow, at seeing great powers perverted to the most paltry purposes. We give his speech entire:—

"Mr. Stephenson, C.E., said, he considered the Commissioners had given no opinion at all on the point submitted to them—they ought to have given a decided opinion, taking the present extent of existing lines, which was the most practicable line, the eastern or western. Instead of that, *they overlooked the difficulties to be encountered in getting to Carlisle, difficulties which he believed could never be overcome.* The eastern line from Newcastle to Berwick *was over a very easy country*, and from Berwick forward to Edinburgh the works required would not be heavy. On the other hand, the western line would have to be carried over valleys by bridges such as never had been made in England, nor probably in the world. Across the Avon would be a viaduct of 120 feet high, the Mill Burn 103, Dalserf Burn one of 70, and another of 85 feet, Crossford Burn 98 feet, Gilbank Burn 98 feet, and Nethan Water 232 feet!!! *Never, he believed, had such a piece of masonry been put together as this projected bridge over the Nethan Water*—it would be about twice the height of the celebrated Menai bridge. It was preposterous to carry such a line forward, and he was satisfied that if once a line was completed from Darlington to Newcastle, it would be certain to be continued forward to Edinburgh. It would then embrace the whole of North Britain, and also secure no inconsiderable traffic from the north of Ireland."

If Mr. Stephenson had stated that the Commissioners personally examined with great minuteness "the difficulties to be encountered in getting to Carlisle," and that the only means he himself had of judging of them, were those to be derived from a ride across Shap Fells, snugly ensconced inside a carriage drawn by four horses, the public would have been able to judge which of the two were most likely to "overlook" them. Before going further let us just glance at the difficulties on Mr. Stephenson's pet line, and see if it be clear of "bridges such as never had been made in England, or probably in the world."

By Mr. Stephenson's line, before he can get quit of Auld Reekie, he has to form a tunnel, which he sets down at a cost of 10,000*l.*; a viaduct from Leith Wynd to the Calton Hill, which he estimates at 12,000*l.*—two road bridges, and other works which are put down at 17,000*l.* There is, besides, property required which he values at "say 25,000*l.*" And as this property will consist in part at least of houses to be purchased and pulled down, if we were to "say" another 25,000*l.* we should not be exceeding the mark. In the next 54½ miles, we have seven tunnels, varying in length from 100 to 440 yards—there being two of the latter length, one of

Digitized by Google

350 yards, and one of 280 yards. Then with respect to viaducts and bridges, upon which Mr. Stephenson looks with such great horror on the western line, they appear to be almost innumerable. The viaducts are set down as 14 in number—one of them 600 yards (rather more than the third of a mile) in length, and of the height of 65 feet; one 220 yards in length, and 74 feet in height; one 84 yards long, and 87 feet in height—although one of 85 feet upon the western line causes Mr. Stephenson to raise up his hands in special wonderment. Then the stone bridges of various sizes are set down as amounting to 174 in number. But this is not all. At the end of the estimate we find this very nice little item, "Tunnels and other masonry not included in the above, 89,426*l.* 2s."!!

By this time the reader will think that Mr. Stephenson's difficulties are at an end—that having raised so many mountains in the face of his opponents his own mole-hills are all destroyed. Let us see how stand the facts. We have yet only traced him from Edinburgh to the river Tweed, not quite half the distance. We have that beautiful stream now to cross to reach Newcastle. The crossing of the Nethan water fills Mr. Stephenson with such surprise that the only resource left to the reporter of his speech for giving his reader an idea of the amount of astonishment he felt, was to mark his expression of it by three notes of admiration. We confess when we saw these three notes of admiration, placed to express the surprise of a man of Mr. Stephenson's deservedly high reputation, we began to tremble for the fate of our favourite line; and, as most unprofessional men would do, we dare say, under similar circumstances, we thought the best way of judging of the difficulties of crossing this much dreaded Nethan water, was to compare the amount of its estimated cost with that of some similar work recommended by Mr. Stephenson himself. So long as a work of any kind, be it a bridge, a viaduct, or a pyramid, be not in itself impracticable, the best mode of judging of the amount of difficulty to be overcome, is to ascertain the cost of its accomplishment. Mr. Locke has to cross the Nethan Water—Mr. Stephenson has to cross the Tweed. No man has said that either work is impracticable. Like the formation of a road across the Simplon, the building of the Pyramids of Egypt, or the crossing of the Atlantic in a steam-ship, their accomplishment entirely depends upon the ingenuity and skill brought to bear upon them. The magnitude and difficulty of each undertaking were to be estimated by its cost. Here then was a fair and tangible ground of comparison. We turned, then, to the Appendix to the Fifth Report of the Railway Commissioners, and there we found (p. 114) a detailed estimate, made out by Mr. Errington (Mr. Locke's assistant) of the cost of the terrible Nethan Viaduct, amounting, in all, to 47,179*l.* 13s. This is doubtless a very serious sum for one viaduct; and, standing by itself, without any means of comparison with other similar works recommended by those who hold up their hands in astonishment at it, might well startle any man—more especially unprofessional men such as Mr. Stephenson wished his observations to reach. Happily we have the means of comparison at hand, and they are such as Mr. Stephenson himself cannot object to. At page 38 of the work from which we have quoted above we find appended to Mr. Stephenson's Report on the east coast line, "an estimate of the proposed bridge across the river Tweed, at a level of 100 feet above low water, with eleven timber arches, six of 150 feet span, and five of 140 feet, and also one stone arch of 50 feet span over the footpath on the south side of the river, for the projected railway by the east coast from Newcastle to Edinburgh." And what does the reader think this estimate amounts to? Why, to no less than 71,814*l.* 18s. 1d.—almost double the amount of the work which excites the amazement of Mr. Stephenson! No wonder he should be so anxious to pluck the mote out of Mr. Locke's eye when the beam is so enormously heavy in his own.

It is far from our wish to disparage Mr. Stephenson, but when he was trying to run down a line of railway to which his own interests, professional as well as personal, are opposed, we think he should have been cautious no to provoke a comparison which, when made, would tell so much against his own candour. But we are not yet through Mr. Stephenson's difficulties: we have only just passed the Tweed, we have yet to cross the Coquet and the Tyne. The length of the bridge across the Tweed, we should have remarked, is 2,178 feet, and its height 100 feet above the level of the river. Then we have a bridge across the Embleton Burn 264 feet in length, at a height of 40 feet, and a cost of 4,500*l.*, a viaduct across the Howick Burn, 396 feet in length, and 50 feet in height, at a cost of 7,000*l.*, a viaduct over the river Aln, 396 feet in length, and 60 feet high,* at a cost of 7,500*l.* Then we come to the river Coquet, with a viaduct 1,056 feet in length, and 45 in height, estimated to cost 18,000*l.*, next a viaduct over the Wansbeck, 396 feet long, and 90 feet in height, at a cost of 9,900*l.*; then a viaduct across the river Blyth, 462 feet in length, and 90 feet in height; and to crown all, and as if in very mockery of Mr. Stephenson's own assertion, that the bridges on the western line "were such as have never been made in England, nor probably in the world," there comes a bridge across the Tyne, of the length of 1,120 feet, and 115 feet in extreme height, and the cost of which is set down at 120,000*l.*!!! And yet the projector of all these bridges, viaducts, and tunnels, gets up in a public meeting and denounces a impracticable a rival line, on account of its bridges, though they scarcely equal by one-half either the number or costliness of those upon his own line! We will prove this still more clearly by two short tables. Mr. Stephenson enumerates certain bridges and viaducts on the western line which he says are "such as have never been made in England, nor probably in the world;" and in consequence of these bridges he asserts it would be "preposterous to carry such a line forward." In the following table we give the names of the bridges so denounced by Mr. Stephenson, with their respective heights, lengths, and estimated costs.

Viaducts and Bridges enumerated by Mr. Stephenson, as rendering the west line preposterous.

TABLE I.

	length in yds.	height in ft.	cost £
Viaduct across the Avon ..	130 ..	110 ..	20,000
Millburn	100 ..	100 ..	700
Dalserf Burn	90 ..	80 ..	450
Ditto	40 ..	30 ..	500
Gilbank Burn	117 ..	80 ..	819
Nethan Water	220 ..	170 ..	47,079
Totals.....	667	570	69,548

There are some discrepancies between the figures in the above table and those named by Mr. Stephenson in his speech. We have taken ours from the tables furnished to the Commissioners—the errors in Mr. Stephenson's statements may not unfairly be attributed to the reporter. We will now take the principal bridges and viaducts on the east coast line and place them as we have placed the above—copying, as before, from the tables furnished to the Commissioners:—

TABLE II.

Viaducts and Bridges on the East Coast Line.

	Length in yds.	Height in ft.	Cost £
Viaduct at Edinburgh	320	20	11,200
,, at Portobello	190	39	9,900
,, at South Esk	200	34	10,350
,, at Luston	220	39	8,400
,, at Hedderwick	600	65	32,500
,, at Bell	100	73	7,150
,, at Thurston	170	70	10,000
,, at Dean Burn.....	84	87	9,000

,, at River Aln	132†	60	7,500
Viaduct at River Coquet.....	352	45	18,000
,, at Road at Wansbeck	132	90	9,900
,, at River Blyth.....	154	90	11,550
Bridge over Tyne	373	115	120,000
Totals....	4,545	1,291	£381,864

* This is Mr. Stephenson's own statement; but the Commissioners say (4th Report, p. 23,) that it would require a "viaduct 1,100 yards in length, and 55 feet in height."

† The Commissioners say this will require to be 1,100 yards in length. However, we give Mr. Stephenson the benefit of his own estimate.

In making out the above table we have thrown aside all bridges and viaducts (and they are almost innumerable) costing less than 4,000*l.*, taking only those which, from their cost, appear to be most difficult; and yet the result is, an aggregate length of bridges, more than six times that of those which so startle Mr. Stephenson upon the western line, a height exceeding them more than twice, and a cost more than double! And notwithstanding his knowledge of these astounding facts, Mr. Stephenson lends himself to make the assertion that the bridges on the western line are of such a formidable character, that "it would be preposterous to carry such a line forward."

Had our object in making these remarks been merely to obtain a victory over Mr. Stephenson and the party who advocate the eastern line, here we might fairly close the argument. Every difficulty they have been able to conjure up, fairly or unfairly, against the western line, we have shown to exist to at least twice the extent upon their own favourite line. But we have a higher object in view. We wish the public to know what are the actual difficulties on both lines, that they may judge for themselves which is most deserving of support, as best calculated to promote the general weal. For our own parts we should be glad if both lines could go forward; but we see no chance of this for at least half a century to come; and therefore we are anxious that that line should be promoted first which would give the greatest facility to trade and commerce, and, at the same time, be most easy of accomplishment. The statement put forth at the York meeting, have some other interest in view than that of the public at large, or so determined an attempt to misrepresent facts, as we have shown to have been the case, would not have been made. We have, however, already so far trespassed upon the patience of the reader, that we must not venture to go further at present. To have done less, after the gross misrepresentations put forth against the western line, would have been a dereliction of that duty we owe to the public at large, and more especially to that portion of it within the immediate sphere of our circulation, who are so deeply interested in the formation of a railway from England to Scotland. We have yet left many points untouched; but we must leave them till another day, assuring our readers that the more fully the subject is investigated, the more thoroughly must every candid mind be convinced of the superior claims of the western line.

RAILWAY COMMUNICATION WITH SCOTLAND.

To the Proprietors of the London and Birmingham Railway Company.

GENTLEMEN,—Allow me through the medium of this paper, and by the kind permision of its conductors, to place before you a few remarks, tending I conceive to benefit the interests of that great and successful undertaking in which you are co-partners.

You will doubtless have read the Reports of the various meetings of gentlemen and Railway Companies interested in the west and east lines of communication with Scotland; and especially those reported in the *Railway Times*, October 16 and 23 last.

Such of you that have not read those Reports I recommend to purchase and peruse the papers of the above-mentioned dates.

The paper of the 16th ult., contains a report of the meeting held at Carlisle, October 9th, to forward the west line, that of the 23rd, a report of a special meeting of the York and North Midland Company, held at York, to forward the east line.

The merits of the two lines (east and west) have been so frequently discussed, that many of you will be decided in opinion, as to the best line of communication.

Digitized by Google

Many of you have interest in the North Midland, and other east lines, sufficient to balance your interest in the London and Birmingham.

If I may judge by the circumstance of your Chairman, G. Carr Glyn, Esq., late Chairman of the North Midland Company, attending and presiding at a meeting held to promote the east line, you have passed the bounds of neutrality, and must declare in favour of the one or the other.

Your Chairman having resigned the chair of the North Midland Company, induces a belief that you are in some measure undecided as to the course you will pursue.

Having prefaced sufficiently, I come to the question:—

Which line, the east or the west, is it the permanent interest of the London and Birmingham Company to support?

The east line is, can, and will be, effectually opposed by steamers, as the following list of fares will show:—To or from London to Edinburgh 50s., Newcastle 30s., Hull 3s. and 4s.

The low price, as well as greater convenience, per steamers, induces a considerable number of passengers, for some distance in the neighbourhood of each port named, to prefer them to the railway.

By the Manchester and Leeds line (*via* Hull) to London, I can book throughout for 14s. third class, 18s. 6d. second class, 30s. first class. By the Grand Junction, and London and Birmingham, 210 miles, the fares are—third class 25s., second class 38s., first class 53s. 6d. From Manchester to London, by the Manchester and Leeds, North Midland, Midland Counties' (Rugby Junction) to London, 246 miles, the fares throughout are,—third class 21s., second class 33s., first class 46s.

You will perceive what a considerable premium is offered to take passengers *via* Hull from Manchester to London, by railway and steamers; and a sufficient sum offered, (by lines forming a junction at Rugby, cutting 30 miles of traffic completely off from you,) to induce passengers to prefer that route to the one using the whole length of your line.

There is another line fast approaching completion, the Manchester and Sheffield, the route by which, from Manchester to London, *via* Junction at Rugby, will be 217½ miles.

But you will say, what is all this to us? Simply this; take the railway map, and you will see that by laying a railway from Leicester, through Market Harborough, and Northampton to Roade Station, a distance of 35 miles, you will shorten by 11½ miles the whole of the eastern lines.

The distance from Manchester to London, *via* Sheffield, would be reduced to 106 miles, shorter than any railway at present between Manchester and London, and your line would have 23 miles more cut off, or in the whole 52½ miles from Birmingham to Roade, over which the midland, west, east, and north traffic will not pass.

Now, Gentlemen, though you succeeded in your opposition to the Stafford and Rugby Railway, you could not expect that the same success would attend your opposition to a line from Leicester to Roade Station, supported as that line would be, by the towns of Northampton, Market Harborough, and Leicester, and by the very Railway Directors on the east lines, who presume to think and speak for you.

Captain Huish, in his speech at Carlisle, (Oct. 9th,) stated that "the proposition he had made would prove to the people of the east, that those of the west were in earnest,—not to prevent them from having a line,—but to have one of their own."

The Chairman of the York and North Midland Meeting (see the *Railway Times*, Oct. 23rd), would have done well to have imitated the manly forbearance of the gallant captain, instead of favouring his auditory with a speech, the purport of which only, was,—every thing must, shall, and will pass through York.

"Every one knew," says the Chairman of that meeting, "that until very recently the mails and coaches between London and Edinburgh all came by way of York, whilst the mail from London to Glasgow, passed so near York as Boroughbridge, considering that the people of Carlisle can be accommodated by the eastern line."—Ergo, all people ought to pass and must pass through York.

Any person who could thus reason, would pursue the argument further in this manner:—The mails and coaches from London to Edinburgh never ran near, or parallel, for any distance, to the London and Birmingham line, but inclined more to the route of the Northern and Eastern Railway, therefore all passengers from London to Scotland ought to go by the Northern and Eastern, thence by Junction through York—again!!

From London to Cambridge, 46 miles: Cambridge to Leicester, 63, = 109 miles. From London to Rugby, 83: Rugby to Leicester, 26, = 109 miles: therefore, according to Mr. Chairman's argument, all passengers from London to Scotland ought to go by way of Cambridge!

How very considerate, Gentlemen, is this Chairman of a rich and populous district, to wish forcibly to accommodate the people of Manchester, to Carlisle and Glasgow, through York, and the people of Carlisle and Glasgow, to Manchester, through York—again!! Surely this Chairman would not inflict any other charge (except the loss of their time) upon the poor people of the west, for taking them so much out of their way.

Now as to gradients, upon which the Chairman appeared so learned, the very worst he could find on the west line was 1 in 113½. Most of you, Gentlemen, have travelled on the Manchester and Liverpool line (which was constructed by Mr. Stephenson), and will recollect Sutton incline on that line, which is 1 in 89.

Mr. Stephenson, C. E., followed Mr. Chairman, and the key-stone in the arch of difficulties erected by him was Netham Water Bridge, 232 feet high. Now, Captain Huish stated at the meeting at Carlisle (Oct. 9) that a responsible contractor had offered to build the same for 47,000*l.*

If such a piece of masonry—which exceeds any thing of the kind (Mr. Stephenson says so) ever put together before—can be erected for 47,000*l.*, and no one can disbelieve the estimate of Mr. Errington, supported as that estimate is by an offer to perform the work for a less sum than such estimate, I think you will agree with me, Gentlemen, that some former contractors, or engineering contractors, have had rare pickings out of works already done.

There have been sufficient personalities indulged in by the Chairman of the East, who only lacks the means (as he states in his speech, Oct. 23), to be the greatest and most tyrannical of monopolists. "Paralyse the people of the West," says he, in one sentence, and, "if I had the means I would do it myself," says he in another.

Now, gentlemen, your permanent interest is to support both routes in the same ratio that they will each benefit your line.

Presuming that by a junction of east lines at Roade Station only, a traffic amounting to at least 70,000*l.* per annum will be taken from you, then is it your interest to subscribe one million pounds at least to forward the West line.

Presuming that the making of the junction from Darlington to Edinburgh will substract from the steamers from Edinburgh and Newcastle about 5,000*l.* per annum, it is your interest to subscribe 60,000*l.* to forward that junction. In either, and both cases, you would be benefitted by the traffic on the lines thus made, by receiving dividends from them, and would receive the increase of traffic on your own line, without any additional cost.

I am, Gentlemen, with respect,
Your humble servant,
AN OPERATIVE.

P.S. The fact of Edinburgh being situated north-west of Liverpool must convince any person, if he will examine the map, that the West line is the shortest and most desirable direct route.

Manchester, Nov. 9, 1841.

THE TOLL QUESTION—CROYDON AND GREENWICH RAILWAYS.

We give the following "Reply to Mr. W. A. Wilkinson's pamphlet on the Toll Question on Railways Exemplified, in which the principle of High and Low Fares is considered.—By Locomotive." The Reply is printed in the form of a pamphlet, and published by Pelham Richardson, Cornhill. In a recent number we gave in full Mr. Wilkinson's pamphlet, to which the following professes to be an answer. We have noticed the general question in our leading columns:—

Reply to the "Toll Question on Railways Exemplified."

The impression on the public mind is so general, that the disastrous state in which the Croydon Railway is placed is owing solely to mismanagement and defective system—that a pamphlet, from Mr. W. A. Wilkinson, the Chairman of the London and Croydon Railway Company, professing to "Exemplify the Toll Question on Railways," naturally has excited some expectation and attention. We have looked over the pamphlet, and we confess that the result has been one of disappointment. In place of seeking to "exemplify the Railway Toll Question," the evident drift of the writer is to divert attention from the manifest rashness and incompetency of parties to whom the business portion of the London and Croydon Railway has been entrusted, and to fix the odium of complete failure on the Greenwich Company. This charge is attempted to be sustained by showing that the toll of 3d. per passenger, charged, according to compact with the Croydon Company, for allowing the transit of Croydon passengers over about one mile and three-eighths of the Greenwich Railway, has had the effect of compelling the Croydon Company to raise the fare to the public to such an amount as to shut out a large number of passengers, which a lower rate of fare would have embraced. Mr. Wilkinson professes to be the champion of "low" fares; and, in his professions and practice, he certainly exhibits a curious contradiction. The Croydon Railway Company, of which Mr. Wilkinson is Chairman, *pays* to the Greenwich Company 3d. per passenger for the use of the Greenwich line, and *charges* to the Brighton Company 1s. per passenger, for permission to carry passengers over somewhere about eight miles of the Croydon line. The relative proportion of the toll paid and the toll charged is pretty nearly equal, if we take the relative cost of the two portions of line into consideration, the one mile and three-eighths of the Greenwich having been constructed at an expense little short of the expense of the eight miles of Croydon Railway; and, therefore, it must strike every one as something rather singular to find, that though the worthy Chairman of the Croydon Railway devotes all his energies, both by speeches and pamphlets, to oblige the Greenwich Company to reduce their toll, yet he apparently exhibits a disinclination to carry out his own principle in his own case, by lowering the equally high toll obtained from the Brighton Company. But, independently of the arrangement between the two Companies, which it is quite clear the Croydon Company is anxious to upset, another question of greater public importance—the question of high or low fares—is incidentally brought into discussion. The pamphlet of Mr. Wilkinson strongly advocates extreme low passenger fares; and as public attention has been very much turned to railway matters, and very much changed, in consequence of the recent publication of letters relative to the comparative safety of four and six wheeled locomotive engines, this reply is undertaken, in the hopes of eliciting such facts and arguments from practical men as will enable the public to form an unprejudiced opinion, and not, as hitherto, continue to be misled by the popular fallacies of the day on the subject, promoted and promulgated by parties who have a *present self-interest* as their actuating motive. No one *now* pretends to question, that railways, though essentially private speculations, are of enormous public utility, as well as of *national* advantage. The pro-

Digitized by Google

moters of these magnificent undertakings are clearly entitled, upon every principle of business and equity, to a handsome return for the capital so long risked without Government assistance, against the endless extortions of individuals, and the oppositions and prejudices of a large body of the nation. How is this fair return for a large outlay of capital to be permanently secured to the shareholders—with due regard to the public rights? The first consideration is, obviously, to fix upon such a scale of fares as will secure the greatest amount of profitable traffic. It is quite evident to us that Mr. Wilkinson, in his anxiety to promote low fares, has totally lost sight of the wide distinction between a *low* fare and a *losing* fare. The popular idea of low fares is relative—that is, if a fare is originally 1s., and afterwards reduced to 6d., the second is held to be the *low* fare, though the highest fare may possibly be the fare which affords only a proper return for capital. But the common sense principle that ought to govern the settlement of the fare is, that no fare is to be deemed sufficiently high that does not, under all circumstances, remunerate the individuals who embark their capital in these undertakings; and that, *vice versa*, no fare is to be deemed otherwise than a low fare, however comparatively high it may appear to be, if it does no more than afford this reasonable return to the shareholders. This principle appears never to have been properly considered by the Croydon Company; for though the Croydon Chairman tells us that "high fares," against the opinions of the Directors, are charged on the Croydon line, yet investigation of their accounts furnishes us with proof that not "low" fares but "losing" fares have been their guiding principle. So many circumstances operate in different localities to influence the judgment of even the best informed on the subject, that it occasionally becomes a difficult task to determine upon a permanent rate for the respective classes of passengers. But though this proceeding is difficult, still the experience of many railways, for many years,—which information is accessible to the diligent inquirer—enables us to ascertain the ordinary cost of working a line, and, therefore, it is almost unpardonable to fall into the not uncommon error of establishing lower fares than will cover the expenditure. Before railways came into operation, the average of the charge of stage coach and mail fares per mile was, inside 4d. to 6d., outside 2d. to 3d. The average of the charge per railway is, first class, 2½d. to 3d. per mile? second and third, 1d. to 2d. per mile. The average charge per mile of railway fares may be taken at somewhat about 2½d. per mile. The question then arises—can this average be lowered with due regard to the just rights of the shareholders? We can only arrive at a just conclusion by taking into consideration all the settled and indispensable expenses of working the line. Hitherto 1d. per passenger per mile has been the lowest average expenditure of the most favoured and best managed long railways, where the gradients are good and the price of coke moderate, and fully one-half of this sum will always be a *pro rata* charge per passenger per mile, totally independent of per centage on the receipts from fares. Very little per centage reduction can consequently be effected by increased numbers upon the other half comprising maintenance of way, rates and taxes, Directors' and officers' salaries, police, offices, &c. It is to be clearly understood, that, under all circumstances, there is a *minimum* expenditure per passenger per mile; and this *minimum* only varies on different lines according to the character of the gradients and the cost of coke. Now if, under the most favourable circumstances, one penny per passenger per mile is found to be the *lowest* calculation for the efficient remunerative working of a passenger long line, with good gradients and with low priced coke, it is not unreasonable to assume that a short line, such as the Croydon, with inferior gradients, many stopping stations and high priced coke, cannot be advantageously worked for less than 1¼d. when depreciation of stock, and all other legitimate charges are introduced into the traffic accounts. But Mr. Wilkinson appears to imagine that if the number of passengers were quadrupled by a reduction in the fares from 1s. 6d. to 9d. the expenditure would be reduced from 50 to 40 per cent. of the receipts. Mr. Wilkinson's calculations look well, but will not bear investigation. The Chairman of the Croydon Railway has fallen into a common mistake, and that mistake is, that a reduction of fares will *ensure* a commensurate profitable return, granting the anticipated increase of passengers to take place. Mr. Wilson instances a cotton-mill in order to fortify his position. In a cotton-mill, however, there must be certain constant charges attendant on the work performed, such as fuel and labour, which, added to the cost of fluctuating materials, establishes a price for the commodity, below which sales would be ruinous. The same principle applies to a railway—a locomotive engine can only do a certain duty at a cost of so many pounds of coke per mile, without incurring an unwarrantable and ruinous expenditure. The average load and distance in well-managed railways is accordingly considered, and a due regard paid to economic power, and, as the traffic increases, extra engines, or more powerful ones, at a heavier cost, are put in requisition. It must be also borne in mind, that whether there be ten trains or twenty trains per day, the cost per passenger is the *same* for locomotive power, government duty, repairs of carriages, depreciation of stock, and other small charges. With these *constant* charges, amounting to about five-eighths of 1d. per mile on the Croydon line,* there is only left the fluctuating expense of five-eighths of a penny upon which a reduction can be made by any given amount of traffic. And even upon these expenses the reduction must be very trifling, because of the expenses consequent upon a great accession of traffic, such as additional clerks, an increase in the number of guards, police, porters, stationery—perhaps more rates and taxes—and something additional for maintenance of way. We will suppose, for instance, that the five-eighths of a penny, which we have before shown to be the necessary cost, were reduced to three-eighths (40 per cent.) 1d. per passenger per mile remains as a charge of conveyance on all short railways, similarly situated to the Croydon Railway, however great the number of passengers. A reference to the result of the management of the Croydon Railway clearly establishes the accuracy of our calculation, notwithstanding the extraordinary statement of Mr. Wilkinson, that the Croydon system points to the peculiar policy of *low* fares. We dispute the accuracy of the position taken by the Croydon chairman, and, on the other hand, contend that the Croydon system tends to establish the very reverse of the chairman's favourite crotchet. To show how completely the Croydon Railway chairman is in error as to the fancied superiority of his system of low, or rather losing fares, it is only necessary to refer to the result which the annexed table presents.

Balance Sheet for Two Years' Traffic on the Croydon Railway.

Half year ending,	Receipts. Classes.	Total.	Receipts.	Average receipts per passenger.	Average expense per passenger.	Total.	Expenditure. Locomotive department.	Carriage.	General.	Maintenance of way.	Government duty.	Greenwich toll.

			74,480	1s. 2d.	1s. 3d.	74,480						

Less 50 per cent. on merchandise.

{ One year's maintenance of way not charged, and chargeable as a general calculation, because the second year's income has not increased at all, whilst, according to usual railway practice, 25 to 50 per cent. ought to be added to the receipts.

{ Two years' depreciation of stock omitted, 10 per cent. per annum, on the cost stated in last Report, 34,501*l.*

* Number without the annual, &c. tickets to passengers.

This table, we think, ought to settle the question of "low fares," as far as regards this railway, completely. The Company have been actually carrying passengers as low, if not lower, than any other line, and yet, in place of showing, according to Mr. Wilkinson's notion, a corresponding degree of profit, the accounts exhibit a very material loss. The average of the undermentioned railways appears to be—

* Not calculating upon the past expenditure, but supposing the concern to be under competent management.

Digitized by Google

RAILWAYS.	Average fares per passenger per mile.
London and Birmingham	2¼d.
London and South-Western	2¼
Manchester and Birmingham	2½
Great Western	2
Midland Counties'	2
Manchester and Leeds	2
Manchester and Bolton	2

While a reference to the Croydon receipts show that their average does certainly not exceed 1½d. per passenger per mile. And yet, with 2,500*l.* per annum loss staring the Company yearly in the face on their "low,"—or more truly speaking the "losing"-fare—principle, Mr. Wilkinson is anxious to reduce the fare still *lower*. It appears to us, that the main errors of Mr. Wilkinson's leading notion about low fares are, that a very low charge will "entice" the public on the railway in such vast numbers as to afford an enormous compensation for the reduction in the fare, and that this vast number can be carried at little or no extra expense. We are of opinion, no matter to what extent the reduction of fare may be experimentally carried, that the increase of numbers will only take place to a limited, extent, and at special seasons. Now, it must always be borne in mind that the most profitable traffic to a railway is the regular legitimate business traffic.* *

[For various illustrations of the opinion, that "all experience is *not* in favour of low fares," we refer our readers to the pamphlet itself. It ought to be in the hands of every railway proprietor.—ED. R. T.]

* * * Beyond a certain point we have shown that fares cannot be lowered without insuring a perpetual loss, however great the number of passengers. This being so, in reference to the Croydon Company we cannot see that the shareholders would be placed in any better situation were the present toll lowered or even abolished; for if the Croydon Company succeeded in altering the Greenwich toll, they could not upon any principle of justice refuse to make a corresponding concession in reference to the Brighton toll. This allusion to the Brighton toll brings us to the point more immediately connected with the "Reply" to Mr. Wilkinson's "Toll Question Exemplified." We have before shown that Mr. Wilkinson attacks the Greenwich toll as too high—but what do we find Mr. Wilkinson laying down as a correct principle relative to tolls at the September meeting, when the Brighton Company were referred to? It is here we establish our charge of inconsistency against Mr. Wilkinson. Mr. Wilkinson says, "that the Brighton Directors expected to receive a portion of the profit derived from the carriage of their passengers along the Croydon line, but to this they had, in his opinion, no right or title whatever. *The Croydon Company had constructed the line at a great outlay, and they alone were entitled to reap the benefit!*" In the pamphlet before us we find this paragraph:—"In making a charge, therefore, for these items alone, or for *toll*, the question of increase of cost as respects numbers, may be almost wholly disregarded, and the only consideration remaining will be what rate of charge will produce the greatest amount of money receipts. Into such a consideration it is manifest that *the quantity of capital expended in the construction of a railway cannot enter*. An attempt at a higher rate of charge per passenger, on *account of superior cost of construction* might, and in all probability would, produce a diminution of gross money receipts." We cannot reconcile these two statements. Perhaps Mr. Wilkinson can, at all events they afford ground for believing that there is some severe truth in a remark elsewhere made, that "there was a good deal of talent and honesty in the composition of the Croydon Directory, although they were somewhat lacking in common sense."

THE POLICY OF LOW FARES, AND GOOD ACCOMMODATION.

To the Editor of the Railway Times.

SIR,—I was much pleased with the perusal of a pamphlet by Mr. Wilkinson on the "Toll Question on Railways," published in your last number.

In the course of his very judicious and sensible remarks, he enunciates a principle which, though in his reasoning it is exclusively applied to the "Croydon and Greenwich Railways," is equally applicable to the working of all railways; and from its sound practical usefulness, particularly recommends itself to the Directors and Proprietary of railways in general.

But I have been induced more particularly to call your attention, and that of your readers, to this pamphlet, as it carries out, but much more ably, the views which I advocated in a letter to you on "Third-class Carriages" a few weeks back, viz., the duty and self-interest of Directors to afford accommodation to the public and at a low charge. By carrying out this principle to its full extent, they would make it the interest of the high and the low, of a poor as well as a rich man, to use the railway, for the more extended is its use by means of low fare and good accommodation (or in Mr. Wilkinson's words, "the most liberal administration of its management") the more conducive the railway is likely to be to the credit of the Directors and to the interest of the proprietary in general.

If such enlightened views as are propounded by Mr. Wilkinson were to become more general among the "directorial public," who, I believe, are eminently unpractical in all these matters, in fact in precisely the same state as Mr. Wilkinson describes himself to have been two years ago, I believe that railway property, instead of being in the present depressed state, would be eagerly sought after, as not only an investment returning a larger rate of interest than the funds, but also as one of as safe and sound character, and which would feel the effects neither of an insurrection in Spain, nor the assembling of a set of marauders and pirates on our Canadian frontiers. It is no sufficient argument that because the London and Brighton, for instance, have expended immense sums in beautifying and adorning their railway, in lighting the tunnels with gas, or in any other unnecessary expenditure, that therefore the public are to be compelled to pay high fares, or to be forced into the first-class carriage, by reason of the want of accommodation and comfort in the second and third-class carriages.

I am glad to see that since I wrote to you upon the subject of the inconvenience of the third-class carriages on the Midland Counties' Railway, there has been a considerable improvement,—allowing seats, with a trifling increase (8d.) of charge, at the same time keeping on the old third-class, without seats, as fourth-class carriages; but still I think that the number taken in these ought to be regulated according to the amount that they will conveniently hold.

Mr. Wilkinson's experience on the London and Croydon railway has amply substantiated the view which I took in my last letter of the sound policy of low fares. He says, "that whenever the fares of this line have been raised, the traffic has been diminished, and its progress checked. Whenever the fares have been lowered, even under the least favourable circumstances, and the toll not interfered with, the increase of traffic has more than repaid the reduction."

Such an opinion coming from a man of Mr. Wilkinson's experience would be sufficiently conclusive, but when backed by the fact above stated, it puts beyond the possibility of a doubt both the policy and self-interest of the Directors and Proprietary of railways, affording the greatest possible accommodation, at the lowest possible remunerating fares, to the public.

In conclusion, I would remark upon the fallaciousness which runs through the argument of several of your correspondents, who have contended for the justice of high fares by introducing an analogy between the present mode of travelling and the old coach system.

Now, between the two there can be no analogy whatever, putting out of consideration that "the cost of conveying passengers increases with every passenger by coach, whereas the railways are regulated by entirely opposite principles"—I say, putting this, which entirely upsets the analogy, out of the question, what analogy, what comparison, can there be between the powers of steam and the power of the horse,—between that which travels at fifty and that which travels at ten miles per hour,—between that which has given to man the wings of the dove, and which enables him to perform his various public and private duties, and to participate in the pleasures, the amusements, and enjoyments of life a dozen times in the course of a single day, and at distances so far asunder as would have taken him in former times a week to accomplish, which makes the distance between Manchester and Liverpool seem as nothing, and brings London and Birmingham as near to one another as London and Broxbourne formerly were; which annihilates the space betwen different communities of men, and walking on "the waters like a thing of life," brings the continent of America in close proximity to England;—and the physical properties and exertions of the horse? There can be no analogy, no comparison, between the two; then the argument that is drawn from such analogy would be equally false with the analogy.

P. Z.

November 4, 1841.

MANCHESTER AND LEEDS RAILWAY.

To the Editor of the Railway Times.

SIR,—To prove that the Manchester and Leeds Railway will pay at the end of the current half year a dividend after the rate of six per cent. per annum, I beg leave to offer the following statement, expressing at the same time no little surprise, that notwithstanding so very encouraging a prospect, the line having been opened throughout only about eight months, the 100*l.* shares in this railway (70*l.* being paid up) should continue at 15*l.* discount, or 21½ per cent. below par, 3 per cent. consols being at the same time at or about 89. If anything can show the false position in which the delusive estimates and extravagance of engineers, and the repeated highly coloured, but erroneous, statements of Directors, have placed the railway system, assuredly this does! Any person, in fact, purchasing shares in this railway at the present price of 55*l.* would get at the end of the half a dividend equal to 7*l.* 12s. 8d. per cent. per annum!

I am, Sir, your obedient servant,

VERITAS.

Receipts on the Manchester and Leeds Railway for the Week ending

July 5, 1841	£4,194	6	7
July 12	4,626	14	6
July 19	4,531	17	10
July 26	5,828	9	2
August 2	5,060	1	7
August 9	5,082	11	1
August 16	5,667	1	6
August 23	5,237	7	10
August 30	5,066	17	4
September 6	5,074	2	5
September 13	4,910	3	4
September 20	5,019	15	2
September 27	4,884	0	10
October 4	4,668	1	11
October 11, the exact amount not known, about	4,500	0	0
October 18	4,348	11	5
October 25	4,141	5	4
Add for the remainder of the half year nine weeks at 3,700*l.* per week. As this railway takes as much for goods as for passengers nearly, the winter months will not so much affect it as others	33,300	0	0
	115,341	7	11
Add rent, interest, &c. &c., about	2,000	0	0
Total gross half year's receipts up to the end of December, 1841	117,341	7	11
Deduct working expenses for the half year at 39 per cent. on the gross receipts, same as last half year 45,763 2 10			
Interest at 5 per cent. on mortgage-bonds and money paid in advance of calls 33,100 19 6			
	78,864	2	4
	£38,477	5	7

Surplus balance, equal to paying 3 per cent. on the amount of the calls (1,294,090), or at the rate of 6 per cent. per annum.

The traffic for the week ending March 8th, 1841, was 2,898*l.* 10s. 10d.; ditto for the week ending August 16th, 5,667*l.* 1s. 6d., having thus doubled itself in five months!

ULSTER RAILWAY—FURTHER OPENING.

(Abridged from the *Northern Whig*, November 9.)

YESTERDAY, an additional portion of the Ulster Railway, extending from Lisburn to Lurgan, a distance of about thirteen miles, making altogether a distance of twenty miles from Belfast, was opened to the public. It may not be uninteresting to give a slight sketch of the works on this section of the line. There are thirty-three bridges on the entire line, between Belfast and Portadown, fifteen of which are on the section now under consideration. They are, for the most part, built upon what is technically called the skew principle, and the material employed is firebrick, with ring-stones, quoins, copings, &c., of sandstone. The bridge over Antrim-lane, at Lisburn, is of cast iron, from the foundry of Messrs. Coates and Young; and, when completed, will be a very elegant structure, and an ornament to the town of Lisburn. That at the old Ballinderry road, also, presents itself as a very striking object, when viewed from the town of Lisburn; it has three arches, and is 38 feet in height, from the formation line of the railway. The bridge over the canal, at Lady-bridge, is a very extensive work; and, from the peculiarity of the site, and the difficulty of getting in the foundations, it must have been one of the most expensive structures on the entire line. The length of this bridge is about 160 feet, and the span is 30 feet on the square, and upwards of 40 on the skew face. The line, or permanent way, is laid on continuous bearings of Memel timber, of a scantling of 12½ by 6½ in., secured, to transverse sleepers, at intervals of about 10 feet, with iron knees or brackets, and so constructed, that the line can be adjusted or removed, with great facility, and without disturbing the ballasting. The rail is of the bridge form, and weighs about 65lbs. to the yard; it is secured to the continuous bearings by 11-16ths inch wood screws. There are very few curves on this section of the line; and, for all practical purposes, it is equal to a straight one. The gradients are, generally, unexceptionable; and the line, altogether, may be considered in this particular, as inferior to few now in operation. We have no particular observations to make in reference to the running of the trains during the day, except that a considerable delay occurred in the arrival of the one o'clock train, occasioned so far as we could learn, from some defect in the quality of the coke, and a consequent deficiency of steam. The Directors will, we have no doubt, see the necessity of preventing a recurrence of this inconvenience, and inquire minutely into the matter.

At six o'clock, the Directors and a number of the shareholders sat down to dinner, at the Donegal Arms, Mr. Goddard, Chairman of the Company, presiding, and Mr. Kane, Vice-Chairman, acting as Croupier. The healths of the Queen, the Princess Royal, and Prince Albert, having been given, the Chairman proposed, after a few introductory remarks, "The Ulster Railway Company, and success to it."

Mr. COATES being called on, briefly replied. The undertaking, he said, was one in which he had uniformly taken a warm interest. It was now about five years since it had been talked of, and he was one of the first who had taken part in it. The first movement which had been made in the business, was calling together a number of the merchants, bankers, and other business men of Belfast, by circular, to take the project into consideration. The meeting was a very spirited one. Those present vied with each other in their manifestation of zeal. There was a difficulty in the way. A party in Lisburn had projected a railway between Belfast and that town, to stop there. (Hear, hear.) This was a difficulty which had to be got over; and it was surmounted, though it had required some little sacrifice to do so. The sacrifice was not very great; but it was still felt. To carry on the work much money was required, which was a matter of no slight importance, seeing that it had to be supplied chiefly by men in business, who had other employment for their money. Still, they met the demands upon them, with a spirit which was most creditable. Mr. Woodhouse was the engineer who originally surveyed and laid off the line; and it was satisfactory to know that the actual expenses of making it had not come up to the amount of his estimate, though it had been made in a superior style. (Hear, hear.) For the last two years they had all been acquainted with the proceedings of the work, and had expressed their approval of them. (Cheers.) That day, 12 or 13 miles more of the line had been opened, affording accommodation to the public, such as they had expected, and on such terms as the public were quite prepared to meet.

The next toast was, "The Town and Trade of Belfast."

Mr. J. BRISTOW, who was called upon, shortly returned thanks. Of the prosperity of the trade of Belfast, they had sufficient evidence before their eyes; and he did not know anything that would give a greater impulse to that prosperity than the Ulster Railway. (Hear, hear.) He believed it would confer a great benefit upon the town, and would prove creditable to those who had formed it. He begged, in conclusion, to propose "The health of the Chairman and Directors of the Company." (Cheers.)

Mr. GODDARD had sincere pleasure in returning thanks. For 36 years he had been in the habit of attending Boards and Committees in Belfast; and he could say, that he had never sat with any gentlemen who displayed more zeal, regularity, and attention, than the Board of Directors whose health they had drunk. They had been under the necessity of contending with several difficulties, some of which were to be expected. One of these was of a heavy description. (Hear, hear.) They had failed to obtain, as they had expected, an adequate loan of money from Government. He did not now regret that it was so; for, amid all the difficulties of the times, the shareholders had paid down the calls, with promptness, and enabled the Directors to finish an undertaking such as no other part of Ireland could boast of. (Cheers.) He hoped the time was coming, when all the shareholders would be amply remunerated. He hoped that the work would prove a benefit to this country. It would be of service, as furnishing information, which might not otherwise be attainable, if other similar works were projected. Some farmers and landlords had supposed, that they would sustain injury by the passing of the line through their property; and the Company had to pay smartly for the land which they required. Still, it was satisfactory that the work had been executed considerably within the amount of the original estimate. They were much indebted to some of those who had acted with them, among whom he would name Mr. Dargan. (Hear.) That gentleman would have been present, but that he was under the necessity of going to England. He (Mr. Goddard) believed, that he had done the work well; and he had done it in a way never to cause the slightest trouble to the Directors. (Hear, hear.) They had also had great satisfaction in the way in which Mr. Godwin had made his reports. (Hear, hear.) Mr. Godwin had stated, that Mr. Dargan had executed the work, and carried out suggestions which were made to him, with the utmost readiness. Under all the circumstances, and especially considering the cheap rate at which the work had been accomplished, he thought the shareholders could not fail to be remunerated. Mr. Goddard concluded by proposing, "The Shareholders of the Ulster Railway."

Mr. STERN returned thanks.

"The health of Mr. Woodhouse, the late County Inspector for Antrim, who first surveyed the line of the Ulster Railway," was the next toast.

The CHAIRMAN rose to propose the health of Mr. Godwin, their Manager and Resident Engineer. (Hear, hear.) He had seen much of that gentleman, in the Boards and out of them, and his every thought seemed to be what he could do for the benefit of the concern. (Cheers.) If anything, indeed, he was too anxious upon the subject. He considered that the Company were fortunate in having the services of Mr. Godwin.—(Cheers.)

Mr. GODWIN rose to return thanks, and was warmly applauded. He must say that the works had been successfully carried out. The close attention, however, which the Directors had paid to the proceedings had made them well acquainted with everything that had been done, and the shareholders had not been inattentive observers. (Hear, hear.) The only thing now that he could refer to was the mechanical department of the line. (Hear hear.) He was happy to say, that Mr. Coates, whose opinion, they were aware, was a good one upon the subject, had spoken favourably of the line. It had also been inspected by eminent engineers, and among others, by Sir Frederick Smith, in the discharge of his professional duties, as Inspector-General of Railways for the United Kingdom—an excellent public officer, whose clear views upon the subject of railway matters, and whose high scientific attainments were of a superior order. There was a peculiar steadiness in the motion of the trains upon the Ulster Railway. This he (Mr. Godwin) attributed to the principle upon which it had been constructed. There had been controversies upon the subject of four-wheeled engines, and wide or narrow gauges. The Directors had wisely fixed upon six-wheeled engines with a wide gauge, and longitudinal bearings. To this he attributed the steadiness of the motion, and the cheap rate at which they had worked their locomotives. There was only one circumstance about which there could be doubt—the liability of the timber to decay, on exposed situations. But, so long as a line of railway was in operation, the timber, he believed, would not rot soon. When kept not damp, or what was commonly called between wind and water, and in constant use, he thought it would not soon decay. With respect to engines, they had selected those of the six-wheeled description; and it was well that they had. He thought, that a legislative enactment would be passed against the use of four-wheeled engines, and it would be expensive, if they were obliged to throw their engines away. With respect to cost, there was no other railway, with equal cuttings, and similarity of formation, that had been made so cheaply. The scantling of timber, weight of rail, and in short, all the principal parts, were precisely the same as those of the Great Western Railway. That railway was considered to be the best yet made; and he might speak of it as a model, without depreciating any other. He did not know that it was necessary for him to say anything more about the construction of the railway; and, therefore, he would merely beg again to thank them for the manner in which they had drunk his health. (Loud cheers.) Mr. Godwin then said, he would request leave to propose "The health of Mr. Smith, the Company's Secretary."

Mr. SMITH returned thanks, and he said he owed much to the assistance he had received from Mr. Godwin, and the kindness which he had experienced from the Directors.

Some other toasts were given, after which the party separated.

PAYMENT OF DIVIDENDS QUARTERLY.

To the Editor of the Railway Times.

SIR,—I think "Clio's" suggestion, in your last number, for the *payment of dividends quarterly*, well worthy the consideration of railway proprietors. Not only would those of small incomes be benefitted by it, but it would give additional confidence to the whole of the shareholders by having quarterly reports as well as quarterly receipts. Losses would be less likely to accrue from defalcation of parties intrusted with the receipts, from the banker to the lowest officer whose hands money passes through. So important do I think it, that I have no doubt of its ultimate adoption.

Yours, &c.,

A HOLDER OF NEARLY ONE HUNDRED SHARES.

Cambridge, Nov. 4, 1841.

16. Toll to London and Birmingham 136*l.* 19s. 2d., to be deducted from gross receipts.

4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone.

8. Receipts include the Northern and Eastern toll, &c. The dividend is from the time of opening.

10. The part between Glasgow and Paisley was made at the joint expense of the Glasgow Paisley and Greenock, and Glasgow Paisley and Ayr Companies, but each Company's receipts in respect of that part are now merged in the general returns of each.

11. Capital of 1,967,800*l.* is exclusive of the Chester and Crewe line, which cost 456,338*l.* The receipts include those derived from the use of the Liverpool and Manchester line, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 114 (83+31.)

13. The 5,231,527*l.* 9s. 10d. is the amount actually raised according to latest balance-sheet. The receipts include those derived from the Cheltenham and Exeter branches; the former opened for 18 miles, and the latter for 38. The divisor employed to ascertain the daily receipts per mile is therefore 169½ (118½+18+33.)

15. The 38*l.* 3s. 9d. from goods, &c. is for toll only.

18. Ten per cent. is the maximum dividend allowed by the Company's Act.

17. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. On the quarter shares the dividend is at the rate of 42½ per cent. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

19. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table.

20. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company.

21. Capital of 993,300*l.* includes new capital for widening the line, &c. The dividend mentioned does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table is exclusive of Brighton and Croydon toll.

22. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, an i is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount.

24. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

25. The 4,149*l.* 15s. 0d. are the receipts after deducting omnibus charges, and payments to other Companies. The dividend is from the time of opening.

26. The receipts for goods, &c. include, carriages, 34*l.* 7s. 0d.; horses, 32*l.* 2s. 0d.; dogs, 2*l.* 6s. 0d.; parcels, 241*l.* 3s. 10d.; cattle, 162*l.* 17s. 0d.; corn, 10*l.* 9s. 11d.; heavy goods, 377*l.* 19s. 0d.; coal, 114*l.* 2s. 2d.—Total, 975*l.* 6s. 11d. The dividend is from the time opening.

28. The details of the receipts are as follows:—Passengers, 2,267*l.* 12s. 9½d.; parcels, carriages, horses, and mails, 364*l.* 4s. 11½d.; merchandise, 1,040*l.* 2s. 11d.; minerals, 2,6*l.* 16s. 10d.; cattle, 234*l.* 8s. 11½d.—Total, 4,182*l.* 3s. 4½d.; including North Midland proportion of Manchester and Leeds traffic, amounting to 152*l.* 5s. 4½d. The dividend includes a sum of 31,786*l.* earned previous to the last half-year.

29. The receipts stated are after deduction of Liverpool and Manchester toll.

30. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 26 miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

31. The capital of 500,000*l.* includes that provided for harbour and works as well as railway. The dividend is from the commencement.

33. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

Our best thanks are due to M. N. *(Leamington),* W. R. *(Aberdeen), and several other correspondents.*

J. L. *(Dundee).—We shall be glad to receive the promised paper.*

Our Cambridge correspondent is informed, that we do give all the quotations of sales made. With respect to the length of the lines named, he has overlooked the word "then," namely, in the corresponding week of 1840.

L., *(the second) on the Great Western Railway, contains nothing that is new.*

An Inquirer *wishes to know what number of passengers travel from London to Birmingham, and from Birmingham to London, weekly, or have travelled in any one week within the last three months? The same question from Birmingham to Liverpool and Manchester, and from Liverpool and Manchester to Birmingham?—Our correspondent is surely aware that, on all railways, the Government tax is the same, namely, one-eighth of a penny per passenger per mile, without distinction of class.*

We have received the following note, which perhaps some of our readers will enable us to answer:—"Manchester, Nov. 5, 1841: *Sir,—One of our correspondents, residing in the West Indies, who has seen your article in the* Railway Times, *respecting Mr. W. Pritchard's improved method of making bricks, is desirous of having the machinery alluded to, and as we do not find Mr. Pritchard named in our London Directories, we beg you will, at your earliest convenience, do us the favour of stating who sells the mentioned machinery; or if it be obtainable of Mr. Pritchard alone, we shall feel obliged by the communication of his address to us. Do you happen to know how this machinery works, and whether it has realised the expectation of the inventor?—We are, Sir, your obedient servants,* Lomnitz and Co."

M. D.—*The omisions were made solely out of regard to our correspondent's interests. Had the passages referred to been given, we have no doubt that his whereabouts would have been traced, and probably himself punished.*

Alphæus.—*In our last number we drew a distinction between accidents on railways and railway accidents. Our correspondent is perfectly right in saying that these "accidents on railways" ought no more to be adduced in disparagement of the railway system than the fact of a drunken fellow being run over by a mail coach can be fairly brought to tell against common-road conveyances.*

A Constant Reader.—*What else can trespassers look for? In answer to his second question we have to state, that the cost would be from* 5*s. to* 7*s., to any party.*

Dubitans.—*There is no occasion at all for any hesitation.—We believe that an investment, even at par, would ultimately prove beneficial; most assuredly, at the present great discount, it could not fail to be eminently so. We do not like to give advice in such cases, but in the present instance we cannot refrain. Buy, by all means.*

The notice which appears elsewhere was in type before the communication from Darlington came to hand.

Exspes.—*The subject has been more fully handled by other correspondents.*

W. J. *(Goswell-street) would do well to advertise.*

Numerus *would oblige us by forwarding a full and authentic statement of the case. We shall do what we can to assist him.*

An Original Holder.—"*Fuit Ilium.*"

North Union Railway.—*The traffic for the week ending October* 29, *was as follows:—Passengers and parcels.* 985*l.* 5*s.* 8*d.*; *Goods,* 124*l.* 1*s.* 9*d.*; *Coal,* 86*l.* 3*s.* 5*d.*;—*total,* 1,095*l.* 10*s.* 10*d.*

Another Railway Clerk *will, we think, find his object gained by the publication of a letter which was in type before his reached us, but which we are obliged to defer.*

G, Another Shareholder, *advances nothing but assertion in disparagement of the system on which he comments. The Engineer must have pretty good data for its adoption.*

P. B. W. *(Bristol).—We do not believe that any Engineer has yet been appointed.*

W.—*The trouble would be very considerable, and the advantage would not, in our opinion, be correspondent. We feel obliged to our friend for his kind wishes.*

Great Western Railway.—*We have, in fairness, devoted more space than we can conveniently spare, to replies to "S. P.'s" letter of last week. Those correspondents whose communications on this subject are withheld (including* A Shareholder, Fabius, A Subscriber *(Newbury),* C. D., H. B., *&c.) must attribute the omission to this cause alone.*

"Safety Rotation Railway Company."—*The Birmingham correspondent, who wrote to us last week in reference to this scheme, is referred to the "Railway Adjudications" in our present number.*

Dublin and Kilkenny Railway.—*A correspondent* (Scrip) *wishes to know the present position of this undertaking. We shall feel obliged for any information on the subject.*

York and North Midland Railway.—*What does* Observer *mean, by stating that the shares of this Company "bear so depreciated a price in the market?" He must surely have "headed" his communication wrong.*

A Young Beginner.—*The best counsel we can give our correspondent is, in the words of a very sensible writer, "Because you find a thing very difficult, do not presently conclude that no man can master it; but whatever you observe proper, and practicable, by another, believe likewise within your own power."*

The Railway Clerk who writes under the signature of The Rights of Man, *must surely be mad to wish his letter published. He talks of situations on the line with which he is connected not being worth a week's purchase; were we to print his letter,* his *would not be worth an hour's. When he is anxious to preserve his incog.,* he should not use office paper, *even though the printed head be partially obliterated. We know something of the line referred to, and believe our correspondent's complaints to be without foundation.*

South-Western Railway.—*The correspondent who complains that the Gosport branch is not yet open, although it was stated at the meeting (nine weeks ago) that it would be completed in three weeks from that time, forgets that since then the second failure at the Fareham tunnel (or rather, a continuation of the first slip) has occurred. We believe, however, that the line will be opened on the* 29*th instant.*

A Shareholder *(Chelsea).—Use your own judgment, but be cautious.*

Samuel Greenwich.—*The toll, we apprehend, is from Croydon to London Bridge—not Croydon to New Cross.*

In Mr. Charles Todd's letter, published in our last (page 1162), *the word* lead *was misprinted* load.

Glasgow and Greenock Railway.—Dividend, *in reply to* Greenockian *next week.*

Railway Drainage.—Probatum est *next week.*

Accidents on Railways, from incaution.—*Mr. Bainbrigge's letter on this subject shall appear next week.*

Nauticus; An Original Shareholder; C.; H. C. D.; *and* Economicus; *are in type.*

THE RAILWAY TIMES.

SATURDAY, NOVEMBER 13, 1841.

Mr. W. A. Wilkinson's pamphlet on the Toll Question, more especially as bearing on the relative position of the Croydon and Greenwich Railways, has promptly met with a "Reply." As we gave in a recent number Mr. Wilkinson's pamphlet entire, we have thought it right to print a considerable portion of the "Reply" so that the case is now fairly before our readers, so far as these two parties are concerned. It is not our intention to interfere in any way in the controversy, but on the general question we may be permitted to say a very few words.

It is not denied by any one, least of all would it be denied by the intelligent Chairman of the Croydon Company, that the Greenwich Company are fairly and justly entitled to a reasonable remuneration for the outlay they have incurred. The only point in dispute is, how may this remuneration be most easily and most extensively secured? The Croydon Management, as speaking through their Chairman, contend that a reduction of tollage would be beneficial to both Companies, while the Greenwich Directors appear to doubt the assertion, and are content in common phrase to "let well alone," without having recourse to questionable speculations. For this we cannot in the smallest degree blame them. The interests committed to the guardianship of the Greenwich Directors are far too vast, and too complicated, and their constituents have too long indulged in that species of hope which when deferred maketh the heart sick, to warrant the trying of experiments which *might* tend to their ultimate advantage, but of which in the meantime the issue is doubtful. There is moreover this peculiar feature in the case of the Greenwich Company, that they have recently sought for and secured Parliamentary sanction for an increase of tollage, arising from the representation that the existing toll is inadequate to the payment of interest on the further capital required, and therefore it is scarcely to be wondered at that they should shrink, instinctively as it were, from any scheme of reduction which whatever results it might promise, and however plausibly, must in so far run counter to the opinions and inferences which heretofore have been pressed upon the attention of the legislature.

It seems to us that the only true criterion of a reasonable amount of toll, so far as the Croydon Company are concerned, is a calculation of the probable amount which would have been required by the Croydon Company to extend their own line to the terminus in Tooley-street. If the sum annually paid to the Greenwich Company falls short of the interest on the amount which the making and maintenance of a railway from Corbett's-lane to Tooley-street would have occasioned, then we say the Croydon Company have no reason to be dissatisfied. They enjoy (or will enjoy) all the facilities and conveniences of a separate and independent terminus, with a part at least of the benefits derivable from the Greenwich establishment of servants, and this being the case, they have no reason to find fault with the terms to which they voluntarily became parties. It is quite true that the receipts from the Croydon Company are to a certain extent so much "money found" to the Greenwich Company, and that any interference with the prosperity of the Croydon line must affect the other establishment; but we see no reason why advantage should be taken of the relative position of the two Companies, to impose upon one of them terms which were not originally contemplated, and which the other party believe would be detrimental to their interests. The Croydon line was constructed with a full knowledge of the drawbacks to its traffic (if such they are to be considered) which its connection with the Greenwich Company would impose; and although, as we have already hinted, the non-formation of the Croydon line might have proved a serious loss to the Greenwich Company, the promoters of the former, having once made it, have no excuse whatever for attempting to evade the terms of the contract, or for clamouring for more easy conditions, or failing the attainment of these, for murmuring and complaints as to the effects of the agreement into which they have entered.

As we have already observed, however, it is not, we believe, the wish of the Croydon Directors to quarrel with the Greenwich Board in seeking to secure a due return on the capital invested in their undertaking, nor even to find fault with the particular scale of tollage adopted, but simply to represent that a modification of the existing rates would tend to the mutual benefit of the toll-paying and toll-receiving parties, and so far to the benefit of the public at large. The Croydon Directors appear to be convinced that a reduction in the amount of toll per passenger would result in an augmentation of the gross receipts,—a proposition to which the Greenwich Board do not appear to be inclined to yield assent. And can we blame them for hesitating to enter upon such an experiment—for experiment it clearly must be?

Digitized by Google

A suredly not. However flattering may be the prospect held out by those who are anxious for a modification of the present system,—however much experience in similar cases may indicate a prosperous issue—however strong even may be the conviction of individual members of the Greenwich Direction, that the reduction recommended would be advantageous as well to their own immediate constituents, as to the proprietors of the Croydon Railway, they do right to pause before consenting to such a measure. Changes of so material a character are not to be rashly introduced into the management of a public undertaking, for in addition to the fact that failure will certainly be attributed to the mismanagement of the parties to whom the business has been entrusted, while success, however marked, will gain for them no praise, all doubtful experiments ought to be sparingly entered upon from the difficulty which arises, in case of their miscarriage, in returning to the old system. Supposing the Greenwich Directors to consent to the reduction of toll urged upon them by Mr. WILKINSON and his colleagues, and the result to prove injurious in a pecuniary point of view to the Greenwich proprietors, with what grace would the Croydon Management regard a return to the old scale, or how would the public look upon it, taking it for granted, as contended for by Mr. WILKINSON, that a reduction of toll would justify a reduction of fare?

It seems to us, that the only way to arrive at a right decision upon this matter, would be for the Croydon Company, who appear to coincide in the views of their Chairman, to guarantee to the Greenwich Company an annual income, pending this experiment, equal to the average income received from the Croydon toll since the opening of that line. If the experiment succeeded, self-interest as well as justice would secure the reduction recommended; if it did *not* succeed, the effects of the failure would be felt by that party only which was desirous to see it carried out. If the Croydon Directors are really as confident as they profess to be, as to the beneficial result of the trial, we see no reason why they should for a moment object to so reasonable a proposition. It is for the Greenwich Directors to adhere to "the bond," unless it can be plainly demonstrated that it would be for their interest to submit to a modification of its provisions.

The position which the author of the "Reply" wishes to illustrate is, in his own words, this: "that in a pure business-undertaking like a railway, in which the capitalist, on business principles, expects a fair return for his money, no fare ought to be charged to the public lower than one which affords a remuneration." Whatever opinion may be entertained as to the justice or policy of the Greenwich toll, there can, we imagine, be no difference of sentiment in reference to *this* proposition. Indeed, it is so obviously a truism that one wonders how it can ever be overlooked in practice. Yet so it is. Lowness of fare is sometimes regarded as that to which everything else ought to give place. It is looked upon as the only source of a railway's prosperity, whereas in reality it is but one of many causes, and not unfrequently the least of them. Many as are the complaints against high fares, we do not think that the error is usually on *that* side. No scale of fares that is not remunerative to the proprietors of a railway undertaking can be permanently maintained, and self-evident as is this truth, it would be well if in the discussion of the question of fares it were always borne in mind. We have said repeatedly, and we say again, that no general rule for the regulation of a scale of charges can be deduced from the experience which Railway Companies have hitherto had. Circumstances of a merely local or temporary character interfere so much with theoretic speculations that it were madness to regulate the arrangements of one railway by those of another. Time and practice alone can determine the due amount of charge in each instance—we mean that charge which shall be most remunerative to the proprietors, for it is for them alone that we profess to be concerned. It is a very gratifying circumstance in connection with railways as far as the public are concerned, that nothing can be lost should nothing be gained by their construction. Railway Companies, monopolists as they are called, possess no exclusive privilege of the traffic of particular routes. The field of competition is open to all, and if railways carry off the palm it is solely by reason of their intrinsic superiority. Railways have not annihilated the common roads of England; and if the public could be better served by the late frequenters of these roads than they are by the proprietors of railways, not a day would elapse before a revolution in the existing system of locomotion would take place in a return to the ancient mode of horse conveyances. The public, therefore, are gainers, whatever may be the result to the parties through whose enlightened enterprise this mighty change has been produced. One would suppose that such a consideration as this would temper and restrain the strictures of the *soi-disant* guardians of the public weal —we mean the anti-railway press—but unfortunately the great good which railways have effected is too often overlooked in a partial and exaggerated consideration of the minor mischiefs to which, in common with every other great improvement, they have given rise.

OUR columns have been considerably occupied during the last few weeks with notices of meetings held in the north of England to secure the formation of a short junction line, so as to complete the means of railway communication from London to Newcastle, and thus, it is thought, determine the route to Scotland by the east coast. To-day we continue these notices, and give at the same time one or two communications in support of the rival project by the western coast. It is not our intention to interfere in the discussion now going forward as to the relative merits of the two schemes, further than to express our belief that supported as the west coast line is by the preference awarded after a careful investigation by the Government Commissioners, it will be a matter of no small difficulty to induce the public to embark in any other. It was not without a due balancing of their respective capabilities that the preference of the Commissioners was fixed, and although their Report, and the evidence upon which it rests, may be open to criticism in minor points and unimportant details—as every such Report must be—nothing that we have yet heard objected to its principle or to its general conclusions, alters in the smallest degree our original impression as to the perfect fairness and impartiality of the Commissioners' decision. Nevertheless, good will result from the agitation now going forward, and if it can be shown either that the deductions and conclusions of the Commissioners are untenable, or that the east coast line possesses advantages undiscovered at the period when the Commissioners' Report was put forth, we shall be glad to see the support of the public transferred from the one scheme to the other.

In one important respect, it matters but little which of the two routes be first carried out (for carried out *both* of them must ultimately be,)—we mean as regards the impetus which the formation of such a line would certainly give to the progress of the railway system in Scotland. The completion of the Edinburgh and Glasgow Railway has already turned public attention to the extension of locomotive facilities throughout other districts of the north, and we trust and believe that the practical working of that important line, now on the very eve of coming into operation, will tend to confirm and deepen the favourable impression which the experience of English Railways has made upon the capitalists of the sister kingdom. The existence of an unbroken chain of railway communication, or the certainty that such would be secured at no distant day, would of course still further incite to the promotion of similar works, in continuation of, or as auxiliary to, so magnificent an undertaking. We have reason to believe that it wants but this certainty of the speedy formation of either line to induce parties whose plans are already to a considerable extent matured, to bring more than one new railway project before the capitalists of Scotland. The Scotch bear the character of a prudent, perhaps over-prudent, people, and it is thought that they are little inclined to doubtful speculations, such as railways must almost always be considered; but we cannot think that if the prospect of even a moderate pecuniary return were clearly seen, the indirect but not less tangible benefits to be derived from an extension of the Railway System would be overlooked by the landed proprietors and commercial gentlemen of that country. Scotland, more especially the northern part of it, has within the last few years owed too much of its prosperity to the extraordinary developement of steam navigation to leave any doubt that the further supply of an easy, expeditious, and economical means of transit would fail to be duly appreciated.

One of the great obstacles to the organization of a Company for carrying out either the east coast or west coast line will be the suspicion and distrust (we might almost say disgust) excited in the public mind by the extraordinary excess which upon almost every line yet made has been found to arise in the actual cost of construction over the original estimate. So far it was fortunate that nearly all the great lines of road received Parliamentary sanction almost simultaneously, for we are satisfied that had the discrepancy referred to been as clearly apparent in regard to one-half the existing lines, when the other half were first projected, as unfortunately it is at present, the promoters of the latter would have found it impossible to fill their subscription lists. This is the great opprobrium of the system—the main impediment to its future progress. When it is found that an excess of 40, 50, nay, 60 or 70 per cent. is no unusual occurrence in practically working out an engineer's plans—when it is seen that new shares, third shares, and even fourth shares, must needs be called into existence to the extreme prejudice of the original subscribers, it can occasion no surprise that capitalists should be cautious how they put the smallest faith in even the most positive estimates of cost, or that they should hesitate to venture upon schemes the end of which they have no data beyond the oft-refuted assertions of interested parties, to enable them to discover. It is thus that "the evil which men

Digitized by Google

do lives after them," and in this respect the existing race of Engineers have much to answer for. Their ignorant blundering (for we cannot believe that there has been intentional deceit in their representations) has given a check to railway speculation from which it will not speedily recover. Indications of this suspicion as to the estimates in reference to both of the projected lines have already appeared, and we cannot see how such doubts are to be removed, unless the framers of the estimates could be brought to guarantee their sufficiency. This proof of confidence has virtually been offered in regard to one of the greatest of the works on the west coast line, the engineer undertaking to complete it within his estimate. Might not this arrangement be extended with advantage? With the experience which by this time Engineers *ought* to have acquired in calculating the cost of a projected railway, they could run but little risk in pledging—not their reputation alone, for *that* has been done too frequently and too fruitlessly to inspire confidence, but—their pockets to the accuracy of their own judgment. Better far that the original estimate should be considered high, so it were clearly understood that it would not be exceeded—at least, not at the cost of the promoters—than that a fallacious calculation of a less amount should be put forth, leaving every person to add little or much to the sum total, according as his experience of the past practices of the profession might lead him to be credulous and sanguine, or suspicious and severe.

If the appointment of a Commission to Report upon the merits of the competing routes were followed up as it ought to be, Government would extend to the promoters of the selected line such facilities in the shape of raising a portion of the requisite capital, on loan, as Government alone can afford. Of course it is not to be expected that Government would advance any portion of the funds, until it were clearly shown that the scheme had been properly taken up by a respectable and responsible body of subscribers; but were it once ascertained and made known that upon the subscription of a certain proportion of the required amount being realised, a loan would be granted by Government upon favourable terms, we have no doubt that the effect would be to inspire such confidence into the parties locally connected with the district, and into capitalists generally, as would led to a speedy filling up of the subscription lists. Never was a public loan better applied than would be such an advance as we are now recommending. The undertaking is on all hands allowed to be one of great national importance, and, as such, deserving of every encouragement which a Government really anxious for the good of the country can extend towards it. We sincerely trust that this point will not be lost sight of, but pressed upon the notice of the new Administration, many members of which we have reason to believe are more than usually favourable to the Railway System generally, and to the completion of a railway route to Scotland in particular.

Meantime, we take it for granted that the matter will be brought before Parliament in the coming session, so as to obtain, if possible, a suspension or relaxation of the Standing Orders of the Lower House. That so trifling a boon could possibly be denied we should never have anticipated, were not a similar refusal, in the case of the competing lines to the Welsh coast, fresh in our remembrance. An able correspondent, in our number of last week, forcibly pointed out the obstructive effects of these Orders as regards railway speculations at large; and without assenting to all the views and inferences of our correspondent, we certainly are of opinion that if ever a case could be made out for the abrogation of the rules referred to, it would be in such an instance as this, where it can be shown that no practical inconvenience could possibly arise from such a step, and where fostering measures are so urgently required to carry out an undertaking certain to be of so much benefit to the community. We indulge a hope that the new Parliament and the new Administration will in this respect stand somewhat less upon profitless forms than their predecessors, and that not simply the indulgence alluded to, but every other indulgence and facility compatible with the rights of individuals and the well-being of the country at large, will be cheerfully and at once conceded to those who may show themselves disposed to prosecute so important an enterprise.

THE question of resident or non-resident Directors was discussed at the special meeting of the Clarence Railway Company, held in London, and noticed in our last number, and rediscussed at the meeting at Stockton, of which a sketch will be found in our columns this day. The proprietors of that concern appear to prefer a non-resident Management; but if the present position of the undertaking is to be regarded as a proof of the efficiency of the plan, assuredly it says but little in favour of the decision to which the shareholders have come, for never was a public Company in a more pitiable plight. Embarrassed with debt—their railway itself threatened with seizure by its Government creditor—the Directors and superior officers of the railway quarrelling with and criminating each other—embroiled with their nearest neighbours, and denounced by a portion of their constituents as unworthy of confidence, the Clarence Directors resident in London would require to make out a very strong case indeed of benefit accruing to the Company from the present seat of Government, to counteract the impression which the state of things above described must leave upon the minds of unbiassed spectators. This they have not condescended to do; and if we presume that they cannot do it, we but draw a natural inference from the absence of any explanation at a period so loudly calling for it.

The truth is that we never yet have heard one argument adduced in favour of a non-resident Management which will bear a moment's examination. If some concerns have prospered under such management (although we really are not acquainted with a single case of the kind), this has, it may fairly be assumed, arisen not from the non-residence of the governing body, but in spite of it. It is evident that it must be so. The absurdity of pretending to direct from a distance, it may be of several hundred miles, affairs which require unwearied vigilance in watching events as they arise, is too glaring to require to be pointed out. One of two things must inevitably arise from such a position—either that the concern is not managed at all, but left to take care of itself, or that the duties of the Directors devolve upon some one or more of the resident officers of the Company, who in that case became virtually the Directors, the nominal managers being an impediment, rather than otherwise, to the working of the machine. Prompt action will, in nine cases out of ten, prevent mischief, or remedy it with the least possible damage; but how can a Superintendent or Manager take upon himself to adopt, in an emergency, measures upon which he cannot have the opinion of his superiors for several days? On the one hand he is liable to err from an excess of caution and a fear of giving offence, or on the other, to have recourse to hasty measures on his own responsibility, which the presence of a guiding and controlling Board would probably have restricted or repressed.

If one of the accounts transmitted to us of the Stockton meeting be correct, the Clarence Directors appear to have defeated an obnoxious measure, by a most unsparing application of proxies, some of which, it is asserted, had been entrusted to them years before for totally different purposes, and probably not recalled, only because the parties giving them had forgotten their existence. Surely this is an abuse of the proxy system—a system of which at the best we are by no means enamoured, for we hold that, in general, parties who are duly concerned for or against particular measures, will take care to attend the meetings in person. At any rate, we would not allow a question to be carried wholly or principally by proxy votes, and it says but little in favour of any Management which is compelled to have recourse to this mode of drowning the voices of such of their constituents as may be present. It is easy to imagine how a dexterous use of proxies might in a thinly attended meeting, carry any proposition, and when it is recollected how easy it is for any party, but more especially for Directors and officials, to secure a large number of these instruments, we think it will be allowed that the proxy voting ought to be used discreetly, and with considerable restrictions.

As already said, the case of the Clarence line is but a sorry specimen of the benefits resulting from a non-resident Board of Direction. There appears, indeed, to be a good deal of mystification as regards the exact position in which this Company are placed, and we should be glad to have some farther information upon several points in connection with it. How happens it that the concern has become so involved in debt, apparently with little hope of extrication? Are there any Contractor-Directors in the Management, as in the Durham and Sunderland Company, upon which we recently commented? What is the connection between this Company and the Stockton and Hartlepool, (a Company we believe not incorporated,) as regards the origin of the latter and the differences now prevailing; and how happens it that the Clarence Directors retain as their professional adviser, a gentleman who, like Mr. JACKSON, their solicitor, steps out of his ordinary routine to forward what appears to be a movement hostile to those who employ and pay him? These are a few of the points respecting which we are desirous to be more minutely informed, before entering further into the matter.

A FARTHER opening of the Ulster Railway took place on Monday last, as detailed in another page. In Ireland, where works of this description are unfortunately rare, such an occurrence is to be regarded as of some importance. It is quite clear that isolated efforts will never secure to that country the full benefits to be expected from an extended system of railway communication; but, nevertheless, the progress and completion, and, we trust, the profitable results of such undertakings as the Ulster line, will doubtless encourage capitalists to project and execute similar works in other districts. Every step will be something gained,

Digitized by Google

and may perhaps lead in the end to the success of a more comprehensive scheme.

The Ulster Railway is now open for a distance of twenty miles, namely, from Belfast to Lurgan. An interesting description of the works upon the line precedes the notice of the opening, for which we are indebted to a local contemporary. One very remarkable and very gratifying fact in connection with the line (we wish it were not *so* remarkable), was noticed at the dinner given to celebrate the event, namely, that the works have been completed *within* the estimate of Mr. WOODHOUSE, the gentleman who originally surveyed and laid out the railway! We sincerely trust that the expectations of the proprietors, as to the proceeds of the line, will be amply realised.

WE have more than once had occasion to lament the misunderstanding, or whatever it may be, that has hitherto prevented the construction of the short but important connecting link between the Liverpool and Manchester and Manchester and Leeds Railways. Our readers are aware that both Companies have obtained Parliamentary powers for making, each a moiety of, the proposed line; but while the Leeds Directors are anxious to carry the project into effect, the Liverpool Company—from what cause has never very clearly appeared—decline to proceed further with the scheme, at least for the present.

The Manchester papers of last week give the particulars of an occurrence which may perhaps tend to modify the views of the Liverpool Company upon this point, but which at any rate cannot fail in its results to exert a material influence on the prosperity of the other Company. We allude to the practical introduction of steam navigation on the river Irwell—a circumstance which bids fair to raise up a most powerful rival to the Liverpool and Manchester Railway Company, in the carriage of goods between Manchester and Liverpool, *even as regards time.*

The Leeds Company have Parliamentary powers for the erection of a station at Hunt's Bank adjoining the river, and it is easy to perceive that they will avail themselves of their position, so that we may speedily expect to see the establishment of a very superior conveyance between Liverpool and Hull.

We must again express our regret that anything should have interfered with the harmony which at one time appeared to subsist between the two Companies in reference to the junction line. We have little doubt that its construction would be mutually profitable, but at all events it would unite two neighbouring lines in closer bonds of co-operation, and take away the necessity on the part of one of them of having recourse in self-defence to measures which may very sensibly affect the well-being of the other.

—•—

THE Paris correspondent of the *Globe* evening paper, mentions a rumour that there is some misunderstanding amongst the French and English shareholders of the Paris and Rouen Railway, as to the plans of the English engineer; but that the work is, nevertheless, proceeding with great energy. It is but just (he adds) to the superior authorities, to say that every facility in their power is afforded for the undertaking. The juries also, for assessing the value of the property required by the Company, are favourable to the Company wherever equity will allow them to be so. Two recent decisions at Versailles are worth recording. The Mayor of one commune demanded an indemnity of 37,000f., and the Mayor of another commune 100,000f. As the capital of the Company is chiefly English these gentlemen thought it patriotic to extort all they could; the jury, however, has showed them, that for a national enterprise foreign capitalists are rather to be encouraged than thwarted. To the modest gentleman who demanded 37,000f., they have awarded 650f.; and to the other, who demanded 100,000f. they have given, 1600f.

—o—

AN inquiry was recently made through our columns, relative to the rating of railways. Perhaps the following case of canal rating, for which we are indebted to a correspondent, may throw some light on the matter:—

The Commissioners of Land Tax for the Division of Kington, in the county of Warwick, assembled at the Justice Room, in the County Hall, Warwick, on the 19th ult., to hear an important appeal touching the liability of the Oxford Canal to be rated for land tax in the township of Wormleighton, in the said division and county.

The Commissioners present were Col. Miller, J. Bracebridge, and J. Harding, Esqrs.

It appeared that the whole of the township of Wormleighton is the property of the Right. Hon. Earl Spencer, with the exception of the Oxford Canal passing through it. The quota of land tax fixed upon the township is 299*l.*, the whole of which his Lordship has hitherto paid; and the object of the present appeal on behalf of his Lordship was to quash the rate and re-assess the township by an equal pound rate.

It appeared that his Lordship's estate was rated to the poor's rate at 3,100*l.*, and the canal at 811*l.* and it was contended that the land tax ought to be paid in the same proportion. Mr. Baker, the Clerk to the Commissioners of Land Tax for this division, read a letter from the Hon. the Board of Taxes, Somerset House, in which they expressed their opinion that the Canal ought to pay in proportion to its annual value. The Commissioners, therefore, reduced Earl Spencer's rate from 299*l.* 10s. to 237*l.* 7s. 3d., and assessed the difference upon the canal (viz. 62*l.* 2s. 9d.) which had previously paid nothing.

—o—

ON Thursday Professor Vignoles gave an introductory lecture on Civil Engineering at the London University College. The importance of cultivating this study was ably enforced by the Professor, who showed that it was not to be taken up in a day, but required a sound practical education as a basis, and an intimate acquaintance with mathematics and geometry. The lecture was extremely interesting, and was listened to with great attention. In the course of his observations, Mr. Vignoles said the mercantile world sadly complained of the heavy expenditure on railways. It was an axiom with him never to regard such undertakings as works of art, nor to estimate them by the high scale which such consideration called for, but to regard them according to the actual profit resulting from them. Expenditure should be kept down, and recklessness abated. An engineer of eminence was at issue with him on this point, and expressed himself thus in conversation:—"Never tell people, at first, what the works will cost, or they will never be done." And another had remarked to him:—"It is no matter what it costs, it will be sure to pay." The Standing Orders of Parliament had been decried for enforcing engineers in their calculations to enter into precise and detailed relations of their plans; the Professor considered that the Standing Orders of Parliament had only ordered what was just and proper.

—o—

WE learn from the Irish papers that a meeting of the Committee, appointed in 1835, to aid in the promotion of the then contemplated railway communication between Dublin and Cork took place recently, when the project was revived, and an unanimous expression given of concurrence in the vast national advantages that would arise from the undertaking. It would appear, from what passed, that active measures are being taken to ensure the aid and countenance of Government in carrying out the provisions of a Bill, making Limerick the terminus of the communication. A deputation was appointed to wait on the Earl of Bandon, at the Imperial Hotel, who received the deputation, and entered warmly into their views of the speculation, and intimated his willingness to preside at a public meeting of the landed and mercantile interests of county and city, to be held on Thursday, the 25th instant.

—o—

WE have not yet been able to obtain a sight of Professor Barlow's Report, relative to the late fatal accident on the Brighton Railway. Considerable surprise has been manifested that the Directors have not laid an abstract of its contents before the public. By some it is said that the Board of Trade regard the Report as a private communication, solely for their own guidance, and that they would object to its publication; others allege that it is by no means favourable to the Management, and that therefore it is carefully suppressed. Whether either of these conjectures is right, we cannot of course say, but it certainly *does* look strange that a different course from that which was adopted in similar instances should be followed in this.

—o—

IT is stated in some of the daily papers, that "an arrangement will, in all probability, be shortly made for sending the mail from London to Edinburgh in 26 hours." We are glad to find that our representations on this matter are likely to be attended to.

—o—

IN the speech of the King of Belgium, delivered a few days ago, on the meeting of the Belgian Senate, the following sentences occur:—

"The works undertaken either by the state, the provinces, or the communes, are prosecuted with true emulation: all the lines of railway are adjudged, and the day is not very remote when this great undertaking will be completed.

"Measures will be submitted to you with respect to our navy, to the development of our foreign mails, and to favour the circulation on our railways."

The mention of railways in any of *our* Royal speeches, is scarcely to be looked for. Perhaps it is as well that matters in this respect should remain as they are.

—o—

THE following paragraph in reference to the Thames Haven Railway has been sent to us; we know nothing of the matter ourselves:—

"We are happy to have it in our power to state that the new shareholders coming into the Thames Haven Company will do so free from debts and responsibilities, and their funds will be applied to the immediate commencement of the undertaking; the liabilities standing against the Company having been

Digitized by Google

wholly cleared off. The Directors, we understand, intend disposing of the forfeited shares at a discount, thus offering a bonus in addition to the above advantages; and we have reason to believe the allotted shares will be quickly disposed of."

THE SLIP ON THE CROYDON RAILWAY.

SINCE our notice of last Saturday, every advantage has been taken of the fineness of the weather to push on the work of removal as rapidly as the confined scene of action will allow. The main object has been to clear a gullet, and open the down line of railway first; but considerable impediment has arisen from the earth following down into the gullet, which required a number of barrow-roads to be run in upon the slope from stages at each end of the slip, so as to lighten it at the side. The large body of the slip remains on the solid floor, and has given no signs of movement for several days, but there are several large masses of clay overhanging upon the edge of the floor, which must be removed to avoid the risk of filling in the gullet after it has been opened. Four trains of earth-waggons are employed, day and night, in removing the spoil. Those below the slip are worked by an engine, and tipped on the side of the Cold-blow embankment. Those above are worked by horses for about a quarter of a mile up the inclined plane, in the New Cross cutting, and the spoil run out in an adjoining field. About 160 men are unceasingly engaged on the slip, and up to Thursday night about 6,000 yards of earth had been tipped, and the gullet opened for nearly three quarters of the length of the slip on the down line of railway.

In order to avoid the delay caused by coaching the Brighton passengers between New Cross and Forest Hill, and to give sufficient accommodation for the passengers of both railways, a new pathway seven feet wide has been constructed a short way up the east slope, opposite the large slip. This has been planked and covered with an awning, and the delay caused in transporting Brighton passengers and luggage along it, from train to train, was less than 10 minutes on Thursday, the first day on which it was used.

We mentioned last week the assistance rendered to the operations of the Croydon Company, by their neighbours of the Brighton and Greenwich Railways. We have since learned that Mr. William Hoof, of Kensington, the Contractor by whom a great portion of the Croydon Railway was executed, visited the ground early on the morning after the slip, to offer any assistance, and to place his extensive stock of materials at the disposal of the Company.

NORTH MIDLAND RAILWAY.

To the Editor of the Railway Times.

Sir,—I observe that in the last number of the *Railway Times*, a fellow-townsman has commented upon the estimate which I forwarded to you of the prospects of the North Midland for the current half year, and has been pleased to designate the statement I then made as "decidedly erroneous" and "loose," although the only difference between us is, that he *thinks* the receipts will average 4000*l.* per week to the end of the year, and I *thought* they would not exceed 3,052*l.* It is probable his estimate will be more nearly correct than mine, and I shall rejoice if it be; but it will not very materially alter the result at which I arrived. He has in one short sentence directed us to the cause of the present depressed condition of this line. He says, "the line has cost too much to realize the brilliant expectations at one time anticipated from it," &c. Yes, and what was it that incurred this cost? Why this very word "confidence"—confidence in estimates which have been proved to be worse than worthless. But though these are my sentiments, I can assure him that I had not the most remote intention of detracting from that confidence which may with propriety be reposed in the present Directory. But this feeling does not appear to me to be at all merged in the endeavour to ascertain what are the fair and legitimate prospects of the shareholders at the present time. By a reference to the letter of "A Sufferer" in the same paper, it will be seen that I have rather overrated than otherwise the dividend likely to accrue on the present receipts. There is, however, considerable difficulty in ascertaining from the accounts, as they are published, what is the actual share capital of this Company. In the last Report, we are told that 2*l.* per share on the old shares, and 1*l.* on the new, was to be paid, but the amount that would be required for this is not named, except that the Secretary, in reply to a question, states it at about 45,000*l.* Taking this to be nearly correct, it will represent a share capital claiming a dividend of 2,250,000*l.*, exclusive of the third shares lately issued, "A North Midland Shareholder" will therefore see that the estimate of "A Sufferer" is more nearly correct than mine. But do I from this at all despair of the ultimate success of the undertaking? Not in the least. I fully agree with my townsman that there is little stock in the market which offers prospectively a better investment than the stock of the North Midland at its present quotation. I think, however, the way to keep it buoyant is to look the difficulties which present themselves fairly in the face. I have never found this panacea of "confidence" of much service without exertion, and the application of remedies where remedy is needed.

Your obedient servant,
WILLIAM SIMPSON,
Sharebroker.

Leeds, 11th Month, 1841.

NORTH MIDLAND RAILWAY.

To the Editor of the Railway Times.

SIR,—I noticed in your last publication two letters in reference to the income, expenses and management of this railway.

I agree with the gentleman who signs himself "A Shareholder," that if this line were only properly managed, and the traffic obtained upon it which eventually must come from Sheffield, Barnsley, and other places, it must soon, notwithstanding the extravagant outlay on its construction, be a *paying line*, but whether the Directors are worthy of the continued confidence of the shareholders, or not, is a matter which probably at the next half-yearly meeting in February may create considerable difference of opinion. Are they not responsible to the shareholders for allowing the Engineers, &c. to expend so large a sum upon the construction of this line? Are they not blameable for allowing so large a sum to be expended on the building of the stations which are so much more expensive than upon any other line? Are they deserving the confidence and praise of the shareholders for the expense of working the traffic, it being nearly double what it ought to be, and exceeding so greatly those lines in connection with it? I have, Sir, almost daily opportunities of making personal observations with regard to the management of the traffic upon this railway; and I do not hesitate to pronounce it the worst managed of any I am at all acquainted with.

In answer to "A Sufferer," (not the only one I am sorry to add), I beg to send you my calculations, which will show a different result from his, if I am correct; and I have no doubt the receipts will be found equal to the sum named. The shareholders ought to have a dividend next half-year after the rate of 4 per cent. The only error I can have made must be in the working expenses; and if this line exceed 40 per cent., which is more than either the York and North Midland or the Manchester and Leeds have charged, the cost ought most certainly to be reduced.

The receipts for this half-year will be	£120,000
Deduct 40 per cent. for Management	48,000
To pay interest on loans and dividends....	£72,000
Four per cent. on the amount paid on calls, allowing 2 months on the last call on the third shares, and 6 months on the shares	48,500
Interest on loans 5 per cent., as per last statement	20,000
Total sum for interest on shares and loan	£68,500

which will leave a surplus of 3,500*l.*

I am, Sir, your most obedient servant,
ANOTHER SHAREHOLDER.

York, Nov. 10, 1841.

THAMES HAVEN RAILWAY AND DOCK.

To the Editor of the Railway Times.

SIR,—I cannot condescend to keep up a correspondence with an anonymous writer, who makes charges wholesale against a Company, in which, if he be really a shareholder, he has the means of ascertaining the correctness of at any time he pleases. That such charges are not true, the printed reports with the accounts attached to them of the half yearly meetings sufficiently testify; and I should altogether have left the large circulation of those reports to have answered the assertions and insinuations were it not necessary that the public mind should not be abused as to the power of the Directors to withhold all and every information properly applied for at the office. Most certainly none has ever been withheld in this, or at the public meetings. The fault in all these cases lies with the shareholders themselves.

I am, Sir, your obedient Servant,
HENRY AMSINCK, Secretary.

Thames Haven Office, 2, St. Mildred's Court,
Nov. 11, 1841.

THAMES HAVEN RAILWAY.

To the Editor of the Railway Times.

SIR,—I regret exceedingly to find your correspondent, "J. S.," making such a proposition as that of dissolving the Company. If your correspondent be in reality a shareholder, why not accept the privilege offered—pay his call and retire, instead of worrying those who are endeavouring to add new interest, and carry thus the object of the undertaking? When once clear of the discontented portion of the shareholders, something may be expected from the respectable portion remaining, and their friends who may now enter into the undertaking.

The great evil which this Company has laboured under, is the want of unanimity in its proprietary; for whilst the one portion are desirous of carrying out the undertaking, the other are advising a dissolution! Now that the grumbling and disaffected portion have the opportunity of retiring and divesting themselves of further liability, they refuse, and still cry "dissolve!" If *they* do not wish to have anything more to do with the concern, which can be their only object in dissolving it, why not let those who can carry on, and are willing to carry the object through, do so? Is it fair, Sir, to impede their efforts, when an opportunity is afforded for retiring?

I am, Sir, your obedient servant,
A SHAREHOLDER—C.....

London, Nov. 8, 1841.

RAILWAYS IN FRANCE.—The following is the result of a comparison of the traffic on the railways of St. Germain and Versailles (*rive droit*) during the month of October this and last year:—

Oct., 1841.	Passengers.	Receipts.
St. Germain	95,127 ..	107,640f.
Versailles	104,313 ..	118,026
	199,440 ..	225,666f.
Oct., 1840.		
St. Germain	83,777 ..	92,407f.
Versailles	100,041 ..	99,758
	183,818	192,165f.

The increase is slow but steady on both lines; taken conjointly the single month of October has produced an excess of 15,623 passengers, and 33,500f.

FOUR-WHEELED AND SIX-WHEELED ENGINES.

To the Editor of the Railway Times.

SIR,—I have perused Mr. Hood's letter upon four-wheeled and six-wheeled engines, published in the last number of the *Railway Times*, 23rd October, and from the manner he has treated the merits of the six-wheeled engines, it is evident that his observations hitherto have been confined to one particular description of six-wheeled engine, and that he has by no means drawn a fair line of demarcation through those points of distinction, which constitute the degree of safety between four-wheeled and six-wheeled engines.

In the following remarks I shall confine myself to the exposition and correction of several errors, and misstatements, made by Mr. Hood, in regard to the comparative safety and suitableness of six-wheeled engines, to work any railway otherwise than one which is a perfectly straight line.

Mr. Hood, after making a few judicious remarks as to the desirableness of obtaining a correct knowledge of those elements, which, when combined, shall constitute the system of greatest safety in the practical working of the machinery upon a railway, and the difficulty of arriving at a decided conclusion upon this matter, says, "The difference between four-wheeled and six-wheeled engines is not confined merely to the number of wheels; both the weight and the length of the engines vary in a very great degree; in both these particulars the six-wheeled engine exceeds the other by upwards of 50 per cent."

This description of the difference between four-wheeled and six-wheeled engines embodies two very palpable errors. A six-wheeled engine is not more than two feet longer, and the weight is never more than three tons greater than in a four-wheeled engine of the same power; in both these values I have exceeded the actual results in practice, and to any person practically acquainted with a locomotive engine these facts will appear obvious. But as assertions are not always facts, let us examine the constitution and arrangement of the different items, the aggregate amount of which compose the ultimate weight of a locomotive engine.

It will be admitted that two engines, having the same diameter of cylinder, the same length of stroke, and the same diameter of driving wheels, will be of equal power, and to maintain this power in active operation the same quantity of steam must be expended by both engines in equal times. This again requires that both engines shall have boilers of the same heating and generating powers; and to accomplish this, both boilers must be of the same length and diameter, having the same number and size of tubes, also same size of fire-box, smoke-box, &c. I hope these premises will not be disputed upon the plea of improvement in figure or construction, as both engines can have boilers partaking equally of these properties. Thus far, then, both engines are similar, and if we now suppose the one a four-wheeled and the other a six-wheeled engine, the only difference in their weights will be the weight of an extra pair of wheels, axle, guard-plates, brasses, and springs, intermediate framing, and the additional length of axles and cross beams. Should the six-wheeled engine have outside framing, this is all the extra weight, and it will appear evident that instead of being upwards of 50 per cent., it is under 30 per cent.; and as to the length, I am at a loss how to dispose of the additional two feet I have allowed, unless we keep the buffer beam further from the end of the smoke-box, and lengthened the engineer's stand beyond what is found necessary for the four-wheeled engine; for as the extra pair of wheels is placed immediately behind the fire-box, there is not any additional length of framing required for them.

As regards the arrangement of the framing and wheels, which Mr. H. seems to think of considerable importance, this difference is not an indispensible or absolute one, nor is it by any means so universal as is generally believed. The Dundee and Arbroath Railway Company have all their engines six wheeled, with the wheels exterior to the bearings; the Arbroath and Forfar Railway Company, ditto; the Dundee and Newtyle Company have half the number of their engines six wheeled, and inside framing; and on the Glasgow and Ayr Railway (which Mr. H., in his enumeration of railways having four-wheeled engines, says has "nearly the whole,") there are twelve six-wheeled engines, with inside framing, and only eight four-wheeled engines.

Mr. Hood's next difference, viz., driving wheels without flanges, is, like the last, not an essential one, and I should think not very extensively adopted. I am only aware of one house that manufacture engines of that description, although there may possibly be more.

Mr. H. next notices the different motions the engines partake of (in their progressive motion along the line), apart from the go-a-head one, and satisfactorily accounts for the causes of those motions; but unhappily, in reasoning of their effects upon four-wheeled and six-wheeled engines, his prejudice for his four-wheeled favourite, upsets his better judgment. The motions referred to are three, viz.: rocking motion, horizontal, lateral, or zig-zag motion, and vertical or pitching motion.

Mr. H. says, "These several motions occur in different degrees in engines with four and with six wheels; the last of these motions, in so far as it is produced by inequalities in the rails, is greater in four-wheeled than in six-wheeled engines. But as this kind of motion is in a great measure produced by the second, which affects six-wheeled engines much more than the others, the result will be, that in a perfectly straight road the six-wheeled engines will be the steadiest, but in any road possessing curves, the four-wheeled engines will in that part of the road have greatly the advantage."

Mr. H. draws his conclusions without examining his evidence. What is the reason of the greater pitching of a four-wheeled engine? Is it not that the base is so small in proportion to the superstructure raised above it it; is it not from the circumstance, that the centres of the axles or points of support lie so near to one another? Consequently, the ends of the engine being so far projected over them, if one of the driving wheels of a four-wheeled engine pass over a part of the rails having a deflection of one half inch, the end of the engine being about double the distance from the fulcram, or centre of motion, (viz.: the axle of the leading wheels,) will be depressed double that space, or one inch, independent of the deflection of the carrying spring, occasioned by the sudden surge, and which will of course rise again in the same proportion. But suppose a six-wheeled engine to pass over the same rail, of course each wheel in rotation would descend into the curve or bend, but would the engine thereby rock or pitch like her predecessor? Suppose one of the leading or following wheels were in the curve or deflection, that part of the engine over the wheel would not go down so far as did the four-wheeled engine, for the centre or driving wheels would support that end of the engine at the proper level, minus the deflection of the carrying spring, occasioned by the superior weight transferred to it at the moment. And it needs no reasoning to show, that when the driving wheels were passing over the deflection, the motion would be scarcely perceptible, the engine being then supported at each end by the fore and aft wheels, both upon the perfect part of the rails.

But Mr. H. admits all these facts to exist, if the line of railway be straight; but in any railway having curves, he says the result is otherwise. To support his statements he gives the following reasons, viz.:—"It must be quite obvious to every one that any body of the parallelogram form, moving in curved lines, must be more easily moved in proportion to its shortness, as it then adapts itself more readily to the curvature. Now in the case of locomotive engines, the extreme points of support in four-wheeled engines are about six feet apart, while in six-wheeled engines they are nearly 11 feet. To avoid the difficulty which arises from this great increase of length, the gauge of the wheels is made much smaller than the gauge of the rails, which will evidently increase the second kind of motion above-mentioned, by allowing more of the lateral sway."

This is very plausible reasoning, and no doubt sounds very well with those whose time and pursuits prevent them from obtaining an acquaintance with the practical working of a railway, and certainly paints the *formidable difficulty* of curves on a railway, in colours not to be easily mistaken; and as a recent writer in your journal truly states, that one-fourth of all the railways in Britain is composed of curves, I think it will be worth while to inquire whether these difficulties admit of a solution and a rational remedy.

First, then (for I shall begin at the end and reason backward), I am not aware of any makers of six-wheeled engines who make the gauge of their engine-wheels much smaller than the gauge of the rails. They do not all adopt this practice, and it is not requisite that any of them should do it. I believe that there are few curves, upon any modern railway, with a radius less than one half mile; the generality of curves will be found to have their radius double that amount. But take one of the smallest—a curve whose radius is one-fourth of a mile, or 1,320 feet—and place upon it a six-wheeled engine, with the fore and aft wheels 11 feet apart, what will be the lateral deflection of the rail, or the versed sign of an arc of that circle, the chord of which is exactly 11 feet, or the distance between the fore and aft wheels of the engine? $1320^2 - 5.5^2 = 1742369.75$ and $1320 - \sqrt{1742369.75} = .01146$ of a foot, or 13752 of an inch, very nearly one-eighth of an inch. Can we suppose that this is the cause which requires that six-wheeled engines be made so much smaller in the gauge. If it is, for there does not seem to be another, it is not so very formidable as we might have been led to suppose; in fact, it furnishes no more objection to the use of a six-wheeled engine, even upon this narrow curve, than it would be upon a straight line; and there is no line of railway in use, but you may meet with as good reasons for having the wheels of both four-wheeled and six-wheeled engines of smaller gauge, at every hundred yards along the line, by the rails either being out of line at the joinings, or deflected in the middle of their length.

Secondly, let us come to the parallelogram problem; and here again, at the outset, we are met with the difficulties of *curvature* which we have been examining, and which, even in *a serious case*, is dissolved quickly by a little of the touchstone of mathematics. And as it has been admitted that a six-wheeled engine will move much steadier along a straight line of railway than a four-wheeled engine, when the rails are deflected or otherwise out of order, and as we have seen that there exists no reason why they should be narrower in the gauge than any other railway vehicle, it must follow that the same cause which contributes to their superior steadiness, when passing vertical irregularities, viz., greater length of base in proportion to the length of the body carried above, and also in proportion to the distance between the rails, must in like manner produce a steadier motion also when going round curves—for a curve of one mile radius is practically as far as regards the moving of a parallelogram 11 feet long, to all intents and purposes a straight line; and no one need be told that an engine 16 feet long, with 5½ feet between the centres of the axles, and one half inch of play in the gauge, if turned round diagonally as far as the rails will allow, will just form an angle of double the number of degrees, with the rails, that another engine would do with the same play in the gauge, but with the centres of the wheels 11 feet apart. Yet with these glaring inconsistencies staring him in the face, Mr. H. asserts that a four-wheeled engine will go steadier round *a curve* than a six-wheeled one.

There is another objection urged against the application of six-wheeled engines, as regards curves, by the advocates of four-wheeled engines, and it is the only one which requires a serious consideration, but, unfortunately for the objectors, it applies with equal force against a four-wheeled engine. It is

Digitized by Google

that tendency which every body in motion has to move in a straight line if undisturbed by ulterior causes. This, then, is that tendency which an engine leaving a straight line and entering a curve has to continue the rectilinear motion. It is well known that the cone, or difference of diameters at the flange, and at the outside of an engine wheel when in good order, is not less than three-eighths of an inch. The usual play of the wheels in the gauge or between rails, on most railways, is about three-fourths of an inch; now, from the tendency of the engine to keep moving in a straight line, when entering a curve, the wheels next the outside of the curve will have their guide flanges run up close to the inside of the exterior rail, which will produce a difference of one-eighth of an inch upon the diameters of the wheels, at the centre of their rolling surface, or point of contact with their respective rails. One-eighth of difference on the diameter is equal to three-eighths on one revolution of a leading wheel 3 feet 6 inches diameter, or 11 feet measured along the rail; hence, while the wheel on the exterior rail makes one revolution it progresses 11 feet, but the wheel on the interior rail will only have moved 10 feet 11 inches and five-eighths, which is the exact proportion required for a curve 1,320 feet, or one-fourth of a mile radius, and this is certainly a much smaller curve than is generally adopted in practice. But if Mr. H. should still prove sceptical, I can refer him to a railway worked with passenger and goods' trains, varying from 8 to 18 carriages, and drawn by *six-wheeled engines*, and those engines with their trains have gone daily round a double curve of 1,200 *feet radius*, for the last three years, at a speed from 20 to 30 miles per hour, and have never run off the rails.

Although I have already trespassed by the length of my letter, yet there is another statement of Mr. Hood's which is so startling, and so much beside the truth, that I must beg your further indulgence to allow me just to notice it. Mr. H. says, "in any mode of constructing six-wheeled engines the great increase in length already mentioned, necessarily produces a greater tendency to run off the lines at curves, a tendency which is increased by the fact, that owing to the vertical deflection of the rails, the whole of the six-wheels are scarcely *ever actually in contact with the rails at any one moment.*"

As I have already shown the fallacy of the doctrine that six-wheeled engines are owing to their greater length, liable to run off the rails at curves, I shall just advert to the assertion, that this tendency is increased owing to the vertical deflection of the rails.

Mr. H. to make good his statements, has, with his usual ingenuity, and a few strokes of his pen, rapidly manufactured a piece of railway, which, to say the least of it, is very well calculated to produce his contemplated casualty—a six-wheeled engine off the rails—in fact, it beats hollow the famous "Slamanan" floating railway, where I have seen the sleepers and rails sinking under the weight of *a six-wheeled engine*, as it moved along, making a beautiful curve, of at least two inches deflection, but still we had no running upon *three legs* in matter. Mr. H. either means to treat the admirers of six-wheeled engines to a burlesque, or which, I dare say, is more likely, he has undertaken to put the public right upon a matter of which he is practically ignorant himself, and I am sure that if Mr. H. had understood the manner in which the springs bearings and axles of *all engines* are fitted up, and connected, he would never have ventured to make, such hop, step and leap statements regarding the wheels rising off the rails.

I am, Sir, your obedient servant,

THEODORE CRUCKSHANK.

FOUR-WHEELED AND SIX-WHEELED ENGINES.

To the Editor of the Railway Times.

Sir,—On the subject in question, Mr. Hood has a very excellent remark at page 1113, *R. T.*, to which none of us can too closely attend, more particularly in a discussion like the present, in which there is to be found a variety of practical advantages in the different constructions of locomotives, independent of the more important questions of the unfortunate accidents which have taken place with both four and six-wheeled engines. If Mr. H. should favour us with returns to a few questions we may fairly hope that in doing so, he will not attempt "to controvert facts by arguments," as that "is not the way to arrive at truth in a matter which admits of proof by reference to experimental demonstration of the most extensive and conclusive character." Now Mr. H. asserts, that "on one railway alone, upwards of 3,000,000 miles have been run with perfect safety by four-wheeled engines." In the first place, does Mr. H. mean to deny that several cases have actually taken place in which the four-wheeled engines of that line have, without any apparent cause, gone off the rails and tumbled over, both in the early and subsequent career of that Company?

Second. Does Mr. H. mean to deny that it was the fatal results, which attended some of the cases alluded to, which taught that Company the prudence of running for a time at a slower speed than their grand six-wheeled neighbours?

Third. Does that gentleman mean to insinuate, or to assert, that he can produce a single instance of the kind, in which six-wheeled engines, with outside bearings, have either gone off the rails, or tumbled over, without any apparent cause, in the manner that four-wheeled engines with inside bearings have so repeatedly done on different railways (notwithstanding his laboured "arguments" to make out a case); but if so, will Mr. H. be kind enough to inform us about what periods, and whereabout such casualties have taken place, and what were the consequences.

Fourth. Will Mr. H., in consistency with his own proposition, point out actual "facts" as exceptions in the different railways where inside four-wheeled engines are used, which have not more or less experienced similar tumbling propensities, and if so, where are those to be found?

Fifth. In cases of collisions, or of being thrown off the road from any other cause, does Mr. H. mean to deny, that the engine-driver or the stoker almost invariably suffer, whilst they as generally escape, under similar circumstances, with outside six-wheel engines: and if so, will he prove it by producing a dozen "facts" on each side, for we beg of that gentleman to excuse us in declining "arguments." Nothing but facts will be satisfactory answers.

Sixth. I know from observation, that inside engines without springs have a jolting and tremulous motion (as might be expected), though they are not subject to anything like to the rocking motions of the inside engines upon springs; I therefore assert that the road is not the great cause of rocking motions, and if the advocates of the inside system question this assertion, I call upon them to disprove it by "facts."

Seventh. The early locomotives of the Liverpool and Manchester line, and also their mail coaches, were upon inside bearings and springs; they both rocked from side to side, much more than anything upon the outside system; and in consequence outside bearings were generally substituted, and the rocking was reduced to a mere trifle. Your Liverpool correspondent (Mr. Jones) has questioned Mr. Seaward upon this point. Let Mr. J. controvert the above "facts" if he can; they are before his eyes in his own town.

Eighth. The Liverpool and Manchester coaches formerly had their wheels closer together, similar to the four-wheeled engines; they both had a considerable pitching and serpentine motion in consequence; and on the application of the third pair of wheels to the engines, and the removal of the coach axles further asunder, both of those motions were brought within moderate bounds. And their length has not created a practical difficulty in passing curves, nor do they require an extra quantity of play upon the road. Let the advocates of four-wheeled engines, &c., controvert this statement by "facts," if they can; and also that the maintenance of the way is generally less per mile, per train, where six wheels are used, than where four-wheeled engines are employed.

Ninth. Ships without the requisite proportion of breadth and length, to their depth, are as generally known for their cranky propensities and bobbing and pitching motions, as short-coupled engines are upon the narrow foundation of the inside system: let Mr. Hood deny the fairness of the comparison if he can, as a popular illustration of similar (and in principle almost parallel) "facts."

Tenth. The middle of a locomotive, like the midships of a ship, is the centre of their oscillations, and the crank axle, in consequence of its position, has not the power to steady the engine against a pitching and serpentine motion to the extent of the hind and front axles; from the combination of the whole, producing a compound motion across the engine in the diagonal direction, consequently in some cases where the front and hind axles of locomotives made within the last two years, have been projected further through the wheels, to give a still more extended width for the springs, they are found to run steadier than six-wheeled engines in general, although they have only two inside stay-frames, with all the weight upon the crank, on two inside bearings; and thereby have all the protection of the four-wheeled engines in that respect. Mr. H. has questioned this point,—will he give us "facts," and state the particulars of his objections more minutely, and if any accidents have taken place with them through such objections,—will he be kind enough to to state when and where they took place, and also whether the practical working of those engines has not been more economical than either four or six-wheeled engines, as generally constructed and under similar circumstances?

Eleventh. It is a fact, (though not perhaps sufficiently known), that the outside system of bearings requires railway axles generally to be about 40 per cent. stronger, and cranks about three-fourths of an inch more in diameter than is necessary for the inside system. The want of this proportionate difference in the dimensions with outside bearings, has led to their frequent breakage, and occasional accidents in consequence; but they have stood when proportionately made, and therefore their failure cannot be attributed to an inherent property of outside bearings, any more than it would be if the cranks on the inside system were made as much too small. Of course, the extra size is not only an additional expense, but also a constant source of greater weight and friction. But setting aside the mistakes which may have been inadvertently made in both classes of engines on several points, I believe that a fair comparison of the maintenance of rails and way, and locomotive power, will show a less cost per ton, or per train, per mile, where six-wheeled engines only are in use, than upon similar lines where four-wheeled engines only are used; and also, without finding a single instance of an outside six-wheeled engine rocking and pitching itself off a road in *only moderate order*, no matter how quick the speed, or slipping of the wheels, but, in the absence of other causes and similar to the circumstances of the several accidents that have taken place with inside four-wheeled engines suddenly tumbling over, when nothing but the combination of different violent motions across the engine in the diagonal direction appeared to be the cause of it.

Twelfth. Should your four-wheeled correspondents find my remarks on the different class of engines to which I have alluded, to be drawn from "facts," will the four-wheel advocates refrain from "controverting them by" mere "arguments," and give us plain matter of "fact" returns; if not, will they follow up Mr. Hood's proposition, and candidly acknowledge them to be "facts?"

I am, Sir, your obedient servant,

JOHN GRAY.

English-street, Hull.

FOUR-WHEELED AND SIX-WHEELED ENGINES.

To the Editor of the Railway Times.

SIR,—With the same brevity that your correspondent "Lachesis," treats the subject of four and six-wheeled engines I will reply to him.

"If one of the cranks of a six-wheeled engine breaks, it has four wheels left to run on," till it suddenly stops off the rail in the compass of "a nutshell," two of the remaining wheels having no flange to keep it on the rails.

If the hind axle breaks, perchance it may not upset, nor would a four-wheeled engine. If the fore axle breaks, it would instantly turn over on whichever side it ran off, and its additional weight over a four-wheeler would perhaps give two or three passenger carriages a lee lurch with it.

Contrary to "Lachesis'" statement, engine-makers have not yet hoisted their colours in favour of either fours or sixes, and the only contest has been by volunteers against Mr. Seaward, who gladly crept into sick quarters on the first broadside.

Therefore, "the fours have it" by a large majority, and the public will be satisfied of their superior safety, until able advocates of six-wheeled engines prove that every road vehicle in the kingdom *is* and always *has been* running on erroneous principles.

I am Sir, yours truly,

A CONSTANT READER.

11th November, 1841.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—In your last number is a letter signed "S. P.," Birmingham. The writer, considering his own opinion valuable, kindly presents it to your readers, in order that such a mass of good advice may not be imbibed by one solitary friend. The consulting party has probably been guided by "S. P.'s" opinion, but the shareholders will perhaps obstinately await the event of time, and not allow themselves to be led astray by the unsupported and contradictory statements of the "sinister" or the "sanguine." I borrow these two words of your correspondent; and whilst they are before us, I would wish to draw attention to that part of his letter wherein he says, "So far the traffic, and the road itself, though they present no special feature, are equal to the average traffic of other summer lines, and would perhaps justify investment at par now, though a fair return to the original holders at par, including interest on 125*l.*, is not to be expected, taking the cost to be that of the average of other long lines in operation."—Contrast this with the following:—

"Having thus shown that the only two amounts with respect to which any doubt could exist, are stated greatly in favour of the Great Western, *it thus inevitably results that by no contrivance can a dividend be fairly declared.*"

In one instance "S. P." chooses to fix par as the real value of Great Western shares; in the other he declares them valueless, nay, makes an elaborate calculation to prove an absolute loss to the proprietors from working the line. Contradictory evidence is at the best superfluous—for the most part criminal. I cannot designate "S. P." one of the "*sanguine;*" can you or your readers suggest *another* appellation?

I now proceed to a consideration of the three points—capital, revenue, and expenses, as laid down by "S. P."

1st. Capital. "S. P." states that a station in London, and a probable extension of the line at the London end, which cannot be constructed for a less sum than 500,000*l.*, will make nearly in the whole a grand total of 7,000,000*l.* This is too far-fetched to cause suspicion of truth.

Revenue. 12,300*l.* per week is fixed as the maximum average, and a rule of 6½ to 9 is delared infallible; but if the writer had chosen to avail himself of the published traffic returns for this line, he would find the rule to err as egregiously as himself.

The receipts for the month of July		£60,733
"	" August	65,529
"	" September	61,360
"	" October	57,284
An average of £10,682 per week for November and December		93,094
would be £13,000 per week for six months		£338,000

No reasonable doubt can exist that November and December will exceed the required amount; how, therefore, can "S. P." assume 12,300*l.* as the maximum average, to be in "no event exceeded," when the first six months show the above result? In a subsequent part of his letter, however, an "after increase, in no case to be expected to exceed 50,000*l.* per annum," is graciously allowed. The Exeter traffic, it is stated, "being entirely agricultural, is not susceptible of much increase, and may be expected to remain, like that on the Birmingham, nearly stationary after the first year"!!! Now if what is here stated respecting the Birmingham receipts were true, I should never expect a greater dividend than 6 per cent. from the Great Western; but I happen to have at hand a statement of the receipts on that line on its first opening throughout, which I give, and for "S. P.'s" edification contrasted with the Great Western receipts for corresponding weeks, and also the latest Birmingham receipts.

The revenue of the London and Birmingham line this year will amount to about 850,000*l.* If the Great Western increase in the same ratio, we find by a simple rule of three—if 74,000 produce 850,000; 94,000 will show for the Great Western in round numbers 1,080,000. But "S. P." says he takes into consideration the "thinly scattered population on this line, as compared to the Birmingham." Tring and Aylesbury against Slough, Windsor, Maidenhead, Reading, and Oxford, Coventry against Chippenham, Bath and Cheltenham, for population, and what is worst of all, travelling population!

Then as to goods; let any person compare the Great Western with the Birmingham, even in its present state, and ascertain what may be reasonably calculated on for the yet undeveloped traffic in freestone, coal, &c., and I would venture to assert an average of 5,000*l.* per week, will be eventually obtained.

3rd. Expenses. 2,600*l.* per mile is assumed by "S. P." to be the lowest possible charge for working the Great Western and its branches.

Bristol to Bridgewater is 34 miles, Swindon to Cirencester 17, in all 51 miles, at 2,600*l.* per mile is	£132,600
Rent and mileage, as charged by "S. P."	60,000
Total	£192,600
per annum is therefore charged for these lines, but what are the facts? Say their traffic amounts to £1,700 per week, which is, per annum	£88,400
Deduct 50 per cent. expenses	44,200
Add rent and mileage	57,000
Total	£101,200
Being a difference in the branches of	£91,400

per annum—the traffic in both cases remaining to be credited. But I believe these lines are worked at much less than 50 per cent., being almost exclusively passenger traffic. To fix an arbitrary sum of 2,600*l.* per mile for working the Great Western itself, is indeed most ridiculous, when we see by the last half-year's Report the 91 miles then open were worked at an expense for the half year of 73,408*l.*, or 1,600*l.* per mile per annum. I shall be happy to see this increased to 2,600*l.*, for then the dividend on the shares will be 12 to 15 per cent.

In conclusion, I should like to know what investment "S. P." considers good. Would he advise his friend to pay 3 per cent. at 89, in preference to a present certain 3*l.* per annum, for 57 in Great Western half shares, with a moral certainty of that income being doubled within two years; or has he some brilliant scheme of his own to throw all others into the shade?

I am, Sir, your obedient,

COCKER.

November 7, 1841.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—Since the period when railways first began to excite public attention, none has ever been the subject of so much diversity of opinion, from the moment of its first opening up to the present hour, as that which heads this communication. All shades and degrees of difference have been promulgated by its friends and opponents, from that of your correspondent "F." of Bath, who shows how 15 per cent. will be produced, down to "J. D.," of London, who doubts whether the loan creditors will not be compelled to put up with a composition in lieu of getting their 5 per cent. interest, leaving for the unhappy shareholders of course *nil.*

Of the various articles which have recently appeared in your columns upon this subject many carry with them their own refutation, but one—rather a lengthy one—which appears in your last under the signature of "S. P.," of Birmingham, commences with so much apparent candour, and professes throughout such a desire to elicit truth, and to deal with facts, not fancies, and sets down figures with so much confidence, that it would not be surprising if his statement should "chill the expectations and sadden the hearts of those," who, without further examination, should give implicit credence to the result of his investigations.

It would be a needless tax on my time and your space to follow your correspondent through all his details; it will be sufficient to deal with a few of his own figures to prove how little calculated he is to give sound advice in this matter. In the first place, he assumes the expenses at the same rate per mile as the London and Birmingham, although every one at all conversant with the subject knows that, with the exception of the expenses of stations, and their establishments of police, &c.; the working expenses of all long lines are exactly in proportion to the traffic. On this head, therefore, we may without any hesitation set down an error of 20 per cent.

Secondly. "S. P." puts down 13,000*l.* additional tollage to Bridgewater, but upon what grounds he does not condescend to enlighten us.

Thirdly. He charges interest upon 3,500,000*l.* bonds for the whole year, which would make, with the paid up capital of 3,025,000*l.*, a total of 6,525,000*l.* money actually raised, being at the present moment about half a million beyond the mark, as a reference to the Secretary would prove to him.

And lastly, he puts down the gross receipts at an average of 12,300*l.* per week, an amount which he declares, *ex cathedra*, *can in no event be* exceeded! The result is, that the working of this unfortunate line will produce an annual deficit of 34,800*l.*, which is exactly the consummation dreaded by your aforesaid correspondent, "J. D." After this laboured display of "facts, not fancies," the shareholders must needs be both chill and sad; and "facts and figures" having been stated so "*fully and fairly*," they will naturally press forward to get rid of such worthless property, even at a sacrifice of 35 per cent., if buyers can be found after

Digitized by Google

such an exposé.* The magnitude of the interests involved in the success or the contrary of this undertaking, prevents my pursuing the subject with levity, and I will therefore only further trespass on your space, by placing before your readers what I consider a fair and candid statement of the prospects of this undertaking, based upon the actual result of its working thus far, neither pretending to see into futurity, nor drawing on my fancy for facts. Experience of the working of railways which have had their traffic fairly developed, proves that the receipts for the month of October, give the average of the whole year, with a precision which renders it tolerably safe to assume it as the basis of calculation; and if it be so on old lines, it can hardly lead to an error of excess, in the case of the Great Western, which has not been six months opened throughout. I find then, that the receipts in October have been 57,619*l.*, adding 3-7ths of the week ending 4th October to the following four weeks, which,

As 31 is to 365, gives for the year	£678,417
From which deduct for expenses 42 per cent.	284,935
Leaves for net revenue	£393,482
From this deduct—	
Rent of branches	£47,000
Interest on £3,125,000 at 5 per cent.	156,250
	203,250
Leaving for dividends	£190,232

The paid-up capital consists of—	
25,000 shares of 100*l.*, 65*l.* paid	£1,625,000
25,000 shares of 50*l.*, 40*l.* paid	£1,250,000
37,500 shares of 20*l.*, 4*l.* paid	£150,000
Total	£3,025,000
A dividend of 6 per cent. on which is	£181,500
Leaving a surplus for contingencies—or for extra tollage to Bridgewater—of	£8732

Of course my estimate of the traffic and the per centage expense of working is matter of opinion, the accuracy of which time only can show; and those who are interested in the matter will take it for what it may seem worth. I believe, however, it will be much nearer the truth than many of those to which you have given publicity. I have my own opinion as to the future prospects of this line, which I will merely say does not partake of the gloomy character of those which have given rise to this communication; but my present object is merely to lay before the shareholders what I deem a fair and reasonable view of their prospects, as far as we have experience to guide us; and I will not, therefore, attempt to withdraw the veil which conceals the future from our view, quite satisfied if these observations shall serve to warm the *chilly* or to cheer the *sad*.

I am, &c.

A SHAREBROKER.

Liverpool 8th November, 1841.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—For the present I submit that a very brief answer will suffice for the long letter of your correspondent "S. P." in your last number relative to the Great Western Railway, though as containing several objectionable assertions, I may probably beg space hereafter to answer him more fully.

I will now only select his dictum that on an assumed traffic of 639,600*l.* per annum, the annual expenses (assimilated to the Birmingham), exclusive of rent, tollage, and interest, would be 439,400*l.* per annum. This would be equal to a rate of $68\frac{42}{100}$ per cent. or within a fraction of double the result on the Birmingham according to their last half-yearly report, viz., $34\frac{80}{100}$ per cent. It is really ludicrous! Of all the recent endeavours to depreciate this property by bold and groundless assertion, this exceeds in extravagant exaggeration any attempt of the kind I have yet seen.

It is inconceivable how your correspondent can imagine that any of your readers can be so ill informed respecting railways, and so credulous as to be influenced by such statements as this.

Your correspondent pretends to advance "facts not fancies," the case really is nearly just the reverse, his assertions being generally fancies not facts.

Yours, respectfully,

F.

Bath, 9th November, 1841.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—The long letter in your last number from "S. P.," dated Birmingham, November 1, (that friend to *facts*, and enemy to *fancy*) requires but a very short reply. When perjured witnesses appear in a Court of Justice, their prevarication and contradictory evidence generally settle the dispute very promptly.

To "S. P.'s" evil disposition or ignorance I have only to say, "Out of thine own mouth will I condemn thee."

S. P.'s Letter.

So far the traffic and the road itself, though they present no special feature, are equal to the average summer traffic of other summer lines, and would perhaps justify investment at par *now*, though a fair return to the original holders at par, including five years' interest on 125*l.*, is not to be expected, taking the cost to be that of the average of other long lines in operation.

The existing traffic as far as Swindon has received its developement, and the only portion of the traffic from which more than the ordinary increase can be expected, is that from Bath and Bristol. The Exeter traffic being entirely agricultural [*facts not fancy*], is *not* susceptible of much increase, and may be expected to remain like that on the Birmingham, nearly stationary after the first year; the increase being barely adequate to compensate for the influx of the first season arising from novelty.

Same Letter.

As it may be useful to give the facts upon which I found my conclusion after the statements which have lately appeared in your paper, I submit them for the earnest consideration of all those who may contemplate investments in this line, influenced by the speed and safety attendant upon its service, and the magnificence (magnificence how dearly purchased) of its exterior.

Expenses per mile on 169 miles, same as the Birmingham, which after three years experience are reduced to 2,600*l.* per mile	£439,400
Rent to Bridgewater and Cirencester	47,000
Tollage additional to Bridgewater	13,000
Interest on 3½ million bonds	175,000
	£674,400
Receipts which in no event can exceed 12,300*l.* per week	639,600
Leaving a loss of	£34,800

Of course paying no dividend.

Now, "this is a line that would perhaps justify an investment at par *now*," leaving an annual loss of 34,800*l.*, after merely paying expenses and interest, though "but little improvement," only between Bath and Bristol, can be expected!!!

Next—The line between London and Bristol is *only* 119 *miles*. The Great Western bears no expense on the branch lines but rent, tollage, and locomotive power, consequently they are not liable to an expenditure of 2,600*l.* per mile (on the Birmingham calculation,) on 169 miles—the branches are 50 miles!!! (*facts again.*) What facts does "S. P." produce to afford any evidence that the eventual cost or outlay "will greatly exceed seven millions?"

"S. P." concludes his letter in the very words of another like himself—"as my time is more than fully occupied." I suspect he is "Ignotus," or some such *lover of truth* in disguise! I defy him to acknowledge his signature to his misrepresentations and blunders, and have only to address him in the words of a judge to a perjured witness—"Witness, get down!!!"

By way of testing "S. P.'s" *facts*, I have taken out the entire weeks, commencing with Monday, 5th July, to Sunday, the 31st October, the first 17 entire weeks the Great Western has been open all through, and find the average of the weekly receipts to be 14,020*l.*

"S. P." affirms the receipts can in no event exceed 12,300*l.* per week (meaning the average.)

Gloomy November will give the lie to this *second Daniel*.

VIALES.

November 8, 1841.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—"S. P." insinuates in your last number, that those correspondents who have of late sent you favourable calculations and predictions respecting this railway, are "sinister deceivers," and that they are seeking their own interests by the most unworthy means.

As one of the correspondents thus alluded to, I indignantly repel these unjust aspersions. For the very favourable opinion I have given in your journal, I have quoted "facts and figures," the truth and accuracy of which your readers can easily test. "S. P." should have subverted my calculations, instead of maligning my motives.

I will not follow his example, but suppose that he has written in ignorance, and not with "sinister" design, and proceed to point out some of the "fancies" which he calls "facts."

"S. P." asserts that "the eventual cost" of the line "will greatly exceed 7,000,000*l.*;" but he has given no data to warrant such a confident and extravagant assumption.

"S. P." estimates the expenses upon 169 miles at 2,600*l.* per mile, besides the rent and tollage, or nearly 80 per cent. of the receipts! while for the last half year the expenses were but 45*l.* upon an undeveloped revenue!

"S. P.," "to prevent all cavil," informs us, that the "gross receipts will assuredly be *much less* than 12,300*l.* per week on the average of the year." And yet, *all other* railways have increased their receipts from 25 up to 100 per cent. within three years after the entire openings. Why should this be the only exception to the rule?

"S. P." predicts a like fate to the shareholders of the Great Western Company as has befallen the North Midland holders, and deplores the "inevitable" and "dreary" future which awaits them. But the Great Western line, which will cost little more than double the North Midland, has a gross weekly receipt of more than *four times* that of the North Midland at the same stage of its history, and a much lower per centage of expenses. Where then, is the question of comparison?

I have glanced at "S. P.'s" "incontrovertible statement," and will leave it to your readers to determine whether or not it really contains "facts, not fancies."

I am, Sir, &c.

L.

Nov. 9, 1841.

RAILWAY ADJUDICATIONS.

THE QUEEN *v.* THE SHERIFF OF WARWICKSHIRE.

Bail Court, November 9, 1841.—Mr. WHATELEY, Q. C.—My Lord, I am directed to move for a rule to show cause why a mandamus should not issue, directed to the Sheriff of the county of Warwick, commanding him to review the taxation of certain costs. The question is one of some novelty, but it has been considered, and the parties have no other remedy.

Mr. Parkes having complained of the injury done him by the Birmingham and Gloucester Railway, the usual precept was issued for ascertaining the damage, and the jury assessed the damages at 520*l.*, namely, 20*l.* for the land taken, and 500*l.* for the injury sustained, and that sum has been paid. It appears, that on the 26th of August last, the attorney on behalf of the Railway Company appeared before the Sheriff with the attorney for the plaintiff, to tax the costs under the Act of Parliament, and upon that occasion the Under-Sheriff allowed a great deal more for costs than under the clause he had the power to do. The 83rd clause of the Company's Act provides—

"That in every case in which the verdict of a jury summoned as aforesaid, shall be given for the same, or a greater sum than shall have been previously offered by the said Company for the purchase of any lands to be used or taken by them for the purposes of this Act, or as satisfaction, recompence, or compensation for any damage or loss which may happen or arise in the execution of any of the powers hereby granted, all the costs of summoning such jury, and the expenses of witnesses, and of the bond to be entered into as after-mentioned, shall be defrayed by the said Company, and such costs and expenses shall be settled and de

* I wonder whether "S. P." would buy a few shares at a handsome discount.

Digitized by Google

termined by the said Sheriff, Under-Sheriff, Coroner, or other person as aforesaid, and in case such costs and expenses shall not be paid to the party entitled to receive the same, within 20 days after the same shall have been demanded, then the same shall and may be levied and recovered by distress and sale of any goods and chattels of the said Company, under a warrant to be issued for that purpose by any Justice of the Peace for the county, city, or place where such inquisition shall be held, not interested in the matter in question, which warrant such Justice is hereby authorised and required to issue under his hand and seal, on application made to him for that purpose by any party entitled to receive such costs and expenses.

And therefore the Sheriff has only the power to tax the costs of summoning the jury, the expenses of the witnesses, and the bond which is to be entered into. Now, my Lord, I do not propose to trouble your Lordship with a detail of the sums that have been allowed by the Under-Sheriff, but I may mention one or two of them. One is for "attending you when you went into a lengthened account, &c., 6s. 8d.;" another "attending in Montpelier-street, 13s. 4d.;" another "writing a letter, 5s." There are charges for numerous attendances, for the payment of a room at the hotel, where the inquiry was taken; and 12 guineas for each of the surveyors, attending one day, which is clearly exorbitant. There is a sum of 78*l.* 6s., which in the view I take of it, (the items being of the nature which I have mentioned), are not within the meaning of the Act of Parliament, and therefore it was that an application was made to the Under-Sheriff, a gentleman of the greatest respectability, to review his taxation. At the time of taxation, all these items were objected to on the ground that they did not come within the words or meaning of the Act of Parliament. The affidavit states this fact, and a written demand has been served upon the Company and a distress warrant is about to issue; but it has been put off by the magistrates, to give the parties the opportunity of taking advice upon the question. The following letter was written to the Under-Sheriff a few days ago, which I will read to your Lordship, together with the answer which has been received:—

"PARKES *v.* THE BIRMINGHAM AND GLOUCESTER RAILWAY COMPANY.

"Sir,—As the Solicitors of the Birmingham and Gloucester Railway Company, we make this application to you, to review your taxation of the plaintiff's costs, and to disallow the following charges, which, in our opinion, the Company are not liable to pay, which we objected to at the time of taxation, and which we consider you erroneously admitted.

"We are, Sir, your obedient servants,
"J. W. & G. WHATELEY.

"Waterloo street, Birmingham, 8th November, 1841."

(Here followed the items, amounting to 78*l.* 6s.)

'PARKES AND THE BIRMINGHAM AND GLOUCESTER RAILWAY.

"Warwick, 8th Nov. 1841.

"My Dear Sirs,—I think I have not allowed more than I was justified in doing under the Act of Parliament, and therefore must decline reviewing my taxation; but should the Court of Queen's Bench think otherwise, I should be happy to attend to any suggestions the Court may think proper to throw out.

"I am, dear Sirs, truly yours,
"G. CATTELL GREENWAY,
"Under Sheriff of the County of Warwick.

"To Messrs. J. W. & G. Whateley,
Solicitors, Birmingham."

I know of no remedy which the party has, except your lordship should be pleased to grant this writ of mandamus. It is very desirable that the clause should have a judicial determination. The Under-Sheriff is anxious to do what is right, and will, no doubt, follow the suggestion of the Court.

Mr. JUSTICE PATTESON—You find no instance of the sort, Mr. Whateley?

Mr. WHATELEY—No, my Lord; but upon general principle, I should think there is no doubt this mandamus would lie, where there is no other remedy. This is laid down in Bacon's Abridgement, under the title "Mandamus."

"It is clearly agreed that the Court of King's Bench having superintendency over all inferior Courts and magistrates, may, in the plenitude of its power, correct not only errors in judicial proceedings, but also extra judicial errors and misdemeanours, tending to the breach of the peace, oppression of the subject, to the raising of faction, controversy, debate or any manner of misgovernment, so that no tort or injury, whether public or private can be committed, but what may be reformed and punished according to the due course of law."

And there is the case of the St. Catherine's Dock Company, in which your Lordship took part in 4 Barnewell and Adolphus. "The first question in this case is, whether a mandamus will lie, and it undoubtedly will, if the party has no other legal remedy." There are some other authorities on the same point.

Mr. Justice PATTESON—It seems a mandamus would lie, if he had refused to tax these costs.

Mr. WHATELEY—Yes, my Lord, and this application is that he may review the taxation.

Mr. Justice PATTESON—If he has taxed them improperly, I do not see why there should not be a remedy.

Rule granted.

THE QUEEN *v.* THE MANCHESTER AND LEEDS RAILWAY.

Court of Queen's Bench, Nov. 2, 1841.—Mr. CRESSWELL—My Lords, in the case of the Trustees of the Manchester and Oldham Road, against the Manchester and Leeds Railway Company, I am instructed to apply to your Lordships to enlarge the time for the return of the peremptory mandamus. My Lords, I make this application on an affidavit which sets forth shortly the proceedings which have taken place between the two contending parties—first, that a Mandamus was applied for, that a return was made by the Manchester and Leeds Railway Company that there was a traverse, and a number of issues were raised which went down for trial to be tried at the Liverpool Assizes.

The LORD CHIEF JUSTICE—Are the defendants engaged in doing that which they are required to do.

Mr. CRESSWELL—No, my Lord, they have brought a writ of error. Some issues were found one way, and some were found another, and cross motions were made for judgment—*Non obstante veredicto*. For the Company the jury found, as appeared to their advisers, and certainly to the learned Judge who tried the cause, the material issue, viz.—that they had set out the two roads, with footpaths, and had accomplished the alteration in a manner more convenient to the public, than if they had pursued that which was contended for, as the literal construction of the Act of Parliament.

The LORD CHIEF JUSTICE—It is almost a matter of course that they should have time; they are not compelled to do that which perhaps they never may be found compellable to do.

Mr. CRESSWELL—It is a case in which they could not have a writ of error, without the fiat of the Attorney-General, and of course he would look into the papers before he granted that fiat. If your Lordship please, it will be to enlarge the time until that writ of error has been argued and disposed of. The parties are using all possible expedition to have it decided: both parties indeed are anxious to proceed with dispatch.

JONES *v.* THE LLANELLY RAILWAY COMPANY.

Court of Queen's Bench, Nov. 5.—Mr. CHILTON moved in this case for a rule to show cause why the verdict for the plaintiff, with damages 50*l.*, should not be increased to a verdict for 200*l.* damages. It was an action of debt, and upon an award. The defendants pleaded the performance of a part of the award, and the impossibility of performing the remainder. It appeared that the plaintiff, Harry Jones, was possessed of a piece of land, through which it was proposed the Llanelly Railway should pass; and when the parties went before the Court of Quarter Sessions in order to have the case submitted to a jury, it was agreed that the case should be referred to a magistrate of a county; and, by the rule of reference, the amount of compensation and damage, as well direct as consequential, which would be occasioned to the land, was referred to the arbitrator. There was an exception with regard to inundations, upon which, however, nothing would turn. The arbitrator awarded 730*l.* as full compensation for the land, and also a further sum of 200*l.* conditionally. He directed that there should be four arched tunnels made at various parts of the line, by which severance of the property would be avoided, and which, when completed, would enable the defendants to avoid the payment of the 200*l.* It appeared that the Company made three tunnels, but did not make the fourth; and the provision in the award was, that these four tunnels should be made within three months, and in the event of their not being then completed, the Company were ordered and directed to pay, within ten days from the expiration of the three months, the sum of 200*l.* to the plaintiff.

Lord DENMAN—I never heard of an arbitrator awarding a penalty under such circumstances.

Mr. CHILTON contended that the Company not having fulfilled the conditions of the award, and not having given any satisfactory reason why they had not made the fourth tunnel, the plaintiff was entitled to the damages conditionally awarded him.

The Court granted the rule.

FAULKENER V. M'CABE.

Court of Exchequer, Nov. 10.—Mr. S. Wortley moved to set aside the verdict, which was for the defendant. The action was brought to recover the value of certain certificates of shares from the public officer of a bank. It was tried at the late Liverpool Assizes, before Justice Wightman. It appeared that the plaintiff, in March, 1838, employed his brother, who was a share-broker, to purchase for him certain shares in the London and Birmingham Railway Company, the payment for which was to be made out of a sum of 900*l.* in the hands of John Faulkener, the property of the plaintiff. John Faulkener made a bargain with another broker, named Hampson, for twenty quarter-shares in the above railway, for 711*l.*, to be paid for on the 3d of July. A contract note was made out and signed by the owner of the shares, and it was clearly and distinctly in the name of the plaintiff. On the 3d of July, Hampson applied to John Faulkener for payment, but he, in fraud of his brother, had dealt with the 900*l.*, and could not pay. He asked Hampson for and obtained the certificates, which he took to a joint-stock bank in which he was a shareholder, and although it was then after bank hours, he immediately obtained an advance of 700*l.* upon the certificates. After that John Faulkener became bankrupt; he was considerably indebted to the bank, which held many shares as security, the whole of which were sold, and amongst them those belonging to the plaintiff. To prove that fact, he (Mr. W.) called both Hampson and the broker who sold them on the part of the bank; and, in order to identify them, he asked the witnesses what were the number of the shares. The question was objected to. It was said he was inquiring into the contents of a written document, and his Lordship held the objection to be good. On that part of the case the Learned Gentleman contended that he did not want to know any thing of the contents of the certificate—all he wanted was to treat them in the same manner as any other chattel which had a particular mark upon it for assisting its identification; and in support of his view of the case he cited the cases of Butcher *v.* Jarratt, 3d Bosanquet and Pullar; Jolly *v.* Taylor, 1st Campbell, 149; and Whitehead and Scott. He further complained that his Lordship had left a question to the Jury upon which there was no evidence. He left it to the Jury to say whether the shares were purchased for the plaintiff, or whether they were not purchased for the account of John Faulkener himself, and the contract note an afterthought. Now there was no evidence of that at all, but Mr. Cresswell, with that tact which distinguished him, mooted the point in his reply, and they all knew with what peculiar effect his Learned Friend addressed a Liverpool Jury. On these grounds he trusted their Lordships would think the case worthy of further consideration.

Lord Abinger considered the Learned Judge had acted right. The number alone would not prove that the paper was a certificate—it was part of a written instrument, and must be proved.

Baron Parke—If the objection be taken, it is one that must prevail, however hard it may be. He thought the Learned Judge was right in rejecting

Digitized by Google

the evidence, and also in leaving the question of, for whom the shares were purchased, to the Jury.

The other Barons agreed, and the rule was refused.

THE PARISH OF STRETTON AND THE NORTH MIDLAND RAILWAY COMPANY.

We omitted to notice this case in our late County Sessions Report, which was an appeal against a poor-rate made upon the Company, and had been referred to the Chairman, John Balguy, Esq. in pursuance of whose award the Court at this Sessions, ordered the charge to be struck out of the rate altogether, and the rate paid to be refunded by the parish officers.—*Derby Mercury.*

BIRMINGHAM AND GLOUCESTER RAILWAY.—ALTERATION OF TRAINS.—On and after MONDAY, the 15th of November, this Company's Trains will run as follows until further notice:—

From Birmingham.	From Gloucester.
12 44 a.m. (Mail.)	8 15 a.m.
3 10 a.m. (Mail.)	• 9 30 a.m. (Goods.)
8 45 a.m.	11 45 a.m.
•10 0 a.m. (Goods.)	2 30 p.m.
12 15 p.m.	• 3 0 p.m. (Goods.)
2 45 p.m.	5 0 p.m.
• 3 30 p.m. (Goods.)	7 15 p.m. (Mail.)
6 15 p.m.	9 0 p.m. (Mail.)

Short Train, from Gloucester to Cheltenham, at 9 15 a.m.

Short Train, from Cheltenham to Gloucester, at 9 45 a.m.

• Passengers are conveyed by Goods Trains, starting at Birmingham from the Camp Hill Station; and the Company do not provide Conveyances at Spetchley for Worcester, nor do they guarantee the attendance of Omnibuses at any of the other Stations to meet those Trains.

Passengers may be booked in London for Worcester, Cheltenham, or Gloucester, by Trains leaving the London Station of the London and Birmingham Railway at 6 and 9½ a.m.; and from those places for London, by Trains leaving Gloucester at 8½ a.m. and 2½ and 9 p.m.

By order,
GEORGE KING, Secretary.

12, Waterloo-street, Birmingham,
2nd November, 1841.

ESTABLISHED 1839. — WESTMINSTER LOAN and INVESTMENT JOINT STOCK COMPANY, 10, Buckingham-street, Strand; instituted pursuant to Act of Parliament 4th and 5th Victoria I, cap. 51. Capital £100,000, with power to increase the same.

Chairman—CORNELIUS O'BRIEN, Esq., M.P.

TRUSTEES.

The Hon. Edward Byng. .	Hewitt Bridgeman, Esq. M.P.
Sir Robert Dugdale,	Charles Kerry Nicholls, Esq.

DIRECTORS.

Sir Robert Dugdale.	Charles Kerry Nicholls, Esq.
Gustavus Noon, Esq.	Robert Napoleon Price, Esq.

Secretary—Mr. John Simpson.

Actuary and Accountant—Mr. Charles William Williams.

The Directors give notice that they continue to grant loans from £10 to £50, repayable by weekly instalments of 1s. in the pound, and that they receive deposits from £5 to £500 and upwards, upon which £5 per cent. interest is allowed, and which deposits may be withdrawn by giving four days' notice.

By order of the Board,
JOHN SIMPSON, Sec.

Notice.—Applications for shares to be made to Mr. Chas. William Williams, Actuary and Accountant to the Company.

TO CAPITALISTS, ENGINEERS, MILLWRIGHTS, FOUNDERS, SMITHS, and OTHERS.—To be disposed of, an old established Engineers', Millwrights', and Founders' Concern (the present Proprietors retiring from the Manufacturing Department), situated in London; the premises and plant have been erected during the last 25 years, at a considerable cost; but from the above cause will be disposed of upon extremely favourable Terms. The premises will be Let on Lease, and the Machinery and Tools disposed of at a valuation. Apply for particulars to John Evans, Esq., 51, Lincoln's-Inn Fields.

T. H. RYLAND AND CO., OOZELL'S STREET, • BROAD-STREET, BIRMINGHAM, Patentees and Manufacturers of Wood Screws and Screw Bolts, for Railways, &c.

The quality of these Screws is acknowledged to be superior to that of any other maker, and T. H. R. and Co. have, by their improved means of manufacture, so greatly reduced the price, that they will be found not to exceed in cost the common driving pin; and that they are more efficient for the purpose will be obvious, from the fact that one of these screws will require a force equal to from 2 to 4 tons weight, to tear it from the wood.

T. H. R. & Co. have to dispose of

A 12-horse high-pressure engine, metallic piston, with or without boiler.

Two boilers, quite new, 18 feet by 4 feet.

UNITED KINGDOM LIFE ASSURANCE COMPANY, 8, Waterloo-place, Pall mall, London. Division of Profits among the Assured.

HONORARY PRESIDENTS.

Earl of Errol,	Earl Somers,
Earl of Courtown,	Lord Viscount Falkland,
Erl Leven and Melville,	Lord Elphinstone,
Earl of Norbury,	Lord Belhaven and Stenton.
Earl of Stair,	

DIRECTORS.

James Stuart, Esq., Chairman. William Plasket, Esq., Deputy Chairman.

Samuel Anderson, Esq.	Charles Downes, Esq.
Hamilton Blair Avarne, Esq.	H. De Castro, Esq.
Morton Balmanno, Esq.	Charles Graham, Esq.
Edw. Boyd, Esq., Resident.	F. Charles Maitland, Esq.
E. Lennox Boyd, Esq., Assistant Resident.	John Ritchie, Esq.

This Company, established by Act of Parliament, affords the most perfect security, from an ample capital, and only requires, when an insurance is for the whole period of life, one-half of the very moderate premiums to be paid for the first five years after the date of the policy; the other half may remain, subject to the payment of interest at 5 per cent. annually, to be deducted at death, or may be previously paid off at convenience.

It obviously becomes easy for a person of very moderate income to secure, by this arrangement, a provision for his family; and should he at any time, after affecting the Insurance, succeed to or acquire a fortune, he may relinquish his policy, having only paid one half the premiums for the first five years, instead of the whole, as in all other Companies.

Thus, a man of 25 years old may, by an annual payment of £28 16s. 3d. for the first five years, and afterwards the full premium, £57 12s. 6d. yearly, secure to his widow and children at his death payment of no less than £3,000, subject only to the deduction of £144 1s. 3d., being the amount of premium unpaid.

On the 1st of July, the Board of Directors added 2 per cent. per annum as a bonus to those assured on the participating plan from the dates of their policies, thus appropriating £20 a year as an addition to every policy for £1,000. The following table will show the amount of the bonus on policies since the commencement of the Company in March, 1834:—

Sum assured.	Time assured.	Sum added to policy.
£1,000.....	6 years, 10 months.....	£136 13 4
1,000.....	6 years	120 0 0
1,000.....	5 years	100 0 0
1,000.....	4 years	80 0 0
1,000.....	3 years	60 0 0
1,000.....	2 years	40 0 0
1,000.....	1 year	20 0 0

This Company holds out in various other respects great inducements to the public. When such facilities are afforded, it is clearly a moral duty in every parent who is not possessed of a fortune, but of an income, however moderate, to insure his life for a sum which may yield a comfortable provision for his family.

RATES OF PREMIUM.

Age.	Without profits	With profits	Per cent.
25	£1 18 5	£2	2 11
30	2 3 10	2	8 2
40	2 19 1	3	3 4
50	4 9 8	4	14 5
60	6 15 3	6	17 9

Insurances may be effected on lives, however far advanced, and the half credit for five years is found particularly convenient on such insurances. Annuities are granted on very liberal terms.

For the convenience of parties residing in the City, they may make their appearance and pass the medical examination before the Agent, Edward Frederick Leeks, Esq., 2, Charlotte Row, Mansion House; and J. F. Goude, Esq., Surgeon, 105, Cheapside.

Every information will be afforded on application to the Resident Director, Edward Boyd, Esq., No. 8, Waterloo place. Proposals may be accepted on Wednesday, at Three o'Clock, and any day at Half-past Two o'Clock, when Frederick Hale Thomson, Esq., the Company's Surgeon, is in attendance, to give dispatch to the business.

PATRICK MACINTYRE, Secretary.

PARISIAN BITUMEN COMPANY, Millwall, Poplar.—The Directors of the above-named Company beg to call the attention of Engineers, Architects, Surveyors, Builders, and the Public generally, to the applicability of the BITUMEN manufactured by them, as a pavement or flooring; also for its use in covering arches for the prevention of damp and preservation of the masonry.

They beg also to state that it has been used very successfully as a cement for masonry on the weirs of the Upper Medway, and is particularly applicable to hydraulic works and foundations of heavy buildings.

They beg to submit the following list of prices, and to state that they will guarantee the durability and efficiency of any work executed by them.

	s.	d.
Covering viaducts or arches of bridges, vaults, terraces, &c., ¼ inch thick, per square yard	4	6
Paving pathways, kitchens, cellars, granaries, malt houses, warehouses, &c. 1½ inch thick	4	6
Paving barns, court yards, tun rooms, wharfs, stables, &c. 2 inches thick.....	5	6
Paving walks, &c. ¾ inch thick	3	6

The above charges are exclusive of the cost of carriage, which must be borne by the parties by whom the work is required.

W. MACKENZIE, Superintendent.

NATIONAL LOAN FUND ASSURANCE SOCIETY, for granting Life Assurances, Deferred Annuities, &c. &c., 26, Cornhill.—Capital, £500,000.—Empowered by Special Act of Parliament.

DIRECTORS.

T. Lamie Murray, Esq., Chairman.

John Griffith Frith, Esq.	John Riddle Stodart, Esq.
H. Gordon, Esq.	Clement Tabor, Esq.
George Lungley, Esq.	Joseph Thompson, Esq.

Auditors—Professor Wheatstone, F. R. S.; Professor Graves, A.M., F.R.S.

Actuary—W. S. B. Woolhouse, Esq., F.R.A.S.

Physician—J. Elliotson, M.D., F.R.S.

Surgeon—E. S. Symes, Esq.

Solicitors—Messrs. Sweet, Sutton, Ewens, and Ommanney, 6, Basinghall-street.

Bankers—Messrs. Glyn, Hallifax, Mills and Co.

LIFE ASSURANCE.

Advantages.—Perfect security from a large paid up Capital and accumulations——Equitable Rates—Power to borrow two-thirds Premiums paid, without expense or forfeiture—and Profits *annually* divided.

N. B. Policies for short periods, at lower rates than at any other Office, with option of continuance for Life, at the usual rates.

DEFERRED ANNUITIES.

The best and most varied provision for after life hitherto offered,—20*l.* 12s. per annum (1s. a week,) at 20, will at 65, give the Policy-holder the choice of an Annuity of 47*l.* 16s. 6d. or 349*l.* 11s. cash, or Policy at death of 466*l.* Similar advantages at 50, 55, and 60,—two-thirds payments lent at any time, and two-thirds returned in case of premature death.

The detailed Plans and last Annual Report to be had at the Office, at any of its Branches, or, on application, will be forwarded post-free.

F. FERGUSON CAMROUX, Secretary.

Just published, 7th edition, price 3s., and sent free on receipt of a Post-office order, for 3s. 6d.

MANHOOD: the Causes of its Premature Decline, with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects of excessive indulgence, solitary habits, or infection followed by observations on the treatment of Syphilis Gonorrhœa, Gleet, &c., illustrated with cases, &c.:

By J. L. CURTIS and Co., Consulting Surgeons, London.

SEVENTH EDITION.—Published by the Authors, and sold by Balliere, Medical Bookseller to the Royal College of Surgeons, 219, Regent-street; Strange, 21, Paternoster-row, London; Guest, Birmingham; T. Sowler, No. 4, St. Ann's square, Manchester; G. Philp, South Castle-street, Liverpool; Machen and Co., 8, D'Olier street, Dublin; Duncan, 114, High street, Edinburgh; and to be had of all Booksellers.

The following are a few of the numerous testimonials this popular work has received, and which the limits of an advertisement will only allow of being published:—

Messrs. Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it, render it invaluable.—*Magnet.*

The perusal of Messrs. Curtis's book, entitled MANHOOD, has really astonished us by developing a series of maladies, the never failing consequence of the vicious habit of which it treats. The clear connexion pointed out between the assigned cause and the effects is perceptible to every capacity. We strongly recommend the work.—*Age.*

We recommend the work, entitled MANHOOD, &c., to the careful perusal of persons of all classes. The moral as well as physical advantages sure to result from such perusal, will be most readily recognised and felt by those who stand most in need of them.—*Statesman.*

Messrs. Curtis and Company are to be consulted daily at their residence, No. 7, Frith-street, Soho-square, London.

Country Patients are requested to be as minute as possible in the detail of their cases. As to the duration of the complaint, the symptoms, age, general habits of living, and occupation in life of the party; the communication must be accompanied by the usual consultation fee of £1, without which no notice whatever can be taken of their application, and in all cases the most inviolable secrecy may be relied on.

BERDOE'S VENTILATING WATERPROOF for rendering every description of Woollen Cloth, &c. thoroughly impervious to rain, *without confining perspiration*, or imparting any objectionable property whatever. After more than three years' extensive and most successful trial, public attention is again invited to this invention, and which is confidently recommended to Travellers, and all who are exposed to the rain. Many of the principal Railway and other public Companies have already adopted it for their servants' clothing.

W. B. also invites especial attention to his well-known and much approved

WATERPROOF CODRINGTON FROCK,

a light and gentlemanly garment, adapted for general use at all seasons, and described by those who have tried them as the most convenient and valuable protection from the weather ever invented. Also his

WATERPROOF SHOOTING JACKET,

made from a new, very strong, and much approved material, manufactured for this express purpose.

The above made only by

WALTER BERDOE, TAILOR, &c., 69, CORNHILL

(Eight doors from Bishopsgate-street.)

LONDON AND CROYDON RAILWAY.—In order to afford the greatest facility for removing the obstruction on this railway, occasioned by the slip in the deep cutting at New cross, the following Trains only will run until further notice:—

Down Trains from Tooley-street.	Up Trains from Croydon.
MORNING.	MORNING.
5 minutes after 9 o'clock.	5 minutes after 8 o'clock.
5 minutes after 10 ,,	5 minutes after 9 ,,
5 minutes after 12 ,,	5 minutes after 10 ,,
AFTERNOON.	5 minutes after 12 ,,
20 minutes past 2 o'clock.	AFTERNOON.
20 minutes past 4 ,,	20 minutes past 2 o'clock.
20 minutes past 5 ,,	20 minutes past 4 ,,
	20 minutes past 5 ,,

SUNDAY, 7th November, 1841, the following Trains will run—

Down Trains from Tooley-street.	Up Trains from Croydon.
MORNING.	MORNING.
5 minutes past 9 o'clock.	5 minutes past 9 o'clock.
5 minutes past 10 ,,	5 minutes past 10 ,,
AFTERNOON.	AFTERNOON.
20 minutes past 2 ,,	20 minutes past 2 ,,
20 minutes past 4 ,,	20 minutes past 4 ,,
20 minutes past 6 ,,	20 minutes past 6 ,,
20 minutes past 8 ,,	20 minutes past 8 ,,

The Directors regret exceedingly the inconvenience the public are subjected to in consequence of the slip; but in order to diminish the unavoidable delay in the passage to the Croydon Trains, arrangements have been made for passing the Croydon passengers only over the cutting, for this purpose it will be necessary that such passengers should walk a short distance over New Cross Hill.

By order,

R. S. YOUNG, Secretary.

BIRMINGHAM AND GLOUCESTER RAILWAY.—THIRD INSTALMENT UPON SCRIP, £5, DUE NOVEMBER 25, 1841.—The THIRD INSTALMENT, amounting to £5, upon the Scrip issued by the Company, is required to be PAID to the Birmingham Banking Company, at Birmingham, on or before the 25th instant, after which day interest will be charged at the rate of five per cent. per annum; and if the same "shall remain unpaid for one calendar month after the day above mentioned for its payment, the scrip will be absolutely forfeited, with all moneys previously paid thereon."

Each holder of Scrip is requested, so soon as he shall have paid his instalment, to bring or send his Scrip to this Office, together with the Banker's Receipt, in order that the payment may be duly registered on the Scrip and in the Company's Books.

The Bankers have received instructions to allow a discount at the rate of 5 per cent. per annum, upon Instalments paid in advance.

The Fourth and last Instalment will be due on the 25th of February next.

By order,

GEORGE KING, Secretary.

Waterloo-street, Birmingham,
November 11, 1841.

GREAT WESTERN RAILWAY.—ALTERATION of TRAINS for the Winter.—NOTICE is hereby given, That on and after November 1, 1841, the Trains will leave Paddington for Cirencester, Bath, Bristol, and Bridgewater, as follows:—

11 55 ,, ,,	1 40 ,, a.m. mail
1 40 ,, p.m.	1 40 } goods' train.
	5 45 }

Passengers may be booked to Cheltenham, Exeter, Plymouth, and Devonport, at the Railway Office, Prince's-street, Bank, or at the Paddington station.

Further particulars of Trains, and the stoppages at different stations, may be known by application at the Company's offices and stations.

October 29, 1841.

TO ENGINEERS, BREWERS, BUILDERS, and Others requiring Roomy Premises. — To LET CLOSE TO THE CITY, eligible and extensive premises consisting of a piece of Ground 200 feet long, and a Building 60 feet long with three floors, and cellar under, and five arches of the Blackwall Railway, close to the Minories, with a good roadway entrance. Apply to Messrs. Rippingham and Rose, Solicitors, 17, Great Prescot-street, Goodman's Fields.

GLASGOW, PAISLEY, AND GREENOCK RAILWAY.—NOTICE IS HEREBY GIVEN, that in pursuance of a Resolution of the Board of Directors, Proprietors of New Shares in the said Undertaking, are required, on or before Wednesday, the 1st day of December next, to pay into any one of the undermentioned Banks the further sum of £1 10s., as a SECOND CALL on each share held by them respectively, viz:—

Edinburgh and Glasgow—Royal Bank of Scotland.
Greenock—Any of the Banks there.
Liverpool—Liverpool Commercial Bank.
Lancaster—Lancaster Banking Company.
London—The Chief Office of the London and Westminster Bank, Throgmorton-street.
Dublin—To Messrs. Labertouche and Stafford.
Londonderry—Branch of the Provincial Bank of Ireland.

Discount at the rate of 5 per cent. will be allowed on all payments made previous to the 1st December, and the Bankers have been instructed to charge Interest from that date until payment.

By order of the Board of Directors,

WYNDHAM HARDING, Secretary.

Railway Office, Greenock, Nov. 3, 1841.

LONDON AND SOUTH-WESTERN RAILWAY.—In consequence of numerous representations that the proposed discontinuance of some of the Trains now running, would inflict serious inconvenience to parties travelling by the Line, the Directors have determined to continue running the present trains at the accustomed hours until further notice, viz.:—

DOWN TRAINS FROM VAUXHALL.

To Southampton, mixed	7 0	Morn.
Weybridge, mixed	8 15	,,

By Order of the Directors,

ALFRED MORGAN, Secretary.

29th October, 1841.

TO EXPORTERS, RAILWAY CONTRACTORS, ENGINEERS, SHIP BUILDERS, &c. &c.—The Patent Rolling and Compressing Iron Company having their works in full operation are ready to execute orders to any extent, for the undermentioned articles:—

Boiler and Tank Rivets of every description.
Bolts for Machinery, Architectural, Agricultural, Ship and Coach Building, Gas Water, and other works, &c.
Railway Pins, Hooks, Screws, &c.

Particulars may be obtained, and specimens seen, upon application to the Secretary, at the Company's Works, Upper Ordnance Wharf, Rotherhithe.

By order of the Board,

JNO. ATLEE, Secretary.

CRANES AND HOISTING TACKLE of every description, of the best materials and workmanship, and capable of lifting from 5 cwt. to 20 tons and upwards, with or without steam power, made by ELLIS & NOTON, who take this opportunity of respectfully soliciting an inspection of their Drawings and Patterns, at the IRWELL FOUNDRY, Salford, Manchester.

EASTERN COUNTIES RAILWAY COMPANY DEBENTURES.—The Holders of Debentures and of Debenture Receipts in this Company are reminded, as a matter of caution, that the Fourth Instalment of Two Pounds Six Shillings and Eight-pence will become due on Thursday, the 18th November instant, and unless punctually paid on that day to the Bankers of the Company, the special privileges guaranteed by the Debentures will be forfeited as therein mentioned.

By order of the Board,

A. BULKELEY, Secretary.

Offices, High-street, Shoreditch, Nov. 9, 1841.

THE RAILWAYS OF GREAT BRITAIN AND IRELAND practically described and illustrated. By FRANCIS WHISHAW, Civil Engineer, M. INST., C. E.—The flattering testimonials which the author has received from various quarters, as to the utility of the first volume, which was produced at an expense of upwards of One Thousand Pounds, and Sixteen Months constant attention, induce him to propose to the railway public the production of a second volume, which, however, can only be done on the plan of subscription.

Railway proprietors, therefore, and others who would like to be in possession of much additional information on the important subject of railways, will be so kind as at once to forward to the author their names as subscribers to the Second Illustrated Volume which would be issued at the price of One Guinea.

THE RAILWAYS OF BELGIUM practically described and illustrated, in One Octavo Volume, price 10s. 6d. may also be produced in the same manner.

FRANCIS WHISHAW.

Gray's Inn, London, and Haverfordwest, Pembrokeshire, October 4th, 1841.

(TESTIMONIAL.)

Cabinet du Roi. Neuilly, le 21 Mai, 1841.

MONSIEUR,—Un exemplaire de votre ouvrage sur les chemins de fer de la Grande Bretagne, est venu au Roi par l'entremise de son Ministre des Affaires Etrangères. Déjà, quelques jours auparavant, Sa Majesté avait reçu la lettre que vous lui avez écrite pour lui en faire hommage.

L'intérêt du Roi est toujours acquis, Monsieur, aux travaux qui, comme les vôtres, ont pour lui et pour résultat le progrès des arts utiles; aussi cet hommage a-t il reçu l'accueil qu'il méritait. Sa Majesté m'a chargé de vous transmettre ses remercimens, a j'ai l'honneur de vous prévenir que par son ordre, votre savant traité aprés place dans la Bibliothèque particulière du Palais Royal.

Veuillez agréer, Monsieur, l'expression de ma considération très distinguée.

Le Secrétaire du Cabinet,

CAMILE FAUY.

Monsieur Whishaw.

ARGUS LIFE ASSURANCE COMPANY, 39, Throgmorton-street, Bank, London. Established in 1838. Empowered by Act of Parliament.

DIRECTORS.

Thomas Farncomb, Esq., Alderman, Chairman.
William Leaf, Esq., Deputy Chairman.

William Banbury, Esq.	John Humphery, Esq., Ald. M.P.
Harry Barrett, Esq.	Rupert Ingleby, Esq. Manchester
Edward Bates, Esq.	Thomas Kelly, Esq., Alderman.
Thomas Camplin, Esq.	Jeremiah Pilcher, Esq.
James, Clift, Esq.	Lewis Pocock, Esq.

Rates reduced to the lowest possible scale that is compatible with the safety of the assured, and of the Company, whereby a certain and annual bonus is secured to every individual assured in this Office, in lieu of the deferred and sometimes delusive prospect of a periodical division of profits.

An ample Subscribed Capital, together with a large accumulated Premium Fund, invested in Government and other available securities, and perfect security without any responsibility, is thus given to the assured.

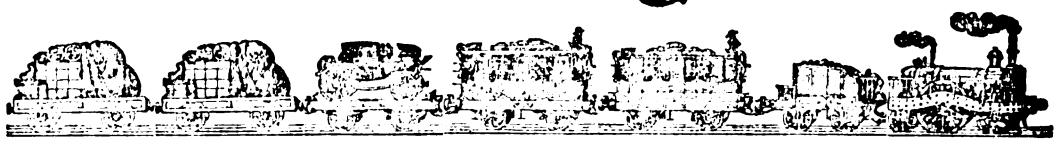
ANNUAL PREMIUM TO ASSURE £100.

Age.	For one year.	For seven years.	Term of Life.
	£ s. d.	£ s. d.	£ s. d.
25.....	0 19 7	1 0 7	1 15 1
30.....	1 1 3	1 2 1	1 19 0
35.....	1 2 9	1 3 8	2 5 10
40.....	1 4 6	1 6 2	2 13 9

In assurances for advances of money, as security for debts, or as a provision for a family when the least present outlay is desirable, the varied and comprehensive tables of the Argus Office will be found to be particularly favourable to the assured. A Board of Directors, with the medical officers, attend daily.

WARD BATES, Resident Director.

RAILROADS.—TRAVELLERS to LONDON by Railroad or otherwise, will find the most ample accommodation, on reasonable terms, at EVANS's GRAND HOTEL, King-street, and Piazza, Covent Garden.



Bed and Breakfast, One Guinea per week. Coffee Room. Dinners, 2s. Fine Sherry and Port at 5s. per bottle.

Admittance at any hour.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Brides', Fleet-street, Middlesex.—Saturday, November 13, 1841.

The Railway Times.

"Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 203. Vol. IV.—No. 47.] SATURDAY, NOVEMBER 20, 1841. [Price, 6d.

PROPOSED PLAN for the establishment of a GENERAL OFFICE for the use of TRAVELLERS BY RAILWAY and STEAM NAVIGATION, where the public could readily obtain every species of information that might be useful to or required by Travellers, either on business or pleasure, by any of the various Railway and Steam Navigation Conveyances throughout the United Kingdom, more especially as relates to the hours of departure and arrival, the scale of fares, and the different regulations of each, for conveying Passengers and Goods; to be formed under the sanction and patronage of the several Boards of Direction and Management of the Companies now in existence.

It is proposed that a complete Register be kept of all the Railway Conveyances, systematically arranged for the convenience of immediate reference, setting forth every station at which the trains stop on the respective lines, and the several stations and booking offices from whence passengers and goods may be conveyed.

That the proposed Office be furnished with the printed placards and hand-bills from all the different Companies, for reference and distribution to the public, who should receive gratuitously every information required.

That a like Register be kept of all the Steam Navigation Conveyances, and a similar distribution be made of the hand bills of the different Companies, and every information respecting them be given in the same manner.

That a communication be opened for correspondence with the respective Secretaries to enable the Manager of the Office to give answer to such inquiries as might arise, and which their printed hand-bills do not furnish, and that the Secretaries would from time to time give the Manager immediate notice of every alteration affecting the conveyance of passengers and goods.

The Manager of the Office would undertake to transmit by post any hand-bill or specific information, which might be required by persons residing in the country, and who could not conveniently attend personally to obtain it.

That such Office be fixed at some centrical point (being a public thoroughfare) at the West End of the Town, holding connection with a similar establishment in the City, and to be open to the public every day, Sundays excepted, and that the Office shall be furnished with geographical maps and plans of the Railways.

It is proposed that arrangements should also be made which would embrace an extension of the plan, by collecting information of the various establishments on the Continent of Europe and elsewhere, for conveyance by Railway and Steam Navigation, as it is considered that by centralizing these various objects at one place, a complete Emporium will be formed for obtaining that general information which Travellers so much require, and this concern founded upon such an enlarged and comprehensive scale as would ensure the contemplated benefit and advantage to the several Companies interested, as well as for its becoming a medium of the greatest public utility.

NATHANIEL W. SYMONDS.

Lombard Street Chambers, Clement's Lane,
27th October, 1841.

*** Any suggestion to improve or add to the usefulness of the above plan will be thankfully received.

ANDREW SMITH'S PATENT WIRE ROPES, for STANDING RIGGING, LIGHTNING CONDUCTORS, STROPPING OF BLOCKS, MINING, RAILWAY, and GENERAL PURPOSES; about half the Size and Weight of Hempen Ropes, and 25 per cent. cheaper. Testimonials to that effect, with Specimens, may be seen, and every information obtained, at the Manufactory, Mill wall, Poplar; and also of the following Agents:

Robertson and Co., 12, Goree Piazzas Liverpool,
Mathias Dunn.....Newcastle-upon Tyne
Joseph Bothway.....Plymouth.
John Thompson and Co.....Wigan.
J. T. Tregellas.....Truro.
Thomas Mooney and Son.....Dublin.
Coates and Young.....Belfast.
James Kibble and Co.....Glasgow.
James Gunn.....Leith.
John M. Beatte, 14, Clement's-lane, High-street, Dundee.

This Rope has been in use for standing rigging in her Majesty's navy, and a great number of merchant vessels, for upwards of six years, and is giving the highest satisfaction. It is also employed in various mines and railways in different parts of the kingdom.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secresy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

PARIS AND ROUEN RAILWAY.—Notice is hereby given, That a meeting of the Shareholders will be held at the Clarendon Rooms, Lord-street, Liverpool, on Wednesday, the 24th November, instant, at one o'clock, for the purpose of hearing the Report of the English Directors on the state and prospects of the concern.

THOMAS STUART TRAIL,
Secretary to the English Directors.

London Office, 4, Austin Friars, 16th Nov., 1841.

This day is published,

TUCK'S ROLLER CALENDAR FOR 1842.—This is a mode of affixing the Calendar for the whole year on two revolving cylinders, within an elegant case, so as to exhibit each day's information in a bold and novel manner, presenting Daily Memoranda indispensible to every housekeeper and man of business. It possesses the advantage of a Date Box and Almanac, and is adapted for the Library, Board Room, Counting House, Warehouse, or Parlour; and is the best application of the Calendar ever yet devised. In Mahogany Box, price 5s. 6d.; in Ornamented Box, 6s. 6d. In addition to much useful information relating to business, &c., the Calendar contains the time of High Water at London, Liverpool, Dublin, Glasgow, Leith, Bristol, and Hull, for every day in the year.

Railway Times Office, Fleet-street; Letts, Cornhill; and Ackerman, Strand.

RAILROADS.—The Advertiser, a young man, age 26, wishes for a situation as Lamplighter on either of the Railroads, or to any other public company where oil is used. He understands his business in all its branches.

Respectable reference will be given if required.

Address (post paid) to Y. Z. at Mr. Hubes, Hope Town, Wandsworth Road.

LONDON AND BIRMINGHAM RAILWAY. CALL of £10 (being the second) on the £25 Shares, making £15 per Share called for.

The Directors of the London and Birmingham Railway Company having resolved that a Second Instalment of Ten Pounds per Share, payable on or before the 10th of January, 1842, should be called for on the £25 shares of this Company, the Proprietors of such shares are hereby required to pay, on or before the appointed day, to any one of the undermentioned Bankers, the sum of £10 on each of their respective shares, viz.,—

London—Messrs. Glyn and Co., 67, Lombard-street, or at the Office of the Railway Company, Euston-station.
Birmingham—Messrs J. L. Moilliet and Son, or the Birmingham Banking Company.
Liverpool—The Bank of Liverpool.
Manchester—Messrs. R. Heywood and Co., or the Bank of Manchester.

The Bankers have been severally instructed to charge interest at the rate of £5 per cent. per annum (according to the provisions of the Act of Incorporation), on all sums which shall be tendered after the 10th of January, 1842.

GEORGE CARR GLYN, Chairman } Of the Board of
J. F. LEDSAM, Deputy Chairman } Directors.
By order,
R. CREED, Secretary

Office, Euston Station, November 12, 1841.

BRISTOL AND EXETER RAILWAY COMPANY.—TENDERS FOR LOANS ON DEBENTURE.—The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising therefrom, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest at the rate of Five per cent. per annum, payable half-yearly at the Bank of Messrs. Glyn, Hallifax, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Prince's street, London, or Broad-street, Bristol.

By order of the Board of Directors,
J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol.

TO RAILWAY SHAREHOLDERS, ENGINEERS, CONTRACTORS AND OTHERS.

IMPORTANT RAILWAY CASE. — In the Press, and shortly will be published, price 2s. 6d., A Report of the Case, IRVING *v.* THE MARYPORT AND CARLISLE RAILWAY COMPANY, referred from the Carlisle Assizes to R. B. Armstrong, Esq. Q.C., and heard at Carlisle on the 7th of September, 1841, and the four following days, in which Mr Thorpe, of Thorne, Yorkshire, appeared as Attorney for the Plaintiff; and Mr. Tyson, of Maryport, Cumberland, and Mr. Mounsey, of Carlisle, for the Defendants.

London: Whittaker and Co., Ave-Maria-lane.

When published, due notice will be given in the *Railway Times*, &c. &c.

THIRTY TO FIFTY POUNDS GRATUITY to any person who can assist the Advertiser to obtain a situation as conductor, guard, clerk, or any situation on a railway or other establishment producing from 25s. to 30s. per week. He is a steady young man, thirty years of age, and a tolerable scholar; has been used to a mechanical business, but from want of employment wishes to meet with some gentleman who can assist him to obtain a livelihood. Respectable references can be given, and security if required.

Letters addressed to W. J., 2, Gee-street, Goswell-street, will receive immediate attention.

A YOUNG MAN WISHES TO TAKE THE MANAGEMENT OF AN IRON FOUNDRY, where they manufacture Locomotives, Tools, &c. Can give satisfactory testimonials as to his ability. Has no objection, at the end of twelve months to take a share in the concern.

Letters addressed, post-paid, to "L. M.," Post-office box, L 28, Liverpool.

REPORT OF THE SELECT COMMITTEE OF THE HOUSE OF COMMONS ON 11TH CLAUSE OF THE RAILWAY REGULATION BILL.

MINUTES OF EVIDENCE.

(*Continued from page* 1157).

1284. Does Mr. Porter's attention to this branch of business, under the Board of Trade, consist in obtaining, under the provisions of the Act, the proper statistical returns, and then digesting them?—No, it has hardly been so in fact.

1285. What has the fact been?—The fact is, that I have had that department hitherto in a great measure, and Mr. Porter has merely taken a part in it generally; when we have had any doubt what to do, we have consulted him.

1286. Mr. Labouchere.—Is not the business of the department under the general superintendence of Mr. Porter?—Yes.

1287. Lord Granville Somerset—What authority has either Mr. Porter or yourself, or Sir Frederic Smith, severally or conjointly, independently of the President or Vice-President of the Board of Trade?—No authority, I apprehend.

1288. Do any of you institute any proceedings without the consent of either the President or Vice-President of the Board of Trade?—So far as writing letters, or acting in cases of no importance, where I have no doubt what to do, and where I feel quite certain that I am carrying into effect the views of the President of the Board of Trade.

1289. Was any official memorandum made of the constitution of this department of the Board of Trade?—There was a letter written to the Treasury recommending the appointments.

1290. State precisely the amount of authority that is delegated to you by the President of the Board of Trade with regard to railway matters?—I think it is stated in the minute of the Board of Trade, that Mr. Porter and I are authorised, in the terms of this section of Lord Seymour's Act, to sign communications to the Railway Companies in the name of the Lords of the Committee.

1291. When Sir Frederic Smith was appointed, was there any minute or memorandum made?—A letter was written to the Treasury.

1292. Mr. Labouchere—Do you happen to know what is the annual permanent expense entailed upon the public by the establishment of the railway department of the Board of Trade?—Permanent, about 1,400*l.* a year, I think.

1293. There was one clerk added to the Board of Trade when the railway department was established?—Yes, one junior clerk.

1294. Lord Granville Somerset—Supposing an accident to be reported as having occurred upon any railway, would you feel yourself authorised, independently of the President or Vice-President of the Board of Trade, to give directions for investigation into it?—That would depend upon the nature of the accident; in some cases I should.

1295. In what class of cases?—Where the accident was one of a very serious nature, and one in which investigation might bring to light facts that might be of use.

1296. Then the Committee are to understand that in case of an accident of a serious nature, you would, in conjunction with Sir Frederic Smith, determine upon inquiry, without reference to the President of the Board of Trade?—If Mr. Labouchere was at the Board of Trade, I should consult him; if Mr. Labouchere was absent, and it was a pressing case, I should decide at once.

1297. Mr. Labouchere—In point of fact, an accident having occurred at a time when the President of the Board of Trade was absent from London, you did take upon yourself to institute an inquiry?—In several cases.

1298. But when the President of the Board of Trade is in London, is it not your practice constantly to communicate with him upon any point of the least consequence that occurs in the management of the railway department?—Certainly; I have always done so.

1299. Lord Granville Somerset—Whatever may be the press of business?—Yes.

1300. Supposing the President of the Board of Trade to be absent, has it been your habit, or would it be your duty, to submit any matter to the Vice-President?—No.

1301. The Vice-President of the Board of Trade is not supposed to interfere with this branch of the department?—That has been the practice.

1302. You have stated already that Mr. Baxendale's application was in writing; was there any personal communication with him, or with any other party, upon the subject?—Yes, with Mr. Baxendale, and his lawyer, Mr. Cardwell, a barrister who conducted his case.

1303. Was that conversation or communication on the part of Mr. Baxendale and his legal adviser with you, or with whom?—With me.

1304. Alone?—Yes.

1305. Did you make any memorandum of that conversation?—No.

1306. Did you communicate the substance of it to the President of the Board of Trade?—Yes.

1307. It was an oral communication?—It was. It was, in fact, the purport of the memorial; they came to me, and stated their case, and asked what to do; and I put their statement in writing, and sent it in to the Board of Trade.

1308. Then that statement in writing of the substance of the conversation was communicated by you to Mr. Labouchere, and in consequence of his directions you wrote a letter to the Grand Junction?—Yes.

1309. Has any written commnnication been returned from the Grand Junction?—There was a copy of some resolutions passed by the Grand Junction Company applicable to it.

1310. Is it probable that those resolutions were written in misapprehension, and that some other answer will eventually be given, so far as you are able to state? It is so stated on the part of the Grand Junction Company.

1311. Mr. Labouchere—The transaction, therefore, is yet in an unfinished state; no final decision has been come to upon it on the part of the Board of Trade?—Yes.

1312. Lord Sandon—Do you suppose that the Board of Trade will be able to carry out all the powers of the new Act, both as to licensing and other purposes, without a considerable increase of the establishment?—I think there must be some increase.

1313. Can you at all conjecture in what shape or to what extent that can be provided?—I should think it may be done at a very small expense, by somewhat increasing the establishment at the Board of Trade.

George Stephenson, Esq., called in, and examined.

1314. Chairman—With what railways are you connected?—I have been connected with a great many: first, the Liverpool and Manchester.

1315. Mr. Labouchere—How long were you the Chief Engineer of the Liverpool and Manchester?—I was some years there after it was finished; I also laid out the Grand Junction line, and remained there till it was half finished. I laid out the Manchester and Leeds line, and I remained there till it was finished. I laid out the York and North Midland line, and finished that; the North Midland line, the Derby and Birmingham, the Stockton and Darlington, and also several lines in the North of England that Bills were not got for. I assisted my son in laying out the London and Birmingham, the Chester and Birkenhead, and the Chester and Crewe. In fact, there is hardly a railway in England that I have not had to do with. I assisted Mr. Brunel in getting the Great Western Act. He was twice in Parliament, and I was with him both times, giving evidence for the Bill.

1316. Mr. Loch—And the Carlisle and Maryport?—And the Carlisle and Maryport. I assisted many of the Scotch Bills; among others, the Glasgow and Ayr.

1317. Mr. Labouchere—You have of course devoted much attention to the subject of the means of preventing accidents upon railways?—I have.

1318. Have you read the suggestions made by the officers of the railway department of the Board of Trade upon this question?—I think not; I know some of them, but I have not read any evidence upon the subject.

1319. Have you seen the report of the officers?—I have not seen that report.

1320. You have paid much attention to the subject of breaks?—I have.

1321. Do you consider them an important element of safety in railway travelling?—Certainly, the most important of anything that can be contrived for the safety of travelling. I believe that if self-acting breaks were put upon every carriage, scarcely any accident could take place.

1322. What do you mean by self-acting breaks?—Whenever the power is taken off the engine by the engine-driver, it immediately ceases to proceed so fast; all the carriages immediately run towards the engine, with the impetus put into them before the engine was retarded in its progress. Every carriage, as it approaches the next carriage, shall apply the break itself. Every carriage is brought into the state of a sledge; the rolling motion of the wheels ceases; and supposing that an engine was running on with 12 or 14 coaches, and that every coach had a breaksman, that is, 12 coaches and 12 breaksmen, and the whole of them upon the look-out to see if anything went wrong in the engine, to apply the break immediately, I conceive that the self-acting principle is fifty times better.

1323. Lord Stanley—Upon what railways is the self-acting principle practically brought into operation?—It has not been much done, but we were doing it before I left the Liverpool and Manchester; I got some put on there, but they were given up afterwards; but why I do not know.

1324. Upon what railways have they been practically brought into operation?—Upon the Liverpool and Manchester, a short time.

1325. Have they been brought into operation upon any other railways with which you are connected?—No, but they are about doing so now.

1326. Where?—Upon the Derby and Birmingham, and upon the Manchester and Leeds; they are preparing for them.

1327. Mr. Labouchere—Are they very expensive?—No, I think not; the breaks may cost from 5*l.* to 10*l.* for each carriage.

1328. Lord Stanley—Are your present carriages upon the Manchester and Leeds furnished with the usual breaks?—They are.

1329. Then, although you have a very high opinion of the efficacy of those self-acting breaks, they have not been practically tested?—We have not had much opportunity.

1330. Lord Granville Somerset—Are they patent breaks?—I do not know; I have heard of a man taking out a patent for it; but I do not see how that can be done.

1331. When you applied them upon the Liverpool and Manchester, were they patent, or were they your own invention?—There was no patent for them.

1332. Did you construct them yourself?—I did.

1333. Did you invent them?—I did.

1334. But you have never taken out a patent for them?—No.

1335. Do you know whether any improvement has been made or suggested in them?—I have heard that there is a patent taken out for them, but I do not know exactly the construction.

1336. Mr. Labouchere—In the report made by Sir Frederic Smith to the President of the Board of Trade, he states that no train should be allowed to start without breaks. Do you consider that recommendation a judicious one?—I do.

1337. You think it is of universal application?—I do; I should say that the whole of the carriages ought to have breaks upon them, because it is impossible to tell how those carriages may be divided in starting.

1338. Do you think it would be equally safe to trust a heavy train to a break upon the engine or tender?—Not so safe as the application of breaks away from the engine. I conceive that applying the break to the engine or tender, is something like putting an obstruction before a ship at sea in order to stop her, instead of throwing the anchor out at the stern. All the carriages being loose besides, they will run to the place where the obstruction takes place. Of course, if the momentum is great, one carriage will tumble over another; I have seen that take place. I happened to be in the last carriage when the accident took place upon the North Midland; I looked out and saw the guard thrown out from the coach. If a self-acting break had been there, I believe no such accident would have taken place.

1339. Supposing there were no breaks to the carriages, and that in going up a plane of severe inclination, the coupling-chains of any of the carriages should break, would not the hinder carriages be exposed to the danger of running down the plane?—Certainly.

1340. Is not the Northern and Eastern Railway nearly a level line?—I believe it is.

1341. Is it not the fact, that notwithstanding this favourable circumstance, the Company are having breaks put to all their carriages?—They are.

1342. Do you consider that judicious?—I do.

1343. If a railway were entirely your own property, should you consider it proper to put breaks to the whole of the carriages?—I would; I think I should have a saving by it; I believe there would be less wear and tear of the engines, less wear and tear of the tenders, less wear and tear of all the coaches; and it would be more pleasing to the passengers. As they are at present, the break is applied upon the tender and also upon the coach that the guard may be travelling in, till all the four wheels are raised and the fire comes flying from the wheels. That would not

Digitized by Google

take place if the mode of stopping were divided through the whole train; there would be no occasion for the wheels to slide at all like glass; but where the break is applied to so few of the wheels they cease to roll, and slide along the rail, and the fire flies between the wheel and the rail, and of course a flat part is wearing upon the wheel, and when the wheel is left at liberty again, it will strike like a hammer; it will be unpleasant to the passengers, and of course cause more wear and tear to the carriages.

1344. Lord Sandon.—It will produce a jar every time the wheel comes to the flattened part?—It will.

1345. Lord Stanley—By applying a break to every carriage you would not prevent the rotatory motion of the wheel, but only check it?—The breaks would be applied gently, and the striking could scarcely be felt; and their progress would be stopped in some degree.

1346. In short, a less degree of retention applied throughout the whole of the train will answer more safely and more effectually than by applying the whole of it to one or two carriages at different parts of the train?—Certainly.

1347. Sir Robert Peel—Are you speaking of self-acting breaks now?—I am; I call them self-acting, because if an engine ceased to go on, the carriages all ran one against another; they will apply the break in doing that.

1348. Mr. Labouchere—Are you of opinion that it would be an important point, with reference to the public safety, that there should exist somewhere the means of enforcing the use of breaks, at least to some extent, upon all lines of railways?—I am.

1349. Do you think the enforcement of such a principle would be causing an unreasonable degree of expense, or imposing any hardship upon any railway company?—I believe they would benefit by it in the end.

1350. Lord Stanley—Do you believe that it would be desirable that the use of breaks upon every railway should be required by Act of Parliament, or that a discretionary power should be left to any party to enforce or not to enforce the use of breaks upon railways?—There are some railroads, certainly, that would require more breaking than others; but still I cannot see that it is a hardship for such a clause to be in the Act, wherever passengers are to be carried. If the gradients are very favourable they may increase the velocity to a very high degree, and then the breaks may be as much required as if the gradients were unfavourable.

1351. Sir Robert Peel—Will the interest of the Railway Companies, and the desirableness of protecting their own property and the lives of the passengers that travel by them, induce them to take this precaution, as their own voluntary act, without the enactment of a positive law upon the subject?—I believe, as soon as it is found to be beneficial, and that it diminishes the wear and tear, all the Companies will be induced to do it, even if it was not enforced by an Act of Parliament.

1352. Do not you think it very desirable that every heavy carriage upon a common turnpike-road should have a drag chain?—Certainly.

1353. The interest of the proprietor induces him generally to provide himself with a drag chain, without any positive injunction of an Act of Parliament?—It does.

1354. Do you think the same motive will induce the Railway Companies, when they are convinced of the policy of using a break, to use a break without being required by law to do so?—I think they will, as soon as the benefit is known, be induced to do it themselves.

1355. You say some railways require more breaks than others, therefore it would be necessary, in laying down any positive regulations upon the subject, to go into a detail of the breaks required upon different lines; and to say, for example, that there should be one break for every four carriages, would not be applicable to every line of railway?—I should say more than that, my plan is to have all the carriages with breaks.

1356. Lord Sandon—Do you mean self-acting breaks?—I mean self-acting breaks.

1357. In case the self-acting breaks should not be found to answer, would you wish to have a breaksman to every carriage?—I am sure the self-acting break would answer, I should say it would be too costly to have a breaksman to every carriage.

1358. Supposing for any reason these self-acting breaks were not adopted, can you lay down a general rule as to the number of breaksmen in proportion to the carriages which you would think it right to impose upon all railroads?—No, I cannot lay down a rule for that, it would depend upon so many circumstances as to gradients.

1359. Mr. Labouchere—But you think an important point would be gained for the public safety, if the use of breaks, in some measure at least, were insisted upon and enforced upon all railways?—I think so.

1360. Although it might not be possible to enter into further detail, and to make different regulations for the different Companies?—I think so.

1361. Lord Sandon—There are certain railroads where you think that one break to every four carriages would be enough; there are certain others which you think would require one to every two carriages; then of course the general regulation, if it is not to be severe upon the one for which one in four would be enough, must be one in four for all; then would that regulation be of any use as applied to the railways upon which there ought to be a break to every two carriages?—I can imagine railways where one in four might be enough, but it would not be enough upon other lines.

1362. Do you know any railroads where there are no breaks now?—I do not.

1363 Lord Granville Somerset—Was your attention attracted to a very serious accident which happened upon the Eastern Counties' Railroad soon after its being opened?—I heard of it, but I do not know the particulars.

1364. You do not know that it was stated on oath before the Coroner's inquest that the trains were going about 60 miles an hour when the accident happened?—I might have heard it stated.

1365. Supposing that was the fact, do you not conceive that the application of breaks, suddenly and injudiciously in such a case, might be injurious rather than advantageous?—A single break, but not if the whole caariages had been breaked, I think no such accident would have taken place.

1366. Supposing the velocity was acquired before the breaks were brought into action, do you think the application of breaks upon each carriage in the train, the engine still being in full operation, would not have been of advantage?—Certainly; breaks there of course would be useful.

1367. You do not think it possible that the breaks acting when the train is going at that velocity, might have a tendency to run it off the rails?—It is not possible that they should do so; the stopping the momentum following after the engine by bringing the rolling motion into a sledge motion, must have a tendency to prevent the matter rolling upon the engine that otherwise would come upon it; but if you apply the break to the engine, then it makes it press, because there is all the momentum of the matter behind, which will roll on, and the carriages will tumble one over another.

1368. The engine could not get out of the way, and the momentum of the carriages behind would be such as to overwhelm the engine, or if it did not overwhelm it, to cast the carriages off the rails?—Yes; and I believe it was something like that when the accident occurred upon the Eastern Counties' Railway.

1369. Supposing any one of your self-acting breaks should fail, what would be the result then?—It would only be then as if it were not applied.

1370. Supposing your self-acting breaks were not successful, would it be desirable (independently of the expense) to have a man to each carriage, to apply a dozen independent breaks?—It would make it safe, but it would be so very expensive.

1371. Do you think that their acting together in that case would be essential, and that the possibility of their not acting together might be disadvantageous?—Acting together is the best.

1372. Supposing they put on the breaks at an improper moment, what would be the result then?—They could not put them on at an improper moment.

1373. You think the application of the break at an improper moment could not produce a disadvantage?—It could not be applied improperly if it was a self-acting break, it could not be brought into action when it was not wanted.

1374. Supposing there to be a self-acting break, and that the machinery snaps or gets out of order, what would be the result then?—It is not likely that they should all get out of order; if one got out of order, of course it would not be quite so powerfully stopped as if all remained perfect.

1375. Lord Stanley—Supposing a train to be in a state of rest, and another train to come up, and run against the train, what would be the result of the action of your self-acting breaks upon the first train?—In that case the breaksman can relieve them all from their places merely by turning a handle.

1376. Then with the self-acting break you must have a breaksman to prevent the action of the break upon certain occasions?—When you want assistance, then it is necessary to lift the lever out of its place; it lies behind the buffers; the buffer spring would carry the break to its place, but if it was necessary to have the breaks out of their places, all that you require is to lift the lever.

1377. Do you mean that one breaksman, by the application of a single lever, could prevent every one of the self-acting breaks from acting?—He could.

1378. Lord Sandon—Would his action affect them all at once?—That would not matter; it might be done just as he liked. I can imagine a case where a carriage is standing, and a train runs into it, and it would not matter whether the breaks were on or off; the whole smash would take place in a moment, and it would not matter whether the breaks were on or not.

1379. Supposing the collision came from behind, and supposing the train to be in motion, but not in motion so fast as the carriages coming on; if the first train keeps its action, it to a certain degree diminishes the force of the collision, but supposing the train which is going on to have upon it one of the self-acting breaks, would not the first effect of the collision be to check the onward motion, and to subject the first train to the whole force of the collision?—It would have that effect if they were not removed from their position by the breaksman, but would still have a breaksman there to attend to it.

1380. Sir Robert Peel—What is the contrivance by which one man can manage so many breaks upon different carriages?—It is merely to have a connecting lever, coming up to where the man stands, running along the coaches, that shall touch the break.

1381. Lord Stanley—And throw it out of gear?—And throw it out of gear. There is a variety of ways in which it might be applied.

1382. Sir Robert Peel—Can you depend entirely upon the lever being kept in a constant state of repair, so that it shall always be certain of being applicable when necessity arises?—It is so simple that I can hardly imagine its being out of repair.

1383. Lord Stanley—How do you account for its being abandoned on the Manchester and Liverpool Railway, after being applied there?—I think it must have been because they did not think it necessary to lift the lever out of its place. If I had remained there, I think it would have been there yet.

1384. Lord Granville Somerset—Would it be practicable to apply these self-acting breaks to carriages not previously prepared for them?—Yes.

1385. At an expense of 5*l*. or 10*l*. each?—£5 or 10*l*.

1386. In the case of the Eastern Counties Railroad, in what way would the self-acting break have been brought into operation there, because in that case the engine itself was going at an immense pace?—As soon as the engine left the road, then the breaks would all be applied.

1387. Then, the moment the engine was capsized, the breaks would have come into operation, and have prevented further calamity?—Many of the carriages would be stopped by the application of the break before they came up to the engine.

(To be continued.)

North Midland Railway.—The Company, this week, have begun to erect sheds, to cover the platforms on the opposite side of the line to the station-houses. Those at Chesterfield and the other principal stations are nearly finished, and all the other stations are, we understand, to be provided with similar erections. Hitherto parties waiting for the up trains have been exposed, with their luggage, to the inclemency of the weather; and, as the weather seems to portend an early winter, the sheds will be duly appreciated. The Company deserve great credit for their endeavours to secure the comfort of their passengers.—*Derby Mercury.*

Shocking Accident on the Wyre Railway.—On Saturday evening last, as the last train was proceeding from Preston to Fleetwood, an innkeeper of the name of Hornby, formerly of the Ship Inn, Preston, but latterly of Fleetwood, fell from one of the carriages on to the line, and was so dreadfully injured by the wheels passing over him, as to cause his death on the following day. We have been unable to learn the full particulars of the accident, but we have heard that both the legs of the unfortunate man were cut off by the train. He was a remarkably stout, powerful man, and in the prime of life.—*Blackburn Standard.*

EDINBURGH AND GLASGOW RAILWAY —SUNDAY TRAVELLING.

THE following is the document referred to in our leading columns. It is addressed to the Directors of the Edinburgh and Glasgow Railway Company:—

GENTLEMEN,—The members of the Newcastle-upon-Tyne Society for Promoting the Due Observance of the Lord's-day, have watched with deep interest and anxiety the recent discussions and proceedings connected with the apprehended desecration of the Sabbath, by the running of railway trains between Edinburgh and Glasgow upon that day.

It is under the influence of these feelings that we, though not locally interested in your arrangements, address you on a subject so momentous, and one which cannot be viewed with indifference by any man who adequately estimates the principle which it involves, and the awful and overwhelming consequences which are inseparably associated with it. When you bear these considerations in mind, we are confident that you will acquit us from the charge of unwarrantable interference; especially as we can, manifestly, have no other object in view than to secure a due regard to that law of God which, by setting apart a seventh portion of our time to be employed in the worship of our Creator, is so eminently designed to promote the best interests of mankind.

We desire then, gentlemen, to testify our cordial sympathy in those vigorous and enlightened efforts which have been recently directed to the great end of maintaining the proper sanctity of the Sabbath in your own immediate locality; and we do so with the greater cheerfulness because we believe those efforts to have been based on the only sure ground upon which Christian men ought to stand, viz., the simple requirements of God's law, divested of all feelings of expediency derived from fancied necessity or supposed commercial advantage.

It is possible that you may admit the force of the law of the Sabbath, and yet, at the same time, imagine that we overrate the importance of the threatened violation of it to which this address has reference; or at least you may say that we are too rigid in carrying out our principles, and that little harm would accrue from the conveyance of the mail, or from the running of a limited number of carriages for passengers on the Lord's-day. Suffer us, then, with the utmost earnestness, to press upon your attention the fact which our own painful expeperience in this town has fully established, viz., that if you once abandon the only certain principle of Sabbath observance, and sanction the least departure from the Sabbath law, you open an effectual door for the introduction of all manner of the most open, reckless, and shameless violations of the Divine institution. A few years ago, when Sabbath railway travelling was first commenced in this neighbourhood, it began in a very quiet, and, as some would say, very harmless manner; a few carriages were placed on the railway, as some very gravely asserted, for the conveyance of persons to the various churches on the line of country through which it passed. Notwithstanding a very determined opposition to this evil on the part of the individuals now addressing you, it was unhappily sanctioned, and has since increased to an appalling magnitude. Not only have we three railways on which Sabbath travelling is habitually carried on, but there have been repeated special trains on that holy day, for the open and avowed purpose of "pleasure trips." On these occasions thousands of passengers have been taken at one-half the usual fare, and the scenes of drunkenness and tumult have been truly fearful. So great is the multitude who by these means are led to desecrate the Sabbath, that on a certain Lord's-day, about three months ago, it has been ascertained that a greater number of individuals left this town by the railway trains and river boats, than the average number attending the whole of the places of worship of all denominations in this large town.

Universal as are these desecrations in the southern part of the island, the eye of the Christian has rested with delight upon Scotland as hitherto exempt from so wide-spreading a desolation; and it has been gratifying to be able to point to your highly-favoured country as affording a practical proof that industry, activity, and commercial enterprise, in their highest degree of healthy development, were not incompatible, as is frequently alleged, with the maintenance of the inviolable sanctity of the Sabbath-day. To your consciences, gentlemen, and to your firm adherence to the demands of Christian principle, is intrusted, under God, the continuance of this noble example; and vast is the responsibility under which you are placed, to guard against an incipient breach, on a scale so conspicuous and extended, of the holy tranquillity and quietude which has hitherto characterised a Scottish Sabbath. To the conduct of those who occupy the position of railway Directors applies, as it appears to us, in an eminent degree, the apostolic injunction, to abstain from a participation in other men's sins; and it is difficult adequately to estimate the consequences involved in deliberately converting this important medium of conveyance into a broad road which will have the inevitable effect of leading multitudes to destruction,

Desirous of solemnly, but yet respectfully, urging these considerations on your attention,

We have the honour to be, Gentlemen,
(Signed by order of the Society),
WILLIAM CHAPMAN, President.
THOMAS GEORGE BELL, } Secs.
WILLIAM C. MARSHALL, }
Newcastle-upon-Tyne, Oct. 26, 1841.

ACCIDENTS ON RAILWAYS—*NOT* "RAILWAY ACCIDENTS."

WE have little doubt that the following lamentable occurrences, the notices of which we extract from the daily papers, will be adduced by the anti-railway press as proofs of the dangers of railway travelling, and probably will supply a text for a long tirade in the *Times* against Railway Directors. Yet who does not see that the casualties in question are attributable solely to the imprudence and incaution of the sufferers themselves?—

"An inquiry adjourned from Friday, concerning the death of Patrick Calmody, aged 50, a labourer, was on Tuesday resumed before Mr. Baker, at the London Hospital. On the 29th of October deceased, with other workmen, was employed near the Blackwall station on the above railway, repairing a portion of the line damaged by the late floods. They all had strict orders to keep clear of the line when the carriages were approaching, but notwithstanding these injunctions deceased frequently ventured across it. As the train was proceeding along the north line towards Blackwall, deceased imprudently stepped across the rope to get a piece of wood to clean his spade, and the guard seeing his dangerous position, blew his horn and shouted to him to get off the line. He endeavoured to do so, but was unable, and as the carriages could not be stopped, he was struck by them and knocked down a hole through which the rope which attaches the train to the engine passes. The rope rolled over him until the engine was stopped, and having been extricated, he was attended by a surgeon. He received a compound fracture of the thigh and an injury to the skull, besides several bruises, of which he died in the hospital. Verdict—'Accidental death.'"

"On Thursday evening Mr. Payne held an inquest at Guy's Hospital, on the body of William Martin, aged 19, a porter on the London and Croydon Railway. It appeared in evidence that on Tuesday morning last about nine o'clock, the London and Croydon train was coming in sight at the New Cross station, and the London and Brighton up train was leaving the slip, having set down passengers on the other side of New Cross bridge. Two trains being on the same line the red signal flag was hoisted for the London and Croydon train to stop. A few seconds after the deceased was seen passing from one carriage to another of the Brighton train, and whilst in this dangerous position he was struck against the arch of New Cross bridge, knocked off the carriages on to the line, and the train passed over him. At the time of the accident the train was progressing very slowly, at the rate of between six and seven miles an hour. Deceased was picked up in a state of insensibility and conveyed per train to that hospital. It farther appeared that deceased had no business whatever to be on the top of the carriages, and none of the witnesses could tell why he should place himself in a position the danger of which he was fully aware of. Mr. Lay, house surgeon, said, deceased was admitted insensible, having both his arms broken and both his hands frightfully lacerated. He died at seven o'clock on the evening of the day he was admitted, of laceration of the brain, caused by a fracture of the skull. Verdict—'Accidental death.'"

"On Saturday week a serious accident occurred at Edmonton, to a man named John Kiddle, 25 years of age, employed on the North-Eastern Railwany, whose leg was fractured by the step of one of the carriages coming in contact with it. He was immediately conveyed to the London Hospital."

"A woman, named Whalley, had her leg fractured last Thursday evening by endeavouring to get out of a railway carriage on the York and North Midland line before the train had finally stopped."

NORTH MIDLAND RAILWAY.

To the Editor of the Railway Times.

SIR,—At the last half-yearly meeting held at Derby, on the 26th of August, it was unanimously resolved, that a list of the shareholders in this railway should be printed and circulated amongst the proprietors; and at the previous half yearly meeting held in London, on the 26th of February, the Chairman stated in reply to a gentleman (as reported in the *Railway Times*,) that "he or any other shareholder might have a list of the salaried officers of the Company, and obtain any other information required, from the Secretary."

Several gentlemen applied for lists of the shareholders and salaried officers, at the last half-yearly meeting, and also at the last special meeting.

Now, I wish to know,—and perhaps one of the active and intelligent Secretaries would be kind enough to state—why a list of the salaried officers of the Company *cannot be obtained by a shareholder when asked for?* and also, if Mr. Brancker and Mr. Alston have had the list of shareholders *promised them?* and lastly, why the Secretaries have not printed, published, and circulated amongst the proprietors generally, the list of shareholders agreed upon at the half-yearly meeting?

A SHAREHOLDER.

SECOND CLASS CARRIAGES.

To the Editor of the Railway Times.

SIR,—I have over and over again heard of complainants against the accommodation afforded in second class carriages, and of the greater exposure to cold therein, beyond what is experienced by the outside passengers of a common road coach from the slower speed travelled at by the latter.

Now, there the error lies; for I appeal to every traveller's experience whether riding, driving or walking rapidly they are not less inconvenienced by the cold than when slowly progressing.

It is, perhaps, worthy of remark that the London and Brighton Railway second-class carriages, though more costly mediums of conveyance than the like class on most other lines, are on the other hand more comfortable than any others. In fact, had they seat cushions they would be nearly as snug as first-class, for recently they have had the transverse partitions boarded up all the way to the roof, so that the only opening is at either side, and this boarding seems so slight that in the event of any collision one's head would not suffer therefrom.

FOUR-WHEELED AND SIX-WHEELED ENGINES.

To the Editor of the Railway Times.

SIR,—Some statements of mine on the subject of four-wheeled engines, having been called in question by some correspondents of your paper, I beg to reply to their several objections. And first, I would desire, should these remarks meet his eye, to express to Mr. Seaward—whose objections I have already answered through another channel—that I concur not in the sneering observations which several writers have made on his letters. The gentlemanly and temperate tone of his letters might with advantage be copied by others who desire to make known their opinions on the subject now under discussion; and all personalities and unseemly warmth being far more derogatory to the writer than to the party against whom they are used, I will, while recommending others to adopt the example I have quoted, endeavour myself to follow the advice which I give to them.

My object in writing the letters which have become the subject of remark and have been already copied into your journal, was to disabuse the public mind on several points connected with the relative degrees of safety of four and six-wheeled engines. But although several letters containing different views to mine have appeared both in your own and other journals, I have seen none which merited another reply from me, except the two which appeared in your last number; the one evidently the production of a man practically acquainted with the subject he writes upon, and containing, I apprehend, the best arguments which can be brought forward in favour of six-wheeled engines; the other remarkable for its unscrupulous assertions, which however pardonable in one possessed of more slender knowledge, would scarcely have been expected from Mr. John Gray, who, as the inventor of a most ingenious plan for working locomotive engines by expansive steam, and once an *employée* of the Liverpool and Manchester Railway, possesses ample means of knowing that his assertions are not warranted by facts, and has had the advantage in the person of the able Manager of that railway, of the best example of probity and honour.

And first, I will reply to the several remarks of the gentleman who writes under the (assumed?) name of "Theodore Cruckshank." And in doing so, I cannot avoid observing, that, seeing the care which he has evidently employed in drawing up his reply, and the length of time which has been required for perfecting what I acknowledge to be a very ingenious letter, he did not at the same time furnish us, from the data which I feel assured he possesses, some statistical facts which would clearly prove the superiority that he assumes for six-wheeled engines. Arguments are *not* facts; though facts are I conceive the strongest arguments in such cases as the present. And having produced I believe incontrovertible facts in favour of the safety of four-wheeled engines, I regret that the advocates of six-wheeled engines *are obliged to rely on arguments alone*, to prove that their engines never break their axles—or rather I should say, never do any damage when their axles break; for the former I perceive they do *not* assert—and that their engines never run off the rails at curves or elsewhere. However, to the arguments I will now reply, and in the order in which the respective parties have placed them.

The objection which is taken to my remark that both the weight and length of six-wheeled engines exceeds that of four-wheeled engines by 50 per cent. is not a fair statement. It was not the total length between the buffer heads which I stated, but the whole context of the letter evidently shows that it was the length between the extreme points of support in the two classes of engines which I asserted was in this proportion; and that this is the case is too well known a fact to require any proof. As to the weight of six-wheeled engines exceeding the four-wheeled engines by 50 per cent., I maintain my position to be correct as a general statement, and I must therefore deny the counter-statement, that "the weight [of a six-wheeled engine] is *never* more than three tons greater than a four-wheeled engine of the same power." The engines of Messrs. Robert Stephenson and Co. will not be denied to possess some claim as a precedent for six-wheeled engines; and of those either made by them or under their directions, and according to their patterns—such, for instance, as those on the North Midland, the Midland Counties', the Northern and Eastern, and other railways—the additional weight is fully equal to what I have stated, as compared with the majority of four-wheeled engines; of which the average weight of those employed on the Birmingham Railway is less than 10½ tons, including water and coke, while the *least* weight of Stephenson's engines which I have been able to ascertain, is 15 tons.

The assertion, that the outside framing has been stated by me to be "*an indispensable and absolute*" distinction between four-wheeled and six-wheeled engines, is founded in error. There is nothing like it in my first letter; and in my second letter, I have distinctly stated that several instances existed of inside bearings to the crank axles of six-wheeled engines. The instances mentioned in your correspondents' letters of the various railways which are adopting inside framing and bearings to six-wheeled engines, afford the most convincing arguments in favour of the supposition, that as so many railways have found the great evils that result from the use of six-wheeled engines of the usual construction, they are rapidly adopting that which until lately was one of the distinguishing features of four-wheeled engines; and they will probably still further assimilate them by ultimately dropping the additional pair of wheels also.

The next assertion—that I have stated the absence of flanges from the driving wheels to be an essential distinction between six-wheeled and four-wheeled engines—is also founded in error. Nothing in the least like such a statement can be found in my letters, which, had it existed, would have shown the most complete ignorance of the subject. These several mistatements of your correspondent are, I am sure, unintentional; they cannot serve the cause he advocates, and I think better of his abilities than to suppose he stands in need of such assistance, unless indeed, he feels the goodness of his cause to be something more than doubtful.

The next objection urged is, that the statement made respecting the greater slackness of the gauge of six-wheeled engines, is not correct. It is a pity that instead of going into lengthy arguments to prove that it *needs not* be so, your correspondent did not show by facts that it really *is not* so—by stating the degree of play allowed on the several railways using respectively the four and the six-wheeled engines. I will supply his omission, by stating that on the Liverpool and Manchester, the Grand Junction, the South-Western, the North Midland, and several other railways, the difference between the gauge of the rails and the gauge of the wheels is *one inch*, the whole of these lines being worked by six-wheeled engines: while on the Birmingham Railway, the play allowed is from half an inch to three-quarters of an inch? and on some other lines using four-wheeled engines half an inch is the extreme limit allowed. The only instance that I know where the gauge of six-wheeled engines is as close as four-wheeled, is the Great Western Railway; where the wheels fit absolutely and completely close to the rails, the flanges being of a peculiar form to allow of their coming close in contact with the rails.

But the most ingenious part of your correspondent's letter is his next remark; in which he endeavours to prove that six-wheeled engines go better round curves than four-wheeled. He argues, that "a curve of *one mile* radius is practically, as far as regards the moving of a parallelogram 11 feet long, to all intents and purposes a straight line," and then goes on to assume that, *on a straight line*, two parallelograms of 5½ and 11 feet respectively (*assuming also that they are exactly of the same width*), the shorter will form an angle of double the number of degrees, when moved diagonally, that the other will. This mode of running off from a difficulty, is just what his six-wheeled engines do at the curves—they quit the line and go off at a tangent! He first assumes that all curves are a mile radius, whereas they vary (as on the Grand Junction Railway) from *one-seventh* of a mile upwards: he next assumes, that his supposed curve is tantamount to a straight line: and finally, he assumes, that the four and six-wheeled engines are exactly of the same guage which I have shown they are not. And thus arguing on all his three premises erroneously stated, we cannot wonder that he arrives at the conclusion he desires; whereas by placing all these several premises exactly as they stand in actual practice, the result is that the six-wheeled engine in going round a curve forms with the tangent of that curve, double the angle that is formed by the four-wheeled engine: it is therefore twice as likely to run off the rails, and receives twice as great a strain upon the axle.

The last of the objections which your correspondent urges is, that my assertion that the whole of the wheels of a six-wheel engine are scarcely ever in contact with the rails when travelling, is not founded in fact. To this I have merely to reply that he has no doubt fallen into the same error which I have found many other persons commit on this subject. All allow, that without springs this result would obtain; but the action of the springs they maintain corrects this defect. That the springs greatly modify the defect I allow, but they do not remove it. A spring, like every other mechanical power, is not *instantaneous* in its action, but requires a definite period of time to develope its power; and therefore, at high speeds, the action of the spring is frequently at fault, as it is perhaps expanding after the effects of a previous contraction, when the deflection of the rails would require it again, or still further, to expand in order to keep the wheels in contact with the rails. No person can deny that the want of contact exists; for with six-wheeled engines the whizzing of the driving-wheels is continually heard, as they revolve without contact with the rails; an effect which never occurs with four-wheeled engines. Your correspondent laughs at the idea of running upon *three* legs, as he calls it—an expression which has been used by no one but himself—but he perhaps forgets that *except on a line mathematically true*, there never can be, with a rigid body, more than three points of support all equally in contact at the same time. To a certain extent this will apply to the case of the engine; and therefore his simile of the three legs is not quite so ridiculous as it might at first appear.

Having replied to every point in this letter, I will now proceed to answer the several queries proposed

Digitized by Google

by Mr. Gray—*not* by inuendos, by loose general assertions, and unfounded statements, but by tangible and substantial facts, so far at least as the nature of his questions will allow.

To his 1st query I reply, that on the railway where "300,000 miles have been run with perfect safety by four-wheeled engines," by which of course is meant the Birmingham Railway, I deny that "several cases," or even one single case, has occurred, in which "the four-wheeled engines of that line have, *without any apparent cause*, gone off the rails and tumbled over, both in the early and subsequent career of that Company." One case has occurred on this railway in which an engine driven at frightful speed by a reckless or drunken man, sent by the manufacturers to take charge of her, ran off the line, tearing up the rails for a considerable distance, and was knocked over by the impetus of the train down an incline plane, after the driver had in his alarm, at the consequences of his folly, suddenly shut off the steam. The road at this place was in bad order in consequence of water lodging in a newly-made embankment; and I think it cannot be said that this was "without any apparent cause," as any engine, whatever its construction, must under similar circumstances have shared the same fate; and to which I shall presently again allude when speaking of six-wheeled engines. The case of collision at Harrow last year cannot of course be included among cases "without any apparent cause," even by Mr. Gray; as the cause was in that case also quite sufficient to produce the same result to any engine whatever.

2nd. Having denied, as above, the existence of the *cause*, I of course cannot imagine that it was the *effect* of these accidents "which taught the Company the prudence of running for a time at a slower speed than their *grand* six-wheeled neighbours." The second of these accidents occurred only 12 months since, and long after the Birmingham Company had regularly travelled at their full speed—which, by the returns published by the Board of Trade last March, appears to be 22½ miles per hour for first class trains, and 20½ miles per hour for the night trains, *including stoppages;* while from the same documents it appears that the speed on the Grand Junction line is only 19½ miles per hour *including stoppages;* and on the Liverpool and Manchester 22½ miles.

3rd. Mr. Gray denies that any instances can be produced of six-wheeled engines having run off the rails and tumbled over, and challenges the production of such cases. Mr. Gray's former connection with the Liverpool and Manchester Railway must have made him acquainted with two such cases of which he here denies the existence. In 1837, the engine with six wheels, called the *Patentee*, broke her fore axle and ran off the line, dragging the train after her down the embankment: and on another occasion a six-wheeled engine, going down the inclined plane with a goods' train, ran off the line and turned completely round. On the Southampton Railway, a few months after the opening of the line, the engine called the *Garnett*, having six wheels and outside framings, ran off the line "without any apparent cause," and tumbled down to the bottom of an embankment near Kingston; and but for the couplings breaking would inevitably have drawn the train after her. To this day no cause has ever been discovered for the accident; and it now stands recorded, together with those which occurred on the Liverpool and Manchester Railway, as evidence against the *perfect* safety of six-wheeled engines, which the indiscretion of such unscrupulous advocates as Mr. Gray has alone called forth.

4th. Mr. Gray here asks me to prove a "negative fact," a task for which I acknowledge myself incompetent.

5th. In the case of collisions, Mr. Gray asserts, that the drivers always suffer when four-wheeled engines are used, and always escape unhurt when similar accidents occur to six-wheeled engines. But he goes rather too far when he asks *me* to prove this case, particularly as I have the best possible reasons to disbelieve its existence. But I think the least he can do, unless he wishes to be considered as making groundless statements, is to prove it himself, by direct reference to statistical returns of accidents; and if he succeed, I will then acknowledge that he has made out the strongest argument in favour of six-wheeled engines that I have yet met with, and one which will merit, and will no doubt receive, the humane attention of every Railway Director.

6th. This is a mere theoretical opinion of Mr. Gray's, not worth controverting, being wholly unsupported by either arguments or facts.

7th. Mr. Gray is well aware that the cause of the "early locomotives of the Liverpool and Manchester line," rocking, was not the inside bearings, but it was the alterations which were found necessary to be made in the boilers and fire-boxes, which threw the engines out of their balance, and caused the additional pair of wheels to be then first used. The insufficient strength of the rails used at that period, would also materially affect the steadiness of both engines and carriages; and therefore it is no marvel that when these several causes of unequal motion were removed, the engines should be steadier, although the outside framing had nothing to do with the result.

8th. The placing the axles of the carriages further apart on the carriages of the Liverpool and Manchester Railway would no doubt produce greater steadiness of motion, *provided they were too near together in the first* instance; but this latter fact Mr. Gray has forgotten to tell us, and therefore his data of comparisons are useless. But when we remember the novelty of railway locomotion at the period alluded to, we cannot wonder that such alterations should have been required, and the fact has nothing whatever to do with the subject now under discussion.

9th and 10th, require, I conceive, no reply; as the latter, if answered, would require far more space than the subject is worth.

11th. After acknowledging the "frequent breakage" of the axles of six-wheeled engines—an accident from which I have already shown the four-wheeled engines are almost wholly exempt, Mr. Gray asserts that "a fair comparison of the maintenance of way and locomotive power, will show a less cost per ton, or per train, per mile, where six-wheeled engines only are in use, than upon similar lines where four-wheeled engines only are used." The maintenance of way on the Eastern Counties', the North Union, the Lancaster and Preston, and the Midland Counties' Railways, is in each case contracted for at sums varying from 180*l.* per mile to 215*l.* per mile, with the exception of a small portion of one of these lines (the Midland Counties'), which from particular circumstances is charged somewhat higher. All these lines use four-wheeled gines. But on the Liverpool and Manchester the charge for maintenance of way is 300*l.* per mile, and on the Grand Junction 245*l.* per mile, both lines using six-wheeled engines. As to cost of locomotive power, Mr. Gray's statement is just as much at variance with the facts as in the maintenance of way. The cost on the Birmingham Railway is, according to the tables published by Mr. Bury, in the Transactions of the Institution of Civil Engineers, 1s. 3¼d. per mile for passenger trains; while, on the Liverpool and Manchester Railway the expense was, for years I believe, about 2s. 3d. per mile; and though now greatly reduced by the mode introduced of working the steam expansively, is still much above the cost of the four-wheeled engines. On the Grand Junction I believe the cost was nearly the same as the Liverpool and Manchester, but I am not aware of the present rate.

In concluding these remarks I would here observe—that the question of cost is, I consider, a very secondary consideration to that of safety. It is certainly an additional recommendation to four-wheeled engines, that they possess, as well as increased safety, greater economy in working. But could it be shown that they are less safe than six-wheeled engines, my pen—imperfect as its advocacy in the cause has been—would never be again employed in commendation of a form of engine likely to lead to the destruction of my fellow creatures.

I am, Ser, your obedient servant,

CHARLES HOOD.

Earl-street, November 17, 1841.

YORK AND NORTH MIDLAND RAILWAY.

To the Editor of the Railway Times.

SIR,—In your notices to correspondents last Saturday, you express surprise at the statement of "Observer," that the York and North Midland shares are at a depreciated value.

I quite agree with "Observer" that they are so, and the following are my reasons, which I have no doubt are his also, for thinking so:—

This very thriving and well managed line paid a handsome dividend to the shareholders when only partially opened. It was opened through on the 1st July, 1840; and the traffic during the half year ending 31st December following, averaged 900*l.* per week. With this it paid a dividend at the rate of 7 per cent. per annum: the following half year, from 1st January to 30th June, 1841, the traffic averaged 1,200*l.* per week, and a dividend was declared at the rate of 9 per cent. per annum. During the present half year the traffic has hitherto averaged nearly 1,800*l.* per week, and no doubt for the whole half year will be 1,600*l.*, which will pay a dividend of 12 per cent., and this, exclusive of the traffic on the Leeds and Selby line, which is giving the Company a profitable return. The shares can be bought at present at 84, which will give the purchaser upwards of 7 per cent. for his money, with a prospect of considerably more, especially if the line is carried through from Darlington to Newcastle. Now, surely this is purchasing property at a great depreciation. If the return for money is, as it must be, the criterion of value, the shares are well worth 100*l.* in place of 80*l.*, and would then give 6 per cent.

The Directors of the North Midland line, in which I am an unfortunate shareholder, must feel ashamed of themselves when they look at the result of the management of these two lines, which were opened through on the same day.

I am, Sir, your obedient servant,

PHILO-OBSERVER.

17th November, 1841.

The following is the letter above referred to:—

To the Editor of the Railway Times.

SIR,—The prosperity of this line, and the amount of the traffic returns, as published in your paper, cannot be generally known by the public, otherwise the shares would not bear so depreciated a price in the market.

It will be observed, on reference to the weekly returns, that the traffic for the present half year up to the first of November instant (four months), *already exceeds* the amount received for the previous six months, and it may fairly be presumed that for the remaining portion of the year more than 11,000*l.* will be received; therefore, instead of again dividing 45s. per share, the returns will allow at least 10s. a share more for the current half year, leaving a very large surplus to be carried to the depreciation fund. As the Manchester and Leeds, and the Great North of England lines, have only been opened a few months, a gradual increase of traffic may be expected on this line next year.

Fifty-five shillings half yearly will allow 5 per cent. on 110*l.* The shares, I believe, are selling at about 80*l.* per share. I have not included in my calculation the surplus that will arise from the Leeds and Selby line, which will also have to be divided amongst the shareholders in this line.

I am, Sir, your obedient servant,

AN OBSERVER.

LONDON AND BRIGHTON RAILWAY.—On Sunday night a heavy fall of snow took place, which delayed the train an hour and a half, as the rails were so slippery from the snow that they were unable to proceed at above eight miles an hour.

Digitized by Google

RAILWAY SALARIES.

"Honi soit qui mal y pense."

To the Editor of the Railway Times.

Sir,—The above motto is, I think, a sufficient answer to the unjustifiable insinuations which "An Old Clerk" has thought proper to pen in answer to my letter of the 19th ultimo. I exceedingly regret that he should have read my letter with so little attention as to imagine that I countenanced the opinion that railway servants are ready to enter into collusion with each other for the purpose of defrauding their employers. And, I further regret that he should have formed such an incorrect estimate of the characters of myself and the class of persons of whose cause I am the humble advocate, as to suppose that I or they would ever be parties to such dishonest proceedings. Whatever acerbity of feeling "An Old Clerk" may choose to exhibit towards his fellows, he should not forget that he himself is doubtless no more immaculate than they.

I am sorry that my opponent should have found it necessary to hide the weakness of his cause beneath false imputations. His letter contains but few arguments, and those are exceedingly *malapropos*, and fallacious. Assuming that the principle laid down in those arguments is good, one naturally asks, why is it not uniformly acted upon? We find Managers, Secretaries, chief accountants and others, in the receipt of salaries varying from 300*l.* to 1,200*l.* a year, yet can it be denied that there are many persons possessing all the necessary qualifications, who would willingly fill these offices for a much lower remuneration? Why then should the principle advocated by "An Old Clerk,"—if really good—be abandoned in these cases? Why should not persons for these various situations be engaged "on the most favourable terms?" A much easier and greater reduction of expenditure would thus be effected, than by reducing the salaries of subordinate clerks to "the shadow of a shade." The answer to these questions is obvious,—the principle is vicious, and the Directors, consequently, cannot apply it in all cases. But if the higher grade of railway officials be exempted from its operation, it is but just and reasonable that the subordinate officers should be exempted also.

Let "An Old Clerk" apply his argument to his own case. There are, no doubt, many persons fully as well qualified as himself, who would fill his situation at a much lower salary than he receives, yet I very much question if he would laud the policy of the Directors whom he serves, were they to reduce him to the alternative of either leaving his situation, or filling it for the very low remuneration at which some of his competitors might be willing to take it. With him lies the *onus probandi*, whether or not he would remain attached to his principles under these unfavourable circumstances.

But these arguments have, after all, very little to do with the real question at issue, which is, whether Railway Clerks are paid in a *manner proportionate to their duties*,—and is not, as your correspondent would have it, whether the price of their services, like the price of cattle, is regulated by the supply in the market.

It is not, perhaps, generally known to your readers, that Railway Station Clerks, in addition to their arduous duties, long hours of attendance, and heavy responsibility, are accountable for all bad coin or notes which they may inadvertently take, and all losses which they may sustain during the day, in giving and taking change. Now, as instances have come to my knowledge, in which one clerk has lost to the extent of 1*l.* in the course of one day, it would appear but just that these persons should be so remunerated as to compensate them for the great risk they are continually compelled to run. No one can deny the justice of this principle; yet, as I stated in my last letter, they are paid at the scanty rate of 60*l.* to 100*l.* per annum.

But, in order to show still more clearly, the relative disproportion between railway salaries and duties, it is only necessary to contrast them with the wages paid to some of our mechanics. In a very extensive manufactory with which I was formerly connected, many of the workmen were paid from 2*l.* to 3*l.* per week, and some were frequently paid upwards of 4*l.* They had to work twelve hours a day, inclusive of time for meals.—These persons, be it remembered, incur scarcely any expense in keeping up appearances, and their education, perhaps, never cost themselves or their friends a fraction. The railway clerk, on the contrary, is obliged to incur a considerable expense in maintaining his respectability; his education, in many instances, has cost a matter of some hundred pounds, and yet he is only paid at the rate of from one to two pounds per week. These facts speak for themselves.

Viewing the subject apart from these considerations, it seems but reasonable that persons whose duty calls them to "rise up early and sit up late,"—whose responsibilities are so heavy, and upon whose care and efficiency depends the proper conducting of such a vast amount of business as is weekly transacted by the different Railway Companies, should be well paid for their services. This point, I think, cannot be controverted.

I shall leave the conclusion of this subject for another letter; in the meantime I would beg to inform "An Old Clerk," that if he be unable to refrain from personal invective and the imputation of unjust motives, I shall not stoop to notice any more of his communications.

I am, Sir, your obedient servant,

C.

RAILWAY DIRECTIONS.

To the Editor of the Railway Times.

Sir,—I know not if it is your intention to admit into your columns anything further on this subject. I was in a remote part of the country when your last number appeared, and did not till to-day see the communication of "A Shareholder." I never supposed mine to be a new proposition; on the contrary, its principle having the sanction of ages was its great recommendation to me. Your correspondent establishes my case, and clearly enough shows why the arrangement adopted on the Birmingham and Gloucester line does not succeed. "Each of the restricted Board (of five members) takes a particular department, and being able only to devote a small portion of his time to the duties, they are consequently badly performed." "A Shareholder" still sticks to the notion that the Directors are to be little better than nominal superintendents; I go on the principle that they shall be effective and responsible ones. He treats the Directors as men-masters (in the ordinary loose acceptation of the term), while I regard them as servants of the shareholders, and strictly masters of the underlings. As to the shareholders looking after their own affairs, how can they look after what they do not understand, and besides have no time to attend to effectually? They can look after the results indeed, adopt a sound system, and see to the appointment of good auditors, and that is all.

I beg to state that my observations relate more immediately to railways when complete and in operation. If the Director does not direct, no one else can take his place. And if he understands not his duties how is he to direct? Thus, the Director of maintenance of way, *e. g.* if he is not familiar with the subject, can he exercise any practical authority or control, or good influence with the underlings? And among all the Directors will there be one who understands any one branch sufficiently for acting at its head, unless he has been duly trained for the purpose? The Director should be in the nature of a managing partner. And who would feel any confidence in a managing partner, unless he fully understood the business, resided on the place of business, and devoted his whole time thereto? But in this he must be adequately rewarded—even so much the effective Director be. An entire change in the system is required. In the mercantile marine it is often made a condition that the captain shall hold a share of the vessel. But he is not made captain on this ground only but because he is acquainted with the duties of a seaman. Let the same principle prevail in railway affairs. No Director can have any real authority over the people, or become really responsible unless he is at home in his department.

The Director only should be looked to by the shareholders. They cannot be attending to any inferior servants, so that unless the Director is made effective, and consequently responsible, no one is so. If any failure in the Engineering department of the Great Western took place, the shareholders would look to Mr. Brunel, and hold him answerable, and would pay no attention to any attempt to shift blame on underlings. This is a parallel case.

I am, Sir, your obedient servant,

C. D.

WORKING EXPENSES OF RAILWAYS.

To the Editor of the Railway Times.

Sir,—When, in your number of the 23rd ult., I drew the attention of the public to the working expenses of 21 of the most considerable lines of railway, all now sufficiently long opened throughout to show fair results, it was with the hope of stimulating Railway Managements to a more just and reasonable economy, feeling as a shareholder since 1833—and, indeed, this feeling seems now to be general—that the prospect of gain so prominently and repeatedly held out by the Directors of every line of railway, without exception, throughout the kingdom, never could be realized but by a very different degree of economy and system of management from that which exists at the present day. For this purpose I gave, in a tabular form, the gross receipts, the disbursements, and the per centage on the gross receipts of working the several lines, taken from the Reports published at the last half-yearly meetings. This, as you would perceive, showed a strange and unaccountable difference, the cost of working some of the lines being three times, nay, in one instance actually nearly four times, as great as that of others, and I did not therefore fail to draw particular attention to this enormous inequality, hoping either that it might be explained away, or that by being thus fairly placed prominently in view of the railway world, the Directors of the mismanaged lines could not avoid making strenuous efforts at amendment, unless they meant to occupy their places *vi et armis*, and then they must needs sit therein most uneasily. It seems then by the letters in your journal of the 30th, of "A Greenockian," and of Mr. "John Dixon, C.E.," that the great expense of working the Glasgow and Greenock, and the Chester and Birkenhead Railway, "is owing to causes over which the Directors have no control—low fares." It is to be feared the public will not feel satisfied that this is altogether a sufficient reason, though undoubtedly it is so in a great degree. The Lancaster and Preston Railway is but six miles longer than the Chester and Birkenhead. The coal districts are almost as near the one as the other. The amount of traffic is nearly the same on each; however the number of passengers on the Chester and Birkenhead is a little more than double that on the Lancaster and Preston, yet it does not follow that the cost of working the Chester and Birkenhead line should on this account be more than double that of the other.* But however this may be, perhaps my letter has not been in vain to have produced these two explanations. Could we but get Railway Managements sensitive on these points; could we but get them to consider themselves amenable to public opinion, half the battle as regards railway economy would be won, and I know not how this is to be better brought about, and these officials "touched to the quick," than by exhibiting a table—something like the one I furnished—week after week in your widely-circulated journal, say, amongst the Traffic Returns. Who does not see that when the cost of working a line is 88 per cent. on the gross receipts

* One hundred passengers can be carried at little more cost than fifty when the trains must go.

Digitized by Google

that a *little more expense*, and the whole profit is gone? Even 55, 60, 65 and 66 per cent. is not a little alarming, and exceedingly damages a railway in the opinion of the public; an accident even—or at least a series of accidents—might altogether cut off the dividends for the half-year in which such accidents occur. It is in fact this enormous cost of working railway lines, threatening, as it does, to overwhelm and swallow up everything, that makes railway shares so little looked after as investments for money. I again, therefore, earnestly exhort Railway Directors, if they have any regard for the concerns over which they preside, to omit no occasion of placing these magnificent and nationally beneficial undertakings in a better financial position, which every one must now see can alone be done by the *practice of the most rigid economy*.

I remain, Sir, your obedient servant,

ŒCONOMICUS.

GLASGOW AND GREENOCK RAILWAY.

To the Editor of the Railway Times.

SIR,—In your journal of the 6th current, I observe a letter from a warm friend of the Directors of the Glasgow, Paisley, and Greenock Railway Company, signed "Greenockian," in which, after mentioning the "satisfactory disappointment" of the intelligent shareholders at not receiving 10 or 12 per cent., he goes on to state, that all the "clouds which lowered upon their undertaking" are to be dispersed, by an augmentation of traffic, to arise in consequence of the opening of the Glasgow and Edinburgh Railway, and of the Liverpool and other deep sea steamers discharging their cargoes at the New Timber Wharf, Greenock, thence to be carried per railway to Glasgow.

I make no doubt were the anticipations indulged in by "Greenockian" to be realised, so also would be realised the magnificent prospects sketched out in the quarterly reports, where this line is designated in futurity as a little "Liverpool and Manchester line."

Such expectations are manifestly idle and altogether fictitious, so far as regards the large steamers discharging cargo at Greenock. One moment's consideration, of any person at all acquainted with the matter, must dispel such an idea. Nothing could be gained by the public from such an arrangement—expedition would not be gained—the preservation of goods must be less from the frequency of discharge: besides, and this is the stronger reason, no such intention is entertained by the proprietors of either the Liverpool, or other deep sea steamers, as stopping at Greenock to discharge their cargoes.

The opening of the Edinburgh and Glasgow Railway may increase the traffic, although I must confess such a result is by no means apparent to me. Already there exists a water conveyance between Edinburgh and Glasgow, and that the traffic on the Glasgow, Paisley, and Greenock line should be increased by the opening of the Edinburgh and Glasgow Railway appears to me a *non sequitur*.

The Directors of the Glasgow, Paisley, and Greenock Railway have, in my opinion, gone wrongly to work in their operations by lowering their rate of carrying. This is the great evil. By fixing their rates of carriage below the river freight, they probably looked forward to doing away with that opposition, and when once placed in a clear unopposed field, these rates might be raised to meet the loss of any former depression. There may be other reasons brought forward to account for the lowering of freight, but without adducing these, it is self-evident that the present rates as exhibited from the paltry weekly returns in this department yield no adequate remuneration. Why did the Directors of the Railway Company not rest their confidence upon the superior facilities which a railway conveyance affords in contra-distinction to either a water or any other conveyance, and not upon the palpably absurd foundation, that because they choose to carry on at a weekly loss, all other modes of conveyance were to be swallowed up.

It may be, however, that the intelligent townsmen of "Greenockian" (having disposed of their shares in this line to strangers, and those at a distance) are amazingly well content that the present state of things should continue on the principle, that the more the shareholders lose, the more *they* gain.

I am, Sir, your very obedient servant,

NAUTICUS.

Glasgow, 9th November, 1841.

GLASGOW AND GREENOCK RAILWAY.

To the Editor of the Railway Times.

SIR,—I was much astonished on reading a letter signed "Greenockian," on the subject of the Glasgow and Greenock Railway, which appeared in your publication of the 30th October last, and still more so on reading that contained in yours of the 6th current.

"Greenockian" states, that the York and North Midland Railway, which is the same length as our line, charges for each passenger at the rate of 1½d. per mile, and that they, that is the York and North Midland Railway Company, collected 23,000*l.* for conveying 160,000 passengers, during a period of six months; and that on our line, during a similar period, we had conveyed 400,000 passengers for 23,929*l.*, averaging only five-eighths of a penny per mile. He winds up his first letter by hoping that "your correspondent will not put our Greenock line down as a mismanaged concern, because from circumstances over which the Directors have no controul, the fares are so exceedingly low, that it is evident a most *extraordinary* extent of traffic will be necessary to enable them to pay a decent dividend."

If the Directors of the York and North Midland Railway Company collected 23,000*l.* for conveying 160,000 passengers in six months, it is quite evident that the Directors of the Greenock Railway have during the first six months conveyed upwards of 200,000 passengers at the *expense* of the SHAREHOLDERS. If this be not mismanagement, and gross mismanagement too, I knew not by what other name it may be called. "Greenockian" admits that the expense of making railways should be much the same throughout the kingdom; it is plain, therefore, that the income should be in the same ratio, that is, if the expenditure is so much per mile, the charges for the conveyance of passengers and goods, ought to be at so much per mile also. The cost of the undertaking, as also the traffic in passengers and goods had to be proved, on oath, before both Houses of Parliament, ere an Act could be obtained. The Directors will, I have no doubt, be able to explain, at the next half-yearly meeting, why the anticipated cost of the works is DOUBLED, and the anticipated INCOME *one half less*.

During the first six months, nearly 160,000 passengers per week, were conveyed by the Greenock Railway Company. If that be not an extraordinary traffic, pray what may "Greenockian" consider as an *extraordinary traffic*, so as to enable the Directors "to pay a *decent dividend?*"

I am, Mr. Editor, your obedient servant,

DIVIDEND.

Greenock, 10th November, 1841.

RAILWAY COMMUNICATION WITH SCOTLAND.

To the Editor of the Railway Times.

SIR,—It is not often that I trespass upon your columns, but the acrimony of the discussions respecting the relative merits of an eastern or a western communication with Scotland, has induced me to venture a few remarks, and also to notice a letter addressed to you, and signed "An Operative." Now, Sir, we all talk a great deal about "*public good*," and *public benefit*, but if we would but look into our own hearts, and substitute the word *pocket* for *public*, we should, I think, find ourselves much nearer the truth. Upon this substitution, therefore, I proceed to argue. I, as an individual, and there are many others besides, have nothing to do with Edinburgh or Glasgow, or Manchester, &c., BUT, I hold shares largely in the Midland Counties' Railway! If the rich merchants of Glasgow or Liverpool, &c., wish to benefit THEMSELVES, by a railway communication on their side, by all means let them do so; but what care I, or what care thousands, *not so interested*, whether in our journey to Scotland we take a route by Newcastle or one by Carlisle? I cannot see what the Government Commissioners have to do (to such an extent) with the matter. The real and *only* question is, can that line ever pay the shareholders? Will it or will it not cost in constructing from Lancaster to Carlisle 40,000*l.* a mile? Will it ever pay, over and above its expenses, a dividend to the *bonâ fide* shareholders of even 3 per cent.? And this without an eastern line; but, with *both* lines to *divide* the profits, what will their's then be? This is the reason why shareholders are not forthcoming, and a very plain one it seems to be. Too many persons are now smarting under railway losses, to make them willing to venture yet again. I prefer the eastern route, because it is shorter, and because I consider that the lines in that direction *ought to be supported*, for, in benefitting the shareholders in lines which have cost in constructing about 12 or 14 millions, (several of which lines, such as the North Midland, cannot pay above 3 per cent.,) a large portion of the public is benefitted, and that to the extent of saving many families from great want, who have put their little fortunes into lines which pay at present a very small per centage, and thereby have been caused great distress; whilst upon such a line as the Grand Junction, where 12 and 14 per cent. is to be obtained, such sympathy cannot be enlisted, and would be ridiculed if looked for. "The Operative," however, hopes by another line of argument to induce the London and Birmingham Company to subscribe even 1,000,000*l.* if requisite, towards the completion of the proposed western line of communication. But first of all he says that the eastern line is *opposed by steamers. So is the western also*, from Liverpool to Glasgow, a most common mode of travelling; and, as far as *London* passengers are counted upon, it would be fully as much opposed to the latter as to the former, and the Liverpool steamers would materially injure the travelling on the new line which it is wished to construct. But to come to the argument held out to frighten the London and Birmingham Company, viz., a line from Leicester to Roade, *via* Harborough and Northampton. Everybody who knows the country, knows that this is the old South Midland line, abandoned because it would have cost 35,000*l.* a mile generally, and about 50,000*l.* a mile in the neighbourhood of Northampton, without any adequate chance of the smallest remuneration to the shareholders, after the 5 per cent. on loans are paid, and which was opposed by every landed proprietor, the great canals, the Midland Counties, and the London and Birmingham with its very powerful influence. No, Sir; we are not afraid of this line being ever made, because there would be no *pocket benefit* to the shareholders, and this I consider the most satisfactory kind of security, and the town of Leicester would *not support* it. They are not fond of railway speculations, as by reference to the Midland Counties' share list, "an Operative" may satisfy himself of, so he must not count upon this either. The real benefit of this eastern line will be desired in common by the shareholders in the Midland Counties', North Midland, Manchester and Leeds, and other railways, and I do consider that this is not to be overlooked, seeing that the line, contemplated offers greater facilities of access to Edinburgh, and equal facilities to Glasgow and elsewhere, whilst all these above-mentioned railways, though beautifully constructed and regulated, as well as highly beneficial to passengers, return a very low and very precarious profit to the proprietors, and in the market are some of them at a ruinous discount. I have only to add that, for goodness sake, let the "Operative," and the "Editor of the *Carlisle Journal*," take shares largely in the western line, thus securing for themselves that to which abuse of the other line, or mis-statements, can never help them. I have the honour to be, your most obedient servant,

ONE OF YOUR INTERESTED SUBSCRIBERS.

MANCHESTER AND LEEDS RAILWAY.

To the Editor of the Railway Times.

SIR,—Your correspondent in your paper of to-day, under the signature of "Veritas" should tell the whole truth. To supply his omissions, I venture a remark on his letter. He would have the public believe, that the statement he has annexed proves that this railway will, at the end of the current half year, pay a dividend at the rate of 6 per cent. per annum. The summary of his statement is as follows :—

Receipts 1st July to 31st December.....		£117,341 7 11
Deduct working expenses, 39 per cent., as last half year	£45,763 2 10	
Ditto, six months' interest of money borrowed	33,100 19 6	
		78,864 2 4
Balance		£38,477 5 7

Equal to 3 per cent. on £1,294,090, the amount of calls.

It appears to me that his statement is imperfect, for it is expressly mentioned in the September Report that after deducting from the receipts the working expenses of 39 per cent. the balance was subject to a further deduction for depreciation of stock, according to the following rates, viz. as to engines 1*l.* for every 100 miles run, and as to carriages and waggons, 5 per cent. per annum on their cost. Taking, therefore, the number of miles run in the six months between the 30th June and 31st December, to be the number ascertained between the 1st March and 1st September, viz.—

267,256, a disbursement will arise, under the head of "Engine Superannuation," of....	£2672
And taking the cost of carriages and waggons at 68,897*l.*, the sum mentioned in the Report, there will be added for the six months, 2½ per cent. on that amount, making a further disbursement of	1,722
Being a deduction from the balance of "Veritas," of	£4,394

The result is, therefore, that "Veritas" has omitted to deduct disbursements, under the head of depreciation, which according to the Report will amount to between 4,000*l.* and 5,000*l.*, and unless he can increase his estimated receipts by that amount, or further diminish the working expenses, (by no means a probable event) the transactions of the current half-year will not yield him the 6 per cent. per annum on which he calculates.

Having to some extent corrected the defective statement of "Veritas," I beg to add my own belief that his estimated receipts will be realized, and that at the next half-yearly meeting the Directors will have the means, with the aid of their reserved fund, of paying a larger dividend than at the rate of 6 per cent. per annum, but will not consider it prudent to do so. That they will maintain the present dividend of 2*l.* per half year, upon 70*l.* paid up, I believe; but that the public do not believe so must be apparent from the quoted discount of 15*l.* per share. If the letter of "Veritas" should draw from some future correspondent the reason why the public, with the cost and present traffic before their eyes, are so very much alarmed at the prospects of this extravagantly expensive, and once "pet" line, some good will have resulted from it. The impression on my mind is, that the public do not give credence to our talented Chairman and Captain Lawes' estimates of 100,000*l.* per annum, as the cost of maintaining and working the railway, with a traffic of 300,000*l.* a year—the amount which may be reasonably expected in 1843 or 1844. Indeed, it is not quite clear from the last Report, if reference be had to that part of it in which allusion is made to the receipts between the 1st March and 30th June, that there are not "some quarterly salaries and *other payments*" to be added, as not included in the working expenses of 39 per cent. I do not allege that the working expenses have been stated below their actual amount, but it would be satisfactory to the shareholders to learn, from an authentic source, that there are no such additions for salaries to be made, to diminish the reserved fund of 37,577*l.* which several shareholders have considered as being subject to be reduced only by the charges for interest and depreciation, as mentioned in another part of the Report. If "Veritas" can ascertain whether the working expenses may be relied upon, as not exceeding 39 or 40 per cent., he will oblige, amongst the rest,

AN OXFORDSHIRE SHAREHOLDER.

November 13, 1841.

MANCHESTER AND LEEDS RAILWAY.

To the Editor of the Railway Times.

SIR,—A writer, signing himself "Veritas," in last week's number, in making a statement of a dividend might have made it more than at the rate of 3 per cent. for the half year. He has forgotten the balance of 37,577*l.* 16s. 11d. of the four months previous, *i. e.* from March 1st to June 30th, but which is subject to interest, say 22,067*l.*, and depreciation, say 2,666*l.*, leaving to add to his amount (after deducting from that, 4,000*l.* for depreciation of stock for the six months) 12,844*l.* 16s. 11d., then the account will stand thus :—

Net amount for the half-year	£34,477 5 7
Four months' balance.....	12,844 16 11
Total	£47,322 2 6

which will give 3½ per cent. for the half year upon calls amounting to 1,294,090*l.*, and leave a balance then of upwards of 4,000*l.*

A READER OF YOUR USEFUL PUBLICATION.

SHEFFIELD AND MANCHESTER RAILWAY—PARTIAL OPENING.

ON Thursday week, the Directors of this important undertaking, accompanied by J. Parker, Esq., their Chairman, J. Locke, Esq., engineer, and a numerous party of their friends, proceeded on an experimental trip along the line as far as Godley, (a distance of nine or ten miles,) previous to that portion of the line being opened to the public, which we understand is to be on Wednesday next. The train used upon the occasion, consisting of an engine and eight carriages, started from the station of the Company in Travis-street, Manchester—the same at present used by the Manchester and Birmingham Company—at about a quarter to three o'clock, some delay having occurred in removing an obstruction upon the line, and proceeded at a slow pace during the whole of the journey to the station at Godley, in order to allow the party present an opportunity of glancing, in passing, at the nature of the works, and of the difficulties which have had to be surmounted in their formation. On its return, however, the speed attained was occasionally very fair; and the result of the trip, both in going and returning, must have been highly satisfactory to the Directors and shareholders present.

We believe we are correct in stating, that, with the exception of the Summit Tunnel, and one or two viaducts, which are already far advanced, the portion of the line now completed is the heaviest in the amount of cutting and embankment, and considerably the most expensive, of the entire railway. So far as we are enabled to judge of the execution of the works in their present somewhat undressed state, the whole reflect great credit, both upon the engineer and upon the contractors; and, except in one or two places, the earth-work appears settled and firm, and the bridges, retaining-walls, &c., of a permanent and solid character. In the construction of the whole, strength and utility seem to have been consulted in preference to mere effect and ornament; and we believe the result of this common-sense mode of construction is, that no line of railway hitherto, with equal extent of works, has been laid down at so small a cost to the proprietors and so near the original estimate.

The engine used in this experimental trip, and we believe the whole of the engines upon the line, are of an extra powerful description, calculated to surmount with ease the somewhat steep gradients which occur throughout. No difficulty was experienced in ascending the steepest; and in the descent towards Manchester, the necessary stoppages were made at the different stations with a facility equal to that upon the most level railways. The first class coaches are very elegant and commodious. The second class are also very pretty, and in convenience, something between those upon the Grand Junction and those upon the Liverpool and Manchester line. The third class are what are termed "stand-ups," and resemble the same class in use upon the Manchester and Leeds line.

There can be no doubt that, when opened to the public, this length of line even, running through a very populous manufacturing district, must be extensively used, and be found of great value to the manufacturing population in its neighbourhood. That such is the opinion of the public themselves was made evident by the groups of delighted and wondering faces which greeted the train as it passed by the various bridges and inhabited places along the line. It cannot, however, attain its full degree of usefulness to the public, or its value to its spirited proprietors, until completed throughout, and the important districts at its termini thus permanently united.

The only accident which occurred was the destruction of a poor dog belonging to some of the excavators. The animal, in a sudden fit of enthusiasm, took a fancy to *bite the heels* of the engine in advance of the train; and, after running along the side of an excavation in pursuit for a considerable distance, bounded down at length upon his iron antagonist, and, as the result of his mad emprise, was severed in two, the whole train passing over him.—*Liverpool Standard*, Nov. 16.

SHEFFIELD AND MANCHESTER RAILWAY.

To the Editor of the Railway Times.

SIR,—The recent accidents on the London and Brighton, and London and Croydon Railways, would almost have made any one believe that parties would be cautious against opening railways too early, but this does not appear to be the case, as I find a portion of the Manchester and Sheffield Railway to Godley, seven miles in length, was opened to-day for the carriage of passengers. It perhaps may not be known, but such is the fact, that nearly all the embankments are made of clay, and great portions of them put together within the last six weeks, during the very bad weather that has prevailed, and which must make them have a tendency to slip, from being formed of such material. I understand that Sir Frederick Smith has been over and certified that it is in a proper state to be opened; I only hope it may prove so, and no accident take place. Whilst on the subject of this railway, I should be glad if any of your readers can inform me when it is likely it will be formed the whole length through to Sheffield. It appears by the Share List, that there are 7,000 shares, and that 72*l.* 10s. has been called, and that another call is advertised of 10*l.*, making 82*l.* 10s., and which ought to produce 507,000*l.*; and yet the distance completed is only seven miles, and that in an imperfect state; the whole distance now let being only twelve miles, and five-sevenths of the capital gone. Surely the whole capital is not to be swamped in the length from Manchester to Glossop, if so, what is to become of the remaining twenty-eight miles, with the three miles tunnel? I observe by the Appendix to the Report of the Committee on the Bill in the House of Commons, that the estimated traffic on this railway was as follows :—

Digitized by Google

From passengers, 502,788 at 2d. per mile each passenger	£88,819	16	8
From the carriage of goods, 584,851 tons at 4d. per ton per mile	166,075	0	0
From cattle	4,625	0	0
Total	£259,519	16	8

I find, amongst other matters, that this amount is founded upon an expectation of having a great portion of the trade which is now carried on the Manchester and Leeds Railway. If greater progress be not made in the execution of the line (the Act being obtained in the year 1837), I am afraid it will be a very poor competitor to that line, but time only can show. I shall, however, watch the returns, which I suppose will be published as all other Railway Companies do, in your excellent paper, and see what progress it makes to realise the annual income of 259,519*l.*

I am, Sir, your obedient servant,

A QUIET OBSERVER.

Manchester, November 17, 1841.

DRAINAGE OF RAILWAYS.

To the Editor of the Railway Times.

SIR,—From the pages of your valuable periodical being exclusively devoted to the interests of railway concerns, I am induced to hope the following observations on the very important operation of draining, as applied to them, will not be considered unworthy to appear in your columns.

I am led to address you at this time in consequence of having visited that part of the Croydon line where an immense slip of earth has lately occurred, which I am confident would not have happened had the slopes of the cut been properly drained at their formation, as they are in every other respect beautifully set out and grassed, and are laid at an angle of about 2 to 1, which is quite adequate for the depth of the cutting where the contingency took place.

It is generally admitted by all persons conversant with earthworks, that a slip of this nature is occasioned by the action of water; and usually by that which is absorbed at the surface, from which it continues to percolate until it arrives at an alteration of the strata, when it collects, and by its liquidity detaches the superincumbent weight, which then slides down, facilitated by the greasy quality of the clay which is increased by the moisture that caused its separation.

If this simple theory be true (and experience leads me to justify it) it follows that if proper drainage be effected when cuttings and embankments are made, a fall of earth similar to that which I have alluded to would seldom or never occur, and consequently heavy expenses to the proprietary, and serious inconvenience to the public would necessarily be prevented.

For this purpose I confidently recommend that *rubble* drains be made in the slopes of cuttings and embankments, such drains to be of two or three feet in depth, of proportionate width, and filled in with broken stone (magnesian lime stone if it can be obtained). These ridges should be made to communicate with and intersect each other, by which means it is evident all the surface water would be conveyed away to the bottom of the cut or embankment to be finally carried off, and would thus be prevented from collecting as I have described, to the great injury of the works.

If water is found to proceed from land springs, as is sometimes the case, similar drainage should be made at the source, or at least at that part of the works whence the water is observed to ooze out.

If it should be asked, why I recommend rubble drains, my answer is, that they are not prevented from acting by any slight movement of the material in which they are placed, as happens with pipe, tile, or brick drains, and as the broken stone prevents their being choked up, the water has a continuous free passage, which is not the case with any other description of water-course when disturbed.

PROBATUM EST.

London, 9th November, 1841.

CLARENCE RAILWAY.

To the Editor of the Railway Times.

SIR,—As it appears from your observation (in your last week's journal) that I had "stepped out of my ordinary routine," in reference to the late movement of the Clarence Railway proprietors, for a change in the place for managing its affairs, that you entertain an erroneous impression of my position in the matter, I trouble you with a few remarks —which I feel sure you will readily insert in your next number.

As I am the Solicitor of the Clarence Railway Company, you will of course not expect from me any information of which I become possessed in that character. But I am also a considerable shareholder, and have many friends embarked in the concern; and consequently, when the question as to a change in the system of managing the affairs becomes canvassed generally among the proprietary, it cannot surely be said that I step beyond my ordinary routine in giving my own honest opinion, as a shareholder, on the subject. Indeed, I consider that the whole body of proprietors, (by whom, in feat, I am appointed Solicitor to the concern,) have on that account a greater claim upon me to disclose to them my real sentiments on all points connected with its welfare. The entertaining and expressing, therefore, my opinion that the distance of the seat of Management is not only inconvenient, but prejudicial, to the welfare of the undertaking, you will at once see need not, as I confidently assert it does not, interfere with my giving my best attention to all matters which are professionally referred to me, and for the correctly conducting of which I am, of course, in every way responsible.

The occasion which first more forcibly called upon me to address the Committee on the subject occurred in August last, on my receiving a letter from the Secretary, requesting to be informed if I would consent to advance any further money towards the undertaking. I then considered it due, from me more especially, no longer to withhold from them and the proprietors, my sentiments and determination; and I consequently (disclaiming all party and personal allusion to any individual member of the Committee) wrote to the Secretary the letter, of which, in order that I may not be further misunderstood, I now beg to subjoin a copy, and which the gentlemen calling the special general meeting here, on the 4th instant, have printed and circulated amongst the proprietors, accompanied by their own remarks, and reasons for advocating the removal of the seat of Management from London to Stockton.

I am, Sir, your obedient servant,

RA. WARD JACKSON.

Stockton, 17th November, 1841.

The following is the letter above referred to:—

The Committee of the Clarence Railway Company.

Stockton, 13th August, 1841.

Gentlemen,—I have to acknowledge the receipt of Mr. Benson's circular of the 3rd instant, and, in replying to it, am desirous to record the grounds for my, at present, declining to subscribe any further sum. I have, for upwards of three years, given my utmost and best attention to the concerns and interests of the Clarence Railway, and I consider it now my bounden duty to yourselves, to the general body of proprietors, and to myself, not only as the Company's solicitor, but as having a pecuniary interest of some moment in it, to declare my sincere conviction of the utter impracticability of your attempting successfully to manage its affairs while you are removed upwards of 250 miles from it. I therefore, think I should act very wrongly if I were now to withhold from you and the proprietors the full expression of my sentiments on the subject. It must surely be manifest to all who give the matter one moment's reflection, that where a railway is, there should be its seat of management. I believe I may confidently assert that it is not only an unprecedented, but a ruinous system, for Directors, living at such a great distance off, to conduct the weighty and complicated affairs of an extensive railway merely by agents, who have to communicate only by letter with the Board upon the numberless important and intricate questions which are daily occurring, and which require gentlemen, with local influence and information, to decide and regulate—very often on the spur of the moment.

Many times have I myself felt the inconvenience of not being able personally to refer to you in matters which have come before me as the Company's solicitor: and I ought also to mention that the law expenses of the Company, as well as all other expenses connected with the Direction are much increased by the Board being at such a distance. Being, therefore, now thoroughly convinced, after the most mature deliberation, that any prospect of the railway remunerating the shareholders is hopeless, if the *entire* Board of Directors remains in London, you will not, of course, be surprised at my not making any further pecuniary advance so long as the present system is adopted. I will continue faithfully and zealously to discharge my duty as the Company's solicitor in all matters which are professionally referred to me; but I cannot, consistently with my opinion as to the management, consent to increase the money I have already embarked in the concern. I may indeed deem it prudent the rather to diminish the amount.

I will not also refrain from adding my great regret that some inexplicable feeling of opposition, or jealousy, should have sprung up against the Stockton and Hartlepool Railway. That line originated, and has been fostered and completed under the direct and acknowledged encouragement of the Clarence Railway Company, and has invariably been designated, in the reports of your proprietary, "as the salvation of the Clarence."

That this has been the case I am more and more satisfied, and could enumerate sufficient instances of the benefit which the Clarence has secured by the Stockton and Hartlepool. It is, therefore, beyond my comprehension what has now given rise to the feeling I allude to. I can truly declare that it is wholly unfounded; and I once for all beg, that, if the Clarence Railway Committee think they have any grounds of complaint whatever against the Directors of the Stockton and Hartlepool Railway, they will not hesitate to make them fully known. To prevent the possibility of misunderstanding I will just mention (though, probably, it is quite unnecessary) that I distinctly disclaim any idea of opposition, or personal allusion, to any member of your Committee. On the contrary I most readily acknowledge the confidence and kind manner with which I have uniformly been treated by every member. My objections, and thence my observations, are confined to the *principle* and *system* of management, not to the individuals.

In conclusion I beg to request that you will have this letter read to the general meeting on Tuesday next. Having to be in London for some days next week, I am making my arrangements to be at the Old Hummums, Covent Garden, by mail, on Monday morning. If you have a Committee meeting on that day, or previous to the general meeting on Tuesday and wish to see me, I will, on receiving a line to the Hummums from Mr. Benson, mentioning the hour, be glad to wait upon you.

I remain, Gentlemen,
Your faithful and obedient servant,

RA. WARD JACKSON.

To Mr. Charles Benson, Clarence Railway Office, 80, Old Broad-street, London.

CHELTENHAM AND GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—In your notice this week of the last general meeting of the Cheltenham and Great Western Railway Company, you make an observation in which every rational person must concur, feeling with you how much it is to be regretted that undertakings deliberately commenced, and authorised by the (frequently dear-bought) sanction of Parliament, should fail of being carried out to the full

Digitized by Google

extent originally contemplated. In further reference to this subject, it was only yesterday that I accidentally ascertained, whilst expressing a wish for a branch line from this place to the Great Western, that the Cheltenham Union was at first intended to have been brought close to Oxford. By the abandonment of this project, how many advantages appear to have been lost! It would have admirably connected two highly important places, Cheltenham and Oxford, both with the Great Western, and with each other. It would have been the greatest accommodation to the inhabitants of Oxford,* (a place so fitly entitled to participate fully in the benefits of the western system of railways by forming a part thereof, and now participating in them so imperfectly), and in all probability by much promoting the influx of visitors, it would have greatly benefited the town in other respects, so that, as far as regards one important division of the collective system of railways for the whole nation, that division is left signally deficient—and irremediably so; whilst it is obvious that the grand trunk of the Great Western (an observation which I commend to the whole body of shareholders) has been robbed of a most powerful auxiliary. Then it is also to be considered whether the line, as originally designed, would not have received the joint support of Oxford and Cheltenham, and indeed the shares have been in greater demand with all parties, as promising more of an adequate remuneration than those of the existing Cheltenham branch. Moreover, I should wish to be informed, as ignorant myself, whether the works, according to the direction first proposed, might not have proceeded over a preferable line of country to that which terminates at Swindon; if so, the present situation of the Company, so justly regretted by you, must be added to the catalogue of mortifications pointed out as flowing from the cause assigned above.

The reason for relinquishing the Cheltenham and Oxford line, I find to have been the opposition raised against it by the heads of Colleges in the University, who disapproved of the facilities it afforded the students for indulging in excursions of a day to the metropolis—facilities, observe, that subsists as nearly as possible in an equal degree at present, by reason of the short distance which the Steventon station is from Oxford, and which, it is obvious, they avail themselves of. How great a pity, then, that the abandonment of so valuable a scheme, and the institution of so inferior a one, should have been occasioned by the resistance of persons who, however dignified by station and respectable in their own province, can be expected to have but little judgment in these matters, and little sympathy with the interests of the public as affected by them; and how much to be feared that proper energy was not exerted to prevent such insufficient objections from standing in the way!

I am, Sir, very respectfully, yours,

A FRIEND TO RAILWAYS AND THE RAILWAY TIMES.

Oxford, November 12, 1841.

* Of the three hours and a half which the journey to London occupies, one hour and a half is taken up by the coach part, the distance being but eleven miles, an important circumstance, both as respects the convenience of residents here, and the attraction of strangers to the City. The short branch to Didcot is in very remote prospect.

PREVENTION OF ACCIDENTS ON RAILWAYS.

To the Editor of the Railway Times.

SIR,—Railway travelling has rapidly advanced to so great a state of perfection that were it not for the fearful occurrences which are frequently occasioned by this mode of conveyance, it might with justness be considered one of the greatest improvements of modern times. I am led to the consideration of this subject in consequence of the dreadful *character* of the accidents which are now too frequently witnessed on the different lines, and which must from their *nature* tend to fill the mind with extreme fear and dread, of what, in itself, is by far the safest method of travelling. The accidents to which I allude appear to be owing, not to any want of foresight or insufficiency in the regulations devised for the management of the different railways throughout the kingdom, but to the want of caution in individuals themselves, who by some imprudent act of their own, cause their lives to be sacrificed in this manner. Witness the numerous deaths that have taken place since that of the lamented and highly gifted Huskisson up to those which occurred on the Grand Junction line, a few days ago. It seems then that the regulations, however strictly enforced, are inadequate to secure the lives of those who occasionally are found rash enough to attempt to regain, or to leave, the carriages whilst in motion. To render such imprudent attempts free from the awful consequences attendant on them, I would suggest a simple remedy, which if adopted, must effectually prevent the repetition of such calamitous recurrences. A guard of strong wire net-work should be attached laterally to the under frame work of each carriage, which would bring it anterior to the wheels and posterior to the steps, to extend the whole length of the carriage, and one to two inches from the ground, thus preventing any who may miss his hold or slip from the step, getting by any possibility under the wheels, and thereby hundreds of frightful accidents would be avoided. The wire-work might be strengthened by rods of iron passing under the body of the carriage between the wheels. I mention wire net-work, or any reticulated work, as being lighter than any solid material, and it would be easily manufactured of sufficient strength to answer the purpose intended. A small square opening might be left in the centre, opposite to the axle box, to allow of its being properly supplied with palm oil. Sincerely trusting that these suggestions may meet with the approval of those who have the power of enforcing them, and that the heart rending scenes we have lately read of may be altogether prevented,

I remain, Sir, yours, &c.

W. H. BAINBRIGGE.

Everton, Liverpool, November 11, 1841.

SAFETY IN RAILWAY TRAVELLING.

To the Editor of the Railway Times.

SIR,—Safety seems the first desideratum in railways, as well as every other species of travelling. To do away the present impressions of fear, much too prevalent I must allow with part of the public, would be to render that general, which is now only partial, and consequently to put money into the pockets of the proprietors. With this view I offer for whatever attention it may be deemed worthy, a mode of constructing railways, from which I conceive much good might arise. The invention is not mine. I am not seeking to wear the colours of any other man, but merely to draw forth the opinion of those so much more qualified than myself to give it.

I recommend a third rail to be placed in the centre between the two, on which the carriages now run. From the engine, and perhaps some of the carriages, two small wheels should present themselves horizontally, one on each side of the centre rail, but not to touch it unless there should exist a disposition of the engine, &c. to run off the line, in which case one of the wheels would immediately come into contact with the rail, and thus check it. The rail must be capped over to confine the wheels. I submit, that under the plan I have attempted to describe, it would be next to impossible for carriages to run off a line.

I have a strong opinion that the middle rail I have been speaking of, might be applied as a means of retarding or even stopping the train at the will of the driver. I would effect this by a pressure given to it on each of its sides; this pressure could be limited, acting only to a certain extent.

I abstain of course from saying how or in what manner the middle rail should be laid down, or the mode by which the pressure is to be obtained,—these are subjects beyond me.

I remain, Sir, your humble servant,

E. JEFFRIES ESDAILE.

Cothelstone-House, near Taunton, Nov. 15, 1841.

BIRMINGHAM AND GLOUCESTER RAILWAY.

To the Editor of the Railway Times.

SIR,—An attempted reply to my two previous statements in your very valuable paper was made in your last number, by "A Sedative," who is either completely ignorant of his subject, or wilfully disposed to misrepresent and injure the Birmingham and Gloucester Railway, and therefore is undeserving of any formal reply, as in the opinion of many of your readers, "the writer has shown the cloven foot."

If he had only referred to your general traffic list, he would have seen that the amount authorised by Act of Parliament is 1,266,666*l.*, and the actual expenditure up to the last balance sheet, June 30th, you give at 1,320,716*l.*, making an excess only of 54,050*l.* To make up this deficiency, and other sums required for the completion of the line, the shareholders authorised the creation of quarter shares on about 900,000*l.*, (the unborrowed capital,) to be paid by instalments, not ending *before* February 25th, 1842, which will, *when paid up*, make a total of about 1,500,000*l.* Yet your correspondent, Sir, styling himself "A Sedative," has the effrontery to say, that "the dividends will be made on 1,700,000*l.*," and consequently, "not pay 2 per cent. per annum." To make or to convert 1,500,000*l.* into 1,700,000*l.*, is an insult to common sense. Besides this, the gist of my statement given in figures (and there is no reasoning against figures,) was as to the *present* paid up capital—the *present* weekly returns of an average of 2,000*l.* per week, from the 30th June last, to the 31st December next, with an excess of average in hand of 1,300*l.* towards any defalcation in the next eight weeks.

I therefore maintain that more than consol interest will be made on these data, with the prospect of future advantage, I appeal to your good sense, and the common sense of your readers generally, but shall make no answer to any such as deal in "Sedatives."

I remain yours truly,

AN ORIGINAL SHAREHOLDER.

Birmingham, Nov. 10, 1841.

REGISTRATION OF SHARES.

To the Editor of the Railway Times.

SIR,—Your valuable paper being open to the correction of abuses in Railway Management, would you allow me to call the attention of shareholders to the *enormous fee* attending the registering of shares?

On some lines 2s. 6d. per transfer is charged not endorsed, or 5s. with certificates endorsed; on others, 5s. per transfer not endorsed, and 1s. per share extra if certificates endorsed; while on another 5s. a transfer, and 1s. a share for endorsation is charged, and the endorsing is compulsory. Surely, Mr. Editor, some stop ought to be put to this vexatious charge. The London and Birmingham, which holds the first rank in railways, makes no charge whatever, and no one can doubt the good sense of this arrangement. To facilitate sales and purchases of railway shares is the main spring of success, at least so far as regards the financial department; yet when this enormous taxation for registering of shares is taken into account, it deters many parties from purchasing, not only because of its high charge, but because of its injustice; for surely "paying to lend money" is too bad, even although you are to obtain some recompense for it hereafter.

Your obedient servant,

JUSTITUS.

P.S. It would be as well if Railway Directors were to turn their attention to the advertisement in your last two papers, respecting "a central station" for time tables, fares, &c. The small sum which it would take from the funds of the railways, would be more than doubly returned by the facility and accommodation it afforded to the public.

15th November, 1841.

2. Toll to London and Birmingham 129*l.* 15s. 8d., to be deducted from gross receipts.

4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone.

8. Receipts include the Northern and Eastern toll, &c. The dividend is from the time of opening.

10. The part between Glasgow and Paisley was made at the joint expense of the Glasgow Paisley and Greenock, and Glasgow Paisley and Ayr Companies, but each Company's receipts in respect of that part are now merged in the general returns of each.

11. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester line, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 114 (83+31.)

13. The 5,231,527*l.* 9s. 10d. is the amount actually raised according to latest balance-sheet. The receipts include those derived from the Cheltenham and Exeter branches; the former opened for 18 miles, and the latter for 33. The divisor employed to ascertain the daily receipts per mile is therefore 169½ (118½+18+33.)

15. The 38*l.* 19s. 5d. from goods, &c. is for toll only.

16. Ten per cent. is the maximum dividend allowed by the Company's Act.

17. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. On the quarter shares the dividend is at the rate of 42½ per cent. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

19. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table.

20. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company.

21. Capital of 993,300*l.* includes new capital for widening the line, &c. The dividend mentioned does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table is exclusive of Brighton and Croydon toll.

22. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount.

24. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

25. The 3,094*l.* 14s. 9d. are the receipts after deducting omnibus charges, and payments to other Companies. The returns are for five days only, to make the week end on Saturday. The dividend is from the time of opening.

26. The receipts for goods, &c. include, carriages, 311*l.* 12s. 0d.; horses, 51*l.* 2s. 6d.; dogs, 1*l.* 6s. 0d.; parcels, 223*l.* 13s. 3d.; cattle, 42*l.* 7s. 0d.; corn, 4*l.* 0s. 4d.; heavy goods, 404*l.* 8s. 9d.; coal, 124*l.* 16s. 6d.—Total, 883*l.* 6s. 4d. The dividend is from the time opening.

28. The details of the receipts are as follows:—Passengers, 2,070*l.* 3s. 6½d.; parcels, carriages, horses, and mails, 329*l.* 7s. 11½d.; merchandise, 1,021*l.* 15s. 3d.; minerals, 178*l.* 17s. 5d.; cattle, 67*l.* 19s. 0½d.—Total, 3,686*l.* 3s. 2½d.; including North Midland proportion of Manchester and Leeds traffic, amounting to 113*l.* 7s. 9½d. The dividend includes a sum of 31,786*l.* earned previous to the last half-year.

29. The receipts stated are after deduction of Liverpool and Manchester toll.

30. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 26 miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

31. The capital of 500,000*l.* includes that provided for harbour and works as well as railway. The dividend is from the commencement.

33. The traffic stated does not include the Leeds and Selby;

TO CORRESPONDENTS.

Y. Z. *(Liverpool).—We are at all times anxious to give both sides in the dispute fair play, but we have not seen the article referred to by our correspondent.*

A Six wheel Engine-driver *should apply at once to Mr. Hood. We cannot enter into that gentleman's motives.*

No Railer *is a very great railer indeed, and what is worse, a railer without cause. Does he suppose that his assertions are to be received as proved facts?*

Edinburgh and Glasgow Railway.—*A correspondent writes thus:—"Some time since (in May I believe) the Edinburgh and Glasgow Railway Company advertised for officers. Thinking myself qualified to fill one of the situations, I procured at some personal inconvenience and expense, credentials from undeniable sources. As yet, I hear, no appointments have been made, and I ask the powers supreme if they are acting justly to those who, like myself, have been kept in a state of suspense seven months." We cannot suppose that the officers have not been appointed long since, although probably the late squabbles at the Board may have caused some delay. It is not practicable to apprise rejected candidates (the number is so great) of their own want of success.*

A Subscriber *(Gosport).—There is such a railway.*

An Admirer of Railroads —*We do not see what our correspondent has to complain of. He was taken to Broxbourne for the stipulated price, and within the stipulated time, and what matters it to him, or any other traveller, whether the railway is a few miles longer or shorter than the common road. Let those who prefer the road use it; but do not let the Railway Company be found fault with for what they cannot help.*

J. R. C. *must have been misinformed; we do not believe that at present there is any particular demand for the class of servants to which he refers. By and by there may be.*

In Mr. **Theodore Cruckshank's** *letter of last week, on four-wheeled engines, 3rd column, near the bottom,* "16 *feet long" was misprinted for* "6 *feet long."*

R. O. P. E.—*We feel much obliged.*

Thames Haven Railway.—*Our respectable contemporary, the* **Essex Mercury**, *in quoting in his paper of yesterday the paragraph relating to the Thames Haven project, which appeared in our number of last week, scarcely does us justice in omitting the introductory sentence, wherein we stated most distinctly that we could not of our own knowledge vouch for the accuracy of the statements put forth. As printed in the* Essex Standard, *it would appear as if we had given an opinion Editorially in favour of the past or present plans of the Directors.*

Chester and Birkenhead Railway.—*The returns of traffic for the week ending Nov. 8, were—Passenger* 376*l.* 10*s.* 3*d.*; *Merchandise* 35*l.* 9*s* 4*d.*; *Total,* 411*l.* 19*s.* 7*d. The returns though dated the* 8*th, did not reach our office till the* 13*th.*

Brandling Junction Railway —*The traffic for the week ending November 7, was—Passengers,* 360*l.* 17*s.* 9*d.*; *Goods,* 375*l.* 9*s.* 9*d.*: *Total,* 736*l.* 7*s.* 6*d.*

Great Western Railway.—*The letter of* Clitho *is in type.*

A Clarence Railway Shareholder *shall be attended to next week*

THE RAILWAY TIMES.

SATURDAY, NOVEMBER 20, 1841.

In our last number we alluded to the plan of proxy-voting, and expressed a doubt as to how far it was likely to be conducive to the prosperity of the Railway System generally. The particular instance which called forth the remarks in question was the result of a late meeting of the Clarence Railway Company; and *there* we think there can be but one opinion respecting the operation of this mode of proceeding, when it is seen that a most important point was negatived by proxies of long standing and obtained, it is alleged, under very different circumstances from those in which they were used, contrary to the wishes of a large majority of the proprietors who happened to be present in person. It is quite possible that the Stockton meeting to which we are referring may have been attended more numerously by the friends of the opposition party (if we may so term those who are agitating for a removal of the seat of Management to the country in direct hostility to the sentiments and schemes of the Directors)—it is possible, we say, that these parties may have mustered in strong force, simply because the place of meeting was convenient for those holding views such as the proxy votes defeated, and that if the whole Clarence proprietary had been fairly canvassed, a majority might still have been found in favour of distant management, but that circumstances would in no way answer the charge, nor justify the alleged act, of raking up proxies from their long-forgotten sleep, and by them determining in a matter of so much importance the future course to be pursued by the Company. The fairest, the openest—the only satisfactory—course for the Directors to have pursued was to have applied for fresh proxies, if proxies must be had, putting the question at issue clearly and distinctly before the shareholders, and then, if the opinion of the majority had been given in favour of London Management, the minority would, we presume, have felt satisfied, or at least would not for some time to come have re-agitated the matter. As it is, they will in all probability persist in bringing the question before every subsequent meeting of the Company, the more especially as they appear to consider (we say not with what reason) that they have been to a certain extent tricked in the business, and that the sentiments of their co-proprietors have not been candidly canvassed nor fairly and deliberately recorded.

We repeat, that we entertain a very strong dislike to proxy-voting, as generally practised in the Companies. It is certainly but right that property should be represented, and it seems, moreover, but fair that where a proprietor is unable, from whatever cause, to attend in person, his known sentiments should be acted upon in a matter affecting perhaps the very existence of his interest in the undertaking. This, however, being granted—and we grant it to the fullest extent—there ought, we think, to be some restrictions imposed in the exercise of such right. For it is never to be forgotten that the granting of a proxy denotes, of necessity, "a foregone conclusion." The party entrusting the instrument to his friend, must either have made up his own mind as to the most beneficial course to be followed in a particular instance, or he must trust in a general way to the impression which may be made upon his friend's understanding from the discussions that may arise, or from the events which may transpire between the granting of the proxy and its application. In either case, the holder of the shares in respect of which the proxy appears, is himself precluded from fairly estimating the force of any arguments and facts that may be adduced during the discussion preceding the division—arguments and facts which might possibly modify, in a very striking degree, his previous impressions, or lead him to waver in his confidence of his friend's judgment. We believe that few proprietors attend a general meeting without having previously made up their minds for or against any particular proposition that they may think likely to be brought forward; but, nevertheless, the opportunity of listening to and duly weighing the whole circumstances and illustrations of the case ought to be afforded, and as, we hinted last week, we do not imagine that if the matter be one of moment, or of special interest to individuals, they will to any great extent absent themselves from its formal discussion. It is by some objected to the prior publication of Directors' Reports and abstracts of balance sheets, that the interest of the periodical meetings of the Companies would thereby be destroyed, and that in consequence very few persons would give their attendance. We deem the objection of very little weight. It is much more probable, indeed, that a careful examination of the official statements about to be submitted for their approval, and a comparison of these with similar documents previously put forth, would induce proprietors to attend the meetings for the purpose of having doubtful points cleared up, and apparent discrepancies reconciled. Be this, however, as it may, surely nothing can tend more to detract from the interest with which expected discussions on matters of importance are looked for, than the knowledge that it requires no sacrifice of ease or convenience to determine a question, either one way or another,—that those who do not attend are placed precisely in the same position as those who do,—and that in most cases it is quite useless to strive against the power centered in the Directors of the Company, from the vast number of proxies which these parties usually contrive to secure.

Probably it would be well if only a certain proportion of proxy-votes were admitted—a proportion either as regards the entire number of proprietors, or the number that might be present on particular occasions. At any rate, we would have none but what may be termed *special* proxies used—we would have the particular occasion of their application specified, if not the very question upon which their influence was to be brought to bear. This would require, of course, that no matter should be brought to the vote without previous notice; and, indeed, such a regulation would, under any circumstances, be desirable. Directors are at present compelled in self-defence to have as large a number of proxies as possible in their hands, less factious or interested individuals should come to a particular meeting thus armed, and defeat a measure obnoxious to themselves, or carry one which the Directors may conscientiously believe would prove prejudicial to the best interests of the undertaking. If, however, due notice of intended motions were at all times given, no one could complain of being taken by surprise; nor would such an arrangement as this be serviceable and convenient to the Directors alone. The proprietors would soon reap important benefits from its adoption. How frequently does it happen at the half-yearly meetings, that after much valuable time has been wasted in discussions the most frivolous, and when the meeting are wearied of further business, and anxious to retire, most momentous questions are brought forward by Directors, and literally without a word of remonstrance on the part of the proprietors, or one iota of explanation by the authorities, carried or rejected, just as the Management may point out; whereas had the shareholders had a reasonable time for deliberation, the very opposite course would have been adopted? We have sometimes been unchari-

Digitized by Google

table enough to suspect that these trifling controversies—these insane speechifyings—were secretly promoted (as we certainly have on more than one occasion seen them indirectly encouraged,) by honourable gentlemen behind the table, for the express purpose of calling off attention from some really important, but probably to the Directors not very pleasant, business that is thereafter slurred over as already described. Unfortunately a personal collision between speakers on adverse sides is so much more *piquant* than a discussion of dry details of facts or figures, that this *ruse*, if such it be, is generally pretty sure to be effectual.

With respect to the mode in which proxies and votes generally are applied, it surely is a glaring abuse of their legitimate influence, that their number may be very considerably increased by entering into certain well understood arrangements for the pretended sale of the shares which they represent—that for example, A. who holds 500 shares, and is thereby entitled to a certain number of votes, should, by making over a portion of his holding to B., C., D., and E., be able to command through their instrumentality, a much larger influence than the original holding would entitle him to. Whatever proportion the number of votes may bear to the number of shares in any given instance, the same proportion should hold in every other instance; if 500 shares entitle to 100 votes, the breaking up of these 500 shares into holdings of 50 each, should not produce in the aggregate one vote more or less than the 100. The simplest plan would be to grant a vote for every share held, be the number large or small. The total number of votes would thereby be increased, but the result would not be affected, and on the supposition that a proprietor holding ten shares in a railway has ten times the interest in its prosperity that is felt by the holder of a solitary share, so would be his influence in securing such prosperity as far as it *can be* secured by the votes of the shareholders in general meeting assembled.

We briefly adverted in our last number to the effects likely to arise from the practical introduction of steam navigation upon the river Irwell, as respects both the Manchester and Leeds and Liverpool and Manchester Railway Companies; and we could not but express our regret that anything should have been suffered to interfere with the construction of the short junction line between these two great undertakings, more especially as both Companies had applied for and secured Parliamentary sanction for the work, although, unfortunately, the Liverpool Company now shrink from carrying their part of the project into effect. A correspondent attributes this apparent desire of the Liverpool Directors to draw back from their engagements, to the prevalence of an influence at the Board in favour of a certain canal, the prosperity of which might be considerably affected were the junction line constructed. We know not how this may be, but certainly the conduct of the Board in this matter affords strong room for suspicion that there is some secret influence at work or that some object is to be attained which the Directors do not venture to avow. What, indeed, can be more inconsistent than for a Company to go to Parliament for permission to undertake a particular work, and having obtained such permission, to leave the scheme in abeyance? We may be sure that the only ground upon which the privilege prayed for was conceded by the legislature must have been a consideration of the public advantages which were expected to result from the execution of the project; and how has the interval which has since elapsed tended to detract from such advantages, or to render the public less deserving of them? To us it appears very much like *playing* with Parliament, to pursue the course in which the Liverpool and Manchester Directors seem determined to persist.

We have heard it urged that the project is not likely to turn out advantageous as a pecuniary investment, and that the unwillingness of the Liverpool Directors to commit their constituents to the chance of loss, is the sole cause of their present apathy. If it be so, it should be openly and broadly stated, and moreover it should be fully explained how it happened that this alleged unprofitableness was not discovered sooner. Were the Directors deceived in their estimate of the probable income, or the cost of construction; and if so, by whom were they deceived? That at one time they must have been satisfied of the results to be expected from the formation of the junction line is manifest enough, otherwise they would never have consented to the trouble and expense inseparable from an application to Parliament. If they have rushed unthinkingly into a foolish speculation, from which more sober reflection now leads them to retreat, let them boldly avow it, and if their caution cannot be commended, their candour will do them honour.

As a general rule, as well as in this particular instance, we most strongly deprecate all merely speculative applications to Parliament,—such applications we mean, as it is not fully and truly intended to act upon, should the requisite powers be secured. We pass over the injustice and injury inflicted upon parties whose property may be affected by a proposed railway, and the anxious suspense in which they are kept, (it may be for years), as to the future movements of those who have contrived to obtain the help of the strong arm of the law; it is the effect as regards the future disposition of the legislature for which we are principally concerned. Already there is more than enough of ill-feeling towards railways evinced by members of both Houses of Parliament—already such speculations are regarded by many as little short of national nuisances, or as, at best, the means of obtaining a doubtful advantage from the cupidity of interested schemers—already the promoters of these important works have much to struggle against from the bigotry and rapacity of landowners and others; and it is detrimental to the system generally, and to the advocates of particular undertakings to cause that odium and that opposition to be increased by professing anxiously to seek for the sanction of Parliament, and then to leave it wholly inoperative. Ill-digested schemes are in this respect productive of twofold evil; they disappoint their immediate promoters, and lend a heavy blow to all similar projects, however well matured.

It would, perhaps, be carrying a right principle too far in practice, were it made compulsory upon all parties applying for and obtaining legislative authority for railways or such like schemes, to complete their respective undertakings at whatever cost or risk. Circumstances may arise which it was wholly impossible to foresee, and those who at the outset fully intended to finish a prescribed work, may thus be rendered wholly incapable of complying with the conditions upon which their privileges are based; but in nine cases out of ten, no such plea can be justly urged, and ought not to be allowed. It is for the interest of the public, and not merely or mainly for the pecuniary benefit of individuals, that the legislature is supposed to interfere in what are called "Private Bills" for the construction of railways, roads, canals, and other similar undertakings, and if that interest be carelessly overlooked or knowingly postponed to the promotion of any other, the legislature, and the legislature alone, is greatly to be blamed. But the truth is, that the legislature itself is over-reached and deceived, when Companies come forward to undertake a particular work, and then shrink from the terms of a contract into which they have voluntarily entered. If any means could be devised for keeping such parties to their implied engagements, these means the members of the legislature ought to adopt, not less in their own vindication than in justice to those whose interests they profess to protect. They might at least compel the parties to show sufficient cause why they have hesitated to carry out to their full extent the powers and privileges secured to them by their several Acts; and if such cause should not be shown, then might they be dealt with accordingly. We do not take upon ourselves to assert that the Liverpool and Manchester Company have not valid and satisfactory grounds for refusing to extend their line to the point for which they have obtained Parliamentary permission, but while these reasons remain unexplained, the Directors must not feel surprised if their sudden retreat from a position into which they entered of their own free will, should be ascribed to motives not the most deserving of praise.

Scarcely one provincial newspaper can we take up without finding in it some remonstrance against the existing or contemplated arrangements of the General Post-office. We believe that in the great majority of instances these complaints are without any solid foundation. Local accommodation, although it ought as far as possible to be promoted, must at times yield to the regulations necessary for the general conduct of so complicated a business as that presented by the Post-office, and if every obscure town or village cannot be embraced in the improvements which we are happy to see the authorities of that noble establishment have of late shown a disposition to carry into effect, the fault is not to be ascribed to any unwillingness on the part of the Post-office to supply the much-coveted accommodation.

It is not in respect of these details that we are inclined to find fault with those whose duty it is to superintend and direct the daily operations of the Post-office. We are of opinion that they err in a much more important matter, namely, in omitting to take full advantage of the extraordinary facilities which the leading lines of railway supply for the more frequent transmission of the mails. We doubt whether, after all, railways are very particular favourites at the Post-office. They have interfered so much with the time-honoured arrangements of that establishment—have so unscrupulously upset the routine which in all public offices, and in the Post-office more especially, becomes a second nature, that one can hardly feel surprise that the new-fangled system should be looked upon with suspicion, if not with dislike. For some time after the letter-bags began to be carried by the first-established railways, complaints on the part of the Post-Office authorities, as to delays and disappointments, were very numerous. We do not assert that in many cases these complaints were altogether groundless. On the contrary,

Digitized by Google

we are firmly persuaded that the culpable irregularities which at that time marked the operations of one of the leading lines (irregularities which we are happy to say have long since been remedied) did much to prejudice not only the Post-Office officials but the public against the (then) novel mode of conveyance. Too happy were the interested enemies of railways to join in the cry, and loudly was it then raised. That the clamour has long since subsided, and that no man in his senses would now for a moment advocate a return to the old system, is the best proof that could be given of the innate superiority of railways, and of the pains taken by those to whom their management has been entrusted, to secure to the public, and consequently to themselves and their co-proprietors, the fullest amount of benefit which these undertakings are capable of producing.

So far from any prejudice now existing against the conveyance by railway of the correspondence of the country, the general complaint among men of business is, that the Post-Office people are slow to avail themselves of the full measure of benefit which might be reaped therefrom. It would be strange indeed, if it were otherwise. The mercantile world has witnessed too much of the facilities for personal intercourse which railways so eminently furnish, not to desire to see a corresponding advance in the conveniences which the Post-Office professes to supply for the transmission of letters. Journeys which formerly occupied from 30 or 35 hours, are now by means of railways reduced to 10 or 12, while the facilities offered by the Post-Office have by no means advanced in an equal ratio. With the exception of the establishment of day mails to a few of the principal towns, the public has gained little from the transmission of the mails by railway. In London, for example, the period during which the letter-boxes remain open has not been extended, and if the morning delivery be somewhat expedited, it is owing more to the arrangements unconnected with, and independent of, the railways, than to any saving of time in the trans-urban journey.

The Post-Office authorities will never fully carry out the objects of the establishment over which they preside, until they determine to afford the greatest possible facilities of which the existing mode of communication will admit. If ever such a determination were politic and prudent, it is at the present moment when the effects of a great change in the financial department of this branch of the public service are beginning to be felt, and when unless increased, encouragement can be given to the multiplication of correspondence, it is to be feared that the old system, or at least a modification of it, must again be resorted to. We are strongly of opinion that if additional mails were instituted, with the present low rate of postage, the number of letters would be immensely increased. The experiment is at all events worth trying. We understand that the Directors of one of the principal Railway Companies, acting upon the hint which we ventured to throw out some few weeks ago, have volunteered to carry a mid-day mail for six months without any profit whatever, till it can be seen how the plan will succeed. How the proposition will be received by the Post-Office authorities remains to be seen. The example, however, is deserving of imitation, and we cannot believe that if public opinion were strongly expressed upon such a point, any body of officials would long venture to resist it, however troublesome to themselves might be any arrangements consequent on the adoption of so manifest an improvement.

THE Sheffield and Manchester Railway was partially opened on Wednesday last, namely, from Manchester to Godley, a distance of about 8 miles. We cannot but deem this step ill-advised at this season of the year—in the present state of the weather—and after the unprecedented severity of rain with which we have of late been visited. The works upon the portion of the line thus opened cannot but have been seriously affected by those rains, in common with every other new work, and indeed every work of the kind whether new or old; and should any slips or subsidence occur from that cause, now that the trains are running, the result would probably be some lamentable catastrophe to the public, and certainly a source of great additional expense to the Company. It is true that Sir FREDERICK SMITH is said to have certified the solidity and safety of the works; but with all deference, we are not inclined to put much faith in these (of necessity) cursory inspections; nor would our confidence be much increased in this instance, if it be true, as was very industriously circulated at the time, that the gallant officer had, previous to the opening of that line, pronounced the works of the Brighton Railway to be among the most perfect, if not *the* most perfect, of the kind he had ever seen—this *perfection* being in a very few weeks so strikingly apparent!

Nor do we see what profitable result can be expected in the shape of traffic upon so short a portion of the Sheffield and Manchester line at such a period of the year. Pleasure-travelling is out of the question; and we doubt whether, under the circumstances, there is likely to be a sufficiency of other business to reimburse the expenses of working. By waiting till the commencement of spring, the works upon the line would have been still further consolidated, and the Company's arrangements more satisfactorily matured.

The Gosport line is to be opened in a few days, and although even in that case we would counsel a few months' postponement, the circumstances are very different from those of the Sheffield and Manchester Railway. The Gosport line is but a branch of a railway, all the arrangements of which have for many months been in full and efficient operation. The servants are all trained, the machinery in good order, the times of departure and arrival from the main termini long since fixed, and daily acted upon; whereas in the Sheffield and Manchester Company's case, every thing of this kind is still matter of doubtful experiment. Should any accident arise from this opening, the Directors will assuredly be much blamed.

We can readily conceive how it is that the Sheffield Directors should be anxious to bring a portion of their line into active operation at the earliest possible moment. The present position of the undertaking is far from being a desirable one, and doubtless they think if they can but once show that they have made a start, some of their difficulties will disappear. For many of these difficulties they have, in our opinion, to thank their own objectionable policy; but, be that as it may, we do not think that the course which they have pursued on this occasion will at all retrieve the misfortunes or mistakes of the past, while it *may* tend greatly to aggravate and prolong them.

A WEAK defence is not unfrequently more fatal to a cause than a vigorous attack of an adversary, and such would seem to be the case with the anti-Sunday travelling question, as handled by the members of the (self-styled) "Newcastle-upon-Tyne Society for promoting the due Observance of the Lord's-day." At the urgent request of a valued (and we are sure a well-intentioned, although we cannot help thinking a much mistaken) correspondent, we give insertion elsewhere to an address of the body above named, to the Directors of the Edinburgh and Glasgow Railway, with a view to prevent the running of Sunday trains upon that line.

We believe that the minds of the great majority of our readers, and of the English public generally, have long since been fully made up in reference to this question, and therefore we do not intend to re-open it on the present occasion. We cannot, however, make this slight allusion to the Newcastle address without calling attention to the display of hypocritical cant in the reference to *religious and moral* Scotland! If the Directors of the Edinburgh and Glasgow Railway suffer themselves to be decoyed in the smallest degree by such appeals, they are, to say the least, but ill qualified for the office they fill.

Shall we confess it (and why should we not?) that a statement put forth by the Newcastle Society affords us much pleasure, namely, that "on a certain Lord's-day about three months ago, a greater number of individuals left Newcastle by the railway trains and river boats, than the average number attending the whole of the places of worship of all denominations in that large town?" We trust we have no occasion to disclaim the smallest disrespect to the religious institutions of the country—institutions to which, more than to any thing beside, so much of our national pre-eminence is to be ascribed; but on this subject we may be allowed to quote once more a stanza which has already appeared in our columns, from the pen of one who knows practically more of the situation and sensations of such parties as the Newcastle Railway travellers than dozens of members of "Lords'-day" Societies, who for the most part are placed in such a station of life as to command their own carriages, without the necessity of resorting to the plebian conveyance of a railway train. Thus speaks EBENEZER ELLIOT, the Sheffield bard—the poet of the poor:—

"Now quit thy home, thou bread-tax'd artisan;
Drink air and light, pale victim, while thou may'st!
What do'st thou hence, umbrella'd Englishman,
Bound to thy pagod in the streeted waste?
Deem'st thou that GOD dwells only where *thou* pray'st?
Come worship here, where clouds the hill-tops kiss;
Death numbers them who linger where thou stay'st;—
Bliss-praying suppliant, why shunn'st thou bliss?
Oh! can ye hope for Heaven and scorn a scene like this!"

Since the preceding remarks were in type, we have, through the courtesy of the Editor of the *Glasgow Argus*, been favoured with a proof slip of a notice (which was to appear in that paper of Thursday) of a meeting of the Edinburgh and Glasgow Board held on Tuesday last. It is as follows:—

"The meeting of the Directors of the Edinburgh and Glasgow Railway Company, alluded to in our last, was held upon Tuesday, and terminated in the defeat of the party opposed to *all* travelling on the railway on Sunday. An incorrect statement of the

Digitized by Google

proceedings having appeared in a contemporary of yesterday morning, we have procured copies of the motion and amendment which were actually submitted to the meeting.

"The motion, of which previous notice had been given, was as follows:—

"'That there be no travelling on the railway on Sabbath, unless compelled by the Government.'

"The effect of this motion, if carried, would, as we believe was stated at the meeting, be not only to negative Sunday travelling, but to deprive the shareholders of any opportunity of expressing their opinions on the subject, as the Act confers on the Board of Directors the exclusive power of regulating all matters connected with the passenger traffic. The amendment opposed to the above was in the following terms:—

"'That it is the opinion of this Board that it is their duty to provide trains for the accommodation of the Post-office and the public, one in the morning and one in the evening of Sunday, from the cities of Edinburgh and Glasgow respectively—and under such rules and regulations as shall enable the servants of the Company, and all others travelling on the railway, to attend divine service. But as this is a question on which it is proper to consult the shareholders generally, the Board refers the decision of that question to a general meeting of the Company.'

"Upon a division taking place, the amendment was declared to be carried by a majority of 10 against 8.

"The mover of the amendment then mentioned that he held in his hands a letter from one of the six absent Directors, authorising him to state his cordial concurrence in the principle embodied in it—that letters from two of the other absent Directors were in the hands of the Chairman, also adopting the same view—and that of the remaining three he could take upon himself to say that at least one would have voted with him, if his engagements had allowed of his being present."

We understand that Mr. JOHN LEADBETTER, the well-known Sunday steam-boat traveller, and Mr. JOHN BAIN, mail coach contractor, voted in the minority! We trust the English shareholders will not fail to make their sentiments fully known upon this really important question.

—o—

IT would appear that the malicious practices which we have so often had occasion to reprobate in reference to railway obstructions, are not confined to this country. Two young men, of Forest, in Belgium, were a few days ago amusing themselves with putting sticks on the rails of the railway near that town, to see the effect as the train passed over them, when they were arrested before it came up, and taken before the authorities, who determined to prosecute them. We sincerely hope that they have been punished as they ought to be for such shameful conduct.

—o—

LAST week we alluded to some extraordinary cases of compensation in which the Paris and Rouen Railway Company were concerned. We have now to add, that in another case a claim was made by the Civil List, of 46,224f. for about 35 acres of the Forest of Saint-Germain. The advocates for the Company, after hearing the evidence and arguments in behalf of the Civil List, left the question entirely to the discretion of the jury, who awarded the full sum. In another case, the town of Poissy had made a claim for 25,500f.; the Company offered 10,000f. On coming before the jury, the town reduced its demand to 18,000f., and got an award for 15,000f. It will be seen that attempts at extortion are not confined to English landowners!

—o—

A CONTEMPORARY states, we know not upon what authority, that the Directors of the Great Western Railway Company have recently increased the allowance of the clerks employed upon their line. We sincerely trust that it is so. The Great Western Company do by no means bear the character of having a niggard establishment, but at the same time we should be glad to find a due respect paid to the claims of a very useful class of servants.

—o—

THE affairs of the Common-road Steam Carriage Companies do not appear to be in a very flourishing condition. The following notice from the daily papers will explain what we mean:—

"A numerously attended special meeting of the shareholders in the above Company was held on Friday, pursuant to advertisement, at the Freemason's Tavern, Great Queen-street, Lincoln's Inn Fields, to determine what course should be pursued in reference to Sir James Anderson's steam carriage, and to take into consideration the situation of the Company generally; H. STUART, Esq., M.P., in the chair. A great deal of discussion ensued on the affairs of the Company, one gentleman stating that the Company was in a bankrupt state, and that the sooner it was wound up the better, and that as Sir James Anderson, (who had undertaken to supply the Company with his patent carriages, but had failed to do so,) either had no carriage at all, or was incapable of producing one, that negociations should be entered into with other parties; whilst another proposed that the sum of 100*l.* should be advanced to Sir James, to enable him to bring a carriage which, it was stated, he had manufactured at Manchester, to London. A good deal of argument took place, but two resolutions were ultimately passed unanimously. The first (proposed by Mr. Storking) to the effect that Sir James Anderson, and Mr. Rogers (the co-patentee), having failed in their engagements with the Company, the manufacturing of the carriages should be open to general competition, and that the Company for the purpose of establishing locomotive carriages on common roads should be continued; and the second (proposed by Mr. Shaw, and seconded by Mr. Johns) was to the effect that Sir James Anderson and Mr. Rogers should not be absolved from their engagement with the Company, but that the Directors should be instructed to make such arrangements with the patentees as would be most advantageous with the shareholders."

—o—

WE daily expect to have to record some most calamitous occurrence from the defective state of railway fencing, to which we have so often called attention. The following is from the *Leeds Mercury* of last Saturday:—

"On Saturday last a fine milch cow, the property of Mr. John Short of Chesterfield, was killed upon the North Midland Railway, near that place, by coming in contact with a train that was passing. It appeared that the animal had strayed upon the line from a pasture adjoining, *owing to the bad state of the fences;* the beast was literally smashed to pieces."

—o—

THE following contradiction has been sent to us of some statements contained in a letter of a recent correspondent relative to the Durham and Sunderland Railway. We have great pleasure in giving it publicity, although we need scarcely remind our readers that it does not in the smallest degree affect the argument advanced in our Editorial columns.

"It is not true that Mr. Backhouse's *statep* number of shares in the railway is correct.

"It is not true, 'he is (or ever was) a Director of the Northumberland and Durham District Bank.'

"It is not true that he 'charged his brother Directors (of the railway) exorbitant discount,' or any discount at all.

"It is not true he was concerned 'in taking the coal at Houghall.'

"It is not true he has any share (or ever had) in the Houghall Colliery."

We leave our correspondent to justify his assertions as he best may.

—o—

MOST of the facts contained in the following paragraph, which we extract from the *Standard* of Wednesday evening, are already known to our readers, but we have great pleasure in giving them still further publicity, in the hope that the example thus set by the Company, which, above all others, is looked up to as a pattern, will speedily be followed by others:—

"We learn with pleasure that the Directors of the London and Birmingham Railway have established at their great central works at Wolverton, a day school for boys, and one for girls, together with an infant school—in addition to a reading room and library for their artificers and servants. They have also provided the means of religious instruction; the Reverend George Weight, M.A., F.R.A.S. has been appointed chaplain to the Wolverton station, and a chapel built by the Company has been licensed by the Lord Bishop of Lincoln, which will be opened for divine service on Sunday next. We cannot but commend this conduct, and hold it up as an example to other Railway Companies and large mining and manufacturing establishments, many of which exist at some distance from towns and places of worship. If timely attention had been paid to the education, the rational occupation of leisure hours, and above all, to the religious duties of the population gathered together in great works in Wales and other districts, it is probable that Chartism and political troubles would have been unknown among them. *We understand that donations of useful books to the Wolverton library would be very thankfully received.*"

We earnestly recommend the concluding paragraph of the above extract to the attention of every London and Birmingham proprietor.

—o—

IN our advertising columns will be found a Report from Mr. Locke, the Engineer-in-Chief of the Sheffield and Manchester Railway, as to the probable cost likely to be incurred upon the whole line. It will be seen that Mr. Locke's estimate is higher by about 113,500*l.* than that framed by Mr. Vignoles, the original Engineer of the undertaking, the difference arising principally on the works at the difficult tunnel beyond Glossop. Mr. Locke is nevertheless of opinion, that the line will, on the whole, be cheaply constructed, namely, for about 25,000*l.* a mile, exclusive of carrying stock; and should this estimate prove correct, it certainly would be a cheap line considering the nature of the country through which it passes. Mr. Locke expresses his willingness to test his estimate by finding parties ready to guarantee the execution of the several works for the amounts specified, or failing this, he says he will at once retire from his official position. Mr. Locke seems sanguine as to the profitable results of the line, but this is a point upon which we have not at present sufficient data before us to be able to form an opinion.

THE TOLL QUESTION—CROYDON AND GREENWICH RAILWAYS.

The substance of the following remarks with reference to an Editorial article which appeared in our last number, has been forwarded to us by a highly intelligent correspondent, who, it will be seen, strongly advocates the views taken by Mr. Wilkinson, the Chairman of the Croydon Company, on the subject of the Greenwich toll. We have much pleasure in giving publicity to our correspondent's observations, although on some points we do not altogether concur in them. Some communications on the same subject will be found in another part of our present number:—

The Croydon Company do not allow that the question of toll is any longer matter of experiment, since they have proved—if proof be needed—that the toll depends upon the number of passengers,—that the number of passengers depends upon the rate of fare, and that the latter is in the power of the Croydon Company.

The Croydon Company would gladly pay a larger sum per annum than the interest of any capital which it would have cost them to extend their terminus to Tooley-street,—and they did offer to extend the line themselves, and pay any reasonable, or more than any reasonable, price to the Greenwich Company for their land, and for this offer they were called "robbers;" although they only made it because the Greenwich Company refused to extend the line, as the Select Committee of the House of Commons required. But the Croydon Company are willing to allow that the Greenwich Company are entitled not only to what is fair, but to all they can *get* out of the traffic. The Croydon Company, however, have proved that the Greenwich Company cannot *get* more than the public is disposed to pay, unless by taking the whole of the Croydon profits which the Croydon Company (having the power to withhold) are not disposed to allow. When the Croydon line was constructed, the necessity of low fares was not contemplated, and if high fares would bring a sufficient income, nobody would complain of the present toll;—it is only when low fares are charged that the toll gives more than the *contemplated* share to the Greenwich Company.

There is no desire to evade the terms of the contract, for there was no *contract* that the Croydon Company should charge *low fares*, and it is only upon condition that these low fares are charged, that any reduction of toll is expected, and this only upon the plea that such reduction of toll and fare shall bring a larger income to both Companies; the reduction of one without the other, would benefit exclusively the party refusing to concur in the reduction, which is just the unreasonable position which the Greenwich Company insists upon occupying.

After all, the whole question turns upon the effect of a *fixed* toll upon a *variable* fare, which is very little understood, and which it was the object of the pamphlet of Mr. Wilkinson, however imperfectly carried out, to illustration.

A reference to the first letter of the printed correspondence, which passed between the Directors of the two Companies, (which correspondence by the way contains the whole pith of the arguments on both sides, and except for the little unfortunate asperity at the close, might be a sort of *vade mecum* upon the subject), will show that the Croydon Company offered to guarantee to the Greenwich Company a fixed amount per annum, and although circumstances which have since occurred would prevent the unconditional renewal of this offer, it might still be made with modifications.

A reference to the same letter will likewise show that what "Locomotive's" Reply asserts is untrue, where it states that there has been an unwillingness on the part of the Croydon Company to offer the same terms to the Brighton Company on the one hand, as to the Greenwich on the other. This offer has been twice made to the Brighton by the Croydon Company, and is even now at the option of the former. No better proof can be given than this offer affords of the sincerity of the Croydon Company; and no better proof can likewise be offered of the truth of the argument as to the effect of the toll upon high or low fares—since the reason why this plan is refused, or rather not accepted, by the Brighton Company, is the very same as that for which it is urged by the Croydon Company upon the Greenwich, namely, that the toll which it seeks to supersede is favourable to high fares, which are charged by the Brighton Company, while low fares are desired by the Croydon, the circumstances of the Companies being essentially different. If the Croydon Company could obtain from the public an average fare of 3s. to Croydon, the plan proposed by the Croydon to the Greenwich Company would entitle the latter to a toll of 4½d., and the same plan adopted by the Brighton Company would entitle the Croydon Company to a toll of 1s. 10d. instead of 1s. upon the first class fare of 14s. 6d. to Brighton: whereas, if the Brighton fares were to average less than 8s. the Croydon toll would, upon the plan proposed, average under 1s.

The only debateable point is *what is the most remunerative fare?* Railway proprietors have no business to attend to any body's interest but their own. All we contend for, is that in attending to the public interests, thay *do*, in reality, best *further* their own.

Almost all the statements in the "Reply" are either untrue, or partly untrue.

THE SLIP ON THE CROYDON RAILWAY.

Since our last report, the weather has not been sufficiently favourable to enable the parties to make so rapid an advance in the work as previously.

The down line of rails was however cleared on Wednesday, and the up line on Thursday, and the luggage vans of the Brighton trains are now run hrough, to avoid the detention caused by the removal of luggage. Several goods' trains have passed from New Cross to Croydon, but it is thought more prudent to continue the existing arrangement with regard to passengers until Monday, when it is expected that both lines will be completely righted, and the main part of the slopes trimmed down of their original batter.

Three or four lengths of rails at the south end of the slip on the up line have been lifted up, and pushed over between three or four feet towards the down line.

Up to Thursday night, between 9,000 and 10,000 cubic yards of earth had been removed; and after the line is opened the work of removal will be continued with those remaining portions of the slip which are likely to move upon the floor.

HAMBURGH AND BERGEDORF RAILWAY.

A meeting of the Shareholders of the Hamburgh and Bergedorf Railway Company was held at Hamburgh on the 23rd ult. to receive a Report from the Directors of the state of their works. It appears from the Report that the Expropriation Law was passed on June 1, 1840, and the works were shortly afterwards commenced, but owing to difficulties arising from the unfavourable nature of the above law, much delay was experienced in obtaining possession of the land. The works, however, have been pushed on, and it is expected that in April, or about a month after the breaking up of the winter, the line will be ready for traffic. Its total length is about nine miles, but it forms the Hamburgh link of a railway into the interior of Germany. The original estimates of W. Lindley, Esq., the Chief Engineer, will cover the entire cost of the road and establishment. The whole capital is about 109,000*l.* sterling. The approach of the railway to the city will be the most magnificent in the world, it will pass for about 3,000 feet between two large navigable canals, into a station 2,000 feet in length, close to the heart of the city and the harbour. The line is laid out entirely through a district of marsh; but the works are perfectly firm and substantial.

The *Morning Herald*, of yesterday, states that the Directors of the Grand Junction Railway have, with a very becoming liberality, defrayed the travelling expenses, &c., of those friends of the late Mr. Thomas Phillips, who considered it their duty to repair to the spot where the unfortunate and fatal accident took place, and who likewise attended the inquest. The expenses of the removal of the remains of the ill-fated gentleman to the terminus of the Birmingham Railway, at Euston-square, have also (it is said) been defrayed by the Directors.

—o—

It is stated that in consequence of the misfortunes on the Brighton line, and the want of confidence in many of the inhabitants and visitors, a great number of the tradesmen of Brighton intend taking a trip up and down the line on Wednesday next to report on its real state, to endeavour to remove the prejudice existing against it. Upwards of one hundred have already subscribed to the excursion. The demand amongst respectable families for the inside places in the coaches continues unabated, and the proprietors taking advantage of it in many cases refuse to book fewer than four places together, and from the 1st of December intend raising the fare to 25s. each. Most of the inside places are already booked up to that time.

—o—

We understand that yesterday week a slip took place in a cutting on the Great Western Railway about half a mile west of Wootton Bassett Station. The working of the north line only was interrupted, and on the following day both lines were restored to their original state.

—o—

Bolton and Preston Railway.—The works on this railway are progressing favourably. The line to Chorley will be opened the 22nd of next month. The contractor for the tunnel at Chorley is using great exertions, and there is no doubt but the whole line will be completed and opened to the public in September next. Some conception of the magnitude of the work at the tunnel may be formed when we state, that seven steam-engines have been found necessary to work the pumps, having a power of nearly sixty horses. The dimensions of the tunnel will be 20 feet by 22 feet 6, its length about 300 yards. A portion of the permanent rails is already laid on the line from the tunnel to its junction with the North Union Railway at Euxton.—*Preston Chronicle.*

THE TOLL QUESTION—GREENWICH AND CROYDON RAILWAYS.

To the Editor of the Railway Times.

SIR,—I have read with considerable interest Mr. Wilkinson's pamphlet on the "Toll Question," and "Locomotive's" reply thereto. Those who are interested in railways, I think, must regret that a question of so much importance should be mixed up with an appearance of party spirit and rivalry between the two Railway Companies, because in place of elucidating truth such sentiments tend to obscure it. Although much interested in railway business, I am in no way connected with either of the railways, nor do I know either of the parties.

"Locomotive," in my opinion, fences too much; he rather plays with Mr. W.'s arguments than answers them. His profit and loss *estimate* of the Croydon business is not in good taste, being in no way necessary to his arguments; it seems as if brought in "neck and heels" to have a "fling" at the Croydon without effecting any purpose save that of casting dirt at his neighbour; in so doing, I think, he has secured rather a prejudice against himself.

"Locomotive" harps upon the words remunerative and sufficient toll, and relative cost of the line, while Mr. W. inquires how to obtain the largest revenue irrespective of rate of toll or cost of line. This savours to me of a mind capable of *managing business well*, for it matters not to the public whether a line cost 15,000*l.* or 50,000*l.* per mile; they only will use a railway if its conveniences are worth the fare charged. If fares are to be regulated by cost of lines it is probable that the most costly lines will be least used, and, consequently, have the smallest revenue.

In my opinion the only way to obtain a large revenue is to suit the fares to the locality and circumstances regulating the adjacent modes of transit irrespective of the cost of the line. If the original calculations upon which the line was constructed be sound the concern will pay; if the calculations are faulty, and the revenue cannot be realised, or the cost exceeds the estimate, in my opinion the shareholders will be deceived if they attempt to palm upon the public the effects of their own blunders, for this is not the age of high prices.

Mr. W. shows that when the Greenwich Company increased their toll to the Croydon, the actual effect was a reduction of the gross amount of toll paid to the Greenwich. "Locomotive" does not answer this startling fact, but contents himself with simply showing that low prices do not in every case produce a large revenue, but if all he states be on his side of the argument how can either his facts or his arguments upset the actual experiment made and proved—that in *this* case *increasing* the rate of toll has *decreased* the amount of revenue?

"Locomotive" endeavours to prove the justice of the extravagant toll of 3d. paid for the privilege of passing over one mile and 3-8ths of the Greenwich by comparing it with the Croydon charge of 1s. for eight miles to the Brighton, saying, "The relative proportion of the toll paid and the toll charged is pretty nearly equal, if we take the relative cost of the two portions of line into consideration the 1 mile and 3-8ths of the Greenwich having been constructed at an expense little short of the expense of the 8 miles of the Croydon Railway." But what have the public to do with such an argument? They only judge that the Greenwich charges a toll of about $2\frac{3}{10}$d. per mile, while the Croydon charges $1\frac{1}{2}$d. per mile, both affording equal conveniences.

But "Locomotive" states that the average charge of railways at present is $2\frac{1}{4}$d. per passenger per mile, and he estimates the Croydon expenses at $1\frac{1}{4}$d. per passenger per mile, so that the Croydon account would stand thus:—

Toll per passenger per mile paid to the Greenwich Company	2 3-16d.
Expenses for working	1 4 16d.
	3 7-16d
Average fare which Croydon may charge	2 4-16d.
Loss per passenger on every mile the Croydon trains pass over the Greenwich Railway	1 3-16d.

As to the justice of the charge no more need be said; a better champion must be brought to the rescue.

Neither, Sir, can I agree with your arguments. "If the sum annually paid to the Greenwich Company fall short of the interest of the amount which the making and maintenance of a railway from Corbett's-lane to Tooley-street would have occasioned, then we say the Croydon Company have no reason to be dissatisfied." A line common to two Companies cannot be so valuable to either party as two separate and distinct lines. If the amount of the interest and expenses of maintenance of way is to regulate the rate of toll, surely it is not just that one Company should pay the whole. Let each pay according to the number of their trains or the number of their passengers.

The subject would admit of further consideration, but I have already trespassed too far on your columns.

I am, Sir, your obedient servant,

COKE.

FARES ON RAILWAYS.

To the Editor of the Railway Times.

SIR,—I really feel some scruples about adding to the number of letters that threaten almost to overwhelm you at present, but there is one subject of great public and general interest which lies in such narrow compass, and on which so much has been written to no purpose whatever but to mystify and perplex those who have never reflected much upon it, that I will, with your permission, occupy a short space in your valuable paper.

Two pamphlets have been published;—one by Mr. Wilkinson, Chairman of the Croydon Railway; and the other a Reply, by "Locomotive," on "the Toll Question," as it is called, but, in fact, *on the question of low charges for the use of railways.* Mr. Wilkinson, with objects that are self-evident, endeavours to raise a general clamour for low fares, by such specious popular observations as that these important undertakings, in which so much of the national capital (contributed to a great extent by the most helpless and needy members of the community possessed of any property whatever) has been invested, "should be the poor man's railway as well as the rich man's railway," &c., &c.; but comes (page 7 of his pamphlet) to the very sound and just conclusion, that "*that* rate of fare should be levied which will bring in the largest NET revenue." If, in place of 16 pages of contradictory and often absurd reasoning, his pamphlet had been confined to this one sentence, it would have left a much more favourable impression of the author's wisdom and knowledge of his subject.

I have no intention of entering at all into the question of the arrangements between the Croydon and Greenwich Railway Companies, which "Locomotive" appears to have sufficiently disposed of in *his* pamphlet, but shall confine myself to the subject in its general point of view, and deeply interesting and important bearing, alike on railway and public interests.

Immediately after the observation which I have just quoted, we find the following:—"It is expedient to make such a charge only to the public as will *secure the greatest numbers*, together with the largest GROSS income."—(Page 7 of Toll Question Exemplified, by W. A. Wilkinson, Chairman of the Croydon Railway.)

Now it is quite clear that *the lower the fare the greater will be the number of passengers*, and, to a certain point, even of *gross* receipts; but it is also quite clear, that the rate of charge *may be reduced so low that there will be* NO NET *revenue whatever*; and it is singular that this fact, which has already been *experimentally* established by more than one Railway Company, should have escaped the attention of *the Chairman of the Croydon*, when he was engaged in penning the above singular sentence. The only question really is, what is the point at which to aim? and it can only be answered in Mr. Wilkinson's former words, that upon each line, and of course within the limits fixed by Parliament in the different Acts, "that rate should be levied which will bring in the largest net revenue." No other principle can ever be *permanently* acted upon, and no other will bear a moment's examination. It matters not whether a road has cost much or little, or been extravagantly or economically constructed, the object at which the *Managers* are bound to aim, when it is completed, is, *that of obtaining, within the above limits, the greatest* NET *revenue for the proprietors*; and the rate which will accomplish that, will always, *in the end*, prove the best for the PUBLIC INTEREST. A *railway* can never pay well without a great amount of traffic; and wherever there is a great amount of traffic, it is of the utmost importance to the public that the affairs of the Company should be liberally and well, and not parsimoniously, administered; but if a Company is acting upon the extreme low fare principle, and is running an immense number of trains, it is clear that without *great* parsimony and the severest economy in every part of the arrangements, there cannot be the least hope or chance of net revenue for dividends; and if this principle is still obstinately persisted in, what must be the natural and inevitable consequences?

The heavy expenses of maintenance of way, moving power, and conveyances, all—as the experience of all the older lines has now fully demonstrated, go on increasing in the ratio of the traffic and number of trains on railways, and to reduce these within the needful limits, the road ceases to be maintained in the best possible order, the engine and carriage stock is run out and exhausted, and the whole machinery becomes not only imperfect and unsatisfactory, but highly dangerous and objectionable in every point of view. There is, and there can be, but one standard by which to regulate the rate of charge on railways,—that which experience proves to produce the greatest net revenue; and if we abandon this, there can be no good reason for stopping at any particular point in our course of reduction. As with a telescope, you can only see the object when the right focus is obtained; the slightest deviation in *either* direction renders your object unattainable; and fortunately for Railway Companies and the public, the same focus answers for both. It is quite as important an object to the public to travel *safely, expeditiously, and comfortably*, as to travel *cheaply*, and the rates of fare producing the greatest *net* revenue, are those by which *all* these objects will be best accomplished; and I cannot doubt that the universal adoption of this as a railway axiom will, ere very long, for ever settle this question.

I am, Sir, your most obedient servant,

ONE DEEPLY INTERESTED BOTH AS A RAILWAY PROPRIETOR AND ONE OF THE TRAVELLING PUBLIC.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—It is a thankless office to state the truth without disguise, when great pecuniary interests are at stake, and are sought to be subserved both by the suppression of truth, and by the suggestion of falsehood. I have, however, begun the good work, and I will not falter though another dozen of correspondents should rush to the rescue, each more than the other inveterate against the first writer who has proved by facts and by figures the fallacy of the hopes and expectations so long and so sedulously fostered by the sinister and the sanguine.

I will, however, first reply to those of your correspondents whose replies you have inserted.

"Cocker" and "Viales," both impute inconsistency, and collate two passages which, even without the context from which they are dissevered, do not

Digitized by Google

bear out the charge, seeing that I guarded myself by stating, that "by no contrivance could a dividend be *fairly* declared."

"Cocker," by putting the whole passage in *Italics*, when in the original it was given as above, clearly stultifies the inference which necessarily results from the words as originally given. I stated then, and I *re-state* now, that "though the road presented no special feature, it *might perhaps*, justify investment at par now;" and I stated, and now re-state with more confidence, as the result of further inquiry and more information, that a dividend cannot FAIRLY be declared upon the present receipts, taking those receipts (a very liberal allowance,) at 10,682*l.* per week for the next two months.

"Cocker" represents me as stating that the station in London, and a probable extension, will make nearly 7,000,000*l.* I *stated* that the capital already in course of being borrowed upon the credit of the Directors, and in direct violation of the spirit of the Act of Parliament, was 6,350,000*l.*; that the engineer and secretary stated that they should consider 100,000*l.* a great excess, but from my experience of those functionaries, we might assume it very fairly at 150,000*l.*, thus making the actual sum 6,500,000*l.*, and that a station at Paddington, and a probable extension, would cost 500,000*l.* more.

Unable to reply to this statement, "Cocker" dismisses it thus: "This is too far-fetched to cause suspicion of its truth." Let your readers judge. It is agreed that the amount expended, or in progress of being expended, is 6,350,000*l.*; does any one doubt that the excess will be 150,000*l.*? Nay, does any man, after the experience of the last two years, dream that the excess will be so little as 150,000*l.*? But the secretary and the engineer assert that it will be less. Secretaries and engineers perform duties for their Companies at home, which, in the opinion of Sir William Temple was the proper function of Ambassadors abroad. They lie for the good (at the time so called,) of their Companies. Over and above their general duty, let us see what is the special fitness of parties upon whom we are called to pin our faith, to place entire confidence. The Secretary, after the work had made progress, and when much experience had been gained, *still* asserted that the work would be completed for 2,500,000*l.*; and the engineer, as proved by Mr. Gravatt, has exceeded his estimates by nearly 100 per cent. Are these men safe,—are they,—can they be—otherwise than biassed witnesses? I have further stated that 500,000*l.* will be needed for station and extension. Why, Sir, the extension to the site of the water-works, not 500 yards distance, and therefore of little use, would alone entail an expense of from 300,000*l.* to 500,000*l.*, whilst an extension to Battle-bridge, or to Oxford-market, the last the only one of value, would not be less than 2,000,000*l.*!

"Cocker" next impugns the accuracy of my proposition that the average weekly receipts of a series of railways, bears to the highest week the same proportion as 6½ to 9. In this "Cocker" shows his own ignorance, this being a *fact*, not an hypothesis; but even if there were any doubt, which there is not, the addition of 1,300*l.* per week would be vastly in excess.

What "Cocker" states with regard to the increase on the Birmingham, has no relation to the Great Western. The one line had its traffic to make, the other had its traffic to Swindon already developed, as "Cocker" and the sanguine holders are like to find when they come to count their expected gains.

I also stated that the traffic on the Exeter line was entirely agricultural, and not being open to much increase, might be expected to remain like that on the Birmingham, nearly stationary after the first year. "Cocker," upon this, brings forward tables to show the increase on the general traffic of that line, which I had never once impugned, but merely referred to the Birmingham agricultural traffic, or passengers from the country *par excellence*, as may clearly be seen by the context. So far, however, from having over-stated my case, I have understated it, for the counties intersected by the extension line are pastoral rather than agricultural, and therefore still less likely to be feeders to the railway. The expenses I stated at 2 600*l.* per mile, while your correspondent, like the ostrich, which thrusting its head into a hedge, deems itself unseen,—asserts that the expences would not exceed 50 per cent. and so he and others like him would assert, if the receipts were one-tenth the present amount. The one crowning absurdity of the supporters of this line of railway is, that of doggedly asserting, expecting, and idling,—*hoping* that their expenses will be in proportion to their receipts, and not that their expenses will be in proportion to the work done. Now, *it so happens*, that on the Great Western more work is done, more miles run, more servants employed, more expensive and costly stations, heavier works, dearer coke, more expensive works engines and carriages, a greater width of earthwork and permanent road to uphold, a greater wear and tear of engines and rails than on the Birmingham, and and yet we are told that it can be worked for a less sum per mile. As the line is in every respect more costly to maintain and to work, *per mile*, than the Birmingham, how, in the name of common sense, can the aggregate be less? All returns based upon partial workings are calculated to mislead, and I take my position upon the fact that, without putting aside any money for a reserve fund (which however ought to be done at the next meeting, seeing that the light rails in use at the Bristol end should be at once replaced by heavier ones) there can be no dividend if the expenses incurred are fairly stated. Can "Cocker" state any one item, any single head, under which the charges will be less per mile than on the Birmingham, taking the one at 112 and the other at 170 miles, for that is the only way in which truth can be reached or approximated? If the branches or extension are to be taken as parts of the main line by the Company, which gives a receipt as from the whole, so also must the line be taken as one in its expenses. The receipts of the Birmingham for the week last ended are 121*l.* per mile, whilst those on the Great Western are 67*l.*, or, deducting tollage, less than 60*l.* per week. Now the expenses on the Great Western, if fairly stated, will, on the aggregate, greatly exceed those on the Birmingham, but take them at the same rate, and the 35*l.* per cent. on the Birmingham is 70*l.* per cent. upon the receipts of the Great Western, which if fairly stated, are only a half, and from this there is no escape. Again, on the Grand Junction, whose receipts are 70*l.* per mile, the expenses, after four years' experience, are more than 2,200*l.* per mile. Now, if the expenses are as above stated on one of the cheapest lines ever constructed, where the works are upheld for little more than 100*l.* a mile less than one quarter the expense of the Great Western, where the stations are without policemen, the expenses of every kind greatly restricted, where coal is cheap, and iron still cheaper, and where there are but few trains, it needs only the exercise of common sense and the most ordinary powers of reasoning to arrive at the certainty, that on the Great Western, where all their expenses are *vastly* in excess, a very different result is quite inevitable. If there is any dividend on *this* line with a net receipt less than 62*l.* per mile on the average, then it results as a necessary corollary that there is great waste, if not malversation, on the Birmingham and Grand Junction. No jugglery, no mixing up of accounts, no mystification, will serve; to this complexion it must come at last.

There are great interests at stake, there are hundred of shareholders whose hopes and fears would lead them to sanction any statement of accounts which would lessen their uneasiness and apprehension; but no self-deception can *now* avail. There are too many eyes upon this concern, there is already too much known as to the cost of railway traffic to permit a hope that any legerdemain, any hocus pocus, can be successful, now that the line is fully opened. Having thus gone through the only points at all bearing upon the present condition of this really magnificent but most costly railway, having carefully reviewed my former letter, and satisfied myself beyond all question or misgiving of the accuracy of the statements, I shall leave it with you, Sir, the public, and still more to time, the great solver of disputes, to settle this question; satisfied, regardless of the imputation of unworthy motives, with having borne my testimony free from favour, free from fear, to the facts which have been made evident to me, repaid if the views, here or heretofore expressed, shall have opened the eyes of the sanguine to a *just* appreciation of this really magnificent work.

As I shall have no further opportunity of addressing you for some weeks, I may as well state that the notes issued in anticipation of calls, and the loan notes for the last 500,000*l.* arrears, are not sanctioned by Parliament, but are decidedly in contravention of the principle upon which Railway Acts are framed, viz., that the capital shall consist of shares in the proportion of 3*l.* to every 1*l.* borrowed, whilst in this line the borrowed money already exeeeds the capital in the proportion of 3*l.* 10*s.* to 3*l.*

This is also another serious consideration, seeing that when this money is unpaid, it hangs, and will continue to hang, over the shares like a call unpaid.

I have said enough to guide those who are anxious for facts, not fancies, and who have sufficient firmness to take counsel from reason rather than hope.

I am, Sir, yours, &c.

S. P.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—As a shareholder in the Great Western Railway, I have read with interest the various statements and calculations in regard to its position and prospects, contained in your publication from time to time, and which, though taking very different views of the subject, are calculated, I think, to put the public eventually in possession of a fair estimate of that important undertaking. Of course I do not allude to such effusions as that of "S. P." in your paper of the 6th, which presented such a tissue of self-contradiction, random assertion, and contempt of facts and figures, as I should think never before arrogated to itself the dignity of an argumentative epistle. The motives of the writer are within his own breast. Be they what they may, I apprehend he has not deceived one simpleton, unless it be the unlucky friend for whose especial benefit he instituted his enlightened enquiries.

Setting aside, then, this remarkable production, I feel that our thanks are due to several of your correspondents who have grounded very able calculations on the already ascertained results of the Great Western Railway itself, and the experience of other lines with which it may fairly bear a comparison. I would instance a writer in your paper of the 16th of September, who, in making his calculations to show that the Christmas dividend would be at the rate of 6 per cent. per annum, estimates the receipts of the line with very extraordinary accuracy. The receipts had been ascertained to the 23rd August, when he wrote. He estimated the next 11 weeks at 149,000*l.* Those 11 weeks ended the 7th instant, and have actually produced 149,449*l.* 2*s.* 3*d.*! If the remainder of this year shall average 10,000*l.* per week (and I think it will be more), his anticipations will be fully realised. But there is one important point, of which I think he and others also have lost sight, and which in my opinion justifies an expectation of a still better result than that which he gives, unless the shareholders have suffered grievous wrong. I allude to the working expenses. In the statement I have referred to, he takes the expenditure at 40 per cent. on the traffic for this present half year, and 35 per cent. afterwards. Now it appears that on the Birmingham line the working expenses at present are not quite 35 per cent. Surely the Great Western shareholders are not to look to this as the ultimate reduction to which that item is to be brought. If so, I would ask for what earthly purpose have we expended our

Digitized by Google

hundreds or thousands—nay, our millions, in obtaining our celebrated wide gauge and unrivalled gradients. If we had been satisfied with a railway in all respects equal to the Birmingham, it might have been completed, with all its plant and stations ready for work, for less than five millions. That fact, I believe, is acknowledged on all hands. But we have been repeatedly told that the costly perfections of our line were to bring about a great cheapening of its permanent locomotive expenditure; and in fact no other consideration could have justified the Engineer in recommending, or the Directors in adopting, the expensive plans alluded to. If this promised result be not gained—if we do not work our line at a percentage far below that of the Birmingham, then indeed have we been deceived in an extraordinary degree. It is said that the name of our Engineer will be handed down to posterity as that of a man who has constructed the most splendid work in the history of engineering. It remains to be seen with what *kind* of fame this notoriety will be accompanied. If his costly experiments shall result in saving to the Company the interest of the money expended upon them (and this would require 1,000*l.* a week at the very least) then will he receive the well merited praise of present and future generations, as the constructor of the most perfect and convenient railway in the world, on principles which involved at least no sacrifice on the part of his employers. If, on the other hand, he cannot show any such saving, I for one, (and I imagine my sentiments will prevail pretty generally,) must for ever deplore that the interests of this great Company were placed in his hands. I will say no more now, for I hope better things than to be constrained to express such an opinion of any man, as must attach to him in case it shall appear that through ignorance or any other worse cause, he has deceived his employers in this most important point. I fully anticipate that we shall see a great comparative economy in locomotive expenditure from the adoption of Mr. Brunel's principles of wide gauge and perfect gradients, and that your valuable correspondents, who have taken their per centage of expenditure on the experience of last half year's partial workings of our own line, and on the cost of other lines longer in operation, will find that they might safely have reduced that item far below the figure they have adopted, and have thereby added 1 or 2 per cent. to the shareholders' dividends.

I am Sir, your obedient servant,

Y.

16th Nov. 1841.

RAILWAY ADJUDICATIONS.

THE QUEEN *v.* THE EASTERN COUNTIES RAILWAY COMPANY.

Court of Queen's Bench, November 13.—Mr. Butt said this was a mandamus directed to the Eastern Counties' Railway Company, and calling upon them to summon a jury and assess compensation for the damage and injury done to the land of the prosecutor, John Collinridge. The writ recited that the prosecutor had a leasehold for a long period of certain land and premises which adjoined a public highway or road, called the Bath Field-road—that the defendants, in order to carry their railway over the said road had altered it by lowering the road to such a depth in front of the land of the prosecutor, that it had been thereby greatly damaged and injured, and that he had been obliged to make additional fences and lower a part of the land in order to the beneficial occupation and enjoyment of the same. To that mandamus there was a return which set out that the land of the prosecutor was not a part of the land required for the purposes of the railway; that the land was not entered upon by the Company, nor taken, nor used by them, nor was it in their schedules, and that Collinridge was not the owner of any land taken by the Company, or over which the railway ran. The return, therefore, raised the question of whether a party was entitled to compensation for injury where the Company had not actually cut into, or taken, or used, any part of the land in question. Now he submitted to the Court, that, clearly within the meaning of the Act of Parliament, Mr. Collinridge was entitled to compensation. In the first place, the return was no answer to the mandamus, because if the Company were entitled to rely on the statement that no damage had been done to the land, they should have stated that fact in order that it might be traversed. They merely state in a few words, that they have not taken, or used, or gone upon the land of the prosecutor. The Act under which the Company was incorporated, was the 6th and 7th Wm. IV. chap. 106, and the sections which referred to the awarding compensation were the 9th and the 29th. The Act empowered the Company in the usual way to enter upon and take land for the purposes of the railway, and by the 29th section they were in every case in which the land was damaged or injuriously affected, to grant to the owners or lessees compensation. There were two cases in which compensation was to be awarded—first, in the case in which the land was taken; and, secondly, where the land was not taken, but injuriously affected. The learned Counsel, having read the clauses awarding compensation, referred to the cases of the Queen *v.* the Nottingham Water Works Company, the King *v.* the Commissioners of the Thames and Isis Navigation, and the King *v.* the Exeter Improvement Company, which last, he contended, was strictly analogous to the case before the Court. There the Commissioners had power to lower a road or highway, and the inhabitants of the houses on either side were obliged to build steps in order to obtain access, and claimed compensation, which the Commissioners refused. The case came before the Court of Queen's Bench on a mandamus, and their Lordships were of opinion that the houses having been injuriously affected the owners were entitled to compensation. Now he submitted that that came not only within the spirit but the very letter of the present Act, and that the prosecutor was entitled to compensation.

The Solicitor-General for the defendants, contended that under the present Act the party applying for the mandamus was not entitled to compensation. He would not dispute the decisions that had been come to in the several cases cited by his learned friend, but the compensation awarded therein turned upon the particular clauses inserted for that purpose in these several Acts. Indeed, the very fact of these clauses having been introduced, showed that under the ordinary compensation clauses they would not be entitled. They contained special clauses to give special damage, but there were no such clauses in the Act under which the present Company was incorporated. The question was of the greater importance, because if the Court was of opinion that the prosecutor in the present case was entitled to compensation for the injury he was alleged to have sustained, there was not an owner of land along the line of the railway who would not be entitled. The meaning of the word "damaged or injuriously affected," clearly referred to the injury sustained by land taken for the purposes of the railway, which was first to be valued, and then the injury sustained by the placing of materials or severance was an additional damage for which the party was entitled to additional compensation. If the Court should be of opinion that for consequential damage accruing to a party from the making of the railway compensation should be awarded, there would be no end to the matter. A party living five or ten miles from a railway might complain that he was obliged to go two or three miles further round in order to get to London, in consequence of the making of the railway, and claim compensation for consequential damage. Now, he contended that the principle recognised by the Courts of Law in all these cases was, that the consequential and indirect damage to individuals ought not to counterbalance the benefit to the public at large, and if the rule did not hold good, no public work could be constructed in that country.

Mr. Butt having replied,

The Court took time to consider its judgment.

THE CHELTENHAM AND GREAT WESTERN UNION RAILWAY COMPANY *v.* DANIELS.

Court of Queen's Bench, Nov. 16.—This was an action of debt to recover the sum of 101*l.* 7*s.* 3d., and 150*l.* 7*s.* 10d., being the amount of three several calls upon 20 shares alleged to be held by the defendant as one of the proprietors of the above named Railway Company. The defendant pleaded that he was not indebted; and secondly, that he was not a proprietor of the Company. The case was tried before Mr. Justice Williams, at the sittings of the last Hilary term, and a verdict had for the plaintiffs for 360*l.* 8*s.* 6d., subject to the opinion of the Court of Queen's Bench on the following special case. On the 21st June, 1836, an Act was passed authorising the formation of a railway from Cheltenham and Gloucester to join the Great Western Railway at Swindon. Prior to the passing of the Act, the parties subscribing signed the deed, and paid 2*l.* 10*s.* per share, and scrip certificates were given to each of the subscribers. The defendant never executed or subscribed the Parliamentary deed. A notice was affixed to the scrip certificates, stating that they were not transferrable, but notwithstanding this the certificates passed from hand to hand, so that at the time the Act passed, a number of them were in the hands of parties who had never signed the agreement. The 20 shares for which the defendant was sued were taken originally by Doctor Barrington and Sir Richard Wolsley. The plaintiffs received letters from these parties, stating that they had transferred their shares, and on the 16th of December, 1836, they received a letter from the defendant, signed J. Denis Daniels, of Kingsland-place, Kingsland, Middlesex, claiming to be registered in right of those twenty shares, and enclosing the scrip certificates. The plaintiffs replied, acknowledging the receipt of the scrip, and stating that the certificates would be delivered on the defendant completing the register. The name of the defendant was entered on the books of the Company, as a proprietor of these twenty shares, and the seal of the Company affixed in the usual way. When the first call was made, the defendant refused to pay, and the plaintiffs took legal proceedings, which were stayed on the payment of the amount of the call with costs. The defendant also paid the second and third calls as they became due, and the calls for which the present action was brought were the fourth and fifth, due 21st March and 31st August, 1839, respectively. No transfer of the shares was made, and the question for the Court was, whether at the time the fourth and fifth calls were made, the defendant was a proprietor of twenty shares in the Company within the meaning of the Act of Parliament.

Mr. Cresswell, on behalf of the plaintiffs, submitted that the decisions which had been recently made in the Exchequer Court in similar cases, were applicable to the present, and must decide it. It was there held that where a party had done any act which would induce the Company to treat him as a proprietor, he was bound by it, and could not afterwards deny that he was a shareholder. It appeared by the present case that the defendant requested the Company to register him as a proprietor of certain shares, and they did so at his request. It appeared further, that he paid the first three calls of 5*l.* each, and then he took it into his head to deny that he was a proprietor. Now the decisions to which he had alluded expressed decidedly that he could not do that. A person after having taken shares and applied to be registered as a proprietor, could not afterwards fall back upon nice and subtle reasoning as to the construction of the Act. Now the 108th section enacted that the Directors were to cause the names of the several subscribers to be regularly entered in a book, with the number of shares to each, and to affix their common seal thereto, and they were to deliver certificates to each of the subscribers on demand. In the present case it appeared that no such demand had ever been made upon the Company, but having been entered at his own request upon the register he was entitled to be considered a proprietor whether he demanded a certificate or not. The latter part of the clause showed the object for which the certificate was granted, namely, that in all the Courts of Law it should be taken as *prima facie* evidence of the title of the proprietor to such

Digitized by Google

shares, but the want of such certificate should not hinder him from selling or disposing of his shares. The cases to which the present was analogous were "the Sheffield, Ashton-under-Line, and Manchester Railway *v.* Woodcock," "the London Grand Junction Railway *v.* Freeman," and their Lordships would see that in these cases all the objections which could be urged against the title of the defendant to be considered a proprietor had been discussed and decided. Under these circumstances he submitted that the judgment of the Court must be for the plaintiffs.

Mr. PEACOCK for the defendant contended that the transfer of the shares could not be legally made until the Act of Parliament had been obtained. Independently of that, by the fifth section, those persons only were to be considered proprietors who had signed the Parliamentary contract, and that had not been done by the defendant—the names of Dr. Borrington and Sir Richard Wolsley, were those to whom the shares were set down, and until the defendant had been required and had signed the contract, the plaintiffs could not take him in lieu of the others and consider him a proprietor. He submitted, therefore, that the circumstance of his having sent in a claim to be registered would not render him liable for these calls. It it appeared that he had participated in the profits, or that the Company had been injured in any way by his act, then liability would attach, but as the case at present stood the transfer could not be said to be legally effected, and the defendant was entitled to the judgment of the Court.

Lord DENMAN said it was impossible to forget the fact that, whatever the Act of Parliament required, the defendant had held out false colours to induce the Company to register him as a proprietor, and the universal rule of law must apply by which where a party makes a certain representation on which others are induced to act, he is bound by that representation. The judgment of the Court, therefore, must be for the plaintiffs.

THE CHELTENHAM RAILWAY COMPANY *v.* MEDINA.

The point of objection raised in this case being the same, the Court also pronounced judgment in favour of the plaintiffs.

THE AYLESBURY RAILWAY COMPANY *v.* MOUNT.

Court of Common Pleas, Nov. 16.—This was an action of debt for calls of 5*l.* per share upon fifty shares held by the defendant in the undertaking for which the Company was constituted by Act of Parliament, and the plea on the record was that the Directors of the Company made a call on the proprietors, payable on the 9th of April, 1838; that on the 7th of April, in the same year, the defendant transferred the shares to one Charles Thompson; and that a memorial of the transfer was entered in the books of the Company before the calls made were payable. To this plea there was a special demurrer, assigning for cause that the plea neither traversed, nor confessed and avoided the allegations in the declaration, and that it amounted to the plea of never indebted.

It appeared that the Company brought an action in the first instance against Thompson, the transferee of the shares, but the Court of Queen's Bench decided, in Hilary term last, that the action against him was not maintainable. The present defendant was therefore, sued for the amount of the calls, and the main question discussed to-day was whether the proprietor of the shares at the time the call was payable, or the proprietor of the shares at the time the call mas made, was liable for the amount.

Mr. Sergeant CHANNELL, in support of the demurrer, argued that the plea was defective both in form and in substance. It was substantially bad, because it was apparent, from the language of the 98th section of the Act incorporating the Company, that it was intended that the owners of the shares at the time the call was made should be liable to the payment of calls made. But if it were good in substance, which it was not, it was clearly bad in point of form. It neither denied any of the allegations in the declaration, nor did it confess or avoid them. Nothing appeared in the Act to discharge the defendant from his liability after it had accrued.

Lord Chief Justice TINDAL said, that as there was considerable obscurity in the case, the Court would take some time to consider.

IN THE MATTER OF JOHN RANGELEY.*

Insolvent Debtors' Court, Nov. 10.—The insolvent in this case applied to be liberated on bail. Mr. Montague, of Greve-street, Camberwell, and Mr. Curtis, of Church-street, offered themselves as sureties.

In a rigid cross-examination by the Learned Commissioner, previous to entering on the solvency of the bail, the insolvent stated that in May, 1840, he was granted a patent for a certain description of wheels to be used on railways, called safety rotation wheels, by which danger would be much diminished. A company was formed under the name of the Safety Rotation Company, of several influential individuals, for the purpose of carrying his invention into practical utility, amongst whom was the present Lord Mayor, and to which Mr. Cornwall Barron Wilson was solicitor. In endeavouring to perfect his invention he had incurred considerable expense, and was obliged to deal largely in accommodation bills. His debts were considerable, and his only available assets for the creditors was his patent, the right in which he had sold to the Company for the sum of 61,500*l.*, which was to be paid as soon as the invention was found to be practicable. To two branches of the Society, called the Irish and English Companies, he had sold a portion of his rights as patentee for about 300*l.*

Mr. Commissioner Law said it was to be regretted that if there were so many influential persons forming the Company, they did not step forward to assist him in perfecting his invention, without obliging him to rob the public, for by no other name than robbery could he designate the conduct of persons who recklessly dealt with accommodation bills. However, as the insolvent was a very old man, and he (the Learned Commissioner) was satisfied of the solvency of the gentlemen offering themselves as bail, he should order his release.

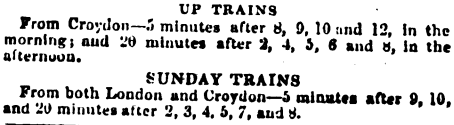
The insolvent was then liberated on bail.

* This case was accidentally omitted in "making-up" the paper last week.—ED. R. T.

CROYDON RAILWAY.—The Obstruction on this line having been removed, the following Trains will run on and after Monday, the 22nd instant, until the 1st of December, previous to which time the arrangement for the winter Trains will be announced.

DOWN TRAINS

From Tooley-street—Morning, 5 minutes after 9, 10, and 12, and afternoon, 20 minutes after 2, 4, 5, 6, and 8.



UP TRAINS

From Croydon—5 minutes after 8, 9, 10 and 12, in the morning; and 20 minutes after 2, 4, 5, 6 and 8, in the afternoon.

SUNDAY TRAINS

From both London and Croydon—5 minutes after 9, 10, and 20 minutes after 2, 3, 4, 5, 7, and 8.

TO ENGINEERS, PATENTEES, CONTRACTORS, AND BUILDERS.—STEAM-ENGINES ON SALE OR HIRE.—C. H. CAPPER, Iron-Founder, Manufacturer of Steam-Engines, Sugar Mills, and Mill Machinery, Broad street Foundry, Birmingham, has Engines from 6 to 20 horse power always on hand, and any parties wishing to Hire New or Second-hand ones for a given time, to try experiments, &c., may have the same at work immediately, and upon the most moderate terms. For particulars, apply as above

T. H. RYLAND AND CO., OOZELL'S STREET, BROAD-STREET, BIRMINGHAM, Patentees and Manufacturers of Wood Screws and Screw Bolts, for Railways, &c.

The quality of these Screws is acknowledged to be superior to that of any other maker, and T. H. R. and Co. have, by their improved means of manufacture, so greatly reduced the price, that they will be found not to exceed in cost the common driving pin; and that they are more efficient for the purpose will be obvious, from the fact that one of these screws will require a force equal to from 2 to 4 tons weight, to tear it from the wood.

T. H. R. & Co. have to dispose of

A 12-horse high-pressure engine, metallic piston, with or without boiler.

Two boilers, quite new, 18 feet by 4 feet.

TO EXPORTERS, RAILWAY CONTRACTORS, ENGINEERS, SHIP BUILDERS, &c. &c.—The Patent Rolling and Compressing Iron Company having their works in full operation are ready to execute orders to any extent, for the undermentioned articles:—

Boiler and Tank Rivets of every description.

Bolts for Machinery, Architectural, Agricultural, Ship and Coach Building. Gas Water, and other works, &c.

Railway Pins, Hooks, Screws, &c.

Particulars may be obtained, and specimens seen, upon application to the Secretary, at the Company's Works, Upper Ordnance Wharf, Rotherhithe.

By order of the Board,

JNO. ATLEE, Secretary.

LONDON, EDINBURGH, AND DUBLIN GUARANTEED MUTUAL and PROPRIETARY LIFE ASSURANCE COMPANY, 3, Charlotte-row, Mansion House; St. Andrew's-street, Edinburgh; Fleet-street, Dublin.

James Bidden, Esq.	John M'Guffie, Esq.
Captain F. Brandreth	John Maclean Lee, Esq.
James Hartley, Esq.	J. Marmaduke Rosseter, Esq.
Vice-Admiral Robert Honyman	Alexander Robertson, Esq., Managing Director.
Benjamin Ifill, Esq.	

Solicitors—Messrs. Palmer, France, and Palmer.

Secretary—F. Edgell, Esq.

Important improvements have been introduced into Life Assurance practice by this Company.

The Policies are indefeasible and indisputable, unless they have been obtained by fraudulent misrepresentation.

The Board of Directors satisfy themselves upon the various questions proposed before they enter into contracts of Assurance; and frame their Policies in such terms as to preclude all future questions as to their validity, and thus render them indisputable and negotiable documents of future debt against the Company.

Parties may be assured either upon the participating or non-participating plan; the assured are relieved of all responsibility, and the participating class is entitled to the whole of the profits upon that branch of the business.

Table to assure £100, with addition of Profits.

Age 25.	Age 35.	Age 40.	Age 45.	Age 50.	Age 55.
£2 2 7	£2 15 10	£3 5 0	£3 15 5	£4 10 7	£5 18 8

Persons interested in the Lives of Nominees or Debtors may, for a trifling extra Premium, be relieved from the risk of their Policies being forfeited by the parties going to foreign countries.

One-half of the Premiums may remain unpaid for seven years, affording a greater facility for loan transactions and family provisions than any other plan which has been suggested.

Credit Table to assure £100, payable at death.

Age 20.	Age 25.	Age 30.	Age 40.	Age 45.	Age 50.
£0 18 0	£1 0 7	£1 3 7	£1 11 5	£1 16 6	£2 3

The usual Commission allowed to Solicitors and Agents; and Medical Gentlemen are in all cases remunerated for their reports.

Just published, 7th edition, price 3s., and sent free on receipt of a Post-office order, for 3s. 6d.

MANHOOD: the Causes of its Premature Decline, with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects of excessive indulgence, solitary habits, or infection followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases, &c.: By J. L. CURTIS and Co., Consulting Surgeons, London.

SEVENTH EDITION.—Published by the Authors, and sold by Balliere, Medical Bookseller to the Royal College of Surgeons, 219, Regent-street; Strange, 21, Paternoster-row, London; Guest, Birmingham; T. Bowler, No. 4, St. Ann's square, Manchester; G. Philp, South Castle-street, Liverpool; Machen and Co., 8, D'Olier street, Dublin; Duncan, 114, High street, Edinburgh; and to be had of all Booksellers.

The following are a few of the numerous testimonials this popular work has received, and which the limits of an advertisement will only allow of being published:—

Messrs. Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it, render it invaluable.—*Magnet.*

The perusal of Messrs. Curtis's book, entitled MANHOOD, has really astonished us by developing a series of maladies, the never falling consequence of the vicious habit of which it treats. The clear connexion pointed out between the assigned cause and the effects is perceptible to every capacity. We strongly recommend the work.—*Age.*

We recommend the work, entitled MANHOOD, &c., to the careful perusal of persons of all classes. The moral as well as physical advantages sure to result from such perusal, will be most readily recognised and felt by those who stand most in need of them.—*Statesman.*

Messrs. Curtis and Company are to be consulted daily at their residence, No. 7, Frith-street, Soho-square, London.

Country Patients are requested to be as minute as possible in the detail of their cases. As to the duration of the complaint, the symptoms, age, general habits of living, and occupation in life of the party; the communication must be accompanied by the usual consultation fee of £1, without which no notice whatever can be taken of their application, and in all cases the most inviolable secrecy may be relied on.

PUBLIC SALE OF VALUABLE ENGINEERS' TOOLS AND PATTERNS, STEAM ENGINE, SMITHY TOOLS, &c. &c., AND WORKS TO LET OR SELL.—To be Sold, by Public Sale, at the Works, West-street, Tradeston, Glasgow, on Wednesday, the 8th December, the whole valuable Tools belonging to Mr. A. Mylne, Engineer, Millwright, and Tool-maker, who is retiring from that business, including a superior Self-acting Planing Machine, 48 feet long by 4 feet wide; three smaller ditto; seven Self acting Lathes of various sizes; Hand-lathes with iron-beds; splendid Vertical Slotting and Drilling Machine; Nut-cutting Machine; Screwing Machine; large Crane of Fitting-up Shop with Chain and Pulleys; Portable Crane and Purchase Blocks; Ten-horse Power Steam-engine with Boiler, Gearing; Smiths' Vices, Anvils, and Tools of all sorts; Millwright's Benches, &c. &c. A very valuable set of Patterns for Steam engines, Planing Machines, Lathes, Spur and Bevel Wheels, and the Office Furniture, Watch-dog, &c.

These Tools are all of the most modern and expensive description, substantial and highly finished, part made to order and never used, and all of a quality rarely met with. Catalogues may be had by applying to the Auctioneers, and the whole seen any day between 10 and 2 o'clock. Sale to begin at half-past 10 for 11 o'clock, precisely.

BARCLAY AND SKIRVING, Auctioneers.

These extensive and recently-erected Premises, extending to nearly 4,000 square yards, contiguous to the harbour of Glasgow, and on the line of the Ayrshire, Greenock, and Hamilton Railways, are to Sell or Let, entry immediately. Apply to Mr. W. Colledge, Writer, Dunlop-street.

Glasgow, 12th November, 1841.

To Railway Contractors, Iron Founders, and Others.

IMPORTANT RAILWAY PLANT CLEARING-OUT SALE.—Messrs. MANSELL and KAYNS respectfully inform the public that they have received instructions from Mr. Price (whose work is completed on the Great Western Railway) to sell by Public Auction, immediately adjoining the Railway Station, Chippenham, on Friday, Nov. 26, 1841, punctually at 11 o'clock, without the least reservation, the whole of his valuable Plant, comprising 300 tons of Railway Bars, with flat bottoms, nearly equal to new, weighing about 38lbs. to the yard, and 20 crossings; 125 Tram Waggons, fit for immediate use; quantity of wheels and Axles for tram waggons; ditto small Wheels and Axles, 1 foot 8 inches and 2 feet diameter; 40 tons of Cast Iron; sound Plank Timber for seventy waggons, in 2½ inch, 1¼ inch, and 6 inch square, and 4½ inch by 11 inch; the whole of the Wrought Iron-work for ditto; quantity of Pedestals; small quantity of Deal Planks and Pine Timber; three very useful young Draught Horses; 40 sets of Harness; 12 broad and narrow-wheel Carts; Corn Binns; and many other useful lots.

The Auctioneers beg to claim the attention of Railroad Contractors to the above sale, the whole of the Plant being in excellent condition, and laying within fifty yards of the Chippenham station, which affords great facility for the north, east, and western roads.

Catalogues are now preparing and may be had, four days prior to sale, at the White Lion Inn, Bristol; Greyhound, Bath; Goddard Arms, Swindon; and of the Auctioneers, Malmesbury and Chippenham.

GUARANTEE SOCIETY.—To afford Security to Bankers, Merchants, Commercial and Trading Communities in general, is the *first* object of this Society. To relieve Relatives and Friends from painful obligations and responsibilities the *second*.

The experience of the first year (during which the Society has been eminently successful) already numbers amongst its patrons the principal Bankers, Merchants, and Public Institutions in the metropolis, and provincial districts, and by providing Guarantee for their integrity, has secured a competency for several hundred individuals.

DIRECTORS.

Thomas Attree, Esq.	G. Palmer, Esq.
David Cannan, Esq.	Major Prosser, F. G. S.
James Colquhoun, Esq.	James Row, Esq.
William Croft, Esq.	G. Scovell, Esq.
James Law Jones, Esq.	G. E. Shuttleworth, Esq.
John F. Maubert, Esq.	Henry Vaughan, Esq.
Lieut.-Col. Moody, R. E.	B. G. Windus, Esq.

STANDING COUNSEL—R. Ryder Dean, Esq.
SOLICITORS—Messrs. W. & S. Cotton, No. 76, Basinghall-street.

This Society presents to the Public (and particularly to Bondsmen) the following advantages:—

1. No individual need hereafter incur the responsibility of becoming security for the integrity of another.
2. Individuals who are already surety for the fidelity of others, may immediately protect themselves from loss by insuring with the Society.
3. The expense and painful obligation of obtaining approved Sureties, or of replacing them when removed by death or otherwise will be altogether obviated.
4. All risks attending irresponsible sureties will be removed.
5. The submission to the loss, or the distressing alternative of instituting legal proceedings against the friends who are surety, will be avoided.

Also to Agents, Travellers, and Clerks holding, or being desirous of holding, confidential and responsible situations, the Guarantee Society presents immediate facilities, where for a moderate premium, surety for integrity may be acquired.

The Prospectus, Form of Application, and other particulars, may be obtained at the Office, No. 28, Poultry, London

By order,

THOMAS DODGSON, Secretary.

Rates reduced to the lowest possible scale that is compatible with the safety of the assured, and of the Company, whereby a certain and annual bonus is secured to every individual assured in this Office, in lieu of the deferred and sometimes delusive prospect of a periodical division of profits.

An ample Subscribed Capital, together with a large accumulated Premium Fund, invested in Government and other available securities, and perfect security without any responsibility, is thus given to the assured.

ANNUAL PREMIUM TO ASSURE £100.

Age.	For one year.			For seven years.			Term of Life.		
	£	s.	d.	£	s.	d.	£	s.	d.
25.....	0	19	7	1	0	7	1	15	1
30.....	1	1	3	1	2	1	1	19	0
35.....	1	2	9	1	3	8	2	5	10
40.....	1	4	6	1	6	2	2	13	9

In assurances for advances of money, as security for debts, or as a provision for a family when the least present outlay is desirable, the varied and comprehensive tables of the Argus Office will be found to be particularly favourable to the assured. A Board of Directors, with the medical officers, attend daily.

WARD BATES, Resident Director.

SCOTTISH (WIDOWS' FUND) ASSURANCE, Founded A. D. 1815, on the Original Plan of the LONDON EQUITABLE.—Head Office, Edinburgh, 5, St. Andrew-square; London, 7, Pall Mall West; Manchester, Cross-street, King-street; Glasgow, 30, Royal Exchange square.

Accumulated Fund exceeding One Million and Forty Thousand Pounds; Annual Revenue exceeding One Hundred and Eighty Thousand Pounds.

This Institution is the oldest, and in point of business the most extensive, Life Office in Scotland.

A slight consideration of the following statements will abundantly satisfy intending Assurers that there is not at this time any other Life Office in the United Kingdom which, whether in respect of

The sound principles on which it is constituted,
The unprecedented prosperity of its course throughout,
The selection of its Lives,
The successful investment of its Funds, and
The uniform promptness and liberality of its settlements, can hold out more solid advantages, especially to that important class of Assurances effected as Family Provisions.

The Whole Surplus Profits belong to the Assured, and are divisible septennially.

As ascertained from the investigation at 31st December, 1838, these Profits were sufficient to secure—

1*st*, A Retrospective Bonus of Two per Cent. per Annum, or Fourteen per Cent. for the Septennial Period, not only on the Original Sum assured, but likewise on the Bonus Additions previously declared.

2*nd*. A Contingent Prospective Bonus of Two per Cent. per Annum, to be paid from 31st December, 1838, on all Policies of *Five* Years' standing that may emerge before 31st December, 1845, when next investigation takes place.

The Directors are empowered to grant Loans to Members, on the Security of their Policies, to the extent of nine-tenths of their *value* at the time, and also, on application to that effect being made by parties, to convert their Bonus Additions into an equivalent deduction from the future Annual Premiums, or to give them in ready money the value of the additions at the date of application.

Practical Illustrations of the above.—A, in January, 1820, being then 40 years of age, insured his life for £3,000, paying an annual Premium of £98 8s.

He is now 61 years of age, and has an actual vested Bonus or Addition, declared and attached to his Policy of £1,035 12s., which, with the £3,000, the original sum assured, shows the full amount of the sum presently contained in the Policy to be, £4,035 12s.

Were A to die after Payment of his Premium for the current year, the sum payable under the Policy would be, £4,277 14s. 9d.

Were he to die in 1845, after payment of his premium for that year, the sum payable under the Policy would be, £4,600 11s. 9d.

Or if it were an object to him to reduce his present annual contribution, he might, by giving up his Bonus, reduce his future premiums from £98 5s. to £24 9s. 5d.

Or if he preferred receiving immediately the present value of his Bonus, he would, by surrendering it, be entitled to a sum of, £650 8s. 3d.

Assurances effected previous to 31st December, are entitled to participate in the Profits of the current year.

JOHN MACKENZIE, Manager.

Edinburgh, September, 1841.

HUGH Mc KEAN, 7, Pall Mall, Agent for London.

SHEFFIELD, ASHTON-UNDER-LYNE, AND MANCHESTER RAILWAY.—In pursuance of a Resolution passed at the last Half-yearly meeting of the Shareholders, held at Sheffield on the 23rd of August, to the effect that "Mr. Locke be requested to make a Report of the portion of the works executed, and the cost thereof, as compared with his original estimates, also the extent of works remaining to be done, the estimated cost, and the probable time requisite for their completion," the following Report was submitted to a meeting of the Directors held at Manchester on Wednesday, the 10th November, instant:—

Manchester, 13th November, 1841.

To the Directors of the Sheffield, Ashton-under-Lyne, and Manchester Railway.

Gentlemen,—In accordance with the request of the Proprietors, as expressed by a resolution passed at their last general meeting, and communicated to me, I have directed my attention to the works on this railway, and am now enabled to make the following Report.

The works already in hand, independently of the tunnel, extend from Manchester to Dinting, and great progress has already been made with them. About seven miles of this distance, from Manchester to Godley, are sufficiently completed to justify the opening of one line for public traffic during the ensuing week, but the remainder (four miles) to Dinting, in consequence of the delay in obtaining the land for the Broadbottom viaduct, will not be completed till the end of next summer.

You are aware—although from the resolution alluded to it seems for the moment to have been forgotten—that the estimates of expense in constructing this railway were made by Mr. Vignoles, and that since my appointment it has not been necessary for me to do more than examine those portions of the line which had immediate reference to the works under construction. It is true that on each contract being let, I furnished to you an estimate of the probable cost of the works therein contemplated; but these contracts do not generally, and cannot always, contain all the works that may ultimately be required; hence the necessity of guarding against the conclusion that the amount of contracts so let furnishes the sum at which the whole works are to be executed. Estimates so formed should not therefore be compared with those more general and more comprehensive estimates which include the entire cost of the works; and as the only one ever made by me of this work was in the year 1836, before the Act of Parliament was obtained, it appears better, for the purposes of this inquiry, to take the more recent estimates of Mr. Vignoles, (which are minutely detailed, and have already been laid before you), and to ascertain whether or not they are sufficient for the works contemplated on this line.

The general estimate of Mr. Vignoles is as follows:—

Manchester to Glossop, 11 miles	£248,600
Glossop to Tunnel, 7½ miles	116,470
Tunnel, 3 miles	81,350
To Sheffield, 19 miles	219,718
Cost of Works	£666,138
Land	80,571
Management	37,336
Stations and stock	125,571
Tunnel contingencies	24,617
Unforeseen ditto	65,767
	£1,000,000

From the first item it appears that the works between Manchester and Glossop were estimated at £248,600; the actual cost according to contracts already made, is—

Contracts	£205,863
Contingencies and extras	14,137
Rails, chairs, keys, &c.	33,000
	£253,000

This is, I think, sufficiently near to justify the belief that the estimates generally cannot be very far from the actual cost; and if to the sum of £248,600 we were to add a fair proportion of the contingent fund with which the above general estimate is provided, we should find that the works from Manchester to Glossop have been actually executed for £20,000 less than the estimate.

In examining the prices of the works not yet commenced, I have found very nearly the same standard adopted as in those parts where the works are already executed; and although I think that in some cases the line as laid down will admit of some modification with a view to improve the curves, yet the general estimate, with the slight additions I have made to it, will, I conceive, be sufficient. To this, however, the tunnel will form an exception, and I shall have occasion to direct your attention to that part of the work hereafter.

From Glossop to the tunnel, a distance of about 7½ miles, and including the viaduct at Dinting, the estimated cost is £116,470; and I am inclined to think that it will be necessary to increase that amount to £125,000. In like manner, from the eastern side of the tunnel to Sheffield the estimate is £219,718, which should, I think, be increased to £230,000.

The observations I have made regarding a proportion of the contingent fund apply equally to these two items: and the additions being made would bring the estimate above what I think will be the actual cost of the work.

The tunnel, which is estimated at £73,850, together with £24,617, for contingencies, making £98,467, will, I think require double that amount; and it is in this item that I find the greatest difference of opinion to exist. The cost of the works, according to my views, will appear below:—

Manchester to Glossop, as actually executed, and with an allowance for Contingencies	£253,000
Glossop to Tunnel	125,000
Tunnel	200,000
Rails, &c., for ditto	7,500
From Tunnel to Sheffield	230,000
	815,500
Land, according to a list furnished by the solicitor	100,000
	915,500
To which add £50,000 for Parliamentary and other expenses incurred up to this time, and £20,000 for future management	70,000
Total cost of Railway	£985,500

The extent of the carrying establishment and the requisite stations will depend in some measure on the amount of traffic, and the cost of these will require to be added to the sum stated above. In all probability the following estimate will be found sufficient:—

40 Engines and Tenders	£60,000
70 Carriages	17,500
150 Waggons and Trucks	10,500
Stations (excluding the Manchester, which is provided by the Birmingham Company)	40,000
Total	£128,000

This sum added to the former, makes the entire cost of the railway and stock amount to £1,113,500. The following comparative table will show where the differences exist.—

	Dists.	Mr. Vignoles.	Present Estimate.
Manchester to Glossop	11	248,600	253,000
Glossop to Tunnel	7½	116,470	125,000
Tunnel, including Rails and Contingencies	3	105,967	207,500
From the Tunnel to Sheffield.	19	219,718	230,000
Land		80,571	100,000
Management		37,336	70,000
Contingencies unforeseen		65,767	
Stations and Carrying Stock		125,571	128,000
Total	40	£1,000,000	£1,113,500

Although there seems to be a considerable discrepancy in the items of "Management" and "Contingencies," it will still be found that the general amounts (with the exception of the tunnel) do not materially disagree. With reference to the tunnel, so far as our experience has gone, there does not appear to me any reason to hope that the work will be executed for the sum stated in Mr. Vignoles' estimate. That gentleman, I believe, considered that it might not be necessary to line the tunnel with brickwork or masonry; and since I have thought it more prudent to calculate upon that contingency arising, a considerable augmentation of the estimate has followed. A tunnel of this length through rock might probably be made safe without arching; but since we know that there are alternations of rock and slate, and that some of the rock lies in thin beds, it would, I think, be imprudent to make no provision for it.

The outlay already incurred at this tunnel is 53,000*l.*, of which 27,000*l.* has been expended in erecting engines, cottages, workshops, supply of materials, &c., and 26,000*l.* in sinking shafts, drawing the headings, &c. The tunnel will be 5,300 yards long, and five shafts have been laid out, and engines put up, for driving the water and the material excavated. The driftways, in the meantime, have progressed from each end, and the following statement shows the present position of the work:—

Western face drift already executed	645	yards.
Eastern ditto, ditto	482	„

Shafts.	Total depth.	Already sunk.	To sink.
No. 1	182	132	50 yards.
2	189	130	59
3	162	125	37
4	189	174	15
5	135	135	none.
	857	696	161

To complete the shafts and the drifts, I estimate the time at 18 months, and the expense at 40,000*l.* When these operations are completed, the drifts will carry away all the water in the tunnel, and the engines then may either cease working or be used only for raising the rock, &c. To make the tunnel 20 feet high and 15 feet wide, so as to allow one line of rails, will cost 105,000*l.*, and require two years for its accomplishment. Should it be determined, however, to proceed with the enlargement of the tunnel simultaneously with the driving of the headings or driftways, a portion of the time rendered necessary for that operation may be saved. It is not improbable, in the progress of the work, that the material may be found of such a nature as not to require all the arching that I have calculated on; but as I have said before, it is not for me to make such an assumption. I feel myself bound to proceed on the information we now possess, and I have rejected, therefore, as far as I possibly could, all speculations on the subject. I have adopted prices at which I think the work would now be let and guaranteed to the proprietors; and although it may hereafter turn out that a less sum may accomplish the work, it is safer to proceed on more secure ground.

In a commercial point of view the cost of this railway is certainly not excessive. Few lines have been executed so cheaply, and whether we look to the country through which it passes, or to the objects which, when made, it is destined to accomplish, there can be little doubt of its ultimate success. There has been, up to this time, many causes to arrest the progress of this undertaking. The depression which has existed in every branch of trade in the Lancashire and Yorkshire districts has no doubt tended to depress not only this, but every other description of railway property; and the opening of other lines not so successfully as was expected, has, from a sort of intuitive feeling of inferiority, sunk this line still further in public estimation. The truth is, that the railway public has been too much dazzled with the brilliant prospects of traffic, to distinguish clearly the difference between a cheap and a costly line. It has until recently, passed judgment upon all railways according to the expected income, regardless of the relative expenditure; and thus it is that many great and useful undertakings remain neglected. It is not my wish, although it may be my duty, to make comparisons with lines more or less favourably circumstanced than the Sheffield and Manchester; but whether we look to the local or general traffic, or to the position which this line must eventually hold in the chain of inland railway communication, there cannot remain a reasonable doubt that, with an outlay less than one-half that of such lines as the Leeds and Manchester and the North Midland, the derivable profit cannot be less than it is likely to be on either of those lines. These comparisons may not be altogether fortunate; but there can be no doubt that had either of these lines been executed for the cost per mile of the Manchester and Sheffield, they would hold very different positions in public estimation to what they now do; and there does not seem to me any adequate difference in the traffic on those lines to justify so decided a preference over the one now under consideration. This state of opinion, however, if ill founded, will in time correct itself; and if it can be shown—as I have endeavoured to show—that this line can be executed at something like £25,000 a mile (exclusive of its carrying stock) there seems little reason to doubt of its eventual success.

It may not be strictly within the limit of my instructions to remark on the advantages which this railway will give to and receive from the great coal field at Silkstone, near to which it passes, nor to call your attention to the fact that it will, at no distant period, be a shorter line from Manchester to the Humber and many parts of the West Riding of Yorkshire, than any yet made; but I should not be doing justice to the undertaking itself were I to omit even this brief notice, believing as I do that these circumstances will contribute very largely to its prosperity.

If in this undertaking were to be involved such a large outlay of money as has characterised some of the neighbouring lines, I should pause in my recommendation. Railway capitalists have already made too large sacrifices in many of them to hazard much upon this, and they will no doubt expect greater certainty in the expenditure of their money than they have heretofore possessed. With a view to arrive as nearly as possible at this certainty in the present case, it has occurred to me that it would be well to obtain contracts for the entire works, to be finished in a given time, and that all liabilities of every kind, even including the land, should be guaranteed to the Company under bond. If persons could not be found to to take such contracts, then a *prima facie* case is made out against the sufficiency of the estimate. Upon this shewing I am willing to test the estimate I have made to you, and either to find, parties who will give the guarantee required, or at once retire from the position I hold.

With a view to expend the capital of the Company the most economically possible I would suggest, in addition to the contracts already entered into as far as Glossop, that the works from thence to the tunnel be commenced forthwith. These works, together with the tunnel, would require 165,000*l.* during the next eighteen months, and by that period I have no doubt the state of the undertaking would be such as to justify the prosecution of the remainder with all possible dispatch. The heaviest portion of the work is done. One-half of the entire earthwork of the line existed between Manchester and Glossop, and that is now nearly completed. The execution of the line from Glossop to the tunnel would facilitate the building of the viaduct at the former place, by supplying it with stone from the neighbourhood of Woodhead; and the line, by thus progressing another stage, would draw to it all the trade of Sheffield, Barnsley, and other places in that district, even before the tunnel was completed.

Let it be borne in mind that the opening to Glossop, although it may secure the Sheffield traffic, cannot afford any facilities to Barnsley, Penistone, Silkstone, &c., all of which places would no doubt be brought to the line at Woodhead, instead of passing by the present circuitous route by Wakefield. Barnsley, the most eastern point, would be 17 miles from the railway at Woodhead, and, both as regards time and money, would gain by adopting that route.

Thus it appears that in every future progress, not only will the trade of Sheffield be more certainly secured to the line, but that fresh sources of traffic will be brought to it. So long as this extension can be made for less than 18,000*l.* a mile, there ought not to remain a doubt of the propriety of proceeding with it.

I am, Gentlemen, your obedient servant,

JOSEPH LOCKE.

London, November 8, 1841.

EASTERN COUNTIES' RAILWAY.—CONTRACT FOR COKE.—The Directors will be ready on Tuesday, the 30th inst., to receive Tenders from parties willing to supply the Company with Coke for a period of 12 months, the quantities and rate of delivery of which may be known on application at the Company's Office, High-street, Shoreditch.

Parties wishing to send in samples of their Coke, may obtain an order from the Manager for the Storekeeper to receive sample quantities of 5 tons each.

By Order,

A. BULKELEY, Secretary.

Eastern Counties' Railway Offices,
High-street, Shoreditch, Nov. 16, 1841.

BIRMINGHAM AND GLOUCESTER RAILWAY.—ALTERATION OF TRAINS.—On and after MONDAY, the 15th of November, this Company's Trains will run as follows until further notice:—

From Birmingham.	From Gloucester.
12 44 a.m. (Mail.)	8 15 a.m.
3 10 a.m. (Mail.)	• 9 30 a.m. (Goods.)
8 45 a.m.	11 45 a.m.
•10 0 a.m. (Goods.)	2 30 p.m.
12 15 p.m.	• 3 0 p.m. (Goods.)
2 45 p.m.	5 0 p.m.
• 3 30 p.m. (Goods.)	7 15 p.m. (Mail.)
6 15 p.m.	9 0 p.m. (Mail.)

Short Train, from Gloucester to Cheltenham, at 9 15 a.m.

Short Train, from Cheltenham to Gloucester, at 9 45 a.m.

• Passengers are conveyed by Goods Trains, starting at Birmingham from the Camp Hill Station; and the Company do not provide Conveyances at Spetchley for Worcester, nor do they guarantee the attendance of Omnibuses at any of the other Stations to meet those Trains.

Passengers may be booked in London for Worcester, Cheltenham, or Gloucester, by Trains leaving the London Station of the London and Birmingham Railway at 6 and 9½ a.m.; and from those places for London, by Trains leaving Gloucester at 8¼ a.m. and 2¼ and 9 p.m.

By order,
GEORGE KING, Secretary.

12, Waterloo-street, Birmingham,
2nd November, 1841.

LONDON AND GREENWICH RAILWAY SCRIP.—The holders are reminded that the final instalment became due on the 15th of October last, and that interest at the rate of 5 per cent. per annum is now charged on all instalments in arrear; and that unless paid in full on or before the 15th of January next, the whole of the amounts already paid *are subject to forfeiture.*

The Scrip on which the whole of the instalments have been paid, must be registered before the holders can receive any dividend thereon.

By order,
J. Y. AKERMAN, Sec.

Offices, 37, Canterbury-square, Tooley-street,
16th November, 1841.

NORTHERN AND EASTERN RAILWAY.—FURTHER OPENING OF THE LINE.—This Line of Railway will be further opened on Monday, the 22nd November, to the Turnpike-road near Spelbrook, two miles from Bishop's Stortford and Hockerill. The Trains will run as follows on week days:—

DOWN TRAINS,

From London to Broxbourne and Spellbrook, 8 o'clock, half-past 9, half-past 11, morning; half past 1, half-past 3, half-past 4, half-past 5, and half-past 7, afternoon.

UP TRAINS,

From Spelbrook to London, half-past 7, half-past 8, half-past 9, half-past 11, morning; half-past 2, half-past 3, half-past 5, and half-past 6, afternoon.

SUNDAY TRAINS.

DOWN TRAINS.

Half-past 9 morning, to Spelbrook
Half-past 2 afternoon, to Broxbourne
Half-past 3 „ Spelbrook
Half-past 6 „ Spelbrook.

UP TRAINS.

Half-past 9 morning, from Spelbrook
Half-past 1 afternoon, from Spelbrook
4 afternoon, from Broxbourne
Half-past 6 afternoon, from Spelbrook.

The Fares, Stoppages, and other particulars will be given in the bills to be had at the several stations.

Third-class Carriages will be run only with the half-past 9 morning, and half past 7 afternoon, Down Trains; and with the half-past 9 morning and half-past 6 afternoon, Up Trains, on week days, and on Sundays with all the Trains.

Carriages and Horses conveyed to and from London, Broxbourne, Harlow, and Spelbrook.

WM. BOURNE, Secretary.

Shoreditch, London, Nov. 15, 1841.

NORTHERN AND EASTERN RAILWAY.—Notice is hereby given, That a Special General Meeting of the Proprietors of this Company, will be held at the London Tavern, Bishopsgate-street, on Thursday, the 2nd day of December next, at Two o'Clock precisely, for the purpose of authorising the Directors to borrow a sum of Money on Interest, not exceeding Two Hundred and Forty Thousand Pounds, as directed by the Acts of Parliament incorporating this Company.

WILLIAM CRAWSHAY, Chairman.
WM. BOURNE, Secretary.

Shoreditch, London, 18th Nov. 1841.

TO ENGINEERS, BREWERS, BUILDERS, and Others requiring Roomy Premises. — To LET CLOSE TO THE CITY, eligible and extensive premises consisting of a piece of Ground 200 feet long and a Building 60 feet long with three floors, and cellar under, and five arches of the Blackwall Railway, close to the Minories, with a good roadway entrance. Apply to Messrs. Rippingham and Rose, Solicitors, 17, Great Prescot-street, Goodman's Fields.

RAILWAY to GOSPORT and PORTSMOUTH.—LONDON AND SOUTH-WESTERN RAILWAY. In consequence of the OPENING of the Gosport Branch, on and after November 29, 1841, the times of Departure will be as follows:—

DOWN TRAINS FROM VAUXHALL.

	M.	M.

FARES.

First Class, 4s. 6d.; Second Class, 3s.; Children under 12 months, no charge; above 12 months and under 10 years, half price.

N.B. During the present winter the speed of the trains over the new line will be strictly limited to 20 miles per hour—London time observed, and the doors of the stations finally closed five minutes before the time of starting.

By order of the Directors,
A. MORGAN, Secretary.

CRANES AND HOISTING TACKLE of every description, of the best materials and workmanship, and capable of lifting from 5 cwt. to 20 tons and upwards, with or without steam power, made by ELLIS & NOTON, who take this opportunity of respectfully soliciting an inspection of their Drawings and Patterns, at the IRWELL FOUNDRY, Salford, Manchester.

BRISTOL AND GLOUCESTER RAILWAY EXTENSION LINE.—CALL of £10 per Cent., being £5 per Share.—The Committee of Management of this undertaking having resolved at a meeting held in Bristol this day, to CALL under the provisions of the Acts of Parliament relative to the said undertaking, for an Instalment of £5 per Share, Notice is hereby given, That the Subscribers to the said undertaking, and proprietors of Shares therein are required to pay on or before the 11th day of December next, to any one of the undermentioned Bankers, the sum of £5 on each of their respective Shares, viz.:

London—Messrs. Barnett, Hoare, and Co.
Bristol—Messrs. Miles, Harford, and Co.; Messrs Baillie, Ames, and Co.; Messrs. Stuckey's Banking Company; The West of England and South Wales District Bank.
Gloucester—The Gloucestershire Banking Company.
Manchester—Messrs. Jones, Loyds, and Co.

By Order of the Committee of Management,
GEORGE JONES, Chairman,
ROBERT FLETCHER, Secretary.

Interest at the rate of £5 per cent. per annum will be charged to all parties who may remain in arrear for this call after the above named 11th day of December.

Office, Exchange Buildings, Bristol, Nov. 15, 1841.

PARISIAN BITUMEN COMPANY, Millwall, Poplar.—The Directors of the above-named Company beg to call the attention of Engineers, Architects, Surveyors, Builders, and the Public generally, to the applicability of the BITUMEN manufactured by them, as a pavement or flooring; also for its use in covering arches for the prevention of damp and preservation of the masonry.

They beg also to state that it has been used very successfully as a cement for masonry on the weirs of the Upper Medway, and is particularly applicable to hydraulic works and foundations of heavy buildings.

They beg to submit the following list of prices, and to state that they will guarantee the durability and efficiency of any work executed by them.

	s.	d.
Covering viaducts or arches of bridges, vaults, terraces, &c., 1½ inch thick, per square yard	4	6
Paving pathways, kitchens, cellars, granaries, malt houses, warehouses, &c. 1½ inch thick	4	6
Paving barns, court yards, tun rooms, wharfs, stables, &c. 2 inches thick	5	6
Paving walks, &c. ¾ inch thick	3	6

The above charges are exclusive of the cost of carriage, which must be borne by the parties by whom the work is required.

W. MACKENZIE, Superintendent.

NEW EDITIONS of the following useful Works are just published at the *Railway Times* Office, 122, Fleet-street:

I.

ROBINSON'S RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Map, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Price 1s., in cloth.

II.

ROBINSON'S RAILWAY DIRECTORY FOR 1842, containing the Names of the Directors and principal Officers of the Railways in Great Britain, derived from authentic sources, price 1s.

III.

TUCK'S MAP OF THE RAILWAYS throughout ENGLAND and WALES to the Capital of Scotland, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

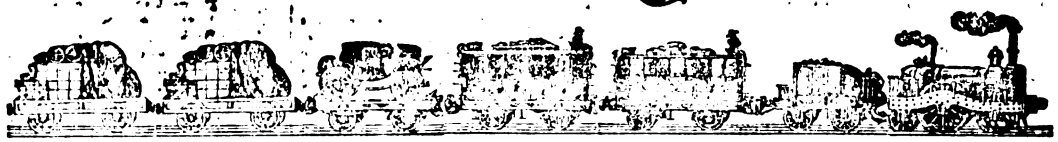
Bound in cloth, 1s. 6d.; in paper covers, 1s.; mounted on canvass, in cloth case, 2s. 6d.; on rollers, 3s. 6d.

IV.

MAPS OF ALL THE LINES OF RAILWAY through ENGLAND and WALES, showing the country in their immediate vicinity on a larger scale than was ever before displayed in a sheet pocket map, with a compendium of Railway information. In paper cover 1s., in cloth 1s. 6d.; on canvass, 2s. 6d.

V.

TABLES OF HACKNEY CARRIAGE FARES from the BIRMINGHAM RAILWAY to all parts of the METROPOLIS, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.



VI.

TABLES OF HACKNEY CARRIAGE FARES from the GREAT WESTERN RAILWAY to all parts of the Metropolis, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate-street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Bride's, Fleet-street, Middlesex.—Saturday, November 20, 1841.

The Railway Times.

Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 204. Vol. IV.—No. 48.] SATURDAY, NOVEMBER 27, 1841. [Price, 6d.

PROPOSED PLAN for the establishment of a GENERAL OFFICE for the use of TRAVELLERS BY RAILWAY and STEAM NAVIGATION, where the public could readily obtain every species of information that might be useful to or required by Travellers, either on business or pleasure, by any of the various Railway and Steam Navigation Conveyances throughout the United Kingdom, more especially as relates to the hours of departure and arrival, the scale of fares, and the different regulations of each, for conveying Passengers and Goods; to be formed under the sanction and patronage of the several Boards of Direction and Management of the Companies now in existence.

It is proposed that a complete Register be kept of all the Railway Conveyances, systematically arranged for the convenience of immediate reference, setting forth every station at which the trains stop on the respective lines, and the several stations and booking offices from whence passengers and goods may be conveyed.

That the proposed Office be furnished with the printed placards and hand-bills from all the different Companies, for reference and distribution to the public, who should receive gratuitously every information required.

That a like Register be kept of all the Steam Navigation Conveyances, and a similar distribution be made of the hand bills of the different Companies, and every information respecting them be given in the same manner.

That a communication be opened for correspondence with the respective Secretaries to enable the Manager of the Office to give answer to such inquiries as might arise, and which their printed hand-bills do not furnish, and that the Secretaries would from time to time give the Manager immediate notice of every alteration affecting the conveyance of passengers and goods.

The Manager of the Office would undertake to transmit by post any hand-bill or specific information, which might be required by persons residing in the country, and who could not conveniently attend personally to obtain it.

That such Office be fixed at some centrical point (being a public thoroughfare) at the West End of the Town, holding connection with a similar establishment in the City, and to be open to the public every day, Sundays excepted, and that the Office shall be furnished with geographical maps and plans of the Railways.

It is proposed that arrangements should also be made which would embrace an extension of the plan, by collecting information of the various establishments on the Continent of Europe and elsewhere, for conveyance by Railway and Steam Navigation, as it is considered that by centralizing these various objects at one place, a complete Emporium will be formed for obtaining that general information which Travellers so much require, and this concern founded upon such an enlarged and comprehensive scale as would ensure the contemplated benefit and advantage to the several Companies interested, as well as for its becoming a medium of the greatest public utility.

NATHANIEL W. SYMONDS.

Lombard Street Chambers, Clement's Lane,
27th October, 1841.

*** Any suggestion to improve or add to the usefulness of the above plan will be thankfully received.

ANDREW SMITH'S PATENT WIRE ROPES, for STANDING RIGGING, LIGHTNING CONDUCTORS, STROPPING OF BLOCKS, MINING, RAILWAY, and GENERAL PURPOSES; about half the Size and Weight of Hempen Ropes, and 25 per cent. cheaper. Testimonials to that effect, with Specimens, may be seen, and every information obtained, at the Manufactory, Mill-wall, Poplar; and also of the following Agents:

Robertson and Co., 12, Goree Piazzas Liverpool.
Mathias Dunn..... Newcastle-upon-Tyne
Joseph Bothway..... Plymouth.
John Thompson and Co. ..... Wigan.
J. T. Tregellas..... Truro.
Thomas Mooney and Son..... Dublin.
Coates and Young ..... Belfast.
James Kibble and Co. ..... Glasgow.
James Gunn..... Leith.
John M. Beatts, 14, Clement's-lane, High-street, Dundee.

This Rope has been in use for standing rigging in her Majesty's navy, and a great number of merchant vessels, for upwards of six years, and is giving the highest satisfaction. It is also employed in various mines and railways in different parts of the kingdom.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secrecy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

This day is published,

TUCK'S ROLLER CALENDAR FOR 1842.—This is a mode of affixing the Calendar for the whole year on two revolving cylinders, within an elegant case, so as to exhibit each day's information in a bold and novel manner, presenting Daily Memoranda indispensible to every housekeeper and man of business. It possesses the advantage of a Date Box and Almanac, and is adapted for the Library, Board Room, Counting House, Warehouse, or Parlour; and is the best application of the Calendar ever yet devised. In Mahogany Box, price 5s. 6d.; in Ornamented Box, 6s. 6d. In addition to much useful information relating to business, &c., the Calendar contains the time of High Water at London, Liverpool, Dublin, Glasgow, Leith, Bristol, and Hull, for every day in the year.

Railway Times Office, Fleet-street; Letts, Cornhill; and Ackerman, Strand.

LARCH TIMBER FOR SALE.—The LOW PORTION of the KNOCK PLANTATION of MONZIE, situated near Crieff, in the county of Perth, and within 16 miles of the shipping port of Perth, will be exposed to SALE by Public Roup, on the spot, on Wednesday, the 12th day of January next, at Twelve o'clock, noon. It consists of 38 imperial acres, and will be exposed in one, two, or three separate lots. There are 5,169 trees of Larch, and 991 of Scotch Fir. The other intermixed Timber is to be reserved. The Larch is of very superior quality, and is upwards of 60 years old. Much of it is of very large scantling, and well suited for Railway Sleepers, Ship-building, and other purposes requiring heavy Timber. There is a ready market in the neighbourhood for the Tops and Brush, and also a good situation adjoining for a Saw-mill, with a plentiful supply of Water.

For further particulars application may be made to Messrs. Davidsons and Syme, W.S., Edinburgh; or to Mr. William Blackadder, C.E., Glammis, Forfarshire; and the Timber will be shown by James Taylor, forester at Monzie.

November, 1841.

LONDON AND BIRMINGHAM RAILWAY. CALL of £10 (being the second) on the £25 Shares, making £15 per Share called for.

The Directors of the London and Birmingham Railway Company having resolved that a Second Instalment of Ten Pounds per Share, payable on or before the 10th of January, 1842, should be called for on the £25 shares of this Company, the Proprietors of such shares are hereby required to pay, on or before the appointed day, to any one of the undermentioned Bankers, the sum of £10 on each of their respective shares, viz.,—

London—Messrs. Glyn and Co., 67, Lombard-street, or at the Office of the Railway Company, Euston-station.
Birmingham—Messrs J. L. Moilliet and Son, or the Birmingham Banking Company.
Liverpool—The Bank of Liverpool.
Manchester—Messrs. R. Heywood and Co., or the Bank of Manchester.

The Bankers have been severally instructed to charge interest at the rate of £5 per cent. per annum (according to the provisions of the Act of Incorporation), on all sums which shall be tendered after the 10th of January, 1842.

GEORGE CARR GLYN, Chairman } Of the Board of
J. F. LEDSAM, Deputy Chairman } Directors.

By order, R. CREED, Secretary.

Office, Euston Station, November 12, 1841.

BRISTOL AND EXETER RAILWAY COMPANY.—TENDERS FOR LOANS ON DEBENTURE.—The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising therefrom, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest at the rate of Five per cent. per annum, payable half-yearly at the Bank of Messrs. Glyn, Hallifax, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Prince's street, London, or Broad-street, Bristol.

By order of the Board of Directors,
J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol.

BIRMINGHAM AND GLOUCESTER RAILWAY.—THIRD INSTALMENT UPON SCRIP, £5, DUE NOVEMBER 25, 1841.—The THIRD INSTALMENT, amounting to £5, upon the Scrip issued by the Company, is required to be PAID to the Birmingham Banking Company, at Birmingham, on or before the 25th instant, after which day interest will be charged at the rate of five per cent. per annum; and if the same "shall remain unpaid for one calendar month after the day above mentioned for its payment, the scrip will be absolutely forfeited, with all moneys previously paid thereon."

Each holder of Scrip is requested, so soon as he shall have paid his Instalment, to bring or send his Scrip to this Office, together with the Banker's Receipt, in order that the payment may be duly registered on the Scrip and in the Company's Books.

The Bankers have received instructions to allow a discount at the rate of 5 per cent. per annum, upon Instalments paid in advance.

The Fourth and last Instalment will be due on the 25th of February next.

By order,
GEORGE KING, Secretary.

Waterloo-street, Birmingham,
November 11, 1841.

Now ready, in quarto, to correspond with the origina Volume, price 7s. 6d., useful and interesting additions to THE RAILWAYS OF GREAT BRITAIN AND IRELAND, by FRANCIS WHISHAW, Civil Engineer, M. INST., C. E.,

COLOURED SECTIONS, exhibiting at one view the Lengths, Summits, and Levels of all the principal Railways in England, reduced to the Trinity Standard. Coloured Diagrams, showing the rise and fall of shares in the principal lines of railway for a series of years; all the principal railway wheels illustrated.

SOUTH-EASTERN RAILWAY COMPANY—GENERAL MEETING.

THE Half-yearly General Meeting of the proprietors of the South-Eastern Railway Company was held on Thursday, at the London Tavern, Bishopsgate-street, JOSEPH BAXENDALE, Esq., in the Chair.

There was a full attendance of proprietors.

The advertisement calling the meeting having been read,

It was resolved unanimously, that the common seal of the Company be affixed to the register of proprietors, which was done accordingly in the presence of the meeting.

The SECRETARY (J. S. Yeats, Esq.,) then read the following Reports :—

DIRECTORS' REPORT.

London, 15th November, 1841.

Since the half yearly meeting in May last, the progress which has been made in those portion of the line between Tunbridge and the junction with the Brighton Railway has been such as to confirm the opinion then expressed by the Directors, that that district may be opened for traffic before the next half-yearly meeting of the proprietors.

The contract for ballasting the line and laying the permanent way between Redstone Hill and Tunbridge has been some time in operation, and there is reason to believe that the eastern portion, about 11 miles in length, will be completed before the end of the year, leaving about nine miles to complete, which the contractor is under an engagement to finish early in the spring of 1842.

Under the recommendation of the Engineer in Chief, the Directors have adopted certain improvements in the form and description of sleepers, chairs, and fastenings; they have also substituted, in lieu of iron pins, treenails of compressed oak; and from the experiments which have been tried on that portion of the permanent way, which has been laid for more than 2 miles, over which the locomotive is daily passing, they have reason to express their perfect accordance in the principle, and their approbation of the result.

Eastward of Tunbridge, for a distance of 34 miles, the line has been contracted for, and the works are in progress. A large portion of the earthwork and brickwork on that part of the line intended for the next opening has been finished, and the contractor is bound to complete and open the line to the Staplehurst Road, a distance of 12 miles east of Tunbridge, by the 1st of July, 1842.

That part of the line from the Staplehurst Road to Ashford, a distance of 14 miles, is let to a responsible contractor to be opened in the year 1842. At this point the Dover traffic will come upon the line, being a distance of 20 miles from that place.

Beyond Ashford another contract has been let, extending over nearly seven miles, the earthworks of which requiring some time to complete, it has been deemed advisable to commence them at the present time, in order that their completion may be effected by the time the line is in a condition to be opened to Folkestone.

The works in the Dover district have continued to advance steadily and satisfactorily. The Warren and Folkestone contracts have been completed to formation level, and arrangements have been made for driving the Saltwood tunnel and other works in that district.

The Directors have the satisfaction to state that the works have sustained no injury from the continued rains to which they have been subjected; the embankments being nearly closed, the late wet weather has been of considerable service in consolidating them: they have, however, instructed Mr. Cubitt to prepare a Report on the subject of the works, which will be submitted to the meeting.

The whole of the land from Redstone Hill to Dover has been contracted for,: and in addition to the amount already paid under that head, as shown in the accounts, there remained on the 1st of October last a sum unpaid amounting to 53,091*l.*, a portion of which has since been paid.

Of the 400 shares forfeited at the last meeting, 50 were redeemed on the following day by payment of the Calls then due, and 91 were sold at prices realizing more than was owing upon them. There are now 1,405 shares in the hands of the Company.

By resolutions of the Board, dated 17th August last, the Directors declared forfeited 7,372 shares, which were then in arrear; since that date 3,979 have been redeemed from forfeiture. Arrangements have been made for the payment of others, and, unless between this period and the day of meeting the remainder be redeemed by payment of the calls, a resolution for confirming the declarations of forfeiture will be submitted to the meeting.

There are, however, other cases in which the Directors have considered it more to the advantage of the Company not to forfeit the shares, but have adopted legal proceedings for the recovery of the arrears, and they have reason to believe that in these cases the whole will eventually be recovered.

The necessity of increasing the proposed accommodation at the London Bridge station has been such, that it became imperative on the Directors to co-operate with the Brighton and Croydon Companies in its enlargement, and they doubt not that the proprietors will give credit for the attention and assiduity of the Managers in carrying out the works.

On referring to the accounts of expenditure by the Directors, it will be seen that payments have been made to the extent of 18,304*l.* 3s. 4d., on account of the joint station at London Bridge. It is desirable that provision should be made to repay the amounts thus advanced from the funds of this Company, and also to provide for the future payment of those which will be required for that object, and as power has been granted to raise the sum of 120 000*l.* for the express purpose of the station at London Bridge, it is proposed to submit to this meeting a resolution authorising the raising of that amount, or any part of it, agreeably to the provisions of the Act under which such power was given.

In concluding their Report, the Directors desire to express their unabated confidence in the soundness of their undertaking; convinced, as they are, that, whether regarding the cost of the line, or the expected traffic resulting therefrom, it must sooner or later prove itself entitled to a better position than it now holds in the railway world.

The annexed account of the receipts and expenditure of the Company shows a balance in hand of 26,361*l.* 5s. 1d.

Statement of the Share Capital of the Company on the 1st of October, 1841.

ENGINEER'S REPORT.

To the Board of Directors.

GENTLEMEN,—In drawing up a Report to be submitted to you previous to the half yearly general meeting on the 25th inst., it is with strong hopes of its being the last general meeting to which I shall have to report before the opening of a considerable portion of this railway to the public.

In the performance of this duty it appears to me that the desired information as to the state and progress of the works will be more clearly set forth by a reference to my two former Reports, viz. that of November, 1840, and May, 1841, in which I stated my expectations that the cost of this railway for engineering works, exclusive of land and compensation, would not exceed the general estimate set forth in November, 1839, being the first estimate after the precise line of railway from the Brighton line at Red Hill to Archcliff Fort, at Dover was finally settled, and which amounted to 1,266,861*l.* This expectation nothing has yet occurred to shake,—neither have I any reason to doubt that the line may be opened to Tunbridge during the month of May next, and to the Staplehurst Road by Midsummer, as stated in those Reports,—and also to Ashford by the end of the year 1842. In fact, contracts are entered into with able and experienced contractors for completing the railway to Tunbridge in May, to Staplehurst Road in July, and to Ashford in December,—and which (means being provided) I have no doubt they will be able to effect.

Since the last general meeting in May, the works between Red Hill and Tunbridge have been unremittingly pushed forward; and, but for unexampled wet weather during the whole of the last month, all the embankments upon that 50 miles of line would have been joined and completed up to formation level:—as it is, however, there does not remain a month's work to complete all the embankments ready for ballasting; and, setting aside the delay, the works are in a much improved state, from the embankments having been well soaked and consolidated before being ballasted, thus ensuring a more perfect railway in the first instance.

It is satisfactory to report that ample stores of ballasting, of a most excellent quality, have been found along the line, several miles of which, between Tunbridge and Edenbridge, are already ballasted, and about three miles of permanent way laid, on which the locomotive engines of Messrs. Betts (the contractors for ballasting and laying the permanent way) are at work night and day, with the intention of completing, if possible, a line of permanent way from Tunbridge to Edenbridge—a distance of 10 miles—by New-Year's day.

The tunnel at Bletchingly is completed, with the exception of its ends and entrances, and the whole will be completed and ready for the rails by Christmas; by which time also, or the first week in January, I expect the ballasting and laying the permanent way will be commenced at the junction with the Brighton line, near Red Hill.

From the experience we have now had of the permanent way, as regards the efficiency of the sleepers, chairs and fastenings for the rails, I trust the proprietors will have every reason to be satisfied with that important part of this

Digitized by Google

railway, whether considered with regard to efficiency, first cost, or ultimate maintenance of way.

In consequence of the storms, high tides, and wet weather prevalent during the last month, various statements were put forth in the public papers relative to the effects of the rain and high tides upon different parts of the coast, and which were set forth in such a way as to induce the readers to suppose that injury of some kind, or to some extent, had occurred to the works of the railway now in progress between Dover and Folkestone.

Under these circumstances therefore I deemed it my duty, previous to the general meeting, to go to Dover, and personally examine into the state of the works there, as well as on the other portions of the line. In accordance with this feeling, and accompanied by your Chairman, we devoted nearly the whole of the last week to the objects of this inquiry: commencing at Dover and going over every portion of the line where works are in progress, from thence to Red Hill at the junction with the Brighton line.

It is therefore with much satisfaction, I can most unequivocally state, that in no one instance have the storms, high tides, or heavy rains, injuriously affected the works of this railway; but (setting aside the loss of time occasioned thereby) have in some instances been attended with advantage.

At Dover, it is true, the extraordinary high tides have interfered with the general coast line both east and west of the town, but not to a greater extent than has occurred at former periods; and it is also true, that the late very heavy seas have acted upon the chalk cliffs so as to cause portions of them to fall, but this as regards the Shakespere Cliff, where the falls have principally occurred, has no interference with the railway works, as the Shakespere Tunnel was driven through and at the back of that promontory for the very purpose of avoiding such casualties. And as regards the falls of chalk on the other parts of the cliff connected with the works, none have occurred but where the same was in course of being removed in trimming down the cliffs to a safe slope, or where it has all along formed part of our plans to have it removed; and in one case, the point or promontory of chalk between the west entrance of the Shakespere Tunnel and the commencement of the Sea wall, I have had plans, sections, and estimates prepared for its removal for more than twelve months, and nothing but the great cost (from 8,000*l.* to 10,000*l.*), combined with the hope and expectation that it would come down of itself in time, and the circumstance of wanting the means more in the Tunbridge division, deterred me from having it removed before this time. I am happy, however, to find that my expectations as to its coming down even without help, are likely to be realized during the ensuing winter, and thus a large expense saved, and the face of the cliff at that point rendered perfectly safe. It is also gratifying to me to be able to state, that our great work, the Sea wall, which is in various states of progress in different parts, has withstood all the storms and high tides, and without injury, and already forms a most perfect security to the foot of the cliffs against which it is built, both by protecting them from the action of the Sea in front, and perfectly draining them (by means of culverts built in for that purpose) from the land and spring waters at the back; besides the important object for which it is being executed, that of forming a railway, 12 yards wide at its top, and within a parapet formed by the whole thickness of the wall.

I have dwelt more particularly on this part of the works for the cause set forth above; for, although I feel neither surprise at what has occurred, nor apprehension at what may occur, relative to the execution of the works in this place, yet, as there may be parties interested in them, who for the causes above mentioned might be apprehensive if I remained silent on the subject, I have deemed it my duty to give the above explanation in reply to the reports and paragraphs which have been before the public relative thereto, and again to state most explicitly my full confidence that, when completed, the portion of the railway from Dover to Folkestone will be as safe and good as any other portion of the line, and by far the most picturesque and interesting.

In conclusion, therefore, I can only say, that any information omitted in this Report, I shall be most happy to give to any inquiries at the general meeting,

And have the honour to remain, Gentlemen,
Your most obedient servant,
(Signed) W. CUBITT.

London, November 20, 1841.

The Reports were well received. A draft copy of the Directors' Report had been circulated among the proprietors some days previously, and copies of Mr. Cubitt's Report were handed round the room, as parties entered.

The CHAIRMAN said, in rising to move that the Reports now read be received, adopted, and printed for circulation among the proprietors, it was not his intention to inflict upon the meeting a set speech, but he deemed it desirable to take that opportunity of making some few comments upon the last paragraph but one in the Directors' Report, wherein they expressed "their unabated confidence in the soundness of the undertaking." Lest these expressions should be looked upon as mere words of course—as partaking somewhat of the character of royal speeches—he would, with the permission of the meeting, state briefly the causes of that confidence. For the last 13 or 14 years he had devoted much of his attention to the subject of railways; he had watched and examined the cost per mile of the several lines, and he regretted to see that in so many cases the original estimates were so enormously exceeded. When he first became connected with the South-Eastern Company, he found that the Company were authorised to raise by shares a sum of 1,400,000*l.* and by loans a further sum of 450,000*l.* making the total capital of the Company 1,850,000*l.*; and he was happy to say, that up to the present time everything that had transpired gave promise that the estimates and calculations upon which that amount of capital was based would prove to be correct. When he used the word "correct," he wished to be understood as expressing his conviction that the excess would not exceed 10 or 15 per cent. In works of such magnitude it was necessary to leave some small margin for contingencies; but when he saw estimates of 1 million end in an actual expenditure of 2 millions, and 2½ millions raised to 6, he certainly thought the margin much too large. (Hear, hear.) Within the last few days he had made a calculation of the cost of 15 of the principal railways now completed, and he found that of these five had cost, on the average, from 20,000*l.* to 30,000*l.* per mile; two from 30,000*l.* to 40,000*l.*; two from 40,000*l.* to 50,000*l.*; and six from 50,000*l.* to 60,000*l.* He had the satisfaction of stating, that unless something occurred wholly unforeseen at the present moment, the South-Eastern line would come into list 1—in other words, that it would be finally and effectually completed under 30,000*l.* per mile—nay, very considerably below that sum. (Hear, hear, hear.) With such an opinion, formed upon the best data, was it any wonder that his colleagues and himself should express their "unabated confidence in the soundness of the undertaking," unless, indeed, the traffic should turn out to have been over-estimated—which he was firmly convinced it had not; nor indeed was it generally in respect of traffic that railway calculations had proved incorrect, but in the enormous excess of estimates of construction. (Hear, hear, hear.) If then the traffic estimates should prove correct, the cost of construction being comparatively so small, there was abundant reason to congratulate the proprietors on the prospects of the railway. No line near the metropolis had been constructed for anything like so small an amount as 30,000*l.* per mile,—those to which he had referred being far removed. Last autumn he had the pleasure of meeting at Derby, whither he had gone to attend the general meeting of the North Midland Company, an influential gentleman—a shareholder in the South-Eastern, as well as in the North Midland and York and North Midland lines. The gentleman inquired of him whether he still entertained the same favourable views of the prospects of the South-Eastern Company, seeing that some alarm had got abroad in consequence of the low price of the shares in the market. He (the Chairman) had expressed himself as well satisfied as ever of its ultimate success, and had added "You, Sir, are a proprietor in the York and North Midland Railway, where you receive a good dividend, and where the shares stand in the market at a considerable premium: you are likewise a proprietor in the North Midland line, where we have as yet received no dividend, and where the shares are at a great discount; the York line cost 26,000*l.* per mile, and its neighbour 46,000*l.*, so that by this time you have doubtless satisfied yourself that first cost is most essential in the matter of dividends. Now, Sir, in my opinion, and I have taken some pains to form a correct one, the South-Eastern line will cost little more per mile than the York and North Midland, and I leave you to judge from that fact of its ultimate success." (Hear, hear, hear.) Such was the opinion he had expressed to his friend at Derby, and to that opinion he still had every reason to adhere; for sooner would he suffer his right hand to be cut off, than he would give utterance to any statement which he did not conscientiously believe to be correct, or lend himself in any way to deceptive representations. (Hear, hear, hear.) If he thought for one instant that anything had occurred, or was likely to occur, which would cause the margin to which he had referred to be exceeded, he would at once proclaim it; but nothing whatever had occurred—nothing whatever was likely to occur—to shake in the smallest degree the accuracy of the calculations which he had laid before the meeting. (Hear, hear, hear.) It was for these reasons that the Directors continued to place "unabated confidence in the soundness of the undertaking," and it was now for the proprietors to form their own judgment as to the result. Without further trespassing upon the patience of the meeting, he would at once move the adoption of the Reports.

The honourable gentleman sat down amid much applause.

Mr. RICHARD TYRRELL (whose previous exhibitions at the general meetings of this Company must be fresh in the recollection of our readers), entered into some statements relative to the accounts, but from the low tone of voice in which he spoke, and the signs of impatience manifested by the meeting, it was impossible fully to catch the substance of his remarks. We understood him to say, that he was glad the estimates were not likely to be exceeded, but he wished to see the accounts submitted at the half-yearly meetings placed in a more intelligible shape and drawn out more minutely. He could not comprehend why 38,702*l.* stated to be "by shares in the hands of the Company, 1,405 at 38*l.* per share," should be placed on the credit side of the share capital account, as that amount had not been received from such shares. There was in the statement of receipts and expenditure to the 1st October, 1841, some large items of which no explanation was given, and in the share capital account an item of 14,688*l.* stated merely as "amount received" on the shares already referred to, and yet they were not informed how that loss had occurred. He thought the accounts should be strictly looked into. The honourable proprietor here exhibited a form of account (a copy of which he handed over to the Chairman) and expatiated upon its superiority over the form adopted by the Secretary of the Company. He saw in the accounts an item of 143*l.* 11s. 6d. for the last half-year for "inspection of works," and he wished to know who the inspectors were.

After a pause, Mr. Tyrrell repeated the question, whereupon,

The SECRETARY said, there was no difficulty whatever in answering the question, but as he had to notice some of Mr. Tyrrell's previous statements, probably it would be more convenient to the meeting, if he were to wait till that gentleman had concluded, rather than to reply to detached portions.

Mr. TYRRELL persisting in calling for an immediate answer, some conversation took place on the subject, in the course of which,

Mr. T. SMITH said, he did not think that the meeting owed any courtesy to the individual who had asked the question, but at the same time he thought it desirable that he should be answered, in order that he might not have it to say that any information had been withheld from him. (Hear, hear.)

Digitized by Google

Mr. TYRRELL called upon the last speaker to retract what he had said.

The SECRETARY said, the 143*l.* alluded to comprised the travelling expenses of the Committee of Directors in their monthly inspection of the works over the whole line. (Much applause.)

The CHAIRMAN begged to state, that he had never received a single farthing beyond the actual expense out of pocket. (Hear, hear, hear.)

Mr. SMITH having been alluded to so pointedly, would merely repeat that from that course so generally adopted by the proprietor alluded to, he thought no courtesy whatever was owing to him from the meeting, although at the same time he thought it due to themselves that such courtesy should be extended. (Great applause.)

Mr. TYRRELL, after some farther remarks, wished to know the amount of the Secretary's salary. The Secretary himself, when applied to, had told him in uncourteous language and in rude terms, to go to the Directors if he wanted to gain any information on the point.

The SECRETARY would deny most positively and unequivocally, that in simply referring Mr. Tyrrell to the Directors, he had been guilty of rude or uncourteous demeanour, either in words or manner. (Hear, hear, hear.)

Mr. TYRRELL wished the question answered now.

A storm of hisses here arose which most men would have cared little to encounter, but Mr. Tyrrell remained unabashed.

The CHAIRMAN would put it to the meeting, whether they would have the amount of salaries of all their servants stated. (A unanimous shout of—"No!") Under these circumstances it would be invidious to select the allowance of the Secretary.—(Hear, hear, hear.)

Mr. TYRRELL still urged his point, whereupon an *extempore* motion, that the question be not answered, was put to the meeting, and carried by acclamation, several proprietors protesting against the time of the meeting being wasted.

Mr. TYRRELL, after muttering something about the Solicitor's bills, sat down, saying he was content to leave the matter to the decision of the public.

The SECRETARY said, he would merely state in reply to Mr. Tyrrell's insinuation respecting the accounts, that the 38,702*l.* referred to by him, had been placed to the credit of the Company, because on the other side they were debited with the whole amount of 38*l.* per share upon the 28,000 shares.—(Hear, hear, hear.)

Mr. PARSONS, as a railway proprietor who had long advocated a reform in the mode of keeping the Companies' accounts, thought it due to the Secretary of this Company to state that his accounts were more minute than those of others, for items were here entered separately instead of being thrown together. (Hear, hear, hear.) He (Mr. Parsons) had always contended for minuteness of details, for otherwise accounts were worth nothing; but it was unfair that the very Company whose accounts were most minute should be selected for censure. (Hear, hear.) With respect to the loss which had accrued on the re-sale of forfeited shares, it had on former occasions been so fully and explicitly explained that he was surprised any misconception could have arisen. With respect to the works, he, as a proprietor, felt deeply indebted to Mr. Cubitt, their Engineer, for his very excellent Report. Everything in it was clear and straightforward; there was nothing of a doubtful or equivocal character in it; everything that was brought forward from time to time, and the results as they gradually developed themselves were confirmatory of what had been stated before, and under these circumstances he thought they might look forward that the estimate of the Engineer would prove deserving of the name. (Applause.) Allusion had been made in the Report to the joint station at London Bridge; might he ask what the cost of that station would be?

The CHAIRMAN said, the matter had undergone a good deal of discussion, and it was thought that the cost would be about 250,000*l.*, or about 85,000*l.* to each of the three Companies. This Company, it would be recollected, had power to raise 120,000*l.* for the purpose of a station—a subject which would be brought before the meeting at a subsequent period of the day.

Mr. PARSONS hoped that as economy had been one of the characteristics of the South-Eastern Board, no extravagant decoration would be indulged in, in the erection of this or any other station. There had been too much of this extravagance upon other lines.

The CHAIRMAN hoped and believed that in this case there would be nothing of the kind. In fact there was a strong feeling among the Managers of the station, of the folly of incurring a large expenditure in decorative architecture. (Hear, hear, hear.) It was very likely—although nothing was yet finally determined—that a separate fund would be raised for the purposes of the joint-station without the necessity of pressing upon the Companies at all.

Mr. PARSONS enquired if there was any arrangement in contemplation for separating the first class passengers from the second class, in mounting and dismounting from the carriages, as for example, by a separate platform.

The CHAIRMAN expressed his inability to answer the question—remarking, that as the South-Eastern line was not yet open to the public, he had not directed particular attention to arrangements for the conduct of traffic.

Mr. PARSONS thought the plans of the station might show it. He thought if separate platforms were used, both in going and returning, the pride of some parties who could afford to pay first class fares might deter them from entering the second class carriages. (Hear, hear, and a laugh.)

After a few words from the Chairman,

Mr. PARSONS said, there appeared from the Report to be only about six miles of the railway not under contract.

Mr. CUBITT said, such was the case. The whole of the works from Folkestone to Dover were nearly completed; in fact, the line might be said to be let entirely to Dover. (Hear, hear.)

Mr. PARSONS believed there was some peculiarity in the mode of laying the permanent way.

The CHAIRMAN was glad the subject had been alluded to, as some anonymous censures had been made public in a railway periodical. He did not profess to be an engineer—although he believed some gentlemen holding a similar station claimed to be so *ex officio*—but he had again and again told his colleagues that so satisfied was he of the beneficial effects of the alterations made from the established plan, by Mr. Cubitt, that he was willing to take the whole responsibility on himself. (Hear, hear.) He would have said the same thing to the Engineer himself, but that gentleman stated that he was fully prepared to be responsible for his innovations, and to justify them. (Hear, hear.) There was a gentleman in the room who could speak with some authority on this point—he meant Mr. Betts, the contractor for the permanent way. He had had no conversation with that gentleman, never having had the pleasure of seeing him, since he had travelled on a locomotive over the portion of the permanent way which had been already laid, but he thought Mr. Betts could fully confirm what he (the Chairman) thought of Mr. Cubitt's plans.

Mr. BETTS expressed his entire confidence, both in the form of the sleeper adopted by Mr. Cubitt, and in the mode employed for fastening the chair to it. In fact, it far exceeded in completeness any thing of the kind he had ever before seen. (Hear, hear.) Three miles of permanent way had been laid about two months, and 100,000 tons had been conveyed along the rails. They had taken pains to ascertain whether the road had sunk—and it would not have been surprising if it had, considering the extraordinary, he might say unprecedented, wet weather that had recently occurred. They had put in marks to discover if the sleepers had sunk, but after a month's working, and in spite of the bad weather, they had found that the sleepers had not sunk at all. (Hear, hear.) It was his firm conviction that the South-Eastern permanent way was the best ever put down. (Hear, hear, hear.) They had taken trains over it the day after it was laid, and he would assure the meeting that it worked as well as some lines that had been laid for two years. The grand feature, however, of Mr. Cubitt's plan had reference to the ultimate cost of maintaining the way, and on this point he (Mr. Betts) was perfectly satisfied that the expense of maintenance on the South-Eastern would not amount to two-thirds of the average upon railways generally. (Hear, hear, hear.) The materials used were far better than on any other line, so much so that he was convinced the road would be a road 30 years hence—which was more than could be said of other sleeper lines. He was sure that Mr. Cubitt's plan would be followed on all future railways. (Hear, hear, hear.)

The CHAIRMAN explained that Mr. Betts was the successor of the late Mr. Macintosh, the great railway contractor. A gentleman of so much experience might safely be relied on. (Hear, hear.) He did not think that after the statement of Mr. Betts there was any occasion for further comments on anonymous strictures; indeed, he should not have of himself alluded to the matter at all, feeling satisfied that the proprietors would not suspect the Board of jobbing, (as had been insinuated,) in that or any other matter. (Applause.)

Mr. BETTS said, his experience had satisfied him that in no department of railway construction had alteration been so much called for as in the laying of the permanent way. On most other lines, the sleepers appeared to be laid at random, whereas on the South-Eastern they were laid on a principle which was so perfect that ultimately it must meet with general adoption. (Hear, hear.)

The CHAIRMAN thought the meeting had heard enough to know that despised as the South-Eastern Company was in the estimation of some, it was not so far behind its contemporaries, for they had struck out something not only new, but beneficially new. The Directors had been accused of too much caution, but on this head he would only say, that if the proprietors had supplied the means, a more rapid progress would undoubtedly have been made. (Hear, hear.)

Mr. LAYCOCK inquired whether the portion of railway from Redstone Hill to the junction with the Croydon was to be purchased by the South-Eastern, what was its cost, and when payment would have to be made?

The CHAIRMAN said notice had been served upon the Brighton Company of the intention of the South-Eastern Company to purchase the Brighton half of the 12 miles from Croydon to Redstone Hill, as sanctioned by the Act of Parliament. As yet no account of the cost of that portion of the line had been rendered, and as to the payment nothing had yet been settled. He should be sorry if the South-Eastern Company did not purchase the Brighton part. He begged to say that such purchase was included in the estimate which he had given of 30,000*l.* per mile, as placing the South-Eastern Company in class 1. (Hear, hear.) Within the last few days the matter had been discussed between the Brighton and South-Eastern Boards.

Mr. HILLYARD, referring to the Chairman's statement of cost per mile—a statement which he was sure would not have been made without a thorough conviction of its correctness—inquired whether the 30,000*l.* included the losses incurred upon the re-issue of forfeited shares—whether, in fact, the line could be made by the Company at a cost of 30,000*l.* per mile of nominal capital, or whether it could be so constructed by the contractors. Reference had been made to the York and North Midland Company, and it was well known that that Company had not sustained loss from the re-issue of forfeited shares, or at any rate not to nearly so great an extent as the South-Eastern.

The CHAIRMAN said, he meant that the actual cost of the works, without regard to any real or assumed loss on shares, would be under 30,000*l.* per mile.

Mr. HILLYARD believed that more mischief had arisen to railway proprietors from not having had

Digitized by Google

the worst features of their several cases at once submitted, than had been made up by the good which was expected from temporary concealment; for when the truth began to be known, mistrust always exceeded reality. He wished to know the probable cost per mile to the Company, taking into account their past and prospective losses.

The CHAIRMAN had already stated his opinion as to the actual cost of the works; and reckoning their losses—although losses he should be sorry to call them—at 184,000*l.*, this would be equal to an additional outlay of from 2,000*l.* to 3,000*l.* per mile.

Mr. HILLYARD said, the answer was perfectly satisfactory to him.

Mr. LAYCOCK inquired if the Directors had considered when it would be necessary to raise further capital.

The CHAIRMAN said, they had not. He wished they had secured all that they already had power to raise. He hoped that what had been elicited that day would direct the attention of capitalists to the South-Eastern line.

Mr. LAYCOCK believed that 52,000*l.* had been raised on loan during the past half-year.

The SECRETARY said, that considerably more had been raised since the accounts were made up.

Mr. CUBITT said, the cost of a railway resolved itself into two parts—that depending upon the Engineer and that depending upon others. With respect to the engineering cost (properly so called) of the South-Eastern Railway, it would not exceed by more than 5 per cent., 21,000*l.* per mile, leaving for the land, the law expenses, the losses and crosses to which all Companies were subject, a sum of 6,000*l.* or 7,000*l.* per mile, and still bringing the total expenditure under 30,000*l.* He quite agreed with the Chairman, that including the purchase of the six miles of the Brighton line, the expense of stations and everything else, the cost would be under 30,000*l.* He spoke this with the more confidence that one-third of the work was already completed. He was quite satisfied that the works would not exceed 22,000*l.* per mile. (Hear, hear.)

Mr. LAYCOCK said, if this statement were correct—and he entertained no doubt of it—it must be very satisfactory, for as to the York and North Midland line, with which a comparison had been made, the works were extremely light. He believed the deepest cutting on the York line did not exceed 25 yards, and that for only a short distance. He thought the Company deeply indebted to the exertions of Mr. Cubitt. (Hear, hear.)

The CHAIRMAN said, that reckoning at 66 miles, the line to be *bona fide* constructed by the South-Eastern Company, and that of the Brighton, common to both, 12 miles more, the total cost at 30,000*l.* a mile, would be 2,340,000*l.*, and he should feel greatly surprised if that amount were really wanted. The more he investigated the estimates and prospects of the line, the more satisfied was he with them. (Hear, hear.)

Mr. CASH inquired what was the length of the South-Eastern line.

The CHAIRMAN said, they had to construct 66 miles. Then there were 12 miles from Redstone Hill to the junction with the Croydon line, and of these 12 miles 6 belonged to the South-Eastern Company, making in all 72 miles of continuous railway. The other 6 miles they had power to purchase, and had given notice of their intention to do so. This was exclusive of the Croydon line.

Mr. PARSONS said, some allusion had been made at the last meeting to the Kyanising of the sleepers. He believed that this process was now adopted on the South-Eastern line.

Mr. CUBITT said it was. The sleepers were Kyanised under high pressure, (namely 80 lb. to the inch.) He had always been opposed to the common mode of Kyanising, namely, that of merely dipping the wood into the solution. On the South-Eastern line, every sleeper was Kyanised separately after being bored. He had no doubt that under such circumstances decay would be prevented.

The CHAIRMAN believed that good had resulted from the delay in prosecuting the works to which the Company had unavoidably been subjected. If they had proceeded as rapidly as some other Companies, they would have been under the necessity of incurring not only a great additional present expense, but a permanent cost in the future maintenance of the road.

Mr. CUBITT concurred in these views.

Mr. WIX, referring to a previous remark respecting the decoration of the stations, said, the English had been designated a nation of shop-keepers, and as foreigners were likely to use the South-Eastern line to some extent, he thought they ought in honour of their country, to have at least becoming stations, not miserable paltry erections. As an Englishman he would submit to receive a less dividend rather than incur the jeers of foreigners. (Laughter.) At the same time he would not have money wasted.

The CHAIRMAN said, it would be as well to pause, till it was seen what the result of working would be. (Hear, hear.) He had in the course of the season been at Dover for a few weeks, and his colleagues in the Direction had done him the honour to ask his opinion as to the character of the stations in that neighbourhood. He had recommended them to go on quietly, and if at the expiration of two years from the opening of the line it was seen that larger stations could be afforded, let them be made. The interest of the money thus saved for two years would defray the cost of erecting temporary stations. (Hear, hear, hear.) A bad plan had been pursued, in other Companies, of at once incurring an expenditure which, however justifiable when their traffic was properly developed, was very injudicious at first starting.

After some further desultory talk, the resolution for the adoption of the Reports was carried unanimously.

Several formal resolutions were then passed unanimously, confirming the forfeiture of certain shares upon which calls had been paid, which forfeiture had been declared by the Directors on the 17th of August last. Of these there were 865 shares, on which 18*l.* a share had been paid; 1741 shares with 23*l.* paid; 418 with 28*l.* paid, and 344 with 33*l.* paid, making in all 3,368 shares.

The CHAIRMAN then brought forward a resolution empowering the Directors to dispose of the forfeited shares in conformity with the Company's Act.

This gave rise to a very long and desultory discussion, the substance of which may, however, be compressed into a small space.

Mr. HILLYARD suggested that the forfeited shares should in the first instance be offered to those of the existing shareholders who had paid up the whole of their calls, rateably according to their several holdings. One great cause of the depression of the South-Eastern shares in the market, was the number of shares in the coffers of the Company, which it was feared might at any time be thrown upon the market. The plan which he had suggested was a rational one, for it was to be supposed that those who had paid up their calls hitherto were fully satisfied of the soundness of the undertaking. He believed that the whole of the forfeited shares would be absorbed by the existing proprietors, and if they were not, those which were offered to the public at large would be enhanced in price. There was the precedent of the Bristol and Exeter Railway Company who were placed in a similar position, and who had adopted the plan recommended, the consequence of which was, as he understood, that a rise of 5*l.* per share in the market-price of the shares speedily followed. He would leave it to the Directors to fix the price at which the shares should be issued, for he had the fullest confidence in their honour and ability. Indeed, if his suggestion could in any way be misconstrued into an expression of distrust, he would not make it. (Hear, hear.)

The CHAIRMAN felt obliged for the suggestion. For his own part he should under such circumstances take up his proportion of the shares. ["And so would I," from several of the Directors and proprietors.] He had always looked upon it as a serious evil that so large a number of shares should be hanging over the market, and he should be glad to get rid of them. (Hear, hear, hear.) He was fully satisfied that if offered, as proposed, they would be taken up, but at the same time it would perhaps be as well to leave the Directors unfettered. There might be legal difficulties in the case, otherwise he should be glad to see the suggestion carried into effect.

Mr. HILLYARD contended at some length that there was no legal difficulty, and said no valid objection had been urged.

A PROPRIETOR thought there might be a practical difficulty, inasmuch as if there was but one forfeited share for every ten of the existing shares, the holders of a less number than ten would be injured, unless indeed they received their equitable proportion in money, to which he had an objection.

Mr. HILLYARD quoted the cases of the Great Western, South-Western, North Midland, and other Companies, where no practical inconvenience had resulted from this fractional distribution. He then, after some further discussion, proposed the following motion:—

"That if no legal objection exists to such a course the Directors be requested to offer the shares forfeited this day, as well as those in the hands of the Company, *pro rata*, to such existing proprietors as have paid up all calls in full at the time such offer is made, and at such price as the Directors may determine."

Mr. SMITH was so satisfied with the conduct of the Directors, that he would not consent to have them fettered. He would therefore move an amendment to the effect that the matter be left to their discretion. (Hear, hear.) He would take up his own proportion of the shares, but he thought they should not seek to direct the Board, lest the step should be misconstrued into distrust of them.

Mr. CASH followed on the same side.

Mr. HILLYARD most emphatically disclaimed all imputation of mistrust as applied to the Management, and forcibly urged the benefits which would result from the plan proposed.

The SECRETARY would mention one objection which might be urged against the honourable proprietor's suggestion, namely, that by confining the market to the existing proprietors, an injustice would be done to the original holders of the forfeited shares, who ought to have the full benefit of as large a market as the Directors could command.

Mr. HILLYARD said, the original holders of forfeited shares had nothing whatever to do with the Company except to receive the balance remaining from the sale of the shares after paying their debts, and he thought it inconsistent that they should look to the interest of those who, by neglecting to fulfil their own engagements, had helped to place the undertaking in difficulties. (Hear, hear.)

Mr. FIELD said, if the appropriation of shares were left indefinite as to period or price, the tendency of the arrangement would be to depress the market price of the other shares. (Hear, hear, and "No, no.")

The CHAIRMAN did not much regard the effect which would be had on the market. He was satisfied the shares would be taken up by the existing proprietors. He would prefer the adoption of Mr. Hillyard's resolution.

Under these circumstances, and after a good deal farther discussion, Mr. SMITH consented to withdraw his amendment, his sole object in bringing forward which was, he explained, to leave the Directors unfettered.

As a matter of form, the motion proposed by the Chairman was first carried unanimously, and subsequently the motion of Mr. Hillyard, it being understood that the latter should limit the appplication of the former.

Mr. FIELD brought forward the case of Mr. John Williams, formerly an extensive holder of shares in this and other railways. As the details of Mr. Williams's misfortunes have been noticed in previous Reports of the South-Eastern meetings, and in those of the Northern and Eastern, it is unnecessary to dilate upon them. It appeared that a memorial, numerously and respectably signed by the proprietors, had been forwarded to the Directors, recom-

Digitized by Google

mending the case of Mr. Williams to their favourable consideration.

The CHAIRMAN read the document referred to, which was signed by 55 proprietors. It set forth the zealous and efficient co-operation of Mr. Williams in the formation of the South-Eastern Company, and the heavy pecuniary sacrifices which he had made in the Company's behalf, and prayed that 493 shares paid up in full should be granted to him in lieu of 3,174 shares originally held by him, and since declared forfeited, and on which 20,694*l.* had been paid up; these 493 shares to be held as security till the balance due upon the whole of Mr. Williams's shares was liquidated. It also prayed that certain judgments which the Company had obtained for non-payment of arrears should be vacated. The Chairman explained, that through some mistake the memorial had not been placed in his hands until after entering the room that day.

Mr. FIELD moved a resolution in accordance with the prayer of the memorial. He said, the gift of 493 shares of 50*l.* each would only amount to about 6,000*l.*, for at the present discount they could be purchased in the market for 12,800*l.*, and out of that sum, it was proposed to pay a debt of 6,000*l.* due to the Company by Mr. Williams. He was satisfied that otherwise Mr. Williams could not pay one farthing of the debt. The honourable proprietor forcibly urged the claims of Mr. Williams.

Mr. MARK seconded the motion.

Mr. SMITH, after expressing his sympathy with the misfortunes of Mr. Williams, thought the meeting had not power to accede to the motion, in the absence of so many proprietors—perhaps in the teeth of the Act of Parliament. If granted in this case, the same consideration would be asked, and unjustly withheld, in other cases of a similar character.

Mr. FIELD contended that no similar case could arise. But for Mr. Williams's exertions and Mr. Williams's capital, it was doubtful whether the South-Eastern line would ever had an existence, as it was he who extinguished the North Kent project.

Mr. OLDERSHAW said, Mr. Williams had entered into speculations to benefit himself, not others, and however much their failure was to be regretted, he did not see that the Company ought to be called upon to pay 12,000*l.* in order to get back 6,000*l.* Mr. Williams had taken the fortune of war, and must abide the result. Self-preservation was the first law of nature, and to entertain this proposition, even if they could do so legally, was not fair to those who had become proprietors since Mr. Williams's misfortunes.

The CHAIRMAN said, he knew very little of the merits of the question, except that he had purchased his shares at a premium at a time when perhaps Mr. Williams was selling at a premium. He did not think they had legal power to comply with the motion.

After some further discussion, the motion was negatived by a majority of at least 6 to 1.

A resolution was then unanimously passed, empowering the Directors to raise 120,000*l.* (if necessary) for the purposes of the joint station at London Bridge, in conformity with a recent Act.

Mr. FIELD said, although unsuccessful in his main application, he trusted that the meeting would look favourably upon a proposition for vacating the judgments which had been obtained against Mr. Williams. That gentleman was labouring under extreme anxiety on account of the heavy liabilities hanging over him. He had saved little or nothing from the wreck of a splendid fortune, and it would be an act of justice—certainly it would be an act of mercy—if the Company would forego their claim. (Applause.) The honourable proprietor concluded with a motion to that effect.

Mr. PARSONS seconded the motion.

The CHAIRMAN said, the Directors were entirely in the hands of the meeting, but if the matter rested with himself he would at once accede to the proposition. (Hear, hear, hear.) Were Mr. Williams a man of property, it would only be justice to the proprietors that they should endeavour to make terms with him, but from all that he had heard of Mr. Williams and his case, he was satisfied that that gentleman's misfortunes—caused, perhaps, by too great easiness of nature—had overwhelmed him.

Some conversation ensued as to the propriety of letting the case stand over till the next meeting, it being understood that the Directors would take no steps against Mr. Williams in the meantime.

Mr. SMITH feelingly urged the desirableness of passing the resolution now, so as not to interfere with Mr. Williams's future prospects should his friends have it in contemplation to assist him in re-establishing himself.

This view of the matter was adopted, and Mr. Field's motion was carried unanimously.

Mr. FIELD returned thanks for Mr. Williams, remarking that the meeting had the satisfaction of knowing that they had relieved the mind of a most estimable individual from a load of care and anxiety, which was depressing all his energies. (Hear, hear, hear.)

Mr. LAYCOCK inquired if the Directors knew anything of a proposed railway to Lille, as he had seen it stated in the *Railway Times*, that the French authorities had come to some arrangement on the subject of such a line, which could not fail, if carried out, to be beneficial to the South-Eastern Company.

The CHAIRMAN said, the question had certainly been mooted by the French Government, and he had no doubt the project would ultimately be carried into effect. It was altogether a question of time. The Deputy-Chairman and himself had been in communication with parties on the subject, but the negotiations were not yet matured. A circumstance had been witnessed by him during a recent sojourn at Dover, which had afforded him some merriment. He had seen a Manchester gentleman deeply interested in the South-Western Railway, and the late Chairman of that Company at Dover, *en route* to Paris, and he thought that when these gentlemen, who had an excellent line of their own to the coast, selected Dover as the place of embarkation, it spoke pretty strongly in favour of the South-Eastern line as the future highway to the continent, these gentlemen and others giving up the facilities of a railway communication to Southampton, to secure a sea passage of only 2½ hours, instead of one of 13 or 14 hours from Southampton to Havre. (Hear, hear, hear.)

Mr. LAYCOCK inquired if anything had been done in the matter of branch lines to Maidstone, Ramsgate, Canterbury, and other places, as he saw from the accounts that some expense had been incurred under that head. Would these projects be taken up by this Company, or would independent Companies be formed for carrying them out?

The CHAIRMAN said the requisite preliminary notices had been given, but the projects were not yet in a fit state to be brought forward. At present the hands of the Company were quite full, but here again the formation of the branch lines was merely a question of time. (Hear, hear.)

Mr. SMITH, in complimentary terms, proposed the cordial thanks of the proprietors to the Directors for their uniform zeal and ability in forwarding the interests of the Company. He hoped he might be allowed to join with them the name of their excellent Engineer, who month after month was proving himself still more worthy of the confidence reposed in him. As he could not in his presence enlarge upon his distinguished merit, he would content himself with saying that Mr. Cubitt had shown himself to be one of the first engineers in Europe, and they might congratulate themselves upon having secured his services. (Much applause.)

The motion was carried by acclamation.

The CHAIRMAN returned thanks for his colleagues, himself, and Mr. Cubitt, expressing their determination to pursue the same course as heretofore. For himself he would say that the moment he found he could not discharge his duties with satisfaction to the proprietors and himself that moment would he resign his trust.

The meeting then separated.

PARIS AND ROUEN RAILWAY—MEETING OF SHAREHOLDERS.

ON Wednesday last a meeting of the English Shareholders of this railway was held in the Clarendon Rooms, Liverpool, for the purpose of receiving the Report of the Directors of the undertaking, who had visited the works in France, for the purpose of ascertaining the state in which the line was, and the future prospects of the Company.

Shortly after one o'clock the room was crowded with Shareholders. Mr. J. Moss, banker, was called to the chair.

Mr. SWIFT, law clerk to the Company, at the request of the Chairman, then proceeded to read the Report of the Directors, but its extreme length precludes more than a very brief abstract. It first referred to the position in which the Company was at the last meeting in July, last year. The Chambers of French Legislature then voted the law, authorising the construction of the railway, and it only awaited the signature of the King of the French. The Report stated that in passing the Chambers the Bill had received some modifications. Those modifications were subsequently discussed and acquiesced in by the English shareholders, after which the Bill received the Royal sanction in due course. The Report then proceeded at very great length to notice the progress made in the construction of the line, the funds necessary for the works, and the ultimate prospect held out to the shareholders. The cost of constructing the line was expected to be about 1,610,000*l.*, and the land was expected to cost about 150,000*l.* The subscribed capital of the Company, which was 2,000,000*l.*, was fully expected to be amply sufficient for the whole cost of the undertaking. The Report further stated that a great portion of the line was contracted for by two Englishmen of known respectability, who, in addition to the undoubted security they had given, had agreed to allow 5 per cent. of the amount of their contracts to remain in the hands the Directors until they had completed their works, and then they wished the money to be expended in shares in the railway. The works contracted for are to be finished at various periods, the latest of which is to be March 1st, 1843. Towards this undertaking the French Government have advanced the sum of 560,000*l.* at 3 per cent. interest, to be repaid in 30 annual payments—the first of which was to commence in July, 1848. After adverting to the satisfactory progress of the works on the line, and the prospect of the Company, the Report concluded by stating, that the English Directors could not give a greater proof of the success of the line than the fact that they now hold more shares than they had done at any former period.

The CHAIRMAN said, that was the Report which the Directors had thought proper to lay before the shareholders, and he trusted it would meet with their approbation. Most of the information contained in that Report had, however, been obtained from gentlemen most competent to afford it, namely, Messrs. Reed, Locke, and Chaplin, and he trusted those gentlemen would now afford the meeting the benefit of their personal experience. He first called on Mr. Locke, the Engineer of the Company, to state his views of the works.

Mr. LOCKE then addressed the meeting. He said, when he last addressed the shareholders, twelve months ago, he had stated the amount of capital which would be required. He had now the satisfaction of stating that the subscribed capital of the Company would, in his opinion, be rather more than amply sufficient for their entire completion. (Applause.) Although there were only about 240,000*l.* of the works on the line incomplete, he (Mr. Locke) had had an offer to complete them at a sum less than he had put in the estimates. Mr. Locke, after stating that the cost of engines, stations, carriages, &c., would be about 350,000*l.*, said he trusted the whole of the works would be completed by March, 1843. Of course it was impossible to state what would be the traffic on the line, but he felt no doubt of the success of the undertaking. (Cheers.)

Mr. REED, one of the Directors who had visited

Digitized by Google

France, next addressed the meeting, and gave a flattering account of the progress of the works.

The CHAIRMAN said, he had seen it stated in the public papers that there was a misunderstanding between the French and English Directors. He begged to say that such was not the case, for although the English Directors had the right of voting by proxy in France, they had never yet thought proper to use those proxies. He begged to call on Sir John Easthope, as one of the deputation of Directors, to state the manner in which they were received in France.

Sir J. EASTHOPE observed, that he could have no hesitation in stating that they had been received in France with perfect frankness, that they were admitted by the French Directors into that close and thorough investigation of their affairs, without any apparent reserve, that men of business always looked for, and which always begot mutual confidence. The speaker then alluded to some differences which had existed between the two bodies of Directors arising from the fact of the English Directors having from their commercial ideas different views to those of their French colleagues; but he was happy to say those differences were now satisfactorily arranged. (Cheers.) After alluding to the fact of nearly all the calls being paid up, and the probability of the remainder being forthcoming, Sir John proceeded to speak of the industry displayed by the French Directors, which was indeed an example to the English, for instead of attending weekly, or at the meetings which took place twice a week, they made it their daily business, and, with the exception of their Chairman, who was a very old gentleman, all were present at all their meetings. After stating that there was no doubt of the success of the undertaking, the speaker proceeded to observe that the result would have a far higher object than mere gain, for it would lead to a better understanding between the two countries, by bringing the artizans and labourers of France and England into personal contact.

After a few words from Mr. Chaplin, one of the deputation to France, and some desultory discussion, the Report was adopted, and ordered to be printed and circulated amongst the shareholders, and after thanks had been voted to the deputation of Directors who had visited France, the meeting separated.

PROPOSED NORWICH AND YARMOUTH RAILWAY—MEETING AT GREAT YARMOUTH.

A MEETING was held at the Town Hall, Great Yarmouth, on Friday, the 19th instant, convened by private circulars from the Mayor, for the purpose of considering the propriety of supporting the line between Yarmouth and Norwich, selected by Mr. Robert Stephenson, and known as *the Valley line*.

The Mayor having been called to the chair, stated shortly the object of convening the meeting. They had many of them attended a private meeting some time ago for the support of the East Anglian line laid down by Mr. Rastrick, and had formed a Committee for advancing that measure, under the impression that it would be forthwith proceeded with. He believed the general feeling was, that that line should be supported which was likely to be proceeded with first, and as he was now informed by Messrs. Reynolds and Palmer, the Solicitors for the Valley line, that they were intending to introduce a bill into Parliament in the next session, for carrying out that measure, he thought he should be considered as having acted rightly in convening the present meeting for considering the merits of that proposed undertaking. The letter from the Solicitors was then read, and afterwards a report of Mr. Robert Stephenson on the Valley line, from which the following are extracts:—

REPORT.

GENTLEMEN,—In accordance with your request conveyed to me by Mr. Rackham, I took the earliest opportunity my engagements would allow to examine carefully the country between Norwich and Yarmouth.

In the first instance I had laid out the line by the assistance of the ordnance map, in which the features of the country are so accurately delineated, that I had scarcely a doubt as to the expediency of the line I had selected. I then sent down two of my assistants to examine the locality, and report to me whether any, and what natural impediments existed to the construction of the line along the Valley of the Yare. Their Report being favourable, I at once gave orders for proceeding with the survey and section, and the plans were accordingly deposited on the 1st of March last, in compliance with the Standing Orders of the Houses of Parliament.

It is perhaps unnecessary for me again to describe the direction of the line, as with that I presume you are already familiar, but it may be as well to state some of the more striking features of the Valley line as compared with the two River lines.

In the first place, then, the greatest difference between the highest and lowest points in the gradients of the Valley line is 25 feet, whereas in the Eastern Counties' line there is a difference of 76 feet, and in the East Anglian line a difference of 67 feet. Laying aside trifling indulations, the Valley line has one summit, the Eastern Counties' line one, and the East Anglian two; the highest summit above the level of the Valley is upon the three lines respectively, taking them in the same order, 28 feet, 79 feet, and 70 feet. The worst gradient upon each—Valley line 1 in 345, the Eastern Counties' 1 in 168, and the East Anglian 1 in 330; the two worst gradients upon each—Valley line 1½ mile of 1 in 345, and 1¾ mile of 1 in 430, the Eastern Counties' of 1¾ mile of 1 in 168, and 1¾ mile of 1 in 250, and the East Anglian 4¼ mile of 1 in 330, and another 2 miles of 1 in 330. In the latter line the gradients for about 10¼ miles are at the rate of 1 in 330, and to attain even that gradient, this line encounters more than twice the quantity of excavation required on the Valley line.

The Eastern Counties' line has considerably less cutting than the East Anglian, but with even worse inclination; taking them in the same order, viz., Valley line, Eastern Counties', and East Anglian, the deepest cuttings are 26½ feet, 32 feet, and 30 feet; the highest embankments are 16 feet, 28 feet, and 35 feet; the comparative quantities of excavation as 4, 5, and 8½.

The number of public roads to be crossed is as follows:—By the Valley line 9, including 1 turnpike road; by the Eastern Counties' 17, including 2 turnpike roads; and by the East Anglian 23, including 5 turnpike roads. It should, however, be mentioned, that many of the roads in the Valley, on account of the small traffic along them, may be safely passed on the level, thus avoiding the expense of bridges, which cannot well be done with the roads inland from village to village. In addition to this, it would be found in the execution of either of these lines, that the number of the accommodation bridges required, would form a large and extensive item, from which the Valley line is almost entirely free.

The Valley line does not cross any navigable river, but it is proposed to divert the course of the river Yare at Thorpe for a distance of about 50 chains; the Eastern Counties' line crosses the river Yare once near Postwick, by means of a drawbridge, and the East Anglian crosses the river Wensum twice and the river Yare once, by the same means. I cannot refrain from expressing my opinion, that considering the nature of the traffic, these impediments would be almost fatal to the working of either of the lines. * * *

Lastly, the value of the land required by the direct lines is estimated to be at least twice that of the marsh land required by the Valley line.

Having thus far compared (and I hope it will allowed with fairness) these three rival lines, many will no doubt feel with me surprised, that a line should be sought through the high country when so good a line could be obtained along the Valley of the Yare. The chief object appears to have been to save about 2½ miles of distance,—all which advantage would be lost in time, in consequence of the worse gradients.

The rejection of the Valley line could not proceed from a fear of the foundation being sufficiently firm to carry a low embankment, because I perceive that both the lines cross the marshes from Witlingham to Postwick, one with an embankment of 28 feet, and the other with an embankment of 24 feet in height. For my part, I entertain no doubt of the practicability of carrying the low embankment I propose over the marshes, by the occasional adoption of a base of hurdles, and in some few places of piling.

Before I entirely quit the comparison, let me say a word or two as to the selection of the stations. The Norwich terminus of the Valley line is at the Foundry Bridge, which I conceive to be a very good point; the East Anglian station is about half-way up Rose Lane, and is therefore better still by nearly a quarter of a mile, but is only attained at an outlay which I think uncalled for; the Eastern Counties' station is a little south-east from the Carrow Bridge, and is obviously much inferior to either.

The Yarmouth station of the Valley line is at the west side of the river Bure, at its confluence with the Yare and it is proposed to throw a bridge across the river Bure at that point, which would make it an excellent situation for a terminus. The East Anglian station is to the east of the Market-place about a quarter of a mile, and is no doubt a convenient one, but the same remark applies to it as to the other terminus—it is attained at too great cost; the Eastern Counties' station is to the north of the new road, near the Suspension Bridge, and is decidedly the least advantageous of the three.

I will now give a list of the gradients of the Valley line, and will then proceed to make some general remarks upon it

0	miles	34	chains	falling 1 in	449
0	,,	52	,,	rising 1 in	763
0	,,	48	,,	level	
0	,,	40	,,	falling 1 in	660
1	,,	40	,,	rising 1 in	345
1	,,	66	,,	falling 1 in	430
1	,,	40	,,	level	
1	miles	30	chains	rising 1 in	660
,,	,,	60	,,	falling 1 in	1131
5	,,	70	,,	level	
,,	,,	40	,,	falling 1 in	1760
4	,,	00	,,	level	
,,	,,	40	,,	rising 1 in	1056
1	,,	44	,,	level	
20		44			

The above statement of the gradients I conceive requires scarcely any comment, as they are so strikingly favourable as to be almost without a parallel for a distance exceeding 20 miles.

The section is equally remarkable as regards the extent and character of the works required in attaining the formation of such gradients. There is not one of them of an extent likely to involve any extraordinary contingency, by which the estimate of cost might be rendered equivocal or uncertain.

The excavations are not only few in number, but in extent fall short of such as are in the ordinary course of railway engineering deemed important. The embankments are still more insignificant, and as regards the point upon which I have previously touched, viz. the marshy character of the foundation, I directed my attention to this point in an especial manner during my recent survey of the line, by walking over the parts where such a casualty might be supposed in the least degree likely to arise, and I can unhesitatingly assert that the difficulties just alluded to do not exist. I express this opinion with the more confidence, since, in a line lately completed under my direction, every part of it is now standing firmly, although many of the embankments are raised upon a marshy bottom, exceeding in depth and quite as bad in quality as any part of the marshes crossed by the proposed Norwich and Yarmouth Railway.

Having satisfied myself as to the capability of the marsh ground to support any embankment which is proposed to be made upon it, I am more than ever confirmed in the opinion I expressed in my former Report as to the propriety of following the course of the Valley of the Yare, in preference to the high grounds by Lingwood.

The additional length of 2½ miles is more than compensated for by the inexpensive character of the works and by the excellent gradients obtained. These were the two considerations which induced me to decide in favour of the Valley line, and it is almost needless for me to add a single remark in vindication of the importance which I have attached to these elements.

In railways generally, one of the chief difficulties an engineer has to contend with, is in the correct determination of the expense to which he is justified in going, in order to produce a certain improvement in gradients, and more particularly in what has been termed the characteristic or maximum gradient of a line of railway. In the present instance, however, I have had to encounter no such difficulty, for while the line by the Valley affords the most unexceptionable gradients, it at the same time admits of the formation of a line at the least expense.

In conclusion—I have merely to state, that I have carefully considered all the particulars connected with the establishment of a railway communication between Norwich and Yarmouth calculated in any way to effect its success as an investment of capital, and I am firmly persuaded, that if the line I have selected be judiciously carried out and economically worked after completion, it cannot fail *to be as prosperous as the most successful of the lines in this country*. I am aware, that doubts have been expressed by many as to the probability of making a railway profitable which runs parallel with and close to a navigable river; but I consider this question now set at rest by the signal success which has attended the opening of the Newcastle and Shields Railway, by which the steam-boats upon the river Tyne, which were very numerous, have been almost annihilated, and that too, under circumstances much less likely to bring about such a result than the Norwich and Yarmouth Railway, the saving in time by the Shields Railway being comparatively trifling.

I have estimated the costs of making this railway at the sum of 197,429*l.* 18s., which I believe will be found ample for the completion of the line, including the purchase of land, and the necessary carrying establishment for the estimated traffic.*

I have the honour to be, Gentlemen,
Your most obedient servant,
ROBERT STEPHENSON.

Westminster, 19th April, 1841.

Mr. BURKE, the Parliamentary Agent for the promoters of the Bill, was then called on to address the Meeting, and in doing so, stated, that it would be needless to detain them by any observations on the advantages of having a railway between Norwich and Yarmouth. It was enough to walk along their fine quay crowded as it was with shipping, and to know that the whole of the produce imported into the harbour was conveyed inland, to become at once convinced that whether for the conveyance of persons or goods, a railway bringing Yarmouth within one hour's reach of the city of Norwich could not but be a source of vast local convenience. He did not deny that it would be better still to have a railway from Yarmouth via Norwich to London, but he hesitated not to affirm, that a measure of that magnitude, involving as it would an expenditure of more than 2,000,000*l.* was, in the present state of the monied affairs of the kingdom, im-

* 50,000*l.* will be borrowed on mortgage under the usual powers of the Act, for the purposes of the carrying establishment in addition to the capital of 150,000*l.* required for the works.

Digitized by Google

practicable. The people of Liverpool and Manchester had hitherto been the great supporters of railways, but he hardly doubted, that looking to the comparatively small traffic which might be anticipated on the proposed East Anglian line (the most profitable part, viz. that nearest London, being already occupied by another Company) it would be almost impossible to raise a share towards that undertaking, either in Liverpool or Manchester. If so, would it not be wise to secure the line merely between Norwich and Yarmouth, which it was quite within their own means to execute, and which would not only prove a most profitable and useful speculation in itself, but which being executed, would afford the greatest possible inducement to an extension of the line from Norwich to London. He need hardly point out the advantages of such a line to Yarmouth, which would thereby become almost a suburb of Norwich, and of course a place of constant resort for purposes of pleasure, whereby the value of house property would be increased and a stimulus given to the trade, of the town. The question then to be considered was which of the lines laid down between Norwich and Yarmouth would be the best, and in considering this subject he would simply refer them to the Report of Mr. Stephenson, and the statements made by the promoters of Mr. Rastrick's line, from which it was plain that the Valley line could be made for about one-half the cost of the latter, and with more favourable gradients. He held in his hand a letter from Mr. Robert Stephenson, addressed to himself, explanatory of his Report, which he would take the liberty of reading to the meeting.

35½, Great George-street, Westminster,
November 17, 1841.

My Dear Sir,—Referring to our conversation of this morning respecting the estimate of the Norwich and Yarmouth Railway, I have not the least hesitation in saying that the amount exceeds what will be required. I cannot quote a more conclusive case than the Aylesbury Railway, which was executed under my directions, for 7 000*l.* per mile. The works upon that railway are very similar to although not quite so favourable as those on the Norwich and Yarmouth line. Indeed the works on the latter line are of so inexpensive a character as to be without any parallel within my knowledge over a like distance.

I remain, my dear Sir, yours sincerely,
ROBERT STEPHENSON.

To St. George Burke, Esq.

The line therefore being about 20 miles long, would cost about 14,000*l.*, and allowing 10,000*l.* for contingencies, and 50,000*l.* more for the purchase of engines, carriages, offices, &c., the whole capital required for the Valley line would not certainly exceed 200,000." If that were so, there could be no sort of doubt that the measure would be one attended with very considerable profit to the subscribers, for he found by the calculations made by Mr. Reynolds, who had taken the greatest pains to arrive at accuracy, that the traffic between Norwich and Yarmouth would produce at least 40,000*l.* per annum, calculated on the principle that the present passenger traffic would be doubled by the making of the railway. He thought, however, that on a short line of this description, whereby two important towns would be brought within three quarters of an hour's reach of each other, the passenger traffic would be increased in a far greater ratio than as two to one. Even on long lines, the traffic increased in a greater ratio than that, but if they looked to the case of the Manchester and Liverpool Railway, or the Great Western Railway between London and Windsor, they would find that, whether for purposes of business or pleasure, the traffic by railway on all comparatively short lines bringing towns of importance within one hour's reach of each other, bore no comparison to the previous traffic by coaches and other conveyances, which occupied three or four hours in the journey, thus wasting the best of a day in going to and fro. Granting, however, that the traffic between Norwich and Yarmouth would yield but 40,000*l* per annum, this alone would give a profit to the subscribers, after allowing 40 per cent. for working expenses of at least 13 per cent.—no inconsiderable inducement for the investment of money. It was essential to show to Parliament that every measure to which the legislative sanction was sought, was one likely to support itself, and return a profit to the subscribers, and the promoters of the present measure had reason to think, that it possessed these essentials in an eminent degree. It was said that Mr. Rastrick's line would cost 16,000*l.* per mile, and of course therefore its profits could not be so large as those of the line selected by Mr. Stephenson, even if it were equally favourable in other respects. He of course, could not contend, that if the East Anglian Company were in a condition to go to Parliament next year, with their proposed capital of 2,000,000*l.* subscribed for, it would not be wise for Yarmouth to support them, but it was one thing to promise to bring in a Bill into Parliament, and another to get the funds requisite to do so. He had already said, and he repeated, that he believed it to be quite impossible to raise the 2,000,000*l.* required for the East Anglian line, at all events in the present state of the public feeling with regard to railway speculations Moreover, it would be for the people of Yarmouth to consider, whether it would not be more for their interest, to keep under their own control the formation of the line between Norwich and Yarmouth, than to entrust it to strangers at a distance. They had already had experience of the latter course, and had not benefited by it; but if once they made their own line to Norwich, they would be in the happy position of having two rival Companies, namely, the Eastern Counties' and the Northern and Eastern, struggling which should join them first. If on the other hand they rejected the Valley line, which was quite within their reach, under the hope that others would proceed with the East Anglian, he firmly believed they would sacrifice a substance for a shadow, and it would be many years ere they could boast of any railway at all.

An agent of the East Anglian line then addressed the meeting, and pointed out that that measure was supported by very influential persons, and that it would be unwise for the people of Yarmouth by supporting the Valley line, to deprive themselves of the great benefits which the former line held out, whilst its promoters were adopting all the necessary steps for bringing a Bill into Parliament in the next session.

Mr. REYNOLDS, Solicitor for the Valley line, stated that he was applying to all the landowners, &c. on the Valley line, in compliance with the Standing Orders of Parliament, and believed that similar steps were not being adopted by the other party, which was admitted so far as the knowledge of the agent of the East Anglian Company extended.

Resolutions declaring the importance of having a railway between Norwich and Yarmouth, and approving the line selected by Mr. Stephenson, were then passed without any dissentients, (see our advertising columns), but it was suggested by Mr. G. D. Palmer, that as this was not a public meeting, these resolutions could not be considered as expressing the opinions of the town of Yarmouth, and that it would be wise to convene a public meeting hereafter, which was fully concurred in by the promoters of the Valley line, and it was suggested by them that an early day in January should be named for the meeting, by which time it would be seen whether the East Anglian Company had taken the necessary steps for going to Parliament in the next session, by complying with the Standing Orders requiring application to be made to all the landowners and occupiers on the line before the 31st December.

A vote of thanks to the Mayor was then passed, and the meeting separated.

COACH ACCIDENTS.

ABOUT five o'clock on Monday evening last, as one of the Bury coaches, the property of the assignees of John Ramsbottom, was proceeding towards Manchester, the horses took fright a little on this side of Roden-lane, Prestwich, and became intractable. Mr. J. Williamson, of the firm of Messrs. Williamson and Denville, hat-manufacturers, Canal-street, Stockport, was sitting on the box with the coachman; and, in assisting him to pull up the horse, the reins broke, and the horses ran against a ditch, and upset the vehicle. Mr. Williamson was thrown headlong from his seat, and received, in his fall, a severe concussion of the brain. The coachman and two other passengers were severely bruised; and Mr. Daniel Williams, manufacturer, 14, Stanley-street, Red Bank, received a severe wound in the forehead and nose. He and Mr. Williamson were conveyed in an omnibus to the Manchester Royal Infirmary, where they remained in a state of insensibility till the following day. Mr. Williams has since sufficiently recovered to be able to attend to his business, but Mr. Williamson died at 10 o'clock on Wednesday night. A *post mortem* examination was made on Thursday, and it was found that a comminuted fracture on the base of the skull, with the effusion of blood on the surface of the brain, were the cause of death. Last evening an inquest was held, on view of the body, before Mr. Chapman, the borough coroner, when these facts were stated in evidence, and a very high character was given of the driver for steadiness and sobriety. No blame being attributable to any party, the jury returned a verdict of accidental death.—*Manchester Guardian.*

This morning, as the *Independent* Carlisle coach had reached Beansburn, on its way from Glasgow, it stopt on a sudden, the axletree broke, and the vehicle, with a full complement of passengers and luggage, upset. The driver had his arm bruised, but still retained possession of the reins, and the guard sustained a concussion on the head. Among the passengers all escaped with slight bruises, and those who required to go further than Kilmarnock proceeded afterwards in the other coach which was procured, under the guidance of the same guard and driver, except a boy, about 14 years of age, whose leg and right arm were found to be both broke. He was carried into a house in the neighbourhood of where the accident occurred, and attended by Drs. Young and Whitelaw, who took immediate means for his relief. No blame attaches to the driver, who was driving at the usual pace when the accident occurred.—*Kilmarnock Journal.*

On Monday afternoon, as the *Queen Victoria* coach was on the road between Colne and Burnley, the horses became rather unmanageable; and when the coach was coming down the hill between Bank Hall and the old church in Burnley, just at the entrance of the town, Mr. Francis Bumby, cattle dealer, of Manchester, suddenly seized one of the reins, with the laudable view, no doubt, of assisting the driver to pull up the horses. Unfortunately, however, in trying to avoid a grate and declivity on one side of the road, the coach was nearly upset, and by the concussion, the driver, Mr. Bumby, and several other passengers were thrown off the coach; and we regret to add, that Mr. Bumby was so seriously injured, that on being conveyed to a neighbouring house, although surgical assistance was immediately procured, he died in about fifteen minutes. Mr. William Robinson, butcher, of Haslingden, had his leg broken in several places. Mr. J. Nowell, butcher, of Burnley, had his arm broken, and was otherwise bruised; and the coachman had his shoulder dislocated, and received some other injuries; but most providentially a woman and her child, who were on the top of the coach, as well as another passenger, escaped unhurt. On Tuesday, an inquest was held on the body of Mr. Bumby, at the Old Sparrow Hawk Inn, Burnley, when it was proved in evidence, to the entire satisfaction of a highly respectable jury, that no blame was attributable to the driver, Richard Hanson, who is a very steady man. Accordingly, a verdict of "Accidental death" was returned, with a recommendation that some alteration should be made in the road in the place referred to. We think it right to add, in justice to the driver, that at the close of the inquest Mr. John Bumby, the brother of the deceased, stated that he had travelled thousands of miles with the coachman, whom he had always found to be a steady, discreet person, and that he thought if his brother had not unfortunately interfered, the accident would not have occurred, and he perfectly coincided with the decision of the jury.—*Leeds Mercury.*

FALL OF AN EMBANKMENT ON THE NORTH MIDLAND RAILWAY.—During the night of Sunday last, a large portion of the embankment at the north end of the Clay Cross Tunnel gave way, completely covering the rails, and carrying with it a part of the incline used for the purpose of conveying the coals, &c. from the pits of Messrs. Stephenson and Co. to the North Midland Railway. The policeman on duty at the end of the tunnel immediately gave the alarm, and a number of workmen were collected as soon as possible, and who, in a short time, succeeded in clearing the rails, so that very little delay occurred to any of the trains. During the whole of Monday a great number of men continued to be employed in clearing the earth from the other line. Mr. Stephenson and several other gentlemen connected with the railway were on the spot nearly the whole of the day.—*Derby Reporter.*

FOUR-WHEELED AND SIX-WHEELED ENGINES.

To the Editor of the Railway Times.

SIR,—In Mr. Hood's able letter of November 17, in your last number, appears the following sentence:—

"Arguments are *not* facts, though facts are, I conceive, the strongest arguments, in cases like the present."

If the argument be accompanied by its demonstration, it becomes as sound a fact on paper, as any aggregation of materials can make it, in what is called practice — otherwise geometricians might close their books, and the whole practice of the physical arts would degenerate into mere empiricism. The laws which govern all mechanical movements are precise and definite—the respective actions of gravity and elasticity are well ascertained, and the results which must arise from ignorant attempts to oppose those laws, or thwart those actions, may be as accurately predicted and demonstrated by paper diagrams or plain language, as by the *matériel* of the model room, the workshop, or the railway. That an eccentric wheel will produce unsteadiness in a carriage as compared with one truly centric, requires no practical experiment to demonstrate, unless to the most obtuse faculties, and the whole question of the movements of locomotive engines, regarding them as wheel carriages, and their comparative principles of safety, is reducible to demonstrations just as simple. No facts can controvert principles which exist in nature, even though circumstances may happen occasionally to make the wrong appear the right.

All advocacy of engines four-wheeled *versus* six, if made to rest on "facts," must also rest on evidence; and until that evidence is carefully gathered and correctly set forth, no comparison can be drawn between them. Isolated facts, stated by one side or the other, can only serve to enlist prejudiced or unjudging partisans. The "fact" is not complete unless all the circumstances are stated as to wheels, framings, cylinders, springs, rails, curves, gradients, state of road, speed, length, centre of gravity, &c. It might happen that the six-wheeled engines were constructed in conformity to mechanical laws, and the four-wheeled engines with disregard of those laws, or *vice versa*. It would therefore be manifestly absurd to draw any conclusion, even from a most extensive practice, unless the whole particulars connected with each circumstance were correctly stated. And supposing this done, it would only be a practical verification of the rules which a sound mechanician would lay down as the basis of construction *à priori*, working according to the dictates of mechanical laws. If the machine went wrong, when constructed in conformity to mechanical laws, the constructor would seek for the defect in its imperfect details, and work on till they were mended. It would be in proportions of parts that he would seek for the sources of error, when true principles were attained.

What then are the desirable or rather the essential principles in the construction of an engine, to draw trains on a railway? They would appear to be in the following:—

1. The extreme limit of load on a single pair of wheels, which the rails and roadway will bear—including the effects of momentum and concussion—without deflection or displacement, must be ascertained.

2. The weight on the driving wheels must be limited not to exceed that standard, or the rails and road will be unduly tasked, and destroyed.

3. It is desirable to throw as much as possible of the whole weight of the engine on the driving wheels, because the adhesion will thereby be increased, and the load drawn may be increased in proportion to the adhesion.

4. All locomotive engines, whether they have four wheels or six, are really only two-wheeled machines as regards their powers of progression, unless the wheels are coupled together. The "bearing wheels" as they are termed, are merely contrivances to balance the engine on its driving wheels, and whatever weight is thrown on the bearing wheels, is just so much added to the load of the train.

5. If there be only two bearing wheels, placed in front of the engine, more weight must be thrown on them to keep them down to the rails, than when an additional pair of bearing wheels are applied behind. The front wheels may rise from the rails by a jerk of the train, when only two are used, but where four are used they will naturally counteract any irregular tendency. The two bearing wheels are kept to the rails by the action of gravity, the four bearing wheels are kept to the rails by leverage. But if the attachment of the train be made to the front of the engine, passing beneath the bottom, every jerk of the train will tend to keep the front bearing wheels to the rails, and in that case less weight will be needed on them.

6. The longer the engine—whether on four or six wheels—the steadier it will run, but greater length will in most cases involve greater friction on curves. This friction, however, may be easily obviated.

7. The wheels should be external to the framings and bearings, because in that case the oscillations or irregularities of the wheels will act with a diminishing leverage on the springs and on the engine and boiler, and will be less subject to disturb the level of the water in the boiler; whereas, with framings and bearings external to the wheels, the irregularities of the wheels will act with an increasing leverage on the springs, and cause a more irregular movement in the boiler. The internal framings will also tend to counteract the thrust of the flanges against the rails, and thus relieve the axle from strain.

8. The longer the engine, the longer may be the boiler, and the more perfect the heating process, without increasing the lateral or vertical bulk.

9. The centre of gravity should be kept as low as possible, to prevent oscillation, and also as much in the centre between the framings as possible.

10. The cylinders and pistons should be as close as possible together in the centre, in order that the alternate strokes should exert as little as possible of lateral leverage, causing unsteady movement.

11. The springs should be so contrived as to be perfectly flexible, both vertically and laterally, so as to yield to every variety of concussion. With six-wheeled engines more perfect springs are required, than with four-wheeled engines, on account of the more numerous bearings. An engine with two driving wheels and one bearing wheel, would always bear upon the three wheels without the aid of springs, upon the geometrical principle that three points not in a right line with each other will always be in contact with the surface they rest on, whether that surface be of plane or irregular form. In other words, three points, not in a right line, will constitute their own plane. Four or more points, on the contrary, can only bear equally on a true plane, unless they are shifting points, rising and falling to suit the irregularities of surface. Mr. Hood says truly:—

"That the springs greatly modify this defect—unequal bearing—I allow, but they do not remove it. A spring, like every other mechanical power, is not *instantaneous* in its action, but requires a definite period of time to develope its power, and therefore at high speed the action of the spring is frequently at fault, as perhaps it is expanding from the effects of a previous contraction, when the deflection of the rails would require it again, or still further, to expand, in order to keep the wheels in contact with the rails."

This fact was insisted on by the Editor of the *Railway Times* of April, 1840, in his criticism of the bowsprings. Your readers will there find the following remarks:—

"With the rapid speed used on railways, the concussion is so instantaneous, that a spring is unserviceable which does not reply as instaneously with its elastic action; and, therefore, if a carriage be not suspended as delicately as a scale beam, so that it can be swayed up and down by the hand, it must be considered an imperfect suspension. No springs in common use will answer to this test. They receive a blow unyieldingly; or if they reply at all, it is slowly and so ineffectually, that the wheel has passed over the obstacle, and encountered another, before the spring has had time enough to overcome its own friction or inertia."

So far from the action of common springs being instantaneous, as commonly applied to engines, the commonest axle is to have no perceptible action whatever. The friction of the spring plates in sliding one over the other when new, is a great obstacle to quick action—when rusted, the obstacle is multiplied manyfold. But apart from the defective construction of the spring, the application is still more defective. The elastic or playing portion is removed to the greatest possible distance from the point of concussion. The wheel and axle receive the first blow, and it is contrived to impinge on the butt of the spring, instead of the taper end; therefore the concussion has to travel through the whole length of the spring, in two different directions, overcoming the friction of the plates before it is expended. It is analogous to a coachman fastening his whip lash to the butt of the handle, or an angler fastening his line to the butt of his rod. In all cases of elastic resistance, the greatest amount should be developed in the greatest proximity to the disturbing force, diminishing in proportion as it recedes. Were the ordinary spring divided by a cross section at the centre, and secured by the butts to the framing, so that the two taper ends might be in contact with the axle, a portion of the evil would be remedied, but the friction would remain the same, and there would be no efficient provision for elastic lateral yielding—*the want of which is one considerable cause of the breakage of railway axles*, because the pressure of the flange against the rail is the medium through which the wrenching or torsion force is applied, and *this would be remedied by lateral elastic yielding*.

It was this consideration which first gave rise to the application of the bowspring, the only principle which fulfils the three desirable conditions—absence of friction except in simple axle movements—greatest resilience in the closest proximity to the concussion—and universal elastic action, eluding concussion vertically, laterally, longitudinally, and diagonally. No other convenient principle that I am aware of can produce this result.

Mr. Hood says, that "a spring is not *instantaneous* in its action." This is true; but neither is the concussion of high speed *instantaneous* in its action. It is very rapid, but the suspension of the bowspring may be as delicate as a water balance. It may be made, if required, for a given weight, to tremble almost like a poplar leaf, and tell acutely the tale of every defect in the carriage construction, by free oscillation, or it may be made rigid enough to prevent oscillation, by converting it into hard vibration. A boat oscillates, a cart jerks and oscillates also, a waggon jerks only—unless it be topheavy or too broad for its length. If the boat be lengthened, the oscillation will be diminished, and in proportion to the roughness of the water must the length increase—increasing the breath proportionally. But the greater the speed, the greater must be the proportion of length to width, and the lower should the centre of gravity be kept. The high topped broad-wheeled waggon, which rolls safely at from three to four miles per hour, would be overthrown if the speed were increased to six.

The greater the speed used on railways the longer therefore should be the engine carriages, and train carriages also, to produce steadiness. The solitary objection to length is, friction on curves. This objection was strongly insisted on by me in your No. 140, and at various times since, constant efforts being made to draw the attention of engineers and others, engaged in railways, to this glaring evil. But it has always been met by the assertion that the friction on curves is so inappreciable, as not to merit attention. I trust that Mr. Hood's exertions will be the means of calling attention more earnestly to this, and establishing or refuting, by a series of well-authenticated facts, his argument—which is strongly supported by individual instances—that the axles of six-wheeled engines are broken in much

Digitized by Google

greater proportion, than is the case with those on four wheels; or, what would come to the same thing, that the axles of six-wheeled engines are proportionably heavier than those on four wheels with equal weight of machine and equal steam power.

In addition to the greater steadiness to be attained by long engines, there are two other advantages. First, the boiler may be greatly increased in length and power, without rendering the engine top heavy. Secondly, the length of the connecting rods may be increased, whereby the power of the pistons will be applied at more advantage, and the slide guides of the pistons relieved of much friction, at certain portions of the stroke. The compensation in curves to avoid lateral friction, may be attained by elastic yielding, so regulated as to place the front and hind axles in true radii to the curve, the moment they depart from the straight line. This would relieve the wheels and axles from the torsion to which they are at present subjected, and remove the chief cause of breakage.

I remain, Sir, your's obediently,
WILLIAM B. ADAMS.

November 20, 1841.

WORKING EXPENSES OF RAILWAYS — THE CHESTER AND BIRKENHEAD, AND LANCASTER AND PRESTON RAILWAYS.

To the Editor of the Railway Times.

SIR,—I perceive "Œconomicus" has favoured us with another letter on railway expenses, in which he admits I have in a great degree removed his objections; nevertheless, he thinks low fares no excuse for extravagant expenditure. I am sure he greatly mistakes me if he thinks I advocate unnecessary expenses, whether the Company are working for high or low fares. What I meant to impress upon him and your other readers was, that if two railways were conducted at the same expense in every respect, but that one of them through the opposition of rival conveyances, was obliged at the outset to carry passengers at half the price the other railway did, their expenses would appear by the touchstone of "Œconomicus," to be double that of their neighbours—one say 40 per cent., the other 80, without the parties who manage the traffic expenditure department being at all to blame for it, or having any remedy within reach; for engines will just consume the same coke, and carriages wear out just as fast with passengers paying low fares as with high—yea, even if the passengers were carried for nothing.

I am by no means desirous of entering into warfare with your correspondent, especially as it is fearful odds fighting with an anonymous correspondent who shelters himself behind such a nice name as "Œconomicus;" nevertheless, he draws such insidious comparisons between the Lancaster and Preston Railway expenses and those of the Chester and Birkenhead Railway, that as the managing agent of that concern, I feel called upon to defend myself, lest his remarks should create an unfounded prejudice on the minds of shareholders whose want of acquaintance with the subject does not enable them to see through the fallacy of his arguments. He confines himself to the old style of per centage of expenditure upon income, and makes out that on the Lancaster line it is only 25 per cent., whereas on the Chester and Birkenhead it is 60 per cent. Now I wish to explain, that in this statement he has included the expenses of conveying passengers by omnibuses and steam-boats 1½ miles beyond the railway station, but that the railway expenses, exclusive of these extraneous and temporary charges, are only 45 per cent. instead of 60, as stated by him; and I am prepared to go into a detailed calculation to demonstrate that the discrepancy between the low per centage of the Lancaster line as compared with the Birkenhead, arises from the circumstance of the latter railway carrying their passengers at such a low rate, namely, averaging only 1¼d. per mile for each; and that if the Lancaster line had only received the same rate of remuneration their expenses would have been 46 per cent., or about the same as ours.

But in order to test the expenditure, as expenditure, in proportion to real work performed independent of the earnings. I have looked again into the last Report of the Lancaster and Preston line, My first difficulty arises from their not having given the number of passengers, but this I overcame on finding that they have paid 532*l.* 11s. 10d. for Government mileage duty, and as this on all railways is a fixed charge of one-eighth of a penny per passenger per mile, it follows that they must have carried 1,022,576 passengers a mile (being equal to 51,128 through passengers in half a year, or 280 per day). Their half year's expenses, exclusive of interest on loans, was 3,388*l.* 10s. 11d., which, upon a division thereof, shows that it has cost them 78-100th of a penny per passenger per mile; and on the Chester and Birkenhead the expenses (per account for 12 months ending 30th September), exclusive of interest on loans, and also omnibuses and ferry boats, was 10,971*l.* 17s. 2d., and the number of passengers 3,861,491 over a mile (which is equal to 729 through passengers per day), gives 68-100th of a penny per passenger per mile, being one-tenth of a penny per mile in favour of the Birkenhead line. For the benefit of such readers as are not conversant with decimal fractions, I will state it by the plain rule of proportion. If it cost on the Lancaster line 3,388*l.* 10s. 11d. to convey 280 passengers daily along a line 20 miles long, it would cost at the same rate to convey 729 passengers daily for a year along the Chester and Birkenhead line, 14½ miles long, 12,789*l.*; whereas it only did cost 10,971*l.*, being about 1,818*l.* per annum in favour of the Chester and Birkenhead Railway.

"Œconomicus" states that 100 passengers can be carried at little more cost than 50 when the trains must go. Although this may be true as far as it goes, it is not entitled to go for being worth much; for why should as many trains go on the Lancaster line with a daily traffic of 280 as upon the other line with 729 per day. On referring to their advertisements, I find there are only five trains each way between Lancaster and Preston, whereas nine each way have been running upon the Chester and Birkenhead line.

I thought that if even "Œconomicus" had proved the fact of cheap working at Lancaster, I might in some measure account for it by their having cheap coke for their engines; but he means to imply there is not much in this, when he tells you that Chester is as near the coal districts as Lancaster. Be that as it may, I know we cannot obtain good coke under 24s. per ton, whereas I believe their neighbours, the North Union Railway Company, who run the engines for the Lancaster line, only pay 16s. or 17s. per ton; and I think there is something in favour of the Lancaster line in their using a station at Preston conjointly with the North Union, whereby one set of porters, book-keepers, gas lights, &c., serve them both; and as it is not at all necessary to re-book nor re-load the passenger luggage, &c., at Preston, belonging to those that are going forward, there is a considerable saving to what there would have been required had the Lancaster line been an integral line, with two termini, like many other railways.

Thus far I cannot see that he has made out the case in favour of the Lancaster and Preston line. I will next proceed to make a few observations respecting other lines that he holds up as being more expensively conducted than his favourite; it being shown in his tabular statement, published in your number of the 23rd of October, that whilst the Lancaster and Preston expenses were 25 per cent., the Grand Junction were 44 per cent., the Liverpool and Manchester were 47 per cent., the London and Southampton were 49 per cent., the London and Birmingham were 39 per cent., and the York and North Midland were 38 per cent., making the Lancaster 13 per cent. below the lowest. But I beg leave to announce that, whatever erroneous comparisons he may have made with respect to the Chester and Birkenhead Railway, he has "put his foot in it" much deeper with regard to the others, and I explain it as follows:—There is nothing inserted in the Lancaster and Preston Railway account for maintenance of way!! It is true there has been nothing paid out of the traffic receipts yet, inasmuch as the contractor for the construction of the road had to maintain it in order for 12 months. That time is long past with the other railways above named. The year is now up with the Lancaster contractors, and in future there will be an addition of something like 200*l.* per mile, or 4,000*l.* a-year, to add to their expenses. Now, had this charge, or 2,000*l.*, been added to their last half-year's expenditure, as it will in future, it would have raised it from 3,388*l.* to 5,388*l.*, which would, on a receipt of 12,887*l.*, have been 41 per cent. instead of 25, as held out to the uninitiated.

Your obedient servant,
JOHN DIXON, C. E.

Birkenhead, November 24, 1841.

CLARENCE RAILWAY.

To the Editor of the Railway Times.

SIR,—Observing in your paper of last Saturday a report of a meeting of the proprietors of the Clarence Railway held on the 4th instant at Stockton-on-Tees, and also your remarks with respect to the question of management generally of that Company, I would beg as a shareholder conversant with all its bearings, to give you a more impartial account of what took place, not only at that meeting, but also of one held two days previous in London, having made a point of attending both meetings for the express purpose of hearing and judging for myself, rather than come to a hasty conclusion from reports emanating from either the London or country party. At the meeting held in London on the 2nd inst. there were about 50 proprietors present, who, with the exception of Mr. Jackson and two other gentlemen (both of whom acknowledged they were unacquainted with the details of the affairs of the Company), were, as the resolutions passed will show, decidedly in favour of the London management. It may be as well here to remark, that out of 3,000 shares which the Company have issued, five-sixths of that number are held in London, the remaining one-sixth in the country, the holders of the latter of which, it would appear from the country report, have either in person or by letter, expressed their wish for a local management.

The report of the proceedings you have received is mis-stated, as I find on application at the Company's office in London on the Secretary referring to the share ledger, that the votes to which the proprietors then present were entitled, supposing the whole to have been in favour of a country management, with the exception of three members of Committee and two of the shareholders who attended from London, and were opposed to the resolutions proposed, did not exceed 260 instead of 356, as represented in the statement sent forth to the public. I have also ascertained that the proprietors present at the London meeting represented more than one-third of the whole concern.

No notice is taken of the sentiments expressed at the London meeting, though Mr. Jackson the chief mover in this affair, and to whom the letters put forward as expressing the sentiments of the shareholders were addressed, was present, and could have informed the proprietors at Stockton of the decided opinion then expressed against a removal of the Management. It is true they were read, but it would not have answered to have embodied them in their account of what took place, but which in common fairness ought to have been done. Would it not have been much better after what had transpired at the meeting on the 2nd to have at once, seeing that the main body of proprietors were averse to a country Management, bowed to their decision rather than agitated the question, which could only tend to the injury of the concern generally? Did the country meeting suppose that if they had carried their measures the London shareholders after the recommendations they had intrusted to the deputation appointed by them, would have quietly submitted to put down, to be rode over rough shod, and this by persons not

Digitized by Google

holding more than as before stated, 1-6th of the whole stake in the concern.

Proxies are spoken of as if the parties to whom they were intrusted had no right to use them. They are authorised by the Acts of Parliament under which the Company is incorporated, and for what other purpose intended, than to give a voice to those persons who, for various causes, are unable to attend meetings themselves? The management was originally in the country, and continued to be so from the commencement, I believe in 1829 up to 1834, at which period the only stipulation under which the Echequer Loan Commissioners refrained from seizing the railway to satisfy their debt, was the understanding that the Committee should be removed to London, which was according done. The revenue at that time was at the rate of 2,500*l. per annum*. Since then it has by the exertion and attention of the London Board increased to more than ten times that amount, it being for the *month* of August last 2,295*l.*, or at the rate of 27,540*l.* a year. Such figures as these surely do not argue bad management, and if the proprietors have had no return for the sums they have invested, it is self-evident their property has been increased greatly in value, which must lead to their advantage in realising to them larger returns in the end. The revenue of a railway formed for the transit of coal until it reaches a certain amount, is all absorbed by expenses, but that amount doubled, the outlay on the additional amount would not be more than 20 per cent., and even that would decrease in proportion as the dues advanced. Year after year this increase has taken and is taking place, and the very fact of there being a stir among those on the spot—"North Country Gentlemen"—to take it up and carry it as they say themselves to a successful issue, shows that the prospects of the undertaking are brightening. I feel convinced that, ere another twelve months shall have passed over, the cloud that has so long overshadowed this undertaking will have dispersed, and that the favourable resources hitherto seen in perspective will be fully developed, and be the means of enhancing to the shareholders that for which they have so long and so patiently been looking forward.

The Clarence proprietors were induced to take shares in the Stockton and Hartlepool Railway under the impression that the advantages held out by the port of Hartlepool, would be the means of bringing on the Clarence line coals from other districts then not using their railway. This accession, however, has not been received, as up to the present time all the coals shipped at Hartlepool by means of the Stockton and Hartlepool line have been from collieries on the Clarence, which must otherwise have shipped their produce at the latter Company's staiths at port Clarence in the river Tees.

A CLARENCE RAILWAY SHAREHOLDER.

London, 19th November, 1841.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—I hope the notice taken of "S. P.'s" mendacious letter will not provoke a repetition of such contemptible efforts to depreciate property by misrepresentation. He has certainly made himself conspicuous, but something in the fashion of the distinction afforded by being elevated to the pillory. Your known impartiality will not be impugned by the rejection of *falsehood*. "S. P." is indebted to the notice his trash has excited entirely to the circumstance of being permitted to appear in the columns of your paper. To parry in some degree the efforts of malevolence by the circulation of statistical accounts, I beg to offer the following, which may be acceptable to many of your readers.

The Great Western Railway opened to—

Maidenhead	June 4, 1838.
Twyford	July 1, 1839.
Reading	April 3, 1840.
Steventon	May 22, do.
Farrington	July 20, do.
Between Bath and Bristol	Aug. 31, do.
to Swindon	Dec. 17, do.
Chippenham and Cirencester	May 31, 1841.
All through, and from Bristol to Bridgewater	June 30, do.

GREAT WESTERN RAILWAY RECEIPTS—MONTHLY AND YEARLY.

In.....	1838	1839	1840	1841
January	..	£5080	£9717	£21584
February ..	..	4459	9297	20092
March.....	..	5819	10459	26442
April	..	6827	16262	31918
May	..	11139	17551	35747
June	£6460	10154	26649	51963
July	6913	12710	26580	60733
August	7154	12360	26930	65529
September..	7579	11449	30068	61360
October....	6260	11365	27662	57284
November..	4438	8455	20589	
December..	4969	9544	22080	
	43,774	£109,377	£243,850	

The receipts of the present year will amount to between 525,000*l.* and 530,000*l.* The line will have been opened *through* for six months on the 31st December, 1841. A dividend of 3 per cent. per annum was paid on the half year ending 30th June, 1841. I think statistics of this nature are the best replies that can be given to the attempts to mislead of "Ignotus," "S. P.," and such like.

CLOTHO.

November 15, 1841.

P. S. The month of October, it is admitted, gives what the average monthly receipts amount to for the year; this would produce 690,000*l.* for the year 1842, independent of any increase of traffic, which on the Birmingham line has amounted to 25 per cent. per annum, and this would augment the Great Western traffic to upwards of 850,000*l.* for the year 1842—an event not only possible, but more than probable.

Weekly Interest on 48,000*l.* or 1*l.* per share.... £46

The German journals state that an engineer of Vienna, named Klein, has invented a method of preventing sparks and ashes from the fires of the locomotive engines of railways from falling on the passengers in open waggons, without, however, diminishing the current of air necessary for the fire. The experiments made on the Vienna Railway have been so satisfactory, that it has been resolved to adopt his apparatus, and to burn wood instead of coke.—*Times.*

OLDHAM BRANCH RAILWAY.—The construction of the Oldham Branch Railway is proceeding with such unremitting energy and excellent spirit that it is probable the line, by extraordinary exertions, may be partially opened in the course of July or August, 1842.—*Manchester Times.*

YORK AND NORTH MIDLAND RAILWAY.

To the Editor of the Railway Times.

SIR,—Your two correspondents, "Observer" and "Philo-Observer," are utterly at a loss to account for the fact of the shares in the above-named undertaking being so much below what your correspondents consider their real value. Perhaps the inspection of the following short table may serve in some measure to dispel the astonishment of those gentlemen, as they will learn therefrom that, although York and North Midland shares at present price are not by any means a bad investment, yet nevertheless there are at this moment far more profitable investments to be found:—

Name of Railway.	Paid.	Dividend per cent. per annum	Present price.	Interest on present price.
	£	£ s. d.	£	£ s. d.
York and North Midland Railway	50	9 0 0	85	5 3 6
London and Birmingham	90	9 8 10	156	5 5 6
Manchester and Liverpool	100	10 0 0	186	5 7 6
London and South Western.....	38⅞	7 14 3	54	5 11 0
Grand Junction ..	100	11 0 0	190	5 15 9
North Union	75	6 13 4	75	6 13 4
Sheffield and Rotherham.....	25	8 0 0	32	6 5 0

You will perceive that I have here taken the last dividends as the basis of my calculations, and this, it may be urged, is placing the York and North Midland in a less favourable position than it will hereafter hold compared with other lines. This argument would be good provided the predictions of your correspondents, or the promises of Mr. Alderman Hudson, were at all likely to be fulfilled. But any one who will take the trouble of examining the traffic returns, will find that the utmost dividend that can be made for the present half year will be 10 per cent., and this is probably as large a dividend as the line will ever pay.

I consider the prospects of every one of the railways I have compared above with the York and North Midland to be at least equal to those of that line, and some of them far better.

I remain, Sir, your constant reader and
Most obedient servant,

EXAMINER.

Rotherham, November 22, 1841.

NORTH MIDLAND RAILWAY.

To the Editor of the Railway Times.

SIR,—Great complaints have from time to time been made by the shareholders of the North Midland Railway, that the Office of the Company has been all along kept in London, at such a distance from the line. The Chairman and Directors admitted that this was inconvenient and detrimental to the interests of the proprietors, and at the last general meeting the Chairman pledged himself that the Office should be removed to Derby on the 1st of October last. *Has this been done?* I fear not, as on the 16th inst. I received a circular from the Secretary, *dated* indeed in *Derby*, but posted in *Old Broad-street, London*. This looks very like an attempt to deceive the shareholders into the belief that the Office has been removed, whereas it is still actually in London.

It is really time the shareholders in this concern were looking sharply after their interests, and trying to put an end to that system which has hitherto blasted their prospects.

I am, Sir, your obedient Servant,

A SHAREHOLDER.

22nd November, 1841.

WHAT'S TO BE DONE WITH THE STAGE COACHMEN?—"Do you know what the Tories are going to do with us old coachmen?" Mr. Bond shook his head, and murmured—"Not I!" "Well, then, I'll tell you, Mr. Bond: they're agoing to plant us for milstones along the railroad."—*Cruikshank's Omnibus.*

....	....	....	....	....	....	....	....	....	....	....	....	....	....	....

2. Toll to London and Birmingham 117*l.* 10s. 9d., to be deducted from gross receipts.

4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone.

8. Receipts include the Northern and Eastern toll, &c. The dividend is from the time of opening.

10. The part between Glasgow and Paisley was made at the joint expense of the Glasgow Paisley and Greenock, and Glasgow Paisley and Ayr Companies, but each Company's receipts in respect of that part are now merged in the general returns of each.

11. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester line, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 114 (83+31.)

13. The 5,231,527*l.* 9s. 10d. is the amount actually raised according to latest balance-sheet. The receipts include those derived from the Cheltenham and Exeter branches; the former opened for 18 miles, and the latter for 33. The divisor employed to ascertain the daily receipts per mile is therefore 169½ (118½+18+33.)

15. The 37*l.* 19s. 7d. from goods, &c. is for toll only.

16. Ten per cent. is the maximum dividend allowed by the Company's Act.

17. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. On the quarter shares the dividend is at the rate of 42¼ per cent. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

19. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table.

20. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company.

21. Capital of 993,300*l.* includes new capital for widening the line, &c. The dividend mentioned does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table is exclusive of Brighton and Croydon toll.

22. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, and it is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount.

24. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

25. The 3,951*l.* 5s. 4d. are the receipts after deducting omnibus charges, and payments to other Companies. The dividend is from the time of opening.

26. The receipts for goods, &c. include, carriages, 38*l.* 8s. 0d.; horses, 29*l.* 10s. 6d.; dogs, 2*l.* 5s. 0d.; parcels, 213*l.* 7s. 11d.; cattle, 55*l.* 9s. 6d.; corn, 15*l.* 5s. 7d; heavy goods, 446*l.* 12s. 0d.; coal, 126*l.* 7s. 0d.—Total, 927*l.* 5s. 6d. The dividend is from the time opening.

28. The details of the receipts are as follows:—Passengers, 1,853*l.* 15s. 9d.; parcels, carriages, horses, and mails 289*l.* 8s. 11d.; merchandise, 999*l.* 14s. 11d.; minerals, 218*l.* 13s. 0d.; cattle, 56*l.* 4s. 11d.—Total, 3,417*l.* 17s. 6d.; including North Midland proportion of Manchester and Leeds traffic, amounting to 128*l.* 16s. 7d. The dividend includes a sum of 31,780*l.* earned previous to the last half-year.

29. The receipts stated are after deduction of Liverpool and Manchester toll.

30. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 26 miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

31. The capital of 500,000*l.* includes that provided for harbour and works as well as railway. The dividend is from the commencement.

33. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

Safety in Railway Travelling.—*A Cheltenham correspondent recommends lining the interior of carriages with four or five strata of sole butt leather, each of the usual thickness, and rivetted to the exterior wood-work, and lined and padded as usual—so as to lessen the ill effects of collisions.*

Chester and Birkenhead Railway—An Engineer.—*Not our fault, certainly.*

M. L. *(Temple).—We endeavour to give both sides as fairly as we can, but we shall not overlook our correspondent's remonstrance.*

Aristides, *while deprecating the use of assertions unsupported by facts, falls into the same error himself.*

The circular from Leeds can appear only as an advertisement.

A Friend to Railways *(Bishop Auckland).—We will endeavour, before our next publication, to obtain some satisfactory information for our correspondent, in reference to the matter upon which he writes.*

No Shareholder *can clearly have no right to inquire into the internal management of the Company named by him, but we can assure him that the rumours to which he refers are wholly unfounded.*

For what purpose is the printed doggrel in praise of "Cole's Anti-Friction Carriages" sent to us? We will give our readers the two first verses, as a specimen of twenty-eight:—

"What constitutes Friction we very well know,
They find it on Railways too hot;
Anti-Friction Carriages plainly show,
That Friction must soon go to pot.

"Their axles run level with the horizon,
They point to the centre of a curve,
They do what nothing else ever has done,
Their axletrees also will swerve."

Steam Power in the Metropolis.—*A correspondent wishes to know what is the probable amount of steam power in the metropolis, calculated in horse power.*

Grand Junction Railway.—*The letter of J. W. next week.*

Sunday Travelling on Railways.—*A further notice of Messrs. Bain and Leadbetter's consistent vote is unavoidably displaced by more urgent matter.*

P. Reeder.—*Yes; namely, by the London and Birmingham line to Rugby, thence by the Midland Counties', North Midland, Leeds and Selby, and Hull and Selby.*

Four-wheeled and Six-wheeled Engines.—*A letter from Mr. John Gray, in reply to that of Mr. Hood which we gave last week, will appear in our next number.*

There have been forwarded to us copies of a series of Catechisms, by the Rev. T. Wilson, "designed for the advancement of children in every branch of useful knowledge" They embrace Geography, English History, Bible History, and seem admirably adapted to the object in view. The publishers are Messrs. Darton and Clark, of Holborn Hill.

Zero, and other correspondents, must stand over.

The letters of Captain Watts—A Lancashire Shareholder—Dividend, *&c., are in type.*

THE RAILWAY TIMES.

SATURDAY, NOVEMBER 27, 1841.

THE Half-yearly General Meeting of the South-Eastern Railway Company was held on Thursday last, and was most numerously and respectably attended. A full report of the proceedings, and a copy of the official documents submitted to the proprietors, and unanimously approved of, will be found in another part of our present number.

It will be seen that in the interval since the last meeting, very considerable progress has been made with the works, more especially in the district lying between Tunbridge and the junction with the Brighton railway at Redstone Hill, and it is fully anticipated that this portion of the line will be ready for public traffic in the spring of the ensuing year. It is satisfactory to have the statements recently made in this journal as to the solidity of the works, so fully confirmed as they are in the Report of the Engineer-in-Chief, and in the remarks made by the intelligent Chairman of the Company. The rumours of injury to the works in the Dover district, from the recent heavy rains and high floods, are most fully disproved — rumours, which, in many cases, have originated in a malicious intention on the part of those who ought to have known, and *did* know, the real facts of the case. Mr. CUBITT has taken some pains to set the public right on this subject, and therein he has, in our opinion, exercised a sound discretion; for, apart from the peculiarities of the works at the Dover terminus—peculiarities which might reasonably excite apprehensions of the result in minds not accustomed to look upon such matters with a scientific eye — apart, we say, from these circumstances, it is always better to deal with particular misstatements than with vague and general charges, and this Mr. CUBITT has done most effectually.

The deviations from the usual practice introduced by the Engineer in the formation of the permanent way, are alluded to in the Report of the Directors, and it will be seen, elicited from a very competent witness, (Mr. BETTS the contractor,) the most unqualified commendation. Time alone can fully determine the merits or demerits of Mr. CUBITT's plans, but, in the mean time, the enquiry is one of great interest to the railway public generally; for even in these cases where railways are in active operation, a better system of laying the permanent way (should Mr. CUBITT's prove to be such) may gradually diminish the cost of maintenance, as the improvements are from time to time introduced.

For a full statement of the general position and prospects of the Company, we refer to our notice of the meeting. The cause of the present low price of this Company's stock on the 'Change, was ascribed to the fear entertained that the considerable number of shares now in the coffers of the Company may be thrown at any time upon the market. If this be not the cause, it is very difficult to say what is so. The accuracy of the traffic estimates put forth by the Directors some time since, has never to our knowledge been called in question, and the public has the assurance not only of the Engineer, but of the Chairman of the Company, that the line will not cost on an average 30,000*l.* per mile. It is true that the assertions of Engineers upon such points as these seldom meet with, and for the most part are not entitled to, much credit, but in the instance of the South-Eastern line, Mr. CUBITT has the reputation of being more than usually cautious, and, as was remarked by Mr. PARSONS (who, by the way, usually elicits at railway meetings, by a few well-digested and well-directed questions, more real information than nine-tenths of the speech-makers who figure upon such occasions,) the results of experience have in a remarkable manner confirmed the accuracy of Mr. CUBITT's calculations.

The information incidentally given as to the station at London Bridge—the proposed *useful* (as distinguished from the merely *ornamental*) character of the works there, and the probable future formation of auxiliary lines, both on the Continent and at home, will be found very interesting to all who are in any way connected with the undertaking. We are glad to find that *first cost* is becoming more than ever a matter for the serious consideration of railway bodies. We have no doubt that not a few railways, which at best can now be expected to return a moderate dividend, would, had they been constructed with a view to positive utility alone, have presented a very different result.

The case of Mr. JOHN WILLIAMS was, it will be seen, again brought before the proprietors. We dislike these appeals to the pity of public Companies, but Mr. WILLIAMS'S case is, from all that we have heard of it, of a very peculiar character, and whatever errors of judgment he may have committed in pursuing his speculations, we believe his integrity and honour stand unimpeached. We are glad, therefore, to find that to a certain extent the application made in his behalf was successful.

Need we allude to the pitiable exhibition made at the meeting by Mr. RICHARD TYRRELL? This man's countenance must be bronzed indeed, else would he have blushed at the rebuke conveyed to him in the expression of feeling evinced by so large an assemblage. We believe him to be incorrigible, and our advice to the Directors would be, henceforth not to condescend to reply to or notice him in any shape or to any extent. The meeting, we do not fear, would soon put a stop to his effusions, but at all events his exhibitions should be put off until all the business of the day is at end, that those proprietors only may remain, who seek amusement in the melancholy spectacle of ignorance and impudence combined. The hindrance to real business which the TYRRELL class of railway proprietors (?) cause, is indeed most lamentable. They should confine their efforts to parish vestries.

THERE has been placed in our hands a copy of a correspondence which has recently passed between Mr. TAGART, a medical gentleman of Cheltenham, and Mr. SAUNDERS, the active and intelligent Secretary of the Great Western Railway Company, relative to the damage sustained by some goods conveyed upon the railway. The facts appear to be these. A parcel containing certain bottles of medicine was consigned to Mr. TAGART from London, and conveyed to Cirencester by railway, being forwarded thence by coach through agents of the Railway Company. On opening the parcel in presence of these agents or their servants, it was found that a bottle, valued with its contents at about 5s. 6d., was broken, whereupon Mr. TAGART applied to the coachowners for compensation. By them he was referred to the Railway Company, and hence the correspondence with Mr. SAUNDERS. Mr. TAGART, after explaining that it was not the amount of compensation, but the principle involved, which induced him to apply to the Company, states his case to the effect already noticed. Mr. SAUNDERS, in a most courteous style (as are all the communications of that gentleman), replies, that he has submitted the circumstances of the case to the Board of Directors —that "he has taken pains to ascertain whether any damage was known to have been sustained by the parcel, while in the Company's possession," and that he has been "assured that such was not the case"—that "the Directors cannot be accountable for glass or bottles packed and sent by railway as parcels, unless

Digitized by Google

they can clearly trace the damage to the accident or neglect of their own servants," and that "however small the claim may be, they are obliged to act upon principle." Mr. SAUNDERS further represents, that it "is by no means clear that it [the breakage] may not have been occasioned by defective packing," or that "it may have occurred before the parcel came to the station, *or after it left Cirencester*," and concludes by representing, that "if the Directors were to admit a liability [in this case] they would have to do so in every other case where the fault might rest with the parties sending, or with those whom they employ to carry to the Company's offices." Mr. TAGART insists upon the security of the package as originally committed to the custody of the Company—hints that he has seen instances of negligence in similar cases on the part of the Company's servants,—and contends that as regards the conveyance of parcels from Cirencester to Cheltenham, the Railway Company are to the full as responsible as if there were a railway communication throughout.

And in this last particular it is that we conceive the reply of Mr. SAUNDERS to be unsatisfactory. We fully agree with that gentleman that the consignees are quite as likely to be in fault as the servants of the Railway Company—much more likely we venture to assert—and that if the Company were to admit their liability in one case of damage not clearly traceable to the misconduct of their servants, they would be exposed to numberless impositions of a similar character. At the same time however, we cannot but think that the virtual shifting of the responsibility upon the coach-owners, implied in the passage of Mr. SAUNDERS's letter which we have printed in *Italics* is ill-judged as regards the Company, and unjust as respects the public. The coach proprietors who act in connection with the Railway Company, in the conveyance of goods from Cirencester to Cheltenham, are supposed to be under the control of the Company, and, being so, they ought to be amenable to the same regulations as the immediate servants of the establishment. If they be *not* so responsible, it is due to the character of the railway that the fact should be fully and unequivocally announced. If parties forwarding goods from London to Cheltenham are apprised that the liability of the Railway Company ends at Cirencester, and that it is at the risk of the parties themselves that the space between Cirencester and Cheltenham is traversed, so far it is well, and no deception can be practiced. If consignees do not choose to entrust their commodities to railway conveyance, or if individuals ordering them are unwilling to run the chance of a mixed mode of conveyance, they will of course select another mode of transmission, and there an end; but it is due to all parties that the fact should be fully announced of responsibility for the whole of the journey on the one hand, or for part of it only on the other.

We do not imagine for one moment that the actual damage in this case (however occasioned) can be of the slightest consequence to either of the parties whose correspondence has called forth these remarks. On principle, the one calls for compensation, and on principle the other resists it. Nor should we have alluded at all to the case, but that we think it furnishes a very striking illustration of the not unimportant results which frequently spring from very trifling causes. The correspondence has, it is just to repeat, been conducted on both sides with right feeling, but of how many diatribes against railway managements generally, and of the conduct of this line in particular, might it not have formed the basis? And it shows in no trifling degree the confidence entertained by the Directors in the justice of the decision at which they had arrived, that for the sake of a few shillings they were content to run the risk of being misrepresented and maligned, and to incur the certainty of considerable trouble to themselves and loss of time to a valuable officer. We are extremely sorry that any misunderstanding should have arisen on such a point; but under the circumstances, we cannot think that carelessness has been traced to the servants of the Company, with sufficient clearness to justify any charge either against them of neglect, or against the Directors of refusing to listen to and remedy the just complaints of the public. At the same time, we regret that the Directors should appear to repudiate any responsibility accruing on the part of those who, we presume from their connection with the Company, are to be regarded as their accredited agents.

IN another column will be found a semi-official letter (for the writer appears to speak with authority,) in reference to the Editorial remarks and the letter of a correspondent, which appeared in our last number, with reference to the Sheffield and Manchester Railway, and its recent opening.

Without being at all squeamish as to the terms in which our contemporaries or our correspondents may speak of our opinions or our motives, we think we might fairly take exception to the offensive and sneering tone of this advocate of the Sheffield line. He speaks of our "past preferences," as if he or any one else could charge us justly with having on any one occasion refused, or even delayed, to give a full statement of both sides of a case, whether in accordance with our own preferences or not. Let that, however, pass. We said nothing in disparagement of the Sheffield and Manchester line, and made but a passing allusion to its past management,—an allusion which, if necessary, we are fully prepared to justify. Does our correspondent wish us to re-open the question of entrapping (for we can use no milder epithet,) so many nominal holders of shares, into an actual and positive responsibility for calls? Does he desire that we should go into a full exposition of the circumstances which led to the resignation of the late Engineer, than whom a more honourable man does not exist? We assure him that we have plenty of materials at hand, and that if we have hitherto abstained from entering upon the unpleasant task, it is from no lack of ample grounds for criticism and censure. On this point it is enough to say that the retirement of the late estimable Chairman of the Company (Lord WHARNCLIFFE), rather than be a party to the proceedings adopted by a majority of the Board, is quite sufficient to show that those who find fault with the policy pursued by the Sheffield and Manchester Management do not proceed without some foundation for their strictures. Far be it from us to say that the Directors may not have learned wisdom from past experience—we trust they have—but what we said last week, and what we again repeat, was simply an expression of opinion that for many of the difficulties which now environ them, they have themselves to thank.

We said, moreover, last week, and we say again, that we have not entered with sufficient care into the estimates of construction and traffic to be able to form a satisfactory judgment as to the pecuniary prospects of the undertaking. Notwithstanding our correspondent's charitable insinuation to the contrary, we *have* read and re-read Mr. LOCKE's Report, and for Mr. LOCKE's opinion we entertain a very sincere respect; but that gentleman is not infallible, and perhaps if he had confined himself to his own immediate department it would have been quite as well. Mr. LOCKE, at any rate, has the good taste which our correspondent clearly lacks, of not seeking to exalt his own undertaking at the expense of his neighbours. We hesitated, indeed, whether we ought not to strike out from our correspondent's letter his ill-natured hints and inuendos respecting other Companies, but on further consideration we deemed it better to let him state his own case in his own way. We are greatly mistaken if the old exclamation of "save me from my friends," be not repeated in the case of the Sheffield and Manchester Directors and their more immediate supporters.

We said in the last place, and we say again, that it was injudicious and dangerous, and not likely to be profitable, to open a new line at the present season, after the unprecedented rains of the last six weeks. We may be mistaken, but such was our honest opinion. Our correspondent thinks otherwise. We unfeignedly hope that *he* will prove to be right and ourselves wrong, both as regards the safety of the opening and its beneficial results, but more especially the former. We are too deeply interested in the success of the railway system to wish to obtain a Jonah-like reputation for prophetic warnings at the expense of individual lines. Even if we had personally examined the works upon the portion of the Sheffield and Manchester line now opened—and we were never within fifty miles of their site—we should not presume to pronounce an opinion as to their solidity and safety in opposition to the opinion of Mr. LOCKE, or even of Sir FREDERICK SMITH, the Inspector-General; but what we lack in professional knowledge, may perhaps be made up in the absence of personal and local bias. Mr. LOCKE and the Directors are very naturally, and very properly, anxious to have the line partially opened at the earliest possible period, and accordingly they hope for the best; *we* who have no interest direct or indirect in the result, look at the experience of other Companies, and fear the worst. We say again, that we trust the event will justify their expectations and falsify our forebodings. On this point we call attention to the letter of another correspondent given elsewhere.

THE more we examine into the question of a junction line between the Liverpool and Manchester and Manchester and Leeds Railways, (as adverted to in our recent numbers,) the more are we at a loss to account for the conduct of the Liverpool Company in refusing to carry out their part of the arrangement. We should be happy to find any honourable and valid plea put forth for their non-compliance, but at present our impression most decidedly is, that the course which the Liverpool Directors are pursuing is not a straightforward one.

We adverted last week to the moral if not the legal claim which the public have upon the promoters of railway projects to complete the undertakings for which they have sought and obtained Parliamentary sanction. It would appear, however, from what we have since understood, that the Liverpool Directors have cunningly contrived to evade the legal liability,

Digitized by Google

they having managed to get introduced into the usual clause compelling the completion of the railway, the words "if they shall think proper," or words to that effect. If *this* does not indicate a *mala fides* from the very commencement, we know not what does.

Nor is this all. The Liverpool Directors not merely refuse to complete their own portion of the junction line, but will not transfer their powers for that purpose to others! They have promised to submit the question to their constituents, but have not yet done so. Does not this afford a presumption of the untenableness of their position?

We would gladly waive the further agitation of this question; but justice to the Company who are ready and anxious to carry out *their* part of the arrangement will not allow us to be silent. At the same time we sincerely regret that any difference of opinion or diversity of interest should have arisen between two Companies who might be so mutually helpful to each other. We trust the Liverpool and Manchester proprietors will take this matter into their serious consideration, and if it can be shown that canal influence is injuriously predominant in the management of their line, or in its arrangements with other lines, the sooner they insist upon a thorough reform the better. Neither Directors nor any one else can serve two masters, and if the prosperity of schemes unconnected with the railway is to be at all considered, it may be taken for certain that the true and permanent interests of the proprietors of the railway are so far sacrificed.

We regret to learn that Mr. Patteson who has so ably filled the office of Secretary in the North Midland Railway Company from the commencement of that undertaking, has within the last few days tendered to the Directors his resignation. Mr. Patteson's reasons for taking this step are, we have reason to know, solely of a personal nature—family arrangements rendering it inconvenient for him to reside constantly at Derby, in accordance with the understanding come to at the late half-yearly meeting. Mr. Patteson, we are sure, has the gratification of knowing that he retires from his responsible duties with the regret and kind wishes of the Directors and proprietors at large, and in joining most cordially in the expression of these mingled feelings, we can only indulge a hope that Mr. Patteson's successor will fill the now vacant office with equal credit to himself, and not less satisfaction to the Company.

We give elsewhere a short notice of a meeting of Lancashire shareholders in the Paris and Rouen Railway, held at Liverpool on Wednesday last. We regret that the pressure of *home* matter compels us greatly to abridge a very long account with which we have been supplied, but probably we may make room in our next for the Report of the deputation in full.

It appears that the total capital of the Company is two millions sterling, the line being eighty miles in length. The whole of the share-capital is, it is stated, subscribed for; and a considerable amount is to be advanced on loan by the French Government on very favourable terms. The works are undertaken principally by two thoroughly responsible English contractors (Messrs. Mackenzie and Brassey), who have shown their faith in the success of the scheme, by agreeing to invest in shares 5 per cent. of the whole amount of money to which they will be entitled. It is confidently expected that the present capital of the Company will be sufficient for the entire completion of the undertaking. The works are contracted (says the Report) "to be finished at various periods,—the latest on the 1st of March, 1843, little more than fifteen months from the present time; and there is no doubt that the line may be opened as early in the spring of that year as circumstances render desirable."

As regards the return to be expected from the undertaking, the English Directors appear to be very sanguine. They calculate upon a result of 305,000*l.* per annum from passengers and parcels alone at French railway prices, while (says the Report), "the quantity of goods carried by land, as well as by water, is immense. This railway has one terminus in the capital of France, and the other in the greatest manufacturing district of the kingdom, stretching towards the most important commercial port, and holding out facilities for transport to nearly four millions of inhabitants."

We have no desire to discourage this project—although we would rather see English capital expended at home—but we should fail in our duty to parties contemplating the purchase of shares, if we did not remind them that the working of the railway is to be burdened with allowances to projectors and managers after a fashion totally unknown in England. On this subject we refer those concerned to some articles which appeared in this journal during the summer of 1840. If fully knowing the terms they choose to join the speculation, we have nothing further to say.

The *Leeds Mercury*, in noticing the partial opening of the Sheffield and Manchester and Leeds Railway—an event which, it is stated, did not excite much interest—says there is a *penny fare*, namely, "from Newton and Hyde to Godly, some 1¼ or 1½ miles distance; and, at this charge, some 20*l.* was received,—a strong encouragement to the introduction of low fares." The case would be more "encouraging" if it could be shown that the Directors, after paying Government duty and the expense of working, had secured any net profit.

—o—

The Gosport branch of the London and South-Western Railway is to be opened to the public on Monday next. From an advertisement in another column it will be seen that for the present there are to be seven communications daily from Gosport to London for passengers, and two for goods; with Southampton and Portsmouth the communications will be four times daily. On Sundays the intercourse will be only twice a-day from Gosport to either Southampton or the metropolis. The fares to London are, in the first train 22s., in the mixed trains 21s. and 15s., and in the goods' trains 9s.; children under ten years, half-price.

—o—

We learn from the *Falmouth Packet* of Saturday last, that the Committee appointed for ascertaining the practicability of constructing a railway from Exeter to Falmouth, met in Truro on the previous Tuesday, when, after a lengthened sitting, an adjournment for a fortnight was agreed to, in order to afford time to the Sub-Committee to prepare *ad interim* a well-digested report to submit to a county meeting, which, we understand, will speedily be convened. Lord Falmouth was in the chair, supported by Lord Vivian and Lord Boscawen, &c. &c. Captain W. Moorsom, the able Engineer, was also in attendance. "We think (adds our contemporary) we may congratulate the county on this important question assuming at length a regular and progressive, if not so rapid a movement as time and circumstances seem to require."

—o—

It will be seen from a law case reported in another column, that a rule has been applied for, and secured, against the Directors of the Great North of England Railway Company, similar to that obtained against the Eastern Counties' Company, and quashed, viz. to compel the Company to complete a portion of their line, which it is in contemplation to abandon in favour of another, and we are to presume a better, route. The discussion of the point at issue will doubtless be interesting.

—o—

Lessees for toll bars in the provinces are now by no means easy to find. The *Chelmsford Chronicle* tells us that the Shenfield and other gates in Essex were put up to auction on Tuesday week in the Shire Hall, and not a single bidding was made for them. Is this owing to the railway?

—o—

Some negociations have been going forward between the Directors of the York and North Midland Railway and the Commissioners of the city of York, relative to a line of street in the neighbourhood of the station. At a recent meeting of the Commissioners it was stated, that the benefit derived by the citizens of York from the railway in the article of coal alone, was equal to the whole amount received by the Commissioners for rates!

—o—

The trip by the tradesmen of Brighton to which we adverted last week, came off on Wednesday. There were about 80 of them in all. It is said, that the number would have been at least 200, but for an exaggerated report of the slip on the Croydon line, which had reached Brighton on the previous day, and which induced many persons to believe that the trip would be postponed. Several of the party dined together at the Bridge Hotel, London Bridge. G. Wigney, Esq., presided; and the Company, after the usual loyal toasts had been given, drank with great enthusiasm "Prosperity to the London and Brighton Railway." The whole party returned to Brighton by the last train.

—o—

The importance of economy in Railway management is such, that anything introduced with a view of carrying that object into effect, will always command attention. We have therefore much pleasure in calling the notice of Railway Boards to an invention of Mr. Pulford, the Accountant of the Croydon Railway, who has introduced on that line a new way bill, which supersedes the use of papers and printing, and effects a considerable annual saving to that Company, although only used for two stations, viz., London and Croydon.

The way bill consists of a brass plate 1½ inches wide, and 2 inches long, upon one side of which are engraved the names of all the stations; over this plate is fixed a frame of the same metal, furnished with small sliding pannels (steadied by springs) which can be drawn over any of the names of stations, showing only the names of those places at which the train is to stop. Two of these way bills are required for each train, one for the engine-driver and the other for the guard. The booking clerks in the office push back the slides and expose to view the names of the stations at which passengers are to alight; the bills are then delivered to

Digitized by Google

the respective parties, who place them in situations so as to be seen during the journey. These way bills are not injured by wet, will last for an indefinite period, and cost only a few shillings. Mr. Pulford has, we hear, under consideration a plan for superseding paper tickets and substituting in lieu thereof metal checks. Should this scheme be brought to bear the saving in printing will be very great, as on lines where only two thousand tickets are daily issued, it would be nearly 400*l.* per annum.

—o—

We have had frequent occasion to notice the anomalies and absurdities of Post-office arrangements, and the extraordinary neglect of the authorities of that establishment in omiting to avail themselves to the full of railway facilities. The following, from the daily papers, is another case in point:—A letter for London must be posted at the large and important agricultural town of Newbury, distant from the Reading station of the Great Western Railway 17 miles and a-half, and 56 miles from London, only just one half-hour later than in the city of Exeter, 44 miles from the Bridgewater station, and 195 miles from London! A letter, without paying any fee, can be posted at Taunton or Bridgewater half an hour later than in Reading, although one town is distant from it 123 miles, and the other 112, and the same train takes all the letters!

—o—

In the abstract of returns of the late census, which has just been issued, it is stated that "4,003 males and 893 females, were ascertained to have been travelling by railways and canals on the night of June 6th." Of course the great majority of these were travellers by railway.

—o—

It was rumoured yesterday that an accident had occurred to the mail train on the Great Western Railway, but (if correct) the particulars have not reached us. It is said no one was injured.

THE SLIP ON THE CROYDON RAILWAY

Both lines of rails being open, and the lower part of the slope cleared of the earth which had come down, the trains of the Brighton and Croydon Railways ran through on Sunday and Monday. The force of labourers was employed meanwhile in removing the earth which appeared most likely to give way. On Tuesday morning, about half-past two, the attention of the workmen was drawn to a fresh movement of earth down the slope, when it appeared that the mass which had remained stationary upon the floor of the slip ever since the first movement, had come forward eight feet, and the front was pushed over, and running down the slope, so that both lines were very shortly again covered, and the road impassable.

The comparatively small depth of this fresh fall allowed the clearing of a gullet by noon on Wednesday, and from all inquiries we we were able to make it, appeared that this stoppage was likely to be of very short duration.

The Northern and Eastern Railway was opened on Tuesday last from Harlow to Spelbrook, Herts. It now reaches to within a few miles of Bishop's Stortford.

Railway communication between Belgium and Paris.—The *Journal Belge* states that the extension of the Mons Railway, which has just been opened, and the establishment of new diligences in correspondence with it, will enable a traveller from Antwerp or Liege to arrive in Paris in thirty hours.

RAILWAY OFFENCES AND OFFENDERS.

On Saturday last, John Allen, a carpenter in the service of Messrs. Cubitt, builders, was charged before Mr. Long, a magistrate of Marylebone Police Court, with having by his negligent conduct nearly caused the death of one of the "bank riders," who conduct the business of the London and Birmingham Railway Company, between the Euston and Camden stations. Mr. Bedford, superintendant of the Company's police, was in attendance; and it appeared from the evidence of Matthew Christian that he was one of two persons whose business it is to conduct the trains as above referred to, and that on the same morning he was with the quarter to 9 o'clock down train, when he observed a piece of timber near to where defendant was at work projecting too close to the rail. In an instant his fellow "bank rider," who was standing upon the step of a carriage on the near side for the purpose of being in readiness to detach the train from the rope, was struck with great violence upon the leg by the timber, and in all probability would have fallen to the ground and been crushed to death, had not some of the passengers who witnessed his perilous situation succeeded in holding him up by his coat collar, and clasping him round the waist, until the train, which was going at the rate of twenty miles an hour, stopped. The defendant was with others engaged in shoring up a wall, and the whole of the workmen had distinctly been informed of the danger which might arise from placing any portion of the timber within six feet of the rail. Defendant in reply to the charge, expressed his regret at the occurrence, and said he imagined that owing to the state of the ground, the plank had slipped from the position he had placed it in. Mr. Long told him that he had rendered himself liable to a penalty of 10*l.*, but under all the circumstances he should fine him 10s. If he offended again he would be severely dealt with.

On Monday week, John Marsh, an engine-driver, and David Pasquil, a fireman, in the service of Mr. John Hargreaves, of Bolton, were brought up at the New Bailey, Manchester, before the sitting magistrate, charged by the Liverpool and Manchester Railway Company with having, on the 8th instant, suffered the *Marquis of Douro* locomotive engine, with a train of luggage waggons, to enter the arrival station at Manchester at a very improper speed, thereby endangering the lives of persons employed upon the station, as well as the safety of the Company's property. A number of witnesses were examined to prove the fact of the trains having come into the station at a speed of from eight to ten miles per hour. Several of the Company's servants, who were present at the time, succeeded in pinioning down some of the waggon breaks, thus lessening, though not entirely preventing, a concussion with some luggage waggons which were standing upon the line at the time. The damage done was trifling, and happily no person was injured. Mr. Law appeared behalf of the men, and called Mr. Hargreaves' engineering superintendent to speak to the character for steadiness, sobriety, and industry, which they have always borne, whilst in Mr. Hargreaves' employ, for a period of four or five years. This favourable character had its weight with the magistrates, who fined March, the engineman, as the responsible party, in the mitigated penalty of 40s. and costs, at the same time severely repremanding him for his want of due care in entering the station.

RAILWAY BILLS IN THE HOUSE OF COMMONS.

There has just been printed, with the permission of the Speaker, in a quarto volume, but not for circulation with the Parliamentary papers, an important and complete collection of all the "Standing Orders of the House of Commons, relating to Private Bills, &c., 1685-1841;" consisting—1. Of orders limited to Private Bills, the appointment of Committees, &c. 2. The duties of Committees. 3. The orders regulating the practice of the house. 4. That of the Private Bill Office. Next, the Standing Orders on "public matters"—religion, trade, public money, temporary laws; also as to the promulgation of the statutes; finally, the several tables of fees. This volume is the more interesting as in it are embodied the various alterations of the Standing Orders regarding Private Bills, adopted last session, on the recommendations of a Select Committee that had sat during two sessions on the subject, and after, it may be remembered, several discussions in the house; and as the time is now passing for giving notices, &c., respecting Private Bills intended to be brought in next session.

The first and a most conspicuous alteration is, that to the petition praying for leave to bring in a Private Bill a copy of the proposed Bill is to be annexed. There is a further alteration on this subject in the 119th order.

The 119th order thus amends the previous regulation of the practice of the House regarding Private Bills; that "with the petition a printed copy of the proposed Bill be annexed."

The 120th order alters the time for presenting such petitions—that, instead of 14, all petitions for Private Bills be presented within 21 days after the first Friday in every session of Parliament.

The 161st order directs that a filled-up Bill to be recommitted, instead of being deposited in the Private Bill Office on the day of re-commitment, shall be so delivered "three clear days before the day appointed for the meeting of such Committee."

It is also provided, "That in the case of any application for a Private Bill relating to England, the Committee may admit proof of the compliance with the Standing Orders which refer to the affixing to the church doors the requisite notices on the production of affidavits sworn before any justices in petty sessions assembled for the division within which the churches on which the notices have been affixed shall be respectively situated."

RAILWAY COMMUNICATION WITH SCOTLAND.

[From an Edinburgh Correspondent.]

The article under this title extracted from the *Carlisle Journal*, which appeared in No. 202 of the *Railway Times*, calls for a few remarks on the part of those who support the east coast line.

The promoters of the western line cannot but perceive that the completion of an entire line of railway communication from London to Newcastle, will to a certainty be the death-blow of the western line project. It need not therefore surprise any one that those more immediately interested in this communication should move heaven and earth to prevent the accomplishment of this important object.

The promoters of the east coast line take their stand upon the following among other points of superiority, and nothing that has been said, or, I maintain, can be said, can gainsay any one of them.

Digitized by Google

1st. When the east coast line is completed to Newcastle from the south (which, I have no doubt, will be the case in little more than two years), there will only be 117 miles of railway required to connect both the cities of Edinburgh and Glasgow not only with London but the great manufacturing counties of Lancaster and York, whereas to obtain the same by the western line 202½ miles of new line will be necessary.

The prolongation of the Edinburgh and Glasgow Railway to Dunbar (a distance of 30 miles more), will reduce the gap to 87 miles, and this line to Dunbar is now proposed.

2nd. The capital necessary to complete the respective lines may be assumed in proportion to their respective lengths. This on the most favourable view is in the proportion of 87 to 202½; by the most unfavourable as 117 to 202½. When the difficulty of raising the capital for any of the lines in the present state of the money market, is considered, this difference on the amount of capital required is obviously of the highest importance.

3rd. The county through which the east coast line is carried is for the most part the most fertile and best cultivated ground in the kingdom. Besides this there is along the whole line between Edinburgh and Newcastle sufficient traffic to produce a considerable return for the capital expended. Turn to the western line; the country for the most part through which *it* passes is high, barren, and very thinly populated; it must therefore be solely dependant for any return on the through traffic, and even *this traffic* will be seriously interfered with by the Glasgow and Liverpool steamers. What is more the lines from end to end are all but destitute of minerals, except where the country is already opened up for their conveyance by *other* railways.

4th. The principal railway interests in Scotland are strongly opposed to the west line, and they will certainly leave no stone unturned to prevent its execution while several of the Railway companies, particularly the Edinburgh and Glasgow, will promote by every means in their power the east coast line.

5th. The inhabitants of Edinburgh, as well as those of Dundee and other parts of the east coast of Scotland to the north of Edinburgh, now perceive clearly that the east coast line is the *only* one that will be beneficial to them, and they will certainly give it their support.

In order as far as possible to counteract the decided superiority of the east coast line as respects *distance*, an effort is used in the article above referred to, to make it appear that the works upon that line are much more expensive than those upon the west. With that view lists of viaducts and bridges of the respective lines are given, and the expense contrasted. But it will hardly be credited that while the principal viaducts and bridges on the *whole* 117 miles are given on the one hand, the whole of those given of the west line occur on the first 12 miles from Hamilton southward! But this is not all; for not satisfied with contrasting 12 miles of one line with 117 of the other, the height of the Nethan viaduct is put down at 170 feet, when the extreme height is 232 feet!!! It is also put down much shorter than it is. Well therefore might the printer put three notes of admiration to this part of the Report, and that eminent Engineer, Mr. George Stephenson, say, "Never, he believed, had such a piece of masonry been put together as this projected viaduct over the Nethan, and that such had never been made in England, or probably in the world." Although this viaduct is nearly double the height of our highest viaducts and aqueducts in the kingdom, I am far from calling in question the practicability of executing the work, but the expense must be *enormous*, and notwithstanding this the Clydesdale line is said to be *a cheap* one. I have said that the viaducts on the 12 miles of the one line are contrasted with 117 of the other, but even this falls short of the truth, for in these 12 miles *three* very considerable viaducts are overlooked.

The following viaducts occur on 12 miles of the western line:—

*Barncleuch Burn, extreme height		.....	80 feet.
River Avon	ditto	.....	100 ,,
*Skellington Burn	ditto	.....	62 ,,
Mill Burn	ditto	.....	103 ,,
Daiserf Burn	ditto	.....	70 ,,
Another near to it	ditto	.....	85 ,,
*Goosfield Burn	ditto	.....	98 ,,
Gilbank Burn	ditto	.....	85 ,,
Nethan	ditto	.....	232 ,,

The three viaducts marked * were not in the former line.

Besides these nine lofty viaducts we have a tunnel of nearly three-eighths of a mile within some 12 miles of this line, which is to be *so cheaply* executed. With good reason therefore might Mr. Stephenson say that it was "preposterous to carry such a line forward."

In the article above referred to a comparison is also made of the tunnels on the respective lines. It is made to appear that there is only *one* tunnel upon the west line, while in point of fact there are four.

Tunnel at Blantyre Farm.

Kersford Mains Tunnel.

Craufurd Tunnel, but at which there is given an alternative line. This last is upwards of 1½ miles in length.

Orten Tunnel 1½ miles in length. This last is *the only one* given in the comparison.

The *number* of tunnels upon the east line are greater, but they are all short, some of them *very short*, none of them betwixt Edinburgh and Newcastle exceeding a quarter of a mile in length. This is a most important circumstance in their favour, as not only affecting the time and expense of execution (as *they* can be all wrought from the ends), but also the comfortable use of the same afterwards. It turns out that the *aggregate length* of the seven tunnels on the east line is *less* by 618 yards than the Orten Tunnel. Mr. Hudson is severely censured for stating that this tunnel was 1½ miles in length, seeing that it is stated at 1 mile and 22 chains on the section. Respecting this length the Government Commissioners in their Third Report make the following observation:—

"The heaviest work on the whole line is the Orten Tunnel, which Mr. Larmer proposes to make of the length of one mile and 22 chains; but according to the section, in the accuracy of which we have full confidence, it appears there will be heavy cuttings at both ends of the tunnel; the greatest depth being at one end 95 and at the other 98 feet.

"Now as we doubt the expediency of making a cutting in this instance of above 70 feet in depth, we are of opinion that it would be proper to extend the length of the tunnel to a mile and a half."

Mr. Hudson was therefore *quite justified* in stating Orten Tunnel *to be a mile and a half in length*.

The author of the article is exceedingly indignant that Mr. Hudson should have said that the Orten Tunnel was to pass through granite. On this subject we shall allow the Report of the Commissioners to speak for itself. It is in these terms:—"In approaching this summit where a tunnel of above *one* mile and 30 chains would be required there would be a cutting in rock of rather more than a mile and a half in length, and averaging 48 feet in depth, the extreme depth being 84 feet on the north side of the tunnel; another cutting of the same nature would occur of about half a mile in length, averaging 36 feet, and of the extreme depth of 75 feet." Here there are besides the tunnel itself two miles of cutting through rock, the extreme depth of which is 84 feet and 75 feet respectively. So much for this *cheap* line of railway! But let us see what works there are at the Scotch Summit. It is thus described:—"The next severe work on this line occurs at the summit, in the pass of the Clyde's Nap, where a cutting of 2 miles 56 chains in length, and 50 feet in depth will be required." I believe it will not be denied that this cutting is chiefly in rock. With these observations and extracts, will even the boldest advocate of the western line say that it is one which can be executed at a moderate expense? No.; it is not only not a cheap, but it is a very expensive line. I would ask the advocates of it if there is a line in the kingdom, either executed or proposed, upon which so many lofty viaducts occur as on 12 miles of this line, and the works on the other parts of the line are not such as to compensate for this enormous outlay?

Before the correspondent of the *Carlisle Journal* again puts himself forward as the champion of the western line he should make himself master of the facts of the case and state them fairly. It has been observed that there cannot be stronger evidence of the badness of a cause than when its advocates are driven to resort for their main, and still more their sole, argument to palpable misrepresentations of the nature and character of the works to which they are opposed.

RAILWAY COMMUNICATION WITH SCOTLAND.

To the Editor of the Railway Times.

SIR,—Your "interested" correspondent of last week has certainly published a letter fully worthy of a mendicant "individual holding shares largely in the Midland Counties' Railway;" it is penned with accustomed "acrimony," and replete with usual "misrepresentations." His statements are as near the truth as *the seared remains of York Minster are like a viaduct*. Those "beautifully constructed railways" in the East, of which he speaks, are *very curses* to the country, for they have served to break the spirit of speculation in favour of present projects much more likely to pay and have conferred a "pocket benefit" on "individuals" not easily forgot. But I defy your correspondent to show that any one interested in the western project has followed the ungenerous conduct pursued by himself and party, and "used misstatements or abuse of other lines" for the purpose of enhancing their own in public estimation.

I defy him to show a possibility of the western line costing "40,000*l.* per mile," seeing that the estimates by *honest and unerring* engineers are under 16,000*l.*, with a deduction to be made therefrom of one-fifth, as the usual price of land, which it is understood will generally *be taken in shares*.

That the wise men *have come from* the east is quite clear, otherwise your correspondent would

Digitized by Google

hesitate to say that the Berwick line "will offer to Edinburgh and Glasgow greater, or equal facilities of access;" and to prove the interest taken in the western line by the "rich merchants of Glasgow," I enclose a copy of resolutions passed by the Chamber of Commerce of that city, for which I trust you will find space in your valuable paper.

VIATOR.

The following are the resolutions above referred to:—

Resolved—That from the Report of Sir Frederick Smith and Mr. Peter Barlow, the Commissioners appointed by Government to inquire into the various lines of railway communication between England and Scotland, and more particularly between London and the cities of Edinburgh and Glasgow, it appears—

1st. That the Commissioners have had under their consideration five general lines of railway, of which surveys have been made, and plans, sections, and estimates of cost and revenue, have been submitted to them.

2nd. That after a most anxious and careful investigation into the comparative merits of these various lines, embracing the lengths, gradients, costs, revenues, and general usefulness of each, the Commissioners have expressed a strong and decided opinion in favour of the line recommended by Mr. Locke, which is to run from Lancaster by Carlisle and Lockerbie to Symington, and from thence by diverging lines to Edinburgh and Glasgow respectively.

3rd. That in the opinion of the Commissioners, that line is entitled to the support of Government in preference to any other, provided parties be found within a reasonable time to undertake the execution, and secure the completion of it.

4th. That if the parties willing to promote this undertaking do not come forward within a reasonable time, the support of Government should be transferred to a line from Newcastle to Edinburgh by the east coast.

Resolved—That this Chamber view with great satisfaction the fact, that a line which is obviously, and beyond all doubt, calculated to benefit Glasgow, in a peculiar manner, has been found by gentlemen, whose impartiality is beyond all doubt, to be also the line which promises the greatest amount of national and general advantage, and the best prospect of remuneration to the undertakers.

Resolved—That it is of the utmost importance that the favourable opportunity thus afforded of securing a direct communication between Glasgow and every part of England, ought to be cordially embraced: more especially as it by no means injures the interests of Edinburgh, but on the contrary gives it likewise a saving of distance in every direction, to the benefit both of the time and purse of the traveller; and that every exertion should be made to prevent the line being diverted to the east coast of Scotland, and carried round about by Berwick and Edinburgh.

Resolved—That in these circumstances, it appears to this Chamber, that it is the decided interest of the inhabitants, and the duties of the authorities and public bodies of this city, to lose no time in organising an efficient Committee, to co-operate with the inhabitants of other places interested in promoting the undertaking.

Resolved—That this Chamber will contribute its influence and warm support in furtherance of the object thus recommended by it to the public.

THE TOLL QUESTION—CROYDON AND GREENWICH RAILWAYS.

To the Editor of the Railway Times.

SIR,—My sole object in replying to Mr. Wilkinson's pamphlet on "The Toll Question" was to open a discussion upon the whole question of high and low fares, so that while the public wants and interests, so far as safe and cheap travelling is concerned, were carefully attended to on the one hand, the no less important interests of the shareholders should be protected on the other; and now especially protected from those ruinous experiments, by visionary theorists whose projects have only one certain tendency—that of frittering away the money of the shareholders. An individual, evidently a stranger to the courtesies of discussion, whom you are pleased to describe as an "*intelligent* correspondent," has chosen to designate all the statements in my Reply as "untrue, or partly untrue."

I shall not condescend to notice this unwarrantable vulgarity further than to say, that the only instance in support of the sweeping charge of "untruth" given by your "intelligent correspondent," is a wilfully garbled statement of what the "Reply" put forth in reference to the *presumed* indisposition on the part of Mr. Wilkinson to follow out his own theory of "toll reduction," by lowering the Brighton toll. I never stated the Croydon Company were unwilling to lower the Brighton toll, I only inferred such was possibly the fact from the circumstance of the Company not having actually done so. To correct an erroneous impression in some quarters, I beg to disclaim all connection remotely or immediately, with any railway.

Your obliged humble servant,

LOCOMOTIVE.

THE TOLL QUESTION—CROYDON AND GREENWICH RAILWAYS.

To the Editor of the Railway Times.

SIR,—I do not pretend to be acquainted with the feelings of many of the shareholders in the metropolitan railway lines, but I should suppose there are but few among them who derive much satisfaction from their connection with those undertakings. I certainly receive none, as a buyer of Greenwich at 25*l.*, and of Croydon at 20*l.* I have carefully perused the long series of communications which appeared in your journal under the title I have affixed to this communication, and it is not without pain that I have felt myself compelled to come to the conclusion that the proceedings of the Croydon Directors, in this matter, are neither business-like nor straightforward, but, on the contrary, intended to put their constituents on a false scent, and thus divert their attention from the expenditure of their own line. The promised 9 per cent. dividends which ought for years past to have found their way into our pockets, are still far from our grasp, and all that we have received for our sunken capital and exemplary patience, is a present (?) of two or three wordy pamphlets by our astute Chairman, tending to establish the highly consolatory fact that our own traffic (as at present conducted) is not worth a rush, and that our only prospect of ultimate remuneration arises from our being in possession of the power to take that toll from others which we are dishonest enough to attempt to shuffle out of paying ourselves. I hope my brother shareholders will at length give our Board to understand that we have had quite enough of this, and are at length determined to exert our energies in another direction. Since we cannot affect the Greenwich fixed payment *honestly*, let us try what reduction may be made in that portion of our expenditure not so circumstanced. Here is a field of profitable labour for our pugnacious Chairman, where he is free to move, and to *earn* his salary. I would venture to suggest that three Directors would be ample for such a short line, and that the sum paid for the services of the London station triumvirate would be an ample remuneration for attending to the whole distance as well as the beginning. I offer this as my share towards the general stock; let each man who can do anything lay his shoulder to the wheel, and resolve that the Croydon traffic *shall of itself pay so ething.*

COSMOPOLITAN.

SHEFFIELD AND MANCHESTER RAILWAY.*

To the Editor of the Railway Times.

SIR,—As you have been pleased to express an opinion on the Sheffield and Manchester Railway, anything but favourable either to the undertaking itself, or the mode of its direction, I am sure you will not refuse in common fairness to insert a very short vindication of the recent opening of the line, and a few remarks on the general character of the work.

With regard to the first point, it is quite untrue that any but a very small portion has been finished during the late rains. The works have been regularly proceeding for some years; and the Directors, so far from a premature dedication to the public, have had this object in weekly expectation for some time, and it has been a great disappointment to them, that so much delay has arisen. It would undoubtedly have been much more to their advantage could they have secured the autumn traffic, and they feel as strongly as your correspondent, or the writer of your leading article, that winter is the period least likely to realise any considerable profit; but as they had the full sanction of their Engineer, Mr. Locke, as to the perfect safety and solidity of the works, they considered that the fittest time to open a railway was, when the railway was ready to be opened; and as they have omitted no means within their power to promote the convenience and secure the safety of the public, they are quite willing to take the chance of the unfavourable issue of a winter traffic, being satisfied that a few months will set all miscalculations right, and that even the most adverse traffic will more than pay the expenses of the establishment.

In respect to the work itself, I have to request you to peruse the recent report of Mr. Locke, and when you have done so, nobody can complain of any criticism, you may then be pleased to exercise; but if you expect the public to attach any weight to your opinion, you will see the propriety of giving reasons, of stating counter-facts, (if you dipute those of Mr. Locke,) of disproving the elements on which his calculation of estimates and traffic are founded; in short, you will better discharge the duty with which you have invested yourself, by taking some little trouble to judge for yourself, and not running at once into the error of taking for granted all that the shareholders of a rival railway say against a line, which will be executed at a third or thereabouts of the expense of that of its opponents, and when executed, will be a most formidable and dangerous competitor. Be pleased also to advert to the fact, that in estimating the success of this and all similar undertakings, the *first expense* is a much more important ingredient than your friends in the Great Western, the North Midland, the Leeds and Manchester, and all other extravagant lines, would wish the public to believe. Had those railways been executed by Mr. Locke, I have no doubt the Great Western would give a dividend of 10 per cent., and the other two would have produced 7 or 8 per cent. to their unfortunate and under-paid proprietors. But a magnificent gauge and magnificent viaducts, and over-delicate gradients, and splendid stations, have swept away all hopes of an *El Dorado* in such lines; and in such lines as the Grand Junction and the Southampton, where the expenditure has been moderate, that portion are now finding remuneration. Amongst the latter I believe we shall shortly see the Manchester and Sheffield; but in the mean time the disappointed proprietors of some of the former are attempting to raise a prejudice against it, in the hope of preventing or at all events postponing for a considerable time its formidable rivalry.

Now I propose a test, by which you will judge whether the remarks I make are based on a sound foundation or the contrary. And my first is the very creditable fact which Mr. Locke establishes in his Report, that the expenses hitherto have been within the estimate, and according to Mr. Locke's prospective estimate will continue with very moderate exceptions so to be. Eight miles have been completed (no doubt to the magnificent mind of a Manchester and Leeds shareholder, who amends the locomotion of the country by converting a distance of 40 miles in turnpike into 60 by their railway, this will appear a most contemptible accomplishment) and they have been completed within the estimate. Tell it not at Todmorden—tell it not in the princely stations of the North Midland—tell it not in the mul-

* This letter has been noticed in our leading columns.—ED. R. T.

Digitized by Google

titudinous circumflections of the Leeds and Manchester, that this vulgar object of non-excess has been attained; but whatever others may insinuate, the fact cannot be disputed any more than the equally incontrovertible fact of the immense excess of the above-mentioned lines. The fact too is equally established that the contracts now in course of completion up to Glossop will realise an equal accuracy, and that the residue (tunnel included), in all human probability, is calculated with similar precision. But then, Sir, if these things are true, what will be the result? The result will be, that the Sheffield line must become a most formidable competitor to London, and will carry away the whole of the Midland Counties' traffic. In respect to this result, I quite admit that the fullest apprehensions of the Leeds and Manchester people are justified. They well know that all their forced traffic with London ceases the day when the Sheffield railway opens, that Derby and Nottingham and Leicester, that all the country from Doncaster to Newark, and much more, will cease to travel by this line; and they know, too, that if a branch is made from Penistone to the North Midland, even Leeds itself will prefer the shorter and the quicker route to Manchester we shall afford them, and that the Humber traffic with that of Hull, must be divided between us and the North Midland. Such is the dismal prospect of the Leeds and Manchester Company, but the position of the North Midland in respect to us is widely different; and if the Directors of that line will at last see their true interest, and turn their attention like men of business to new alliances; if they will give up their connection with an undertaking which has nothing in common with them but its expensiveness, they have it in their power to redeem their past follies, and to open out new sources of prosperity. The Sheffield line, if they will throw off the film of ignorance and prejudice under which they commenced their management, will put it into their power to maintain a very efficient and profitable rivalry with existing railways. Towards London it will enable them to compete with the Grand Junction—towards Hull it will give them the command of 10 or 12 miles, instead of 1 or 2 of traffic, and if they assist us in making it the road from Leeds to Manchester, they will get 20 or 25 miles instead of the 9 they now enjoy of that most important traffic. Whether they will do so or not must depend upon events; but whatever may be the determination of Directors or Engineers, the proprietary may safely be appealed to, as appealed to they will be, when a proper opportunity arises. The North Midland Company, Sir, has made great mistakes. It ought never to have gone to Derby, at a vast waste of money and time, but to have proceeded from the Trent northward up to Sheffield, without the expensive station at Derby, and without the still greater and most unnecessary expenditure of the Derwent Valley. It ought to have forced *per fas et nefas* an approach to Sheffield, so as to have possessed itself by the tenure of convenience of the Chesterfield and Barnsley traffic with that important town. It ought further to have possessed itself of the Sheffield branch, and brought into the coffers of its proprietary the remunerating traffic of that prosperous line. All these things were possible, and I advert to them at this late period for no other purpose but to show to the proprietary how grossly their interests have been mismanaged, and how much they are bound to consider the above points of future reform.

Without reference to the past prejudices, and the utter ignorance of local circumstances which have characterised their Direction—had this course been adopted at the outset, their railway would have been amongst the first in point of profit and pecuniary value; as matters now stand they have still much in their power, and it behoves the shareholders to see that the future is not sacrificed like the past. If they continue to prefer their alliance with the Leeds and Manchester, our line will nevertheless be made, and its future prosperity will make it evident to all the world, more especially at those periods when dividends are forthcoming or the contrary, that economy in construction is consideration of heavier moment than architectural splendour, and that a cheap line is after all the best proof of sensible Direction and able Engineering.

I do not know whether your past preferences will allow you to insert the above remarks; but having given place to many articles depreciatory of the Sheffield and Manchester line, I conceive in point of justice that you cannot refuse us to state our case in the same columns in which the depreciation has appeared, and I accordingly transmit those remarks, in the expectation that, as a railway critic, and not as an advocate of particular lines, or particular engineers, you will insert what I have written.

I am, Sir, your obedient servant,
A SHEFFIELD AND MANCHESTER SHAREHOLDER.

Sheffield, Nov. 23, 1841.

SHEFFIELD AND MANCHESTER RAILWAY.

To the Editor of the Railway Times.

SIR,—I have just returned from a trip on the Manchester and Sheffield Railway, and cannot but express my surprise that any person at all conversant with railways should report it fit for opening. I think the public have a right to call for the official Report of Sir Frederick Smith, for I really cannot think that he certified it in safe condition. Your Editorial remarks on this and the Gosport opening, are very much to the purpose. One fatal accident at this time will do more to injure railways generally, than all the profit of the lines opened. On this line the embankments are giving way; in several places the slopes have pushed the retaining walls down, and filled up the side drains; in others the cuttings are only half finished, and the soil (a kind of sandy marl or clay,) is *spewing* into the road. Then the bridges are all *green*, only just finished, and from the late heavy rains are sure to give way; indeed, I should not be at all surprised if one or two of them came down. The viaduct and embankment over the river, between Ashton and Dunkenfield, is in a very dangerous state, so much so that they have had to place large balks of timber to carry the rails since the opening.

On this line the Directors have carried the cheap fare system down to 1d.; it will be well if they do not find themselves "*penny wise* and *pound* foolish!"

Really, Mr. Editor, we had better be without Government inspectors, if the office is to be a mere nominal one.

Your obedient Servant,
A TRAVELLER PER RAIL.

November 22, 1841.

MORE ACCIDENTS ON RAILWAYS—*NOT* "RAILWAY ACCIDENTS."

YESTERDAY se'nnight, when the train which left York for Leeds and Hull, had arrived at Copmanthorpe, the passengers were alarmed by the cry that a woman had fallen out of one of the third class carriages. The train was then about stopping at the station, and our informant alighting with the guard, found the unfortunate woman lying across the railway, with her right leg crushed from the ankle to the knee. We have since learned that the female, whose name is Whalley, resides at Copmanthorpe, and that when the train reached that place, and whilst it was still in motion, he very imprudently attempted to get out, when she fell down on the rails, and the wheels of the succeeding carriages passed over her leg, which was fractured in such a severe manner that amputation was deemed necessary. She had been warned by a fellow-passenger to keep her seat until the train stopped, but neglecting the advice, she met with this serious accident. No blame is attributable to any servant of the Company.—*Hull Advertiser.*

Yesterday a labourer on the Northern and Eastern Railway was taken to the London Hospital, seriously injured by a train solely through his own negligence.

RAILWAY ADJUDICATIONS.

PLAYFAIR *v.* THE WEST LONDON (LATE THAMES JUNCTION) RAILWAY COMPANY.

Court of Chancery, Nov. 22.—The plaintiff is one of the original shareholders in the projected railway to connect the Birmingham and Bristol lines with the River Thames and the South-Western Railway. Seeing some reason to abandon the Company, he refused to pay up the calls on his one hundred shares, and the Company brought an action against him for the amount. A verdict was taken, subject to the opinion, on a special case of liability, and that question is not yet disposed of. Before the trial of the action the plaintiff filed his bill, and the Vice-Chancellor granted an injunction, but Lord Cottenham dissolved it, and allowed the trial to proceed, being of opinion that as the plaintiff alleged he had an equitable as well as a legal defence, there ought to be no bar to the proceedings. The cause therefore was called on for hearing in its turn.

Mr. BETHEL, before he opened the case, suggested the propriety of its standing over till the legal question was decided.

Mr. RICHARDS and Mr. WIGRAM saw no necessity for any postponement. The plaintiff alleged in his bill, as the ground of his application to the Court, that he had no good legal defence. Whether he had or not would be seen; but in the mean time the Court could determine whether he had any equitable defence.

Mr. BETHEL apprehended that both in equity and elsewhere, the real question was, whether the plaintiff had a legal defence. If he had not, the matter was at an end.

The LORD CHANCELLOR, with such an admission on the part of the plaintiff, saw no advantage in hearing the cause, as if the decision of a court of law was against the plaintiff, the only question to be determined in a court of equity would be one of the costs of the suit.

Mr. RICHARDS acquiesced in the propriety of this suggestion, and the cause therefore stands over.

PARKS *v.* THE BIRMINGHAM AND GLOUCESTER RAILWAY COMPANY.

Court of Queen's Bench, Nov. 23.—This was a rule calling on the Under-Sheriff of Warwickshire to show cause why he should not review the taxation of the costs of an inquisition taken on the 19th June, for the purchase of land belonging to the plaintiff. The Company built on the ground of Mr. Parks. A precept was issued to summon a jury to ascertain the amount of compensation, and the jury awarded 520*l.* damages. The Company made no offer to Mr. Parks, and the clause in the section relative to costs refers only to the case when the sum awarded is equal to, or greater than, the offer made by the Company. The Company having made no offer, it was urged that the cost of the inquiry should not be paid by the Company. A concession, however, was subsequently made by the Company, and certain expenses allowed, but not to such an extent as to cover the entire expense of the inquisition.

The ATTORNEY-GENERAL showed cause against the rule.

Mr. WHATLEY in support of the rule, said that the only thing material in the case was that a scale of charges which should govern other Under-Sheriffs in similar inquisitions should be laid down by the Court. There were much conflicting pretensions between the parties, which the adjudication of the Court in the present case would settle.

The Court suggested that the case should go before the Master to determine the nature of the costs, which might have the effect of governing similar cases.

THE QUEEN *v.* THE DIRECTORS OF THE EASTERN COUNTIES' RAILWAY.

Court of Queen's Bench, Nov. 24.—Lord Denman delivered judgment in this case. This was a question arising upon a motion for a peremptory mandamus to the defendants, to direct them to take

Digitized by Google

the necessary steps to grant compensation to a person who complained that his property had been injured by the making of the Eastern Counties' Railway. The injury of which he thus complained was by lowering the highway close to his grounds, in consequence of which a portion of them became useless. The return to the mandamus which had been issued in the first instance, stated that the defendants had not touched, taken, or used the land of the applicant. The question arose on this return. Various cases had been cited in the course of the argument; but it was finally agreed that this case must be decided on the provisions of the particular Act under which the court had been constituted, as all the preceding decisions had gone upon the peculiar terms of the several Acts, under the provisions of which those motions had been made. The point to be decided here was, therefore, whether the applicant was entitled to compensation under the terms of the Act passed, to make a railway from London to Norwich. Before adverting to the particular provisions of that Act, it would not be improper to premise that the Court was of opinion, that where such large powers were given to a Company to take away the land of landed proprietors, on their line, without the consent of those proprietors; it was but reasonable and just that any injury which these proprietors might thereby occasion, should be fairly compensated. Having made those observations, the terms of the Act itself might be considered. The 9th section of the statute gave the Directors the power, not only to take the land, but also to alter, raise, or lower the lands, &c., making full compensation to the owners thereof. On this clause it was important to remark that injuries to the land, independent of the actual taking of it, were comprehended within the terms of the provision. There were several other sections of the Act in which no other injuries beside those of taking or using the land were referred to, and these sections were those which contained the provisions for settling how the amount of compensation should be ascertained and paid. The question, therefore, in this case would be, whether the clauses thus directing the mode of settling the compensation could be applied to that former section of the Act, or whether any injury besides that of actually taking or using the land must remain without compensation. The clauses settling the mode of ascertaining the compensation, stated that the Company might take and use the land; but if the party to whom it belonged refused to accept the purchase-money, recompense and compensation, and a jury should be summoned, and such jury should inquire into and assess the sum to be given for compensation "for the damage which shall have been sustained either by the severing or dividing the land from other land of which such person is possessed," which satisfaction, recompense, or compensation, should be inquired of in the manner therein provided, and separately from the value of the land taken or used, and that the sheriff should give judgment accordingly. Now it must be admitted that the jury in this case had directly found that the applicant's land had been made the subject of damage and compensation, and the argument was, that as the injuries thus mentioned in the Act were alone specially provided for in the clause relating to the mode of ascertaining the compensation of all other kinds of injury were excluded from the benefit of the statute. The Company did not adopt that argument, but thought that the words of the 9th section of the Act must be incorporated into the others, and that the compensation now required ought to be granted. The intention of the legislature was to give compensation, and that intention ought to be effectuated. It might be true that in some of the sections there was no provision exactly meeting this case, but the Court observing that the general intention of the legislature was very clearly expressed to give compensation where injury was suffered, felt no hesitation in carrying into effect that intention. One argument had been addressed to the Court to which some notice might not improperly be given. That argument was, that if this argument should be made absolute, every injury to any person's land, however distant that land might be from the railway, would be made the subject of an application to the Court. The answer to that argument was that when an extraordinary case arose the Court would know how to deal with it. But here was the case of land injuriously affected by an act which was clearly within the powers of the Company's Act, and for that injury the Company must be held answerable. There must, therefore, be a peremptory mandamus. —Rule absolute.

THE QUEEN *v.* THE GREAT NORTH OF ENGLAND RAILWAY COMPANY.

Bail Court, November 20.—Mr. WATSON, on behalf of a gentleman named Ogden, applied for a rule calling upon the Great North of England Railway Company to show cause why they should not immediately proceed to set out the railway from Darlington to Newcastle. This was an application similar to the one which had been made in this Court in the case of the Eastern Counties' Railway, in which case the rule, after argument in the other Court, had been made absolute, a mandamus had gone down which on the return had been quashed, on the ground of insufficiency. In the year 1836, an Act of Parliament had been obtained by the Great North of England Railway Company for making a railway from Gateshead, opposite the town of Newcastle upon-Tyne, to Beworth-on-the-Tees, thus connecting the river Tees by railway with the town of Newcastle. It was also the intention of the Company to carry a railway from the river Tees to the city of York, and in the next session of Parliament an Act had been obtained for carrying the railway from the Tees to York. The first had been obtained in 1836; they immediately proceeded to complete the railway from the city of York to the Tees, and that portion of the line was now open. They also, under their first Act proceeded to complete the original railway from the river Tees to Darlington. With the exception of buying some small portions of property they had not done anything for the completion of the line from Darlington to Newcastle. Lately a meeting of the Company had been held, at which a plan had been proposed for abandoning the original line, and for the adoption of another line. Close to the City of Durham, where the original line would have passed, they would, according to the Act of Parliament, have had to carry an immense embankment across Shimcliff Valley, the expense attending which had probably been the cause of their desiring to abandon the original line. Mr. Ogden, on whose behalf he applied, possessed property close to what would have been the Durham station, and it was now proposed to carry the railway from Darlington to Newcastle, by carrying the line four or five miles from Durham through a place called Thistleton Gap, and then deviating to the right to join the Durham Junction Railway, which railway joined the Stanhope and Tyne Railway, which went to Shields and joined the Brandling Junction Railway, and thus the railway was carried from Darlington to Newcastle by a devious course, and by joining three railways, on which loads of coal were constantly being carried, thus adding considerably to the danger of the passengers travelling on the railway. They had agreed to carry the railway close to Durham; they now proposed to pass at a considerable distance from Durham.

Mr. Justice PATTESON—They must get an Act of Parliament to make the deviations and then the present Act will be repealed, and your rule will fall to the ground. Is this the proper place to fight the question?

Mr. WATSON submitted that they could not speculate on what Parliament might do. The Company had obtained an Act, giving them longer time, but the additional time would expire in two years; and his affidavit showed that unless they immediately proceeded to take steps for the completion of the line it would not be completed in time.—Rule granted.

ALDRIDGE *v.* GREAT WESTERN RAILWAY COMPANY.

Court of Common Pleas, Nov. 19.—This was an action on the case for setting fire to the plaintiff's haystack, the facts of which had been turned into a special case, for the purpose of obtaining the opinion of the Court as to the liability of the defendants. The facts stated on that special case were simply—that the engine, which was the cause of the damage, was an ordinary engine, and that it was running along the line in the ordinary manner, when the flakes of burning cinder flew from it, which rested upon the plaintiff's stack and set it on fire. The plaintiff alleged, therefore, that the damage was occasioned by the negligence of the defendants. On the part of the defendants it was contended, that under these circumstances the plaintiff must be nonsuited.

The COURT, however, was of opinion that the question of negligence was one of fact, which must be decided by a jury. The plaintiff might possibly rely upon the use of a particular engine to show negligence, and it was impossible, therefore, for them to say that he must be nonsuited. The case, therefore, must go to trial.

THE SHEFFIELD CANAL COMPANY *v.* THE SHEFFIELD AND ROTHERHAM RAILWAY COMPANY.

Rolls' Court, Nov. 24.—This cause was resumed, the depositions were read, and Mr. BACON was heard for the defendants, after which Mr. PEMBERTON replied.

The correspondence on which the plaintiffs founded their prayer for the investment in Government securities of a sum to secure them 100*l.* a year, took place in June, 1836, when the Railway Bill, which had passed the Commons, was in the House of Lords. The first letter was from Mr. Vickers, the Solicitor for the Railway, to Mr. Wake, the Solicitor of the Canal Company. It was dated June 18, 1836, and stated, that "in compliance with the recommendation of the Committee, he, as Solicitor of the Railway Company, undertook that the proprietors should enter into a covenant to pay the Canal Company 100*l.* per annum, the same to be applied exclusively towards the repair of the Wicker." This letter was answered on the Monday following, June 20, by Wake, who submitted "that the matter must be arranged by investment in the way he had suggested." The reply to this was, on Monday, June 20, 1836, when the solicitors for the Railway Company wrote to Wake, that they had no objection to meet his views by investing in the funds sufficient to raise the annual payment proposed. It was alleged that before Wake replied to this letter he told Vickers that the investment ought to be made before the Bill proceeded to a third reading in the Lords, but that he would consult Lord Wharncliffe, which he accordingly did; and then he, on the forenoon of the 21st of June, 1836, wrote to Vickers, "that he had had an interview with Lord Wharncliffe, and yielding to his Lordship's opinion, he, on behalf of the Sheffield Canal Company, accepted the engagement on the terms of the two documents." The plaintiffs then stated in their Bill, that the Bill having passed without any opposition on behalf of the Canal Company, and received the Royal Assent on the 4th of July following, they relied upon the agreement, but did not apply to have it carried into execution until the 24th of April, 1838, when they wrote to the solicitors of the Railway Company, calling upon them to perform the engagement respecting the annuity of 100*l.*; and they again applied in June, 1838, when their solicitor received an answer, that if any contribution was to be made, it would be matter of concession and not of right; and on further application they received an answer that the Railway Company did not consider themselves at all bound to make any contribution towards the Wicker, in consequence of which the present Bill was filed. The defendants, in their answer, said, that as the price of peace, and to remove all further opposition, Vickers, on his own responsibility, wrote to Wake the letter of the 18th of June, 1836; that there was an interview with Wake that evening, when Wake refused to accept the proposition made in it, and insisted that the annuity of 100*l.* a year should be paid to the plaintiffs for ever, and be

Digitized by Google

paid to them generally, and not exclusively, for the repairs of the Wicker-road, and that the payment should be provided for by an investment in the funds, Vickers refused to accede to these terms, and Wake said he should oppose the bringing up the Report, to which Vickers replied 'Very well, we will fight it out.' On Monday, June 20, 1836, Vickers received from Wake a verbal message, to which an answer was returned, requesting communications to be made in writing, and in consequence Vickers received from Wake the letter of June 20, 1836, insisting upon an investment and a declaration of trust before the Bill was further proceeded with, or he would oppose its further progress, for he would see Lord Wharncliffe and the Duke of Norfolk, and stop the Report of the Committee on the Bill from being brought up; on which Vickers said, "You are vexatiously unreasonable. We will not delay the Bill. There is an end to all arrangement. It seems we are to fight it out to the very last. Be it so. We shall bring up the Report to-night." The answer stated that there the meeting ended, and the proposal made by Vickers to Wake was no longer open for Wake's acceptance, and the defendants submitted it was not competent for Wake, after that meeting, to accept the proposal, and that the defendants were not bound by it. On the following day, the 21st of June, 1836, the Bill was read a third time and passed, and it afterwards received the Royal Assent. Wake then wrote the letter of the 21st of June, 1836, ("that he accepted the engagement on the terms of the two documents.") Vickers saw Wake that evening, and informed him that his letter was too late, and that the Bill had been passed. Wake positively refused, at the interview which took place between him and the defendant's solicitors at two o'clock on that 20th of June, to accept their proposals, and upon such refusal the whole treaty was at an end, and Wake was at liberty to oppose the Bill.

The cause was argued at great length. It was urged for the defendants that the agreement had been entirely put an end to at the interview where Wake insisted upon the investment of the money and the declaration of trust, and Vickers told him "he was unreasonable; there was an end to all arrangement; we are to fight it out to the last;" and that Wake's letter, written afterwards, accepting the engagement on the terms of the two documents, came too late.

For the plaintiff it was argued that the main claim, the claim of the 100*l.* a year for the repairs of the road, was not in dispute, the difference arose only as to the manner in which that money was to be secured, and that the plaintiffs were upon the agreement clearly entitled to the annual payment of the 100*l.*; and as to the second point, that Wake had accepted the agreement proposed between the solicitors, and had notified its acceptance in time, for that the Bill, when the Report was brought up, and the third reading in the Lords was passed, had been sent up to the House of Commons for their concurrence to some amendments made by the Lords, so that Wake had full opportunity of opposing the Bill, if no agreement had been entered into.

Lord LANGDALE said, this was a new point, and Mr. Kindersley might mention the case to-morrow, after the unopposed petitions.

Mr. KINDERSLEY said, if his Lordship would look at the pleadings, he would see there was no foundation for the last argument.

EDINBURGH AND GLASGOW RAILWAY.

WE understand that the Edinburgh Directors came to Glasgow to attend the meeting which took place on Tuesday last, and will be found noticed elsewhere, entirely by the railway. They travelled part of the way in one of the carriages, and partly by an engine and tender, &c.; and we are informed that they were much pleased with the smoothness of the road and easy motion of the carriage. They were obliged, however, to dismount at the two points still unfinished, viz., the small gap in the great embankment adjoining the Almond Valley Viaduct, and at the Croyridge. The last fortnight of fine weather has made a prodigious change on these two points. At the former, Messrs. Gibb and Son state that another fortnight of such weather will complete their embankment. At Croy, where it will be recollected the great ridge of whinstone rock occurs, of several hundred yards in length, and not less than 70 or 80 feet in depth at some parts, every exertion is making, that men are capable of, to disembowel the portion of rock still remaining to be cleared out. This portion, we are informed, extends to between 100 and 200 yards in length, and 6 or 8 feet in depth. The surface of the rock exhibits a perfect hive of human beings, who give most audible and visible proofs of their progress by the incessant thunder of their blasts, and the eruptions of hughe masses of rock projected into the air. One of these blasts, out of a host of others, which happened to be fired off while the Directors were passing, contained a barrel and a half of gunpowder, and they were right glad to get beyond reach of its volcanic effects. With such adamantine matter to deal with, we can easily perceive it will take some weeks of good weather to remove the comparatively small remaining quantity of rock; but when this is once out, it will only require a day or two to complete the laying of the rails, which, in fact, are at present only a few hundred yards apart. —*Glasgow Herald*, Nov. 19.

EDINBURGH AND GLASGOW RAILWAY.

To the Directors of the Edinburgh and Glasgow Railway.

GENTLEMEN,—You are, it seems, at last about to open the Edinburgh and Glasgow Railway throughout. This being nearly *the last* completed of all the great lines of railway for which the sanction of the legislature has been obtained, it may be presumed you have profited by the humbling—nay, appalling—lessons so repeatedly presented to you, and seeing the disastrous, and every day more and more depressed state of most of the English lines, may have studied and put in practice the needful economy, and have thus avoided the rock on which nearly all the other lines yet constructed have split. Of what avail, as regards making a dividend, can any one suppose it would be, had we whole quarries of hewn and carved stone!—palaces of stations, or viaducts and bridges, surpassing in splendour and magnificence the greatest of the works of Greece or Rome? When dividend day comes it will be found all this is sheer folly—the expense incurred hanging like a millstone round the neck of the concern for ever! My object, however, in addressing you at present is to warn you of another error into which you, like all other Railway Directors, will be sure to fall headlong—I mean as regards the completing of your traffic establishment. Allow me then to exhort you on no account whatever to enlist a whole army of engineers, clerks, policemen, superintendents, conductors, &c. &c. *at first*. You must before now have perceived that railway traffic is a long time in developing itself—many months—even years! Besides, you are opening your line in the midst of winter, when traffic is at the *minimum*. It will be time enough to enlarge your establishment when you find your traffic has increased. Half employed officials will add to your disbursements greatly, whilst sooner or later you will have A DIVIDEND TO MAKE, and then believe me you will be disposed *almost "to give your ears,"* had proper economy been studied from the first, for your concern henceforward must take its stand amongst the now long list of other railway lines—high or low—*exactly in proportion to the dividend it may be likely to pay*.

I am, Gentlemen, your most obedient servant,
ŒCONOMICUS.

P. S.—You are about to apply to Parliament for an amended Act. Get a clause inserted, enabling you to hold *quarterly meetings* and to pay *quarterly dividends*. It will be one means of placing your concern in a favourable position, none of the other Railway Companies having yet accomplished this, nor is there, I believe, any stock, neither the funds, Bank nor East India stock—I omit stock bank, or any stock whatever, on which dividends are payable quarterly—yet Railway Companies have the power of doing this merely by a little *additional trouble to the officials*. When, too, you make your half year or quarterly statements, show the cost per cent. on the gross receipts of the locomotive power, maintenance of way, police, coaching department, merchandise department, &c. &c., the same as the London and Birmingham Railway Company do, and when other Companies shall be compelled to do the same, mismanagement will probably soon cease.

RAILWAYS IN PRUSSIA.—The Berlin papers state that the line to be followed by the railway from Berlin to the banks of the Rhine has been definitely settled by the Prussian and other governments interested in the question. It will commence at Halle, a place already in communication with the Prussian capital by a railway; from thence it will pass by Merseburg, Nauemburg, Weimar, and Erfurth, to Eisenach and Prussian Saxony. At this point three branches will start off, one to Cassel and Frankfort, another to Cologne, and the third towards Bavaria. A treaty was signed on the 6th instant, at Berlin, between Prussia, Denmark, and Mecklenburg, for settling all matters connected with the railway from Berlin to Hamburg, along the right bank of the Elbe, by Boizenburg and Bergedorff. The contracting parties stipulate to give up all the state lands required for the line, and it is expected that the communal lands along the line will also be ceded on moderate terms.

A Company, formed of English and French speculators, lately offered (we are informed by the *Constitutionnel*) to execute *à forfait* a railway from Paris to Lille, a project which has been long talked of, and an undertaking which there appears to be fully traffic enough to justify. The work was to have been executed "upon the account of the state." The Minister of finance, M. Humann, as the representative of the Government, offered to reimburse the Company about to be formed in *bons* of the Treasury, bearing interest at 4 per cent. The Government would by this arrangement have had the advantage of having the line completed within six years, and 12 years would have been allowed them for making good the entire expense. The Company objected to this arrangement as too favourable to the Government, and obviously unreasonable. They demanded a higher interest than 4 per cent. upon the very large sums which they would be compelled to advance. M. Humann refused to subscribe to this condition. The financial embarrassments of France probably coerced the Minister, but the country will suffer.

ACCIDENT ON THE BIRMINGHAM RAILWAY.—On Monday evening last, near Harrow, at the cutting at Woodcock-hill, the down luggage train on the Birmingham Railway, which left Chalk Farm in the evening, broke down, by the breaking of an axletree, and lay completely across the line, rendering it impossible to pass either up or down. The due passenger train from Birmingham was unable to pass until two hours had elapsed. No person sustained the least injury.—*Courier*.

THE LATE MR. COCKERILL.—"The affairs of the late Mr. Cockerill," says the *Temps*, "are about to be brought to a solution. A Company is about to be formed for carrying on the establishments of Liege and Seraing. The body of creditors will transfer thither the vast workshops, with their dependencies, situated at Jemmappe, Tillem, Spa., &c., the tools, the machines, and the materials which are in them. This property has been valued by appraisers appointed by the Government and by the creditors at 12,000,000f. All the rest of the disposable property will be sold, and the produce divided amongst the creditors who refuse to take shares in the new Company to the extent of their claims. Whatever amount may remain due after this dividend, will be paid off in shares.

BRISTOL AND GLOUCESTER RAILWAY.

CONTRACT FOR WORKS.—Notice is hereby given, That the Directors will receive, at their offices, Exchange-buildings, Bristol, on or before 12 o'clock on Monday, the 3rd day of January, 1842, Tenders for the Excavation and Formation of the Earthwork, including the diversion of streams and roads, and construction of bridges, culverts, and other masonry, and the entire completion of the works, including the ballasting, but exclusive of the laying of the permanent rails, of that portion of the railway included in the following contracts:—

Contract No. 5, commencing from a point 200 feet south of the Road No. 15, in the parish of Berkeley (being the end of No. 4 Contract), and terminating in Field No. 1, in the parish of Stinchcombe, being about the distance of 2 miles and 53¾ chains.

Contract No. 6, commencing from a point in Field No. 1, in the parish of Stinchcombe (the end of No. 5 Contract), and terminating in Field No. 37, in the parish of Cam, being about the distance of 3 miles and 22 chains,

Contract No. 7, commencing from a point in Field No. 37, in the parish of Cam (the end of No. 6 Contract), and terminating at a brook boundary between the parishes of Frocester and Leonard Stanley (the commencement of No. 8 Contract), being about the distance of 2 miles and 67 chains.

Contract No. 11, commencing from a point in Field No. 6, in the parish of Yate (being the end of No. 12 Contract), and terminating at the north side of the Road marked No. 87 in the same parish, being about the distance of 2 miles and 67 chains.

Contract No. 12, commencing at the junction of the Bristol and Gloucestershire Railway, and terminating in Field No. 5, in the parish of Yate (the beginning of No. 11 Contract), being about the distance of 2 miles and 58 chains.

Drawings and Specifications of the above works may be seen on and after Monday, the 6th day of December next, at the Company's offices, Exchange-buildings, Bristol.

Tenders are to be made on printed forms, provided for that purpose, which may be obtained on application at the office.

The Directors will not consider themselves bound to accept the lowest tender; and they expect the several parties to attend at the office on the 3rd of January, at 12 o'clock.

ROBERT FLETCHER, Secretary.

Bristol, 23rd Nov. 1841.

CROYDON RAILWAY—WINTER TRAINS

On and after Wednesday, the 1st December next, the following Trains will run:—

DOWN TRAINS

From Tooley-street—Morning, 5 minutes past 9, 10, and 12 o'clock, afternoon, 20 minutes past 2, 4, 5, 6, and 8.

UP TRAINS

From Croydon—Morning, 5 minutes past 8, 9, 10 and 11 o'clock; afternoon, 20 minutes past 1, 3, 5, 7, and 9.

SUNDAY TRAINS

Down Trains from Tooley-street—Morning, 5 minutes past 8 and 10 o'clock; afternoon, 20 minutes past 2, 4, 6, and 8 o'clock.

Up Trains from Croydon—Morning, 5 minutes past 9 o'clock; afternoon, 20 minutes past 1, 3, 5, 7, and 9.

R. S. YOUNG, Secretary.

205, Tooley-street, November 26, 1841.

GREAT YARMOUTH AND NORWICH RAILWAY.

RESOLUTIONS passed at a Private Meeting held in the Town Hall, Great Yarmouth, on Friday, the 19th inst.

The Worshipful the Mayor in the Chair:

1st. "That in the opinion of this Meeting the making of a Railroad to connect the Town of Yarmouth with the City of Norwich, would be attended with great local convenience and advantage."

2d. "That in the selection of a Line for such purpose, it is desirable with a view to the ultimate profit of the Subscribers, as well as to the economical rate of charge at which it may be used by the Public, that it should involve works of as little expensive a character as possible consistent with the permanence and usefulness of the undertaking."

3rd. "That the line selected by Mr. Robert Stephenson appears to be peculiarly well adapted for the attainment of this object, and the unusually cheap cost at which it may be constructed as appears by his report, affords reasonable expectation that it would prove a most profitable speculation."

According to the Estimates of Mr. Robert Stephenson, the above line from Norwich to Yarmouth twenty miles in length may be made for the unusually small sum of 150,000*l.* the traffic between the two towns having been estimated by the Eastern Counties Railway Company, at upwards of 60,000*l.* per annum, and being certainly at a low estimate calculated to produce a revenue of upwards of 40,000*l.* The necessary steps have been taken for going to Parliament in the next Session.

The Shares are 20*l* each, on which a deposit of 2*l.* per Share will be required, *which deposit will however be returned in case the proposed Bill be not introduced into Parliament in the next Session*, and interest at the rate of 5*l.* per Cent. per Annum, will be allowed on all calls made previous to the completion of the work.

Applications for Shares may be made before the 31st of December next, to Messrs. White and Barrett, 35, Lincoln's Inn Fields, to Messrs. Rackham and Cooke, or J. O. Taylor, Esq. Norwich; and to Messrs. Reynolds and Palmer, Great Yarmouth, of whom Prospectuses of the undertaking, and copies of Mr. Stephenson's Report may be obtained.

LONDON AND BRIGHTON RAILWAY COMPANY.

—Notice is hereby given, That on and after Wednesday, 1st December next, the Trains will start as follows:—

From London at 9, 10.45 a.m.; 1.45, 3.45, p.m.
From Brighton at 8, 10.45 a.m.; 1.45, 3.45, p.m.
Sundays—from London at 9, a.m.; 3.45, p.m.
,, from Brighton at 10.45, a.m.; 3.45, p.m.

Due notice will be given when the Goods' Trains will run. The Company will not be accountable for Passengers' Luggage, unless it is booked and paid for accordingly.

By order,
THOMAS WOOD, Secretary.

10, Angel-court, Throgmorton-street, Nov. 24, 1841.

STEAM CARRIAGE AND WAGGON COMPANY.

Offices 18, Moorgate Street, City. The Directors beg to announce that in pursuance of a resolution passed at a General Meeting of Shareholders held at the Freemason's Tavern, on the 11th November, they are ready to receive proposals from persons willing to supply Steam Carriages for the conveyance of Goods or Passengers on Turnpike Roads. Parties proposing to supply carriages must produce one in a state fit for work to be submitted to such test as the Directors may require, and if approved, arrangements for the construction of several for the use of the Company will be immediately made. All Communications should be addressed as above.

First Catechism of Natural Philosophy.
Second Catechism of Natural Philosophy.
Third Catechism of Natural Philosophy.
Catechism of Geography.
Catechism of English History.
Catechism of Bible History.

*** The information gained by means of these useful little Catechisms will form a ground work on which the higher branches of science may be effectually based by the ordinary course of every-day reading.

London:—Darton and Clark, Holborn Hill.

VERY EXTENSIVE SALE OF RAILROAD MATERIALS, VALUABLE ENGINE, TWENTY HORSES, &c. at the HASSOCKS STATION, near Hurstperpoint, and about seven miles from Brighton.—Mr. RIDLEY respectfully announces that he has received instructions from Messrs. Thornton, to sell by Auction, at the above Station, on Friday, December 3, at 11 o'clock precisely, a great portion of their very valuable, extensive and genuine Live and Dead Stock used upon that part of the London and Brighton Railroad for which they were contractors, including a 4 horse engine with improved boiler and apparatus applicable for pumping, turning, cutting, polishing, and many other purposes, the whole in excellent condition, a 35 barrel iron engine boiler, a 100-barrel tank (nearly new) made of ¼ inch Lowmoor iron, about 20 very fine, sound, young Cart Horses, being part of their celebrated and almost matchless stud, about 600 tons of iron sandstone in blocks from 4ft. to 6ft. long, 2ft. to 4ft. wide, and 1ft. to 2ft. 6in. thick (this is the stone used for the handsome parapets and copings to the various viaducts, bridges, and walls, on the line of road,) and will be found worth the attention of builders and masons, a great quantity of handsome Sussex Marble in blocks and slabs, richly flowered with fossils (polished specimens will be exhibited at the sale, which will show how admirably adapted this marble is for chimney pieces, boudoir and drawing-room table-tops, dressing stands, noblemen's hall floors, &c.); 300 3-yd. railway waggons, with 2 ft. 6, and 3 ft. wheels; 54 2-yd. ditto, with 2 ft. 3 wheels (4 ft. 8½ gauge); 3-yd. road carts, several tons of new bar iron from ½ in. to 2½ in. round, and flat and square ditto of various dimensions; upwards of 200 tons of iron rails (broad bottom T headed) from 30lbs. to 42lbs. a yard, a considerable quantity of cast and wrought scrap iron, well deserving the notice of smiths, Memel and fir timber in baulk and plank, capital centres from 6 ft. to 30 ft. span (principally foreign timber), large quantity of 11in. and 9 in. wheeling and other planks, rag mills, brick tables, barrows, moulds and pallets, many thousand new larch sleepers appropriate for fencing posts, earth-carts, navigators' barrows; water, oil, and powder puncheons and casks, cords of fire-wood, &c. &c. &c.

Catalogues may be had two days prior to the sale at GARRAWAY'S, London, Star Inn, Lewes, New Inn, Hurstperpoint, and at the Auctioneer's offices, 155, North-street, Brighton, or they will be forwarded per post on the 1st of December to any person making prior application (post paid) to Mr. RIDLEY.

NORTHERN AND EASTERN RAILWAY.

—Notice is hereby given, That the Directors have this day made a Call of Five Pounds on each Share of Fifty Pounds, to become payable on the 1st day of January, 1842, and the Shareholders are requested to pay the same to either of the following Bankers:—

London—Messrs. Masterman and Co.
Manchester—Sir B. Heywood, Bart., and Co.
Liverpool—Messrs. Heywood and Sons.
Cambridge—Messrs. Fisher and Sons.

Interest at the rate of 5 per cent. per annum will be charged on all sums which remain unpaid after the day above appointed.

Shareholders are requested to take Notice, that each original share of £100 has been by the late Act of Parliament converted into two shares of £50 each, so that the Call hereby made is equal to £10 per share on each of their original shares.

WM. CRAWSHAY, Chairman.
WM. BOURNE, Secretary.

Shoreditch, London, Nov. 25, 1841.

Colonel Mure, of Caldwell.
Gibson Stott, Esq., of Balloch.
William Campbell, Esq., of Tillichewan Castle.
Peter Denny, Esq., of Castle Green, Dumbarton.
Alexander Fletcher, Esq., merchant, Glasgow.
James Black, Esq., merchant, Glasgow.
John Orr Ewing, Esq., merchant, Glasgow.
John Stuart, Esq., merchant, Glasgow.

ENGINEER.

James Thompson, Esq., M.R.I.A., Glasgow.

LAW AGENTS.

Messrs. A. & J. Morrison, Writers, Glasgow; Messrs. Arch. Grahame, Mouncrieff, and Weems, Solicitors, London.

INTERIM SECRETARIES.

Messrs. Macewan and Auld, Accountants, Glasgow.

The want of a good direct water communication between the city of Glasgow and Loch Lomond has long been severely felt, both by the proprietors of the many public works situated on the river Leven, and by the whole population residing or having property in that district of the country, as well as to the north, east, and west of that beautiful Loch. Hitherto, the whole coal, lime, and other minerals, together with the extensive quantities of drysaltery stuffs, cloths, &c. for the various printfields, have been either carted at a very great expense, or shipped from Glasgow *via* Dumbarton; and beyond which, it is only in certain states of the river that the Leven is even barely navigable for barges of light draught, and that under much difficulty and expense of haulage against the current.

For the purpose of remedying so great an inconvenience, and of cheapening the cost of such necessaries (at present so enormously dear), to the inhabitants of Dumbarton, the landed proprietors in the neighbourhood, the owners of public works, and the population generally, it has long been thought that such a canal as the one now to be constructed would be of vast importance.

The Canal, which has been so long in contemplation, has now been resolved upon, and the surveys completed; the line commencing at the termination of the Forth and Clyde Canal at Bowling, on the Clyde, and running near to the town of Dumbarton, and thence, up the Vale of Leven, to Loch Lomond. It is thought advisable to bring the matter before the public.

From the very favourable report of the Engineer, together with the information obtained respecting the amount of the existing traffic, &c., it is already placed beyond doubt that the scheme will prove remunerating, yielding an immediate return of 10 per cent. on the outlaid capital.

Every information will be given by the Engineer, the Law Agents, or the Interim Secretaries, to parties taking an interest in the undertaking.

Applications for shares may be made to

MACEWAN & AULD,
Interim Secretaries.

Just published, 7th edition, price 3s., and sent free on receipt of a Posteffice order, for 3s. 6d.

MANHOOD: the Causes of its Premature Decline, with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects of excessive indulgence, solitary habits, or infection followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases, &c.:
By J. L. CURTIS and Co., Consulting Surgeons, London.

SEVENTH EDITION.—Published by the Authors, and sold by Balliere, Medical Bookseller to the Royal College of Surgeons, 219, Regent-street; Strange, 21, Paternoster-row, London; Guest, Birmingham; T. Sowler, No. 4, St. Ann's square, Manchester; G. Philp, South Castle-street, Liverpool; Machen and Co., 8, D'Olier street, Dublin; Duncan, 114, High-street, Edinburgh; and to be had of all Booksellers.

The following are a few of the numerous testimonials this popular work has received, and which the limits of an advertisement will only allow of being published:—

Messrs. Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it, render it invaluable.—*Magnet.*

The perusal of Messrs. Curtis's book, entitled MANHOOD, has really astonished us by developing a series of maladies, the never failing consequence of the vicious habit of which it treats. The clear connexion pointed out between the assigned cause and the effects is perceptible to every capacity. We strongly recommend the work.—*Age.*

We recommend the work, entitled MANHOOD, &c., to the careful perusal of persons of all classes. The moral as well as physical advantages sure to result from such perusal, will be most readily recognised and felt by those who stand most in need of them.—*Statesman.*

Messrs. Curtis and Company are to be consulted daily at their residence, No. 7, Frith-street, Soho-square, London.

Country Patients are requested to be as minute as possible in the detail of their cases. As to the duration of the complaint, the symptoms, age, general habits of living, and occupation in life of the party; the communication must be accompanied by the usual consultation fee of £1, without which no notice whatever can be taken of their application, and in all cases the most inviolable secrecy may be relied on.

James, Clift, Esq.	Lewis Pocock, Esq.

Rates reduced to the lowest possible scale that is compatible with the safety of the assured, and of the Company, whereby a certain and annual bonus is secured to every individual assured in this Office, in lieu of the deferred and sometimes delusive prospect of a periodical division of profits.

An ample Subscribed Capital, together with a large accumulated Premium Fund, invested in Government and other available securities, and perfect security without any responsibility, is thus given to the assured.

ANNUAL PREMIUM TO ASSURE £100.

Age.	For one year.			For seven years.			Term of Life.		
	£	s.	d.	£	s.	d.	£	s.	d.
25.....	0	19	7	1	0	7	1	15	1
30.....	1	1	3	1	2	1	1	19	0
35.....	1	2	9	1	3	8	2	5	10
40.....	1	4	6	1	6	2	2	13	9

In assurances for advances of money, as security for debts, or as a provision for a family when the least present outlay is desirable, the varied and comprehensive tables of the Argus Office will be found to be particularly favourable to the assured. A Board of Directors, with the medical officers, attend daily.

EDWARD BATES, Resident Director.

FORTY-TWO USEFUL, SEASONED CART HORSES, TWO REMARKABLY CLEVER COBS, THREE-YEAR OLD COLTS, HARNESS, &c.

TO BE SOLD BY AUCTION, by Mr. DIXON, at his Repository, Barbican, on FRIDAY, December 3, 1841, commencing at Twelve o'clock, the genuine and entire well-known stock, that have been employed on contract, with Messrs. Hoppe and Son, Coal Merchants, Pig's Quay, Bridewell Precinct,—Consisting of 20 Powerful, Active, useful Cart Horses, 20 sets of Thill and Chain Harness, 20 Nose Bags, and Stable utensils; the whole of which are positively for unreserved sale.

Also, 10 fine-shaped, valuable, young, seasoned Cart Horses, 2 remarkably promising three year old Colts; 2 very handsome Cobs, exceedingly clever, either as Hacks, or in Harness; Cart, Chaise, and Agricultural Harness, and Implements, the property of a gentleman, sold solely in consequence of his relinquishing his farms, and leaving the county of Kent.

Twelve very useful, short-legged, active Horses, that have been employed on the Eastern Counties' Railway, sold in consequence of the contract on which they have been employed being completed.

Colours.—Bays, Greys, Chesnuts, Browns, and Blacks.

On view, and catalogues had two days before sale.

LONDON AND GREENWICH RAILWAY SCRIP.—The holders are reminded that the final instalment became due on the 15th of October last, and that interest at the rate of 5 per cent. per annum is now charged on all instalments in arrear; and that unless paid in full on or before the 15th of January next, the whole of the amounts already paid *are subject to forfeiture*.

The Scrip on which the whole of the instalments have been paid, must be registered before the holders can receive any dividend thereon.

By order,
J. Y. AKERMAN, Sec.

Offices, 37, Canterbury-square, Tooley-street,
16th November, 1841.

GRAND JUNCTION RAILWAY.—The Directors are prepared to receive offers for supplying the Company with Ten Engine Tenders, agreeably to drawings and specification, which may be seen at the office of the Superintendent of Locomotives, at Edge Hill, on and after the 27th instant, between the hours of Ten and Four o'Clock.

The offers indorsed "Engine Tenders." to be addressed to the Secretary not later than the 4th December.

By order,
MARK HUISH, Secretary.

Lime-street, Liverpool, 19th November, 1841.

GLASGOW, PAISLEY, AND GREENOCK RAILWAY.—NOTICE IS HEREBY GIVEN, that in pursuance of a Resolution of the Board of Directors, Proprietors of New Shares in the said Undertaking, are required, on or before Wednesday, the 1st day of December next, to pay into any one of the undermentioned Banks the further sum of £1 10s., as a SECOND CALL on each share held by them respectively, viz:—

Edinburgh and Glasgow—Royal Bank of Scotland.
Greenock—Any of the Banks there.
Liverpool—Liverpool Commercial Bank.
Lancaster—Lancaster Banking Company.
London—The Chief Office of the London and Westminster Bank, Throgmorton-street.
Dublin—To Messrs. Labertouche and Stafford.
Londonderry—Branch of the Provincial Bank of Ireland.

Discount at the rate of 5 per cent. will be allowed on all payments made previous to the 1st December, and the Bankers have been instructed to charge Interest from that date until payment.

By order of the Board of Directors,
WYNDHAM HARDING, Secretary.

Railway Office, Greenock, Nov. 3, 1841.

SCOTTISH (WIDOWS' FUND) LIFE ASSURANCE, Founded on the Model of the LONDON EQUITABLE.—Head Office, Edinburgh, 5, St. Andrew-square.

PRESIDENT.
The Right Hon. the EARL OF ROSEBERY.

VICE-PRESIDENTS.
The Right Hon. the LORD JUSTICE GENERAL.
The Right Hon. LORD FRANCIS EGERTON.
The Most Hon. the MARQUIS OF TWEEDDALE, K.T.
SIR THOMAS DICK LAUDER, Bart.

All of whom, along with the Directors, Ordinary and Extraordinary, are personally connected with the Society by Insurances of more than three years' standing.

Accumulated Fund at December, 1839, £10,000.

Present Accumulated Fund exceeds one million and forty thousand pounds, being an increase of considerably more than a hundredfold in twenty years.

Annual Revenue, upwards of one hundred and eighty thousand pounds, being more than double its amount five years ago.

Whole profits belong to the Assured.

Bonus Additions, varying from 11 to 80 per cent. on the sum assured, according to the date of assurance.

Assurances effected previous to 31st December, are entitled to participate in the Profits of the current year.

JOHN MACKENZIE, Manager.

Edinburgh, September, 1841.

HUGH Mc KEAN, 7, Pall Mall,
Agent for London.

London, 7, Pall Mall.

FARES.

First Class, 4s. 6d.; Second Class, 3s.; Children under 12 months, no charge; above 12 months and under 10 years, half price.

N.B. During the present winter the speed of the trains over the new line will be strictly limited to 20 miles per hour—London time observed, and the doors of the stations finally closed five minutes before the time of starting.

By order of the Directors,
A. MORGAN, Secretary.

CRANES AND HOISTING TACKLE of every description, of the best materials and workmanship, and capable of lifting from 5 cwt. to 20 tons and upwards, with or without steam power, made by ELLIS & NOTON, who take this opportunity of respectfully soliciting an inspection of their Drawings and Patterns, at the IRWELL FOUNDRY, Salford, Manchester.

PUBLIC SALE OF VALUABLE ENGINEERS' TOOLS AND PATTERNS, SMITHY TOOLS, &c. &c.—To be Sold by Auction, at the Works, West-street, Tradeston, Glasgow, on Wednesday, the 8th December, and following day, the whole valuable Tools belonging to Mr. A. Myine, Engineer, Millwright, and Tool-maker, who is retiring from that business, including a superior Self-acting Planing Machine, 48 feet long by 4 feet wide; three smaller ditto; eight Self acting Lathes of various sizes; Handlathes with Iron-beds; splendid Vertical Slotting and Drilling Machine; Nut-cutting Machine; Screwing Machine; Portable Crane and Purchase Blocks; Smiths' Vices, Anvils, and Tools of all sorts; Millwright's Benches, &c. &c. A very valuable set of Patterns for Steam-engines, Planing Machines, Lathes, Spur and Bevel Wheels, and the Office Furniture, Watch-dog, &c.

These Tools are all of the most modern and expensive description, substantial and highly finished, part made to order and never used, and all of a quality rarely met with. Catalogues will be ready ten days before the Sale; and the whole may be seen any day between 10 and 2 o'clock. Sale to begin at 11 o'clock, precisely.

Apply for catalogues or information to Mr. W. Colledge, Writer, Dunlop-street, Glasgow, or to Mr. Myine, at the Works.

Glasgow, 23rd November, 1841.

PARISIAN BITUMEN COMPANY, Millwall, Poplar.—The Directors of the above-named Company beg to call the attention of Engineers, Architects, Surveyors, Builders, and the Public generally, to the applicability of the BITUMEN manufactured by them, as a pavement or flooring; also for its use in covering arches for the prevention of damp and preservation of the masonry.

They beg also to state that it has been used very successfully as a cement for masonry on the weirs of the Upper Medway, and is particularly applicable to hydraulic works and foundations of heavy buildings.

They beg to submit the following list of prices, and to state that they will guarantee the durability and efficiency of any work executed by them.

	s.	d.
Covering viaducts or arches of bridges, vaults, terraces, &c., 1½ inch thick, per square yard	4	6
Paving pathways, kitchens, cellars, granaries, malt houses, warehouses, &c. 1½ inch thick	4	6
Paving barns, court yards, tan rooms, wharfs, stables, &c. 2 inches thick	5	6
Paving walks, &c. ¾ inch thick	3	6

The above charges are exclusive of the cost of carriage, which must be borne by the parties by whom the work is required.

W. MACKENZIE, Superintendent.

NEW EDITIONS of the following useful Works are just published at the *Railway Times* Office, 122, Fleet-street:

I.

ROBINSON'S RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Map, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Price 1s., in cloth.

II.

ROBINSON'S RAILWAY DIRECTORY FOR 1842, containing the Names of the Directors and principal Officers of the Railways in Great Britain, derived from authentic sources, price 1s.

III.

TUCK'S MAP OF THE RAILWAYS throughout ENGLAND and WALES to the Capital of Scotland, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s. 6d.; in paper covers, 1s.; mounted on canvass, in cloth case, 2s. 6d.; on rollers, 3s. 6d.

IV.

MAPS OF ALL THE LINES OF RAILWAY through ENGLAND and WALES, showing the country in their immediate vicinity on a larger scale than was ever before displayed in a sheet pocket map, with a compendium of Railway information. In paper cover 1s., in cloth 1s. 6d.; on canvass, 2s. 6d.

V.

TABLES OF HACKNEY CARRIAGE FARES from the BIRMINGHAM RAILWAY to all parts of the METROPOLIS, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

VI.

TABLES OF HACKNEY CARRIAGE FARES from the GREAT WESTERN RAILWAY to all parts of the Metropolis, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate-street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Bride's, Fleet-street, Middlesex.—Saturday, November 27, 1841.

The Railway Times.

"Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 205. Vol. IV.—No. 49.] SATURDAY, DECEMBER 4, 1841. [Price 6d.

PROPOSED PLAN for the establishment of a GENERAL OFFICE for the use of TRAVELLERS BY RAILWAY and STEAM NAVIGATION, where the public could readily obtain every species of information that might be useful to or required by Travellers, either on business or pleasure, by any of the various Railway and Steam NavigationConveyances throughout the United Kingdom, more especially as relates to the hours of departure and arrival, the scale of fares, and the different regulations of each, for conveying Passengers and Goods; to be formed under the sanction and patronage of the several Boards of Direction and Management of the Companies now in existence.

It is proposed that a complete Register be kept of all the Railway Conveyances, systematically arranged for the convenience of immediate reference, setting forth every station at which the trains stop on the respective lines, and the several stations and booking offices from whence passengers and goods may be conveyed.

That the proposed Office be furnished with the printed placards and hand-bills from all the different Companies, for reference and distribution to the public, who should receive gratuitously every information required.

That a like Register be kept of all the Steam Navigation Conveyances, and a similar distribution be made of the hand bills of the different Companies, and every information respecting them be given in the same manner.

That a communication be opened for correspondence with the respective Secretaries to enable the Manager of the Office to give answer to su h inquiries as might arise, and which their printed hand-bills do not furnish, and that the Secretaries would from time to time give the Manager immediate notice of every alteration affecting the conveyance of passengers and goods.

The Manager of the Office would undertake to transmit by post any hand-bill or specific information, which might be required by persons residing in the country, and who could not conveniently attend personally to obtain it.

That such Office be fixed at some centrical point (being a public thoroughfare) at the West End of the Town, holding connection with a similar establishment in the City, and to be open to the public every day, Sundays excepted, and that the Office shall be furnished with geographical maps and plans of the Railways.

It is proposed that arrangements should also be made which would embrace an extension of the plan, by collecting information of the various establishments on the Continent of Europe and elsewhere, for conveyance by Railway and Steam Navigation, as it is considered that by centralizing these various objects at one place, a complete Emporium will be formed for obtaining that general information which Travellers so much require, and this concern founded upon such an enlarged and comprehensive scale as would ensure the contemplated benefit and advantage to the several Companies interested, as well as for its becoming a medium of the greatest public utility.

NATHANIEL W. SYMONDS.

Lombard Street Chambers, Clement's Lane,
27th October, 1841.

*** Any suggestion to improve or add to the usefulness of the above plan will be thankfully received.

ANDREW SMITH'S PATENT WIRE ROPES, for STANDING RIGGING, LIGHTNING CONDUCTORS, STROPPING OF BLOCKS, MINING, RAILWAY, and GENERAL PURPOSES; about half the Size and Weight of Hempen Ropes, and 25 per cent. cheaper. Testimonials to that effect, with Specimens, may be seen, and every information obtained, at the Manufactory, Mill wall, Poplar; and also of the following Agents:

Robertson and Co., 12, Goree Piazzas Liverpool,
Mathias Dunn..... Newcastle-upon Tyne
Joseph Bothway..... Plymouth.
John Thompson and Co. ..... Wigan.
J. T. Tregellas..... Truro.
Thomas Mooney and Son..... Dublin.
Coates and Young..... Belfast.
James Kibble and Co. ..... Glasgow.
James Gunn..... Leith.
John M. Beattie, 14, Clement's-lane, High-street, Dundee.

This Rope has been in use for standing rigging in her Majesty's navy, and a great number of merchant vessels, for upwards of six years, and is giving the highest satisfaction. It is also employed in various mines and railways in different parts of the kingdom.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secresy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For farther Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Coruhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

This day is published,

TUCK'S ROLLER CALENDAR FOR 1842.—This is a mode of affixing the Calendar for the whole year on two revolving cylinders, within an elegant case, so as to exhibit each day's information in a bold and novel manner, presenting Daily Memoranda indispensible to every housekeeper and man of business. It possesses the advantage of a Date Box and Almanac, and is adapted for the Library, Board Room, Counting House, Warehouse, or Parlour; and is the best application of the Calendar ever yet devised. In Mahogany Box, price 5s. 6d.; in Ornamented Box, 6s. 6d. In addition to much useful information relating to business, &c., the Calendar contains the time of High Water at London, Liverpool, Dublin, Glasgow, Leith, Bristol, and Hull, for every day in the year.

Railway Times Office, Fleet-street; Letts, Cornhill; and Ackerman, Strand.

LARCH TIMBER FOR SALE.—The LOW PORTION of the KNOCK PLANTATION of MONZIE, situated near Crieff, in the county of Perth, and within 16 miles of the shipping port of Perth, will be exposed to SALE by Public Roup, on the spot, on Wednesday, the 12th day of January next, at Twelve o'clock, noon. It consists of 38 imperial acres, and will be exposed in one, two, or three separate lots. There are 5,169 trees of Larch, and 991 of Scotch Fir. The other intermixed Timber is to be reserved. The Larch is of very superior quality, and is upwards of 60 years old. Much of it is of very large scantling, and well suited for Railway Sleepers, Ship-building, and other purposes requiring heavy Timber. There is a ready market in the neighbourhood for the Tops and Brush, and also a good situation adjoining for a Saw-mill, with a plentiful supply of Water.

For further particulars application may be made to Messrs. Davidsons and Syme, W.S., Edinburgh; or to Mr. William Blackadder, C.E., Glammis, Forfarshire; and the Timber will be shown by James Taylor, forester at Monzie.

November, 1841.

THE RAILWAYS OF GREAT BRITAIN AND IRELAND practically described and illustrated. By FRANCIS WHISHAW, Civil Engineer, M. INST., C. E.—The flattering testimonials which the author has received from various quarters, as to the utility of the first volume, which was produced at an expense of upwards of One Thousand Pounds, and Sixteen Months constant attention, induce him to propose to the railway public the production of a second volume, which, however, can only be done on the plan of subscription.

Railway proprietors, therefore, and others who would like to be in possession of much additional information on the important subject of railways, will be so kind as at once to forward to the author their names as subscribers to the Second Illustrated Volume, which would be issued at the price of One Guinea.

THE RAILWAYS OF BELGIUM practically described and illustrated, in One Octavo Volume, price 10s. 6d., may also be produced in the same manner.

FRANCIS WHISHAW.

Gray's Inn, London, and Haverfordwerst,
Pembrokeshire, Oct. 4th, 1841.

TESTIMONIAL.

Cabinet du Roi. Neuilly, le 21 Mai, 1841.

Monsieur,—Un exemplaire de votre ouvrage sur les chemins de fer de la Grande Bretagne, est venu au Roi par l'entremise de son Ministre des Affaires Etrangères. Déja, quelques jours auparavant, Sa Majesté avait reçu la lettre que vous lui avez écrite pour lui en faire hommage.

L'intérêt du Roi est toujours acquis, Monsieur, aux travaux qui, comme les vôtres, ont pour lui et pour résultat le progres des arts utiles; aussi cet hommage a-t il reçu l'accueil qu'il méritait. Sa Majesté m'a chargé de vous transmettre ses remercimens, a j'ai l'honneur de vous prévenir que par son ordre, votre savant traité apris place dans la Bibliothèque particulière du Palais Royal.

Veuillez agréer, Monsieur, l'expression de ma considération très distinguée.

Le Secrétaire du Cabinet,
CAMILE FAUY.

Monsieur Whishaw.

Now ready, in quarto, to correspond with the original Volume, price 7s. 6d., useful and interesting additions to THE RAILWAYS OF GREAT BRITAIN AND IRELAND, by FRANCIS WHISHAW, Civil Engineer, M. INST., C. E.,

COLOURED SECTIONS, exhibiting at one view the Lengths, Summits, and Levels of all the principal Railways in England, reduced to the Trinity Standard. Coloured Diagrams, showing the rise and fall of shares in the principal lines of Railway for a series of years; Railway Wheels illustrated.

London: Simpkin, Marshall and Co., Stationers'-court.

IMPORTANT SALE OF FORTY SUPERIOR CART HORSES.

MR. DIXON BEGS TO ANNOUNCE that he is instructed by Messrs. KENWORTHY and Co. to Sell by PUBLIC AUCTION, at their Wharf, No. 3, City Basin, City Road, on TUESDAY, December 7, 1841, commencing at Eleven for Twelve o'Clock precisely, about Forty remarkably fine-shaped, active, young, powerful Cart Horses, Spring and Town Carts, being a portion of their well-known excellent Stock; and sold in consequence of having declined the London and Manchester Carrying Business.

Colours—Blacks, Bays, Browns, Greys, and Roans.

The above valuable and truly superior lot of Horses, are worthy the particular attention of Carmen, Contractors, Corn and Coal Merchants, Warehousemen, Wharfingers, Brewers, Distillers, &c. as many of them are remarkable for immense power and activity; also to Wine and Spirit Merchants, Omnibus Proprietors, Public Companies, Tradesmen, &c. there being several, from their breeding and action, would be invaluable to travel with heavy weights at fast paces—are mostly young and sound—positively without exchange or addition—and for sale without reserve.

On view two days previous, and catalogues had at the Wharf, or of the Auctioneer, at his Repository, Barbican.

THE TOLL QUESTION—CROYDON AND GREENWICH RAILWAYS.

[ALLUSION having been made, in some remarks which we published in our last number but one, to the "printed correspondence" between the Croydon and Greenwich Companies, principally concerned in the controversy lately revived upon the above subject, we have been induced to re-peruse it, and we find, as our correspondent has stated, the whole question so thoroughly opened up in its pages that we propose to publish it, having no doubt that the discussion will be found very interesting to all the readers of our journal.

We understand it has never been published in any journal before, although printed and circulated with the Report of the Directors read at the public meeting of proprietors, on the 8th December, 1840]:—

London and Croydon Railway Comp., Oct. 6, 1840.

SIR,—I am desired by the Board of Directors of this Company, to request that you will lay before the Board of Directors of the Greenwich Company the annexed statement. By it they will perceive that the Croydon Company has the power to regulate the proportion which the toll payable to the Greenwich Company shall bear to its own gross receipts, and that the exercise of this power, rendered necessary in the present instance for their own interests, has been productive of considerable loss to the Greenwich Company.

The Directors of the Greenwich Company will observe that although a certain diminution of the receipts of the Croydon Company has likewise taken place, in respect of those passengers passing over the Greenwich line, yet this diminution has not been to the same extent as that of the Greenwich toll, and has been more than repaid to the Croydon Company by the greater amount received from passengers not using the Greenwich line.

I am desired, however, to draw the particular attention of your Board to one circumstance elicited by this statement, since it shows not only what the Greenwich Company has actually lost by the raising of the fares of the Croydon Company, but also what it would have gained had this rise not taken place. It will be seen that in September, 1839, the fares to three of the stations had not yet been reduced, but were, at the time to which this statement refers, at the same rate as that to which they have returned, by the rise of July last; so that they are, as regards this statement, precisely in the same position as if they had not been raised at all. The Directors of the Greenwich Company will take notice that at these three stations where the fares have not been raised, there has been no diminution of passengers, but, on the contrary, an increase, amounting to 38½ per cent.; while upon the other three stations where the fares *have* been raised, there has been a decrease of passengers to the amount of 27 per cent. Now, as it is fair to presume that this increase of 38¼ per cent. would have been uniform throughout the line, if it had not been checked by the raising of the fares, it will be necessary to add this 38½ per cent. to the actual decrease of 27 per cent. in order correctly to estimate the loss of the Greenwich Company, which will, therefore, be found to amount to 65½ per cent. If this be reduced to figures, the result will be as under:—

The number of passengers at the three stations where the fares have been raised, was in July and August, 1839	81,490		
During the same period, 1840	59,509		
Decrease	21,981, or 27 pr. ct.		
The number of passengers at the three stations where the fares have *not* been raised, was in 1839	18,587		
Ditto in 1840	25,747		
Increase	7,160, or 38½ pr. ct.		
Actual loss uppn 21,981 passengers at 3d.	£274	15	3
Supposed loss upon the increase of 38½ per cent. upon 81,490 passengers, or 31,374 passengers at 3d.	392	3	6
Loss of Greenwich Company, two months.	£666	18	9
Or, if these two months could be taken as an average of the whole year, for twelve months	£4,001	12	6

The Directors of the Croydon Company, however, believe, that a reduction of their fares would induce a very large addition to the number of their passengers; that this addition would be attended with very little extra expense to the Croydon Company, and none at all to the Greenwich; that this reduction of fares would, therefore, be profitable to the Croydon Company, and still more so to the Greenwich Company.

With this belief the Directors of the Croydon Company are willing to make the experiment of a return to their old rate of charge, and in some cases to a still further reduction; but they cannot do so, unless the Greenwich Company will lend their aid to a measure which is to be for the mutual benefit of both Companies. They wish it, however, to be distinctly understood, that they make no application to the Greenwich Company for a reduction of toll, as such, but merely propose an arrangement of both toll and fare, which will, in their opinion, be productive of a more profitable result to each Company, and more especially to the Greenwich, than the present system.

In the expectation that the Directors of the Greenwich Company will be disposed to take a reasonable view of this question, the Directors of the Croydon Company beg to propose for their consideration a principle for the regulation of toll between Companies in the same relative position as themselves, which they believe to be based upon justice and equity. This principle consists in a division of the whole sum chargeable as fare, between the toll-paying and toll-receiving Companies, in proportion to the length of their respective lines upon which such fare shall be charged, reserving to the toll-paying Company a certain sum for indemnification of the cost of conveying its passengers over the line of the toll-receiving Company.

This proposition is founded upon the assumption that every Company being a carrier upon its own line, is entitled to all profit derivable from traffic passing over such line; in other words, that it is entitled to participate, in proportion to its length of line, in the profits of all Companies using the same; but that it ought not to interfere with the regulation of the mode in which such profits are to be obtained.

By the adoption of this principle, the Greenwich Company will become participators with the Croydon Company in all the traffic passing over the Croydon line, in proportion to the respective lengths of each line over which such traffic shall pass; and experience has shown that more than such participation is not attainable by the Greenwich Company. At the same time, the Croydon Company will be at liberty so to manage its own affairs, as that the traffic may be rendered most profitable to themselves, and consequently to the Greenwich Company.

I am desired further to state, that the Directors of this Company, in proof of their sincere belief in the justice of this principle, and the advantage of its adoption for the regulation of toll, have just proposed such adoption to the Companies on the other side of them, with whom they are exactly in an opposite position to that in which they stand with the Greenwich Company; and it is their opinion that the acceptance of such a proposition would remove all cause of cavil or dissatisfaction between the Companies upon the subject of toll in time to come, and lead to that concert and harmony which it is so desirable should exist between parties whose interests are so closely allied.

The Directors have given instructions to prepare a table of tolls which would be payable upon this principle according to the fares therein assumed, for the further elucidation of the subject, which I now enclose; and I am desired to request that at all events your Board will not reject this proposition without giving the Directors of this Company an opportunity of more fully explaining their views upon the subject, inasmuch as they are so convinced of its expediency for both parties, that they would be even prepared to guarantee the Greenwich Company against any further depreciation of their toll in consequence of its adoption.

I am, Sir, your most obedient servant,
(Signed) R. S. YOUNG.

J. Y. Ackerman Esq., Sec. to the Greenw. Rail. Comp.

[*Enclosed in the aforegoing letter.*]

Comparative Statement of the Number of Croydon Railway Passengers which passed over the Greenwich Railway, and of the Amounts received for the same, from July 5th to September 5th, 1839, with the corresponding two months in 1840, when the Fares had been partially raised.

London and Greenwich Railway,
London Terminus, 20th October, 1840.

Sir,—I am desired by the Directors of this Company to acknowledge the receipt of your letter, accompanied by statements showing the result of the recent change in the fares of the Croydon Railway Company; and containing a proposition for an arrangement of the tolls on a new principle, which appears to be, that a deduction of one-fourth should be made from the fares charged by the Croydon Railway Company, to cover the expense of conveying their passengers, and the remaining three-fourths be considered as toll, to be apportioned to the two Companies in the exact ratio of the distances travelled by persons passing along both railways.

The Directors of the Croydon Railway Company further mention, that they consider this plan to be not only advantageous to the Greenwich Company, but so equitable in itself, that they have proposed to act upon it towards the Companies who are to use their line.

The Directors of this Company regret that they cannot view it in the same light. In their opinion, the rent or toll to be paid for the use of a railway must have reference to the first cost of constructing, and the annual expense of repairing and maintaining it, together with the rates and charges to which it is liable, and a rate per mile which might be remunerative to the Croydon Railway Company, would be very inadequate for the Greenwich: in short, an equalisation of the tolls, would be inconsistent with the first object for which tolls are granted, viz. a remuneration for the outlay incurred.

With these views, and after the most attentive consideration of the subject, which they beg to offer as some apology for not answering the communication sooner, the Directors of this Company feel that they cannot assent to the arrangement proposed, believing that it would be prejudicial to the interests entrusted to their management.

I have the honour to be, Sir,
Your very obedient servant,
(Signed) J. Y. AKERMAN, Secretary.

The Secretary of the Croydon Railway Company.

London and Croydon Railway Company,
23rd October, 1840.

Sir,—I am desired to express the deep regret of the Directors of this Company, that after the attentive consideration which the Directors of the Greenwich Company appear to have given to it, they should have come to the determination to reject the proposition contained in my letter of the 6th instant; the more especially as they seem so entirely to have misunderstood its nature. Still greater is their concern that your Directors should have thought proper to refuse the request so earnestly made in the concluding paragraph of that letter, "that, at all events, your Board will not reject this proposition, without giving the Directors of this Company an opportunity of more fully explaining their views upon the subject, inasmuch as they are so convinced of its expediency for both parties that they would even be prepared to guarantee the Greenwich Company against any further depreciation of their toll in consequence of its adoption." The Directors of this Company are at a loss to conceive how the Directors of the Greenwich Company can "believe that it would be prejudicial to the interests entrusted to their management," to assent to an arrangement which proposes not only to guarantee their present receipts, but holds out an almost certain prospect of their increase.

The Directors of this Company fully concur in the opinion of your Board, "that the rent or toll to be paid for the use of a railway, must have reference to the first cost of constructing and the annual expense of repairing and maintaining it, together with the rates and charges to which it is liable;" but they differ entirely as to the means by which this rent is to be attained; being of opinion that the remuneration for such outlay and charges can never be derived from a high rate per mile, but only from a great number of rate-payers, and that it is more prudent to rely upon an expenditure of 1s. each from 100,000 persons, than upon the expenditure of 1l. each from 5,000.

The Greenwich Railway has cost much more per mile than any one of the lines which is proposing to use it; and in consequence of this cost, it is in a position to secure the traffic of all, which no one of the others can enjoy; but an attempt to derive, by a high rate of charge, from any small number of passengers, or even from any one line, the whole remuneration for this cost, is likely to defeat its own object by driving all custom away.

The Directors of this Company desire once more to explain, that they seek no alteration of the toll, upon their present rate of fares, to which they are willing to allow that the present rate of toll is nearly equivalent; but, having experienced the greatly diminished use of their railway by the public, in consequence of the raising of their fares, although unattended by any further pecuniary loss to their proprietary than that of their natural increase, which they had a right to expect, they are anxious to try the experiment of considerably reducing these fares, and they had hoped to be able to announce, that in consequence of an arrangement with the Greenwich Company, likely to prove advantageous to both parties, they had been enabled to accomplish this desirable object as far as London Bridge. As it is, however, they will be obliged to limit this reduction to such part of their traffic as will not pass over the Greenwich line, endeavouring at the same time to afford the public additional facilities in other directions.

I am desired likewise to inform you, that the Directors of this Company feel that they cannot be expected longer to rest under the obloquy of pursuing a course which is, in their opinion, alike injurious to both Companies; but that they will be compelled to take the requisite means to inform the proprietors of the obstacles which, in this case, exist to an identification of their interests with those of the public.

I am, Sir, your very obedient servant,
(Signed) R. S. YOUNG.

J. Y. Akerman, Esq., Secretary,
London & Greenwich Railway Company.

(To be continued.)

THE TOLL QUESTION AND FARES.

To the Editor of the Railway Times.

SIR,—In my last letter I urged that railway fares ought to be regulated "by the locality and circumstances regulating the adjacent modes of traffic irrespective of the cost of the line." I advanced this not without due consideration that a certain rate of fare must be obtained to secure a profitable return; now I would state my view of

Digitized by Google

charges or expenses to be deducted from the gross revenue before a profit can be ascertained.

The cost of the permanent way I maintain, ought to form no portion of such deductions. The capital embarked in its formation acquires value from the amount of *dividable* profit earned, and according to the soundness of the original estimates of cost or revenue will it acquire or not acquire a beneficial value. If this position be granted, then the fares by railway must be regulated not by the cost of way but by the present local charges of transit both for goods and passengers, or the amount which they can pay for the extra facilities afforded. The expenses which fall to be deducted from the gross revenue, are on the *working and maintenance* of the line, and interest of borrowed money; if a profit can be obtained after paying these expenses it is applicable to the benefit of the shareholders, and increases or decreases the value of their property. Now, we have to consider how the amount of profit can be increased. I suppose it will not be maintained that fares higher than the local charges of transit can be obtained except to a limited extent, but it may be admitted that the fares may be equal to those by coach or waggon. If this amount does not leave a profit to the shareholder, I fear his case is desperate indeed, as he has no chance of obtaining a large revenue so long as the coach and waggon exist as his competitors, and to effect a complete absorption of the trade it will be necessary to carry at rather lower rates. He has invested his money in a bad line, and the first loss will be the least.

The next point to be considered is the locality. Where a railway such as the Great Western traverses a rich country, abounding in gentlemen's seats, wealthy farmers, and large market towns, with no opposing line, it is not necessary to take the lowest scale of fares. But where a railway runs through a poor but populous neighbourhood, such as the Leeds and Manchester, it will be necessary to reduce the fares to the lowest paying limit to secure the custom of the population generally, as here, by numbers, not amount, is a large revenue to be obtained. On lines where pleasure excursions are taken, and where parties are induced to live out of town by the facilities and cheapness of transit, such as the Croydon, I suspect a *low* fare will produce the higher revenue; for be it remembered, that the Croydon is restricted in its fares, by coaches which carry at a very low fare. If this be true, then how can "Locomotive" justify the extortionate charge to the Croydon of 3d. toll for passing over one mile and three-eighths of the Greenwich Railway, seeing that this charge is nearly as high as the highest gross charge to the passengers on any other railway?

I know many persons hold lightly the pleasure traffic of railways, and regard it as an addenda not of such importance as to be much considered. On many lines, it forms a very material part of the profit.

I would divide the traffic of railways into *staple*, and *pleasure* or *occasional*, traffic. The staple traffic of a railway may be stated to be an amount equivalent to the *winter* traffic; the pleasure or occasional traffic an amount equal to the excess in summer over the winter traffic. Upon looking over the revenue accounts of railways it will be found that this excess varies from 30 to 100 per cent. Those who have experience in railway earnings, know that the continuance of a few days of bad weather in summer reduces the receipts to the winter scale, and the return of fine weather increases them to their proper level; this proves that a very large amount of the traffic is "occasional" dependent on facilities and convenience, and is liable to be materially affected by the rate of the fares, and comfort and convenience afforded.

Those roads issuing from the metropolis, in my opinion, can increase the *pleasure or occasional* traffic to an almost unlimited extent, if their fares be such as to induce the population to seek country recreation in place of the vicious enjoyments of a city. The Gravesend steam-boats could not pay a dividend when their fares were 3s.; now the number of the boats are increased tenfold, the fares are 2s. and 1s. 6d., and they pay a good profit.* Many such arguments could be adduced to show that low fares will produce the largest revenue, but I shall desist at present.

I am, your obedient servant,

COKE.

TOLLS ON RAILWAYS.

To the Editor of the Railway Times.

SIR,—I should like to know on what principle the Croydon and other Railway Boards publish the amount which they receive from their own passengers, but withhold the amount of tolls received from other lines. As a Croydon shareholder, I should be very glad to know the weekly revenue derived from the Brighton tolls, and if you are unable to tell me this, perhaps you can tell me how much is paid by each individual passenger, first class and second class.

I am, Sir, &c.

C. X.

Oxford and Cambridge Club.

FOUR-WHEELED AND SIX-WHEELED ENGINES.

To the Editor of the Railway Times.

SIR,—The late fatal accident on the Brighton Railway having drawn public attention to the question of the comparative safety of six-wheeled and four-wheeled engines, I request that you will allow me to offer, through the medium of your valuable journal, a few brief remarks upon this very important subject.

Different correspondents who have previously addressed you, have made objections to four-wheeled and six-wheeled engines,—to the former class on the ground of having inside framing; to the latter on the ground of the framing being outside. It certainly has been usual to make four-wheeled engines with inside, and six-wheeled engines with outside framing; but this is a distinction not necessarily incidental to the number of wheels.

Engines either with four or with six wheels may be made with inside or outside framing, accordingly as the one or the other may be preferred; and nearly all the four-wheeled engines now in use may be converted into six-wheeled by the addition of a pair of trailing wheels.

It has also been stated by one of your correspondents, that the only advantage which the six-wheeled possesses over the four-wheeled engine is, that in the event of a wheel or an axle being broken, the six-wheeled engine has still two pairs of wheels remaining to support and guide it on the road. The object of my present communication, however, is to show that the six-wheeled engine possesses very important advantages over the four-wheeled, quite independent of the situation of the framing or the greater security in case of broken wheel or axle.

All parties familiar with the construction of railway engines, whether with four or six wheels, are well aware that, in order to keep clear of the fire box, it is necessary to place the crank axle so far forward as to bring it within a very few inches of the centre of gravity of that part of the engine which is supported by springs; and this necessity has apparently induced the makers of four-wheeled engines to place the leading wheels only a short distance in advance of the driving wheels, in order that the former may bear a certain proportion of the load. To such an extent has this been carried, that I have seen several instances of coupled four-wheeled engines in which the flanges of the wheels have barely cleared each other. The result is, that the centres of the axles of four-wheeled engines are sometimes only five feet six inches, and seldom more than six feet six inches apart, whilst the extreme axles in six-wheeled engines of the same power are nearly twice as far asunder.

This peculiarity in the construction of the four-wheeled engine gives rise, under circumstances to which I shall presently advert, to an oscillating or pitching motion,—the existence of which has not, I believe, been denied by any of your correspondents; and some of them have attempted to account for it, though in my judgment not very satisfactorily. I shall therefore endeavour, in a familiar way, to point out what appears to me to be the principal causes of that very dangerous motion.

Those who have at any time amused themselves by swaying on a plank placed across a squared balk of timber, will probably have observed that the narrower the support on which the plank oscillated, the greater was the facility with which it was moved, and the wider the range of its vibration; and that, by doubling the breadth of the support, the labour of moving the plank was more than doubled. When, however, instead of a broad and rigid beam, the plank is placed over *two* yielding and elastic spars, forming together a support of the same breadth, the effect is nearly the same as if the broad support had been exchanged for a narrow one. But, whatever may be the nature of the support, the vibrations of a plank under such circumstances, are subject to the well-known law that governs the oscillations of a pendulum; they have a certain and definite rate, and cannot by any exertion be increased in *number* within a given time; but, by taking care to apply successive impulses at the proper moment, they may be greatly increased in extent.

The four-wheeled engine may be considered as a heavy sway, placed across two yielding *fulcra* (the springs), and may be caused, like a plank across two elastic spars, to vibrate or pitch at a certain definite rate determined by its length; and should successive impulses be applied, which keep time with this rate, the vibrations may be gradually increased to a most alarming and dangerous extent.

Now, in the working of a four-wheeled engine successive impulses *are* applied by the strokes of the pistons; and when the rate of these strokes correspond exactly with the rate of vibration, as of course it is liable to do, the pitching of the engine increases in violence; and if the same speed is continued for a sufficient length of time, the engine can hardly escape being thrown off the rails.

I was a frequent observer of the motions of the four-wheeled engines used on the Liverpool and Manchester Railway during the first three or four years after that line was opened. These engines were what would now be considered small, and had driving wheels of only four feet six inches to five feet diameter, the pitching of those with five feet wheels was at its maximum, as nearly as I can remember, when the speed was from 28 to 30 miles an hour.

The coincidence between the strokes of the pistons and the sway of the engine will take place at various speeds, in different engines, dependant on their length and the diameter of their driving wheels; from which it follows that an engine in which the strokes and vibratory motion are isochronal at 30 miles an hour, may travel with comparative safety at a speed not greater than 26 to 28 miles an hour, or not less than 35 to 50 miles an hour. This circumstance soon became known to most of the drivers of four-wheeled engines, who when the engine began to pitch, cut off or put on a little steam; either of which expedients had the effect of checking the objectionable motion.

The sinuous motion also complained of in those engines seems to be produced by the same cause as that which produces the pitching motion.

In six-wheeled engines the leading and trailing wheels are so far asunder as greatly to reduce, if not entirely to prevent, any other pitching than such as is produced by the inequalities of the road, and even this pitching is but trifling compared with what takes place from the same cause in the four-wheeled engine.

Unless the road is in bad order, each pair of wheels in a six-wheeled engine presses upon the rails with nearly an uniform weight throughout the journey, whilst in the four-wheeled engine, as at present constructed, when at rest, the weight is necessarily great on the driving wheels compared with that on the leading wheels, and this weight is increased by

* We doubt this very much.—ED. R. T.

Digitized by Google

the draught on the engine. When the engine pitches violently, nearly the entire weight is, at intervals, borne by the driving wheels, which injures the road, and endangers the breaking of the rails; whilst at these same intervals the leading wheels having little or no weight on them, are liable to be thrown off the rails by any trifling obstruction, or even by a lateral oscillation of the engine.

The wheels in both classes of engines are commonly set to the same gauge, say three-quarters of an inch narrower than the line, and the length of each engine may, with reference to our present subject, be considered the same, although the four-wheeled engine is generally a few inches longer notwithstanding the foot-plate is nine or ten inches narrower than that of the six-wheeled engine.

On the Brighton line the four-wheeled engines are 17 feet 11 inches long, and the axles 6 feet 6 inches from centre to centre. The six-wheeled are 17 feet 2 inches long, and the extreme axles 11 feet 4 inches from centre to centre, from which it will be seen that the distance between the axles is to the length of the engine nearly as one to three in the former engine, and as two to three in the latter. Hence it follows that the lateral oscillations of the four-wheeled engines may range through nearly double the space that the six-wheeled can, and may cause their axles to make nearly twice as great an angle with the rails as the axles of the six-wheeled engines are liable to do, and consequently at each of these oscillations the blows given to the rails by the four-wheeled will be more than four times, and may be seven times, as great as those given by the six-wheeled engines.

With the occasional want of weight on the leading wheels, with the great angle with the line made by the axles, and with the concussions of the wheels on the rails, and the possible occurrence of all these at the same time, we can hardly be surprised that the four-wheeled engine should sometimes go off the rails. Such a circumstance is even more likely to occur on a straight than on a curved part of a railway, because on a curve the pressure of the wheels against the outer rail would tend to check the lateral oscillations, and to keep the speed below that rate which produces the pitching motion.

The comparative advantages of the two classes of engines now in common use have been nowhere more fully or more satisfactorily tried than on the Liverpool and Manchester Railway. For several years after the opening of that line, none but four-wheeled engines were used upon it, and the existence in them of the defects which I have mentioned was very fully ascertained.

With a view of removing those defects, experiments were made, by adding an extra pair of wheels to one of the four-wheeled engines (I believe the *Mars*) and by the subsequent purchase of an original six-wheeled engine (the *Patentee.*) These experiments were completely successful. The Directors finding that the objectionable motions of the four-wheeled engines were entirely removed by the addition of a third pair of wheels, caused the whole of those which they retained in use to be converted into six-wheeled engines; and several of these are still in use.

I mention this fact circumstances not only for the purpose of showing the opinion of the Directors of the Liverpool and Manchester Railway, but also with the view of making known the fact, that if the use of four-wheeled engines was to be prohibited or given up, the engines now in use would not, as many suppose, become valueless.

I am, Sir, your most obedient servant,

RICHARD ROBERTS.

Manchester, Nov. 30, 1841.

FOUR-WHEELED AND SIX-WHEELED ENGINES.

To the Editor of the Railway Times.

Sir,—The discussion now in progress through the medium of your useful pages, with regard to four-wheeled and six-wheeled engines, cannot but elicit interesting facts on this all-important subject. The object I now have in view is to offer my testimony as to the superiority of the six-wheeled engine in point of safety.

In making the series of practical experiments on the principal railways of the kingdom, the results of which are now before the public, I had unusual opportunities of testing the comparative motions of the two kinds of engines under discussion. When riding on the four-wheeled engine, I had some difficulty in writing down my observations, on account of the pitching and jerking motions almost invariably experienced, and I never felt that degree of safety which I should consider necessary were I placed in the position of an engine-driver; whereas, on the six-wheeled engines, I found the motion (except when the way was out of order) so smooth and easy as to allow me to write down my observations with the greatest facility, even while descending declivities at 40 miles an hour and upwards, at intervals of only half a minute; moreover, I consider a trip by a six-wheeled engine a positive enjoyment.

The fact of six-wheeled engine-men disliking and oft-times refusing to drive four-wheelers, may also be produced as substantial evidence as to the superior ease and safety of six over four-wheeled engines. Again, in order to show the general feeling on the part of railway engineers as to the superiority of the six-wheeled engine, I have only to mention the railways where each description of engine is used.

Four-wheeled engines are entirely used on the London and Birmingham, North Union, and Eastern Counties' Railways. On some other lines—as the Edinburgh and Glasgow, London and Brighton, Glasgow and Ayr, Glasgow and Greenock, London and Greenwich, and Newcastle and Carlisle, four-wheeled engines are partially used; but among the railways entirely worked by six-wheeled engines may be enumerated the Great Western, Grand Junction, Northern and Eastern, North Midland, Birmingham and Derby, Brandling Junction, Newcastle and North Shields, Liverpool and Manchester, York and North Midland, Hull and Selby, Arbroath and Forfar, Bodmin and Wadebridge, Chester and Birkenhead, Chester and Crewe, Dublin and Kingstown, Ulster, Dundee and Arbroath, Great North of England, London and Croydon, and Sheffield and Rotherham.

The Belgian railways are also all worked by six-wheeled engines; as also all the other principal railways of the continent of Europe.

What more need be said on the subject? Are the lives of thousands to be in jeopardy daily, for the sake of any saving, however large, in the original cost of the locomotive stock?

That accidents have not happened more frequently on those lines where four-wheeled engines are used is a matter of surprise, and certainly of mere chance; and so far as the Birmingham line is concerned, is to be mainly attributed to the excellent regulations of that well-conducted line, the extreme vigilance exercised by the superintending officers, added to the constant use of time tables, together with premiums for good conduct awarded to those who daily manage the fiery monsters in their course.

Facts such as the above must be far more convincing to the railway public than ten thousand arguments used by interested persons; and if worthy of occupying a column in your widely circulating and very useful journal, they are quite at your service.

I am, your obedient servant,

FRANCIS WHISHAW.

November 25, 1841.

FOUR-WHEELED AND SIX-WHEELED ENGINES.

To the Editor of the Railway Times.

Sir,—If I have read Mr. C. Hood's letter aright in the number of the *Railway Times*, November 20th, he accuses me of cross-reading some of the statements in his letter of the 13th October, to which I attempted to reply through the medium of your journal. If I have done so, I can assure Mr. H. that it was certainly unintentional, and I am sorry to say, that, had it not been for an error of the same kind on his part, I feel it would have been perfectly unnecessary for me to have troubled you at this time with any further observations.

But as the whole question must be opened up to get at this mis-reading, I shall take the liberty to notice any other thing that may appear by the way. And 1st, Mr. H. regrets that I have not furnished from data, statistical facts, which would clearly prove the superiority that I assume for six-wheeled engines. If by statistical facts Mr. H. means the ransacking of the chronicles of railway accidents, to find the number of broken crank axles, upsets by running off the rails, or other casualties of a similar nature, I beg to assure him that I am not in possession of the required information, and if I were, I do not think I could throw any new light upon the question, by a detail of those "incontrovertible facts" which Mr. H. and some others have lately been tossing at one another, and from behind which he looks out, with pity, at the poor advocates of the six-wheelers, who "are obliged to rely on arguments alone." I shall not follow Mr. H. in his interviews with those advocates of six-wheeled engines, who attempt to prove that their engines never break their axle, nor do any damage when they do break. In my letter there is not a single allusion to *a crank axle;* I am no advocate for their use, either in four-wheeled or six-wheeled engines.

2nd, As to extra length and weight of the six-wheeled over the four-wheeled engines, if Mr. H. meant the length of the engine to be the length between the centres of the axles, I did not understand it so. I now, however, stand corrected; but as he maintains his former statements to be correct, that the weight of a six-wheeled engine exceeds the weight of a four-wheeled engine upwards of 50 per cent., and quotes examples of both kinds in support, I beg to say that it is of no use to make comparisons between two locomotive engines as regards weight, unless we take into account their relative powers. Upon this I founded my former arguments, and successfully refuted his statements; and I will do so again.

Mr. H. quotes the engines upon the North Midland, and the engines upon the Birmingham Railway. The former, he says, weigh 15 tons, and the latter 10½ tons. This looks well enough; but what is the relative powers of the engines in question—what is the diameters of their respective cylinders? Those on the North Midland I find from my note book are 14 inches diameter; $14 \times 14 = 196$: those on the Birmingham line, the largest size, are 13 inches diameter, $13 \times 13 = 169$. Hence the powers of the engines referred to are in the proportion of 196 to 169; or the North Midland Railway has 1-6th more power than the Birmingham Railway engine. May I ask Mr. H. how much of the 15 tons he thinks is assignable to this additional power, before he proceeds to draw his "general" comparison of weights?

3rd, Next comes Mr. Hood's cross-reading. He says, "The assertion that the outside (but I suppose he means inside) framing has been stated by me to be an indispensable and absolute distinction, between four-wheeled and six-wheeled engines, is founded in error." I hope Mr. H. has candour enough to acknowledge that this is none of mine. If he will but look again to my letter in your journal of November 13, he will find the following:—"As regards the arrangement of the framing and wheels, which Mr. H. seems to think of *considerable importance*, this difference is not an indispensable or absolute one, nor is it by any means so universal as is generally believed." The difference of the two readings is so great, that I am really astonished that, while Mr. H. in his prefatory remarks so thoroughly recommends the use of candour to others, he should be so destitute of that necessary ingredient himself. But again; Mr. H. says, "The next assertion, that I have stated the absence of flanges from the driving wheels to be an essential distinction between six-wheeled and four-wheeled engines is also founded in error." Now, Mr. Editor, as we have had very dull weather for some time down in the far north, I suppose you may have had a visit from one of

Digitized by Google

your gloomy winter friends, viz. a London fog; for I really think that if Mr. H. had read my remarks, with only ordinary light, or very superficial attention, he would never have misquoted me as he has done—for any one referring to my letter will see, that I did not attribute either the language or meaning which Mr. H. says I have ascribed to him. What I said was, "Mr. Hood's next difference, viz., driving wheels without flanges, is like the last, not an essential one, and I should think not very extensively adopted." But Mr. H. must have said something about wheels without flanges, which called forth these remarks from me. Now let us see what he did say:—"But in order to avoid a portion of this difficulty [*getting round curves*], some manufacturers make their six-wheeled engines without any flanges on the centre or driving wheels; the policy of this plan however may well be questioned, as some most disastrous accidents have occurred from it, for if the *fore-axle of the engine* happen to break, the engine still continues to run for a considerable distance upon the remaining axles, and the driving wheels, which then become also their runing or guide wheels, having no flanges to retain them in their proper course, inevitably run off the rails, and produce probably the very worst species of accident that can happen upon a railway, by running down an embankment, and drawing the train after it, as experience has unfortunately proved may sometimes occur with this form of engine." Now, I do not think that any man, however prejudiced his mind may be in favour of four-wheeled engines, can, on reading this extract, fail to observe the avidity with which Mr. H. searches for a *statistical fact*. By some accident he gets hold of one of Mr. Stephenson's engines upon the top of an embankment, and, after breaking her leading axle, stands coolly by, a witness of the statistical fact, with a vengeance. But I think, if Mr. H. will try the experiment of breaking the leading axle of one of his four wheelers in the same situation, a circumstance in the chain of events *just as likely to occur*, he very possibly would have an opportunity of contemplating a catastrophe as direful in its results as what he is pleased to ascribe to a six-wheeled engine.

Next as to the play in the gauge, although I showed that it was not necessary for any six-wheeled engine to be so slack in the gauge as inferred by Mr. H., my arguments go for nothing before his facts; and as he has kindly favoured me with a statement of the difference of the gauge of the rails and the gauge of the wheels, on some of the principal railways in England, which I am bound to believe is correct, I shall in return give Mr. H. a few *facts* as to what is doing upon other lines. And first, the six-wheeled engines upon the Edinburgh and Glasgow Railway have quarter-inch, the Glasgow and Ayr three-quarter, the Dundee and Arbroath some half-inch and some three-quarter, the Dundee and Newtyle three-quarter, the Arbroath and Forfar three-quarter. I hope it will be understood that the clearance here specified is that which is allowed when the engines are new, and the rails thoroughly in gauge; and as I have no doubt that your useful journal will be regularly seen by the superintendents of locomotive power upon the different railways I have referred to, if I have made any misstatements I shall feel grateful to any one who will be so kind as to put me right.

Mr. H. next praises my ingenuity for *endeavouring* to prove that a six-wheeled engine will go steadier round a curve than a four-wheeled one, and after quoting my statements *correctly* (for the first time), very good naturedly passes by the arguments by which they are supported, as carefully as if every one of them had been a bull terrier just let off the chain, until he comes to where I was trying the difference of angle that a six-wheeler and a four-wheeler would make with the rails in a curve (not on a straight line as he states) when pulled diagonally round, which he states is not fair reasoning—because I assume both engines to be of the same gauge, which I thought I was entitled to do; and I think Mr. H. will now allow that there are, at least, some isolated cases where I might be safe to draw a parallel. But Mr. H. says, that all my reasoning upon the question is only a mode of running off from a difficulty, just what my "six-wheeled engines do at the *curves*, they quit the line, and go off at a tangent." Allow me just to say, that when Mr. H. met my six-wheeled engine in a curve of a quarter of a mile radius, where I was attempting to show her off *mathematically*, he passed her quietly by, no doubt finding she was not then a fit subject for a *statistical fact*, but I can assure Mr. H. that however frequently accidents occur on some railways where he is acquainted, by six-wheeled engines running off the rails at curves, there is not an instance on record of the like happening in our northern region, and the only cases of an engine going off the rails in this quarter where all was apparently right, were with two four-wheeled engines, which both went off in one day upon one railway, and what may appear not a little extraordinary to Mr. H., there were six-wheeled engines which passed both curves more than once the same day, both before and after, and did not go off. It would be very invidious in me to mention thus publicly either the railway or the maker of the engines, but if Mr. H. doubts my veracity, I shall supply him with particulars through another channel.

The next point I shall notice is a little more of the cross-reading, or great want of light. Mr. H. says, "He first assumes that all curves are a mile radius! whereas they vary (as on the Grand Junction Railway) from 1-7th of a mile upwards." The first point is certainly so very palpable, that I need not trouble you with a quotation of the truth to refute it; as any of your numerous readers who take an interest in these matters, will see its unblushing front by referring to the original in your number of the 13th instant; but regarding the information as to the radius of the curves on the Grand Junction Railway, it is new to me, and I feel obliged to Mr. H. for it, for as the Grand Junction Railway is worked with six-wheeled engines, it furnishes us with a very strong testimony of their suitableness to go round curves; but it must have been difficulties of no ordinary magnitude which compelled the justly celebrated Engineer who conducted the operations of that gigantic undertaking, to submit to the adoption of such small curves as appear to be upon that line.

But Mr. H. says, that by arguing on my premises erroneously, he does not wonder that I get at conclusions to my own liking. As a reasoner I think Mr. H. has taken up the easiest part of his task to begin with, viz., made the assertion that I have done so, and left the proving of it to another time; and the same remark applies to the following statement upon the old theory of curves, where he says, had I arranged my "premises exactly as they stand in actual practice, the result is that the six-wheeled engine, in going round a curve, forms with the tangent of that curve double the angle that is formed by the four-wheeled engine." As in the way I arranged my premises I happened to arrive at a different conclusion from what Mr. H. thinks I should have done, and as he gives us no premises himself, but simply a result which he asserts takes place in practice, I would just beg leave to ask him if the fore and aft wheels of *all* engines do not bear up close to the exterior rail when going round a curve; and while in this situation are not both ends of the engine equidistant from the centre of the circle, of which that curve is an arc; and further, do not both ends of the engine in this case (I mean measuring from the centre of the engine) form equal angles—or rather not any angle—to tangents drawn to a line running between the centre of the circle and the centre of the engine? And lastly, will he state the difference of the angles (readable upon an Engineer's rule), which he asserts exists, between a six-wheeled and a four-wheeled engine, and the tangent of that curve, when the engine is in this situation? Now, we want not facts in this case; they are inadmissable, we must have a demonstration. I shall not trouble you with following Mr. H. further; I am afraid you will find what I have already said but a dry subject, but as Mr. H. will not receive arguments against his facts, I hope I shall not be blamed for not advancing them, and in taking leave of Mr. H. I beg to say, that if he bring his "generals" again into field, as poorly supported as he has done in this instance, I do not think it will be necessary for me to keep my powder dry, in order to meet them.

I am, Sir, your obedient servant,
THEODORE CRUICKSHANK.

Dundee, 24th November, 1841.

FOUR-WHEELED AND SIX-WHEELED ENGINES.

To the Editor of the Railway Times.

Sir,—Mr. Hood's reply of the 20th to mine of the 13th inst. is now before me. I regret that that gentleman should consider himself called upon to impute "indiscretion" and "unscrupulous" assertions, more especially from Mr. Hood's remark, that "all personalities and unseemly warmth" are "far more derogatory to the writer than to the party against whom they are used." Whether those remarks are used by Mr. H. to draw off attention from the numerous and "unscrupulous" remarks in his replies, &c. I shall not stop to inquire, but certainly such a mode of "controverting facts is not the way to arrive at truth." I shall therefore endeavour to explain the various bearings of my last, by Mr. H.'s own admissions, and as far as possible, to answer that gentleman from the same quarter, hoping that he will controvert *his own* statements somewhat less than those of other people.

In reply to the seventh remark of Mr. H., I beg to inform him that he could not have made a greater mistake than to say that I was "well aware that the cause of the early locomotives of the Liverpool and Manchester line rocking, was not the inside bearings, but was the alterations which were found necessary to be made in the boilers and fireboxes, which threw the engines out of their balance and caused the additional pair of wheels to be then first used." Now, the *Twin Sisters* was the first locomotive on that line and she had *six wheels* and inside bearings; all the others of the ten inside bearing engines purchased by that Company had but four wheels; and a *third* pair of wheels, or *longer* fireboxes, was never added to any one of them. And so far from their motions being unfairly affected by weak rails, they had the very best part of them when the rails were new.

It was not until four years afterwards that stronger rails were used (see the Report) at which time the inside class of engines were mostly sold, disused, or broken up.* The *Swiftsure*, *Speedwell*, and *Rapid*, were only received in 1835, and (at that time) were all four-wheeled engines, and certainly had not large fireboxes, but the reverse.

Moreover, it was not until the road was considerably renewed with strong rails that six wheels were *re-introduced* into the coaching engines, so that all the "controverting" upon the effect of weak rails on the motion of either inside or outside bearings is purely visionary. But if the road was bad for one class, it is contended that it was equally bad for other engines working at the *same period*; and therefore the palpable difference in their rocking and crankiness supplies extensive and practical data for the deduction of either facts or arguments of the most extensive and conclusive character.' Even Mr. H. himself admits the "fact" he here attempts to "controvert," in the first division of his reply to Mr. Seaward, at page 1137 of the *Railway Times*, where that gentleman only attempts to frighten us with broken axles as a greater drawback than the advantages gained by outside bearings. His own words are—"1. The outside bearings of six-wheeled engines *would, undoubtedly*, give greater steadiness of motion," &c.

8th. Mr. Hood states, that "the placing of the axles of the carriages of the Liverpool and Manchester Railway further apart, would no doubt produce greater steadiness of motion, *provided they were too near together in the first instance*, but

* See also Mr. Pambour's work. Edition, 1836, page 333.

Digitized by Google

this latter fact," (he is pleased to say) I had "forgotten to tell" them; "and therefore" my "data of comparisons are useless," and that "the fact has nothing whatever to do with the subject under discussion."

Now, I beg to remind Mr. H. that I distinctly informed him that the coaches formerly had their wheels closer *together, similar to the four-wheeled engines*, and that gentleman, from his knowledge of four-wheeled engines, must know that the distance (according to the length of the boiler,) generally ranges from five to six feet. Moreover, I stated that the engines as well as the carriages had, in consequence, a considerable pitching and serpentine motion, and that a greater distance for the wheels and springs had brought those motions within "moderate bounds."

I do not see what can be Mr. Hood's meaning here, in making a distinction without a difference, as to the operation of the same causes and effects in engines, after he has unequivocally admitted *that* in carriages. His words are, "it would no doubt produce greater steadiness of motion." Hence, we find Mr. H. again at issue both with "facts" and with himself, for he admitted its truth in his reply to Mr. Seaward. The sixth part of that letter alludes to the first in the following words:—"The greater liability of four-wheeled engines to pitch when any inequalities occur," &c., "HAS BEEN ADMITTED." So much for his own "*discretion*" and "*scrupulous*" consistency! Upon a road of sufficient strength, I do not contend for six wheels over four, as possessing any additional safety, except in the present form of locomotive, where it is better for various reasons. I believe that if the weight of materials in three pair of wheels and axles, be put into two pair of wheels and axles, the latter will be the safer engine of the two; PROVIDED the extreme distance of the axles and springs be the same in both cases. But however strong and durable, or whatever may be the number of the wheels and axles, the advantages "admitted" by Mr. Hood in employing a greater width for the action of the springs, and a greater length for the better working of both wheels and springs, which the present six-wheeled engines possess,—that, I think, is the principal point of the present discussion; for it must be palpable that some dimensions will be sufficient for axles, and where this has been proportionately given, the axles actually stand both in the outside and in the inside system of engines.

The present may be considered as the fourth class of engines which have been used on the Liverpool and Manchester line. The first were the inside bearing engines, and from their construction the axles were further apart than in the present four-wheeled engines; however, several cases of bent, cracked, and broken axles took place even in those engines, and the crank of the Liverpool (which was the father of the London and Birmingham engines,) broke in a very short time; but the whole of these inside "facts" merely prove that the axles were not strong enough, and only involve the question as to what dimensions are necessary for daily work, their breakage forming no argument against inside bearings.

The second class of engines introduced was the four-wheeled engines upon outside bearings, the fireboxes of which were of various sizes, but none of them exceeded 24 inches in length (inside), except the *Liver*, which had a round firebox, (see Mr. Wood's work, last edition, table at page 352). Several of the rectangular firebox engines had copper furnaces of the same size replaced when the original ones failed, and none of the new fireboxes exceeded two feet for the coaching engines, prior to about 1837, with two of the last of the third class of engines.

The rails showing symptoms of weakness *some time before any larger fireboxes were used—six wheels were then* spoken of as a remedy, but before those wheels were added, the second class of engines had broken several of their axles, and when it is recollected that their cranks, and that of the *Liverpools*, were only about 3¼ inches in diameter, that circumstance accounts for those failures; those were increased to about 4½, and afterwards five inches were found necessary for the former, which, with a more proportionate form, amounted to an increase of about 300 per cent. in their strength. Now, if the strength of those axles is looked at, and the fact be borne in mind that those engines were chiefly used during the best state of the old rails—had Mr. Hood asserted that their axles had suffered considerably from that cause, he would not have misstated "facts" in the manner he has done.

The third class of engines was formed from the second class by extensive repairs, and adding a third pair of wheels, in a few cases of which the fireboxes were under 24 inches in length, but all the goods' engines were supplied with larger boxes. None of the boxes above two feet were tried before applying the third pair of wheels, and consequently the derangement "of their balance" talked of by Mr. Hood, was not the cause of using six wheels, for most of the larger sized boxes did not project more weight than some of the larger sized circular boxes: and the 24 inch ones did not project so much as the London and Birmingham engines.

The fourth class of engines are heavier, and decidedly more powerful, and all upon six-wheels. They are without the moving hand gear of the former classes.

6th and 9th. I have already shown the correctness of my seventh and eighth arguments, and demonstrated them from Mr. Hood's own words; and my sixth position was a primary fact, which, although decided on the 29th November, by Mr. H., and represented as a "mere theoretical opinion," its truth was, with his usual consistency, admitted at the same time, as well as implied in the admissions I have already quoted. Toward the conclusion of his reply to Mr. Cruckshank, at p. 1205, the fact is admitted, that "A spring, like every other mechanical power, is not instantaneous in its action," &c., "and therefore, *at high speeds*, the action of the spring is *frequently at fault*." That is precisely the upshot and foundation of a chain of facts, of which my sixth position is the first link, namely, *that the stiffer foundation of the road is not the chief cause of rocking; but the more elastic foundation formed by the springs.*

Having established the sixth, seventh, and eighth positions, my ninth question is too plain a consequence and illustration of the effect of their obvious tendency, to require any further proof.

10th and 11th. In the latter class of my observations I stated the fact, that where the proportionate dimensions had been given to crank axles with outside bearings, they have stood. Mr. Hood has not directly attempted to "controvert" that fact; but should he think proper to do so, I beg he will at the same time state whether the peculiarly formed and weak axles of the *Liverpool*, also the axles of the first class of Liverpool engines, and those admitted by Mr. Hood himself to have broken, be as great an argument against the advantages of inside bearings, as any similar cases are against the advantages of outside bearings. I am induced to put the matter thus pointedly, from Mr. H. taking "no objection" to so palpable a "fact," but evidently attempting, "by loose general assertions," to trample under foot the advantages of outside bearings, by continuing to make a stalking horse of broken axles, whilst he shrinks from the proof assumed by his assertions. Hence we find him cautiously shrinking from controverting my 10th class of "facts," well knowing that in doing so he would have had to contend *against the advantages of having only two inside stay frames, bearings, and springs*, for which he has so strenuously and (as far as the crank is concerned) most ably exerted a powerful intellect. That part of Mr. Bury's engines reflects the highest credit both upon himself and his talented engineer, Mr. Kennedy. I believe the arguments and facts in favour of inside engines to be unanswerable, for very slow speeds; but at the quicker rates of travelling, the facts admitted by Mr. Hood himself, that the outside bearings *undoubtedly* give greater steadiness of motion, and are not only adopted in carriages by six parties, but (with singular consistency) to a very great extent by the inside advocates themselves. These and other stubborn facts, induce me to acknowledge an equal superiority in outside bearings, as you progressively get into higher speeds. This distinction arises from the facts implied by Mr. Hood himself in his remarks to Mr. Cruckshank (already quoted), by which their momentums follow a well-known principle in mechanics, and proceed increasing with the square of the velocity. Now from such varying forces, it may turn out to be possible that all engines will have a speed beyond which their springs cannot steady them. Hence the advantages gained in a quick speed preponderate over the extra weight of materials requisite for outside bearings and six wheels; whilst on the other hand the advantages diminishing with the square of the velocity, they become to small to compensate for the extra weight as you proceed below about 15 miles per hour. Then the principal question of safety, as I have previously contended, is involved in proportioning the dimensions of the elastic foundation formed on the springs, (the length multiplied into the breadth,) increasing or diminishing with the square of the velocity required for different purposes, taking care to have an excess of base rather than a deficiency; and, before Mr. Hood attempts to controvert what I have stated above, I beg to intimate that he has first to get rid *of his own "fact" of "the springs frequently being at fault" in "high speeds,"* and the very extensive use of outside bearings by inside advocates.

Between the Hull and the York Companies there are eight engines at present having only two inside stay frames and the bearings for the crank axles, and two coupled engines are in progress of the same construction. Of course the boilers are more elevated than they otherwise would have been, from the cranks being nearer together, but notwithstanding this, the motions of the engines are so very small in consequence of the extensive base of eleven by six and a half feet, for the action of the front and hind springs. It was in a great measure from witnessing that fact which led to their use on the York line. An account of those engines was published by Messrs. Shepherd and Todd, in the Leeds newspaper, and copied into your journal, on the 5th December, 1840. Now to give an illustration of the mode of frustrating discussion on the subject. Suppose A had asserted that the boilers of those engines were higher than in other six-wheeled engines of the same stroke: but had inadvertently stated, that the room was required for the *eccentrics* instead of the *cranks and connecting rods*. Then suppose B in reply, on account of such a trifling inaccuracy, is determined to catch at a straw, and attempts to "controvert" A as to "the narrowness of the distance between the bearings," &c., being the cause of some *extra* top heaviness. Now I beg to submit whether B would be chargeable with a want of "probity," and of frustrating the "truth?" If so, a similar example will be found (at 3) in page 1137, in reply to Mr. Seaward's letter, about one-third down, page 1124.

Mr. Hood brings the expenses of the Liverpool and Manchester locomotive power forward as being very high. However, as he only states that *he believes* it was for some years at 2s. 3d. per mile, I beg to state in reply, that I believe it was no such amount, notwithstanding that line had many disadvantages to contend with; in being the first to employ a quick speed, and of course without the data which subsequent lines have had from their experience. If Mr. Hood will take the trouble of examining the Reports of that line when they were printed more in detail, say for three years from January, 1833, he will find the cost per mile is under 1s. 10d., including the charge of *twelve* engines, and two tenders, and independent of increases in the value of stock by the Company not particularised as such in the Reports.

From the year 1836 to 1839 about *twenty* more powerful engines were got to replace the light ones, of the first and second classes, and meet the increasing traffic of the line; this is sometimes called "up hill work." However, if I am rightly informed, the charge for locomotive and fixed power on the Lon-

Digitized by Google

don and Birmingham line is about 1s. 8d., merely to *keep up* the value of stock (and not *increase it* as the Liverpool and Manchester expenses have done.) At that rate of expense the annual mileage must be about 1,202,282, or an average of 3,293 miles per day. The maintenance of way being 48,352*l.* divided 1,202,282, will be about 11¼d per mile, where that of the Liverpool and Manchester is but little (if any) more *than one-half that amount.* As to talking about 300*l.* or 180*l.* per mile, without reference to the mileage of engines, it is a piece of sophistry as discreditable as it is far, very far, beneath the knowledge and talents of Mr. Hood.

But I will take a shorter way of proof as to the maintenance of way for four-wheeled engines, by showing what per centage the maintenance of way amounts to on the expenses of the locomotive and fixed power; for by that process we can (without a knowledge of the mileage) see what the little animals are doing as compared with the heavy six-wheeled monsters—in which we have for the former during the last year 48,352*l.* for maintenance of way, which, divided by 100,192*l.* for power and depreciation, give 48 per cent., and for the Liverpool and Manchester we have $\frac{9,674}{85,198}$, giving only 27 per cent. Then as 27 : 100 :: 48 : 177 showing an excessive proportion of 77 per cent. additional cost, or about 20,000*l.* per annum more for the maintenance of the Birmingham line with light four-wheeled engines, than is to be found in the proportionate expenses of the Liverpool and Manchester line, with six-wheeled engines. Surely the elastic base of the springs must be "at fault" somewhere, to prove in such an "extensive and conclusive" manner that the principles which I have contended for, are not quite so "unfounded," and merely "theoretical," as Mr. H. would have them believe!

Mr. Hood states that I asserted, "the drivers always suffer where four-wheeled engines are used, and always escape unhurt when similar accidents occur with six-wheeled engines." Now that representation is rather "unscrupulous," and certainly is not correct. I have also to charge Mr. H. with similar "unfounded statements" in his representation of my third remarks. However, that gentleman can compare the following cases with what I really asserted on those points:—

Four-wheeled Engine Cases.	Six-wheeled Engine Cases.
No. 1. The (B. and L. R.) *Liverpool* went off the rails through a small defect on the road, and tumbled over. The accident happened about ten years ago; the result was serious, but to the best of my recollection only the fireman was killed on the spot, but the engineman died shortly afterwards.	No. 2. The L. and M., *Orion*, broke her large (wrought iron) wheels, and went off the road on Chat Moss, neither the engineman, Joseph Greener, nor his fireman were injured.
No. 3. The *Star* (No. 1,) went off the road, through the switches not being right at the foot of Sutton Incline (L. and M.); the fireman escaped without injury, but a person on the engine was seriously injured, and the engineman, R. Thompson, was killed on the spot.	No. 4. A (L. and M.) coupled engine broke her front axle in descending the Sutton incline; she went about three quarters of a mile after it gave way, but did not leave the rails more than nine inches; neither the engineer, B. Rice, nor his fireman was injured.
No. 5. On the L. and S. R., about 3½ years ago, an engine ran into some ballast waggons; she went off the road and twisted about; the engineman, James Bird, was killed on the spot.	No. 6. The (G. J.) *Hecla*, Sumersides, engineman, came into severe collision with the *Wildfire*, being at full speed, and the latter engine going in the wrong direction. Severe as it was, the engineman and fireman escaped without injury.
No. 7. The (L. and M.) *Dart* was thrown off the rails at the top of Whiston incline, through some ballast waggons; the engineman, Hope, was slightly injured, but the fireman, J. Turner, had both his legs broken, and was otherwise injured.	No. 8. The (L. and M.) *Star*, (No. 2,) at the Warrington junction, came in contact with a train of loaded coal waggons on the Haydock line, but crossing the L. and M. on the level, the *Star* was thrown off the rails; but neither the engineman, J. Greener, nor his fireman was injured.
No. 9. Not long ago one of the E. C. R. engines went off the rails at the switches, and Cox lost either one or both of his legs.	No. 10. Still more recently an extensive slip of an embankment threw one of the G. W. engines off the rails; both the engineman and his fireman escaped without injury.
No. 11. One of the L. and S. engines was thrown off the rails by running over a cow, and tumbled over on her broadside; Robson, engineman.	No. 12. One of the same Company's engines ran over a cow, and kept the line; Child, engineman.
No. 13. In a severe collision near Derby, (on the M. C. R.) the engineman and fireman (with a mail train) were both killed on the spot.	No. 14. In a severe collision at the Taylor's or Milford junction, (Y. and N. M.) the engineman and fireman were no worse, having the protection of a common six-wheeled engine.
No. 15. About four years ago, a N. U. engine went off the rails and tumbled over. The engineman, C. Unsworth, was disabled for many weeks. An obstruction (I think a sleeper) had been placed on the rails, and being dark, it was not seen.	No. 16. This case occurred at the same place as No. 8, the (L. and M.) *Mars* (previously a short four-wheeled engine) ran through a train of empty coal waggons, and kept on the rails; the engineman, J. Robinson, and his fireman, both escaped without injury.
No. 17. The Liverpool and Manchester *Fury* went off the rails through a broken crook, near Bury-lane; the engine and tender went down the embankment and sent part of the coaches over the wing wall of one of the bridges, where they hung suspended until the passengers got out, and shortly afterwards came down one upon another, breaking each other to pieces: the fireman escaped over the tops of the coaches, and the engine-man, R. Cree, with a few of the passengers escaped with slight injuries.	No. 18. The Liverpool and Manchester *Patentee*, on the same embankment, broke her front axle, but the greater length of the engine prevented her leaving the rails so suddenly as the *Fury* did, and the whole train was brought up without the slightest *personal* injury. The *Patentee* and part of the tender were over the embankment; this was the first and only six wheeled engine upon that line without flanches on the driving wheels. The possibility of such a casualty was anticipated, and a pair of flanched wheels were actually in progress when the accident took place.
No. 19. The L. and M., *Caledonia*, on descending Sutton incline, went off the rails without any other cause than the action of the springs being "frequently at fault," and her own pitching and serpentine motions: the engineman, Baxter, and his fireman, with their utmost efforts could not keep the speed down to the usual rate, when the engineman advised his fireman to jump off with him, and leave her to her fate. This had scarcely been accomplished, when Baxter's apprehensions were realised; she went off the rails, rolling into the field like a foot ball, the waggons tumbling after her.	No. 20. Two of the L. and M. engines were likely to come into collision about the crossings at the top of Sutton incline, when both the enginemen and firemen jumped off those on the *Lightning*, omitting (in their hurry) to shut the steam off; she had no load, and went down an incline about 1 in 88, and a mile and a half in length, when she got to the bottom; her name was highly characteristic of her speed. Probably never before or since has an engine been seen in such a predicament, left as she was to the uncontrolled fury of her powers, down an incline, however, she kept on the rails, and was quickly out of sight over Parmoss, her feeds being on, rather more than kept the boiler up; she stopped about 17 miles distant, or 1½ mile from Manchester with their boiler full of water.
No. 21. The L. and M. old *Etna* broke her crank, and tumbled over; the engineman, Dunn, escaped with some bruises, and the fireman with slight injuries; considerable damage was done to engine, tender and coaches.	No. 22. The L. and M. *Mars* broke her *front* axle with a coach train, and kept on the rails; and no personal or further injury took place.
No. 23. The L. and M., *Planet*, by a broken crank left the rails, and ran on Chat Moss, doing considerable damage. The engineman, T. George, and his fireman, escaped by jumping off.	No. 24. The N. M. R. engine, No. 8., broke her crank axle, whilst running at the rate of about 40 miles per hour, with a mail train, she kept on the rails, and so far from personal injury taking place, the passengers were not aware of what had occurred.

Mr. Hood professes to be of opinion, that "arguments are *not facts;* though facts are (in his view) the strongest arguments in cases like the present." Whether that gentleman will stand or fall by "facts," time alone can tell; but certainly, more talk and noise about "facts," and less production of them, we rarely meet with than in the letters of Mr. Hood. It is possible that in many instances Mr. H. may have been misinformed, and the best apology for many other of his assertions would be to attribute them to carelessness. His contending for facts so very strenuously, and yet being so frequently found supplying the place of facts, with loose general assertions and unfounded statements, is to me altogether irreconcilable.

As to his observation on broken axles, had there been 99 instead of 19, as Mr. H. has stated, that would have proved no more than their insufficient dimensions, as previously stated; and as to the insinuation, that four-wheeled engines seldom or ever go off the rails, by boldly asserting that "in addition" to broken crank axles, there are "numerous cases of accident from six-wheeled engines running off the rails—why did he not give us some data for both sides, by showing a favourable balance for four-wheeled engines, from an equal number of cases. I submit whether the cases which I have already cited, do not give a decided negative to his bold, but unsupported, insinuations; comprising as they do, almost every variety of railway accident which has taken place in different parts of the country.

There had been a number of six-wheeled engines made for (at least) one railway; *every one* of which either *broke* or *bent* their front axles. I was informed at the time the above were making, by one of the individuals most likely to be well-informed on the subject, that the South-Western engines were making from the same specification, and therefore if a dozen of them had gone off the rails without any other cause, that cause was more than sufficient. This will be more obvious when I state, that the former Company are now using (on the same engines) axles of nearly double the strength of those they used a few years ago.

The "*Patentee*" to which Mr. Hood alluded, is evidently a parallel case to the above, and when I stated in my last, that I did not believe there would one single instance be found of an outside six-wheeled engine rocking and pitching itself off a road in only moderate order, no matter how quick the speed, or slipping of the wheels, but in the absence of other causes, *and similar to the circumstances of the several accidents that have taken place with inside four-wheeled engines suddenly tumbling over*"—Mr. Hood must be desperately hard pressed indeed, when, in answer to such remarks, he holds up a six-wheeled engine with a broken axle, and cries out, here is a parallel case. As to his case at Sutton Incline, Mr. H. is still more adrift, the *Caledonia*, or *Manchester*, being the only engine which went off the rails after that fashion; but, alas for Mr. H., she *had only four wheels* (see No. 19.), and for a six-wheel specimen on the same line, see No. 20.

Mr. Hood extols the standing of Mr. Bury's axles, and here I beg leave candidly but fearlessly to ask, if Mr. H. can show that a six-wheeled engine (not upon three pair of crutches, but), upon three pair of wheels and axles, such as have been made by the Liverpool and Manchester Company during the last three years, and are as strong for outside bearings as Mr. Bury's are for the inside system—with such an engine, if Mr. Hood can show that they have gone off the road through such an insignificant reason as merely shutting off the steam, no matter how "frightful the speed," (see No. 20,)—no matter about "water lodging in a newly-made embankment,"—can Mr. Hood, I ask, show a single case of such a six-wheeled engine as I have mentioned, "going off a road, in only moderate order," such as every railway must of necessity be more or less exposed to? If Mr. H. can produce authentic cases of "water" keeping six-wheeled engines upon the rails with steam on, and the same "water" turning such engines off the rails on shutting the steam off, we shall then see on which side the majority of cases lie, and judge accordingly.

Many of the enginemen who have been in the field during five, ten, and twenty years, will recollect the substance of many of the cases I here present, and some of them would be able to give further details, or other cases.

Four-wheeled Engine Cases.	Six-wheeled Engine Cases.
No. 25. The London and Birmingham, "No. 72," went off the rails by running over a horse.—See No. 11 and 12.	No. 26. The Liverpool and Manchester, *Lightning*, ran over a horse at Patricroft, and kept on the rails.
No. 27. The L. and B., "No. 16," run into a train of ballast waggons; the speed was sworn to be about seven miles per hour, but notwith-	No. 28. The G. J., *Witch*, Sumersides engineman, came into a desperate collision with the *Cerberus*, the latter going in the wrong direction, and

Digitized by Google

standing that, R. Duke was so severely injured that he died shortly after. From a general unsafety on the foot-plate of four-wheeled engines, it has earned for them the distinguishing appellation of "Man-traps." From the motions of those engines, one of the manufacturers (Mr. W. H.) rode in the ballast waggons, and probably saved himself from injury by that precaution; the blow did not prove sufficient even to throw the waggons off the road.

No. 29. An L. and B. train, in the very act of stopping, came into collision with another engine; the engineman with the train engine lost his arm by the "man-trap," and the other engine tumbled over into the canal.

No. 31. The Midland Counties' *Lyon* came into collision at Nottingham; the engine-man escaped, but the "man trap" took one of J. Panson's legs off.

No. 33. The M. C., *Tiger*, with a passenger train, near Nottingham ran over a horse, and tumbled three times over, turning end for end in doing so.

No. 35. The M. C. *Wizard* ran off the rails, the switches being wrong, and tumbled over the embankment; the fireman escaped with slight injuries, but the engineman got entangled and was extricated by digging the earth from under him; the latter was not expected to live, but he eventually recovered.

No. 37. The L. and M. *Phœnix*, went off the road, by running over a plank; the engineman escaped, but the fireman was killed on the spot.

No. 39. The L. and B. engines "No. 82" and "No. 1," with a goods train, came into collision with the engine, "No. 15," at Harrow. The fireman of the latter escaped by jumping off; the engineman of No. 1 also escaped, but his fireman was killed. No. 82 tumbled over on her broadside; the fireman was severely hurt, and Simpson the engineman, was killed.

No. 41. The B. and L. *Clarence* went off the rails, on the *inside* of the *curve* in Olive Mount cutting (L. and M.) the road was clear and in usual order; the same engine had passed over it in the morning at a slower speed, but in this case had to run to keep out of the way of a first class train only a few miles behind them; she had fourteen waggons, and the steam was full on when she went off the rails; the smooth side of the rock cutting prevented the engine tumbling over.

No. 43. One of the L. and M. four-wheeled engines, by pitching and serpentine motions, went off the rails at the bottom of Whiston, (the old *Etna*, if I rightly recollect). Going up the hill, she was soon stopped without injury.

No. 45. The M. C. *Panther* rocked, and pitched herself off the rails; the engineman was thrown off, and the foot plate was doubled up; the fireman also escaped.

the former only had time to shut off steam when the two engines met; both engines were much injured, and two horse-boxes were broken to pieces. The fireman of the *Cerberus* was slightly injured, but Sumersides and his fireman escaped without injury.

No. 30. The L. and M., *Mercury*, with a train of goods, came into collision with the *Hercules* at the siding near the foot of Whiston incline; the buffer frame of the *Mercury* was broken, but both engines kept on the rails, and neither enginemen nor firemen were injured.

No. 32. The Liverpool and Manchester, *Sun*, broke two waggons completely to fragments, at the top of the north tunnel; both the engineman (Holmes) and also his fireman escaped without injury.

No. 34. The L. and M., *Arrow*, ran over three cows on Whiston incline; the engine went off the rails, but neither tumbled over nor twisted about.

No. 36. The switches were wrong at the Warrington Junction, and one of the Liverpool and Manchester engines took this at a quick speed, without getting off the rails; neither Murphy, the engineman nor his fireman was injured.

No. 38. The L. and M. *Firefly*, was thrown off the road at the bottom of Sutton incline, through the platelayers having taken out a broken rail, and the engine came upon them before another was put in its place: the engine of course went off the rails and considerable damage was done: the fireman escaped, but C. Callam slightly injured.

No. 40. The L. and M. *Planet* and *Majestic*, with a goods train, in a fog came into collision with a train of goods on the embankment near Bury-lane; the buffers of the *Majestic* and the last waggons considerably broken; both engines kept on the rails, and the enginemen and firemen escaped without injury. So much for Mr. Hood's assertion that the same cause (collisions) produce the same effects, whether with four or six-wheeled engines!

No. 42. The N. M. engine, "No. 5," casually got away without any person with her from a siding at Masbro'; after progressing about half a mile, she had to go through the quick curves at the switches joining the main line to Sheffield, when her speed was about thirty miles per hour; all this did not throw her off the rails, but she continued increasing her speed with a gunshot fury to Sheffield as the "messenger" of bad news.

No. 44. The points being wrong, the L. and M. *Patentee* was sent through them to the Warrington line, at about 30 miles per hour; she kept on the road until she came to a part where the plate layers had the rails out.

No. 46. One of the L. and M., *Cokeman*, started another, *Panther*, from Manchester, and jumped off; she passed Patrecroft with the greatest fury, and finally stopped herself at Parkside, "for water as usual."

No. 47. The M. and C. *Leopard* rocked and pitched herself off the rails, near Long Heaton.

No. 49. One of the E. C. engines rocked and pitched herself off the rails, in going down an incline.

No. 51. The L. and S. *St. Vincent* pitched herself off the rails, by going over an ordinary lift of the rails, and went over an embankment dragging the train with her; the engineman, Wm. Smith, was slightly injured, but the fireman died in ten days

No. 53. The W. and N. *Newton* went off a straight line without any other known cause, than that of own motion about a mile and a half on the west side of Warrington: the engine tumbled over—and the engineman, James Hope was killed.

No. 54. The L. and M. "No. 16," between Tring and London, a passenger train, rocked and pitched herself off the rails, and tumbled three times over: the fireman escaped, another person on the engine was bruised, but the engineman, G. Robson, died shortly afterwards from injuries received in this accident.

No. 55. One of the London and Brighton engines commenced lifting, and went off the rails with fatal consequences.

No. 48. The L. and M. *Rapid* came into a wedging collision with a coal train at Huyton quarry, the waggons were sent off the road, but the engine kept on the rails; the coal train came out of a siding as the *Rapid* was approaching.

No. 50. A person started one of the S. and R. engines from Sheffield, and jumped off; the engine kept the rails at a *frightful speed*, and was only prevented running into the Rotherham station by a policeman throwing her off the road, with obstructions.

No. 52. The L. and M. *Arrow* broke her front axle when at about 28 miles per hour; she kept on the rails to Manchester—12¼ miles.—R. Hesketh, engineman.

48 and
50

More cases might be collected on each side, both in this country and on the Continent of Europe and America; but the above are ample to prove that four-wheeled engines are generally more subject to go off the rails, and are more dangerous to the enginemen, firemen, and passengers. Finally, the general adoption of outside bearings by inside advocates, in their tenders, coaches, waggons, &c., and a greater distance betwen the axles, speak volumes for inside consistency.

Pleading the importance of the subject as an apology for the length of my letter,

I am, Sir, your obedient servant,

JOHN GRAY.

LONDON AND BLACKWALL RAILWAY.

To the Editor of the Railway Times.

SIR,—As the statement published in your paper of the 27th ult., on the subject of the Blackwall Railway, appears calculated to convey an erroneous impression with regard to the value of the shares, the following scale of facts may not be uninteresting to some of your readers:—

The expenses being ..... £480 per week
Interest on 200,000*l.* at 5 per cent. per annum, say .... 192 „

The total expenses being .. 672 per week, would require £718 per week to cover those expenses, and

			yield a dividend of		per sha. per ann.
764	„	.....	„	2 0	„
810	„	.....	„	3 0	„
856	„	.....	„	4 0	„
902	„	.....	„	5 0	„
948	„	.....	„	6 0	„
995	„	.....	„	7 0	„
1041	„	.....	„	8 0	„
1087	„	.....	„	9 0	„
1133	„	.....	„	10 0	„
1287	„	.....	„	13 4	„
1364	„	.....	„	15 0	„
1441	„	.....	„	16 8	„
1595	„	.....	„	20 0	„
1825	„	.....	„	25 0	„

The capital consists of 24,000 original shares of £25
„ „ 24,000 new shares of .. 8 6 8,
being an average cost of 16*l.* 13s. 4d. per share., a dividend of 16s. 8d. per share will therefore pay 5*l.* upon the cost of the railway to the original proprietors, which would require a weekly receipt of 1,441*l.*

From the way in which the statement was made through the medium of your paper of Saturday last, it might be inferred, that 1825*l.* weekly is necessary to pay 5*l.* upon the original outlay, whereas it will be seen from the above, that that sum would pay 7*l.* 10s. thereon.

I am, yours &c.,

A SHAREHOLDER.

LONDON AND BLACKWALL RAILWAY.

To the Editor of the Railway Times.

SIR,—What does one of your correspondents mean by stating it will require a weekly receipt of 1,825*l.* (subject to a deduction of 672*l.* for working, and interest on debentures) to pay a dividend of 5 per cent. to the shareholders, or 800,000*l.*?

The shareholders of this line need not be alarmed respecting the future. There is ample traffic in store for them. The Diamond Steam-boat Company alone carried to Gravesend this season 285,000 passengers, and was only enabled to divide about 1¼ per cent.; this is only a small portion of the traffic which sooner or later must come on the railway, as it will be a most insane speculation for the various Companies to continue running their steam-boats from London-bridge, in opposition to the railway, for if they could only divide 1¼ per cent. this season, how can they expect to work another without a very serious loss. *Only let it be once known, the system adopted on this line will answer in working it*, and will be found capable of carrying the immense multitudes that must ultimately come on it, and the shareholders may throw to the winds all fears for the future.

I am, Sir, your obedient servant,

J. H. LANGWORTH.

November 29, 1841.

RAILWAY ADJUDICATIONS.

DOE DEM. WYATT *v.* THE ST. HELEN'S RAILWAY COMPANY.

Court of Queen's Bench, Nov. 26.—In this action the verdict had been for the plaintiff, with leave to enter a nonsuit or to arrest judgment, should the Court be of opinion the action was not maintainable. The Company had mortgaged certain land connected with the railway for the purpose of raising a loan, and the question was whether the Act of Parliament, 4th Will. IV., chap. 3, authorised them to do so.

The COURT decided that, though equivocal terms had been used in the Act, there was nothing in them to justify the Court in supposing that the legislature had meant anything so exceedingly inconvenient to the public as to deprive the proprietors of railways of the means of carrying on their undertakings by totally parting with their property in the land, by which they were enabled to carry them on for the convenience of the public. The rule for the nonsuit must be made absolute.

THE QUEEN AGAINST THE SHERIFF OF WARWICKSHIRE—RE PARKES *v.* THE BIRMINGHAM AND GLOUCESTER RAILWAY COMPANY.

To the Editor of the Railway Times.

SIR,—Your report of this case in your paper of last Saturday is in one respect inaccurate.

The taxation of Mr. Parkes's costs was not referred to the Master, but the rule for a mandamus to the Sheriff to review the taxation was made absolute, after the Attorney-General and Mr. Chilton had been heard against it. Mr. Whateley, in support of the rule, was stopped by the Court. The Court in effect decided that all the charges to which the Company objected ought to be disallowed.

We are, Sir, your obedient servants,

J. W. and G. WHATELEY.

Birmingham, 22th November, 1841.

EDINBURGH AND GLASGOW RAILWAY.—On Friday last, one of the locomotive engines for the Edinburgh line, arrived from England. Sixteen horses, under the care and direction of Mr. John Norrie, Glasgow, were harnessed to drag the engine to Castle Carey station, 17 miles.—*Glasgow Courier*, December 2.

Digitized by Google

THE ANTI-SUNDAY TRAVELLING AGITATION.*

THE decision come to by the Directors of the Edinburgh and Glasgow Railway Company, on the subject of Sunday travelling (as referred to in our last number), has, as we anticipated, already attracted the notice of the parties who have of late interfered so much in this matter. It appears, from a Report in a religious paper called the *Scottish Guardian*, (published in Glasgow,) that the subject has been brought before the "Commission of General Assembly" of the Kirk, by a reverend gentleman named Candlish, and as his speech is a favourable specimen of the dogmatism which on such occasions is usually brought forward, we have thought it desirable to give a short abstract of it. In introducing the subject, the reverend gentleman said, he held in his hand a Report of the proceedings of the Directors of the Edinburgh and Glasgow Railway, at the meeting which was held in Glasgow on Tuesday. The Report was exceedingly short, and for the information of the Commission, and to show the grounds for the resolution which he meant to propose, it would be as well to read it. The reverend gentlemen then read the Report, and directed the attention of the Commision to that part of it which contained the resolution come to by the Directors, expressing their opinion that it would be advisable to run a morning and evening train on the Sabbath for the convenience of the public, but not to prevent their servants from attending church; but before doing so they would first ascertain the feelings of the shareholders on the point. After reading the Report, the reverend gentleman said that he looked upon the passing of this resolution by such a body as the Directors of the Edinburgh and Glasgow Railway, as one of the most important events, if not altogether the most important event, that had happened for a long time, having a reference to the religious and moral interests of the community of Scotland; *for it was vain to suppose that this resolution merely affected the cities of Edinburgh and Glasgow, and the neighbouring country.* It was quite plain that, so far as it went, it gave a tone to railway travelling throughout Scotland, and destroyed the last hope which the Christian public entertained, that Scotland would be uncontaminated by the sin of Sabbath railway travelling! The resolution of the Directors, to his mind, was even worse than he could possibly have anticipated. The Directors had the unenviable distinction of being the first to raise the standard of Sabbath desecration in Scotland, openly and systematically, on one of the greatest national undertakings which Scotland had ever seen. The resolution of the Directors raised his indignation, because it said that they (the Directors) were bound, not to run trains for the Post-office, but for the convenience of the public; and the restriction which they make was something like a show of decent respect for Sabbath ordinances. He took that to be a mere gilding over of what he considered to be a grievous sin. The distinction between canonical hours and other hours on the Lord's day would never have his sanction, for he considered the hours which were not spent in the church to be as sacred as those of divine service. He rejoiced at one thing in the resolution—the intention to appeal to the shareholders. No doubt the appeal to the shareholders was held over their heads, as something in *terrorem*, as it was said that the shareholders were mostly Englishmen, who would give no heed to their desire for the sanctity of the Sabbath. In answer to this he rejoiced to say that within the last few days he had ascertained that even amongst the English shareholders, some at least of them would lift their voice against any encroachment on the Sabbath. He had great hope that they would put a negative on the resolution of the Directors. At all events, the Commission was bound to use all the means in its power to convince the shareholders of the propriety of not opening the railway on the Sabbath. His resolution was that the Commission should prepare an expostulatory address to the shareholders, and should also exhort all those feeling an interest in the Sabbath to use their influence with the shareholders, to support Sabbath observance on the railway. He would propose that a Committee be appointed to solicit an opportunity of being present at the meeting of shareholders, and of being permitted to address them on the subject. Mr. Charles Cowan said, that he was one of the Directors of the Edinburgh and Glasgow Railway, and he would second the motion of Mr. Candlish. Unless the shareholders would reject the resolution of the Directors he would not hold a single share in the Company. Some discussion ensued, after which Mr. Candlish proposed that the matter be referred to the Committee appointed in August last to watch over the subject, and that they be empowered to take such steps as they see fit, with instructions that they particularly direct their attention to the present emergency.—Mr. Candlish's motion was ultimately agreed to.

We quite agree with the reverend speaker that the example of the Edinburgh and Glasgow Company in this matter will be most important, and therefore it is that we trust the English shareholders, of whom this Scotch divine speaks so offensively, will do their duty. The proposition that the approaching general meeting of the Company should be converted into an arena for the display of the speechifying powers of parties who are not shareholders, is one of the coolest things we have seen for a long time. We hope the shareholders will find some better means of occupying their time, and that they will convey to the reverend agitators a civil hint not to meddle in other people's business.

We alluded last week to the very *consistent* conduct of two members of the Board in voting against opening the railway on Sundays. The matter has not escaped the attention of two of our Scotch contemporaries, whom we are happy to single out from their fellow-journalists of the north, as scorning to acquiesce, even tacitly, in the cant of which their city has for some time past been the scene. The *Glasgow Argus* says:—

"We cannot pass altogether without notice the conduct of two individuals who formed part of the minority. Mr. John Leadbetter's Sunday travelling propensities are already pretty well known to the world, but we dare say it will, notwithstanding, excite little surprise when we state that his vote was recorded on Tuesday against the opening of the railway on Sunday. Mr. Leadbetter's conscience is sufficiently elastic to allow him to make use of a steam-boat in travelling on the first day of the week, but the abomination of a railway carriage is more than it can well bear. Mr. John Bain, *the mail coach contractor*, was also numbered with those who composed the minority. The handsome fortune which Mr. Bain enjoys, has been, in no small degree, hoarded up from the Post-office contracts. Mr. Bain has not the slightest objection, in his capacity of mail contractor, to enter into arrangements with the Postmaster-General to carry the correspondence of the country, and as many passengers to boot as his coaches will hold, on Sunday, as well as on other days of the week; and it is only when it is proposed to employ steam, instead of horses, as the moving power, that his holy fervour is raised to exclaim against the horrors of Sabbath desecration. It is no profanation in Mr. John Bain to keep open shop on Sunday to book passengers and parcels; but oh! the abominations that will be enacted at a railway station—they are much too great for his delicate scruples to stand. Is there no Butler to be found, who, with Hudibrastic pen, will lash the cant and hypocrisy that is so rife in the present day? A period in which both abounded in a higher degree is scarcely to be found in our nation's history, and it would be a pity that future ages should be ignorant of the characteristics of the Leadbetters and the Bains, who flourished in the mercantile metropolis of Scotland towards the middle of the 19th century."

The same paper of Tuesday last thus reverts to the vote of these gentlemen:—

"Mr. Leadbetter has acquired no slight degree of notoriety as a Sunday traveller, and the shareholders of the railway, resident in England, will be somewhat at a loss to understand why he should seek to withhold from others a privilege which, in his own person, he is so ready to exercise. The mysteries of non-intrusion, and the extravagant powers sought to be wielded by the Scottish clergy, along with the contemptible subserviency to the priestly order, of so many laymen, are so little understood in the south, that we give up in despair any attempt at explanation. Mr. Leadbetter may occasionally, when on a trip to England, venture upon a line of action in some degree independent, but in Scotland he is the obedient servant of the clergy.

"Mr. John Bain's case is, if possible, more gross, and it is surprising how he has hitherto contrived not only to satisfy the clergy, but to fill his pockets with the proceeds of Sunday travelling. As a mail contractor, he has been permitted to stand excused, on the pretext that the Post-office authorities compelled the carrying of letters on Sunday. We would like to know, however, whether the Postmaster-General compelled Mr. Bain to start an ordinary stage coach from Glasgow to Carlisle, *in opposition to the mail*, and which takes its departure from the city at a late hour every Saturday evening, *thus performing the greater part of the journey on the first day of the week.* Mr. Bain is, we believe, one of the contractors for the mail from Carlisle to Lancaster, and, after he lost the contract from Glasgow to Carlisle, it occurred to him that it would be a nice thing to run a coach, in connection with his English mail, as a source of profit to himself, as well as of annoyance to those who had obtained the contract which he formerly enjoyed. Mr. John Bain's conscience is therefore seen to be even more elastic than we had previously thought. We gave him credit for being able to stretch it a little when ordered by the Postmaster-General; but we now find that, without compulsion of any description whatever, he can start a common stage coach, carrying no mail at all, which every Sunday runs along the highway just the same as if the horrors of Sabbath-desecration had never been painted by the Clergy of Scotland. Mr. Bain is really so apt a pupil at the work of desecration, that, by and by, when the mails are entirely in the hands of the Railway Companies, and when he has abandoned all hope of further contracts on his own account, we do not despair of finding him, in his new character of a railway shareholder, advocating a much more extended system of railway travelling than the Directors of the Edinburgh Railway have ever considered it wise to propose."

Equally severe and equally well deserved is the castigation bestowed by our friend of the *Scotch Reformers' Gazette*:—

"We are quite willing to give some of the Directors composing the *minority* all due credit for

* This article was in type last week, but was put aside by the press of other matter.

Digitized by Google

the sincerity of their motives, but that is more than we give to the whole of them. For example, Mr. John Leadbetter, who can travel slyly enough in steam-boats *on Sunday*, as we proved he did the other day, had the cheek on this occasion to give the lie to his own example, for he voted for the shutting up of the railways wholly on the Sunday. This pious man, who acts as chairman of non-intrusion church meetings and so forth, can turn up the white of his eyes at the steam ascending the chimney-top of the largest Liverpool steamers on Sunday, while he is on board thereof, yet he affects to religiously horrified if a small portion of that steam ascends from the locomotives to save the carcasses of the poor brutes of horses carrying the mail on that day between Glasgow and Edinburgh. This is consistency and decency, sure enough.

But what will be said of another of Mr. Leadbetter's coadjutors—another very *pious* Director, of course—viz., Mr. John Bain? This gentleman was actually *a contractor*, or at least he was interested with the contractors for carrying the mail between Glasgow and Edinburgh, and other places throughout Scotland, *on Sunday* as well as other days. We challenge him publicly to deny if he can, or rather if he dare, that for many long years he kept *an open shop* in Nelson-street of Glasgow, *on Sunday*, for booking persons as well as parcels by the mail *on Sunday*. We have ourselves seen him often and again standing in that said shop behind the counter *on Sunday*, and taking payment of the *twopences* and *tenpences*, and other sums, larger and smaller, for the transit of these things *on Sunday*. He made his money, in fact, by those means. Yet, now that the mail is taken from him—or now that it has passed into the hands of *other* contractors, he has the cool effrontery to attend these meetings, and to put on sanctified airs, and to vote that travelling per railway, on Sunday, is an act of positive profanation! Are not these two instances quite sufficient to show the arrant cant—the disgusting hypocrisy practised not unfrequently on the public, in these times, by the holier than thou fraternity?"

Do we hold these gentlemen up to public attention because we entertain any feeling of personal animosity to either? By no means; but as we remarked the other week, because we deem individual cases much more serviceable, whether in the way of warning or example, than general precepts, and because, moreover, it is but right that those who are so ready in ascribing improper motives to others should themselves be spotless.

The following are the names of the gentlemen who voted for and against running carriages on Sunday:—

FOR.	AGAINST.
Mr. William White	Mr. William Connal
Frederick Zoller	Hew Francis Cadell
Alexander M'Neill	John Learmonth
A. Drysdale	John Henderson
Eagle Henderson	John Sligo
Sutherland M'Kenzie	Archibald Smith
John George Hamilton	John Bain
Thos. Dunlop Douglas	John Leadbetter.
James Richardson	
John Fleming	

This subject is one of much more consequence than may to many at first sight appear. Do we want an illustration of the spirit of these anti-Sunday travelling people? Look at the case of a poor tradesman of Edinburgh, named Butters, whom they have cast into prison for the non-payment of a fine of 1*s.*, with 3*l.* costs, for selling a pennyworth of sweetmeats to a child on Sunday! We regret that we cannot find room for the whole of an admirable article on this subject, which appeared in the *Examiner* (London paper) of last week; but we cannot refrain from making an extract with especial reference to railway travelling, the more particularly as it anticipates some remarks which we had intended to make on a report contained in another religious paper called the *Witness*. After alluding to the "lollipop war," our contemporary proceeds:—

"The other great fight of the Pharisees is to prevent any travelling on Sunday on the railway about to be opened between Glasgow and Edinburgh. For this object meetings have been held, and the Presbytery's Committee have made a report, and the matter has been agitated as if it were of an importance to the safety of souls not secondary even to the suppression of the sale of lollipop on Sunday. Indeed, it is to be remarked, that with these exceeding righteous folks, all things are of equal importance, all being strained to the highest. In their paintings of what they deem amiss they do not condescend to any shades; pitch black is the only colour on their palettes. Hence Mr. Guthrie denounces Sunday lollipop as a crime than which there is none more ruinous, while others of his brotherhood describe a Sunday excursion on a railway as a journey direct to perdition. The Rev. Daniel Bagot closed a speech full of violence at a public meeting with this flight of invective—

"'But if, Sir, after all our protestations and appeals—if, after we have stated our principles, and forwarded our petitions—the Directors of the railway shall come to the resolution of running a carriage upon the Lord's Day, I would suggest that a special carriage should be kept for that purpose, *and that its name shall be called Juggernaut.* [Here (says the Kirk journal, the *Witness*) a considerable interruption was caused by some persons, who were discovered to be enginemen, hissing the speaker and endeavouring to put him down, in the midst of which Mr. Bagot declared his resolution to stand there till morning until he had finished his sentence. When order was restored he resumed.] I say, Sir, that if, after all, a railway carriage will run on a Sunday, its name should be *Juggernaut*; not because that carriage would lacerate and crush the bodies of men, *but because it would have the effect of destroying the souls of men; and because it would be a car consecrated to a worse and more despotic idol than ever held a heathen population in the trammels of a degrading thraldom*; for, without question, avarice is the worst and most tyrannical despot that ever led the minds of men captive at its will.'

"In going about in private gigs, phaetons, cabs, chariots, and coaches, there is no sin; nay, the clergyman may, without the slightest offence, drive to church in his carriage, but the railway has conveniences for many who cannot afford to keep conveyances, and this is of the class of accommodations against which the Agnewites exclusively wage war, for they have always avoided any interference with those pleasures of the rich which depend on the Sabbath labour of servants. * * *

"The Saints, to be consistent, should extend their quarrel to locomotion of every sort, and should regard the use of the legs on Sunday as a sin of the same class as the use of a railway, a steamboat, or an omnibus. The puritans of the Long Parliament who brought in a Bill making it penal to walk abroad vainly and profanely on the Sabbath-day, had carried their argument to the climax of absurdity.

"The Report of the Edinburgh Presbytery charitably suppose that the railway travellers will be thieves (on the assumption that folks capable of travelling on railroads are capable of every other enormity), and that the country people will be obliged to stay from church in order to defend their property against the marauders:—

"'There will, doubtless, be an interchange of multitudes of the dissipated, idle, and mischievous, who abound in both, to their successfully practising of their evil deeds in the places in which they are strangers; *while the country parishes along the line will have their quiet disturbed and their property endangered by the crowds of Sabbath breakers* that are let out from the several stations, *inducing householders, farmers, and others, to absent themselves from church for the purpose of guarding their property.*'

"The Rev. D. Bagot, in his speech, does not go quite so far as the Report; he does not apprehend that the Glasgow railway travellers will actually sack Edinburgh, but he objects that they will disturb its quiet, and that Edinburgh will not have the satisfaction of doing the same by Glasgow:—

"'Let me allude to the mischief which we cannot avoid apprehending, if the Edinburgh and Glasgow Railway should be open on Sundays. If passengers should be conveyed by it, Edinburgh would be the place to suffer. *Few would go to visit the smoky, and nasty, and disagreeable, and uninteresting streets* of Glasgow; but what hordes of idlers would be attracted by the splendour and magnificence of your city, so as to destroy the quietness of your Sabbath days?'

"'Few will go,' says the reverend gentleman, 'to visit the smoky, and nasty, and disagreeable, and uninteresting streets of Glasgow," but has it never occurred to this preacher of the charities that many a weakly and sickly artizan, and many pining in sedentary employments, would delight to fly from those 'smoky, and nasty, and disagreeable, and uninteresting streets,' and that he is labouring to deny them the means of visiting fairer scenes, and breathing a purer air, on their one day of release from labour? It is one of the holy mercies of the Sabbath to give this sort of refreshment to the spirits and bodies of people who, for six days, toil in confined neighbourhoods and impure air. We would be amongst the first to resist any encroachment on the institution of the Sabbath; we regard it of incalculable importance to the health and happiness of the poor, that their day of religious duty, of rest, and innocent recreation, should not be invaded, but the day would not have its relaxations and comforts for the many but for the labours of a comparative few; and the most violent advocate for the ascetic observance of the Sabbath has never gone so far as to argue for prohibiting the toil of domestic servants, and for dispensing with the services and protection of the police on the Sabbath,

'For some must watch that some may sleep,
Thus runs the world away.'

"We will answer for it that the holy men, who would put this stringent law on others, do not scruple to violate it by availing themselves of the Sunday work of their man-servants and their maid-servants, and that they do not refuse to partake of the good dinner which their neighbour's cook has spent the Sabbath-day in preparing."

PILE-DRIVING MACHINE.

An ingenious machine for driving a double row of piles has recently been imported from the United States. It was built at Utica, and has the national name, "Brother Jonathan," inscribed on it. It is now in operation at Smith's timber wharf, Pedlar's Acre, where it can be seen driving the piles for the causeway and abutment on the Surrey side of the New Hungerford-Market Bridge, now in progress. The rams or "monkeys" are elevated to a height of 35 feet or thereabouts, along grooves in perpendicular ladders, similar to the ordinary machine, by means of a locomotive steam-engine of 10-horse power, fixed on a platform, on which the whole of the machinery is placed. The power of the blow given by each of these hammers exceeds 600 tons, and drives a pile of 27 feet long, and as thick as the thickest piles used in embankments and for coffer dams, nearly its whole length into the earth in about eight minutes, or perhaps less. It drives two piles at the same time. A circular horizontal saw is worked by the engine, which, in a few seconds, cuts the tops of the piles even, and enables the trucks or small wheels on which the platform is supported to come forward as fast as the piles are driven, and cut them even at the top. The power of this machine is astounding, and requires to be seen to be fully estimated. It is an important application of steam power, likely to produce very beneficial results in public works, in the formation of sea banks, and in all operations on a large scale where rapidity of execution and precision are required. The machine was used in America for driving piles for railways; and travelled by its own power upwards of 200 miles, driving piles, and making its own road through swamps and districts heretofore impervious. It is patented in this country, and also in the United States. The machine has, moreover, the power of drawing piles out of the earth as quickly as it drives them in, and can be applied to the raising of blocks of stones, and all heavy weights that require an extraordinary power.—*Daily Papers.*

2. Toll to London and Birmingham 127*l.* 15s. 9d., to be deducted from gross receipts.

4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone.

8. Receipts include the Northern and Eastern toll, &c. The dividend is from the time of opening.

10. The part between Glasgow and Paisley was made at the joint expense of the Glasgow Paisley and Greenock, and Glasgow Paisley and Ayr Companies, but each Company's receipts in respect of that part are now merged in the general returns of each.

11. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester line, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 114 (83+31.)

13. The 5,231,527*l.* 9s. 10d. is the amount actually raised according to latest balance-sheet. The receipts include those derived from the Cheltenham and Exeter branches; the former opened for 18 miles, and the latter for 33. The divisor employed to ascertain the daily receipts per mile is therefore 169½ (118¼+18+33.)

15. The 32*l.* 8s. 5d. from goods, &c. is for toll only.

16. Ten per cent. is the maximum dividend allowed by the Company's Act.

17. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. On the quarter shares the dividend is at the rate of 42¼ per cent. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

19. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table.

20. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company.

21. Capital of 993,300*l.* includes new capital for widening the line, &c. The dividend mentioned does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table is exclusive of Brighton and Croydon toll.

22. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount.

24. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

25. The 3,753*l.* 13s. 4d. are the receipts after deducting omnibus charges, and payments to other Companies. The dividend is from the time of opening.

26. The receipts for goods, &c. include, carriages, 36*l.* 3s. 0d.; horses, 22*l.* 12s. 6d.; dogs, 1*l.* 2s. 0d.; parcels, 22*l.* 10s. 3d.; cattle, 32*l.* 8s. 6d.; corn, 6*l.* 9s. 0d.; heavy goods, 49*l.* 10s. 10d.; coal, 118*l.* 0s. 8d.—Total, 928*l.* 16s. 9d. The dividend is from the time of opening.

28. The details of the receipts are as follows:—Passengers, 1,819*l.* 11s. 6d.; parcels, carriages, horses, and mails, 315*l.* 19s. 5½d.; merchandise, 1,14*l.* 1s. 7d.; minerals, 222*l.* 6s. 8d.; cattle, 34*l.* 4s. 3½d.—Total, 3,508*l.* 3s. 5¾d.; including North Midland proportion of Manchester and Leeds traffic, amounting to 108*l.* 15s. 9½d. The dividend includes a sum of 31,786*l.* earned previous to the last half-year.

29. The receipts stated are after deduction of Liverpool and Manchester toll.

30. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 26 miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

31. The capital of 533,000*l.* includes that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).

33. The traffic stated does not include the Leeds and Selby;

TO CORRESPONDENTS.

We do not think that any useful purpose would be served by carrying out the suggestion of A Subscriber, *and publishing "a price current, especially of such articles as are used on railways." To railway proprietors generally such a list would not be interesting, and the parties to whom alone it might be otherwise, have at hand much better sources of information than any price current can supply.*

Fusus.—*The cost of the one line was, as nearly as possible 28,000l. per mile, and of the other upwards of 35,000l., but nevertheless, we consider the latter much the cheaper line of the two, when the nature of the country through which the two works are carried is taken into account.*

South-Eastern Meeting.—*Mr. Laycock requests us to state, that in the report of the meeting which we gave last week, the word "yards" was substituted for "feet," in the allusion which he made to the lightness of the works on the York and North Midland Railway.*

A Friend to Railways *(Bishop Auckland).—Our correspondent (to whom we alluded last week) is informed, that the conveyance of coals was never contemplated, nor, from the shortness of the line, and the expense of loading and unloading, would such a branch of traffic prove profitable—even if there were not other difficulties.*

Constant Reader.—*We really are overwhelmed with letters on the subject of which he writes, and for the present we must pause, unless they contain something new.*

P. W.—*There were two Secretaries, but for some years past the whole business has been transacted (and very ably transacted) by the gentleman whom our correspondent names.*

An Engineer.—*We do not know the gentleman's private address, but a letter to the care of the Secretary, at the Company's offices will no doubt find him.*

Anglicanus.—*There can be no question whatever that the security is most ample. If, therefore, the interest offered be satisfactory, he has no occasion to hesitate. Indeed, we ourselves should not mind investing the amount in shares at their present price; and, as our correspondent is aware, the claims of bondholders must be satisfied in full before the shareholder receives one farthing of dividend.*

An Old Subscriber.—*There is no occasion whatever for apology. We are glad at all times to hear from sensible correspondents. If we cannot always publish their communications, we frequently receive valuable hints from them.*

Paris and Rouen Railway.—John Bull *appeals to very unworthy prejudices. We, as well as he, would rather see British projects taken up, but where there is a project of considerable gain by patronising foreign schemes we fear the "patriotism" of which he speaks will have little weight. At any rate it is ungenerous and unfair to stigmatise a whole people on account of the shuffling conduct of a few of their former rulers.*

The Toll Question.—Verus *is somewhat uncourteous to an individual, and if we can find room for his letter next week, it must be pruned of not a few of its expressions.*

The correspondent who writes respecting an accident on the South-Western line is referred to our "Railway Offences."

C. X.—*The proprietors know the total amount expended in salaries in that department, and if they are satisfied that such amount is not more than equivalent to the work performed, they need not care how it is apportioned among individuals. The Directors must be best able to judge on that point.*

Four-wheeled and Six-wheeled Engines.—*The great importance of the question as to the comparative merits of four wheeled and six-wheeled engines, and the increased interest given to it by recent events, would plead our apology, were apology required, for devoting so much of our space to day to its discussion. Several communications on the subject must, for the present, stand over. We may mention, in particular, the letter of* Mechanicus, *the writer of which has our best thanks for this and a previous communication.*

Nor-Wester *is wrong in his supposition that the estimate is "exclusive of stations and plant," and therefore his calculations fall at once to the ground.*

Civis.—*We dare say our correspondent, and others of his class, are under paid, but we must confine ourselves to our own province.*

Enquirer *(Stockport).—The bonds are not to be paid off before* 1843.

The Rival Rails.—*We have received a pamphlet under this title, in reference to the disputed railway route to Scotland. It advocates the west coast line, but at present we have not room for an extract.*

Moderator *and a* Constant Peader *(Edinburgh), on the York and North Midland, have been anticipated by other correspondents.*

Sheffield and Manchester Railway.—*We are obliged to two correspondents for various facts relative to this line, which we shall not fail to turn to account, should occasion require. We have not heard again from our correspondent of last week.*

Manchester and Leeds Railway.—*The traffic for the week ending November 20, was—Passengers, 2,007l. 9s. 6d; Goods, 1,742l. 5s. 7d.; Total 3,749l. 15s. 1d.*

Brandling Junction Railway.—*The amount of traffic for the week ending the 21st ult. was—Passengers, 344l. 3s.; Goods, 497l. 13s.; Total 841l. 16s.*

Chester and Birkenhead Railway.—*The traffic for the week ending the 22nd ult. was—Passengers 324l. 12s.; Goods, 32l. 11s. 6d.; Total 357l. 3s. 6d.*

Several letters (some of which we acknowledged last week) are in type, but necessarily deferred. We hope to be able to find room for the whole of them in our next.

THE RAILWAY TIMES.

SATURDAY, DECEMBER 4, 1841.

In the Report of the Directors of the Paris and Rouen Railway to their Lancashire constituents, there occurs a paragraph not very flattering to our national honour, or, we may add, to our national honesty. We allude to the contrast which is drawn between the landowners of England and those of the Continent, in their relation to the railway projects of the respective countries:—

"In the previous part of this Report [say the Directors] it is stated that three-fourths of the land is purchased, and it is fully expected that within three months from the present time the whole of the land will be in the possession of the Company. Those who are acquainted with the minute subdivision of property in France, and the immense number of proprietors with whom the Company would therefore have to deal, were not without fear that these circumstances would impede the operations of the Company, and present almost innumerable instances of that extortion to which Railroad Companies have been subjected by landed proprietors in England. But this has not been the case. The French law requires that various forms shall be complied with, local inquiries made, and positive proof adduced that the land is really required for a work which has been declared by the legislature to be one of public usefulness. The compliance with these forms involves delay, but it does not occasion much expense: appeals to juries are not frequent, nor are those appeals attended with anything like the same expense as in England; there are few large landed proprietors, and these few do not generally ask unreasonable terms from the Company."

This statement, made by, and to, Englishmen, conveys a bitter censure upon those who in this country have laid themselves and their "order" so open to animadversion, by reason of the selfish course they have pursued in throwing impediments in the way of those who at great expense, and greater risk, were anxiously promoting and perfecting important public improvements. We do not say that in general the projectors of railways have been actuated by any particular anxiety for the benefit of the community, as separate or distinct from their own individual gain; but there can be no question that, in many cases, an additional incitement to perseverance in the midst of innumerable and almost insurmountable difficulties has been supplied by the consideration that while there was a fair prospect of remuneration for the promoters themselves, there was the certainty of a great public advantage. The matter, however, as between the owners of land required for railway purposes, and the public at large, has nothing to do with the motives or means of the Companies. Parliament in giving its sanction to the construction of a particular line, formally and explicitly declares that the work is likely to be beneficial to the community, and the land proprietor therefore who extorts or attempts to extort from those who have undertaken to carry out the project, more than he knows in his conscience to be the real and legitimate value of his property, is *pro tanto* doing what he can—and this from the most unworthy of motives—to thwart the intentions of the legislature, and impede the expected boon to the country. It is not the Companies alone who suffer immediately and directly from the extravagant claims to which it is too frequently necessary to accede; the public ultimately pay in the shape of higher fares or inferior accommodation for the scandalous robberies to which, in the first instance, the promoters of railways have been subjected. We need say nothing of the indirect and remote evils to which such exactions give rise—in deadening the feeling of fair dealing between man and man—in legalising, as it were, the plunder of those who are comparatively powerless by those who have might not right on their side—and in fostering corruption of every kind and degree, whether in supporting or repelling these unjust demands. All these points, however, and others to which we need not now allude, are well deserving of reflection, and if the conduct of the landowners of England has been (as we contend it has) instrumental in depreciating the standard of national morality they have incurred a fearful responsibility. It is strange, indeed, to witness how men who in their dealings with individuals would be restrained by shame or by some better principle from taking an unfair advantage, scruple not to resort to every species of trick and quibble, and we fear not seldom of deliberate fraud, in their intercourse with public Companies. The morality of these people is something like the so-called honour of public men, who seem to consider official profligacy quite consistent with private integrity. We confess we cannot understand these refinements. If the minister be guilty of immoral acts we cannot acquit the man; and we call *extortion* by its proper name, by whomsoever and against whomsoever practised.

The projectors of the Paris and Rouen Railway were naturally apprehensive that the minute subdivision of land which the laws of France render necessary, would have multiplied the occasions for extortion of which they had been witnesses, and by which not a few of them had been sufferers, in England; but experience has happily dispelled that fear. Appeals to juries are, it appears, not frequent, "nor are those appeals attended with anything like the same expense as in England; there are few large landed proprietors, and these few *do not generally ask unreasonable terms from the Company.*" The very parties to whom the land required for the operations of the Company is most valuable, namely, the small landholders, are those who are the least exacting, and the same thing has been proved by the experience of the English Companies. It is the "large landed proprietors," who, taking advantage of their wealth and station, impose terms to which, however unjust or "unreasonable" they may

Digitized by Google

know them to be, Railway Directors are compelled to submit. These are the parties who turn their legislative influence into the means of securing private agreements for the purchase of land at prices till then unheard of—who convert barren tracks into mines of gold, under the threat that if their demands be not complied with a Parliamentary opposition will be the result. These are the parties who profess their unwillingness to part with a single acre of their wide-spread domains on any terms, merely to enhance the favour of after-compliance—who are so smitten with a love of fox-hunting (as in the very notorious case of a metropolitan railway) as to appeal to the courts of law, and to the high court of Parliament, to enforce the payment of more than twenty times the value of the property required, because forsooth the operations of the Company would, as alleged, materially interfere with the prosecution of that intellectual sport! These in a word are the parties who, from the peerage downwards, have disgraced themselves, and dishonoured the class to which they belong, by an exhibition of combined meanness and rapacity, which we had thought foreign to the character of English gentlemen.

It is high time that some alteration were effected in the mode of settling the terms upon which property required for the construction of public works is to be valued. A fair, nay, a liberal, price is only what the sellers have a right under the circumstances to expect, but there should be some more uniform and less expensive method of determining what that price shall be. We believe no one can have paid attention to the proceedings of assessment juries without having been struck with the extraordinary difference which at different times, under almost identical circumstances, have marked their awards. We are happy to find that of late juries have evinced a disposition to lean more to the side of justice and less to that of power and influence than was at one time the case. The very impudence of the demand not unfrequently secured to a considerable extent the object of the claimant. When a person, presumed to be a man of honour and veracity, made a demand of 800*l.* or 1,000*l.*, it was difficult for a jury of unsophisticated tradesmen to imagine that the real value of the property did not exceed 80*l.* or 100*l.*; and being puzzled by the technicalities and *ad captandum* appeals of counsel, they were glad to compromise the matter by awarding the medium amount. They now begin to see matters in a different light, and to estimate the value of the property submitted to their decision by judging for themselves of the conflicting evidence laid before them. The expense, however, of these inquiries is so great, as very often to induce the Directors of Railway Companies to choose the less of two evils, and to submit to extravagant demands rather than contest a point where even success is disastrous. For our own parts we would at all times risk an appeal to the common sense and natural justice of a jury, rather than be parties to any compromise between extortion on the one hand and apprehension of results on the other. At the same time we cannot blame the Directors of Companies for making the best of their position. Their great aim and object is of course to economise the funds of their constituents, and if they can do this by private arrangement at a cheaper rate than by having recourse to a court of law, they act very wisely. But that is no reason why the law should not be altered, but rather a reason why it should. We are not prepared to recommend the substitution of any new plan of assessment differing materially from that which is at present in use. The mode, however, of conducting inquiries under the existing law, might, we conceive, be very much simplified, and if any scheme could be devised for *punishing* those whom the award of a jury has convicted of having made an extortionate demand, we have no doubt the result would be salutary. If a claim be cut down by a jury of impartial arbiters, to one-twentieth or one-tenth of its original amount, (and this is not uncommon,) can we do otherwise than designate the attempt to extract money from the coffers of the Company as one of extortion, and ought not such a person (to be visited with some further punishment than the bare defeat of his plans? In the mean time, there is at least the power of exposing these iniquitous demands. The press, which evil-doers of every grade dread far more than they venture to confess, may at any rate hold them up, and ought to hold them up, to public reprobation, and so far as *we* are concerned, this shall at all times and at all hazards be done, without fear or favour.

Our remarks in reference to the course pursued by the Directors of the Liverpool and Manchester Railway Company relative to the junction line between their railway and that of the Manchester and Leeds Company, have called forth from a correspondent, who signs himself "A Liverpool Proprietor," a temperate and well-written defence of their conduct. We have much pleasure in giving insertion to the communication in question; but as we daresay it will elicit some notice from the other side, by parties who are much more conversant with the facts of the case than we profess to be, a very few words from us will for the present suffice.

Our correspondent represents, in effect, that it was at the solicitation of the Manchester and Leeds Company that the Liverpool Directors consented to apply for Parliamentary powers to construct the junction line—that as time was pressing, it was agreed that the Bill should be prosecuted with an understanding that if the estimates of traffic submitted by the Leeds Company did not prove correct and satisfactory, the enterprise should not be carried out—and that the necessary powers having been secured, it was then discovered that the traffic did not amount to one-half that which had been represented. Our correspondent adds, that this fact—the main cause of the indisposition of the Liverpool and Manchester Directors to proceed—was broadly and distinctly stated, and he gives in proof an extract from an official Report of January, 1840. So far as regards the opinion of the Directors, the inadequacy of the estimate is stated distinctly enough, but for any thing to the contrary that our correspondent alleges, the grounds upon which that opinion was based appear to have been wholly unrevealed to the proprietors. Without disrespect to the Liverpool Directors, one may reasonably suspect that having made up their minds *not* to carry out the powers they had obtained, they alleged the insufficiency of the probable return merely by way of excuse, unless they showed by something more than mere assertion, that the estimates *were* overcharged. We are to presume that nothing satisfactory on that head was ever promulgated, else why should the Manchester and Leeds Directors persist in advocating the scheme? It is not pretended that the estimates given in by them were wilfully exaggerated, and if it had been shown, or could have been shown, that such exaggeration really existed, and that the junction line could not fairly be expected to prove profitable, what possible motive could the Manchester and Leeds Directors have in seeking to press upon their proprietors for means to carry out a ruinous scheme—in seeking (as our correspondent expresses it) "to commit their constituents to a large present outlay, without good security for an adequate return, and with the chance of ultimate loss?"

But, says our correspondent, the Manchester and Leeds Directors are *not*, as we, upon what we deemed good authority, asserted they were, "ready and anxious to carry out *their* part of the arrangement;" and he quotes from their last half-yearly Report a passage in which the condition of the money-market, and the great depression of the Company's stock in the market are stated as having IN COMBINATION with "*the continued indisposition of the Directors of the Liverpool and Manchester Railway Company to proceed with the connection line*," deterred the Directors from taking any immediate steps in the affair. Surely our correspondent must perceive that the failure of the Liverpool Directors in fulfilling their part of the compact is adduced as the principal, and if we may so speak, the permanently existing, cause of the course adopted by the Directors, the state of the money and share-markets being regarded as merely temporary and accidental. It is admitted on all hands, that the Manchester and Leeds portion of the junction line would not pay of itself (or at least was not likely to pay previous to the late improvements in the navigation of the Irwell), and therefore for the Leeds Directors to have called upon their constituents for further funds, while they were impeded by the apathy, if not by the secret opposition, of their partners in the venture,—and this at a time when their own stock stood at a heavy discount in the market,—would have been madness indeed. But does this "pause," as our correspondent terms it, indicate that the Leeds Directors are doubtful of the success of the scheme, or unwilling to carry it into execution? Far from it. Let the other side exhibit their willingness to complete their portion, and without being in the smallest degree in the confidence of the Manchester and Leeds Board, we venture to assert that, unfavourable as the times still are, and comparatively (and we may add, unaccountably) low as is the Leeds stock in the market, the whole line will speedily be put in the way of execution.

And here it is that our correspondent's defence is singularly incomplete. Does he deny that other parties have volunteered to assume the responsibility of the Liverpool Company and complete the line, or will he affirm that the Directors of that Company have refused to transfer their powers and privileges? If the junction is likely to turn out so unprofitable as a pecuniary speculation, why hesitate to retire at once from an ill-advised position? It cannot be gainsayed that the benefit likely to result to the Liverpool and Manchester Company, would amply make up for any expense they may have incurred in procuring the Act, and why then should they, if there were no other object to attain but the good of the railway proprietors, refuse to secure such benefit, all the cost and all the risk being thrown upon others? Our correspondent approves "of the Directors not throwing up the Bill altogether, having incurred nine-tenths of the expenses belonging to it;" but to what good purpose do they hold back? Their powers will very speedily expire of themselves; do they expect that prior to

Digitized by Google

that period the traffic likely to pass over the junction line will have so much increased as to justify them in committing "their constituents to a large present outlay, with the chance of ultimate loss"?

Our correspondent deprecates any imputation of "sinister influence at the Liverpool and Manchester Board," and attributes our remarks on that head to a "total misapprehension of the character" of the Directors, in whose judgment and discretion in this matter he affirms that the local proprietors place full reliance. We need scarcely, we hope, state that we meant not to insinuate personal corruption or jobbing of any kind against the highly respectable gentlemen who compose the Liverpool Railway Direction—indeed, we rather gave voice to the sentiments of others than expressed any opinion of our own—but our correspondent need not be told that parties connected, however remotely, with separate, and to a certain extent conflicting, interests, may with every desire to act fairly and justly, be unconsciously biassed to forward the one at the expense of the other. The Liverpool Directors doubtless conceive that in all they do they are consulting the true and permanent prosperity of the railway; others may think, and we know *do* think, the contrary—"so different (as our correspondent himself remarks) does the same proceeding appear when contemplated from different points of view!" *Our* view of the junction case was, that the conduct of the Directors was impolitic to themselves and unjust to an ally, and moreover, *if the interest of the railway alone were under consideration*, wholly unaccountable without some explanation. Such explanation has now been offered, and it will be for our readers to determine how far it is to be considered satisfactory, supposing the statements upon which the attempted vindication rests to remain uncontroverted. We shall probably have occasion to resume this subject.

In the *Globe* newspaper of Tuesday evening, appeared the following paragraph:—

"The Irish Tories—by whom the plan of the late Government for the introduction of railway communication into Ireland was so bitterly opposed and defeated—have determined, it is said, on recommending Sir Robert Peel to adopt a plan somewhat similar to that which they formerly repudiated. Thursday a meeting took place in Cork, for the purpose of bringing the matter before the Government. In a memorial agreed to at the meeting—of which the Earl of Bandon was Chairman—they deprecated private enterprise, in support of which they formerly bellowed so loudly, and called upon the Lord Lieutenant to lend them his assistance in obtaining "a general and comprehensive system." The construction of partial lines, they say, would tend rather to injure than serve the whole community, by concentrating in one district the employment, the industry, and the commerce of the country; and therefore, if the sanction of Government is to be given to any private enterprise connected with railways in Ireland, care should be taken that the completion of one line of railway should not destroy or lessen the chances in favour of the construction of the rest."

It is with extreme regret that we see so excellent a cause like this perverted to the purposes of faction. We had hoped that all parties had at last seen the propriety of taking up the question of railways for Ireland, upon much more comprehensive grounds than the promotion, or otherwise, of the designs of a faction, (and the above ill-judged paragraph notwithstanding,) we will still indulge that hope. We believe the *Globe* to be incorrect in its charge against the "Irish Tories," of having been the sole, or even the principal, cause of the defeat of the Commissioners' plans. The Irish Liberals were quite as much to blame in this matter as the Irish Tories, if indeed they were not much more so—for while some of them opposed, with much bitterness, the scheme then brought forward, most if not almost all of them neglected to lend any efficient aid in furthering it. The truth is, that to the culpable remissness of the Whig Government itself, and to that alone, is the failure of Lord Morpeth's propositions to be ascribed. We are firmly convinced that had that noble Lord and his colleagues in the Administration evinced a determination to adhere to that which with so many protestations they brought forward, success would have been certain. At any rate defeat would not have been inglorious, as was the yielding up, almost without a struggle, the cause in behalf of which they expressed themselves even up to the last moment so warmly. Much of the opposition which the first announcement of the Commissioners' plans had called forth, was by that time withdrawn, and supported as the Ministers were on this question by some of the most influential members of the adverse party, there can be little doubt that success would ultimately have crowned their efforts had they been true to their own repeated pledges, and to the best interests of Ireland.

It is useless, however, to dwell upon the past, except for the purpose of guarding against similar errors for the future. We trust and believe that should the matter be taken up by Sir Robert Peel's Administration, it will not be abandoned without a full and a fair trial. The inadequacy of "private enterprise" as it is called, has long since been clearly demonstrated, and if the "Irish Tories" at whom the *Globe* sneers, have been somewhat more tardy than other people in fully comprehending that fact, it is gratifying to find that they now acknowledge it, even should it be at the expense of that which is sometimes designated "consistency," but which ought rather to be termed obstinacy or bigotry. We are glad, too, to find that the leading merit of the Commissioners' plans is now confessed even by the *Globe's* political enemies, "the Irish Tories,"—and that nothing but "a general and comprehensive system" of Irish railways is considered at all applicable to the requirements of that country. We sincerely trust that the memorial to her Majesty's advisers, agreed to at the meeting held in Cork, will not be without good effect.

The Gosport branch of the London and South-Western Railway was opened to the public on Monday last. Our readers are acquainted with the circumstance which has deferred this opening.

On Saturday the Directors and their friends took a private trip along the line, for the purpose of being present at a complimentary dinner which the inhabitants of Gosport did themselves the honour of getting up, to testify their sense of the value they put upon the completion of a work which cannot fail to be intimately connected with the future fortunes of their town. A sketch of the proceedings on the interesting occasion referred to will be found in another page. It will be seen that Mr. Chaplin, the very able Deputy-Chairman of the Board, who responded to the toast of "Health to the Directors and proprietors of the Railway," ascribed to Sir John Easthope, the late Chairman of the Company, the merit of having projected, and materially aided the execution of, the Gosport branch. We remember well how efficiently Sir John advocated the undertaking at a meeting held some years since, at the London Tavern, and how ably he exposed the hollowness of a rival scheme then said to be in contemplation. This is by no means a solitary instance of the good service rendered to his co-proprietors by Sir John,—for *good* service we are satisfied it will prove. A communication by railway from London to Portsmouth (for such virtually the South-Western line now supplies,) cannot fail to be otherwise than profitable to the promoters, as well as advantageous to the public.

A very interesting fact was mentioned at the opening dinner, by Sir Hercules Pakenham, the commanding officer of the district. To show, he said, the confidence the Government reposed in the railway, he had that day ordered a large detachment of troops to move from Winchester to Gosport, by the branch line, on the first day it opened. We believe that the military authorities have on many occasions expressed a high opinion of the facilities which railways so peculiarly present for the accommodation of the service.

Our readers are aware that we are by no means partial to the opening of new railways at this season of the year, and after the extraordinary weather that has recently prevailed. The case of the Gosport branch differs however very considerably from that of the Sheffield and Manchester opening, upon which we felt it our duty to comment a week or two back. The whole of the Gosport line was ready for opening early in the autumn, and nothing but an unfortunate failure of a portion of the Fareham tunnel, postponed the event. That defect has been remedied by substituting an open cutting at the part where the slip occurred, while as regards the works generally they have had the benefit of a month or two more for consolidation than was at first deemed necessary. This is manifestly a very different matter from hurrying on the opening of a railway by means of temporary appliances, and with cuttings scarcely half completed. There is, moreover, the advantage on the side of the South-Western Company of a well-trained body of servants, a well-tried set of engines and carriages—in short, an establishment in every way equal to the requirements of the case—advantages which a Company opening the first portion of their line cannot be expected to possess to nearly so full an extent.

The Gosport branch of the South-Western Railway being now in operation, the proprietors must, within the next six months, elect whether they will continue to receive as heretofore from the general funds of the Company, interest at 5*l.* per cent. upon the amount of their several holdings in the branch undertaking, or whether they will take their chance of a dividend from the results of the parent line and branch line combined. We do not think that there will arise much difficulty on this score. The working of the South-Western Railway, and this its new auxiliary, will indeed surprise and disappoint us not a little, if it do not secure to those interested in its prosperity an annual dividend equal at least to the interest now paid on the Gosport shares.

Since the above was in type we have learnt with much regret that it has been found necessary to discontinue for the present the run-

Digitized by Google

ning of trams on the branch line. Yesterday a mass of clay toppled over at the open cutting near Fareham tunnel, and covered one line of rails, threatening also to cover the other. Slips have likewise occurred on other parts of the line, but not to any great extent. The Directors, taking into consideration that the damage can be more speedily and more effectually repaired by a suspension of the traffic for a short time, have determined to close the road. In this we think they have acted wisely. But does not the experience of such a line as the Gosport—superior in many circumstances (as above hinted at) to new lines generally—afford a striking confirmation of our opinion, that it is extremely undesirable to commence operations at this season of the year?

MESSRS. PICKFORD and Co., the well-known carriers, in order to meet their very extensive and largely-increasing business, have recently erected, on a very considerable scale, at a cost of about 20,000*l.*, premises adapted to their trade, in close proximity to the London and Birmingham Railway, and connected therewith by a junction line at Camden Town. The whole was designed by LEWIS CUBITT, Esq., and completed under his supervision. The arrangements are of the most perfect and unique character, and the building, of which we hope to be favoured with a full description, is more vast and extensive than any other in England.

Our immediate object in noticing this offshoot of the railway system is, to give publicity to the following interesting facts, connected with its formal opening on Wednesday last. A train of waggons having at half-past seven, p. m. been run in and unloaded in the presence of Messrs. PICKFORD, and amidst the cheers of their large body of workmen, the head gentlemen (13 in all) of the several departments in the London establishment, which comprises altogether nearly 100 clerks, were invited by Messrs. PICKFORD to partake of a commemoration dinner, at which the head of the house, JOSEPH BAXENDALE, Esq. presided. The united servitude of the thirteen who partook of the hospitality of Messrs. PICKFORD equalled 286 years, averaging 22 years each—two having been in their employment between 40 and 50 years, five between 20 and 30 years, and six between 10 and 20 years, the ages of the whole exceeding 500 years!

We need not say that, where such a party was collected, all was harmony and happiness, and that "the London and Birmingham Railway," and "Success to the Railway System," were among the many toasts drunk on the occasion.

The lengthened services of the gentlemen so hospitably entertained by their worthy employers, speak most eloquently of good servants and kind masters.

A SPECIAL meeting of the Northern and Eastern Railway Company was held on Thursday last, and will be found fully noticed in another column. Some interesting details are supplied as to the progress and prospects of that undertaking; but we direct attention to the proceedings of the meeting principally as bearing upon the toll and fare question now under discussion in our columns. The relative position of the Eastern Counties' and Northern and Eastern Companies, seems much the same as that of the Greenwich and Croydon. We have no great hope that the result in one case will prove any guide in the other; but at the same time, whatever tends to throw light upon so important a subject, is well worthy the attention of the public, and as such we recommend the details of the Northern and Eastern meeting, and the correspondence between the Croydon and Greenwich Boards (a portion of which we this day publish,) to the consideration of the railway interest at large.

THE *Gateshead Observer* of last Saturday contained a notice of a "scheme" (which, however, it appears has since been defeated) in connection with the projected Northern Union Railway, patronised by the various Companies in that quarter. Our contemporary says:—

"The line fixed upon was, for about 15 miles, (viz., to near Shincliffe,) almost the same as that already sanctioned [for the Great North of England Company,] by Parliament; from Shincliffe it was to diverge a little to the eastward, in order to join the Durham Junction; and thence *via* the Brandling Junction, it was to be united with the Newcastle and Carlisle at Gateshead. * * * What has been our surprise to find, so late as yesterday, that a scheme is brewing for the counteraction of this great project, or, at least, for marring its usefulness, by rendering it subservient to selfish ends—a scheme (as we are informed by a respectable correspondent) having for its object to bring the railway from Darlington, not by the line agreed upon at the meeting of the Directors of the Companies, and for which they have advertised their Parliamentary notices, but along a coal-waggon-way of the Stockton and Darlington Railway, called 'The Sim Pasture Branch,' thus 'giving to the Auckland district a monopoly of the coal-traffic south of Darlington—delaying the Act of Parliament for another year, as it is too late now to give notice for a new Act—preventing all chance of the national line to Scotland passing this way—breaking faith solemnly pledged—throwing down the apple of discord among the different Companies—and risking the protraction, if not the absolute ruin, of a plan which has been received with great approbation, as being the readiest mode of connecting the Tyne with the Thames.'

"This is alarming information. Indeed, to us it appears almost incredible. An attempt to set at defiance the recorded opinion of the first engineer of the age, that the line selected by the united Companies is the best that could be adopted—and for the purpose, too, of deviating a national line, along seven or eight miles of a coal-waggon-way, for the maintenance of monopoly and the advantage of a few—taxes both our time and our patience."

By the courtesy of the Editor of the same paper we have been favoured with a proof slip of an article which is to appear in his journal of this day, from which we learn that the "scheme" was immediately rejected by the Committee at York.

This species of scheming is not likely to do the original project any good, and we agree with our contemporary that "vigilance may still be necessary."

THE Editor of the *Derby Reporter* says, he understands that the officers of the North Midland Railway have determined upon presenting a piece of plate to Mr. PATTESON, whose retirement from the duties of Secretary we noticed last week. We trust this statement is correct. Never was compliment better deserved.

THE *Derby Mercury* states, that the Directors of the North Midland Railway "in order to diminish the expenditure, on the recommendation of the Committee appointed for that purpose, have discharged the five police officers originally procured from the police force in London, and who for some time have had the immediate charge of the watchmen distributed upon the line. The superintendence of the daily watchmen is now consigned to the travelling inspectors. Messrs. Faulkner and Berners." Query—Will this be found to be true economy? We fear not.

—o—

THE *Western Times* says the carriage of goods by the Bristol and Exeter Railway to Exeter is much on the increase, notwithstanding heavy complaint has been made by the principal traders of unnecessary delay, and of an indiscriminating charge according to the weight of packages. The attention of E. Divett, Esq., it is said, has been called to these facts, and that he is in correspondence with the Directors on this subject.

—o—

WE alluded last week to the depreciation of turnpike property shown in certain districts of Essex. It would appear that similar results have exhibited themselves elsewhere. The *Worcester Journal* states that recently the tolls of the Bromsgrove and Birmingham turnpike road were let for one year, from the 1st of January next, for the sum of 1,305*l.* being 1,655*l.* less than they brought two years ago!

—o—

WE have much pleasure in extracting from the *Essex Mercury* of Tuesday last, the following paragraph relative to the Eastern Counties' Railway:—

"Whenever the fine weather has permitted, the works throughout the line have been pushed forward with extraordinary vigour. And it is owing to the unceasing activity and excellent management displayed by Mr. Braithwaite, the Engineer, and Mr. Hall, the Managing Director, that so much progress has been made, and so many harrassing obstacles overcome. Complaints have been brought forward against the conduct of those railway labourers, temporarily thrown out of employ by the season; but these complaints have generally been without foundation. The Directors, we are given to understand, have instituted rigid inquiries into the charges brought against the railway labourers, and have found that, though out of employ, they have conducted themselves extremely well, and, in all cases, have submitted themselves to the authority of the constables which the Company have so liberally distributed along the line, at their own charge. With respect to certain insinuations that robberies about Widford and its neighbourhood, such as sheep stealing, &c., have been committed by the railway labourers—there appears to be no truth in the charge. That plunder of this sort may have occurred, we do not doubt; but we incline to believe that the offences are committed by bad characters who are in no way engaged on the works of the railway."

—o—

THE Directors of the London and Birmingham Railway Company with that care for the accommodation of the public for which they have ever been honourably distinguished, opened on Wednesday last a new station, called the "BUSHEY STATION." It is situated at the south end of Watford, and is intended, as its name imports, for the convenience of the inhabitants of Bushey and the surrounding neighbourhood. Trains *from* the station to London will start at 21 minutes after 8, and 36 minutes after 9 in the morning, and at 7 minutes after 12 in the afternoon, and *to* the station from London at 3 and 6 in the afternoon.

RAILWAY OFFENCES AND OFFENDERS.

At the last meeting of the Kingston Bench, an engine-driver on the South-Western Railway, named Charles Lack, was charged by the Directors with neglect of duty. It appeared that Lack was in the service of the contractor for the permanent way, and the driver of a ballast engine. On the 17th of November he had neglected to remove his engine from a line upon which a passenger train was due, and the consequence was a collision near the Kingston station, whereby two or three persons were rather severely hurt. Had not George Massey, the driver of the passenger train, observed the obstruction in time to check his speed, although not altogether to prevent the collision, the consequences would probably have been serious. Lack endeavoured to show that the rule of the Company which requires that engines shall be removed out of the way of trains fifteen minutes before they became due, did not apply to ballast engines; but it was clearly shown that it did. He then urged other pleas, but in vain, and being convicted, he was fined 5*l.*, *which he immediately paid.*

A charge of neglect against one of the inspectors of works, arising out of the above case, was then gone into, but was not made out to the satisfaction of the Bench.

A case of adequate punishment for a railway offence is at last recorded in the *Derbyshire Chronicle* of last week. Joseph Rhodes, of Crich, was convicted on Saturday week, before John and Anthony Strutt, Esqrs., at Belper, for assaulting Henry Wright, policeman, at Amber-gate station, in the execution of his duty, and fined the full penalty and costs under Lord Seymour's Act. Some time ago he took a second class ticket at Belper, and rode in a first class carriage to Amber-gate. The moment the train stopped, he got out and jumped over the wall, but was seen by the policeman, who ran round and collared him; he begged to be let alone, and said he would walk up to the station and pay the difference, but the moment he was at liberty, he struck at the policeman and ran off. "We are glad, [says our contemporary,] to see the magistrates have acted with such spirit. By inflicting the full penalty, they have taken the best means of securing the officers of the railway in execution of their duty from the violence of such persons as Rhodes and his companions, and at the same time add to the comfort and safety of respectable people travelling by railway. We trust that other magistrates will follow the good example set them by these gentlemen, in inflicting the full penalty in such cases." In these remarks we entirely concur.

That severity of punishment is not uncalled for in that district is evident from a fact mentioned in the same paper, namely that as the train from Leeds to Derby was passing through Belper, on the night of Monday the 15th ult., at 1 p. m., some evil disposed person threw a stone from one of the bridges near Belper station, and did considerable damage to one of the carriages.

Last week, Thomas Sharples was charged before the Manchester magistrates with stealing a passenger's box from the station of the Manchester and Leeds Railway Company. Alfred Warburton stated that he engaged the prisoner, whom he saw passing with a wheelbarrow, to take his truck to the Leeds Railway station. They arrived at the station a little before two o'clock, and the truck having been placed in the station house he paid the prisoner threepence for his services. The prisoner then asked him to go and have a glass of ale, but he declined, and left the station by himself. On returning to the station at three o'clock, to get his ticket, he missed the box, and gave notice to the police. Police constable Gosling said he received information of the offence, and went to the prisoner's house where he found the box. Mr. Taylor defended the prisoner, and said that he bore a good character, but was drunk at the time. He was committed for trial at the sessions.

On Saturday week the railway station at Weston-super-Mare, on the Bristol and Exeter Railway, was broken open by some person or persons, evidently well acquainted with the premises, and from 30*l.* to 40*l.* in money stolen. There were marks of attempts to fire the building in two places. Inspector Bosworth, of Bristol, immediately on receiving information of the occurrence, repaired to the station and instituted a strict and minute search. No trace, however, has yet been obtained of the offenders, for whose apprehension a reward of 20*l.* has been offered.

THE SLIP ON THE CROYDON RAILWAY.

We had expected this week to be able to report that the obstruction in the New Cross cutting was completely removed; but an additional quantity of earth came down the east slope on Friday night, the 26th ult., covering the rails to a slight depth for about 50 yards, the east line having been previously clear throughout; and the very unfavourable weather at the commencement of the week has prevented the removal of this slip as quickly as its comparatively important character would otherwise have permitted.

We regret the vexatious delay to which the Company is thus subjected; but at the same time, we believe that the present detention will in some respects be favourable, as diminishing the probability of any similar obstruction occurring for the future.

ANOTHER "ACCIDENT ON A RAILWAY," *NOT* A RAILWAY ACCIDENT.

On Sunday night an alarming accident took place on the London and Brighton Railway. It appears that as the last train from London was on its way down, on arriving near the Hassocks-gate station, the engineer observed a man in the middle of the line, a short distance from the engine. He did all in his power to stop the train without effect, as the next moment the man was knocked down by the tender, and the whole train passed over. On going to his assistance it was found that none of the wheels had touched him, but that the fire-box and machinery had completely rolled him up, breaking several of his ribs and lacerating his hand and arm, after which the whole of the carriages passed over without touching him. Medical assistance was procured, and he was shortly afterwards conveyed to the Sussex County Hospital, Brighton, where strong hopes are entertained of his recovery. Last week another accident occurred at the engine station, near the terminus, Brighton. A labourer was engaged working on the roof, when he accidentally lost his footing and fell on the rails, and broke several of his ribs. He was also conveyed to the Sussex County Hospital.—*Daily Papers.*

METAL TICKETS FOR RAILWAYS.

To the Editor of the Railway Times.

Sir,—In your Editorial remarks of last week, you assign to Mr. Pulford, Accountant to the Croydon Railway Company, the merit of a new system for the carrying on the traffic with "metal cheques," which it seems he has under consideration.

I beg to inform you that I directed the attention of Mr. Pulford and the Board of Directors, not only to the principle of metal cheques, but also to a machine for registering the issue of the same, a model of which I have had fitted up in this office.

My attention was directed to this in consequence of the great expense incurred by using paper tickets, as well as the objection of the public to their being so easily lost, thereby subjecting them to double payment.

I beg further to add, that I supplied the Croydon Company with 10,000 of the said cheques in September, 1848, which have been partially in use ever since.

I have the honour to be, Sir,
Your obedient servant,
THOMAS RIDDELL,'
Chief Booking Clerk.

Brighton, Croydon, and Dover Joint Station,
London Bridge, 3rd Dec., 1841.

North Midland Railway—The Fall of Earth, &c., at Clay Cross Tunnel.—On Sunday night the higher end of the wall of the deep cutting at the north end of the Clay Cross tunnel fell across the rails of the up-line, and along with a quantity of earth, extending some distance in length from one of the towers at the tunnel entrance. The watchman on duty, who keeps a fire in the tower on the opposite side, on hearing some stones fall, at first thought that some one at the top was throwing them down to plague him; he very soon, however, found out his mistake, and narrowly escaped being buried in the ruins. The fall also carried down with it a portion of the inclined plane by which the coals and coke of the Clay Cross Colliery are forwarded to the North Midland line. Messrs. G. Stephenson, Swanwick, and other gentlemen connected with the line, were soon on the spot, and all the hands that could be got were immediately set to work to clear the line. Mr. Swanwick also encouraged the workmen to exert themselves by sending for a liberal supply of bread cheese and ale, which prevented loss of time by the men going home to refresh themselves, and the labour was vigorously carried on without intermission. The down line of rails was got clear on Monday morning. The falling of the wall was not caused by any defect in the building, but the continued rain which we have had lately had completely saturated the ground, and found its way through drains behind the wall, and completely sapped the foundations. The accident is not at all serious, and will very soon be set right. The railway was only obstructed on one line for a day and a half, and the inclined plane was at work the next day. On Tuesday morning a slight accident occurred at the same place, owing to the carelessness of one of the watchmen, who had neglected to see the points set right, in consequence of which the up-train from Leeds was turned off the up-line, and ran into a train of empty coal waggons, which were standing on a siding by the line. Fortunately the engine-driver had slackened his pace on account of the fallen wall, and, on perceiving his situation, instantly reversed the engine, but the force was still so great as to throw some of the coal waggons off the line, and one gentleman, in a glass carriage, was somewhat bruised by the shock. After a short hindrance the train was set right, and proceeded on its way.—*Derbyshire Paper.*

—o—

Great Western Railway.—There was considerable interruption to the travelling by the Great Western Railway, on Monday last. During the preceding night the goods' train had got off the line, and the engine running a considerable distance had so ploughed into the line that throughout the day, post-carriages, &c., had to be taken off the trucks at Swindon, and conveyed by the turnpike road to Wootton Bassett. The up and down trains met where the obstruction was, and exchanging passengers thus managed with but trifling delay.—*Salisbury Herald*, Nov. 27.

NORTHERN AND EASTERN RAILWAY COMPANY—SPECIAL MEETING.

A SPECIAL Meeting of the Proprietors of the Northern and Eastern Railway Company was held on Thursday, at the London Tavern, Bishopsgate-street, WILLIAM CRAWSHAY, Esq., in the Chair, for the purpose of authorising the raising of money on the credit of the undertaking.

The SECRETARY (William Bourne, Esq.) having read the advertisement calling the meeting,

Mr. CROWDER (Solicitor to the Company) read, at the request of the Chairman, the clause in the Company's Act of 1840, applicable to the purpose of the meeting, from which it appeared that as soon as 360,000*l.* had been paid up out of 720,000*l.*, the total share-capital of the Company, a further sum of 240,000*l.* might be borrowed on mortgage.

The CHAIRMAN said, the terms of the Act had been complied with, upwards of 360,000*l.* having already been paid on shares, so that they were now in a legal position to borrow. It required the sanction of a public meeting of proprietors, and therefore the Directors had prepared a resolution authorising the borrowing of 240,000*l.* or any part of that amount that might be considered expedient.

Mr. BAGSHAW (Director) proposed a resolution to that effect, which he doubted not would receive the sanction of the meeting, as it would for a time obviate the necessity of pressing upon the proprietors for calls.

Mr. ROWE, in seconding the motion, thought it was not quite correct to state that the raising of this money would relieve the shareholders from calls.

The CHAIRMAN said, the proprietors would be relieved from immediate calls, if the debentures were taken up in time, and he should be glad if they were so, for he had received several letters wishing the Directors to deal as lightly as possible in regard to calls.

A PROPRIETOR inquired what the position of parties, who might advance these loans, would be; and what were the future prospects of the railway.

The CHAIRMAN said the lenders would receive 5 per cent. interest. The prospects of the Company were as promising as ever, but this point would be more fully explained at the next general meeting.

Another PROPRIETOR thought the number of shares, and the amount paid on each, did not produce so much as the 360,000*l.* stated by the Chairman to have been paid up on shares.

The CHAIRMAN said, he had paid up his shares in full.

Mr. BAGSHAW expressed himself to the same effect.

The PROPRIETOR said, mention had been made at the last meeting of a debt of 180,000*l.*; was the 240,000*l.* now proposed to be raised to be applied to the payment of that debt?

The CHAIRMAN said, there was no such intention at present. The amount was to be paid for money owing for contracts, and to complete the works between Spelbrook and Broxbourne.

The PROPRIETOR said, a call had been made, payable in January next; was that to be applied to the payment of the debt referred to?

The CHAIRMAN said, if they got the debentures off, they would remit the call, or at least postpone it. Such was the wish of the Directors.

A PROPRIETOR inquired whether it was intended to apply this loan to the construction of the branch lines to Hertford and Ware.

The CHAIRMAN had no hesitation in saying, that if the whole 240,000*l.* were raised by loan, the branch to Ware would be commenced forthwith. (Hear, hear, hear.) They had only two miles of the main line to complete. An arrangement with Mr. Freer, which had been the greatest impediment to the completion of the line, had been entered into, to the entire satisfaction of the Directors.

Mr. VIZARD enquired, upon how many of the shares the calls had been paid.

The CHAIRMAN said, all the Directors had paid up their shares in full.

Mr. ROSKELL (Director) said, the full amount of 50*l.* per share had been paid on 1,200 shares. (Hear, hear, hear.)

The CHAIRMAN said, the Directors had done this, in order to place the Company in a position to borrow. (Hear, hear, hear.)

Mr. VIZARD said, his question had reference to the amount of arrears.

The CHAIRMAN said, the arrears were about 8,000*l.* At the last meeting there were only 52 shares in a state of forfeiture.

In answer to a question, it was stated that the total number of registered shares of 50*l.* each was 9,052.

Mr. ROWE would be glad to know if the Directors were of opinion, that with this 240,000*l.* and the balance still due on shares, the main line to Bishop Stortford, and the branch lines to Hertford and Ware, could be completed without the necessity of raising the further sum of 240,000*l.* authorised by the Company's new Act.

Mr. BIDDER (Engineer), in answer to the Chairman, stated that it would take 720,000*l.* to complete the main line to Bishop Stortford; about 35,000*l.* additional for the branch to Ware; and 20,000*l.* for the Hertford branch.

It was further explained, that the engine power sufficient for the main line would work the branch lines also. The engine power was included in the 720,000*l.* first mentioned.

The CHAIRMAN said, that after the money already raised, and that now proposed to be borrowed, a further sum of 175,000*l.* would be required, which to a certain extent must be procured by calls, as they were not empowered to borrow any more until the whole share capital was paid up.

[Mr. CROWDER, at the request of the Chairman, here read a clause in the new Act, which provided that when the sum of 720,000*l.* had been raised on shares, a further sum not exceeding 240,000*l.*, might be raised on mortgage.]

A PROPRIETOR hoped it would not be necessary to make another application to Parliament.

The CHAIRMAN—Certainly not.

In answer to questions it was explained, that to produce the 175,000*l.* required, a call of from 19*l.* to 20*l.* per share would suffice.

It was further explained, that the Company had in hand an amount of about 26,000*l.*, on account of forfeited shares.

Mr. WROE went into a long calculation, with a view to show that not much further capital would be required to complete the main line and branches. For his own part, he was quite ready to pay up his calls, being convinced that the sooner the undertaking was completed the better would it be for all parties.

The CHAIRMAN hoped the main line would be finished by the 1st of March next. By that time the Directors would bring forward their budget.

Mr. JOHN WILLIAMS had no doubt the debentures would be estimated at their proper value, especially when it was found that the Northern and Eastern line would not cost more than 23,000*l.* per mile, while other metropolitan railways had cost not less than 63,000*l.* (Hear, hear, hear.)

The CHAIRMAN hoped and believed it would be so. In fact, debentures to the amount of 25,000*l.* had been bespoken by private contract.

Mr. SMALE had not doubt, as the line was so cheaply constructed, that if economical principles in working were adhered to, its success would be very great. He was of opinion that great injury had been done to the Company by raising the fares. He heard complaints on that point every day, and in every direction. Complaints had been made of a breach of faith on the part of the Company, and it was even said that 40 gentlemen had agreed never to go by rail again. The number of passengers by coach was as great as ever, and he thought this was not as it ought to be.

The CHAIRMAN said, there was not much point in the argument adduced. He was bound to say, that the late increase of fares was an experiment—an experiment not sanctioned by the whole of the Board, but of course by a majority, otherwise it would not have been introduced. The experiment had been so far successful that it had shown the Eastern Counties' Company that a diminution of the Northern and Eastern traffic would diminish the Eastern Counties' toll. A proposition had been made by the Northern and Eastern Company, that a diminution of the toll, to the extent of 2*d.* on the Ponder's end and other intermediate traffic, should be made by the Eastern Counties' Company. The Eastern Counties' Company had agreed to a reduction of 1*d.* Up to the recent increase, the traffic to Edmonton, Tottenham, and other places, had not compensated for the wear and tear of the engines, and the injury done to the long traffic by the frequent stoppages required for the short trade. He trusted that in the spring the Eastern Counties' Company would join with them in acknowledging the policy of reducing the fares.

Mr. NASH inquired whether there was not a disparity in the charge between Broxbourne and other parts of the line.

Mr. ROSKELL said, the charge by railway from Broxbourne to London was 4*s.* If passengers went from Broxbourne to Waltham, the charge was 1*s.*, and the fare onwards to London was 2*s.* 6*d.*; there was a saving of 6*d.*, but then they could not proceed by the same train. If this difference, however, were not made, the Cambridge traffic would come upon the line at Broxbourne instead of Spelbrook.

Mr. KINNARD (Director) knew that very few took advantage of any saving that might be effected by going to these intermediate stations. The fact was, that the railway charges corresponded to a great extent with the coach fares for the same distance.

The CHAIRMAN said, great attention had been paid to this subject by the Directors, and although some inconsistencies might appear in their list of charges, the whole was reconcileable with sound principles and sound policy.

Mr. NASH had no doubt whatever that such was the case.

Some conversation ensued as to the possibility of saving a portion of the fare by booking for an intermediate distance, and having previously procured a ticket for the remainder of the journey of then proceeding to London; but it was explained that this could not be done, as tickets were only issued on the day on which they were to be used, and then for the next train only.

A PROPRIETOR presumed that the increased fares would have a fair trial.

The CHAIRMAN—Certainly.

The PROPRIETOR was glad to hear objections made to the raising of the fares. It showed that the railway was in request.

The CHAIRMAN thought this not an *im*-pertinent remark. When he heard that parties had it in contemplation to resume their gigs, or to establish omnibuses and stage coaches, he thought it showed the great utility of the railway. (Hear, hear, hear.)

A PROPRIETOR said, there had been a reduction of 1,700 passengers a week in the number conveyed since the fares had been raised, and for the last week he thought the proportion was even larger. This was very unsatisfactory, when it was taken into account that the line was now opened further, and that the Company could now command the long traffic.

The CHAIRMAN said, that although the number of passengers was reduced, the amount received from the traffic was not diminished.

Digitized by Google

A PROPRIETOR complained of the reduction in the number of third-class trains. Formerly the third-class trains from Waltham had averaged about 65 passengers per day, but since the late increase they had not exceeded 15.

The CHAIRMAN said, some of the third-class carriages had been struck off, because gentlemen—parties who ought not to descend to such a course—had availed themselves of them, to the detriment of the second-class carriages.

A PROPRIETOR thought the public ought to be allowed to judge for themselves which class they would patronise.

The CHAIRMAN said, this was very well; but surely it would not be asserted that the Company ought at a loss to start a third-class train, at a time when those for whose accommodation such trains were intended were not likely to use it. (Hear, hear.)

The PROPRIETOR agreed that it was great meanness in those who could afford better accommodation to go in a third class carriage, but at the same time the public generally ought not to be inconvenienced for the sake of a few individuals.

A PROPRIETOR had understood that third class carriages returned more to the Company than any other class.

The CHAIRMAN said he had that morning been in communication with Mr. Hall, of the Eastern Counties' Company, and the opinion of that gentleman was, that the second class was most productive.

The PROPRIETOR knew little of the matter himself, and was only anxious that the notice of the Directors should be called to the subject.

Mr. KINNARD said, however profitable third class trains might in general be, it was not so when, as in the case of the Eastern Counties' Company, a uniform rate of toll was charged, irrespective of class.

The CHAIRMAN said, the Great Western Company had discontinued their third class carriages in connection with their usual passenger trains, and only used them with luggage trains at night. This he thought was a clear proof that the Directors of that Company did not think the cultivation of third class traffic so profitable as had been represented.

Mr. ROSKELL had no doubt that if the cost of constructing a third class carriage joined to the numbers which it would hold were compared with a second class carriage, the balance would be in favour of the former; but then they had to look at the number of passengers which this third class carriage was likely to abstract from the second class. (Hear, hear, hear.) This, he was sure, would more than overbalance the account as in favour of the inferior class.

Mr. WILLIAMS thought it might be inferred from the present discussion that the charges upon the Northern and Eastern Railway were high, whereas they were as low as any other metropolitan line, and much lower than most of them. (Hear, hear, hear.)

The CHAIRMAN thought no railway establishment could be considered complete without two or three chimney sweepers with their soot bags. Whenever he saw an individual respectably dressed getting into a third class carriage he would send a sweep along with him. (Hear, hear, and a laugh.) When he saw so-called gentlemen squatting almost in a fishmonger's basket in a third class train, he thought it highly derogatory to their own station, and detrimental to the interests of the Company. (Hear, hear.)

Mr. F. BRAITHWAITE thought this matter was not looked at in a right light. To him, as an occasional passenger by the railway, it might matter little whether the fare were higher or lower by 6d., but it should be remembered that there were many persons holding situations in London and resident on the line of railway, to whom such an addition was of consequence when chargeable twice a day during every day in the year. These persons, however humble their means, were compelled to keep up a decent appearance, and in the case of the railway, an additional 6d. a day, might probably amount at the end of the year to as much as they paid for the rent of their houses. (Hear, hear, hear.)

The CHAIRMAN said, it might undoubtedly be so; but could these parties have reached London before the construction of the railway at less cost than they now did?

Mr. SMALE could answer for one part of the line. Even now passengers from Edmonton and Tottenham could reach town by omnibus at 1s. each inside, while by the railway, in the second class carriages, the charge was, from Edmonton 1s. 6d., and from Tottenham 1s. 3d.

The CHAIRMAN said, that they had not yet the means of competing for the Edmonton and Tottenham traffic. The principal obstacle was the Eastern Counties' toll.

Mr. SMALE said they could and did enter into such competition previous to the late increase of fares.

Mr. MARSHALL, M. P., (Deputy Chairman) would ask whether the proprietors were of opinion that the Company should carry passengers at a loss, or even whether they should carry them solely for the advantage of the Eastern Counties' Company. (Hear, hear.)

Mr. ROSKELL would add, that it was not worth while to damage the *long* traffic by cultivating the *short* traffic, which, under present circumstances, could not be done without loss, or at least must be done without receiving any profit. (Hear, hear, hear.)

Mr. WILLIAMS suggested that some arrangement might be entered into for the issue of annual, semi-annual, or quarterly, or even monthly tickets—a proportionate reduction being made to the parties taking them who might be looked upon, so to speak, as wholesale customers.

The CHAIRMAN said, the subject of season tickets had not escaped the notice of the Directors, and negociations on that head had been entered into with the Eastern Counties' Company. That Company, however, like the London and Birmingham, set their face against season tickets, but at the same time had, for the sake of experiment, agreed to reduce the toll in respect of them, by 1d. per passenger. For his own part, he did not think that any person would take out a ticket to go four times by this or any other railway, unless he meant to go five times. (Hear, hear, and a laugh.) If the Eastern Counties' Company would but meet this Company with that reduction of toll which he was satisfied would result in their own advantage as well as in the advantage of the Northern and Eastern Company, he had no doubt that in the spring they would be able to give the system of season tickets, and of low fares generally, a fair trial. (Hear, hear.)

Mr. BRAITHWAITE said, the Chairman had admitted that the Eastern Counties' Company had already agreed to a reduction of toll to the extent of 1d. per passenger on a certain portion of the Northern and Eastern traffic; might he ask, what further reduction the Directors desired?

The CHAIRMAN had no hesitation in saying, that they proposed a reduction of 2d. per passenger, namely, reducing the toll from its present rate of 4d. per passenger to 2d., so far at least as the Ponder's End and other short traffic was concerned. If that were done, the Directors of the Northern and Eastern Company were prepared so to reduce their charges as to return a greater gross toll to the Eastern Counties' Company than they at present received from the 4d. rate. (Hear, hear.) It was but fair to state, that the Directors of the Eastern Counties' line were quite sensible that there was still much undeveloped traffic on the Northern and Eastern Railway, and so far as Stratford was concerned, they had already acceeded to a modification of the toll. (Hear, hear.)

Mr. KINNARD said, there was no railway out of the metropolis, near to which there were so many residents as on the Northern and Eastern.

The CHAIRMAN—And no railway similarly circumstanced, upon which so few are carried.

Mr. NASH recommended that the lower classes should be accommodated by putting on more third class trains, even if the Company through their bad bargain with the Eastern Counties' Company should gain nothing by the traffic. It would add to the convenience of the public, whose interests they were bound to consult, and would retain the traffic on the line, which should the negociations with the Eastern Counties' Company for a reduction of toll prove successful, would be retained with profit.

It was explained that even now there were two third class trains daily each way, which it was contended were quite sufficient for the accommodation of the district.

The CHAIRMAN said, the whole question of fares had received, and would continue to receive, the most careful and candid attention of the Directors. As the Board professed to be guided solely by the opinion of its constituents, it would be for the proprietors at the next half-yearly meeting to say whether they were in favour of a reduction of fares. If so the Board would have great pleasure in carrying their wishes into effect, but in the meantime they might perhaps be allowed to carry out the experiment upon which they had entered. (Hear, hear.)

After some further desultory discussion, the motion for raising money by loan was passed unanimously.

The CHAIRMAN having stated that the business of the meeting was at an end, unless any proprietor wished for further information, and no one availing himself of the opportunity,

Mr. SMALE proposed that the cordial thanks of the meeting be given to the Chairman and Board of Directors, for their zeal and attention to the affairs of the Company. (Hear, hear, hear.) The Chairman was always most ready to answer any question that might be put relative to the state or prospects of the undertaking in which they were all embarked. He believed there was no Railway Board (and to his cost he knew something of them) that was so inexpensive as that of the Northern and Eastern Company. (Hear, hear, hear.) The working Committee alone received remuneration, and that to a very trifling amount. (Hear, hear, hear.)

Mr. NASH had very great pleasure in seconding the motion. When he observed the promptitude with which questions were answered by the Northern and Eastern Board,—in a manner so different from that of other Companies,—however the questions might tend, he could have no doubt that the intentions of the Directors were honest and straightforward, and such being the case, he was fully convinced of the success of the undertaking. (Hear, hear, hear.)

The motion was carried by acclamation.

The CHAIRMAN, in returning thanks, remarked that it was the earnest wish of the Directors to consult the wishes and interests of their constituents, as thereby they were consulting their own, being large holders in the undertaking. (Much applause.)

The meeting then separated.

INTENDED APPLICATIONS FOR RAILWAY ACTS.

THE following notices of intended applications to Parliament—usually termed "November Notices"—have appeared in the *London Gazette* during the past month:—

BIRMINGHAM AND DERBY RAILWAY.

For an amended Act, and for power to raise further capital.

BRISTOL AND GLOUCESTER RAILWAY.

For an Act to authorise the Bristol and Gloucester Railway Company to enter into any contract or agreement with the Cheltenham and Great Western Union Railway Company, "for the formation and use of such portion of the Cheltenham and Great Western Union Railway, and of its stations and other works as is or will be situate between the borough of Stroud, in the county of Gloucester, and the termination of the said railway at Cheltenham;

Digitized by Google

and, for the more effectually carrying such objects into effect. * * * * *

Provisions intended to be made to transfer to the Bristol and Gloucester Railway Company, or to grant them a participation in, certain rights or powers now held and enjoyed by the Cheltenham and Great Western Union Railway Company."

GREAT NORTH OF ENGLAND RAILWAY.

For an Act to enable the Company to cede a portion of their line, and perform certain matters, under circumstances referred to under the head of Northern Union Railway.

LONDON AND GREENWICH RAILWAY.

For an Amended Act. Notice is given, "that provision is intended to be made to authorise the formation of a burial ground for the use of the parishes of St. Olave and St. John, Southwark, in lieu of the present burial ground now belonging to such parishes, pursuant to the provisions contained in a previous Act, and to purchase and take the property necessary for such purpose." * * * *

"And notice is further given, that provision is also intended to be made for making and maintaining a communication from the said railway to the River Thames, with a wharf or landing place adjoining thereto, on the south side of the said river; and which said communication, wharf, or landing place, will be situate in the said parish of St. Olave, with power to levy rates and tolls for the use of such communication and wharf, or landing place."

MIDLAND COUNTIES' RAILWAY.

For an Amended Act, in which "provision is intended to be made to repeal, or to explain, alter, and amend so much of the" original Act "as requires the Midland Counties' Railway Company to make and complete a new weir, of Ashler stone, across the river Trent."

NORTHERN UNION OR NEWCASTLE AND DARLINGTON JUNCTION RAILWAY.

For an Act to authorise the construction of the short line, respecting the merits of which a discussion is now going forward in our columns. It is proposed "to commence at or upon a certain proposed deviation line of the Great North of England Railway, in the township of Shincliffe and parish of St. Oswald, in the county of Durham, and to terminate at or upon the line of the Durham Junction Railway, in the township and parish of Houghton-le-Spring, in the said county; together with a certain branch railway."

The notice further proceeds:

"And it is also intended by the Act, to enable the Company to be thereby incorporated, to purchase, or lease, or acquire by agreement with the Great North of England Railway Company, so much of the line of the said Great North of England Railway as at present authorised to be made, as lies between the intended point of junction therewith, and the town of Darlington, in the said county of Durham, and the several rights, powers, and privileges of the said Great North of England Railway Company, in reference thereto; and also to enable the said last-mentioned Company to cede and to transfer the said portion of their line, and their said rights, powers, and privileges to the Company so to be incorporated as aforesaid; and further to enable the said last-mentioned Company to purchase or lease the undertaking called the Durham Junction Railway, and the several rights, powers, and privileges of the Durham Junction Railway Company in reference thereto; and to enable the said last-mentioned Company to sell or lease the said undertaking, and to cede their said powers, rights, and privileges to the Company to be incorporated by the Act so to be applied for.

"And it is further intended, by the Act so to be applied for, to enable the said Great North of England Railway Company, the York and North Midland Railway Company, the North Midland Railway Company, the Manchester and Leeds Railway Company, the Newcastle and Carlisle Railway Company, the Durham Junction Railway Company, the Brandling Junction Railway Company, the Midland Counties' Railway Company, and the Birmingham and Derby Junction Railway Company, or any of them, either jointly or severally, to purchase or rent the line of railway and branch railway, or any portion thereof, to be made by the Company so to be incorporated as aforesaid; and to use and work the same, or otherwise to guarantee to the said last mentioned Company such interest on the outlay requisite for the formation of such railway and branch respectively, as may be agreed on between them and the said Company so to be incorporated as aforesaid; and lastly, to enable the said last mentioned Company, and all or any of the other Companies hereinbefore mentioned, to enter into such mutual arrangements as may be necessary for carrying out the purposes and objects of the Act so to be applied for, and for promoting the beneficial use and working of the undertaking thereby to be authorised."

SOUTH-EASTERN RAILWAY.

For an Act to enable the Company to construct certain approaches to the Reigate Station of the railway.

STANHOPE AND TYNE RAILWAY.

For "an Act to facilitate the carrying into effect arrangements consequent upon the dissolution of a certain Company, or partnership, called the Stanhope and Tyne Railroad Company, established by deed of settlement bearing date the 3rd day of February, 1834, and for the disposal of the property and effects belonging to such Company, and to establish and incorporate a new Company, for the purpose of purchasing, holding, working, and using a certain railway belonging to the said firstly mentioned Company already constructed and in use, leading from certain lime quarries and other works, in the parish of Stanhope, in the county palatine of Durham, to the river Tyne, at the town of South Shields, in the same county, commonly called the Stanhope and Tyne Railroad, or some part or parts thereof."

THAMES HAVEN DOCK AND RAILWAY.

For an Amended Act, "and particularly to extend the respective periods, limited for taking lands, houses, buildings, and other property; and for completing the railway, dock, and other works."

WEST DURHAM RAILWAY.

For an Amended Act, "particularly for the purpose of authorising an extension of the time, granted by the original Act, for the making and completion of the said railway and works, and for explaining and amending the powers granted to the Company to carry the railway over or across any other railway; and for removing doubts, which may exist in reference thereto; and for obtaining more effectual powers for such purposes; and it is also intended to obtain power, for raising a further sum of money for the purposes of the said railway."

THE NORTHERN UNION RAILWAY.

To the Dissentient Shareholders of the North Midland and Midland Counties' Railways.

GENTLEMEN,—An absence from home, coupled with a desire to know the exact result of the several meetings lately held to promote the above undertaking, has hitherto prevented me from obtruding myself upon your notice. Indisposition put it out of my power to be present at the Midland Counties', and in the Report of the North Midland, the observations I addressed to the meeting in strenuous opposition were altogether suppressed. Upon this disingenuousness I shall not comment, because the intention is too obvious to require it. But it is fitting the subject should not be thus blinked, nor the public kept in ignorance of the fact, that many of the shareholders, as well as myself, are wholly opposed to the project. Were I every way disposed to enter into the comparative merits of an eastern and western line, the task is rendered superfluous by the able and luminous review of the question extracted from the *Carlisle Journal* in page 1182 of the *Railway Times*, and to the perusal of which I earnestly request the attention of all who feel interested in the matter. I will however ask, *en passant*, if any of the parties who have projected this miserable scheme—this burlesque—this travestie of a railway—really believe it can ever deter or frustrate the formation of a western line, or materially forward that of an eastern one? Not a bit of it. For what then is this scheme promoted? By whom concocted? Why, by a party who have hitherto broken faith with the public, and whose views of selfishness and duplicity we are, at the sacrifice of consistency and propriety, called on to yield our support. And what is this violation of principle in the present instance? Why, that a majority at a meeting convened for the very purpose by the Directors themselves, have assumed the right of appropriating a portion of my property to purposes foreign to the undertaking in which we are engaged, without my concurrence or consent asked and obtained. Does the protective shield of the law less vigilantly guard one species of property than another? Would these meetings have presumed to extract additional capital from the dissentients, for the purpose of supporting this abortion of a railway? I trow not. Then, how assume the right of withholding from me a portion of my annual income for such an end. But the project, say Mr. Hudson and his supporters, is fraught with such transcendant advantages as to be a full equivalent for such an innovation on my rights. But suppose I am of a contrary opinion, and cannot, with all consideration given to the subject, arrive at a similar conclusion—am I then to be dragged head and shoulders by a tyrant majority, into a speculation which I consider not only erroneous in principle, but fallacious in calculation? Oh yes, says Mr. Hudson, individual advantage or convenience, must yield to the public benefit. Let us test this declaration out of Mr. Hudson's own mouth—Mr. H. who had the modesty to declare (when I doubted his success at the Midland Counties',) that if the measure was not carried, he would divert the whole of the London traffic from the line, and convey it by the Derby and Birmingham;—thus in effect proclaiming that the public convenience was a mere clap-trap to cover his own ends. But it is rejoined to all my objections on this invasion of my property, that the guarantee we are called on to sanction is merely nominal. Nominal! Then why seek to impose any portion of it upon lines so remotely connected with the project as the North Midland and Midland Counties'? Why do not the proprietary of the lines which will be surely benefited by the measure, take upon them the *nominal* responsibility? Simply because they know it may eventually prove not a shadow, but a serious and stern reality. The very attempt thus to palm it upon others, goes to show what they themselves think, may by possibility become of Mr. Stephenson's estimate, which may be correct enough for ought that I know; but I tell him, and all whom it may concern, very honestly, without any impeachment of his veracity notwithstanding, that my faith shall be pinned to what he shall prove, not to what he shall say. I cannot forget that his estimate for the North Midland, fully complete and in operation, was one million and a quarter, which, under his auspices, has not been merely doubled, but trebled. And yet in the face of such a fact, we are coolly called on for an extension of gullibility in proportion to the extension of this notable scheme, carrying on its face all the features of a rank job, the primary object being to extricate from a dilemma, and to hold harmless and indemnified a party who have adroitly hitherto avoided their public pledge to continue the main line from Darlington to Newcastle in conformity with their Act of Parliament. I am aware it may be said, that although my objection to the measure, founded upon its illegality for want of unanimity, may hold good, yet that my opinion as to its probable failure in point of profit is altogether erroneous. Being then ready at all times to assign a reason for the faith that is in me, I shall briefly touch upon a few points which influence my convictions, that it can never be worth the slightest risk on the part of the North Midland and Midland Counties', thus to travel beyond the boundary of the two undertakings, in quest of any real or imaginary advantage connected with so distant and paltry a speculation, as the one in question.

It is conceded by every one, that railway traffic

Digitized by Google

has an invariable tendency to increase, and as it will require at least three years from this time to complete and bring this new line into profitable or full operation, it is more than probable that the traffic likely to benefit our two lines will have reached its full developement, or so nearly so that any excess created by this line can be of very little import; and this opinion I ground upon the fact, that steam navigation must ever seriously compete with the northern traffic either east or west, were the lines completed to Edinburgh or Glasgow; but carried only as far as Newcastle, can, while such numbers value their money more than their time, be very minute indeed. Mr. Hudson, to be sure, maintains that a large portion of the western Scotch traffic will be diverted eastward by the Carlisle and Newcastle route to our certain advantage. If this vast increase ensues to us, how comes it pray, that the North Midland guarantee amounts to 6,000*l.* per annum, while that of the Carlisle and Newcastle over which it must mainly pass, and which is four-fifths of the length contributes only 500*l.*? This discrepancy, if Mr. Hudson's calculation be correct, is monstrous; and if it be not, it goes to establish my position.

At the North Midland meeting I pointed attention to the fact that the whole of the through as well as local traffic upon the northern lines to the junction at Normanton, not connected with London, and which in spite of Mr. Hudson's statistics I maintain must form the most considerable portion of what the new line will create, cannot contribute to the profit of our lines, and must therefore be dismissed from the computation.

It would swell this article beyond due bounds to dwell upon the various objections that present themselves to my mind. I am told that whatever my own convictions may be, I and other dissentients who form a small minority, should yield in deference to the judgment of those who have given their support to the measure after full and mature consideration. What our numbers may be I cannot tell. It is sufficient that as dissentients we have an existence, and it puzzles my powers of comprehension to make out why I am to forego my opposition in deference to the class of *gyrovettes*—or in plain English, the weathercock tribe, who at a public meeting one week pass an unanimous vote in reprobation of the measure, and with no new lights or additional information, send up their proxies, or attend in person at another the next, in order to support it.

I have now dilated upon this subject under the twofold aspect of utility and legality, and demonstrated that, whatever it may be as a profitable speculation, it is utterly untenable in a legal point of view, without the sanction of every proprietor in both lines, and that I for one, whatever may be the case with others, will not submit thus to leave my property at the mercy of others. We all know that precedent is quoted in support of the most nefarious measures. Once establish it in this case and where shall we stop? Let me not be told that a body of shareholders would never sanction, or give a guarantee in support of the eastern line into Scotland, or in western one either, or yield their support to establish a line of steam boats—or any other wild project which may present itself, under the guise of advantage to their line. The experience I have had of shareholders as a body is not calculated to fill my mind with any very exalted notions of their sagacity. Whatever the *individuals* may be of whom it may be composed, they will collectively do at times anything and everything but what they ought, and the conduct of which I complain is a case in point.

Having thus expressed my intention to oppose this invasion of my rights, I invite the co-operation of all who coincide with me in opinion. It is my present purpose to come forward at the first opportunity with a motion to set aside this hasty and injudicious decision to support a project with which we in reality have no right to interfere; and should this appeal fail, to apply to Parliament in the last resort. I have no hostility to the project if promoted solely by those whom it alone concerns, but I wish all such to confine themselves to their own legitimate boundaries, and not to obtrude themselves upon me as trespassers.

Yours, very faithfully,

G. G. WATTS.

Langton Grange, Darlington, Nov. 21, 1841.

[Captain Watts must excuse the somewhat free use we have made of our pen in striking out passages and epithets very unnecessarily offensive to individuals.—Ed. R. T.]

THE NORTHERN UNION RAILWAY — RAILWAY THROUGH LINCOLNSHIRE.

To the Editor of the Railway Times.

Sir,—Are the North Midland and Midland Counties Companies aware that the parties connected with the Lincolnshire Railway are viewing with a most complaisant satisfaction the exertions made and money expended by the above Companies towards getting the Scotch line by the east coast, and that the moment a probability of this being accomplished appears, that they will bring their and already surveyed (nay, I may say, already levelled) from Cambridge through Peterborough and Lincoln, crossing the Hull line at Selby to York?

I am aware that the York Company, with a slyness which is quite characteristic of that part of the county, imagine that they can induce the promoters of the new line to run along theirs from Selby, and still be able, as far as they are concerned, to retain all the northern traffic from Selby to York; but what becomes of the unfortunate North Midland and Midland Counties (who are at present fighting along with the York line this losing battle) should this new line come forward? Why, they are deprived at "one fell swoop" of all their northern traffic.

Captain Huish at Carlisle adverted to the circumstance of the London and Birmingham being deprived of the traffic between Rugby and Birmingham should the line be carried by Newcastle into Scotland, but he might have gone further and exhibited the London and Birmingham and Grand Junction deprived like the North Midland, of *all* their northern or Scotch traffic.

That the Lincolnshire line will proceed whether the north line is carried by the east or otherwise, there is no doubt; but should that occur, the formation of the line becomes immediate, and few lines would present a more promising front. Here nature appears to have formed the county for railway purposes—no works of an expensive kind, no tunnelling or cutting here present themselves, the experience also of the extravagance into which other lines have fallen would save this Company from many *untoward* expenses. I need hardly add that the enormous engineering disbursements upon a great many of our most promising lines is the cause of their depreciated value.

Yours, &c.,

AN OLD SUBSCRIBER.

Manchester, Nov. 22, 1841.

THE NORTHERN UNION RAILWAY.

The Durham Junction Railway Company held a special meeting on Tuesday last, at their office, in the Blue Anchor Chare, Quayside, Newcastle, when it was unanimously resolved to unite with the Brandling Junction, Newcastle and Carlisle, Great North of England, and other Railway Companies, in taking a lease of the railway proposed to be made from the Great North of England Railway at Darlington, to the Durham Junction Railway—the proprietors of the last-named line guaranteeing the payment of 750*l.* a year, as their quota of the sum required to pay 6 per cent. per annum to the shareholders in the new railway, for the period of ten years from its opening. It was also ordered that circulars be issued to the proprietors, requesting to be informed whether they would take shares in the new line, the Company having the option of subscribing for shares in proportion to the amount of their guarantee.—*Gateshead Observer* of this day.

LIVERPOOL AND MANCHESTER AND MANCHESTER AND LEEDS RAILWAYS.*

To the Editor of the Railway Times.

Sir,—In the two last numbers of your widely circulated journal, you have indulged in a severity of observation, and one one-sided criticism, on the proceedings of the Liverpool and Manchester Directors, by no means characterised by your usual impartiality and candour. I allude to your remarks on the non-execution of the Junction Railway through the town of Salford, to connect the Manchester and Leeds with the Liverpool and Manchester line.

As a considerable proprietor in this latter Company, I crave your permission to offer briefly what appears to me to be a satisfactory reply to the observations which, in your Editorial capacity, you have thought proper to make. In your paper of the 20th November you say, "We have heard it urged that the project is not likely to turn out advantageously as a pecuniary investment, and that the unwillingness of the Liverpool Directors to commit their constituents to the chance of loss, is the *sole* cause of their present apathy." I have heard that such is one of the causes, and as a shareholder I approve the caution of the Directors in hesitating to commit their constituents to a large present outlay, without good security for an adequate return—and with the chance of ultimate loss. But you go on to remark, "If it be so, it should be openly and broadly stated, and moreover it should be fully explained how it happened that the alleged unprofitableness was not discovered sooner."

To this I will reply, that it *has been openly and broadly stated*, and it *has been fully explained* how the alleged unprofitableness was not discovered sooner—and that this was done nearly two years ago in the Directors' half-yearly Report, dated January, 1840. I have the Report now lying before me, and I find it therein openly and broadly stated "that it appeared to the Directors, after the most careful investigation, that the traffic between Liverpool and Leeds *does not amount to one-half the gross tonnage* at which it was *estimated*, in the traffic statements received from the Manchester and Leeds Railway Company, procured, the Directors believe, with great labour and care, but from sources and by means unavoidably liable to error."

Here then, to the mind of a shareholder, is ample ground for delay; and if it be inquired, why then was the Act of Parliament obtained, with so insufficient a traffic case? I admit that the question is a proper one; but the answer is "straightforward" and satisfactory. Being solicited by the Manchester and Leeds Company towards the close of 1838, to construct a portion of a connecting line to unite their respective railways, for which the Parliamentary notices had to be *immediately* given, the Directors consented—but it was with the clear understanding, and this was distinctly stated to the proprietors at large, that the Company in consenting to incur the expense of a survey and an Act of Parliament, upon imperfect information, rather than *miss the session*, and lose a year, where an important object was in question, the proprietors were to be in no ways pledged *beyond* such proceedings, unless a more mature inquiry and investigation should fully warrant ulterior measures.

Accordingly, in the spring of 1839, the Liverpool and Manchester Directors applied to Parliament for leave to make the junction line. But while before a Committee of the House of Commons, many difficulties had to be encountered—objectionable clauses were proposed by the Salford authorities, and a complicated and not very satisfactory arrangement as to tolls had to be settled with the Manchester, Bolton and Bury Company. These latter considerations, added, it may be, to the undecided character of their traffic case, made it imperative upon those who had the management of the Bill, either to throw up the Bill altogether, or to secure to the proprietors the *option* of prosecuting or abandoning the undertaking, when they should have more completely investigated all the

* This letter is noticed in our leading columns.—Ed. R. T.

Digitized by Google

circumstances, and considered all the bearings of the case.

As a shareholder, I approve of the Directors not throwing up the Bill altogether, having incurred nine-tenths of the expenses belonging to it; and further, I think they were in duty bound to their constituents to secure, if possible, the option above referred to, by claiming powers for the Company to construct the said junction line, "if they shall think proper."

To me this appears a sufficient explanation of this optional clause, which has occasioned so much remark, which you are pleased to consider as evidence of a "cunning contrivance to evade legal liability," and as indicative of "*mala fides*," from the commencement of the undertaking, so different does the same proceeding appear, when contemplated from different points of view.

In your paper of Saturday last, you observe that the Manchester and Leeds Company "are ready and anxious to carry out *their* part of the arrangement." In reply to this observation, allow me to refer you to the following passage from the Report of the Manchester and Leeds Company, dated 16th September last:—"The continued indisposition of the Directors of the Liverpool and Manchester Railway Company to proceed with the connection line, *together with* the unfavourable state of the times, and *the serious inconvenience* which would be caused to the proprietors by calling upon them for any large amount of capital under the great depression which has taken place during the last half year in the market value of the stock of this Company, *have combined* to deter the Directors from submitting to the shareholders, on the present occasion, any proposition for the immediate commencement of the works upon the Extension line to Hunt's Bank." In this passage, the same ground for *pause* is advanced by the Manchester and Leeds Company as was stated by the Liverpool and Manchester Company to be *one* of their grounds for delay; and I am unable to discern in it that "readiness and anxiety" to proceed with their part of the arrangement, to which you refer.

With regard to your observations about some sinister influence at the Liverpool and Manchester Board, I can only attribute them to a total misapprehension of the character of the men of whom you speak. The proprietors in this neighbourhood, who are in daily communication with the Directors, I believe to be perfectly easy on that score, being confident that in the whole course of the proceeding upon which you have thought proper to comment, they have not only acted with judgment and discretion, as regards the immediate object under discussion, but that in so doing they have been influenced by the single and honourable motive of promoting, as far as in them lay, the best interests of the concern intrusted to their management.

I am, Sir, your obedient servant,

A LIVERPOOL PROPRIETOR.

OPENING OF THE GOSPORT BRANCH OF THE SOUTH-WESTERN RAILWAY.

(From the *Hampshire Telegraph* of Saturday, Nov. 27.)

It having been announced that this important branch would be opened to-day, the terminus of the railway at Gosport, at a quarter before two o'clock, began to fill with visitors to witness the arrival of the Directors, and at twenty minutes past two they entered the station in four first-class carriages, drawn by the *Queen* engine, and were received with loud cheers, and the band of the 73rd regiment playing "See the conquering hero comes." The train left London at ten o'clock, with the Directors, Sir Frederick Smith, Mr. Locke, the engineer, Mr. Tite, the architect, &c., who examined the line at various stations, and particularly the tunnel at Fareham, where they alighted and inspected the work minutely; and we are informed the result is satisfactory to them and the Government Inspector. At twenty-five minutes to three, the Directors and other gentlemen took their seats, and a procession of carriages and omnibuses being formed, with a band of music at the head, passed through Gosport, over the Floating Bridge, and then through Portsmouth, &c., returning to Gosport to dine with a large party at the Star Hotel, where a sumptuous dinner was prepared at five o'clock, to which they, as well as the friends who accompanied them in the train, and H. Compton, Esq., one of the members for this division of the county, Major-General Sir Hercules Pakenham, and other distinguished authorities, were invited by a large number of the principal inhabitants of these towns. The room was handsomely decorated for the occasion, and about 140 persons were present at the dinner. The band of the 73rd regiment occupying the orchestra, playing appropriate tunes at each toast. Dr. Quarrier presided, and was supported on his right by Sir John Easthope, Bart., one of the Directors of the Company, Major-General Sir H. Pakenham, the Venerable Archdeacon Wilberforce, Mr. Smith, Mr. Humphreys, Mr. Boothby, and A. Morgan, Esq., Secretary of the Company, Mr. Reid, R. Cruickshank, Esq., &c.; and on his left by Mr. Chaplin, the Vice-Chairman of the Directors, H. C. Compton, Esq., M. P., Captain Sir Thomas Fellowes, C. B., Captain Sir Richard Grant, Colonel Henderson, Mr. Drew, and Mr. King, Southampton Directors; W. Grant, Esq., H. St. John Medley, Esq., John Garrett, Esq., &c. &c. Mr. Locke, the engineer, Mr. Tite, the architect, and Mr. Brassey, the contractor, were also present.

On the removal of the cloth, the Chairman gave the usual loyal toasts, which were drank with three times three. "The Bishop and Clergy of the Diocese," followed.

Archdeacon Wilberforce returned thanks in an eloquent speech, and in congratulating the Directors on the accomplishment of this branch of railway, as a great undertaking, suggested to them the consideration whether all traffic upon the railway on Sundays might not be suspended. He took this opportunity, now the Directors were present, to press this subject on their minds. They had, to their great credit, determined to suspend the conveyance on the Sabbath-day of all merchandize, and he trusted that would be followed by a further restriction, by suspending all traffic whatever.

The Chairman then gave the "Navy and Army."

Rear-Admiral M'Kinley returned thanks for the former, and Sir Hercules Pakenham for the latter.

Rear-Admiral M'Kinley then proposed the "Lord Lieutenant and Magistrates for the county."

H. Compton, Esq., M. P., returned thanks.

The Chairman said, the next toast he should propose was one the Company, he was sure, would cordially accept, for it was mixed up with the enjoyment they had to-day received. He was sure they would drink to the "Health of the Directors and Proprietors of the Railway," and join with him in most hearty thanks to them for bringing the branch to Gosport. The toast having been drank with loud cheers,

Mr. Chaplin, the Vice-Chairman of the Directors, in acknowledging this compliment, said, this was truly a most glorious day for the Directors and proprietors, whether they looked to the kind manner in which they had been met on their arrival—the brilliant entertainment that had been afforded them—the attendance on the occasion of so many distinguished persons and wealthy inhabitants of these towns, or the inspiring toast that had been given and received in so cordial a manner. Such a gratifying demonstration was quite enough to obliterate from their minds all the trouble they had encountered in accomplishing this. (Cheers.) With regard to the venerable Archdeacon's suggestion as to suspending all traffic on the railway on Sundays, he would assure the reverend gentleman that the subject should have the consideration of the Directors. Their only policy was that of affording the greatest accommodation, and it was only on this ground they could expect to be supported. If any gentleman wished to suggest any proposition upon the subject of the time of departure of the trains, or of the price, &c., the Directors would be proud to receive it at all times. (Cheers.) Mr. Chaplin then proceeded to say, that the main line of railway had now been open a year and a half, and had exceeded the expectations of the Directors, and the trade was daily increasing. If the parent line was paying a revenue, there could be no doubt that this branch of it must do so, and benefit these towns. To Sir John Easthope the credit was due for proposing this scheme (the Gosport branch); he brought forth the plan as well as the money, and it is now at their door. (Cries of "Hear, hear.") The Engineer of the Company had completed his work—he was the personal friend of most of the Directors, and had promised to remain with them to watch over their interests. He begged, in the name of the Directors and proprietors, to return his thanks for the honour the Company had done them.

Sir John Easthope then briefly addressed the company, to express his gratification at the accomplishment of this branch, and to join in thanks for the kind manner in which the Directors had been received.

The Chairman then gave, "The health of the Commanding Officer of the District, Major-General the Hon. Sir Hercules Pakenham."—(Cheers.)

Sir Hercules Pakenham, after acknowledging this toast, said he felt a great interest in the success of this great undertaking, and to show the confidence the Government reposed in it, he had that day ordered a large detachment of troops to move from Winchester to this town on the branch on the first day it opened, on Monday next. (Cheers.) A large body would then come down by it, not for any light occasion, but to embark for China, there to uphold the honour of this nation.

Several other toasts were given and the meeting broke up at a late hour.

CROYDON RAILWAY.—NOTICE.—The continuance of wet weather having prevented the removal of the Slips on this Railway, near New-cross, so soon as was expected, the WINTER TRAINS will NOT commence running on this day, as announced. The TRAINS will continue to RUN, as follows, until further notice:—

DOWN TRAINS FROM TOOLEY-STREET.

Morning..... 5 min. past 9, 10, and 12 o'clock,
Afternoon ..... 20 min. past 2, 4, 5, and 6.

UP TRAINS FROM CROYDON.

Morning..... 5 min. past 8. 9, 10, and 12 o'clock.
Afternoon ..... 20 min. past 2, 4, 5, and 6.

SUNDAY TRAINS.

DOWN TRAINS FROM TOOLEY-STREET.

Morning..... 5 min. past 9 and 10 o'clock.
Afternoon ..... 20 min past 2, 3, 4, 5, 7, and 8.

UP TRAINS FROM CROYDON.

Morning..... 5 min. after 9 and 10 o'clock.
Afternoon ..... 20 min. after 2, 3, 4, 5, 7, and 8.

By Order,
R. S. YOUNG, Secretary.

PEOPLE'S EDITION OF SIR WALTER SCOTT'S NOVELS.

On Saturday, 1st January, 1842, and to be continued each Saturday till the whole is completed, No. 1, price Twopence, containing One Sheet Royal Octavo, double columns, of

WAVERLEY; OR, 'TIS SIXTY YEARS SINCE With all the Author's Introductions and Notes; to be immediately followed by Guy Mannering, The Antiquary, and all the other novels and romances of Sir Walter Scott.

The Proprietors are anxious to meet the wishes of many intelligent correspondents among the Working Classes, who represent that, notwithstanding the great circulation and unparalleled celebrity of

THE WAVERLEY NOVELS,

thousands upon thousands of our industrious countrymen have yet to form acquaintance with Baron Bradwardines and Fergus M'Ivors, the Meg Merilees and Dominie Sampsons, the Edie Ochiltrees, Old Mortalities, Die Vernons, Rob Roys, Jeanie Deanses, and numberless other immortal creations of the Prince of Novelists. The Edition now announced will, it is hoped, be allowed to put these marvellous performances within the reach of the masses.

It is expected that the entire Novels will comprise about 260 sheets; and, besides the Weekly Issue, a Monthly stitched Part, *price Ninepence*, will be delivered with the Magazines.

Robert Cadell, Edinburgh; Houlston and Stoneman, London.

GOSPORT AND PORTSMOUTH BRANCH RAILWAY.—The weather continuing so unusually unfavourable, as to render the state of the works on the line uncertain and doubtful, several slips in the earth-work having taken place, the Directors, with a view to avoid the possibility of accident, have determined to discontinue running trains upon this branch until further notice.

By order of the Directors,
ALFRED MORGAN, Secretary.

Nine Elms, Vauxhall, 3rd Dec., 1841.

NATIONAL LOAN FUND ASSURANCE SOCIETY, for granting Life Assurances, Deferred Annuities, &c. &c., 26, Cornhill.—Capital, £500,000.—Empowered by Special Act of Parliament.

DIRECTORS.

T. Lamie Murray, Esq., Chairman.

John Elliotson, M.D., F.R.S.	John Rawson, Esq.
John Griffith Frith, Esq.	John Riddle Stodart, Esq.
R. Gordon, Esq.	Clement Tabor, Esq.
George Lungley, Esq.	Joseph Thompson, Esq.

Auditors—Professor Wheatstone, F. R. S.; Professor Graves, A.M., F.R.S.
Actuary—W. S. B. Woolhouse, Esq., F.R.A.S.
Physician—J. Elliotson, M.D., F.R.S.
Surgeon—E. S. Symes, Esq.
Solicitors—Messrs. Sweet, Sutton, Ewens, and Ommanney, 6, Basinghall-street.
Bankers—Messrs. Glyn, Hallifax. Mills and Co.

LIFE ASSURANCE.

Advantages.—Perfect security from a large paid up Capital and accumulations——Equitable Rates—Power to borrow two-thirds Premiums paid, without expense or forfeiture—and Profits *annually* divided.

N. B. Policies for short periods, at lower rates than at any other Office, with option of continuance for Life, at the usual rates.

DEFERRED ANNUITIES.

The best and most varied provision for after life hitherto offered,—*21.* 12s. per annum (1s. a week,) at 20, will at 65, give the Policy-holder the choice of an Annuity of *47l.* 16s. 6d. or *349l.* 11s. cash, or Policy at death of *466l.* Similar advantages at 50, 55, and 60,—two-thirds payments lent at any time, and two-thirds returned in case of premature death.

The detailed Plans and last Annual Report to be had at the Office, at any of its Branches, or, on application, will be forwarded post-free.

F. FERGUSON CAMROUX, Secretary.

TO ENGINEERS, FOUNDERS, MACHINE-MAKERS, STEAM-SHIP BUILDERS, &c.—FOR SALE, an extensive and Valuable MANUFACTORY for the construction of Steam-engines, Boilers, General Machinery, Chain Cables, Anchors, Foundry Goods, Forged Goods, and General Blacksmith Work, well known as the FOOTDEE IRON-WORKS, Aberdeen.

These Works occupy nearly four acres of freehold ground, at a very moderate feu duty or ground rent, and are situated at Footdee, in the populous city of Aberdeen, within 500 yards of the Harbour Quay.

The Engines, Boilers, and Machinery of several of the large class of steam-ships have been wholly constructed and fitted up at these Works, which afford unusual facilities to parties engaged in that branch of business, and such as exist in few other establishments in the United Kingdom. The foreign and coasting trade of the port of Aberdeen is very extensive, and has rapidly increased for several years past, whilst the steam trade to London, Hull, Leith, Inverness, Orkney, Shetland, &c., is carried on to a very considerable extent.

Immediately adjoining the Iron-works, and belonging to the same Proprietors, is an extensive rope, sail, and felt work, which will also be disposed of, either with or without the Iron-work, as may be agreed upon.

To a party desirous of engaging in the building and equipping of steam or sailing vessels, the construction and repairing of Steam-engines, Sugar mills, and General Machinery, these Works, from their local situation and peculiar facilities within themselves, will be found particularly well adapted.

The whole of the Buildings are substantial, commodious, and suitable for the respective trades carried on within them. The machinery is of the first class, and in excellent order, the whole having been erected at considerable expense.

In the mean time, the work will continue to be carried on in all its branches, and orders executed as usual.

A plan and specification of the premises have been printed, which may, with all particulars and further information upon the subject, be had upon application to Messrs. Johnston and Farquhar, Solicitors, London; John Jopp, Esq., W. S., Edinburgh; or Messrs. Jopp and Shand, Advocates, Aberdeen, in whose hands the title deeds of the property are.

TO EXPORTERS, RAILWAY CONTRACTORS, ENGINEERS, SHIP BUILDERS, &c. &c.—The Patent Rolling and Compressing Iron Company having their works in full operation are ready to execute orders to any extent, for the undermentioned articles:—

Boiler and Tank Rivets of every description.

Bolts for Machinery, Architectural, Agricultural, Ship and Coach Building, Gas Water, and other works, &c.

Railway Pins, Hooks, Screws, &c.

Particulars may be obtained, and specimens seen, upon application to the Secretary, at the Company's Works, Upper Ordnance Wharf, Rotherhithe.

By order of the Board,
JNO. ATLEE, Secretary.

LONDON, EDINBURGH, AND DUBLIN GUARANTEED MUTUAL and PROPRIETARY LIFE ASSURANCE COMPANY, 3, Charlotte-row, Mansion House; St. Andrew's-street, Edinburgh; Fleet-street, Dublin.

DIRECTORS.

Alexander Anderson, Esq.	John Johnson, Esq., Ald.
John Atkins, Esq.	Kennett Kinsford. Esq.
James Bidden, Esq.	John M'Guffie, Esq.
Captain F. Brandreth	John Maclean Lee, Esq.
James Hartley, Esq.	J. Marmaduke Rosseter, Esq.
Vice-Admiral Robert Honyman	Alexander Robertson, Esq., Managing Director.
Benjamin Ifill, Esq.	

Solicitors—Messrs. Palmer, France, and Palmer.
Secretary—F. Edgell, Esq.

Important improvements have been introduced into Life Assurance practice by this Company.

The Policies are indefeasible and indisputable, unless they have been obtained by fraudulent misrepresentation.

The Board of Directors satisfy themselves upon the various questions proposed before they enter into contracts of Assurance; and frame their Policies in such terms as to preclude all future questions as to their validity, and thus render them indisputable and negotiable documents of future debt against the Company.

Parties may be assured either upon the participating or non-participating plan; the assured are relieved of all responsibility, and the participating class is entitled to the whole of the profits upon that branch of the business.

Table to assure £100, with addition of Profits.

Age 25.	Age 35.	Age 40.	Age 45.	Age 50.	Age 55.
£2 2 7	£2 15 10	£3 5 0	£3 15 5	£4 10 7	£5 18 8

Persons interested in the Lives of Nominees or Debtors may, for a trifling extra Premium, be relieved from the risk of their Policies being forfeited by the parties going to foreign countries.

One-half of the Premiums may remain unpaid for seven years, affording a greater facility for loan transactions and family provisions than any other plan which has been suggested.

Credit Table to assure £100, payable at death.

Age 20.	Age 25.	Age 30.	Age 40.	Age 45.	Age 50.
£0 18 0	£1 0 7	£1 3 7	£1 11 5	£1 16 6	£2 3 0

The usual Commission allowed to Solicitors and Agents; and Medical Gentlemen are in all cases remunerated for their reports.

MUTUAL LIFE ASSURANCE.

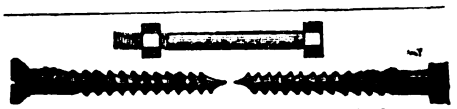
SCOTTISH WIDOWS' FUND SOCIETY.—Instituted A. D. 1815.—Head Office, Edinburgh, 5, St. Andrew-square.

The Oldest and most Extensive Life Office in Scotland.

Accumulated Fund exceeding
ONE MILLION AND FORTY THOUSAND POUNDS.

Annual Revenue exceeds
ONE HUNDRED AND EIGHTY THOUSAND POUNDS.

Bonus Additions, varying from 11 to 80 per cent. on the sum assured, according to the date of assurance.



The whole profits belong to the Assured.

Assurances effected previous to 31st December, are entitled to participate in the Profits of the current year.

JOHN MACKENZIE, Manager.

Edinburgh, September, 1841.

HUGH Mc KEAN, 7, Pall Mall,
Agent for London.

T. H. RYLAND AND CO., OZELL'S STREET, BROAD-STREET, BIRMINGHAM, Patentees and Manufacturers of Wood Screws and Screw Bolts, for Railways, &c.

The quality of these Screws is acknowledged to be superior to that of any other maker, and T. H. R. and Co. have, by their improved means of manufacture, so greatly reduced the price, that they will be found not to exceed in cost the common driving pin; and that they are more efficient for the purpose will be obvious, from the fact that one of these screws will require a force equal to from 2 to 4 tons weight, to tear it from the wood.

T. H. R. & Co. have to dispose of

A 12-horse high-pressure engine, metallic piston, with or without boiler.

Two boilers, quite new, 18 feet by 4 feet.

STEAM CARRIAGE AND WAGGON COMPANY. Offices 18, Moorgate Street, City. The Directors beg to announce that in pursuance of a resolution passed at a General Meeting of Shareholders held at the Freemason's Tavern, on the 11th November, they are ready to receive proposals from persons willing to supply Steam Carriages for the conveyance of Goods or Passengers on Turnpike Roads. Parties proposing to supply carriages must produce one in a state fit for work to be submitted to such test as the Directors may require, and if approved, arrangements for the construction of several for the use of the Company will be immediately made. All Communications should be addressed as above.

BY ORDER OF THE BOARD.

TO CAPITALISTS, ENGINEERS, MILLWRIGHTS, FOUNDERS, SMITHS, and OTHERS.—To be disposed of, an old established Engineers', Millwrights', and Founders' Concern (the present Proprietors retiring from the Manufacturing Department), situated in London; the premises and plant have been erected during the last 25 years, at a considerable cost; but from the above cause will be disposed of upon extremely favourable terms. The premises will be let on lease, and the machinery and tools disposed of at a valuation.

Apply for particulars to John Evans, Esq., 51, Lincoln's-Inn Fields.

THE STEAM-ENGINE, STEAM-NAVIGATION AND RAILWAYS.

One Volume, 8vo., illustrated with very numerous Engravings on Wood. Price 12s. cloth. The Seventh Edition, almost re-written, of

THE STEAM-ENGINE, Explained and Illustrated, with an Account of its Invention and progressive Improvement (including a Life of Watt), and its application to Navigation and Railways. By DIONYSIUS LARDNER, D. C. L.

Printed for TAYLOR and WALTON, 28, Upper Gower-street.

Just published, 7th edition, price 3s., and sent free on receipt of a Postoffice order, for 3s. 6d.

MANHOOD: the Causes of its Premature Decline, with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects of excessive indulgence, solitary habits, or infection followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases, &c.:

By J. L. CURTIS and Co., Consulting Surgeons, London.

SEVENTH EDITION.—Published by the Authors, and sold by Balliere, Medical Bookseller to the Royal College of Surgeons, 219, Regent-street; Strange, 21, Paternoster-row, London; Guest, Birmingham; T. Sowler, No. 4, St. Ann's square, Manchester; G. Philp, South Castle-street, Liverpool; Machen and Co., 8, D'Olier street, Dublin; Duncan, 114, High-street, Edinburgh; and to be had of all Booksellers.

The following are a few of the numerous testimonials this popular work has received, and which the limits of an advertisement will only allow of being published:—

Messrs. Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it, render it invaluable.—*Magnet.*

The perusal of Messrs. Curtis's book, entitled MANHOOD, has really astonished us by developing a series of maladies, the never failing consequence of the vicious habit of which it treats. The clear connexion pointed out between the assigned cause and the effects is perceptible to every capacity. We strongly recommend the work.—*Age.*

We recommend the work, entitled MANHOOD, &c., to the careful perusal of persons of all classes. The moral as well as physical advantages sure to result from such perusal, will be most readily recognised and felt by those who stand most in need of them.—*Statesman.*

Messrs. Curtis and Company are to be consulted daily at their residence, No. 7, Frith-street, Soho-square, London.

Country Patients are requested to be as minute as possible in the detail of their cases. As to the duration of the complaint, the symptoms, age, general habits of living, and occupation in life of the party; the communication must be accompanied by the usual consultation fee of £1, without which no notice whatever can be taken of their application, and in all cases the most inviolable secrecy may be relied on.

PUBLIC SALE OF VALUABLE ENGINEERS TOOLS AND PATTERNS, SMITHY TOOLS, &c &c.—To be Sold by Auction, at the Works, West-street Tradeston, Glasgow, on Wednesday, the 8th December, and following day, the whole valuable Tools belonging to Mr. A. Myine, Engineer, Millwright, and Tool-maker, who is retiring from that business, including a superior Self-acting Planing Machine, 48 feet long by 4 feet wide; three smaller ditto; eight Self acting Lathes of various sizes; Hand-lathes with Iron-beds; splendid Vertical Slotting and Drilling Machine; Nut-cutting Machine; Screwing Machine; Portable Crane and Purchase Blocks; Smiths' Vices, Anvils, and Tools of all sorts; Millwright's Benches, &c. &c. A very valuable set of Patterns for Steam-engines, Planing Machines, Lathes, Spur and Bevel Wheels, and the Office Furniture, Watch-dog, &c.

These Tools are all of the most modern and expensive description, substantial and highly finished, part made to order and never used, and all of a quality rarely met with. Catalogues will be ready ten days before the Sale; and the whole may be seen any day between 10 and 2 o'clock. Sale to begin at 11 o'clock, precisely.

Apply for catalogues or information to Mr. W. Colledge, Writer, Dunlop-street, Glasgow, or to Mr. Myine, at the Works.

Glasgow, 23rd November, 1841.

TO ENGINEERS, PATENTEES, CONTRACTORS, AND BUILDERS.—STEAM-ENGINES ON SALE OR HIRE.—C. H. CAPPER, Iron-Founder, Manufacturer of Steam-Engines, Sugar Mills, and Mill Machinery, Broad-street Foundry, Birmingham, has Engines from 6 to 20 Horse power always on hand, and any parties wishing to Hire New or Second-hand ones for a given time, to try experiments, &c., may have the same at work immediately, and upon the most moderate terms. For particulars, apply as above.

BRISTOL AND EXETER RAILWAY COMPANY.—TENDERS FOR LOANS ON DEBENTURE.—The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising therefrom, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest at the rate of Five per cent. per annum, payable half-yearly at the Bank of Messrs. Glyn, Hallifax, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Prince's street, London, or Broad-street, Bristol.

By order of the Board of Directors,

J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol.

BRISTOL AND GLOUCESTER RAILWAY. CONTRACT FOR WORKS.—NOTICE is hereby given, That the Directors will receive, at their offices, Exchange-buildings, Bristol, on or before 12 o'clock on Monday, the 3rd day of January, 1842, Tenders for the Excavation and Formation of the Earthwork, including the diversion of streams and roads, and construction of bridges, culverts, and other masonry, and the entire completion of the works, including the ballasting, but exclusive of the laying of the permanent rails, of that portion of the railway included in the following contracts:—

Contract No. 5, commencing from a point 200 feet south of the Road No. 15, in the parish of Berkeley (being the end of No. 4 Contract), and terminating in Field No. 1, in the parish of Stinchcombe, being about the distance of 2 miles and 53¼ chains.

Contract No. 6, commencing from a point in Field No. 1, in the parish of Stinchcombe (the end of No. 5 Contract), and terminating in Field No. 37, in the parish of Cam, being about the distance of 3 miles and 22 chains.

Contract No. 7, commencing from a point in Field No. 37, in the parish of Cam (the end of No. 6 Contract), and terminating at a brook boundary between the parishes of Frocester and Leonard Stanley (the commencement of No. 8 Contract), being about the distance of 2 miles and 67 chains.

Contract No. 11, commencing from a point in Field No. 6, in the parish of Yate (being the end of No. 12 Contract), and terminating at the north side of the Road marked No. 87 in the same parish, being about the distance of 2 miles and 67 chains.

Contract No. 12, commencing at the junction of the Bristol and Gloucestershire Railway, and terminating in Field No. 6, in the parish of Yate (the beginning of No. 11 Contract), being about the distance of 2 miles and 58 chains.

Drawings and Specifications of the above works may be seen on and after Monday, the 6th day of December next, at the Company's offices, Exchange-buildings, Bristol.

Tenders are to be made on printed forms, provided for that purpose, which may be obtained on application at the office.

The Directors will not consider themselves bound to accept the lowest tender; and they expect the several parties to attend at the office on the 3rd of January, at 12 o'clock.

ROBERT FLETCHER, Secretary.

Bristol, 23rd Nov. 1841.

BRISTOL AND GLOUCESTER RAILWAY EXTENSION LINE.—CALL of £10 per Cent. being £5 per Share.—The Committee of Management of this undertaking having resolved at a meeting held in Bristol this day, to CALL under the provisions of the Acts of Parliament relative to the said undertaking, for an Instalment of £5 per Share, NOTICE is hereby given, That the Subscribers to the said undertaking, and proprietors of Shares therein are required to pay on or before the 11th day of December next, to any one of the undermentioned Bankers, the sum of £5 on each of their respective Shares, viz.

London—Messrs. Barnett, Hoare, and Co.

Bristol—Messrs. Miles, Harford, and Co.; Messrs Baillie, Ames, and Co.; Messrs. Stuckey's Banking Company; The West of England and South Wales District Bank.

Gloucester—The Gloucestershire Banking Company.

Manchester—Messrs. Jones, Loyds, and Co.

By Order of the Committee of Management,

GEORGE JONES, Chairman,
ROBERT FLETCHER, Secretary.

Interest at the rate of £5 per cent. per annum will be charged to all parties who may remain in arrear for this call after the above named 11th day of December.

Office, Exchange Buildings, Bristol, Nov. 15, 1841.

MIDLAND COUNTIES' RAILWAY.—The Directors of this Company are receiving Money on their Loan Notes, in sums of not less than £400, for either Three, Five, or Seven Years, to be exchanged for Debentures in September next. Interest, after the rate of Five per Cent. per Annum, is allowed and paid half-yearly, on the day it becomes due.

By order,

J. F. BELL, Secretary.

Leicester, 29th November, 1841.

CRANES AND HOISTING TACKLE of every description, of the best materials and workmanship, and capable of lifting from 5 cwt. to 20 tons and upwards, with or without steam power, made by ELLIS & NOTON, who take this opportunity of respectfully soliciting an inspection of their Drawings and Patterns, at the IRWELL FOUNDRY, Salford, Manchester.

LONDON AND BRIGHTON RAILWAY COMPANY.—NOTICE is hereby given, That until further notice the Trains will start as follows:—

From London at 9, 10.45 a.m.; 1.45, 3.45, p.m.
From Brighton at 8, 10.45 a.m.; 1.35, 3.45, p.m.
Sundays—from London at 9, a.m.; 3.45, p.m.
,, from Brighton at 10.45, a.m.; 3.45, p.m.

Due notice will be given when the Gooda' Trains will run. The Company will not be accountable for Passengers' Luggage, unless it is booked and paid for accordingly.

By order,

THOMAS WOOD, Secretary.

10, Angel-court, Throgmorton-street, Dec. 1, 1841.

LONDON AND BIRMINGHAM, GRAND JUNCTION, CHESTER, LANCASTER, MIDLAND COUNTIES', NORTH MIDLAND, YORK AND DARLINGTON RAILWAYS.

In connection with the above lines of Railway, Places can be secured by

Post Horses for hire, may be had on application at the above Offices, to convey Carriages to or from the Railway and any part of London (within Five Miles,) including the Driver, 10s. 6d. each pair.

LONDON AND GREENWICH RAILWAY SCRIP.—The holders are reminded that the final instalment became due on the 15th of October last, and that interest at the rate of 5 per cent. per annum is now charged on all instalments in arrear; and that unless paid in full on or before the 15th of January next, the whole of the amounts already paid *are subject to forfeiture*.

The Scrip on which the whole of the instalments have been paid, must be registered before the holders can receive any dividend thereon.

By order,

J. Y. AKERMAN, Sec.

Offices, 37, Canterbury-square, Tooley-street,
16th November, 1841.

LOCOMOTIVE ENGINE.—TUBES WITHOUT SEAM.—GREEN'S PATENT.—These Tubes possessing great advantages over the ordinary brass tubes used in locomotive and other boilers, may now be obtained in any quantity and of any dimensions.

Testimonials from eminent Engineers and samples may be seen by application to W. C. Alston, Birmingham, or Braithwaite, Milner, and Co., New Road, London.

GUARANTEE SOCIETY.—To afford Security to Bankers, Merchants, Commercial and Trading Communities in general, is the *first* object of this Society. To relieve Relatives and Friends from painful obligations and responsibilities the *second*.

The experience of the first year (during which the Society has been eminently successful) already numbers amongst its patrons the principal Bankers, Merchants, and Public Institutions in the metropolis, and provincial districts, and by providing Guarantee for their integrity, has secured a competency for several hundred individuals.

DIRECTORS.

Thomas Attree, Esq.	G. Palmer, Esq.
David Cannan, Esq.	Major Prosser, F. G.S.
James Colquhoun, Esq.	James Row, Esq.
William Croft, Esq.	G. Scovell, Esq.
James Law Jones, Esq.	G. E. Shuttleworth, Esq.
John F. Maubert, Esq.	Henry Vaughan, Esq.
Lieut.-Col. Moody, R. E.	B. G. Windus, Esq.

STANDING COUNSEL.—R. Ryder Dean, Esq.

SOLICITORS—Messrs. W. & S. Cotton, No. 76, Basinghall-street.

This Society presents to the Public (and particularly to Bondsmen) the following advantages:—

1. No individual need hereafter incur the responsibility of becoming security for the integrity of another.

2. Individuals who are already surety for the fidelity of others, may immediately protect themselves from loss by Insuring with the Society.

3. The expense and painful obligation of obtaining approved Sureties, or of replacing them when removed by death or otherwise will be altogether obviated.

4. All risks attending irresponsible sureties will be removed.

5. The submission to the loss, or the distressing alternative of instituting legal proceedings against the friends who are surety, will be avoided.

Also to Agents, Travellers, and Clerks holding, or being desirous of holding, confidential and responsible situations, the Guarantee Society presents immediate facilities, where for a moderate premium, surety for integrity may be acquired.

The Prospectus, Form of Application, and other particulars, may be obtained at the Office, No. 28, Poultry, London.

By order,

THOMAS DODGSON, Secretary.

PARTNERSHIP.—A Person who is in a considerable Business in the City, returning large profits, requires a PARTNER with Capital. Any person possessing £1,000 or £1,500, and desirous of improving it, will find this an advantageous and substantial concern.

For particulars apply by letter only, post paid, to Messrs Ling and Harrison, 34, Bloomsbury-square.

NEW EDITIONS of the following useful Works are just published at the *Railway Times* Office, 122, Fleet-street:

I.

ROBINSON'S RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Map, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Price 1s., in cloth.

II.

ROBINSON'S RAILWAY DIRECTORY FOR 1842, containing the Names of the Directors and principal Officers of the Railways in Great Britain, derived from authentic sources, price 1s.

III.

TUCK'S MAP OF THE RAILWAYS throughout ENGLAND and WALES to the Capital of Scotland, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

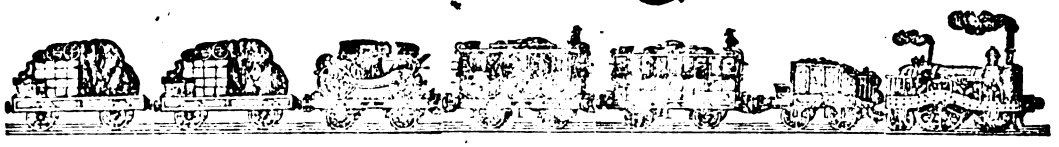
Bound in cloth, 1s. 6d.; in paper covers, 1s.; mounted on canvass, in cloth case, 2s. 6d.; on rollers, 3s. 6d.

IV.

MAPS OF ALL THE LINES OF RAILWAY through ENGLAND and WALES, showing the country in their immediate vicinity on a larger scale than was ever before displayed in a sheet pocket map, with a compendium of Railway information. In paper cover 1s., in cloth 1s. 6d.; on canvass, 2s. 6d.

V.

TABLES OF HACKNEY CARRIAGE FARES from the BIRMINGHAM RAILWAY to all parts of the METROPOLIS, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.



VI.

TABLES OF HACKNEY CARRIAGE FARES from the GREAT WESTERN RAILWAY to all parts of the Metropolis, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street. (facing Saint Bride's Church), in the Parish of Saint Bride's, Fleet-street, Middlesex.—Saturday, December 4, 1841.

The Railway Times.

"Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 206. Vol. IV.—No. 50.] SATURDAY, DECEMBER 11, 1841. [Price 6d.

IMPROVEMENT IN THE RAILWAY SHARE-MARKET.—The attention of the Proprietors of Railway Shares is requested to an important reduction in the expense of working Locomotive Engines, which, if adopted, must have the effect of improving the dividends, and of course the prices of railway property.

The economy above-mentioned is effected by the use of coal (its smoke being consumed agreeably to Act of Parliament) in lieu of the expensive article of coke.

Taking the cost of coal and coke respectively on the Midland Counties' Railway as the data for calculation £100 worth of coal will evaporate as much water, and propel a train as many miles as £235 worth of coke. For the correctness of this statement, application may be made to Jos. Kearsley, Esq., Derby, Chief Engineer, on the above Railway, and no doubt the Directors would afford all requisite information to any Railway Company.

Further particulars, with drawing, &c. &c., may be obtained of the Patentee (of the apparatus) Samuel Hall, No. 18, Kings Arms Yard, London.

THE RAILWAYS OF GREAT BRITAIN AND IRELAND practically described and illustrated. By FRANCIS WHISHAW, Civil Engineer, M. INST., C. E.—The flattering testimonials which the author has received from various quarters, as to the utility of the first volume, which was produced at an expense of upwards of One Thousand Pounds, and Sixteen Months constant attention, induce him to propose to the railway public the production of a second volume, which, however, can only be done on the plan of subscription.

Railway proprietors, therefore, and others who would like to be in possession of much additional information on the important subject of railways, will be so kind as at once to forward to the author their names as subscribers to the Second Illustrated Volume, which would be issued at the price of One Guinea.

THE RAILWAYS OF BELGIUM practically described and illustrated, in One Octavo Volume, price 10s. 6d., may also be produced in the same manner.

FRANCIS WHISHAW.

Gray's Inn, London, and Haverfordwerst, Pembrokeshire, Oct. 4th, 1841.

TESTIMONIAL.

Cabinet du Roi. Neuilly, le 21 Mai, 1841.

Monsieur,—Un exemplaire de votre ouvrage sur les chemins de fer de la Grande Bretagne, est venu au Roi par l'entremise de son Ministre des Affaires Etrangères. Déja, quelques jours auparavant, Sa Majesté avait reçu la lettre que vous lui avez écrite pour lui en faire hommage.

L'intérêt du Roi est toujours acquis, Monsieur, aux travaux qui, comme les vôtres, ont pour lui et pour résultat le progres des arts utiles; aussi cet hommage a-t il reçu l'accueil qu'il méritait. Sa Majesté m'a chargé de vous transmettre ses remercîmens, a j'ai l'honneur de vous prévenir que par son ordre, votre savant traité apris place dans la Bibliothèque particulière du Palais Royal.

Veuillez agréer, Monsieur, l'expression de ma considération très distinguée.

Le Secrétaire du Cabinet,
CAMILE FAUY.

Monsieur Whishaw.

Now ready, in quarto, to correspond with the original Volume, price 7s. 6d., useful and interesting additions to THE RAILWAYS OF GREAT BRITAIN AND IRELAND, by FRANCIS WHISHAW, Civil Engineer, M. INST., C. E.,

COLOURED SECTIONS, exhibiting at one view the Lengths, Summits, and Levels of all the principal Railways in England, reduced to the Trinity Standard. Coloured Diagrams, showing the rise and fall of shares in the principal lines of Railway for a series of years; Railway Wheels illustrated.

London: Simpkin, Marshall and Co., Stationers'-court.

WANTED by a person who understands the Management, Packing, &c. of a Locomotive Engine, a Situation as Engine-driver on a Railroad; he can produce certificates of ability.

Address to J. R. C., 106, York-street, Charlotte-street, Whitechapel Road.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secresy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

This day is published,

TUCK'S ROLLER CALENDAR FOR 1842.—This is a mode of affixing the Calendar for the whole year on two revolving cylinders, within an elegant case, so as to exhibit each day's information in a bold and novel manner, presenting Daily Memoranda indispensible to every housekeeper and man of business. It possesses the advantage of a Date Box and Almanac, and is adapted for the Library, Board Room, Counting House, Warehouse, or Parlour; and is the best application of the Calendar ever yet devised. In Mahogany Box, price 5s. 6d.; in Ornamented Box, 6s. 6d. In addition to much useful information relating to business, &c., the Calendar contains the time of High Water at London, Liverpool, Dublin, Glasgow, Leith, Bristol, and Hull, for every day in the year.

Railway Times Office, Fleet-street; Letts, Cornhill; and Ackerman, Strand.

THIRTY ACTIVE, SEASONED, CART HORSES.

MR. DIXON begs to announce that he is instructed by Messrs. Weston, Perry and Lutley, of Godstone, Surrey, to sell by Public Auction at the City Repository, Barbican, on FRIDAY, December 17, 1841, commencing at Eleven for Twelve o'Clock, precisely, about Thirty remarkably fine-shaped, active, young, powerful Cart Horses, being a portion of their well-known excellent Stock; which have been employed on the South-Eastern Railway.

Colours—Blacks, Bays, Browns, Greys, and Roans.

☞ The above lot of fine young seasoned Cart Horses are worthy the attention of Corn and Coal Merchants, Tradesmen, Brewers, Distillers, Agriculturists, Contractors, &c., having now nearly completed the part of the Contract on which they have been employed, will be positively sold without the least reserve.

On view, and catalogues had, two days before the Sale.

PROPOSED PLAN for the establishment of a GENERAL OFFICE for the use of TRAVELLERS BY RAILWAY and STEAM NAVIGATION, where the public could readily obtain every species of information that might be useful to or required by Travellers, either on business or pleasure, by any of the various Railway and Steam Navigation Conveyances throughout the United Kingdom, more especially as relates to the hours of departure and arrival, the scale of fares, and the different regulations of each, for conveying Passengers and Goods; to be formed under the sanction and patronage of the several Boards of Direction and Management of the Companies now in existence.

It is proposed that a complete Register be kept of all the Railway Conveyances, systematically arranged for the convenience of immediate reference, setting forth every station at which the trains stop on the respective lines, and the several stations and booking offices from whence passengers and goods may be conveyed.

That the proposed Office be furnished with the printed placards and hand-bills from all the different Companies, for reference and distribution to the public, who should receive gratuitously every information required.

That a like Register be kept of all the Steam Navigation Conveyances, and a similar distribution be made of the hand bills of the different Companies, and every information respecting them be given in the same manner.

That a communication be opened for correspondence with the respective Secretaries to enable the Manager of the Office to give answer to such inquiries as might arise, and which their printed hand-bills do not furnish, and that the Secretaries would from time to time give the Manager immediate notice of every alteration affecting the conveyance of passengers and goods.

The Manager of the Office would undertake to transmit by post any hand-bill or specific information, which might be required by persons residing in the country, and who could not conveniently attend personally to obtain it.

That such Office be fixed at some centrical point (being a public thoroughfare) at the West End of the Town, holding connection with a similar establishment in the City, and to be open to the public every day, Sundays excepted, and that the Office shall be furnished with geographical maps and plans of the Railways.

It is proposed that arrangements should also be made which would embrace an extension of the plan, by collecting information of the various establishments on the Continent of Europe and elsewhere, for conveyance by Railway and Steam Navigation, as it is considered that by centralizing these various objects at one place, a complete Emporium will be formed for obtaining that general information which Travellers so much require, and this concern founded upon such an enlarged and comprehensive scale as would ensure the contemplated benefit and advantage to the several Companies interested, as well as for its becoming a medium of the greatest public utility.

NATHANIEL W. SYMONDS.

Lombard Street Chambers, Clement's Lane, 27th October, 1841.

*** Any suggestion to improve or add to the usefulness of the above plan will be thankfully received.

ANDREW SMITH'S PATENT WIRE ROPES, for STANDING RIGGING, LIGHTNING CONDUCTORS, STROPPING OF BLOCKS, MINING, RAILWAY, and GENERAL PURPOSES; about half the Size and Weight of Hempen Ropes, and 25 per cent. cheaper. Testimonials to that effect, with Specimens, may be seen, and every information obtained, at the Manufactory, Mill-wall, Poplar; and also of the following Agents:

Robertson and Co., 12, Goree Piazzas Liverpool,
Mathias Dunn.....Newcastle-upon Tyne
Joseph Bothway.....Plymouth.
John Thompson and Co.....Wigan.
J. T. Tregellas.....Truro.
Thomas Mooney and Son.....Dublin.
Coates and Young.....Belfast.
James Kibble and Co.....Glasgow.
James Gunn.....Leith.
John M. Beatte. 14, Clement's-lane, High-street, Dundee.

This Rope has been in use for standing rigging in her Majesty's navy, and a great number of merchant vessels, for upwards of six years, and is giving the highest satisfaction. It is also employed in various mines and railways in different parts of the kingdom.

THE TOLL QUESTION—CROYDON AND GREENWICH RAILWAYS.

(*Continued from page* 1251).

London & Greenwich Railway Office,
London Terminus—24th Oct., 1840.

SIR,—The Directors of the London and Greenwich Railway Company desire me to acknowledge the receipt of your letter of yesterday's date, and to say in reply, that as the Directors of the Croydon Railway Company are desirous of an opportunity of explaining their views, the Directors of this Company will be happy to receive the mon the subject of their letter of the — instant, on Tuesday next, the 27th instant, at 3 o'clock.

I am, Sir, your most obedient servant,
(Signed) J. Y. AKERMAN.
R. S. Young, Esq.,
Sec., &c., Croydon Railway Company.

Tuesday, 27th October, 1840.

Sir,—I have to acknowledge the receipt of your letter of the 24th instant, in which you state, "that as the Directors of the Croydon Railway Company are desirous of an opportunity of explaining their views, the Directors of the Greenwich Company 'will be happy to receive them on the subject of their letter of the — instant, on Tuesday next, the 27th instant, at 3 o'clock.' I am desired to state, in reply, that the Directors of this Company *were* certainly most "desirous of an opportunity of explaining their views," *before* the Directors of the Greenwich Company came to any determination upon the proposition contained in my letter of the 6th instant, and they feel that they have just grounds of complaint, that the desire. so earnestly expressed was not, *at that time*, complied with. As, however, I have been favoured, in your letter of the 0th instant, with the result of that determination, "after attentive consideration," it appears to the Directors of this Company, that a meeting at *this* time must be without any object, unless to relieve the Directors of the Greenwich Company, from the responsibility which they have incurred by having decided against a proposition of such importance, without first, having heard everything that was offered to be advanced in its behalf.

If, notwithstanding, there should be any real intention on the part of the Directors of the Greenwich Company to re-open the question with a view to its further consideration, the Directors of this Company are too strongly impressed with the value of a good understanding upon this subject between the two Boards, and of the general importance of the proposition itself both to the Companies and to the public, to omit any means of its inducing adoption.

This Board, which has been specially summoned, will therefore attend here till 3 o'clock, when, if you should be able to send me any satisfactory assurance upon this latter point, it will be happy to wait upon the Directors of the Greenwich Company.

I am, Sir, your obedient servant,
(Signed) R. S. YOUNG.
J. Y. Akerman, Esq.,
Sec., Greenwich Railway Company.

London and Greenwich Railway Office,
London Terminus—27th Oct., 1840.

Sir,—In reply to your letter of this date, the Directors of this Company desire me to say that they are equally with the Directors of the Croydon Company impressed with the importance of maintaining a good understanding between the two Companies, and regret that the Croydon Railway Board should feel hurt at the omission of a request for a personal interview on the subject of the tolls, in the reply to their former letter on the subject. They will, however, be happy to receive the deputation of the Croydon Railway Directors, with a view to the full consideration of this subject, though they do not conceive it all necessary to do so, with a view to relieve themselves from any responsibility, as they had fully considered all that was advanced on the subject in the letter from the Board of the Croydon Railway, but would gladly give their best consideration to anything further which may be suggested in reference thereto.*

I am, &c.,
(Signed) J. Y. AKERMAN, Sec.
R. S. Young, Esq., Sec.

London and Greenwich Railway Office,
London Terminus, Oct. 31, 1840.

Sir,—The Directors of the Greenwich Railway Company having further considered the proposals from the Croydon Board in regard to the tolls, and the reasons brought forward by the deputation from the Board on Tuesday last, desire me to lay before you the following statement of their views on this subject.

In the first place they think that a graduated scale of tolls, where the toll shall bear some definite proportion to the fare charged by the toll-paying Company, might be conducive to the interests of both Companies, if the proportion were fairly based, as it would give a common interest to both Companies in increasing the traffic to the utmost.

In examining the principles on which this proportion should be fixed, the Directors cannot but feel confirmed in the one they have constantly maintained; and in adopting a scheme whereby both parties would be interested in getting the greatest gross receipts from the public, they think the subdivision of these receipts between the two Companies ought to have reference to the capital stock provided by each, as well as the current expenses on it; and as the Croydon Company have nearly the same advantage from the viaduct as if it had been made exclusively for them, the Directors think the enormous outlay it has occasioned should not be lost sight of, but that a larger proportion of the receipts should be allotted to the Greenwich Company per mile than if its cost had been no heavier than that of the Croydon Railway.

Further, in adopting a graduated scale of tolls, the Directors think the best starting point, in practice, would be the ratio which the toll bore to the fares charged at the period when both Companies were deriving the maximum receipts. In other words, the maximum toll which the Greenwich Company can at present charge being 3d. per passenger, there are certain fares at which the Croydon Railway Company would be deriving the largest *profits* possible, so long as the toll continued at 3d. If the tolls were proportioned to the fares in about this ratio, so that any reduction of fares would be accompanied by a corresponding reduction of toll, the Directors think a fair scale would be furnished. The maximum *net* receipts yet exhibited are those on the fares of 1839; for leaving out the receipts from the stations where the fares continue as before, there has been a considerable diminution wherever the fares have been raised.

In carrying out these principles, the Directors have drawn up a table, which I enclose, in which the fares received by the Croydon Railway Company would be apportioned between the two Companies in the exact ratio of the distances, thus setting the extra charge which the Directors consider due in respect of the use of the most expensive railway, against the cost of conveyance incurred by the other; and they beg to call attention to the fact, that had this scale been in operation last year when the fares of the Croydon Company were most productive, it would have yielded them very nearly the same amount as they derived at the toll of 3d. per passenger.

In the former letter from the Croydon Board on this subject, they laid down a principle in which the Directors are much disposed to concur, viz., that a certain amount, or nearly so, being guaranteed to the proprietor, it would be expedient that the Company using the railway should have the opportunity of raising this amount in the most advantageous mode to themselves and the public. The Directors consider it worthy of notice, that the scale in question would have left them very nearly the same sums this year as in 1839. Notwithstanding the falling off of the receipts of the Croydon Railway, and they think it may be inferred from this, *vice versa*, that were the fares reduced instead of increased, a similar result would be found, viz., that the amount received on this principle would continue pretty constant, though the rate per passenger might vary.

The Directors, therefore, are willing to give the scheme a trial for 12 months, upon this scale, viz., that the toll payable in respect of the passengers going over the Greenwich line, should be in the exact ratio of the distances travelled over each railway, the Croydon Company guaranteeing that the Greenwich Company shall not lose anything by its adoption. As the Croydon Railway do not ask for any reduction of toll *as such*, the Directors think they cannot, on reflection, object to a scale which gives the same result as the present toll would at fares the most profitable yet tried by the Croydon Railway Company; since any reduction which may be made by them on these fares, will give them the benefit of a corresponding reduction of toll per passenger.

I am, Sir, your most obedient servant,
(Signed) J. Y. AKERMAN, Sec.
R. S. Young, Esq.,
Secretary Croydon Railway Company.

* A conference accordingly took place in which the Croydon Directors stated that it was far from their intention to propose anything which should in effect tend to the defalcation of the amount to be paid to the Greenwich Company, on the contrary, they were convinced, not only upon theory, but from actual experiment, in the converse proposition, that the number of passengers would be so increased as to insure a great augmentation of revenue both to the toll-payers and toll-receivers.

That the earnest desire of the Croydon Directors was a unanimity of purpose and operation with the Greenwich Directors, which would not only tend to the permanent advantage of the two Companies, and the convenience and benefit of the public, but would prevent the Directors of the Croydon Company from being driven to the undesirable expedient of seeking to obtain that profit upon a portion only of their railway—by diverting the traffic as much as possible from the Greenwich line—which the Directors of the Greenwich Company had prevented them from obtaining over the whole.

The Directors of the Greenwich Company admitted that some modification of the toll payable to their Company by the Croydon Company might be adopted, though they would not concede the principle (as such) of the table furnished by the Croydon Company. They were of opinion that any plan for a modification of toll must involve the assumption, that as the Greenwich Railway had cost much more to construct than the Croydon per mile, and entailed a far greater charge for rates, &c. they were entitled to such a proportion of the fares per mile as the ratio of that outlay and annual expense bore to the whole fares. And further that if any guarantee was given by the Croydon Company—which they felt inclined to accept—they conceive that the proper period to fix the amount of that guarantee, would be when the maximum number of passengers carried by the Company yet ascertained took place, calculating at the rate of 3d. per passenger.

To this it was answered, that the Croydon Directors at once repudiated the assumption, that the cost of outlay and local charges had anything to do with the proportional division of mileage, inasmuch as that circumstance alone,—the very large outlay necessary to construct a line immediately from the metropolis,—placed the Greenwich Company in a situation to obtain the extensive traffic which the Croydon Railway had brought, and was about to bring over it; and which was in fact one of the advantages anticipated by the proprietors of the Greenwich Railway in making that outlay. The conference terminated with an understanding that the Greenwich Company would further consider the proposition of the Croydon Company and communicate the result.

London and Croydon Railway Company,
3rd November, 1840.

Sir,—The Directors of the Croydon Company are happy to find, that the further consideration of their proposal has led the Greenwich Directors to the conviction, that a graduated scale of tolls would be conducive to the interests of both the Companies. They, however, regret that the Greenwich Directors should still maintain their opinion, "that in adopting a scheme whereby both parties would be interested in getting the greatest gross receipts from the public, the subdivision of those receipts between the two Companies, ought to have reference to the capital stock provided by each, as well as the current expenses on it," because they feel that the prospect of any satisfactory agreement between the two Boards is very much diminished thereby, inasmuch as every additional consideration which the Croydon Directors have given to the subject, has confirmed them in the opinion, that as the public do not and will not pay in proportion to the cost, but only in respect to the distance, the division proposed by the Greenwich Company is incorrect in principle, especially as it involves in practice this anomaly, that the Croydon Company should consent voluntarily to become carriers on the Greenwich line at the *loss* of the cost of conveying their passengers thereon. The Directors of this Company being at the same time convinced that any extra cost of construction incurred on the Greenwich Railway *ought* to be amply remunerated by the extra number of passengers to be obtained on that line.

The Directors of the Croydon Company are surprised that the Greenwich Directors should propose to refer to a period long past for a rule of action for present circumstances, they take leave to remind the Greenwich Directors, that being aware that the toll of the Greenwich line was at that time disproportioned to the receipts of the Croydon Company, they approached the Greenwich Directors with a view to some arrangement of tolls upon an equitable footing, which might have relieved them from the disagreeable necessity of increasing their fares, but unhappily the Greenwich Directors then evinced no disposition to meet their views on this subject. The Croydon Directors having succeeded in some degree in adjusting this disproportion between the toll and the fares, cannot now be expected to return to a position from which they have taken so much trouble to escape. The adoption of the scale proposed by the Greenwich Company, which is without any allowance for the expense of carrying passengers, being to all intents and purposes the adaptation of a 3d. *toll* to a *low* rate of fares, would no doubt effect a return to that state of things so desired by the Greenwich Company; but as the Croydon Company dispute entirely the right of the Greenwich Company to any additional portion of the fare on account of the extra cost of construction, they cannot consent to relinquish, as a set off against this item, their claim for the cost of conveyance of their passengers over the Greenwich line. It will therefore be impossible for the Directors of the Croydon Company to concur in the proposition for a trial of the scale proposed by the Greenwich Company.

It is true "that the Croydon Directors do not ask for any reduction of toll *as such*," on the contrary, they are so convinced that the aggregate toll which would be receivable upon the scale proposed by them, would be greater than that now produced by the 3d. toll, that they have offered to guarantee that the Greenwich Company should not be in a worse position by its adoption.

So long, therefore, as the Greenwich Company continue to insist on a scale of division which will not remunerate the Croydon Company for the cost of conveyance over the Greenwich Railway, the Croydon Directors will have no alternative but to carry passengers to the London Bridge station, at fares graduated according to their apprehension of an equitable division of the receipts upon the existing 3d. toll, or upon such other toll as the Greenwich Company may deem it expedient to adopt, in order to induce a more extensive use of their portion of the line to Croydon; and I am desired to annex a scale of fares which appears to them practically equivalent to certain tolls contemplated therein. The Greenwich Company will perceive that the existing 3d. toll will restrict the use of their part of the line to first class passengers only, whilst the Croydon Directors must endeavonr to afford, to that portion of the public which cannot or will not pay a high rate of fare, the necessary accommodation independent of the Greenwicn Railway, and for this purpose they will have occasion to reduce their fares between Croydon and New Cross to the lowest possible scale.

In conclusion, I am desired to point out to the Greenwich Directors, that the course here proposed will leave it to their option at any time to open their line to that class of passengers thus excluded from its use, but as the Croydon Directors cannot but anticipate that some inconvenience and disappointment will in the meantime result to the public, they may perhaps think it expedient, not only to communicate with their proprietors on the course which this negociation has taken, but to inform the public at large of the circumstances which could alone induce them to take such a step.

I am Sir, your most obedient servant,
(Signed) R. S. YOUNG.

J. Y. Akerman, Esq. Sec.
Greenwich Railway Company.

London and Greenwich Railway Office.
London Terminus, 7th Nov. 1840.

Sir,—The Directors desire me to acknowledge the receipt of your letter of 3rd November, in which they regret to perceive no nearer approach has been made to the terms which they would consider equitable between the two Companies for establishing a graduated toll; and they must remark on your letter, that were the subdivision made according to the grounds on which the fares are paid, they conceive the distance travelled would not have more to do with it than the cost of construction; passengers paying for the convenience afforded without regard either to the cost or the length of the railway.

Fearing from your letter, and the conversation which Mr. Entwistle has since had with your Chairman on this subject, that their offer will not lead to any practical result, the Directors of course, in such case, withdraw it without prejudice to any future steps that may be taken, whilst they will much deplore the impossibility of an agreement between the two Boards on this important subject, as well as the inconvenience to which the public may be subjected, in case the Croydon Directors should deem it for the interest of their Company, not to carry any but first class passengers between New Cross and London. In order to remedy this inconvenience, the Directors will be happy to co-operate with the Croydon Railway trains by running one of their own to meet each train at New Cross; provided the Croydon Board will fix a moderate toll for the portion of their road between New Cross and Corbett's Lane, which will then have become nearly useless to them.

I am, Sir, your obedient servant,
(Signed) J. Y. AKERMAN, Secretary.

R. S. Young, Esq. Secretary.
Croydon Railway.

London and Croydon Railway Company,
205, Tooley-street,—13th November, 1840.

SIR,—The Directors desire me to acknowledge the receipt of your letter of the 7th instant, and to reciprocate the expression of regret that "no nearer approach has been made to the terms" which would be considered equitable by both Companies for establishing a graduated toll.

With respect to the remark contained in your letter, that "were the subdivision made according to the grounds on which the fares are paid, they (the Greenwich Directors) conceive the distance travelled would not have more to do with it than the cost of construction; passengers paying for the convenience afforded without regard either to the cost or the length of the railway," the Croydon Directors are not quite certain that they clearly apprehend what is intended to be expressed, as it would seem to them that the main convenience afforded, and in regard to which the passenger pays his fare, whether by railway, coach, or other conveyance, is the distance from the place where he may happen to be located, to the place whither he may desire to be conveyed; it is true that he may be induced to consult his convenience by paying a higher fare for greater comfort or greater speed, but they cannot suppose that the Greenwich Directors intend to claim any superiority in these particulars.

The Croydon Directors deplore the determination of the Greenwich Directors as to the impossibility of an agreement between the two Companies on

Digitized by Google

this important subject, a result which theCroydon Directors were hardly prepared for, after the offer of the Greenwich Directors and the conversation between their Chairman and Mr. Entwisle,* which had led them to expect some proposition from the Greenwich Company, on the principle of a commutation or composition of their toll for one year; and they also deplore in common with the Greenwich Directors the inconvenience to which the public may be subjected, and they beg distinctly to state that they will be most happy to co-operate in any equitable arrangement which shall have for its object the public accommodation; but they much fear that the remedy proposed by the Greenwich Directors of running one of their trains to meet each Croydon train at New Cross would be found very inadequate, as it would entail upon the passengers much uncertainty, delay, and discomfort.

Should the Greenwich Directors, however, in order to remedy this inconvenience, be disposed to run their trains throughout to Croydon, the Directors of this Company will be perfectly ready to facilitate such an arrangement by the acceptance of tolls for the use of their railway, graduated upon precisely the same scale as that which they proposed to the Greenwich Directors for the use of the Greenwich Railway.

I am, Sir, your most obedient servant,

(Signed) R. S. Young.

J. Y. Akerman, Esq., Secretary,
Greenwich Railway Company.

(*To be concluded in our next.*)

THE TOLL QUESTION—CROYDON AND GREENWICH RAILWAYS.

To the Editor of the Railway Times.

Sir,—It is surely high time that the agitation of this foolish question should be put an end to by some decisive step on the part of the Greenwich Board. The baseless fiction of the Croydon Chairman, namely, that "the toll is too high," and is the sole cause of the Croydon loss, was long ago set at rest by that gentleman's own statement and figures; but nothing can satisfy him but "*incessant*" agitation to the serious loss and injury of all parties concerned. The established fact of the annual loss to his own Company of 16,000*l.*, and of the loss of 4,000*l.* to the Greenwich Company, is conclusive on the question of *injury!*

It would seem this most glaring proof of mismanagement is perfectly thrown away, upon the apathetic Croydon proprietors. As there is no remedy to be had at the hands of the Croydon people let us turn to the Greenwich Board and its constituents; for I am only one of a thousand who have resolved that their best interests shall no longer suffer from an *agitation* founded entirely on mere assumption. I do not hesitate to charge the Greenwich Board with a neglect of duty in respect of this question. That Board, after the most unequivocal proof of the proprietary's disapproval of listening in any form to this question, as one of danger to the best interests of the Company, ought at once to have refused all and every overture, having reference to it. How great was the folly of listening to an offer of guarantee for securing 5,000*l.* when every one else knows that that amount is barely sufficient to pay the portion of expense in Government duty, taxes, police, &c. which fairly appertains to the Croydon portion of the Greenwich traffic, and in the face of the fact already stated, presenting an addition of 4,000*l.* fairly within view, whenever the Croydon Chairman is compelled to forego his annual loss of 16,000*l.*—moreover, with the additional fact before the Board, of the daily *contravention* of the toll agreement, by the payment of the legitimate income of the Greenwich Company, to coach and omnibus proprietors, by the Croydon Chairman; to which may also be added the undisputed fact, namely, that for the loss of 3d. to the Greenwich Company, the relative loss to the Croydon, according to the present fares, is absolutely 1s. 3d. per passenger! All this is clear to every one else interested, but not so apparently to the Greenwich Board, and anything but creditable to their discernment. As to those members of the Board, (if such there are,) who are enamoured of the honourable Chairman's *guarantee* delusion, I can only say to them, the sooner they abandon their seats to others the better. Is it not enough to prove the fiction of the toll being *high*, that the Greenwich Company for the purchase, not only of the Croydon traffic, but also that of the Brighton and South-Eastern, have abandoned to the Croydon Company of every 100*l.* of their toll granted by Parliament on an estimated cost of 400,000*l.*, two-thirds, or equal to £66 13 4

The Croydon portion of the current expense is equal to 16 13 4

The Greenwich Company's gain of every 100*l.* is only 16 13 4

and this, be it observed, on an estimated expenditure of 400,000*l.*, whereas the actual expenditure, independent of the new works, is hard upon 800,000*l.*!

Yet it seems this sacrifice of 83*l.* 6s. 8d. per cent., and an additional expenditure of 400,000*l.* by the Greenwich Company, which must now stand as the equivalent for the expected income of 30,000*l.* from the Brighton and South-Eastern traffic—yet all this is not, according to the Croydon Chairman's notions of justice, a sufficient set off, for the present paltry income of 5,000*l.* per annum from the Croydon toll.

I do hope, Sir, I have now shown that the only point in this inquiry (if any) in all that has been said upon this *one-sided* question, namely, "Is the Croydon toll high, or is it not?" is now fully and fairly disposed of. If so, I call upon the Greenwich Board, as one deeply interested, to issue an official notification, that all further discussion on this tiresome question is now and for ever closed.

Your very obedient humble servant,

VERUS.

December 1, 1841.

YORK AND NORTH MIDLAND RAILWAY.

To the Editor of the Railway Times.

Sir,—Your correspondent, "Examiner," has by no means convinced me, confident as he appears to be of doing so, that the shares of the York and North Midland Railway are not much depreciated in value. I did not base my calculations, as "Observer" must have seen, upon the fact that the last dividend was at the rate of 9 per cent. per annum: but upon the fact of the enormous *increase* of traffic which has shown itself *since*, together with its future prospects. If "Examiner" believes the correctness of the traffic, as inserted weekly in your valuable paper, he will find that, so far as it has been published for the present half year, it exceeds weekly by nearly 50 per cent., that of the preceding half year, when a dividend was paid at 9 per cent. per annum; and by nearly 100 per cent. the traffic of the corresponding half year of 1840, which gave a dividend at 7 per cent. per annum; and yet, with this staring him in the face, "Examiner" coolly asserts in effect, that 50 per cent. increase of traffic will only give ½ per cent. of additional dividend for this half year. What sort of calculation is this? I suspect "Cocker" was little consulted when he made it; but he goes farther, and says, that probably it will never pay more than this ½ per cent. for the half year, or 10 per cent. per annum. Now, were the present traffic not already sufficient to pay more (for "Examiner" admits that it is sufficient to pay as much), the experience of all railways proves that the *maximum* traffic is not nearly attained upon any railway which has been opened only 17 months, as the York and North Midland has been. Let him examine the other lines he himself has brought forward, did any of them show their *maximum* traffic 17 months after they were opened through? No; not one of them; although they have almost all attained it *now*; and for that very reason cannot be compared with the York and North Midland, which has not.

When "Examiner" proves to me, that the lines he has mentioned have shown an increase of traffic for the same period, in an equal ratio with that of the York and North Midland, I will then admit that they are as good investments as it now is; but until he does so, I maintain that the York and North Midland Railway, with its late *enormous increase* of traffic, which must yet increase very considerably, is now a much better investment than any of the other lines "Examiner" has specified; or, in other words, that the shares are now much depreciated below their real value.

I am, Sir, your obedient servant,

PHILO-OBSERVER.

29th November, 1841.

YORK AND NORTH MIDLAND RAILWAY.

To the Editor of the Railway Times.

Sir,—As you always show a desire to correct false impressions, I hope you will have the kindness to insert the following calculation in your next number. Your correspondent, "Examiner," has thrown out "*hints*" which are likely to mislead the public; "*facts*" will tell for themselves.

The traffic from 1st July to 22nd Nov. exceeds		£36,000
Ditto for 5½ weeks up to 31st Dec. at 1,200*l.* per week		6,600
		£42,600
Deduct 32 per cent. expenses	£13,632	
Interest on monies borrowed	3,682	
Half-yearly dividend after the rate of 55s. per share, including the new shares, 10*l.* paid.....	22,110	
		39,424
Balance to be carried to the Depreciation Fund....		£2,176

My statement, inserted in your paper of the 20th November instant, is, according to this calculation, correct. I have no doubt the traffic for the next five weeks will exceed 1,200*l.* per week.

I am, Sir, your obedient servant,

OBSERVER.

November 29, 1841.

MANCHESTER AND LEEDS RAILWAY.

To the Editor of the Railway Times.

Sir,—In the Directors' Report, published on the 16th of September last, it is officially announced that the contractors for the Oldham branch line are bound to complete the railway for opening, *early in January next*. In the *Railway Times* of last week, you have copied a paragraph from a local paper, in which it is made a matter of congratulation that "the works are proceeding with such spirit that, by *extraordinary exertions*, it is hoped that the line may be PARTIALLY opened in *July or August next*." Will you permit me to ask, through your columns whether this last statement is not founded in error?

Your obedient servant,

A SHAREHOLDER IN THE MANCHESTER AND LEEDS.

MANCHESTER AND LEEDS RAILWAY.

The receipts for the half-year ending June the 30th.....	£104,070
The receipts for this half year, up to 27th of November, was	100,836

The Directors declared for the last half-year a dividend of 2*l.* per share on the old shares, 70*l.* paid, and 17s. 6d. on the half-shares, 30*l.* paid.

R.

December 8, 1841.

* At this conversation, which occurred on the 5th November, Mr. Entwisle maintained his opinion, that the cost of construction ought to determine the share which each Company should receive of the gross fare, although he acknowledged that the public would not pay in respect to cost, but added that it would not pay either in respect of distance, but only for convenience. Mr. E. likewise maintained, that the Croydon Company was bound to adopt the rate of fare which produced the largest gross amount of receipt, notwithstanding that the Greenwich Company obtained a greater portion of such fare. The conversation ended by the Chairman (Mr. W.) proposing that the principles advanced by both Companies should be left in abeyance, and some per centage on the fares be paid, for one year, as a commutation of toll. Mr. E. intimated that the Greenwich Directors might, he thought, consent to take a sum of money as a composition for one year, or agree to Mr. W.'s suggestion of a commutation. The Chairman left Mr. E. under the full expectation that a proposal would be made by the Greenwich Directors, having for its basis one or other of the above plans.

LONDON AND BIRMINGHAM AND CHELTENHAM AND GREAT WESTERN RAILWAYS.

To the Editor of the Railway Times.

SIR,—Advertisements of railway conveyance throughout between Gloucester and London, *vid* Birmingham, have created a belief that it is preferable to travelling by the Great Western *vid* Cirencester, there being as yet no railway conveyance between Cirencester and Cheltenham.

To enable travellers to calculate the time on the road *vid* Birmingham, I send you a table, formed from the advertisements in the *Midland Counties' Herald* of this day, from which it will appear that the *quickest* down train performs the distance, 156 miles, in 7 hours 37 minutes, being abont 21½ miles per hour, including stoppages; and the *quickest* up train performs it in 8½ hours, or at the rate of nearly 19½ miles per hour.

All the trains on the Great Western perform the journey between London and Cirencester, 95 miles in from 3 hours 30 minutes to 3 hours 50 minutes By the turnpike roads, Cirencester is 15 miles from Cheltenham, 17 from Gloucester, and 12 from Stroud.

I say nothing of the fares by both lines; there can be no mistake as to those matters.

I am, Sir, your constant reader,

ZERO.

The following is the table above referred to:—

London, Birmingham and Gloucester Railway.

UP TRAINS FROM GLOUCESTER TO LONDON.							DOWN TRAINS FROM LONDON TO GLOUCESTER.

NORTHERN UNION RAILWAY.

To the Editor of the Railway Times.

SIR,—The total failure of success in a four years' endeavour to urge shareholders into insisting upon a system of business protective of their interests, had determined me never again to put pen to paper upon railway subjects, but to bear the disappointment and pecuniary loss inflicted on me, by as unworthy conduct as ever disgraced a portion of a civilised community, if not with resignation, at least in silence. That this resolve has been in one instance suspended, is owing to the letter you today publish from Captain Watts.

One of shareholders' main wants is, persons coming forward to put matters of doubt, of complaint, of grievance, of censure, in the straightforward and unambiguous style in which Captain Watts deals with the subject he handles; and here, Mr. Editor, I have a bone to pick with you. I have observed, particularly since the change of Editorship you announced—and do not accuse me of prejudice, for I neither know you nor your predecessor—that under the fear that statements are hurtful to private feelings, you depress writers and suppress their writings often, though when truly, the conduct of official men is severely impugned; it is a needless fear, when the party is pure; and if he be not, let him suffer. In this country, where there is more freedom of expression of personal opinion than in any nation in the world, there is also more reluctance to entertain charges against individuals, and a more general consent to scout the man defaming another. This English feeling is the great safeguard against calumny, and without law or formal protection, or your interference, is generally sufficient. How often have we not seen, when impotent charges have been preferred, that your correspondents have overwhelmed their propagator with ridicule and shame. Every man requires, whether he will or not, some sort of character, and let him so comfort himself as to be able to say, in the words of a great moralist, though in a different sense—

"He can't be wrong whose life is in the right,"

and he will hear or read of "*personalties*" with sovereign and utter contempt.

If a man commit himself in his official character, if he be not diligent, or of sound judgment, or if he be wanting in truth and honour, it is fitting that his defects should be expressed in language that will deter others from taking offices they cannot or will not properly fill. If nothing but apologetics and disclaimers are admissable in railway papers, vice and deceit will continue at a premium. I admit that, being answerable in law for your correspondents' letters, you must use a discretion as to their publication, which however will be best governed by viewing the subject as one of interest unaffected by adverse or friendly feeling to parties inculpated. By propitiating Boards and Secretaries, you secure advertisements. By neutralising charges with soft phrases until your correspondents' letters are left nothingless, you risk the loss of numbers from the larger community of shareholders. Your wisdom will be well exercised in striking an exact balance between the two, and by suppressing or publishing as profit may incline. I have made these remarks, from observing, that besides cutting out from Capt. Watts's letter, you pursue a practice, now pretty common with you, of throwing a wet blanket over it, in a note. It would have been better to have rejected the letter altogether. To protect myself from misconstruction I may be permitted to say, that no man, even you, is a greater enemy to trenching upon *private* character, or would go further to put it down, than myself.

To begin with Captain Watts's first objection. Though the making of the Northern Union may not frustrate the formation of a western line, I yet cannot agree with him that it will not "materially forward that of an eastern one;" and under this view it is that I have subscribed to a scheme to which I have several objections:—

1st. I had rather, even at more expense, have contributed to the completion of the Great North of England line; because securing the shortest route would have precluded future competition by adopting it; but that not being accomplished, I think it is the interest of the co-Companies to get to Newcastle in the best way they can.

2ndly. I dislike the present plan as regards the payment of interest out of capital, if it is only from its being an insult to the understanding of all parties acquiescing in such arrangement. Can anything be more absurd than to call 25*l.* from me, that in two years they may pay me back 3*l.* out of it? I confess it lowers my hopes of the affair when I find the projectors resorting to such *legere de main* in support of it.

3rdly. There is something suspicious in the—what they think consolitary—information conveyed in their letter, that 6 per cent. interest is to be given, not on 500,000*l.*, but on any sum the line may cost. What! are we to consider this as announcing that the old game of the North Midland estimates is to be re-played on the Northern Union? Is the payment of the half million to be followed by a glowing Report from Directors, and a levy of upwards of one-third new capital at 20 discount, and that succeeded by reiterated assurances of success—not one of which was founded—and a further overlay upon the old shares at 35 discount? Why have we not some better guarantee, than an estimate from Mr. Stephenson, that the line will be set to work for 500,000*l.*; and some guarantee, too, that so much as that is necessary? Mr. Locke, the other day, engaged to get a work done for the sum he estimated, and it is high time that conditional contracts should accompany estimates, and be advertised and taken before Acts are applied for. Testing Mr. Stephenson's present estimate by that of his North Midland, this branch will cost, as a shrewd proprietor apprehends, not five, but fifteen hundred thousand pounds, and I concur in every word of censure expressed by Captain Watts upon this subject—with this addition, that the speeches and Reports of Directors, from the projection to the opening of the North Midland, were as recklessly made, and to the full as little borne out by the event.

I think if Captain Watts calmly reviews the matter, he will admit that in all reason the minority must be bound by the majority. Were it not so, associated bodies could make no progress—an enemy might creep in and paralyse the best projects. Captain Watts will not say that the opposition of half a dozen should prevail over the wishes of an hundred?

I differ from Captain Watts, that as a shareholder in the North Midland it is not his interest to support an east line to Scotland, and—the direct one not being to be had, though I think it might be—to support the *proposed* line, provided it can be made for a sum not exceeding 500,000*l.* less the two years interest they ought not to pay. Surely, if we can get the Edinburgh traffic along the North Midland—no matter how—no exertion to accomplish it should be spared; it is, in fact, our forlorn hope; succeed or perish—since the work now doing upon the line is not paying three per cent. I yet hope, therefore, to hear of Captain Watts' adhesion to this certainly imperfect plan, upon the principle I have adopted it, which is not from any partiality I have towards it as a scheme of itself, but as the best means in my power of securing a larger sum by risking a smaller—"a herring to catch a whale." But interest should not be paid out of capital, and we should know something more of the sufficiency of the estimate; for if it is to be a dear line, we had better remain as we are.

A RAILWAY SHAREHOLDER.

[We should gladly give the above, were it but out of respect to an old correspondent of this journal. The part which affects ourselves we think it will be time enough to reply to, when our intelligent correspondent can show that the best mode of refuting an opponent's statements is to apply offensive epithets to his personal conduct, or to impute unworthy motives to his official acts. When our correspondents do us the favour to state *facts*, however much they may touch "Boards and Secretaries," neither fear nor favour has led nor shall lead us to suppress them; but we need scarcely say that abusive language is not only no proof of improper conduct on the part of the person to whom it is applied, but in general affords a pretty fair presumption that he is blameless.—ED. R. T.]

FOUR-WHEELED AND SIX-WHEELED ENGINES.

To the Editor of the Railway Times.

SIR,—I have been a regular reader of the letters which have appeared in the *Railway Times*, from various writers, on the subject of the respective qualities of four and of six-wheeled locomotive engines. Many of the arguments that have been advanced have already been replied to, and on the whole the superiority of the six-wheeled engine seems to have been established. But there are various points which appear to me to admit of further correction and elucidation; and as the subject is of great importance, both to the proprietors of railways and the public, I propose in this letter freely to remark on what has appeared from time to time in your journal, as well as in the *Times* newspaper.

The first letter requiring notice appeared in the *Railway Times* on the 16th of October last, page 1098.

The writer, after showing, with the aid of a diagram, that "the weight of the train will have a tendency to lift the front wheels off the rails," proceeds to point out a mode by which "every jerk of the train will have the effect of pressing the front wheels closer to the rails." He appears to have mistaken the centre of the axle for the fulcrum of the bent lever through which the front wheels may be jerked off the rails, by a power applied at the present point of attachment with the tender. The true fulcrum is the point of contact of the hind wheels and the rails; his martingale would consequently reduce the lifting effect of "the weight of the train" to about one-half of what it would be with the common attachments. But this plan of reducing the amount of one evil, introduces another of no less serious a nature.

The martingale and bracket would then have a tendency to lift the front wheels of the tender off the rails.

In the *Railway Times* for October 23rd, page 1123, a correspondent says, that "an engine of Mr. Bury's build costs about 1,350*l.*, while a six-wheeled engine, constructed by Sharpe and Roberts of Manchester, costs from 1,800*l.* upward." Messrs. Sharpe, Roberts, and Co.'s price for a six-wheeled engine with 12-inch cylinders (which I believe was the original size of most of the engines on the London and Birmingham Railway) has not for a *long* time past been more than 1,340*l.* The error may have arisen from mistaking the price of a Great Western engine for that of one of the narrow gauge.

In the *Railway Times* of the same date, page 1123, another writer says, "I think it will appear that the safest form of engine cannot be settled by any arbitrary rules, but that the peculiarities of the road on which it is to be used must greatly determine the question at issue." By the peculiarities of the road, I presume he means the nature of its curves.

Now there are no curves on railways of smaller radius than those in *sidings*, hence any engine that will pass a *siding* freely, and none other would be used, would traverse the most sinuous railway.

Again, he says, "the difference between four-wheeled engines and six-wheeled engines is not confined merely to the number of wheels. Both the weight and the length of the engines vary in a very great degree; in both these particulars the six-wheeled engine exceeds the other by upwards of 50 *per cent.*"

Since the appearance of the letter alluded to, I have obtained returns from five different railways of the lengths and weights (including in the latter water, coke, and one man,) of four-wheeled engines (many of them of Mr. Bury's make, and all of them on his plan) from which I find that those engines are generally a little longer than the *six-wheeled*, and that the latter is from 25 to 30 per cent. and not 50 per cent. as the writer states, heavier than the former of equal power.

He also says, "Even among six-wheeled engines a vast difference exists, namely, whether the driving wheels have or have not flanches on their inner edge."

I believe there are very few engines in use without flanches on all their wheels, and where any such are used there can be no valid reason for their being without flanches, for if the curves required more than the ordinary difference betwixt the gauge of the wheels and that of the rails, this could be obtained by narrowing the gauge of the centre pair of wheels, or by widening the gauge of the rails in the curves.

He further says, "It must be quite obvious to every one that any body of the parallelogram form moving in curved lines, must be more easily moved in proportion to its shortness."

With engines of the same length and weight in curves, the tendency to go off the rails moving at a given speed is in an inverse proportion to the distance between the points of contact of the extreme wheels with the rails; hence in such curves the four-wheeled engine is more liable than the six-wheeled to fly off the rails.

Again, he says, "To avoid the difficulty which arises from this great increase of length, the gauge of the wheels is made much smaller than the gauge of the rails."

I am in possession of the gauges used on many railways for fixing the engine wheels on their axles, among which there is not one that is more than three quarters of an inch narrower than the gauge of the line; one of them is only half an inch, and another only three-eighths narrower.

I believe there are no curves on a well-constructed railway, that require even three-eighths of an inch of difference between the gauge of the wheels and that of the road, except in sidings, and the reasons for making a difference of three quarters of an inch are, that through the effect of the conical form of the tire the flanches may be kept out of contact with the rail as much as may be; and that the tire by a little lateral play on the rails, may last longer, and keep its form better than it would with less lateral traverse.

Again, "The increased weight and length of six-wheeled engines render them particularly liable to fracture the axles." "And, accordingly, experience has proved that the number of accidents from broken axles has been very considerable with six-wheeled engines."

With reference to the greater number of crank axles broken by the six than the four-wheeled engines, this may be ascribed partly to the much greater number of the former engines in use, but principally to the defective formation of their crank axles; and this defective formation is now in a great measure abandoned.

Again, "The whole of the six wheels are scarcely ever actually in contact with the rails at any one moment." If the writer uses the word "contact" in its ordinary sense, he must be in error, unless he refers to a railway in worse condition than any with which I am acquainted.

Again he says, "the number of four-wheeled engines at present employed is very large." Although the number of four-wheeled engines employed may be "very large," it is but small compared with the number of six-wheeled engines in use.

The writer says, "Not one single accident has ever been traced to any failure of the machinery; and the only accident which has been alleged to have arisen from this peculiar form of engine which would not have happened with any other engine in the same circumstance, is the recent occurrence on the Brighton Railway."

The statement in the former part of this paragraph will appear a very bold one, to persons who have had much practice in the working of four-wheeled engines.

The latter part of the paragraph exhibits a strangely defective memory on the part of the writer. Without adverting to a number of cases in this part of the country, where accidents arose from the use of four-wheeled engines, the frightful calamity on the Eastern Counties' Railway, about twelve months ago, took place through the use of a four-wheeled engine, and was quite as much spoken of in this neighbourhood at that time as the Brighton case has been recently.

The same writer in a letter of the 30th October, page 1136, says, "The boiler of a four-wheeled engine does not require to be raised, in order to give room for the eccentric gear." This is quite correct, but although the eccentrics do not require that the boiler in a four-wheeled engine as made by Mr. Bury, should be raised to clear them, the cranks do require it to be raised from three to four inches higher than the boiler of a six-wheeled engine, on account of the cylinders being put several inches nearer together in the four than in the six-wheeled engine. The additional pair of wheels and axles, springs, brasses, and framing, necessary to convert a four into a six-wheeled engine, and which according to the same writer add 50 per cent. to its weight, are placed entirely below the centre of gravity of the four-wheeled engine. From these causes the centre of gravity is much lower in the six than in the four-wheeled engine.

Another writer in the *Railway Times* for October 30th, page 1138, speaking of six-wheeled engines, with *inside* framing, on the Great Western Railway, says, "But not having been found to answer, have been totally discontinued." Three at least of that class of engines are now employed on the Great Western Railway; and if engines with inside framing possess advantages on any railway, they must do so in an especial degree on the Great Western, on account of its wide gauge.

I am, Sir, your humble servant,
MECHANICUS.

Manchester, Dec. 1, 1841.

FOUR-WHEELED AND SIX-WHEELED ENGINES.

To the Editor of the Railway Times.

SIR,—Since I last wrote, I have come in contact with parties familiar with some of the comparative cases I gave of the working of four and six-wheeled engines. In the case No. I. of the *Liverpool*, two are said to have been killed on the spot, and two died afterwards; I only stated one of each. In No. 50, I had been inadvertently misinformed as to some of its details; the parties were upon the engine, and part of a house was knocked down through not being able (in time) to bring up at the great speed they had been running at. You will perceive the difference is not less favourable for six-wheeled engines than was represented in my last; however, should any of your correspondents point out the above discrepancies, you will have an explanation ready, and can give either of the following in lieu of No. 50. One of the Y. & N. M. engines ran over two cows and kept on the rails. One of the L. & M. goods trains, with two six-wheeled engines, came into violent collision with a coal train at the top of the Whiston incline, breaking up four or five of the coal waggons. The goods engines both kept the rails, and none of the enginemen or firemen were injured. From so many examples of this nature, showing the superiority of six-wheeled engines over those of four wheels, both in keeping on the rails and in protecting the enginemen and passengers, where under similar circumstances four-wheeled engines generally go off the rails, and tumble over. I think a judgment may readily be formed.

I am, Sir, your obedient servant,
JOHN GRAY.

P.S. After writing the above, I resolved to wait the arrival of your last number to see if any other observations seemed to be required. At page 1255, in the centre column, line 7, for "best" read *worst*, and a little lower down, for "although decided" read although *denied*; at page 1257, for "the L. & M." at No. 54, read the L. & B.; and at 54, for "commenced lifting," read commenced *slipping*. J. G.

Hull, 7th December, 1841.

FOUR-WHEELED ENGINES—HINTS TO RAILWAY DIRECTORS.

To the Editor of the Railway Times.

SIR,—We have had a strong debate, and still at this present time a very warm discussion is going on as to the comparative safety of four-wheeled or six-wheeled engines. Now, Sir, permit me to ask whether six wheels to carriages would not also give a further security to passengers or travellers on railways. I am aware that the carriages on the Great Western line have six wheels, but it is not less true that the carriages on almost all other railways have only four wheels. It is not my intention to occupy your columns with the pros and cons, the additional expense, the wear and tear, the traction, the difficulties on curves, &c. &c.; these points I leave to the skilful, to Directors, to engineers; my stand is on the abstract question of *safety to the public*.

An axle-tree or wheel breaking in case of a six-wheeled carriage, probably would not be attended with any serious consequences; but a like accident happening to a carriage having only four wheels, would probably be attended with very serious consequences. It is true that a certain degree of support would in such a case be afforded by the *draw-bar*, but this would be of a very uncertain and doubtful nature. Persons at all acquainted with the construction and parts of a railway carriage know that, independent of the draw-bar, there are chains on each side of the draw-bar, which are hooked together, with the view of keeping the train of carriages united in case a draw-bar should give way or break. These chains (on lines where they are used) are permitted to hang loose, and therefore are entirely useless in case of accident to wheel or axletree. I would therefore suggest that these chains be so fixed to the carriages that when hooked together they would act as a support to either carriage, in case a wheel or axle-tree should break, and thus prevent the direful consequences of a carriage coming in contact with rail or road at a high velocity. It is a poor argument to say, that such accidents do not occur, and therefore precaution is unnecessary—neither would such an argument be strictly true.

It will not be here out of place to remark that no means of communication have yet been adopted between the guard and engine-driver during the progress of a train. I am of opinion that a bell fixed on the engine, having attached to it a cord which should pass along the top of the carriages to the seat of the guard, would be of important service in case of need. This simple and cheap contrivance or plan would in time give place to some more efficacious invention. I know that several plans have been suggested, but nothing has been adopted, and in the meantime the plain and naked truth is, that the guard at present has no means, no power, of certainly and speedily giving notice to the engine-driver to stop the train.

I would here beg to say a few words upon the danger of engines and carriages running off the rails. Unfortunately, instances of such events are not wanting; fortunately, such instances have not occurred upon high embankments. None will be so bold as to deny the possibility of a train running off the rails on a very high embankment (say 70 to 100 feet high), or the further chance of falling down such a terrific declivity. It is frightful to think, only of the consequences—it would indeed be frightful to contemplate the effects of such a disaster.

Surely then some extra precaution should be taken in all such places:—1st. A reduced speed in traversing such embankments. 2nd. A mound or wall of soil, sand, or chalk, as the case may be, on each side, sufficient to arrest the progress or overturn the engine, before getting off or over the embankment. 3rd. As on high embankments, there is seldom room or space sufficient for the last provision, beams of wood might be placed on each side, and so secured as to prevent the engine running off the embankment in case of getting off the rails. It may be urged that this would be a heavy additional expense; be it so—if the public will have absence of danger and the greatest safety, they must also be willing to be taxed and pay for it.

There are in this wide world many timid persons, I might say, prudent persons, who are not desirous of being whirled along at the rate of 30 miles an hour—persons too to whom an hour more or less is not important. I think it worthy the consideration of Railway Directors to deliberate whether it might not be wise to conciliate this class of travellers by appointing one slow train daily, viz. 15 or 16 miles an hour.

One more recommendation, and I have done for the present. Railway carriages, in a general way, are destined to contain six persons in each division; this is the general rule, although there are exceptions. The suggestion I would throw out is, to contrive certain divisions in some carriages so as to enable two ladies to travel together without being liable to have the privacy of their part of the carriage broken in upon by strangers.

A RAILWAY PROPRIETOR.

RAILWAY COMMUNICATION WITH SCOTLAND.

To the Editor of the Railway Times.

SIR,—I cannot tell in what rank of life your correspondent, "Viator," moves, but judging from the style of his writing, my expectations do not soar very high! I reply, however, because I wish to call the attention of all speculators in railways to the childish nature of the defence set up by "Viator," and to show (if we are to judge by *his* style) upon how small a tenure of probable profit the western line of communication hangs. He may call me a "mendicant," because I call attention to many far severer sufferers than myself, in lines contiguous to the Midland Counties' Railway, as long as he pleases; but since he accuses me of "misrepresentation," I must call upon him, or rather upon some other person less virulent than himself, to prove this, begging him to recollect that a good cause never requires to be bolstered up by abuse. What then have I misrepresented? As long as there is a port at Liverpool, so long will a vast number of passengers take that route to Glasgow, in preference to any railway communication whatever. There is no misrepresentation in this. The average cost of railways in England is about 36,000*l.* a mile! This also is no misrepresentation. From Lancaster to Carlisle the road is extremely difficult, and those who have visited the Lakes, will be able to form some kind of idea of the expense of a railway traversing this district, and I have therefore *asked*, if one can be constructed at 40,000*l.* a mile? Is this misrepresentation? The Birmingham and Derby line, throughout which there are but few cuttings or embankments, cost 22,000*l.* a mile, but on the one proposed to Carlisle there are some unrivalled in magnitude, with tunnels 1¼ mile long, and numerous viaducts of immense height; yet the temperate "Viator" says, that *as* honest and UNERRING engineers estimate the cost at less than 16,000*l.* a mile, I am writing "usual misrepresentations," and he defies me to prove it otherwise. *Confiteor*, Mr. Editor,—*confiteor*, if the engineers are *indeed unerring;* but, alas! "there's the rub;" and, with no feeling of disrespect to Mr. Locke, engineers are unluckily proverbial for estimating at about half the real cost, though the London and Birmingham, Great Western, and others, have been made at about *three times* their first estimate! and the Midland Counties' Railway, which cost 27,000*l.* a mile, was, when first thought of, estimated at 10,000*l.* or 11,000*l.* Whether a like fate will befal the Lancaster and Carlisle, I cannot of course tell; but I have repeatedly heard it stated, and that by men of business in Liverpool, that it would, from first to last, cost not less than 50,000*l.* a mile.

There is to my mind a degree of grossness in endeavouring to impose upon the public, by the diminutive estimate of only 16,000*l.* a mile, which has the effect of counteracting the best efforts of that party, and I must confess that I put more reliance upon Mr. Robert Stephenson than I do upon most other engineers, and in this I think that a great many persons will be of like mind. There is a fine kind of flowery metaphor about the "seared remains of York Minster, and a viaduct," which may do for picturesque readers, and a malediction upon *all railways on the eastern side*, which is either very absurd or very dishonest. It is true that being constructed generally at double the estimates made by *unerring engineers*, they have not hitherto been profitable, but connecting as they do such places as Newcastle, York, Leeds, Sheffield, Nottingham, Leicester, &c. &c. with London and Birmingham, I *think* the public feel their benefit in no small degree, but if these are called *curses because* a portion of this same public having bitterly purchased experience by such costly constructions, are not willing to put faith in *unerring* estimates of a railway through mountain and valley, at 16,000*l.* a mile, then I must say that dishonest is not too strong a word to apply. The only point that remains is my remark that the facilities of reaching Edinburgh, would be greater by the eastern than by the western line. I was not so much alluding to the actual distance to be travelled over, as to the circumstance that numerous timid passengers, especially females, have a great aversion to tunnels from 1½ to 1¾ miles long, and to viaducts from 100 to 230 feet high, which will be the case on the western side, whilst on the other there will be nothing of any importance either in length or height, and consequently the latter will, I venture to say, be generally preferred, although a few miles longer from London. An accident in a tunnel a mile and a half long, particularly if it happened midway, would be very disagreeable, and a slip over a viaduct 230 feet high would be anything but pleasant. For these reasons the public are likely to prefer the eastern route. I only desire to caution parties from risking their money until they are *thoroughly satisfied of the veracity of the estimates*. The Report of the Commissioners does not in the slightest degree affect these arguments. I myself would take shares instantly in this line, but I know the country well, its difficult character, its abrupt mountains and valleys, and I am hitherto convinced, as every other traveller must be, that any estimate so *minute* as 16,000*l.* a mile is as shameful as it is ridiculous. I do not say that I am right, but merely that this is my humble opinion, and I have had some experience in railway matters; so let "Viator" vomit forth what he will, I feel sure that many will give me credit for not wilfully making any mis-statements.

I am, Sir, your most obedient servant,

AN "INTERESTED" SUBSCRIBER.

GOVERNMENT INSPECTION OF RAILWAYS—BRIGHTON, GREAT WESTERN, ETC., RAILWAYS.

To the Editor of the Railway Times.

SIR,—I have often been at a loss to make out, or in any way understand, of what real use the Government interference has been in regard to railways. The formal examination of these works prior to opening, has, almost in every instance of late, proved to be a complete farce, and if the public rely on the statements put forth by such authorities as Sir F. Smith, there has lately been sufficient evidence to show how sadly they have been duped.

The tumble in upon the Brighton line, I should conceive of all others was such as upon proper examination could not but be predicted by any competent and unbiased authority.

The precipitous slopes of the Chalk cutting are really frightful, and if after the continued wet season we have just had, and I fear are now only in the midst of, a severe frost should set in, the consequences, upon the breaking up, are really awful to contemplate.

Picture to yourself the present state of the Croydon line, and its liability to engulph those who may be hardy enough to venture upon it. But the danger here may be averted. The fall or slip when it

Digitized by Google

advances lies at an angle, almost of repose, but in the fearful abyss on the Brighton line it will more nearly resemble the swallowing up by an earthquake. The paragraph I have just read in your number of the 4th instant, relating to the stoppage of the traffic on the Gosport branch of the South-Western Railway in consequence of a slip of clay in the cutting near Fareham tunnel, is another reason, if any were wanting, why the most vigilant and most stringent rules should be enforced for the common safety.

I came from town on Tuesday last, by the quarter past ten a.m. train, by the Great Western Railway, and instead of reaching Bath a few minutes past two, it was nearly four when we arrived at the station. This delay was partly owing to the heavy train, which ultimately required two engines to draw it, but principally owing to the state of the road. At Maidenhend the engine of an up train got off the line, and was so placed as to interrupt our progress downwards.

After the detention, however, of about a quarter of an hour, we got forward. Later in our journey, and in a deep cutting, we came to a stand-still near to a station (the name of which I do not recollect), and upon inquiry why we so remained, we were given to understand, that, being so much behind time, we must stop until the next up-train had passed, there being but one line of rails passable, in consequence of very extensive slips which had occurred in a cutting not far distant, covering over the rails of the up line to a considerable extent. Here we were detained full half an hour, and on our proceeding cautiously forward, we soon had occular demonstration of the cause, and I am quite certain I do not exaggerate when I state, that a hill, to the extent of four or five acres, was seen moving down gently towards us. Men and horses were buried knee deep in the slush, and thus employed exerting, every nerve, to keep at least one line clear. Some of the embankments, one particularly, were in a dreadful state; how it is held together I know not. And all this at the commencement of a winter! What the consequences may be before the end, heaven only knows.

I should hope, however, that the death of a fellow-creature will not lie at the door of those whose province it is to guard against so lamentable a calamity by timely and prudent caution. Does the Board of Trade know the real state of the Great Western line throughout? If not, I hope this may rouse them from their lethargy. I call upon you, as a public journalist, to see into the truth of this statement; judge for yourself, and corroborate the same, or repudiate it as a foul libel.

This is not all; for at Bristol there is a large stone arch across the Avon, considerably more than 100 feet span, belonging I believe to the Exeter line, in such a state I should conceive as to render it exceedingly dangerous to suffer engines to travel over it. The timbering upon which the arch is constructed is still standing, otherwise the whole fabric would long ere now have tumbled into the river. The stones, which appear of a hard kind, are many of them crushed to splinters.

These surely must be a grand defect or blunder somewhere to cause all this. In my opinion, the arch is too flat for its size, and the lateral thrust has consequently been too great for the strength of the material to withstand. There appears no defect in the workmanship; it looks well and neat, as far I can judge.

But is it not part of the duty of the Board of Trade to condemn such an edifice as this, to prevent the certain consequences which must inevitably follow any attempt at removing the temporary framing underneath. I am quite certain the wind cannot blow them away, as in a similar case some time since at Maidehead; they are evidently pinched too hard by the masonry above, so much so as to cause in some of the horizontal timbers a considerable curvature downwards. If this were not so, I am quite certain the floods a few days since would have floated them away.

The frequency of such failures, as this evidently is, is a matter of far too serious import to railway prodrietors to allow of their being repeated with impunity. I am a railway proprietor myself, and I feel sensibly the consequences which such ill-judged and ill-advised matters as these entail upon our interests, but the fault is mainly our own. Secretaries, Directors and Engineers get so leagued together that though one is committed to the faults of the other, amongst them the proprietors are made to pay the piper while *they* dance.

For the present I have done.

Yours, &c.,

VINCIT VERITAS.

Bath, December 7, 1841.

GLASGOW AND GREENOCK RAILWAY.

To the Editor of the Railway Times.

SIR,—Two or three letters have lately appeared in your paper calculated, as they were, no doubt, intended to injure this line in the estimation of those who will not take the trouble to inquire for themselves.

As a shareholder, I have watched the traffic with anxiety, and although by no means brilliant, it is very good for a commencement, and promises better things. I find that the half-year's receipts up to the present time average 1,000*l.* a week, and as only two weeks remain to complete the time, we may safely put down the revenue at 25,500*l.* The line has cost 600,000*l.*, *not double* the original capital of 530,000*l.* as stated by "Dividend." Of this 200,000*l.* is loan, which requires 10,000*l.* a year as interest, or 5,000*l.* for the half-year. The working expenses should not, for such a line, exceed 900*l.* a mile per annum; and many similar lines are worked still cheaper: while this has the advantage of being closed on Sunday, having only half the expense of the Glasgow and Paisley portion to pay for, and of having no local rates and taxes. On these data then the half-year's expenses will be 10,125*l.*, which, added to the interest on loans, and deducted from the gross proceeds, will leave 10,375*l.* to pay interest on 400,000*l.* or 5 per cent., and a balance. The next or winter half-year will not net beyond 4 per cent., making an average of 4½ per cent. for the first twelvemonth. Most new railways, however, increase their receipts the second year at least 50 per cent., and none are more likely to do this than the Greenock, which has had a very severe competition to resist, and is only just surmounting it. The increase, moreover, does not increase expenses in the same ratio. We may therefore safely look for 7 per cent. and a gradually increasing dividend afterwards, and as there never can be a competing line, we have good reason to hold fast to our first opinion, and not quail even under the ill-natured pens of "Nauticus" and "Dividend." The former I believe to be what he signs himself. He evidently knows nothing of railways, as he talks of the Directors' quarterly "statements." It is of course "gall and wormwood" to him to see the railway carrying the trade away from the devoted river, and to find that the Directors are prepared to reduce their freights to secure it. No doubt "Nauticus" feels the reduction. If it is true, as reported, that the Greenock merchandise traffic is carried on, as on our Leeds and Manchester line, by means of passenger trains, the Company must at their present rates be reaping a large profit. These are now higher than on many English lines, and might still be reduced. A ton of goods ought not to cost more than 2s. from Glasgow to Greenock. I am ignorant at what figure the boats can convey it. Were not the general meeting so near I might be tempted to expose more of the misstatements of your mischievous correspondents, who, having themselves no pecuniary interest in the line, only seek to enjoy the morbid pleasure of injuring their neighbours' property. We shall, however, soon know all, and then it will be seen how far my views are correct. In the mean time the prospects I consider flattering, and as such I shall hold firmly.

Your obedient servant,

A LANCASHIRE SHAREHOLDER.

Manchester, November 24.

GLASGOW AND GREENOCK RAILWAY.

To the Editor of the Railway Times.

SIR,—In "Greenockian's" second letter he endeavours to open the eyes of the shareholders to the fact that they are only to expect a dividend of 7½ per cent. instead of 10 or 12 per cent. as promised in the prospectus. I am certain when it is taken into consideration that the estimated cost of the whole line was 400,000*l.*, and that the Company were empowered by their first Act to borrow 133,000*l.*, and that in 1841 they obtained an Act of Parliament to create new shares to the extent of 100,000*l.*, making a total of 633,000*l.*, to which there is likewise to be added 140,000*l.*, paid by the Glasgow and Ayrshire Railway Company for completing the joint line between Glasgow and Paisley—thus bringing up the capital to 773,000*l.*, any shareholder who expects to receive even such a dividend as 7½ per cent. will be grievously disappointed. "Greenockian" evidently is endeavouring to throw dust in the eyes of the shareholders, and in his zeal to fight the battles of his friends, the Directors, he only exposes their mismanagement. Most fervently may they exclaim "save me from my friends."

As to any augmentation of business in goods or passengers, that is all very well in perspective. The whole question is this, has the Greenock and Glasgow Railway Company had the conveyance of goods and passengers to the anticipated extent, and have they expended no more than that anticipated traffic would cover? If so, it is all well, but I am rather afraid that in the eager struggle for personal aggrandisement, the true interests of the shareholders, have been forgotten, and that they have endeavovred to make the railway a source of grievance to very many, who otherwise would have been its warmest supporters.

I am, your obedient servant,

DIVIDEND.

Greenock, 20th November, 1841.

INSPECTORS ON RAILWAYS—NORTH MIDLAND RAILWAY.

To the Editor of the Railway Times.

SIR,—From a constant and almost daily traveller by railway a few remarks will not be considered irrelevant, as proceeding from one whose nerves are not of the strongest, but whose eyes and observation are always on the alert.

I have noticed on the North Midland Railway an officer whose duty very efficiently contributes to the security and comfort of the traveller, and the constant attention of all subordinates. This officer, whom I believe they term Inspector, is constantly moving on the line, and sees that every man is at his post, and efficient; and an irregularity cannot occur but in a few hours, at the farthest it is reported and remedied.

His province is to supervise the works and the servants, and as his movements are uncertain, he is expected at every point momentarily, and makes his appearance without previous intimation, at all hours, so that in fact, as "the cat can never be considered away, the mice do not find a moment for play." At the far end of this railway, near Leeds, where there are so many junctions, and consequently so many points'-men required, this officer gives very great and satisfactory security, and if the same regulation were observed on other railways, I think we should hear of much fewer accidents; and the expense is trifling in comparison with the comfort and security it purchases. The Inspector moving constantly with the train, hears the observations, complaints, and suggestions of the most intelligent of the travellers, and if anything is to be learnt, he soon sifts the grain from the husks, and rejects what is worthless, while he improves upon what is valuable.

The general tenor of your correspondence is to promote the pecuniary interest of the shareholders, while few touch upon the comfort and safety of travellers, which, if well understood, is the best promotive of the interest of all parties concerned.

I am, Sir, your constant reader,

VIATOR.

PLAN FOR CONNECTING AND DISCONNECTING LOCOMOTIVE ENGINES.

Specification of Patent of Peter Kendall for an Improved method or methods of Connecting and Disconnecting Locomotive Engines and Railway Carriages. Dated, 17th April, 1841.

Fig. 1.

Fig. 5.

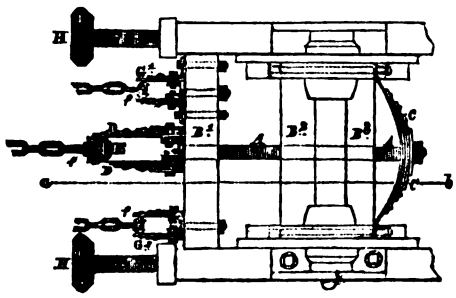

Fig. 3.

Fig. 4.

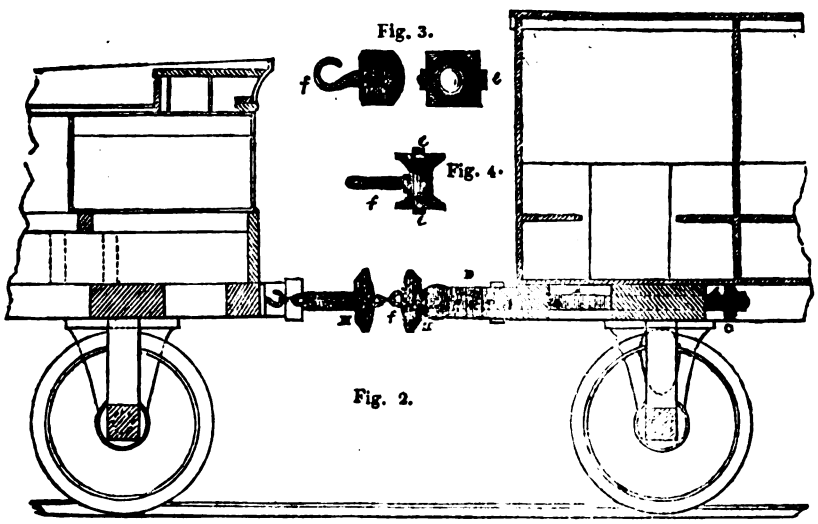

Fig. 2.

FIGURE 1, represents a plan of part of a railway carriage with the newly invented additions, which I propose shall be made thereto, for the purpose of more readily connecting and disconnecting the same from any locomotive engine or other carriage to which it may be attached; and, figure 2, is a sectional view of figure 1 through the line *a b*, and also of part of a tender, supposed to be attached thereto in front. A is a rod or pole which passes under the carriage through the centre of the cross pieces B^1, B^2, and B^3, of the framework, moving freely in the orifices provided for the purpose. The inner extremity of this pole is secured to and presses against the centre of a bowspring C, which is attached by its two ends to the back of the crosspiece B^3, immediately behind the axle of the front pair of wheels. The other, or outer extremity of the pole, is armed with two flat, flexible, and tapering spring grippers arms D D. The bow-spring C, and the spring grippers D D, may each be made either of different pieces of strong steel plate, connected together after the ordinary manner of coach springs, and as shown in the accompanying drawings, or in one piece of sufficient strength and flexibility. E is a coupling boss, of the form shown in the separate plan and side view figure 3, from the square sides of which project two short pins or axles *e e*, which take into two holes in the outer ends of the spring grippers D D, and by which it is held firmly there as long as it is pulled in a line directly parallel with the said spring grippers. The hook *f*, at the end of the boss, serves to connect it by a chain (which may be of any length found in practice most suitable) to the rear of the engine, or tender, or other carriage in front. G^1 G^2 are two smaller pairs of spring grippers, one at each side of the centre spring grippers D D, and of like construction, excepting only that they are not attached to moveable poles but firmly secured to the front crosspiece B, (either in the manner represented in G^1 or in that represented in G^2,) and which smaller grippers grasp or carry two auxiliary coupling bosses of the same description, and secured in the same way as the principal boss before described. Instead of the coupling bosses being of the form represented in figure 3, they may be of that shown in figure 4, or of any other equally adapted to the purpose. The centre spring grippers (D D) must always be of such length only that when the buffers H H are driven home, they shall not protrude beyond them, and the smaller grippers must of course protrude in a proportionally less degree. Each carriage in a train is to be provided with a set of these grippers and coupling bosses. The effect of this method of connection is as follows :—

As long as all the carriages in a train remain in the same line of traction, or no further deviation rrom a straight line takes place than occurs in the worst cases of curvature or deviation known upon railways (excepting always termini and stations), the coupling bosses will remain firmly secured within their respective spring grippers, but when it is desired to disconnect a locomotive engine from a train—as, for example, on its arrival at a terminus —there should be a short line of rails laid down, at an angle more or less acute with the main line, so that, on the engine passing off to that line, it shall, by such act of divergence, pull the coupling bosses out of their state of parallelism with the cheeks of the respective spring grippers, whereby they will be instantly set free, and the engine be detached from all the carriages behind. In like manner, when it is desired to detach any number of carriages in a train, all that is necessary is to pull the coupling bosses by which they are connected with the rest out of the line of parallelism with the cheeks of their respective spring grippers (to effect which a very slight force will suffice), when the separation will be instantly effected. If the engine should run off the line, the coupling bosses will equally lose their hold in an instant, in consequence of the angular pull thereby given to them, and the danger of its dragging any of the carriages off the train after it will be thus wholly avoided. To expedite the introduction of the coupling bosses within their respective spring grippers, there should be attached to the carriage, by means of a chain, and close to each pair of grippers, an expander of a wedge form, as represented in fig. 5, and of corresponding size, by the introduction of which between them they may be instantly separated to the extent required.

I claim the method, or methods, hereinbefore described and explained, by the drawings hereunto annexed, of connecting and disconnecting locomotive engines and railway carriages, however the mechanical details thereof may be immaterially varied or modified, and whether one, two, or more sets of coupling bosses and spring grippers are made use of for the purpose.

LONDON AND BIRMINGHAM AND GREAT WESTERN RAILWAYS.

To the Editor of the Railway Times.

SIR,—Will you oblige me by giving insertion to the annexed comparison between the receipts of the London and Birmingham and Great Western Railways for the months of September and November in the present year :—

LONDON AND BIRMINGHAM RAILWAY.

September 4	£19,217	3	2
„ 11	18,135	17	11
„ 18	18,370	9	1
„ 25	17,447	5	10
Total	£73,170	16	0
November 7	£14,511	12	0
„ 14	13,706	10	0
„ 21	13,951	15	8
„ 28	12,987	18	5
Total	£55,157	16	1

GREAT WESTERN RAILWAY.

September 4	£14,844	16	2
„ 11	14,501	13	9
„ 18	14,725	19	4
„ 25	14,286	9	5
	£58,358	18	8
Excess of London and Birmingham	14,811	17	4
Total	£73,170	16	0
November 7	£11,377	14	1
„ 14	10,753	11	5
„ 21	9,888	17	5
„ 28	9,829	8	11
	£41,849	11	10
Excess of London and Birmingham	13,310	14	9
Total	£55,157	16	1

Now, in every controversy that I have seen on the return which the traffic of the Great Western is likely to yield for the capital expended on it, one circumstance has been invariably relied on by the opponents of the line, and strangely enough acquiesced in by its advocates, viz., that the line is a pleasure, or in other words a summer, line.

To test the accuracy of this assumption, I have made the above comparison, by which it appears that whereas the excess of the receipts of the London and Birmingham, over those of the Great Western for the month of September, was 14,811*l.* 17*s.* 4d., the corresponding excess for the month of November was only 13,310*l.* 13*s.* 2d., exhibiting consequently on the approach of winter, a diminution in the traffic of the London and Birmingham, greater than the corresponding diminution in the traffic of the Great Western by the sum of 1,501*l.* 4*s.* 2d.

Nor do I see how the opponents of the Great Western line can object to the fairness of this test. Regarded as a pleasure line, everything contributed to depress the returns of the Great Western during the month of November. The Court was not at Windsor, and the weather was such as to deter every one who travelled only for pleasure from putting his head out of doors. I have no doubt a similar comparison for the present month will strengthen my conclusion, and prove that whatever advantages belong to the Great Western Railway as a summer line, its winter resources are proportionably as great as those of any railway yet constructed.

A GREAT WESTERN PROPRIETOR.

Temple, 4th December.

PARIS AND ROUEN RAILWAY.

We have already published an abstract of the Report recently submitted to the Lancashire proprietors, and made some observations upon certain portions of it, but for the sake of future reference we now at the earliest opportunity print the document entire:—

REPORT.

In making their Report to the English shareholders of the Paris and Rouen Railway, the English Directors think it better to refer to the state in which matters stood when they last met the proprietors in this town, on the 22nd July of last year. The Chambers of the French legislature had then voted the law authorising the construction of the railway, which law only waited the signature of the King of the French, previous to which, however, it was felt expedient to ascertain whether its terms were such as rendered its acceptance by the English shareholders desirable. Some modifications which the law sustained in its passage through the French legislative Chambers were then discussed, and acquiesced in by the English shareholders, and the royal sanction was in due course given.

The statement which had, up to that time, been submitted to the English shareholders, both as to the cost of the railway and its probable revenue, was such as had induced a ready subscription for its shares. It appeared from the Report of Mr. Locke, who is by law the appointed Engineer-in-Chief of the Company, that the cost both of constructing and equipping the line (eighty miles in length) would be about 1,600,010*l.*; that from the best information which could then be obtained, the land would cost 150,000*l.*; and that, allowing for legal and engineering expenses, for the payment of interest during the period of construction, for all charges of Direction, and for all other contingencies which unavoidably occur in such undertakings, the whole expenditure would be amply met by the capital then provided of 2,000,000*l.* sterling.

The English Directors deem it to be important on this occasion to refer thus briefly to the aspect of things when the English shareholders accepted the terms of the law; and the Directors adopt this course in order to represent the gratifying fact that, up to the present time, when three fourths of the land is purchased—nearly all the works contracted for and in operation—the whole of the rails and chains needful to complete the line also contracted for, as well as the whole of the engines necessary to work it when completed, still there is nothing to excite a doubt of the sufficiency of the capital, or to give rise to the slightest apprehension that its amount of 2,000,000*l.* will be exceeded.

At a general assembly of the proprietors which was held at Paris eight days after the meeting above referred to, the law authorising the construction of the railway was unanimously accepted. At the same meeting, Mr. Reed, who had been so efficient as Secretary to the London and South-Western Railway Company, was appointed one of the Directors at the Board in Paris—there to reside and to devote the whole of his valuable services to the concerns of the Company. Subsequent political events slightly retarded the operations of the Company: but in the course of the autumn, the surveys necessary for the production of detailed plans of the land required and the works proposed were prosecuted with all that energy which the Engineer of the Company is known to possess. From time to time the English Directors were advised by their French colleagues of the progress of the works, and in the early part of last month they determined on visiting France and inspecting them, with a view of reporting to the shareholders the result of that inspection. It is for the purpose of making the shareholders acquainted with that result, that this meeting is called.

Having proceeded to Paris, and received from the French Directors and officers of the Company the most unreserved explanations upon all those matters which relate to in door operations, the English Directors were accompanied by the Engineer-in Chief and the Secretary of the Company on an inspection of the works. Leaving Paris, they proceeded to the Bridge of Beyzons, which is in course of construction across the Seine, and which is not very far from the junction with St. Germain Railway. This bridge is of 10 arches of 100 feet span each, and all the piers (which are of stone) are already built up to the level of the springing of the arches; the timber work for the upper structure is also preparing, and a great number of workmen are engaged in constructing the towing path and other contingent works. From this bridge the embankment extends nearly a mile to the cutting at Hooille, which is also about a mile long, and the embankment then continues to the river at Maisons, where another large bridge is in progress. These bridges, and the earthwork between them, constitute the most important part of the whole work. The cutting at Hooille has been delayed for the want of the land, but it is now in active progress; several of the under bridges in the adjoining embankment are built: at each end of the cutting the earth is being removed, and the whole of this work is proceeding with great energy. The Maisons Bridge, like that of Beyzons, has all the piers ready for receiving the arches, and centres are placed in one arch for throwing over the ribs of timber which are to carry the railway. Tanks for preserving the timber are built, and every preparation made for prosecuting simultaneously all the various parts of the work. A little beyond the bridge the line enters a cutting from 8 to 12 feet deep, which continues for a considerable distance into the Forest of St. Germain. In this cutting, and close to Maisons, a three-arch bridge is built, at which point the station for Maisons is fixed. On the west of the St. Germain Forest, and in the neighbourhood of Poissey, the work is not heavy, but it is already commenced in several places. From Poissey to Mantes, about 20 miles, the work is under contract, but there is not yet much work done: the heaviest portion is at the town of Mantes, which was commenced on the day the Directors passed through. About five miles west of Mantes is the great tunnel of Rolleboise, where considerable progress has been made both in the driftways and in the excavations at each end. A large retaining wall has been built at the east end; and at the west end, which is near to the village of Bonnieres, a bridge across the turnpike road is now in course of construction. To this point, about 40 miles from Paris, the works are under contracts. The tunnels at Venables were next visited. They are in a very advanced state. The easternmost tunnel is a mile long. By walking through the driftway from end to end, an opportunity was afforded of seeing the strata. There is another tunnel at this place 400 yards long, where the driftway is already completed, and the open cutting between the two is proceeding. Both tunnels are through chalk—perfectly dry, and easily worked. The works are very slight between this place and Le Manvir, where a bridge, similar to those before mentioned, is building across the Seine, but the piers there are not placed in the river. The same may be said of the bridge at Oissel, which is a few miles nearer to Rouen. Near to this latter bridge, the tunnel at Tourville, about five hundred yards long, is being cased with brickwork, the driftway being already completed. At all the tunnels the brickwork is started. The line from Oissel to Rouen was not let at the time of this inspection, but it has since that time been contracted for on reasonable terms.

Mr. Locke, who is present, will inform you that the works thus visited form a very large proportion of the whole—that those which remain uncontracted for are of a very light character; and it is confidently expected that the contracts for them will be concluded within a month from the present time. The English Directors believe therefore that they are warranted in conveying to the shareholders their full conviction, that the cost of the entire work is, within a very narrow margin, defined and certain. It may here be observed, that with the exception of one bridge, the whole of these works are let to two English contractors of known respectability, and capital, viz.: Mr. William Mackenzie and Mr. Thomas Brassey, who, in addition to the guarantee which is afforded by their character and their property, give positive security for the due execution of the works within a prescribed time. These gentlemen leave also in the hands of the Company 5 per cent. of the value of the work done, that is to say, they receive only 95*l.* for every 100*l.* certified as being due to them by the Engineer of the Company, the remaining 5*l.* being retained as a security for the final and substantial completion, to be paid to them after the opening of the railway. Moreover, Mr. Mackenzie and Mr. Brassey having, from their own observation, become convinced of the advantages which must ultimately arise to the shareholders on this line, have arranged with the Directors to invest this 5 per cent. in 1,700 shares of the Company, such shares to be handed over to them instead of money, at the period when otherwise that money would become payable to them, and in the meantime to be held in trust for them by the Directors.

The Directors cannot quit this part of their Report without adverting again to the position of the Company, in respect to the work when the last meeting of the shareholders was held. It will be recollected by those who were present on that occasion, that Mr. Locke, with his usual prudence, declared, with respect to the estimates, that "the only difficulty he felt concerning them arose from his not knowing the value of French labour," and to this it may be added, that the Directors had in common with Mr. Locke some doubts whether the experience of English workmen could be combined with those of France, and especially whether the two classes of labourers, French and English, could agree so to act together as to prosecute the works with that expedition which in England is required in railway undertakings. All apprehension of difficulty on this subject is now at an end. It is true, that in the competition for contracts the English contractors have, by reason of their greater experience, and consequently increased ability to appreciate such works, been much lower in their tenders than the French contractors, but so far as the workmen are concerned, nothing can be more satisfactory. Not only do the French labourers work harmoniously with the comparatively small number of Englishmen, whom the contractors have felt it necessary to send over to France, in order to show how works of this sort are conducted, but in some of the operations, particularly in the formation of tunnels, the French workmen are not satisfied unless they are associated with Englishmen.

In the previous part of this Report it is stated that three-fourths of the land is purchased, and it is fully expected that within three months from the present time the whole of the land will be in the possession of the Company. Those who are acquainted with the minute subdivision of property in France, and the immense number of proprietors with whom the Company would therefore have to deal, were not without fear that these circumstances would impede the operations of the Company, and present almost innumerable instances of that extortion to which Railway Companies have been subjected by landed proprietors in England. But this has not been the case. The French law requires that various forms shall be complied with, local inquiries made, and positive proof adduced that the land is really required for a work which has been declared by the legislature to be one of public usefulness. The compliance with these forms involves delay, but it does not occasion much expense. Appeals to juries are not frequent, nor are those appeals attended with anything like the same expense as in England. There are few large landed proprietors, and those few do not generally ask unreasonable terms from the Company.

The rails and chains are all contracted for. The iron is of excellent quality, and, although it is much dearer than in England, the cost does not exceed the estimate.

Far the greater part of the engines used on the few French railways already constructed, have been made in England; the efforts of the French manufactures of locomotive engines having hitherto been unsuccessful. The Directors felt it right therefore to entertain a proposition made to them by an English party, who offered to establish themselves as a Company at Rouen, and there to build, according to plans and drawings approved by Mr. Locke, all the engines required by the Company at a stipulated price. By this means the import duty and the heavy expense of freight from England are avoided. The Directors, acting under the advice of their engineer, have contracted with this Company, and the engines are now in course of construction at Rouen. The concern is under the management of Mr. Allcard, known to many present as formerly one of the engineers on the Liverpool and Manchester and Grand Junction Railways, and of Mr. Buddicom, who, until he went to France expressly for this purpose, was the manager of the locomotive department on the Grand Junction Railway.

The works are contracted to be finished at various periods,—the latest on the 1st of March, 1843, little more than fifteen months from the present time: and there is no doubt that the line may be opened as early in the spring of that year as circumstances render desirable.

As to the traffic, the English Directors have little to add to the statements formerly made. The very careful statistical report originally prepared by Mr. Reed, aided by Mr. Chaplin, showed that the present passenger and parcel traffic would alone, at French railway prices, produce 305,000*l.* per annum. The quantity of goods carried by land, as well as by water, is immense. This railroad has one terminus in the capital of France, and the other in the greatest manufacturing district of the kingdom, stretching towards the most important commercial port, and holding out facilities for transport to nearly four millions of inhabitants. It must be borne in mind, that of the capital of two millions sterling, the French government lend 560,000*l.*, at 3 per cent. interest, repayable in thirty equal annual payments, the repayment commencing in July, 1848. Placing, therefore, the interest on the 560,000*l.* as part of the current expenses of working the line, the profit will have to be divided upon a capital of 1,440 000*l.* only, a sum unprecedently small for 80 miles of railway. Nor is it expected that the cost of maintaining or working this line will be large. The works, with the exception of the tunnels, and the bridges across the Seine, are of an unusually light character, and the nature of the material is everywhere of the very best description. With the exception of the article of coke, all other expenses of working the line will be small, it being found on all the lines hitherto made in France, and on the continent generally, that the number of passengers per train is much greater than in England; and it is almost unnecessary to add that on this, more than on anything else, depends the actual cost to the Company of conveying passengers, and consequently the degree of profit.

The English Directors cannot give a greater proof of their confidence in the success of the line, than by the statement of the fact, that they now hold more shares than they have done at any former period.

As respects the financial position of the Company, the English Directors have to state that although there is in hand nearly 400,000*l.*, yet the rapidity with which the works are now carrying on, in order to their completion by the specified time, makes it imperative that the expenditure be large also at very early periods. The 560,000*l.* which is lent by the Government will not be advanced until the whole 1,440,000*l.* raised in shares is fully paid up; the last of the calls to make up this 1,440,000*l.* cannot be made before the month of October next, leaving only a very short time to obtain from the Government, and to expend, the remaining sum of 560,000*l.* It is evident that to incur any delay in opening the line, by suffering arrears of calls to remain unpaid, would be inconsistent with the best interests of the concern. The English Directors feel it, therefore, to be their duty to press for the punctual payment of all calls: they hope they may be spared the necessity of resorting to the power given them by the law for enforcing payment of calls in a concern which promises such great advantages at so early a period; but they deem it to be their duty at once to state their determination not to suffer the concern to sustain damage by any delay in the payment of the subscribed capital. It may here be added that the calls on the shares held in France are promptly paid. Having now set forth the facts and the opinions which are the result of their late visit to France, it remains only for the English Directors to add that they were treated with the most entire frankness and cordiality by their French colleagues, with whose diligent attention and economical administration the English Directors were highly gratified.

JOHN MOSS.
CHARLES LAWRENCE.
JOHN EASTHOPE.
W. CHAPLIN.

Gas a Substitute for Coke.—A correspondent of the *Mechanics' Magazine*, in a communication on the employment of gas as a substitute for coke in locomotive engines, asks—Might not gas be used with great advantage to heat the water? Jets of gas might be burnt in the tubes of a boiler, no sparks or cinders would then annoy the passengers, or ignite the goods in the trains; the fire could be raised instantaneously, and be regulated with the greatest nicety; it would require much less attention, and, I belive, be more economical. Gas is condensed and made portable, and these holders might be carried in lieu of coke; so far as raising the steam is concerned, gas would be far superior to coke, and to stationary engines, I am convinced, it might be applied in lieu of coal with advantage.

VIÆ PER ANGLIAM FERRO STRATÆ.

Under this title* some Oxford wag has been indulging in a good humoured quiz, at the expense of railways. A few extracts from his *brochure* may amuse some of our readers. In lack, we suppose, of a more classical motto (though to a gentleman of his punning propensities we should imagine that antiquity might easily have been pressed into the service), the writer commences with a couplet from Oliver Goldsmith's *Deserted Village*:—

"But times are altered, trade's unfeeling *train*
Usurp [s?] the land, and dispossess the swain!"

After duly invoking the "*Musæ Tartareæ*," (patronesses of poetry, called into existence for the nonce), the author proceeds to deplore the downfall of the ancient "vehicles:"—

"Tempus erat quondam cum tuta petorrita nobis
Præbebantque viam, portmanteaus atque trahebant
Coachæ quadrijugæ, sed nunc stabula alta, tabernæ,
Aurigæ, Guardi, perierunt turpiter omnes.
Cornua cuncta silent, nam "Salisbury, Mountain, and Co., Sir,"†
Jack Adamumque diu celebrem, una eademque tenet nox.
Postchaises etiam virides flavosque tenebræ
Obscurant atræ: Vosque O clarissima roadi
Ornamenta diu (defuncta cadavera quorum
Quis vidit?) juvenes antiqui, nomine Postboys
Extinctum genus, ah, perilstis morte supremâ!"

After a passing allusion to Mr. Edward Baines, the late liberal M.P. for Leeds, to whom it appears a large portion of the famous Chat Moss does, or did, belong, he proceeds to describe "the *monstrum horrendum*,"—a railway train:—

"Jam nova per nostros grassatur bellua campos,
Monstrum horrendum, informe engine, cui sæpe caminus
Evomit infernos ignes, et luce coruscat.
Interdumque atram prorumpit ad æthera nubem
Turbine fumantem piceo, et candente favillâ.
Non mihi si linguæ centum essent dicere possem,
Quali cum sonitu quantisque ululatibus arva
Impleat et campos, cum diro sibilet ore."

The train is now about to start:—

"Ascendunt currus baggos ticketumque gerentes
Quisque manu cautâ, quod nulli amittere fas est,‡
Nam si forte cadat sublatum flamine venti,
Quanquam per divos jurares atque parentes,
Officer iratus nil crederet, inde Policemen
Cærulei apparent, qui te committere quaddo
Et bis viginti solidis multare minantur.
Non hîc Havannæ placidos emittere fumos
Audendum est; argilla brevis, teretesque cigarri
Hinc absunt, densi satis unâ nube vaporis
Omnia miscentur."

The regulation (a very proper one by the way) against the admission of dogs into the carriages, is then playfully alluded to, and the train proceeds:—

"Jamque iterum campana sonat, suspiria fundens
Machina progreditur, Zephyri velocior aurâ.
Mobilitate viget, viresque acquirit eundo.
Tarda quidem primo, sed mox impulsa vapore
Ingrediturque solo, et caput inter tunnela condit.
Illam Vulcano Neptuni filia prolem
Extremam Gasso Cætchoquoque sororem
Progenuit; mirâ vel Wattius arte Jacobus
Fecit, et insani nervos animumque leonis
Imposuit stomacho monstri, quod clara propago
Brunelli et Stephani, necnon Dionysius iste
Foverunt almæ nutrices; hunc tamen olim
Perdit amor nummi, cauta et meditata libido.
Nam baculo et scuticâ rabies truculenta mariti
Doctoris quanquam miserandos verberat artus,
Inveniat donec piano tectus asylum.*
Nec misero prodesse in tali tempore quibat
Mudfogii cætus, nec Cabinet Encyclopædy.
Hæc dum narramus citiori machina motu
Arva per et saltus perque intima viscera terræ
Progreditur, passus viginti mille per horam
Tranantur, totidem lapides, totidemque Policemen."

A "Railway Accident," with its attendant horrors, next passes under review, and then we have a gentle reference to some of the Oxford worthies:—

"Hic quoque jamdudum ferro via tecta fuisset
Oxoniæ, si non Vice-Chancellor ipse petition
Proctoresque ambo fecissent, atque senatum
Acriter orassent oblatum expellere billum.
Quo ne Londino juvenes incurrere possent†
Urbi damnosæ, patriosque expendere nummos,
Talorum in jactu, visendis atque theatris.
Sed precor O sapiens Vice-Chancellor accipe miti
Pectore consilium; et si ferrea munera nobis
Hæc iterum Occiduus‡ male gratis offerat Ingens,
Ne pete, "suavis Hyems," avertere flamine sævo
Commoda tanta viæ, Rhedycinæ rursus ab urbe.
Tempus enim juvenum pariter nummosque parentum
Sic minus expendes, statio Stephanæa caballis
Mox deserta foret, plorarent Squeaker et omnes‖
Queis curæ est rapidos juvenes imponere screwis."

The whole concludes with the following equivocal compliment to railways, and (taking the note into account) *not* equivocal compliment to a particular stage coach:—

"Promptior haud esset certè, si tuta fuisset,
Migrandi ratio; quocirca vivite Railroads,
Vivite, at humanam melius curate salutem.
Nam Rivalis¶ adest, et quanquam Costar or Waddell
Adversas vobis metuant producere coaches;
Sunt alii magis audaces, quos commoda vestra
Non tantum afficiunt, nec terrent voce Policemen."

RAILWAY AND MILEAGE DUTIES.

The *Scotsman*, a very ably conducted Edinburgh paper, makes some interesting calculations relative to railway travelling, founded upon the following Parliamentary return, published some time ago:—

"RAILWAYS.

	Mileage.	Composition.
1838.—England	£36,221	£2,749
Scotland	30	570
	£36,251	£3,319
1839.—England	£68,747	£1,501
Scotland	2,091	378
	£70,838	£1,879
1840.—England	£107,081	£ 4
Scotland	5,137	205
	£112,218	£209"

The duty on passengers by railways being one-eighth of a penny per mile, it follows [says our contemporary] that, to produce the sum of 112,218*l.*, the number of passengers must have been—

215,458,560, if each travelled only one mile; or
21,545,856, if each travelled on an average 10 miles; or
10,772,928, if each travelled on an average 20 miles; or
7,181,952, if each travelled on an average 30 miles.

If the composition of 200*l.* represents a corresponding number of passengers, it will add a fraction of 1-560th part to each of the preceding numbers. In Scotland, railway traffic is only beginning; and, even in England, the number of railways will probably be doubled within the next thirty years. If we were to assume that each railway draws its passengers from a mean breadth of fifteen miles on each side of it, it would probably be found that nearly one-third of the population of England is yet without access to this mode of conveyance. Supposing such to be the case, we find that the 10,500,000 of the population who have the use of the railway conveyance furnish the following results:—The aggregate number of miles travelled by all the passengers was nearly equal to twenty times the population. Or, if we assume the mean distance travelled to be twenty miles, the number of passengers will be just equal to the population. It is an important fact that the facilities afforded by this new mode of travelling have had very little effect in reducing the amount of intercourse by stage-coaches. The mileage duty upon stage-coaches in England, in the same years was—

1838	£423,471
1839	393,067
1840	300,744

The difference in the amount for 1838, and that for the two subsequent years does not arise from a diminution in the number of passengers, but chiefly from a reduction made in the rate of duty in 1839, which commenced on the 10th of October, and which Lord Monteagle estimated to amount to 100,000*l.* per annum. If we add this to the produce of the duties for 1840, the amount is 400,700*l.*, which falls short of the produce for 1838 only by one-eighteenth part. The mileage duty on stage-coaches does not afford correct data for estimating the number of passengers; because it is levied not upon the number actually carried, but upon the number they are licensed to carry; and the duty varies from 1d. to 4d. per mile, according to that number. The duty upon a coach carrying from twelve to fifteen passengers is 3d. per mile, whether it has one passenger or fifteen. Taking this as an average, the sum of 423,471*l.* represents a capacity to carry about 300,000,000 passengers one mile; or if we assume the average distance travelled to be twenty miles, it will represent 15,000,000; and further, if we assume the passengers actually carried to be two-thirds of the number for which a licence is taken, it will be 10,000,000. This is for England. It will be seen from the table, that the proportional number for Scotland is about a 13th part.

Roads for Wheeled Carriages in England, 1839.

Streets or roads paved under contracts	2,869 miles
Turnpikes	19,666 ,,
All other highways	96,992 ,,
	119,527 miles.
Rates levied	£1,312,812
Money expended on repairs	1,253,272

Return No. 344 of 1841.

These roads, if we may trust another return, occupy an area of 7,500 square miles, or one-eighth of the whole surface. The length of the English railways actually opened is, we believe, only about 1,400 miles, and yet the passenger thoroughfare upon these 1,400 miles is greater than upon all the turnpikes and highways!

We give to-day, for the first time, the traffic returns of the Sheffield and Manchester Railway, and hope to be able to continue them.

2. *Minus* toll to London and Birmingham 118*l.* 11s. 9d.

3. Main line, 53 miles; Tewkesbury branch, 2.—Total length, 55 miles.

4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone.

8. Receipts include the Northern and Eastern toll, &c. The dividend is from the time of opening.

10. The part between Glasgow and Paisley was made at the joint expense of the Glasgow Paisley and Greenock, and Glasgow Paisley and Ayr Companies, but each Company's receipts in respect of that part are now merged in the general returns of each.

11. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester line, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 114 (83+31.)

13. The 5,231,527*l.* 9s 10d. is the amount actually raised according to latest balance-sheet. The receipts include those derived from the Cheltenham and Exeter branches; the former opened for 18 miles, and the latter for 33. The divisor employed to ascertain the daily receipts per mile is therefore 169½ (118½+18+33.)

15. The 31*l.* 13s. 7d. from goods, &c. is for toll only.

16. Ten per cent. is the maximum dividend allowed by the Company's Act.

17. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. On the quarter shares the dividend is at the rate of 42½ per cent. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

19 The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table.

20. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company.

21. Capital of 993,300*l.* includes new capital for widening the line, &c. The dividend mentioned does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table is exclusive of Brighton and Croydon toll.

22. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount.

23. Including Toll, &c., from Sheffield Company.

24. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

25. The 3,549*l.* 4s. 2d. are the receipts after deducting omnibus charges, and payments to other Companies. The dividend is from the time of opening.

26. The receipts for goods, &c. include, carriages, 24*l.* 18s. 0d.; horses, 49*l.* 11s. 0d.; dogs, 1*l.* 9s. 0d.; parcels, 197*l.* 10s. 10d.; cattle, 49*l.* 9s. 6d.; corn, 7*l.* 19s. 7d.; heavy goods, 44*l.* 0s. 0d.; coal, 160*l.* 6s. 2d. — Total, 931*l.* 4s. 1d. The dividend is from the time of opening.

28. The details of the receipts are as follows:—Passengers, 1,780*l.* 19s. 4½d.; parcels, carriages, horses, and mails, 351*l.* 7s. 0½d.; merchandise, 1,253*l.* 0s. 2d.; minerals, 250*l.* 16s. 4d.; cattle, 55*l.* 16s. 8½d.—Total, 3,781*l.* 19s. 7½d.; including North Midland proportion of Manchester and Leeds traffic, amounting to 101*l.* 0s. 4½d. The dividend includes a sum of 31,786*l.* earned previous to the last half-year.

29. The receipts are after deduction of L. and M. toll.

30. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 26 miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

31. The capital of 533,000*l.* includes that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).

34. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

The Croydon and Greenwich Correspondence.—*The letter forwarded by Mr. Akerman, Secretary to the Greenwich Company, shall be appended to the printed correspondence, which we hope to be able to complete in our next.*

Mr. H. *(Glasgow).—The extract from the* Sun *is very much to the purpose, but at present our space will not allow us to give it. If necessary, it may appear hereafter.*

J. S. K. *recommends us to "have formed an accurate table, representing the amount of weekly receipts necessary to pay thereon a dated amount or per-centages on the shares of all the railway concerns at present in the market. That [he says] of the Blackwall Railway, which appeared in your last, and the preceding number, is a specimen of what I mean. The value of this table to investors would be great." Should leisure serve, we will endeavour to comply with the wish of our correspondent. In the meanwhile we shall be glad to have such tables as any of our numerous intelligent correspondents may have time to draw up.*

Omnibus.—*About the beginning of March next.*

Fair Play.—*We* do *make such a distinction. For example, were we to place under the head of "Coach Accidents" notices of casualties where persons throw themselves before the wheels of a stage coach, and are injured or killed, we should be doing precisely what we condemn in the chroniclers of "Railway Accidents;" but our correspondent will perceive that such is not our practice.*

Atticus.—*There is an old proverb respecting premature boasting which* Atticus *would do well to think of. It strikes us that after all, we shall be found right—not* he. *At any rate, when he writes again we hope he will adopt a somewhat different tone; otherwise we shall not trouble ourselves by noticing, even thus briefly, any more of his lucubrations.*

A Proprietor of both Railways.—*We have reason to believe that the particulars referred to will, ere long, be given officially in a much more correct and comprehensive form than we could venture to promise. In the meantime we would guard a* Proprietor, *and our correspondents generally, against an error into which they seem apt to fall. They argue as if the question stood thus: "If at a certain epoch the state of traffic on the London and Birmingham Railway was so and so, and at a corresponding epoch the traffic of the Great Western was so and so, then the existing traffic of the former will give the traffic of the latter when it shall have been opened for the same length of time,"—and so it would* ceteris paribus. *But in the first place the portions respectively opened in part of the two lines, differed essentially in character; and secondly there was a great apprehension of railway travelling when the Birmingham line was first partially opened, and strong prejudices against it, whereas now the fears have happily been dissipated, and prejudice has been replaced by partiality, so that, to anticipate for all railways the ratio of increase of the Birmingham line (favoured as that railway moreover was by the opening of the eastern lines) is more than the premises warrant.*

We shall answer C. B.'s *question next week.*

A. P.—*Nothing can be done in Parliament before* 1843.

Glasgow New Tontine.—*We regret that our correspondent* Sawney *should have taken so much trouble with a communication which does not fall within our province. We shall preserve the M. S. for him for a week, in case he should have an opportunity of giving the matter publicity elsewhere.*

Fortuna Favet Fortibus.—*There is a difference, however, between fortitude and foot-hardiness, and from what our correspondent divulges of the case, we are inclined to think there is more of the latter quality than the former, in the composition of his client. But it is clear that the* whole *case has not been stated, and therefore we must decline giving advice in the matter. Under any circumstances, we would rather avoid doing so.*

F. *(Bath).—We meant to give our correspondent's communication, but as we find he has sent a copy of it to another publication, we must now decline doing so. He must choose his medium of publication, and adhere to it.*

M. D.—*We quite agree with our correspondent, that the same system of vigilance which is in force on the Birmingham line would, if adopted on other railways, be attended with equally beneficial results; but our correspondent must see that this does not dispose of the question as to four wheeled engines. We gladly, however, join in his recommendation to other Companies to be equally attentive to the issuing of time tables, and the rewarding of meritorious servants.*

A Sufferer.—*The concocter of the scheme is now, we believe, "in the rules" of the Fleet Prison.*

Atmospheric Railway.—*We have to acknowledge the receipt of "A Letter to the Right Hon. the Earl of Ripon, President of the Board of Trade, &c. &c., by James Pim, Treasurer to the Dublin and Kingstown Railway Company." The "Letter" is said to be "printed for private circulation," but we had previously seen the greater part, if not the whole, of it in some of the Irish papers. We may, perhaps, find room for an extract on a future occasion.*

Manchester, Bolton, and Bury Canal Navigation and Railway.—*The traffic for the week ending 25th November, was —Passengers and parcels,* 355*l.* 14*s.* 11*d.*; *Goods and Coal,* 190*l.* 4*s.*; *Total* 545*l.* 18*s.* 11*d.*

Mr. D. R. *(Edinburgh).—The memorial shall be duly attended to next week.*

Mr. Adams's *letter should have appeared in our present number, but the illustrative cuts were not ready in time. It shall be given next week without fail.*

THE RAILWAY TIMES.

SATURDAY, DECEMBER 11, 1841.

We understand that Lieut.-Colonel Sir Frederick Smith has resigned his office of Inspector-General of Railways under the Board of Trade, and that he is succeeded by General (better known as Colonel) Pasley, whose sub-marine efforts have recently been much before the public. Sir Frederick, we learn, passes into a more lucrative appointment.

General Pasley is liable to the same objection as was urged against his predecessor, namely, that practically he can know nothing of railway construction or railway working. We do not see, however, how this is to be avoided, if, as is alleged, the Board of Trade are determined to appoint none but military engineers to this responsible duty. The reason for the rejection of civilians is said to be the difficulty of finding a party whose present or past connection with railways and railway makers would leave him thoroughly independent and impartial. We do not think there is much force in this objection, but at all events we trust there is not to be a frequent change of Inspectors, for it will be satisfactory neither to the Companies nor the public that an officer should retire just as he is beginning to know something of his business, and that a tyro should have to go again over the same ground. If there *must* be Government superintendence of railways, we should be sorry to see it degenerate into the mere means of personal or party favouritism.

We shall by and by, we doubt not, elicit the *whole* of the circumstances connected with the indisposition of the Liverpool and Manchester Railway Board to proceed with *their* section of the junction line between the Liverpool and Leeds Railways. The letter of a "Liverpool Proprietor," upon which we commented last week, has, as we anticipated, brought us two communications on the other side, which we publish elsewhere, and to which we invite the attention of our readers.

If the statements of our present correspondents are to be relied on—and the letters reach us from quarters on which we can place every dependence—the defence of the Liverpool Board, put forth by our correspondent of last week, is much more defective than we had imagined. It will be remembered that one of the principal reasons adduced for the apathy of the Liverpool Board was, the allegation that the estimates of traffic likely to pass over the junction line had been over stated (undesignedly, it was admitted, but overstated nevertheless to a very considerable extent,) by the Manchester and Leeds Company. And what do our readers think was the test applied by the Liverpool Management? Why, that two Canal Companies, to whom the proposed line would form a powerful competitor, were applied to for returns of their through traffic, upon which to base an opinion as to the probable productiveness of the railway! Was there ever *simplicity* equal to this—if indeed the application to the Canal Companies were not made to justify a foregone conclusion? Well may our correspondent say, that "this is really asking a 'friend' for a knife to cut his throat with"!

The Liverpool and Manchester Directors would seem indeed to be extremely ready to pin their faith, *for a time*, to the statements of other Companies. We are told that in the first instance they consented to apply to Parliament for powers to construct the junction, on the strength of a statement made by the Manchester and Leeds Company; and now, having obtained that power, they are seemingly satisfied to leave it in abeyance, because, forsooth, other Companies do not think, or are not inclined to represent, that the junction line would be profitable! Did it not occur to the Directors that it would have been much more satisfactory to all parties concerned, and certainly more creditable to themselves, had they taken means to test the "actual observations" of the Manchester and Leeds Company, by actual observations of their own, and to confirm or correct them, as the case might be? What would be said of the promoters of a railway through a new district of country, who should ask the owners of existing stage-coaches whether the venture was likely to prove productive, and who should act, or pretend to act, upon the counsel thus tendered? As well ask a shop-keeper who enjoys a monopoly of the trade of a district, if it would be prudent and profitable to start a rival and superior establishment next door to his own!

But it would seem that it was not solely by the solicitations of the Manchester and Leeds Company that the Liverpool Directors were induced to apply for Parliamentary powers to construct the connecting line. The Manchester and Bolton Company, we are told by one of our correspondents, were desirous of undertaking a moiety of such line, and it was not until they were alarmed by the demonstrations made in furtherance of that object that the Liverpool Board applied for, and obtained, leave to make the railway, *if they should think proper*. If the fact really be so, we do not think that, coupling the willingness of the Bolton Company to undertake the line, with the *conditional* powers obtained by the Liverpool Company, it is any uncharitable inference to suppose that the Liverpool Management made application to Parliament, *not* with the straightforward purpose of making the line themselves,

Digitized by Google

but with a view of preventing others from making it.

The question then naturally arises, Why should the Liverpool Directors be so hostile to the formation of this short but most important junction? Our Leeds correspondent intimates an answer in the alleged predominance of canal influence at the Board—a solution of the otherwise inexplicable mystery to which we have on former occasions adverted. It appears that a majority of the Liverpool Directors are in favour of the completion of the junction line, although there is a majority of shares opposed to it—a fact easily accounted for from the circumstance that the representative of a canal proprietor, *who has the power of nominating three Directors*—holds more shares than all the other Directors put together! We repeat, with our correspondent, that we do not "impute unworthy motives to the Liverpool Directors, on the contrary," we "admit they are gentlemen of the highest commercial character for honour and integrity, but whilst human nature remains as it is, every day's experience unfortunately shows that self-interest is still the predominating influence in the affairs of life."

The only way in which it appears to us the Liverpool Directors can evince their singleness of purpose, is to give up to others the powers and privileges which Parliament has conferred upon them for the public benefit. One of our correspondents shows clearly enough that the advantage to *them* would certainly not be less than that accruing to the Manchester and Leeds Company, the Managers of which, who are so anxious to push forward the work, have, we presume, credit for being sufficiently awake to the best interests of their constituents. The circumstance referred to by our last week's correspondent, namely that having incurred so much preliminary expense it is prudent in the Liverpool Directors not to give up their powers, can have but little weight, as it appears that scarcely any expense can have been incurred. "No counsel," says our correspondent, "was employed, no witnesses were examined, with the exception of the law clerk, who was one of the deputation" of three persons who attended from Liverpool in support of the bill; under these circumstances a very small cost indeed can have been incurred, and small or large we have no doubt it would readily be reimbursed by the other Companies.

We sincerely trust that the Directors of the Liverpool Company will re-consider this matter, or that the proprietors of that Company will call for some further explanation of their conduct than has hitherto been vouchsafed.

We deprecated in our last the attempt made by the *Globe* newspaper a few days previously, to turn the renewed movement in favour of "Railways for Ireland" into the means of a party attack upon the "Irish Tories." A recent meeting at Cork supplied the text for our contemporary's sneering comments—comments which, however deserved they might have been, or may be, by the *Globe's* opponents at large, were assuredly misapplied to the objects of the meeting referred to, as well as to the parties who honoured it with their presence. We have since seen in a local journal a full account of the proceedings, from which we gather that gentlemen of all parties, and of different religious opinions, met together on this occasion cordially to co-operate in promoting the benefit of their common country. The *Globe's* sneer, therefore, at the "Irish Tories," has missed its mark, and we trust that our contemporary's better judgment will not allow him to repeat it.

The proceedings of the meeting, which the local paper already alluded to says was "most numerous and influential," need not be reported at any length in the present crowded state of our columns. Suffice it to say, that a spirit of unanimity and harmony, rarely witnessed in public assemblies in Ireland, characterised the business of the day. Frequent allusions were made to the advantages which England has derived from the establishment of railways, and it was forcibly argued, that if Ireland wished to retain her present position in her commercial relations with other countries—low as that position unhappily is, and even supposing that she cared nothing for further progress—it was indispensable that she should enjoy the facilities which a well-arranged system of railways would present. The example and experience of England certainly speak trumpet-tongued to the sister Isle, but to limit the benefits which Ireland may fairly look for from a comprehensive scheme of railway communication, to a comparison with those of which Great Britain is daily becoming more and more sensible, is to underrate the advantages which, without any flight of fancy, her best friends anticipate for her. Previous to the introduction of railways, England could boast of an almost perfect system of *road* communication, and moreover was well furnished with canals, whereas Ireland is still all but unprovided with these media of transit. The construction of a railway through a particular district of Ireland would open up resources which have never as yet, through lack of means, been to any extent developed.

The first resolution of the Cork meeting is of a very comprehensive character, namely, "that the progress of social improvements and advancing state of civilization render it impossible for any nation to maintain its position, without a well-managed and extensive system of internal railway communication." This may by some be deemed *too* comprehensive, but we do not imagine that any one will dispute the truth of the second resolution, which contains in few words almost all that can be advanced on the subject. The resolution was this:—

"That in Ireland, above all countries, railways would be of vast advantage. Their construction would afford employment to a large and destitute population; they would give an impulse to trade; would tend to resuscitate our manufactures; would create an intercourse between parts of this country that have now but rarely communication; and would increase the property, and raise the social condition, of the Irish people."

We believe that these propositions are now denied by no one, if ever they were really called in question; for, although there was a diversity of opinion as to the best mode of promoting railways in Ireland—whether by the isolated efforts of "private enterprise" on the one hand, or by a well-digested scheme of public aid on the other,—*all* appear to have agreed in one thing, namely, that the establishment of railways in Ireland would (as the resolution phrases it) afford employment to an impoverished population, and give such an impetus to trade, to commerce, and to social intercourse, as could not fail to promote the prosperity of the people.

At a subsequent stage of the proceedings, a resolution was carried, which places the plans originally promulgated by the Government Commissioners in their true light:—

"That to make this benefit arising from railway communication, general and national, not partial and local, it is the opinion of this meeting that such lines of railway should be first constructed as are most likely to afford the greatest advantage to the whole country; and that no partial scheme ought to meet patronage from Government which would result in the construction of a line in one direction only, to the manifest injury of other districts; but that means should be taken to secure the completion, eventually, of the different lines recommended by the Railway Commissioners."

We have all along contended that nothing short of a general system of railway communication, undertaken, if not simultaneously at least as nearly as possibly so, in different districts of the country, was likely to secure to Ireland the full benefits of an improved scheme of internal communication. Unconnected lines may, nay must, do good to particular districts,—and all praise is due to their spirited promoters,—but to the nation at large the scheme proposed by the Commissioners—namely, of taking good and bad together—is the only one which can be extensively beneficial. We trust that its execution is not far distant.

The meeting resulted in a memorial to his Excellency the Lord Lieutenant, embodying the resolutions above referred to. We are not aware what his Lordship's private opinion may be on this important question, but we would fain believe that the subject of the memorial will not fail to receive the careful and candid attention of those at head quarters. Never was a better opportunity presented of obtaining popularity in Ireland; and although we feel disposed to think that the present Administration is influenced in the discharge of its duties by far higher motives, we shall be glad to find that the occasion was not thrown away.

It would be unpardonable in noticing this meeting not to allude to, and commend as we do most sincerely, the noble offer of Mr. John Dillon Croker, who announced that should the proposed railway pass through his estate he was prepared to give the land *gratuitously!* It affords us additional pleasure to learn, from Mr. Dillon's remarks, that other gentlemen have determined to act in an equally generous spirit, and we trust that their example will not be lost upon Irish landowners generally. If we thought any impression could be made upon the owners of property required for the construction of English railways, we would extend our recommendation, but we fear *they* are incorrigible. We have no doubt that Mr. Dillon and his compatriots will, even in a pecuniary point of view, be no losers by the offer; but it is so rare a circumstance to see in connection with railway claims *present* advantage given up, that their conduct is entitled to the highest praise we can bestow.

The inhabitants of the southern counties of Scotland are beginning to bestir themselves somewhat more than they have recently done, in favour of completing a railway route between the capitals of the two countries. The promoters of the west coast line are at this moment particularly active, the decided part taken by the Grand Junction and other English Companies inciting them to co-operate in bringing the matter formally before Parliament.

At a meeting of the county of Dumfries held last week on the occasion of voting addresses of congratulation on the birth of a Prince, Lieut.-Colonel Graham, who has very laudably distinguished himself from the first agitation to

Digitized by Google

this question, introduced the topic, and succeeded in securing a promise of subscriptions to the amount of 200*l.* for completing a general Parliamentary survey of the whole line from Lancaster to Edinburgh and Glasgow. It was explained that the whole expense of the survey would be about 1,400*l.* Colonel Graham stated that the Railway Companies in the south "have determined to carry the line of communication forward from Lancaster to Carlisle, and to stop there, unless some decided demonstrations are made by the counties and towns of Scotland showing their wish to avail themselves of the advantages offered, and their willingness to co-operate and meet that small quota of the expense of getting a Parliamentary survey which would fall to the share of each." Under such circumstances it would be strange indeed, and withal most injurious to their own interests, if the leading men of the different counties through which the contemplated line would pass, did not at once step forward with pecuniary and personal aid.

It appears that a public meeting is shortly to be held in Lanarkshire to help forward the scheme. We see from the Glasgow papers that at a late meeting of the Town Council, "Mr. LUMSDEN gave notice that he should move that the Council should take into consideration the Report by the Government Commissioners of the railway line of communication between London and Glasgow, and that they should consider the propriety of promoting that line."

ONE of our correspondents characterises the Government inspection of railways prior to their opening as a complete *farce*. How indeed could such so-called inspection be otherwise, when no power is vested in the Inspector-General or in his superiors of the Board of Trade to enforce their decisions—when Companies may, and when at least one Company *has*, set their remonstrances and recommendations at defiance? If official inspection of new railways be required at all, it ought to be conducted with far greater authority than is the case at present. If the Inspector-General should be of opinion that a line ought not to be opened at a particular juncture, he should have the means of carrying out his views, he himself and his employers of course taking the responsibility upon themselves. As the law now stands the Inspector has no choice between suggesting matters which may or may not be carried into effect according to the sentiments or caprice of an Engineer or a Board of Direction, or of silently acquiescing in the decision of those parties that the road is in a fit state to be opened to the public.

For our own parts we maintain that there is no necessity whatever for any preliminary inspection by Government officers. We do not say that some lines or portions of a line have not been opened too soon, but we do say, that should an Engineer or a Board of Management determine to commence operations upon a particular day, it would be by no means a difficult matter to secure the favourable testimony of an Inspector—were he ten times more conversant with such works than any military engineer thrown at once into an office connected with railways can be expected to be. We always looked upon it as a very unfortunate point selected by the late Administration, when they promulgated this scheme of Inspection, as no accident had then occurred (and we believe no accident has since occurred) through the premature opening of a railway. It may be that we are more indebted in this matter to good fortune than to well-digested and properly effective plans; but while there were so many other points respecting which external interference *might have been* useful, we regretted, and still regret, that so much stress should have been laid upon these preliminary inspections. The Board of Trade and the public at large appear to forget that the Managers of Railway Companies have the strongest possible of motives—the motive of self-interest—not to risk an unsafe opening of their several lines. Should *that* motive prove insufficient, or should it be counterbalanced by an anxiety to secure at as early a period as possible a dividend for their constituents, the Board of Trade may rest assured that no inspection however minute, by parties who then perhaps for the first time have seen the undertaking, and must necessarily be ignorant of many local peculiarities, will in the smallest degree effect the object which they profess to have in view. As we have said before, the official agent will be talked into approbation, probably into admiration, of the works—a certificate of completeness will be signed—and the line opened to the public with no further security for their safety than if the representative of the Board of Trade had remained quietly at home, and saved the Companies' officers considerable trouble, and the country something under the head of "travelling expenses."

It is but fair, however, to remind our readers that the experience of certain recently opened lines cannot justly be construed into any imputation upon the fitness of the (late) Inspector General for his office. The unprecedented wetness of the season has deranged the calculations, and disappointed the hopes, of all parties concerned, and it is scarcely to be wondered at that works which one day may have borne the appearance of solidity, should the next have given unequivocal proofs of instability. If comparatively old lines, like the Croydon and Great Western, are exhibiting so deplorably the effects of the present season, it would be strange indeed if undertakings altogether *green* were not subject to similar mishaps.

WE had meant to make some remarks upon the language ascribed to Mr. CRAWSHAY at the Northern and Eastern meeting of last week, in reference to third class passengers; but the observations of a correspondent, and two extracts which we take from respectable Essex journals of yesterday, have saved us the trouble. We must, however, express our unqualified disapprobation of any such mode of managing a railway, as would even permit, much less counsel, the offering of studied insults to *any* class of passengers. It is doubtless much to be lamented, that the accommodation provided for the poorer members of the community should be the means of rendering the superior vehicles less profitable to the Companies, but we see no legitimate or proper remedy for the evil, except to dispatch the third class trains at different hours from the others, and at a slower speed. Certainly Mr. CRAWSHAY'S "chimney-sweep" proposition is not likely to do that Company or Companies generally any good should they have occasion to go again before Parliament.

THE subject of Sunday travelling on railways must long ere this time have become quite distasteful to our readers, and we should not have reverted to it even thus briefly, but that we see there are symptoms of a strong stand being about to be made at the February meeting of the Edinburgh and Glasgow Railway Co. to determine the question so recently canvassed at the Board according to the sentiments of the minority—a minority which it should never be forgotten was headed by two Directors who, to apply their own language to themselves, are notorious "Sabbath-breakers." We wish to put the proprietors fully on their guard, as there can be no doubt that the Sabbatarian party will strain every nerve, knowing well that the example of so influential a body as the Edinburgh and Glasgow Railway Company will have great weight either way with other Scotch Companies.

The well-known Sir ANDREW AGNEW—another *consistent* agitator—has addressed a letter on this subject to the Editor of a religious print published in Glasgow, under the title of the *Scottish Guardian*. Sir ANDREW'S cant about the "national character" is truly sickening, the more especially as by implication the people of England are charged with being profane, immoral, and irreligious. For example, this pious personage, who by the way writes "in the name of the Scottish Lord's-day Society," and who appears to have lost sight of the precept—"Judge not, that ye be not judged," says:—

"If the result of the general meeting of shareholders in the month of February, should be a resolution to run trains on the morning and evening of the Lord's-day, *the guilt will not rest exclusively on the* ENGLISH *shareholders*, who constitute the majority, as the Glasgow newspaper has assumed. On the contrary, there cannot be a doubt *that there are a sufficient number of religious men resident in England to turn the scale*, if the Scottish shareholders are but true *to their national character*. * * *

"As this line of railway will probably be opened before the general meeting in February, its first advertisements must bear the gratifying words, as on the Greenock, Paisley, and Ayr Railways, '*no trains on Sundays.*' Here, then, will be an answer to the memorials and prayers of the Church courts and religious public of all denominations in Scotland, and it will exhibit a tribute inadvertently given by the majority of the Directors *to the national faith*, from the irresistible conviction that Scotland alone would not endure the threatened *profanation*, but that a covert from the general indignation must be sought for under the mantle of the English shareholders." * *

"For this short-lived victory let the grace of thankfulness be vouchsafed. But let not the apparent triumph lull the friends of the sabbath into a relaxation of their efforts; for it must be proclaimed that the General Board of Directors have, by a wrong step, obviously got themselves into a wrong position; and by a vote of false expediency, lost hold of the truest security, namely, *a simple obedience to the letter and spirit of the Fourth Commandment of the moral law.* * * *

"But again, it becomes us to be thankful for the time thus providentially gained."

Sir ANDREW recommends that "good use be made of the interval" between this date and the holding of the general meeting, and we cannot do better than earnestly to echo his words, although *our* definition of the phrase "good use" is widely different from his. It seems that the Directors and proprietors are not to be allowed to pass the inverval in peace, for among other things "the following are respectfully suggested":—

"1st. It is suggested to all Church courts, of all

Digitized by Google

denominations, to send up anew to the Directors their most solemn protests against the contemplated profanation of any one of the twenty-four hours of the Lord's day.

"2nd. To solicit from the Directors a list of their present shareholders, so that all requisite information may be circulated to each. And,

"3rd. That all Church courts, of all denominations in Scotland, should appeal individually to all such Directors and shareholders as may belong to their respective Synods, Presbyteries, Kirk-sessions, and congregations."

We do not believe there is one single person connected with the Company who has not already made up his mind on the question, and our advice therefore is, that throwing Sir ANDREW's threatened circulars into the fire, they stand prepared to *vote*.

WE have been favoured from an official source with a comparative statement, showing upon a small scale the effect of a reduction of railway fares. The line upon which the reduction referred to took place, is the Canterbury and Whitstable, six miles in length. On the 1st of February, 1841, the fares were reduced from 9d. to 6d., and the following is the result:—

	1840.		1841.
February	366	.....	1,087
March	352	.....	1,649
April.....	538	.....	1,932
May	816	.....	2,168
June	1,171	.....	2,945
July	1,407	.....	3,244
August	1,468	.....	3,387
September.....	992	.....	2,921
October.....	1,581	.....	2,781
November.....	697	.....	1,605
Total	£9,388		£23,719

Balance in favour of low fares 14,331*l.*

A MEETING of the officers of the North Midland Railway Company has been held for the purpose of organising a subscription for presenting Mr. PATTESON, the late Secretary, with a piece of plate on his retirement from office, as noticed in our recent numbers. The subscription was limited to half-a-guinea each, and we understand that upwards of 40*l.* has already been raised.

MR. THOMAS WOOD, Secretary to the London and Brighton Railway Company, having (in the words of an official advertisement) "ABSCONDED, has forfeited his situation, and has no further connection with that Company." Many rumours are of course in circulation on the subject, but very little is positively known of the circumstances connected with Mr. WOOD's flight. We understand, however, that there have been no mal-practices as to the shares of the undertaking, so that proprietors may rest perfectly easy on that score; nor, it is believed, is there any defalcation in the Company's accounts. Mr. WOOD's private friends will, it is said, be the principal sufferers. The Directors are, we believe, instituting a rigid inquiry into the case, and under these circumstances we refrain at present from entering into further particulars. It is understood that the salary of the next Secretary will be very materially reduced.

WE learn from the *Glasgow Constitutional*, that a very handsome memorial is about to be presented to Mark Huish, Esq., (now of the Grand Junction Railway), "in token of the admiration and respect in which he was held while connected with the Glasgow, Paisley, and Greenock Railway." We are extremely glad to hear of this. Captain Huish's discharge of the duties of his late office was most exemplary, and now that he has entered upon a more extensive field, wherein his talents will have fuller scope, it is pleasing to find that his past services are duly appreciated. Our contemporary thus describes the memorial:—"It is an elegant silver stand for a clock, the base being in the form of a tripod, richly chased with scrolls of the rose, the thistle, and the shamrock, and the arms of Glasgow, Paisley, and Greenock, with suitable inscriptions engraven thereon. On the plinth are two beautiful modelled figures, representing the goddesses Pomona and Flora, supporting an elaborately chased wreath of silver scrolls and leaves, in the centre of which is a patent lever clock, with a very chaste gold dial—the whole being covered with a glass shade. We have seldom seen a more handsome design altogether; and it does much honour to all concerned."

Since the above was written, we find from the *Greenock Advertiser* of Tuesday last, that on Saturday the Directors of the railway invited Captain Huish to a dinner in the Tontine Hotel of that town, for the purpose of presenting him with the memorial. The Provost, the Sheriff, and the officers of the Company, were the only other guests on the occasion. In presenting Captain Huish with the well-merited testimonial which the shareholders had destined to him, the Chairman expressed the gratification he felt in doing so, as he deemed the compliment richly merited by Captain Huish's general services as their Secretary, and especially by his voluntary exertions before Parliament, and on other occasions, which the strict line of his official duties did not require of him, and which, of course, were the more highly appreciated by the shareholders, as evincing his zeal in their service. At the same time, he expressed a hope that the occasion would impress the servants of the Company generally with the idea that the zealous and faithful discharge of their duties would always be appreciated and rewarded. Captain Huish made an appropriate reply. The following is the inscription on the memorial:—

"Presented by the DIRECTORS of the GLASGOW, PAISLEY, AND GREENOCK RAILWAY COMPANY, and with the concurrence of the General Body of Shareholders,
To MARK HUISH, ESQUIRE,
expressive of their approbation of his faithful and zealous services as their SECRETARY,
during a period of Four Years.
Greenock, 2nd July, 1841."

—o—

THE *Grand Junction* Railway Company officially announced on the 1st instant, that they had "reduced the tonnage rate or toll on cotton and other wool, hides, drugs, and manufactured goods, to 1d. per ton per mile; and on passengers to four-fifths of a penny per passenger per mile." We trust the experiment will prove amply successful.

—o—

THE following paragraph, which is now going the round of the papers, may supply a seasonable hint in more quarters than one:—A passenger in an American steam-boat, a short time since, "brought a suit," in St. Louis, against the captain of the vessel, "for not starting at the hour he advertised," thereby creating a loss to the said passenger through non-punctuality. The case went before a jury, who were so convinced of the justice of the claim that they brought in a verdict for 190 dollars!—no trifling sum for the dilatory captain to pay, as the penalty of his not being a good time-keeper. We should like to see a similar case tried in the "Old Country."

—o—

IT is generally rumoured that some important reforms are about to be made in the management of the Post-office, although their precise character is not specified. Now, therefore, would be the time for the Railway Companies to offer any suggestions that experience may have pointed out.

—o—

WHISHAW'S "RAILWAYS OF GREAT BRITAIN."—Mr. Whishaw has just published a small volume of "Additional Plates," illustrative of his great work on railways. They are admirably executed, and cannot fail to be most interesting. There is an exceedingly curious diagram, showing the highest and lowest prices of shares on six of the principal lines, from their commencement to the close of 1840. Great care and labour must have been expended in preparing it. These additional plates will of course be speedily in the hands of all who possess a copy of the original work—and no railway proprietor ought to be without it.

RAILWAY OFFENCES AND OFFENDERS.

ON Wednesday, a boy aged 14, named Lynnot, was charged on summons, before Mr. Henry, the sitting magistrate at Lambeth-street Police-court, with having thrown a missile at one of the trains of the Eastern Counties' Railway Company, near the Shoreditch terminus. The case was fully made out, and in fact the delinquent partly admitted his guilt. It was explained that this case was brought forward to deter other lads from so dangerous a practice. The punishment awarded, however, does not seem likely to have any great effect; for it having been stated that the prisoner was of good character, and that he "had scarcely eaten or slept" since the charge was made against him, and moreover that his earnings amounted to only 6s. a week, the magistrate thought an "impressive admonition," and the payment of the costs amounting to 2s., would meet the justice of the case, and the prisoner was discharged. Mr. Henry is reported to have remarked, "that the effect of almost any penalty in the present instance would be the sending of the defendant to prison; and however willing he might be to punish an offence such as that complained of—and he knew it to be highly dangerous to life and property—still he felt most reluctant to send a lad, who bore so good a character, to prison." On a similar plea might almost any railway or other offender escape his deserts; and we cannot but think that the magistrate's leniency to the lad was injurious to the public.

We learn from the *Halifax Guardian* that on Sunday night week an accident occurred on the Manchester and Leeds Railway at Luddenden Foot, which narrowly escaped being a fatal one. Three men who work on the line and a fourth who had been drinking with them, madly placed a platelayer's truck on the rails, with the intention of travelling upon it to Sowerby Bridge, though warned by a watchman of the near approach of a luggage train. They had not proceeded far when the train did arrive. The men instantly jumped off the truck and threw it over on the other line. They had not, however, time to clear it ere the engine

Digitized by Google

struck one corner and turned it round, throwing down two of the men, breaking the leg of one man and considerably crushing the thigh and face of the other. The two uninjured men were instantly taken into custody. One of them, named Carter, had been for some time in the service of the Company, and his companion, named Mitchell, had been invited by him to have a ride. They were taken before the Halifax Bench, when ultimately Carter was fined in the highest penalty of 10*l.*, and Mitchell 5*l.* A distress warrant was made out against their goods, and failing a due return, Carter will have *three months imprisonment*, and Mitchell *one*.

Great praise is due to Mr. Higham, the professional gentleman who conducted the case for the Company. One of the magistrates (named Briggs) was of opinion that Mitchell had not "wilfully" caused an obstruction as described in the Act, and maintained his views with a small display of legal knowledge, but with great lack of temper. Mr. Higham referred to a case which he had conducted, (viz. that of the surveyor for Rastrick, tried at York), wherein a party was charged for a misdemeanour in "wilfully" causing an obstruction, where he had only upset some barrows for the purpose of determining a right. The judge had in that case supposed many cases in which the jury would have been justified in finding a verdict of "wilful obstruction," and amongst these he (Mr. Higham) distinctly remembered one. "If," said the judge, "a man was crossing a railroad with a log of wood on his head, and saw a train coming up, from which he could not escape with the wood, and threw down the log in order to save his own life, that would be 'wilfully causing an obstruction,' because the man had no business there." Again, only lately four men had been brought before the Wakefield magistrates (the Rev. E. H. Brooksbank in the Chair) for causing an obstruction on the line by a lurry. Three of them were servants of the Company, and it was proved that the fourth was a poor weaver whom they had invited to aid them. The magistrates said, it was a hard case against him, but he was nevertheless guilty, and they therefore sentenced him to one month's imprisonment and the others to three months each. Ultimately Mr. Higham's firmness prevailed, and the men were convicted as above stated.

Our Halifax contemporary says (and in his concluding remarks we cordially concur):—"The other two men are doing well, and will be brought up, we believe, as soon as they are sufficiently recovered. It will be remembered that this placing of a truck on the line has been already the cause of a dreadful accident on the Birmingham and Derby junction; and as the offence appears to have been committed before on the Manchester and Leeds line, we would suggest to the Directors the propriety of punishing the very next offenders to the uttermost penalty before the Quarter Sessions and not comparatively screening the men under the leniency of a summary conviction by magistrates. The offence, considering that in all cases it perils life, will not be too harshly dealt with even if transportation were the penalty, instead of imprisonment. And all who value life and have a respect for the lives of others, will applaud the determination of the Company's solicitor before the magistrates of this town, rather to carry the offenders in the recent case to the Quarter Sessions than allow the magistrates to dismiss one of them unpunished."

Another offence was committed on the same line the same night, and was adjudicated upon by one of the magistrates who tried the previous case.—James Brickhill, a waggoner belonging to Messrs. Pickford, carriers on the railway, was charged with being drunk on the waggons at the Sowerby Bridge station on Sunday night. Mr. Richardson, head clerk at that station, proved the case; and said that as an accident had happened the same evening, and as Brickhill was in charge of some of the waggons on the train, he had felt it necessary to take the man into custody. He admitted being in liquor, but denied being drunk. He was fined 17*s.*, viz. 5*s.* penalty and 12*s.* expenses.

THE SLIP ON THE CROYDON RAILWAY.

The prevalence of rain has caused the following up of so much loose material down both slopes at the slip in the New Cross cutting that the road is not yet quite clear. No new feature has appeared in the slip itself; the work is still prosecuted with as much vigour as possible, by waggoning out from the bottom and relieving the slopes simultaneously. A few days of moderate weather would be all that could be wished to leave the line in a fair state.

METAL CHECKS FOR RAILWAYS.

To the Editor of the Railway Times.

Sir,—In your paper of Saturday, the 4th inst., I find a letter from Mr. Thomas Riddell, booking clerk at the Joint Railway station, London Bridge, referring to your notice of my system of metal tickets for railways, in which he "informs you that he directed the attention of myself and the Board of Directors of the Croydon Railway, not only to the principle of metal checks but to a machine for registering the same."

As Mr. Riddell arrogates to himself the "principle of metal checks," he probably forgets that they have been used on the Greenwich Railway for nearly three years, and in most places of public amusement for many more.

To the "*principle of metal checks*," therefore, I do not pretend any claim, but, to their peculiar application to railways with numerous stations and different fares; and I could show, if necessary, that so long back as July or August, 1839, I spoke publicly of the particular system to which you referred in your leading article of 27th November, and, one gentleman, to whom I mentioned my plans, drew out in consequence sketches of SEPARATE AND *distinguishing forms and symbols*, (for which he suggested bone in preference to metal,) and which he states, that he explained to Mr. Riddell, who at that period could hardly have similar plans of his own, or he would then have alluded to them. The machine for registering tickets to which Mr. R.'s letter refers has no connection with my system—and although a very ingenious contrivance in itself, is not, I conceive, at all necessary for the purpose to which he proposes its application, as the operation of delivery can be performed much more readily by hand, and an equally efficient, and much simpler check provided by other means. The checks supplied to the Croydon Railway in September, 1840, were plain metal checks, obtained on the recommendation of myself and Mr. C. H. Gregory, the Engineer to whom I had communicated my ideas long before he had heard of Mr. Riddell's machine. I have to apologise for troubling you with an explanation at length, but I feel naturally unwilling that the imputation so coolly thrown out by Mr. Riddell, of my appropriating his ideas, should remain unanswered.

I remain, Sir, your obedient servant,
WILLIAM PULFORD.

GRAND JUNCTION RAILWAY.

To the Editor of the Railway Times.

Sir,—Your correspondent "S. P.," in his efforts to terrify the holders of Great Western stock (of whom I am not one), in endeavouring to establish his position, is pleased to wander in some cases very far from the truth, and I fear his wanderings do not all arise from error.

Had "S. P.'s" statements been professedly matters of opinion, I should have left him to the handling of your other correspondents; but when professing to argue upon facts, the data for which are accessible to all, he should adhere to truth, or suffer in character for wilful mis-statements such as the following:—

"S. P." asserts the expenses of the Grand Junction Railway to be upwards of 2,200*l.* per annum. Let us see.

The gross total of the expenses of that line are stated, in Mr. Moss's tabular view of the cost, &c., to be, for the year ending 30th June, 1841, at the sum of 215,577*l.* This includes interest on loans, amounting to 22,030*l.*; and toll paid to the Manchester and Liverpool Railway, 21,255*l.*: the former sum can form no portion of the expenses; and only so much of the latter as may be equivalent to the fair proportion of expense in maintaining that line—which, comparing the amount of traffic, should be equal to about one-third of the whole, which for the last year was 9,674*l.*, say then 3,225*l.*, the remainder of the toll paid being for use of the road or the capital expended in forming it, making the total net expenses of the railway for the last year 175,517*l.*

The length of the Grand Junction line is 82¾ miles; and the length of the Manchester and Liverpool line 30¼ miles, over the whole of which the Grand Junction traffic passes, making the total length for traffic 113 miles, and consequently the expense 1,553*l.* per mile, instead of upwards of 2,200*l.*, as stated by your veracious correspondent. But even my amount is in excess, because the Chester and Crewe line is now working, the expense of which, except the maintenance of way (still at the date of the last Report in the hands of the contractors), is included in the amount of expenses before stated, and the length of this branch is 21 miles; now, dealing a little in estimates, let us see how the matter may be supposed to stand:—

Net expenses of the Grand Junction as before stated	£172,292
Estimated proportion of maintaining Manchester and Liverpool line, as before	3,225
	£175,517
Add to this the probable expense of maintaining the Chester and Crewe branch, 21 miles, at 250*l.* per mile	5,250
Probable total	£180,767

Length of Grand Junction from Birmingham to the Warrington and Newton Junction	82¾ miles
Length of Manchester and Liverpool line	30¼ „
Length of Chester and Crewe branch	21 „
Total	134 miles

or less than 1,350*l.* per mile, instead of 2,200*l.*, as stated by "S. P."

"S. P." further states the cost of maintaining the Grand Junction to be little more than 100*l.* per mile, or about one-fourth of the probable expense of the Great Western; and this *fact* is even more outrageous than the foregoing, especially when the data were accessible to all, and must be known to "S. P."

The Grand Junction has maintained, hitherto, 82¾ miles of road; the Chester and Crewe branch, at the date of the last Half-yearly Report, not being in the hands of the Company; and the sums paid for maintanance are as follows:—

For the year ending 30th June, 1839	£24,645
For the year ending 30th June, 1840	20,698
For the year ending 30th June, 1841	20,761

being for the last year a fraction more than 250*l.* per mile, instead of little more than 100*l.*, as stated by "S. P."

I leave your readers to judge of the value of estimates made by such a writer, when he is capable of so perverting facts.

I am, Sir, your obedient servant,
J. W.

Liverpool, November 24, 1841.

LIVERPOOL AND MANCHESTER AND MANCHESTER AND LEEDS RAILWAYS.

To the Editor of the Railway Times.

SIR,—The force of your Editorial remarks in the last number of the *Railway Times*, on the letter of "A Liverpool Proprietor," renders any further reply almost unnecessary; but there are one or two questions about this "junction line" which I will take the liberty of asking your correspondent, because, if I mistake not, *he* of all persons will be best able to answer them.

"Is there not at this moment a majority of the Liverpool Board (counting noses) in favour of the junction line being made? And is there not a minority of Directors, but a majority of shares opposed to its formation?" And further, "is there not one Director at that Board, the representative of a 'great man,' nominating himself three Directors, and holding more shares than all the other Directors put together? And is not the same Director the managing agent of a canal navigation, which is the rival of the railway between Liverpool and Manchester, and places eastward?"

Far be it from me to impute unworthy motives to the Liverpool Directors; on the contrary, I admit they are gentlemen of the highest commercial character for honour and integrity; but whilst human nature remains as it is, every day's experience unfortunately shows that self-interest is still the predominating influence in the affairs of life

As to the alleged insufficiency of traffic, I consider this question to be put forward merely as a "bugbear." For how do you think the statements of traffic taken by the Leeds Company, *from actual observation*, were tested by the Liverpool Company? Why, by getting from the Rochdale Canal Company, and the Leeds and Liverpool Canal Company, returns of their through traffic. Yes, returns from Companies to whom this "junction line" would be a powerful competitor. This is really asking a "friend" for a knife to cut his throat with; and "friends" of all people are much too shrewd to be caught thus.

The Liverpool Directors must think very highly of the public credulity, if they suppose that their alleged insufficiency of traffic will be accepted as the *real* grounds for their not making their portion of this railway.

For my own part, I rather blame the Leeds Directors for having waited so long, and this is the general feeling amongst their influential proprietors. I believe, however, they have now determined to proceed early next spring in making their part down to Hunt's Bank, and by uniting with the Irwell Navigation render themselves independent of the Liverpool Company altogether.

I am, Sir, your obedient servant,
A LEEDS SHAREHOLDER.

LIVERPOOL AND MANCHESTER AND MANCHESTER AND LEEDS RAILWAYS.

To the Editor of the Railway Times.

SIR,—The large manufacturing population lying north-east of Manchester are much indebted to you for the just and sensible rebuke contained in the last two numbers of the *Railway Times*, relative to the conduct pursued by the Liverpool and Manchester Directors, in not carrying out the powers granted to them by Parliament for making their part of the junction line with the Manchester and Leeds Railway. Much inconvenience has been sustained by the traders of the important towns of Oldham, Heywood, Rochdale, Littleborough, Todmorden, Burnley, Hebden Bridge, Keighley, Mytholmroyd, Sowerby Bridge and Ripponden, all of which towns are intimately connected with Liverpool as consumers of cotton to an extent far greater than any other district in Lancashire or Yorkshire. Beyond Sowerby Bridge you commence with the woollen and worsted manufacturing towns of Halifax, Elland, Brighouse, Huddersfield, Bradford, Cleckheaton, Dewsbury, Horbury, Ossett, Wakefield and Leeds, all of which towns draw large supplies from Liverpool of the wool imported from Australia, Peru, and other parts of the globe, in addition to an immense weight of dye woods, oils, gums, barks, indigo, with a large number of other articles only to be found in the import lists or prices current. Admitting the truth of my position of the towns enumerated consuming the imposts of Liverpool, the inference is strong that an immense number of passengers are constantly moving backwards and forwards to this great emporium of commerce, to whom the value of time is of the greatest consequence. The Manchester and Leeds Railway Company have effected much in this respect; but it too frequently happens (nor can it be avoided, with the greatest desire on the part of both Companies to accommodate the public), that the Manchester and Leeds is too late for the Liverpool train, and *vice versa* the Liverpool train is too late for the Manchester and Leeds, thereby causing a delay of two or three hours, until the next train, to the merchant and manufacturer, independent of the nuisance and danger of being *galloped* in a *crowded omnibus*, through the *crowded streets* of Manchester.

The question now forces itself, why this junction is not made, both parties having obtained the Parliamentary powers. In justice to the Directors of the Manchester and Leeds line, it must be admitted they have, from the commencement of obtaining their Act of Parliament, shown a *bonâ fide* intention of executing their part of the junction, as expressed in the several Reports of that Company, in purchasing the property necessary for the formation of the line to the extent of 45,000*l.*, as also in using all legitimate means to urge forward the Liverpool Directors, by furnishing statements of the traffic between the towns enumerated and that port —which traffic, as a shareholder in both lines, I hesitate not to say is much in favour of the Liverpool line. Thus for instance, the traffic from Liverpool would pass over the maximum or entire length of their line, viz., 31 miles; whereas on the Manchester and Leeds line there would be a minimum of 7 miles to Oldham, 9 to Heywood, 10 to Rochdale, 13 to Littleborough, 20 to Todmorden and Burnley, 23 to Hebden Bridge and Keighley, 25 to Mytholmroyd, and 28 to Sowerby Bridge and Ripponden, thus ending the cotton-consuming district without reaching the same mileage as every bag or bale of cotton must pass over on the Liverpool line. Nor would the average length travelled over the woollen and worsted districts reach the length of 31 miles, the distance which every passenger and every ton of goods must be conveyed over the Liverpool line. The advantage, therefore, is so obviously in their favour, that their disinclination to make their part of the junction line will require much stronger reasons than appear in a letter from a "Liverpool Proprietor" in your number of the 4th December, to be justified in the mind of the public.

With regard to the reason assigned by the "Liverpool Proprietor," for the application to Parliament on the part of the Liverpool and Manchester Company for a Bill to make the junction line, namely, that they were "solicited by the Manchester and Leeds Company," I at once admit the fact, but the public must be further informed that there existed other reasons besides the "*solicitations*" of the Manchester and Leeds Company to make them apply to Parliament at that PARTICULAR time, namely, that the Manchester, Bolton, and Bury Company (after several interviews with the Liverpool and Manchester Directors to effect an amicable arrangement for a toll over the former line without success) gave notices to Parliament of their intention to apply for powers to make that part of the junction line themselves. This so alarmed the Liverpool and Manchester Directors, that the TOLL QUESTION with the Bolton and Bury was soon adjusted, with a condition that the Liverpool and Manchester Company *alone* should obtain powers to make the line "*if they shall think proper.*" Now, as to the expenses in Parliament said to be incurred in obtaining this conditional Bill, the deputation from Liverpool consisted of three persons only: no counsel was employed, no witnesses were examined, with the exception of the law clerk, who was one of the deputation; this should not have involved any *very great expense*.

He omits to state what was perfectly known to the Directors of the Liverpool and Manchester Company that previously to such "unfavourable times," property to the amount of 45,000*l.* was purchased; the Manchester and Leeds Company thereby proving that they were at that time ready and anxious to carry out THEIR PART of the arrangement, and further by reference to their last Report in September, the "Liverpool Proprietor" will find the express determination to complete the purchase of the whole of the land required for the formation of that part of the junction line appertaining to them with a view to form a junction with the old river navigation, a conveyance little if any inferior as applicable to the transmission of goods.

The importance of a continuous conveyance for goods has been fully appreciated by the canal interest, a junction line having been made through the town of Manchester during the last two years, by the authority of an Act obtained since the passing of the Manchester and Leeds Act of Incorporation. As a further proof of the apparent blindness of the Liverpool Directors to their own interests, I need only state the fact, that by the formation of the junction line, there would be a continuous railway from the important town and neighbourhood of Leeds to Liverpool of only 92 miles, against a canal conveyance of 128 miles.

I am, Sir, your most obedient servant,
A PROPRIETOR IN BOTH COMPANIES.

RAILWAY CHARGES — GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—Your Editorial strictures in Saturday's journal, on the correspondence between Mr. Tagart and the Great Western Railway Secretary, furnishes such a further instance of the mode in which railway carriage is conducted, as to induce me to supply you with a brief narrative of facts, together with a copy of the official (*attempted*) justification, as to an occurrence that took place some months since.

Being then temporarily resident at Windsor, I was desirous of sending down some wine from my own cellar, as is my usual practice when from home, and inquired at the office at the Paddington terminus, whether the railway treated packages of empty bottles as other carriers did,—free of charge, —and was answered affirmatively. A six-bottle basket was therefore sent down, and charged one shilling; the same sum was demanded, and, in my absence, paid on its return with the empty bottles, the same or following day, to my residence in town. I remonstrated, and quoted a different practice of very recent date, with respect to the same basket, by coach to and from Brighton. This remonstrance produced a very courteous but equally unsatisfactory reply, of which the enclosed is a copy.

My rejoinder was to the effect, that as railways were beyond the reach of reasonable competition, the public must, until the legislature provided a remedy against this arbitrary conduct, take their own means of redress. This I adopted, by afterwards buying my wine at Windsor, instead of having it sent down to me by railway, and by bringing my family on my return home, to town by coach.

So that the railway folks by squeezing out of me one shilling, lost from 15s. to 20s. This is, at present, the only remedy the public possess against railway tyranny; and they cannot, for their own benefit, exercise that remedy too freely.

I am, Sir, yours, &c.
A TRAVELLER.

29th Nov. 1841.

(COPY.)

Great Western Railway, London Terminus, Paddington, 5th August, 1841.

SIR,—I am directed by Mr. Saunders to acknowledge the receipt of your letter of the 31st instant, [ult.] respecting a charge of *one shilling* upon empty bottles, and in reply beg to state, that *empty bottles* bear so close an affinity in point of weight to

Digitized by Google

full ones, that the Directors do not include them in "free packages."

This will account for the charge complained of.

I am, Sir, your obedient Servant,

(Signed) W. CAMPBELL.

[We give insertion to the above, principally to show how ready the public are to find fault with the arrangements of Railway Companies. We really cannot see that our correspondent has any just cause for complaint or crimination, unless he can prove that the Great Western Company can carry empty bottles without any cost to themselves. It is not disputed that the charge for the full bottles was reasonable; and just as much trouble and expense were caused to the Railway Company by the carriage of the empty ones. The custom of the stage-coaches has nothing to do with the case. If common coach usages are to be revived, we shall have the *fee* system in full vigour as in the palmy days of the "road." We do not dwell upon the representation alleged to have been made at the terminus of the railway as to free carriage of empty bottles, because, without at all impeaching our correspondent's veracity, we are sure there must be some mistake in the matter. Our correspondent's retaliation on the Company was, we fear, far more inconvenient in its consequences to himself than it could be to them.—ED. R. T.]

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—Your correspondent, "S. P.," denies the existence of any inconsistency in his letter of the 1st instant.

May I ask him to explain the consistency of his opinion expressed in that letter, that "the traffic and the road itself would perhaps justify investment at *par now*," with the statement of figures in the same letter showing a *loss* on the working of the line of 34,800*l*.!!

If this statement be correct, so far from buying the shares at *par*, any one in his senses would require a *bonus* as an inducement to become a shareholder.

May I also ask him, on what principle he calculates the expenses at a *fixed* sum? Is it not found that they increase with the increase of traffic, though not in the same proportion? If this line should double its present gross receipts, does "S. P." suppose that the expenses would remain the same as now? If not, I ask again, why should he take the expenses of the Birmingham line as a criterion of those of the "Great Western," the receipts of the former being nearly double those of the latter?

I am, Sir, your obedient servant,

A RAILWAY PROPRIETOR,

But *not* in the "Great Western."

London, 26th Nov. 1841.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—It may be satisfactory to many of your readers who are interested in the Great Western Railway, to learn that the Company are now building another (the second) shed at their Paddington station, which will afford the accommodation of one shed or warehouse for the arrival, and another for the departure goods.

This extension of the buildings on the Paddington station upon the same serviceable and economical principle on which they were originally commenced, does not render it probable that this Company is about to expend 500,000*l*. on the Paddington station in erecting magnificent façades and colossal archways.

With their present accommodation the Great Western Company will have earned in six months ending this Christmas, little short of 350,000*l*., and with a VERY SMALL additional outlay they will have the means of accommodating a traffic of more than double this amount.

The Great Western Company have a larger area of unoccupied land at their Paddington station than any other London Railway Company. The assumption that they are about to purchase more land at an enormous price, is totally unfounded.

That the Great Western Company have not been niggardly in their expenditure on the substantial and excellent construction of their railway *line* is admitted, and it will in the end prove a wise and sound economy. A degree of comfort, celerity, and safety is already established, superior to every other railway yet constructed.

I remain yours, &c.

VIALES.

8th December, 1841.

MR. SAMUEL HALL'S LOCOMOTIVE IMPROVEMENTS.

To the Editor of the Railway Times.

SIR—I take the liberty of addressing you upon a subject of the greatest importance to the advancement of the interests of all Railway Companies and shareowners. It is no less than the perfect consumption of the smoke and inflammable gases of coal during its combustion, whereby it can be substituted for coke in locomotive engines. The latter kind of fuel you are aware has hitherto been resorted to owing to no method having, previously to the invention of which I am about to speak, been devised to consume the smoke of coal agreeably to most of the Railway Acts of Parliament which require it to be done under a very severe penalty. There are one or two Companies whose Acts do not contain the clause compelling the consumption of smoke, but a due regard to the comfort of passengers has been as compulsory on the Directors as Acts of Parliament, to avoid the nuisance.

The apparatus respecting which I am about to give your readers some information, has been in operation as applied to the *Bee* locomotive engine on the Midland Counties' Railway for upwards of four months. It is equally applicable to stationary engines, and is now in operation as applied to a dozen of them at Nottingham, Derby, Leicester, &c. Of these I send you a list, with testimonials from the respectable proprietors of some of them. The apparatus is the invention of Mr. Samuel Hall, who invited a considerable number of gentlemen to investigate the operation of his process on Thursday and Friday last. The party included several Directors and Engineers of various Railways, and Commissioners under local Acts of Parliament for the abatement of nuisances (smoke among the number) of their respective towns. I had the pleasure of accompanying the gentlemen and this has led me to trouble you with this communication. Joseph Kearsley, Esq., chief Engineer of the Midland Counties Railway, very politely accommodated them with a special train, which was taken by the *Bee* from Derby to Leicester and back, and he very kindly accompanied the party, and afforded us every information on the important matters which were the subjects of investigation. The following gentlemen were present at the examination of the stationary engines at Derby, and the greater part of them joined in the trip to Leicester to examine the locomotive engine, namely, William Walker, Esq., Samuel Broadbent, Esq., Joseph Smith, Esq., Daniel Illingworth, Esq. and H. Donnesthope, Esq., all of Bradford, the three first being Commissioners for that town; Benjamin Hick, Esq., of Bolton, E. Wood, Esq., chief Engineer of the Liverpool Railway; John Gray, Esq. Superintendent of the locomotive department of the Hull and Selby Railway; Thomas Pearson, Esq., Secretary to the Sheffield and Rotherham Railway, and — Nicholson, Esq., Engineer of the Leicester and Swannington Railway.

Having had much conversation with these gentlemen, and ascertained their opinions respecting Mr. Hall's apparatus, I have great pleasure in saying that they expressed themselves in the most unqualified manner, and I believe without exception highly satisfied with the perfect manner in which the consumption of the smoke was effected. One of them noted down in his book the expressive words,—"There was not *a particle* of smoke." I could go into minutiæ, but as I have no doubt that the notebooks of all the scientific gentlemen contain many similar remarks, I shall refrain; especially as I feel confident that they will readily afford any information that may be asked by those who feel so much interested in the matter as to apply to them. I shall therefore limit myself to a general description of the working of the apparatus, resulting from my own observation.

In the first place, to use the happy expression which I have quoted, not only was there not a "particle of smoke" produced while the engines were in operation, but to my surprise the smoke was equally consumed when they were in a state of rest. After the effect of this perfect consumption of the smoke and inflammable gases, the next object in point of importance (which indeed ought perhaps to have come the first) is the great reduction in the comparative cost of coal and coke, that of the latter being on the Midland Counties' line nearly 150 per cent. more than that of the former. I was much pleased with the method adopted by Mr. Hall, of condensing all the waste steam by the water in the tender. Instead of injecting it immediately into, and in commixture with, the water, whereby its condensation causes repeated shocks to the tender by which the rivets are loosened, he introduces one of his small patent condensers into the tender, through which the steam passes perfectly smooth, even when the water in which it is enveloped is quite cold. This plan if fully carried out will prevent the least portion of steam from ever escaping from the safety-valve and convert it to a profitable purpose. Another beautiful part of the invention, is what Mr. Hall calls a distributing plate. It causes every tube in the boiler to take its proper share of the heat from the fire, instead of the upper rows taking more than the lower ones, owing to the tendency of heat to rise in its progress from the fire to the chimney. This plate has the further good effect of preventing the least spark from issuing from the chimney.

I could add a great deal more of interesting information respecting this invention, which I believe to be the most important one that has been brought forward since the first establishment of railways. But I am quite confident that its merits will be discussed by parties much more competent than myself, including some, if not all, of the scientific gentlemen I had the gratification of accompanying on Thursday and Friday last. Before I conclude I will, however, make two or three short extracts from a Report to the North Midland Directors, from their highly scientific Engineer, W. P. Marshall, Esq., of a trial he made in October last, with the *Bee*, from Nottingham to Chesterfield and back to Derby, since which time the apparatus is made much more perfect, preventing even the faint tint of which he speaks at starting from filling up the fire. He says as follows:—

"Steam well up; pressure on valve altered from 55lbs. to 60lbs. on the inch, as in North Midland engines; smoke consumed completely, with the extra steam blast whilst standing leaving scarcely appearance but the steam out of the chimney."

Again he says:—

"Smoke consumed completely, whilst running with the ordinary blast alone, leaving only a faint tint, except rather at starting, from filling up the fire, the steam well kept and fire good in the trip."

The third and last quotation which I shall make relates to the return trip from Chesterfield, and it confirms the two preceding ones; it is as follows:—

"The smoke was consumed completely in both trips, leaving no colour in the steam that would be observed, and the supply of steam abundant throughout, being always blowing at the safety valve, with the use of the extra blast only, whilst the steam was shut off from the cylinders."

In conclusion I beg to say, that I hope every Director, Engineer, and shareholder in railways,

Digitized by Google

will fully investigate this valuable invention, as it is so simple that any one may understand it. Trusting that I shall see justice done in your excellent work to the subject of this letter,

I am, Sir, yours, respectfully.

JOHN EATON.

[Derby, December 4. 1841.

NORTH MIDLAND RAILWAY.

To the Directors of the North Midland Railway.

GENTLEMEN,—Being one of the proprietors in the above railway, I hope you will excuse the liberty I take in addressing you through the medium of the *Railway Times*. My opinion is, that the way to make our railway pay, and thereby get the shares up to par is not the *cheese paring* system, which by cutting down trifling expenses will put *very little* money in our pockets, but take it from those who were not too well paid before; but for you to do all in your power to increase the traffic. In travelling occasionally down the Grand Junction Railway last summer, I particularly remarked the number of passengers who go to Scotland that way, who ought in fact to go by the North Midland, *and would go*, if trains went through at the same rate. It is true that by going by the night mail train you can get from London to Edinburgh in 27 hours, but then the great objection to that is the arriving at Edinburgh at 12 o'clock at night. Now, it does appear to me that a much more comfortable way of performing the journey would be to leave London by the *five o'clock train in the afternoon*, which professes to get down to Derby by half-past ten, (that is at the rate of 24 miles in the hour,) and for a train to be sent forward to Darlington at a quarter before eleven—(that is allowing the passengers a quarter of an hour for supper), and if they went forward at the same rate, viz., 24 miles in the hour, they would get down to Darlington by a quarter past four in the morning, as it is an extra 132 miles. The *Chevy Chase* coach might then start for Edinburgh at *half-past four*, instead of half-past nine as it does now, and would reach Edinburgh in 14 hours and a half, viz., at seven in the evening. This would enable passengers to perform the whole journey in 26 hours, and they might dine one day in London, and the next day in Edinburgh; and as soon as there began to be anything of a run, which I am satisfied there would be in a very short time, there would be several more coaches put upon the road.

I am, Gentlemen, your obedient servant,

A PROPRIETOR OF FIFTY OLD SHARES.

Sussex, December 7, 1841.

RAILWAY PROSPECTS.

To the Editor of the Railway Times.

SIR,—On looking at the returns published in your valuable journal, of the dividends paid by the several Railway Companies up to December 31st, 1840, and also at the similar returns of the dividends paid up to June 30th, 1841, it is easy to perceive that the latter are considerably greater in amount than the former; and if any one will take the trouble to add up the weekly receipts of the several lines for *the current half year*, say up to the present date, it will immediately be apparent that the traffic on nearly every line of railway throughout the kingdom,—and this too in spite of the depression of trade, arising from four bad seasons in succession,—very considerably exceeds that of any similar period of previous half years, and consequently even better dividends than any ever yet declared, may be expected at the end of the current half year; the more particularly as it is very generally understood in the railway world, that the most praiseworthy exertions have at length been made by several of the leading lines of railway to reduce their working expenses as much as possible, so as to be able, at the approaching half-yearly meetings, to show *increased receipts* and *diminished expenditure* at one and the same time,—than which nothing can be so likely to reclaim the railway system from the pitiable, but certainly rather unaccountable position it now occupies, and once more make railway shares a favourite species of investment.

That the public have at present but little inclination to invest capital even in any of the very best of the railway lines, will be evident on perusal of the following table, although the interest on such investments, taking the last dividends paid in June last, and making no allowance for *the expected increased dividends at the end of the current half year*, will in many cases be nearly double that which can be obtained in the public funds, 3 per cent. consols being at the present time at 89, and the security nearly as good in one case as the other.

Name of Railway.	Paid.	Interest per cent. per annum paid in June last.	Present Price.	Interest on present price.
	£	£ s. d.	£	£ s. d.
York and North Midland.....	50	9 0 0	87	5 3 6
London and South-Western	38⅔	7 14 3	56	5 4 7
Liverpool and Manchester	100	10 0 0	186	5 7 6
London and Birmingham	90	9 8 10	158	5 7 6
Grand Junction ..	100	11 0 0	190	5 15 9
Midland Counties'.	100	5 0 0	82	6 1 11
Newcastle and Carlisle.....	100	6 0 0	100	6 0 0
Sheffield and Rotherham.....	25	8 0 0	32	6 5 0
North Union	75	6 13 4	75	6 13 4

There is, however, another railway,—the Manchester and Leeds,—which occupies a more strange position still, for although it will certainly *at the end of this half year*, pay a dividend after the rate of 6 per cent. per annum, is so unaccountably depressed, that the 100*l.* shares (70*l.* paid up,) are only worth 60*l.*, and therefore an investment made at the present price, will pay interest at the rate of 7*l.* per cent. per annum, and this too in less than a year from the time of opening throughout!

I am, Sir, your obedient servant,

OBSERVATOR.

BIRMINGHAM AND DERBY JUNCTION RAILWAY.

To the Editor of the Railway Times.

SIR,—I beg to hand you the following comparative statement:—

Receipts for 1840.

Week ending	October 3rd	£1,184
,,	October 10th.....	1,142
,,	October 17th	1,041
,,	October 24th.....	945
,,	October 31st.....	918
,,	November 7th	913
Total.....		£6,143

Receipts for 1841.

Week ending	October 2nd	£1,354
,,	October 9th	1,355
,,	October 16th.....	1,285
,,	October 23rd.....	1,283
,,	October 30th.....	1,266
,,	November 6th	1,162
Total.....		£7,705

showing an increase over the corresponding six weeks of last year of 1,562*l.* As the direct line into Birmingham will be completed by the 25th of next month, there is every possibility of an increase of 60 per cent. on the present takings; for the towns, such as Tamworth, Atherstone, Lichfield, &c., scarcely feel any benefit at present from the railway being open, as the line is ten miles longer than the turnpike road, but this will be remedied as soon as the branch line is completed.

A SHAREHOLDER.

SHEFFIELD AND MANCHESTER RAILWAY.

To the Editor of the Railway Times.

SIR,—Your correspondent, "A Sheffield and Manchester Shareholder," says, *much* in praise of his own line, but I think it had been better for him if he had said *less* of other concerns. I will not enter into his foolish attack upon the North Midland and Manchester and Leeds lines, but just keep to his own pet concern, and *suo sibi gladio hunc jugulo*. First, then, he says "it is quite untrue that any but a small portion has been finished during the late rains." In answer, I say he is correct, for a very small portion only is finished at the present time! Then he says, "the fittest time to open a railway is when the railway is ready to be opened." Very fine; but is a road ready to open for public traffic *before* the embankments have had time to sudside, or a single station-house or waiting-room is built? I admit that on this "*El Dorado*" of a line, sundry wooden boxes are dignified with the double title of booking office and waiting-room, but they cannot be admitted as permanent stations. Then he says, "the works have been regularly proceeding (had he said '*per fas et nefas*,' he would not have been far from the mark,) for years;" and yet all they have done is to open a single line for about seven miles, though they have called up 72*l.* 10s. per share of the capital, and have still 33 miles to make, three of which is a formidable tunnel!!! Well may he say, "tell it not at Tormorden—tell it not in the princely stations of the North Midland—tell it not in the multitudinous circumflections of the Leeds and Manchester, that this vulgar object of non-excess [?] has been attained," for I think neither at Leeds nor at London will they believe a word he has to say.

Since I last wrote, the line has given way in several places; the trains keep very bad time; one of the bridges has had to be rebuilt, (luckily it came down at a time when nothing was travelling on the line)—and though they bought off Messrs. Newton's coaches other parties have now taken up the ground, and coaches run as usual between Manchester and Ashton at all times of the day.

I remain, &c.,

TRAVELLER PER RAIL.

LONDON AND BLACKWALL RAILWAY.

To the Editor of the Railway Times.

SIR,—In reply to your correspondent, "A Shareholder," I beg to state that the calculation in your paper of the 27th ult. applies to purchasers of shares, (the old and new shares bearing the same price in the market,) and not to the "original" proprietors, who must make a calculation for themselves, each according to his particular position. *I* see no difference between an "Original" Proprietor when the price of the shares is 25, and a person who has just purchased them at that price. It is true that the former has made a profit on his "new" shares, which the latter has not. But if he does not realise, then his profit becomes part of the capital invested.

Your correspondent, Mr. Langworth, asks authoritatively, what is meant by stating that it will require 1,825*l.* per week to pay a dividend of 5 per cent. to the shareholders?" And without trying to prove the statement is wrong, proceeds to tell us how many passengers the "Diamond" steam packets carried to Gravesend last season; as if the number of passengers carried, whether great or small, would make 1,825*l.* per week pay more or less than 5 per cent. on shares held at 25.

I am, Sir, your obedient servant,

NO SHAREHOLDER.

8th December, 1841.

ANCIENT AND MODERN TRAVELLING.

To the Editor of the Railway Times.

SIR,—As I was destroying some old letters the other day; I met with the following, describing a a trip to France by an ancestor of mine made with a friend, to divert his grief for the loss of his wife. It affords a striking contrast between the facilities of travelling of that period (1720) and the present time. If you like to make use of it, you are perfectly welcome to do so:—

"In order to which (to divert his grief) we sett forward together from my house (Charing, in Kent)

Digitized by Google

the 13th of Aprill last, lay that night at Canterbury, and went the next day for Dovor, thinking to go on board the pacquet-boat that night, but were forced to stay till the night following; we then went on board her, and arrived whitCalais the next day at noon; sett forward the Monday for Boulogne, and there overtook the the postage coach, and went to Paris in six dayes. ing staid at Paris viewing that and Versailles from the Aprill to the 1st May, which were all the places we saw excepting the townes on the Road, and then returned to Calais, where we arrived the 6th of May, and being informed that no Pacquet-boat had passed between Dovor and Calais, for some days we went thence to Dunkirk with intention to go into Flanders, and return to England by way of Holland, but hearing of some people being killed, others sent back, and others robbed in passing that way, were deterred from going further and resolved to stay at Dunkirk till we could get a passage to England, which we found after 15 days experience, on board an English ship, and landed at Dovor on Saturday, May 23."

I have preserved the old orthography which differs in many words from that of the present time.

Yours very truly,

RAILROAD PACE.

THIRD-CLASS CARRIAGES—NORTHERN AND EASTERN RAILWAY.

To the Editor of the Railway Times.

Sir,—Among the many benefits conferred upon society by the application of steam to locomotion is the greater degree of equality as regards comfort and speed enjoyed by the different classes of travellers.

There was a much more marked distinction before the introduction of steam-boats and railways, between the rich man travelling in his comfortable carriage, at a speed of nine or ten miles an hour, preceded by his courier, ordering whatever might conduce to the comfort and enjoyment of his master to be prepared for his arrival, and the poor man travelling by waggon, two miles an hour on the average, an unwelcome, because unprofitable, guest at the road-side public-house, than there is now between the first and third class travellers on the railway, or the fore and aft cabin passengers of a steam-boat. And this equalization has been effected not by diminishing the comfort of the few, but by increasing the comfort of the many.

In America and in France, where there is much greater equality of condition than in England, the difference between railway carriages is much less than with us.

One effect of the comparatively greater degree of equality in comfort has been that some persons travel in the cheaper carriage who could afford to travel in the more expensive; and this notwithstanding the attempts of Railway Managers to make the greatest possible distinction between the several classes. The English, the most aristocratic people on the face of the earth, are not sufficiently tenacious of caste for the Directors and Chairmen of Railways, and many plans more creditable to the ingenuity than to the humanity of their inventors, have been tried to correct John Bull's too fraternizing propensity!

At the meeting of the Northern and Eastern Railway Company, reported in the last number of your valuable journal, the Chairman expressed an opinion that "no railway would be considered complete without two or three chimney sweepers with their soot bags. Whenever he saw an individual respectably dressed getting into a third class carriage, he would send a sweep along with him."

The "so-called gentlemen squatting almost in a fishmonger's basket in a third class train" (I use Mr. Crawshay's own language), are perhaps regular travellers by railway, paying more annually than several occasional first class travellers, and are entitled to civility from all the servants of the railway, from the porters to the Directors and the Chairman.

It should be borne in mind by the Managers of railways, that many respectably dressed individuals are very poorly remunerated for their services, and cannot afford to pay for the more expensive carriage—that some of them have large families, and rather than enjoy the selfish gratification of riding in a second class carriage alone, take their children with them in a third class carriage—that *all* the third class passengers exercise the same liberty of choice as the Chairman of the Northern and Eastern when he travels by stage instead of travelling post, when he takes an outside instead of an inside place, or gets into an omnibus instead of into a hackney coach, and that the sweep would be equally useful, as in the case of his third class passengers, to drive him into a more becoming carriage.

In conclusion, I must say, that language like that reported, is detrimental to the interests of the Northern and Eastern Company, and derogatory to the character of the Chairman.

A RAILWAY PROPRIETOR.

London, Dec. 8, 1841.

[From the *Essex Standard.*]

We observe that at the recent meeting of the Northern and Eastern Railway Company there was much discussion on the pecuniary result to the Company from having third-class carriages. In the course of that discussion the Chairman thought proper to make the following observations:—He said, he thought no railway establishment could be considered complete without two or three chimney sweepers with their soot bags. Whenever he saw an individual respectably dressed getting into a third-class carriage he would send a sweep along with him. We have heard complaints of rudeness and impertinence displayed by some drivers of coaches, but we never heard of any to exceed this; and it was scarcely to be expected from a *gentleman* at the head of a Railway Company. If it consists with the interests of the Company to run third-class carriages, they have no right to insult those who avail themselves of the *mutual* accommodation—and if the running of such a class of carriages is unprofitable, why then, let them be discontinued, and there is an end. It is most ridiculous for a Railway Company, or the proprietor of a stage coach to talk about the grateful return they ought to receive for the accommadation they afford to the public. What is the primary object of laying down rails, or putting four horses to a coach, but the profit and advantage of the proprietors? Any why do persons travelling avail themselves of the convenience? Because it is to their profit and advantage to do so. A railway is more of a monopoly than any stage coach can possibly be; but its proprietors are not thereby dissolved from all obligations of decent respect to customers; and persons have a right to avail themselves of such accommodation as the proprietors offer, agreeably to the existing legal general rules and regulations of the Company, without being insulted or held up to contempt. What would the Chairman of the Northern and Eastern Railway Company say if a coachman was to speak of him as only fit company for a sweep, because he preferred riding outside his coach to riding inside and paying double?

[From the *Chelmsford Chronicle.*]

We regret to mark the feeling displayed, and the sentiments uttered by certain parties at the meeting. We have given our support to the railway system since its introduction, because we perceived its vast local advantages—because we saw that it must prevail in other districts, and if the inhabitants of the eastern counties did not put forth their hand to assist it, they must be content to sit down on the shady side of public advancement, and see their prospects and their property deteriorated. At the same time we have maintained that the public ought to be strongly protected against the freaks and the dictation of a monopoly, of which character the system necessarily partakes. The observations made at the Northern and Eastern meeting pointedly shows this. Because certain persons of apparent respectability had chosen to ride in third class carriages, it is suggested that this class might be discontinued, and the Chairman hints at the introduction of a dozen chimney-sweepers, with sooty bags and brushes, to begrime any "well-dressed gentleman" who presumes to decide for himself what class he will enter. What would our friends at Harlow and at Bishop's Stortford say at being treated with indignity—for of course the remarks of a person so high in authority as the Chairman of the Directors would be likely to influence the conduct of the underlings of the Company—because they venture to ride with a good coat upon their backs in an open carriage on a summer's day? * * * *

We contend that the interest of the public *is* the first consideration. It was on that ground that the legislature treated with and gave power to the Company to make a railway at all. There was an implied bargain that the public were to receive the advantage of quick transit at a fair and reasonable price; and if the Companies already talk of establishing an inquisition into the pecuniary circumstances of their passengers, and of screwing the highest possible price from people placed at their mercy, it is necessary that Parliament should reduce the intended contract into restrictive enactments, by giving a discretionary power of controul on these points to a Railway Board or the Board of Trade.

To the credit of the Eastern Counties' Company we should add, that often as we have attended their meetings, we have never heard a principle like that we have noticed contended for by shareholders or Directors, or the convenience and interest of the public treated as merely secondary matters, to be considered only when it suited their own profit. Indeed in this case we are inclined to believe that the remarks were dropped hastily and inconsiderately in the warmth of discussion; for if it be found these views are pressed to any extent, they must lead to hampering legislative interference, which the shareholders in those undertakings and the friends of the system would seriously regret.

RAILWAY ADJUDICATIONS.

SHEFFIELD CANAL COMPANY *v.* THE SHEFFIELD AND ROTHERRHAM RAILWAY COMPANY.

Rolls Court, Dec. 4.—The Master of the Rolls gave judgment in this case, which was argued in November last. His Lordship said the suit arose out of an agreement founded on a letter for the payment of an annuity of 100*l.* by the defendants to the plaintiffs; and having recapitulated the facts at length, and dwelt particularly on the declaration of the agent of the defendants at his last interview on the subject. With the agent of the plaintiffs, that "they would fight it out," his Lordship said that he was of opinion there had been a waiver of the agreement by the agent of the plaintiffs, which agreement could not therefore be renewed by his subsequently accepting it. The plaintiffs' agent had rejected the offer of the 18th June, and could not bind defendants by it. On the 20th the defendants, having conceded one point, were willing to renew the contract, but this offer was rejected by the agent of the plaintiffs, as the former had been, and it could not now be converted into a binding agreement. He was of opinion there never was a binding agreement, and the bill must therefore be dismissed with costs.

ATTORNEY-GENERAL *v.* THE LONDON AND GREENWICH RAILWAY COMPANY.

Vice-Chancellors' Court, Dec. 9.—This was a proceeding by the Attorney-General, at the relation of the Commissioners of pavement of the Borough, against the London and Greenwich Railway Company. The object of the suit was to restrain the defendents from proceeding with their works so as to interfere with certain public streets in the immediate vicinity of the terminus of the railway, near London-bridge. A motion had been made in the case before the Master of the Rolls durtng the vacation, on tha 4th of September last. Upon that occasion it was represented that the Railway Company were proceeding to get another Act of Parliament, giving them larger powers, which would enable

Digitized by Google

them to comply with the requisitions of the Commissioners. The Master of the Rolls then ordered that the motion should stand over till the first day of the Michaelmasterm, the Company undertaking to proceed to get their new Act of Parliament, and to abide any order that the court should make with reference to the works complained of, and that the Attorney-General should take such legal proceedings as would have the effect of ascertaining whether the works complained of were legal within the provisions of the Company's Railway Acts. The present application to the Court was for the purpose of obtaining from the Court an order as to the form of the legal proceedings which the Attorney-General was to take under the former order of the Court against the Railway Company. The order now agreed upon by the counsel on both sides was, that the Railway Company should continue their undertaking, as to proceeding to obtain their new Act of Parliament, and to abide by such order as the Court might deem fit to make os to their works, and that the Attorney-General should proceed to indict the Company at law; the defendants to appear and plead to such indictment so as to raise the legal question as to the legal validity of the works of which the relators complained.

ANOTHER "ACCIDENT ON A RAILWAY," *NOT* "A RAILWAY ACCIDENT."

On Monday morning last, as a labourer known by the cognomen of "Irish Jemmy," employed on the Midland Counties' line at the Derby station, who standing near to the line leaning upon his spade, an engine approached, and, strange to relate, instead of getting further out of danger, he walked between the rails, was knocked down, and dreadfully lacerated by the engine passing over him. He is now lying in a very dangerous state.—*Derby Reporter.*

DUBLIN AND DROGHEDA RAILWAY.

There is yet much to hope for the further advancement [of Ireland] in the public works now in progress:—that of the improvement of the navigation of the Shannon, will, by opening a great internal communication, be of great value; but much may be hoped from a general adoption of railways throughout the country. And first, we may mention that very important one, the Dublin and Drogheda, which is now progressing with great spirit. Regarded as a national work, this undertaking must be viewed with deep interest. The great communication which exists between the metropolis and the various and important towns of Drogheda, Dundalk, Newry, Belfast, and the whole North of Ireland, would be immensely increased by the facilities which a railway would afford; and as many of the shares are held in Manchester, it may be well to notice it more particularly. The proposed terminus in Dublin will be near the Custom-house, in the very heart of the city. The line crosses the estuary at Clontarf, two miles further, and then winds its way along a beautiful country until it reaches the romantic castle of Malahide, the seat of the hospitable Lord Talbot de Malahide. Leaving the village, the railway bounds across the estuary, and after passing in its seabound progress various points of interest, reaches the flourishing port of Drogheda; thence, ere long, it is to be hoped, to be extended through the intermediate towns to the Ulster Railway, 25 miles of which are now opened. A great advantage which projectors of railways in Ireland gain is the lull which has taken place in railway operations in England; consequently a railway can now be constructed at a considerably reduced cost: the whole line from Dublin to Drogheda will be completed at 14,000*l.* per mile; and such was the competition at a recent letting of 7½ miles, that it was taken at 6,000*l.* per mile!

It is a maxim laid down by Adam Smith, that one of the most effectual means of improving a country is to afford it the means of internal communication; and all friends of Ireland will hear with much satisfaction, that the advantages of railways are likely to be extended to that hitherto neglected country. On the whole, it may be safely inferred, that if Ireland continues to advance in the same ratio that she has done for the last ten or twenty years, she will become, ere long, one of the most prosperous portions of the British empire.—*Manchester Times.*

FREAKS OF STEAM TRAVELLING.

One day last week, the Rev. C. B. Marriott, of Thundersley, having decided to proceed from the city of "bustle and barter" to the rustic quietude of Harlow, determined on entrusting himself on the Northern and Eastern Rail; accordingly he possessed himself of a snug first class seat, and was soon spinning along before the gale to his destination. "Harlow Station" at last stared him in the face, as plainly as ever paint and board could stare; but, alas! the carriage door had become fixed by the rain; all his exertions could not get it down, to enable him to serve the officers with notice of his intentions to quit; all the Rev. Gentleman's calling out, and all his hammering the glass as heavily as glass may be safely hammered, brought no one to his prison door; and as it was vain for him to attempt to put a bit in the mouth of a steed which is fed with coke and driven with a kitchen poker, he soon found himself whirling along to the next station at Sawbridgeworth. Here he succeeded in achieving his liberty; and was consoled by the information that on the usual terms he could be conveyed back to Harlow. In due time the rev. traveller resigned himself to his fate and to the up train; but scarcely was he snugly seated and fairly under weigh, when his fellow-passenger informed him that train did not stop at Harlow. This was too true; onwards went the monster with puff and snort, and rattle of wheels, regardless of his wishes, all he saw of the desired haven of his hopes being the glimpse which steam at 30 miles an hour afforded him. Of course it was useless lingering at the next station, so onwards he flew to town, where on a proper representation of the case to the Secretary and Directors, the hotel expenses of the night were handsomely paid by them; and the next morning he was again skimming the earth towards Harlow. Again the painted board announced to him his journey's end, aided by the voices of the attendants; again too, the carriage door became obstinate in its slides and sulky in its hinges; and it was not till the train was almost again in motion that the rev. gentleman was enabled to set foot upon the desired spot; even then it was not effected without some risk, as in his haste to avoid a second trip to Sawbridgeworth he did not perceive another leviathan of the modern road, who a few yards off was hissing and boiling up the rail upon which he alighted.—*Chelmsford Chro.*

COACH ACCIDENTS.

As the *President* coach, belonging to Mr. Henry Whalley, of Blackburn, was returning from Bolton on Monday evening, one of the horses broke a trace when on Bull Hill, and the others took fright and came down the hill at full gallop. Mr. Cartwright, of Blackburn, who happened to be the only outside passenger, when the coach drew near the Bowling Green, became alarmed and jumped off, in doing which he was most seriously injured.—*Halifax Courier.*

An inquest was held at the Swan public house, in Haslingden, on Tuesday, on the body of Mr. William Robinson, aged 53. The deceased was a passenger on the coach at the time of the accident which caused the death of Francis Bumby. It appeared the deceased was sitting on the hind part of the coach, and was thrown off into the road, by which he received a compound fracture of the left leg, a severe contusion on the left arm, and bruises on the left side and back. He never recovered the effects of the first shock, and he died on Saturday night last. Verdict, "Accidental death."—*Preston Chronicle.*

On Friday last, as the London and Exeter mail, on the road from Torrington to Bideford, was descending the hill near the inclined plane at the end of Lord Rolle's canal, and turning a sharp corner at the foot of the hill, it came in contact with a covered cart, belonging to George Bragington, Esq., which was standing just round the point of the corner, and on the wrong side of the road, where it was impossible for the coachman to see, or pull up and prevent the melancholy accident that occurred. So great was the concussion of the two vehicles that the mail upset, and the inside passengers were thrown with fearful violence from the roof against a stone wall adjoining the road. Mr. Church, a gentleman from Dawlish (whose wife and family escaped unhurt, having fortunately been inside the mail), received some dreadful bruises, and was picked up in an apparently dying state. Lieut. Henry Glynn, son of Admiral Glynn, who received a severe fracture in the head, and other injuries and bruises about his body, was also taken up in a senseless state, and carried to the Hunter's Inn, till medical assistance could be obtained. The mail-bags were immediately forwarded by one of the horses, and Mr. Parramore started to ascertain the extent of the injury sustained. He found Mr. Church on the road in great agony, and that the other passengers had also received serious injuries. Mr. Parramore, and other gentlemen who arrived on the spot, provided a plank, upon which Mr. Church was placed, and borne to Mr. Parramore's hotel, a distance of three miles and a half, where he was immediately put to bed, and the utmost attention and kindness paid to him. Upon inquiry this morning we were informed that both gentlemen, and the other sufferers, are considered out of danger, and we trust will be again shortly restored to the society of their families and friends.—*North Devon Advertiser.*

On Sunday morning, as the *Quicksilver* mail was ascending a hill about two miles the other side of Cullompton, owing to the gibbing of a blind wheeler the coach overturned. No injury was sustained by any person, but the three horses having been disengaged, set off at a full gallop, and one of the leaders was killed on the spot by coming in violent contact with the turnpike gate. In consequence of this accident the letter bags were detained for more than two hours.—*Western Luminary.*

The Iron Trade.—The ironmasters of Staffordshire and South Wales have had meetings, says the *Wolverhampton Chronicle*, to determine upon the measures to be adopted by them to save themselves from ruin, arising from the low prices of iron. They have agreed to diminish the make of iron one-fourth for six months, and accordingly a certain number of furnaces will be blown out on the 1st of December, and of course one-fourth of the workmen now employed, colliers, miners, and others, will be then discharged. A deputation has been sent to Scotland to induce the ironmasters there to concur in this measure, and there is little doubt that they and and all others will do so. The *Inverness Journal* says: "In consequence of the extreme depression in this trade for some time past, we learn that at a meeting of the ironmasters of Scotland, held at Glasgow on Monday last, it was agreed that for the present one-fourth of the furnaces should be extinguished."

Railway Iron.—Three ships have recently arrived at New York, from Wales, laden with iron rails for the road between Harper's Ferry and Cumberland. Their aggregate cargoes are 1,655 tons—being about one-fifth of the entire quantity required.—*American Paper.*

Accident on the Bristol and Exeter Railway.—The passengers by the Bridgewater mail-train, due at Bristol on Monday at two o'clock, p.m., were thrown into great alarm on their arrival at the bridge over the Avon, near the cattle market, by a fearful crash, occasioned by the train coming into collision with a train of luggage wagons, drawn on the western line of rails, over which the passenger train had to pass. One of the conductors seated near a gentleman's carriage attached to the rear of the train suffered most from the shock, but several of the passengers were slightly bruised.—*Bristol Standard.*

Digitized by Google

FLOOD ON THE GREAT WESTERN RAILWAY.—The inhabitants of Corsham were considerably alarmed on Monday evening, by a report circulated that the Great Western Railway station in that town had been entirely swept away by the flood; but which we found upon inquiry to be incorrect. On Monday, about 6 o'clock p.m., in consequence of the quantity of rain which fell that and the preceding day, the water began rapidly to rise in the cutting, and before 7 o'clock the line presented to the eye one perfect sheet of water extending nearly a mile in length, and more resembling a canal than a railway. Every necessary precaution was taken to insure the safety of the trains; and the passengers, who beheld from the carriage windows the raging surf, did not at all enjoy the aquatic excursion, if such it might be called. When the waters had a little abated, a number of men were employed to remove the pieces of timber which the stream carried down, and an engine continued to play slowly to and fro till a late hour, to keep the rails clear. It was a great inconvenience to the passengers, in consequence of the water bursting into the station, which could only be reached by means of planks.—*Berks Chronicle.* The Railway Bridge, in consequence of the heavy rains (across the Bath Road), has so far given way as to be considered quite insecure, at which from 50 to 100 men are engaged day and night, in order to prevent its falling. It is intended, we believe, to lengthen it.—*Salisbury Herald.*

RAILWAYS IN FRANCE.—The *Journal des Debats* states that the Council-General of the Lower Rhine has been convoked by royal ordinance to deliberate upon the railway about to be constructed from Paris to Strasburgh, and to ascertain what assistance the department is willing to give the state in the prosecution of this important enterprise. "It appears to be the intention of Government," continues the *Débats*, "to propose, instead of a direct line from Paris to Strasburgh, to make use of the proposed line of road from Paris to Marseilles, and so communicate with the Strasburgh and Basle Railway through Malhousen. This indirect line offers great advantages; it substitutes a line of 52 leagues for one of 120, which will effect a saving of from 80,000,000f. to 90,000,000f. Strategetically it would fortify our eastern frontier, by connecting all the fortresses from Dijon to Strasburg. It would form between the Mediterranean and the Northern Ocean a line which would have an immense transit trade. In fact, Strasburg would not be the less united to Paris. It is true that the distance would be prolonged from 30 to 35 leagues, which represents an additional journey of four hours more; but this additional expense of time is of no consideration in comparison with the inconvenience of engaging the state in an excess of expenditure of from 80,000,000f. to 90,000,000f. at a time when so many claims press upon the treasury."

Our notice has been called to a paragraph in a morning paper of the 30th ult., in which an account is given of the opening of the Gosport branch of the London and South-Western Railway, to the effect that the line having been examined by the Government Inspector, the result of the examination was satisfactory to that officer. We apprehend that there must be some error in this statement, for we understand that owing to the defective condition to which some of the works had been reduced by the continued rain, and in consideration of the near approach of winter, the Inspector-General recommended the postponement of the opening, and that the propriety of this course wae also pressed upon the Company by the Lords of the Council for Trade.—*Times.*

LOCOMOTIVE ENGINES.—For Sale, one new Locomotive Engine and Tender, with 14-inch cylinders, 18-inch stroke, 6 wheels, 5-feet 6-inch driving wheels, brass tubes, and copper fire-box. Also, one Locomotive Engine and Tender, with 12 inch cylinder, and 16-inch stroke, 6 wheels, two pair of 5-feet coupled, new brass tubes, and new iron box; has been employed on contracts as earth and ballast engines, and is in good repair.

For price and particulars, apply to Mr. Scott, Locomotive Department, North Midland Station, Leeds, where the engines are now standing for inspection.

Leeds, December 4th, 1841.

NATIONAL LOAN FUND ASSURANCE SOCIETY, for granting Life Assurances, Deferred Annuities, &c. &c., 26, Cornhill.—Capital, £500,000.—Empowered by Special Act of Parliament.

DIRECTORS.

T. Lamie Murray, Esq., Chairman.

John Elliotson, M.D., F.R.S.	John Rawson, Esq.
John Griffith Frith, Esq.	John Riddle Stodart, Esq.
H. Gordon, Esq.	Clement Tabor, Esq.
George Lungley, Esq.	Joseph Thompson, Esq.

Auditors—Professor Wheatstone, F. R. S.; Professor Graves, A.M., F.R.S.

Actuary—W. S. B. Woolhouse, Esq., F.R.A.S.

Physician—J. Elliotson, M.D., F.R.S.

Surgeon—E. S. Symes, Esq.

Solicitors—Messrs. Sweet, Sutton, Ewens, and Ommanney, 6, Basinghall-street.

Bankers—Messrs. Glyn, Halifax. Mills and Co.

LIFE ASSURANCE.

Advantages.—Perfect security from a large paid up Capital and accumulations——Equitable Rates—Power to borrow two-thirds Premiums paid, without expense or forfeiture—and Profits *annually* divided.

N. B. Policies for short periods, at lower rates than at any other Office, with option of continuance for Life, at the usual rates.

DEFERRED ANNUITIES.

The best and most varied provision for after life hitherto offered,—*2l.* 12s. per annum (1s. a week,) at 20, will at 65, give the Policy-holder the choice of an Annuity of *47l.* 16s. 6d. or *349l.* 11s. cash, or Policy at death of *466l.* Similar advantages at 50, 55, and 60,—two-thirds payments lent at any time, and two-thirds returned in case of premature death.

The detailed Plans and last Annual Report to be had at the Office, at any of its Branches, or, on application, will be forwarded post-free.

F. FERGUSON CAMROUX, Secretary.

Just published, 7th edition, price 3s., and sent free on receipt of a Postoffice order, for 3s. 6d.

MANHOOD: the Causes of its Premature Decline, with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects of excessive indulgence, solitary habits, or infection, followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases, &c.:

By J. L. CURTIS and Co., Consulting Surgeons, London.

SEVENTH EDITION.—Published by the Authors, and sold by Balliere, Medical Bookseller to the Royal College of Surgeons, 219, Regent-street; Strange, 21, Paternoster-row, London; Guest, Steelhouse-lane, Birmingham; T. Sowler, No. 4, St. Ann's square, Manchester; G. Philip, South Castle-street, Liverpool; Tannin and Co., 41, Grafton street, Dublin; Duncan, 114, High-street, Edinburgh; and to be had of all Booksellers.

The following are a few of the numerous testimonials this popular work has received, and which the limits of an advertisement will only allow of being published:—

Messrs. Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it, render it invaluable.—*Magnet.*

The perusal of Messrs. Curtis's book, entitled MANHOOD, has really astonished us by developing a series of maladies, the never failing consequence of the vicious habit of which it treats. The clear connexion pointed out between the assigned cause and the effects is perceptible to every capacity. We strongly recommend the work.—*Age.*

We recommend the work, entitled MANHOOD, &c., to the careful perusal of persons of all classes. The moral as well as physical advantages sure to result from such perusal, will be most readily recognised and felt by those who stand most in need of them.—*Statesman.*

Messrs. Curtis and Company are to be consulted daily at their residence, No. 7, Frith-street, Soho-square, London.

Country Patients are requested to be as minute as possible in the detail of their cases. As to the duration of the complaint, the symptoms, age, general habits of living, and occupation in life of the party; the communication must be accompanied by the usual consultation fee of £1, without which no notice whatever can be taken of their application, and in all cases the most inviolable secrecy may be relied on.

STEAM CARRIAGE AND WAGGON COMPANY. Offices 18, Moorgate Street, City. The Directors beg to announce that in pursuance of a resolution passed at a General Meeting of Shareholders held at the Freemason's Tavern, on the 11th November, they are ready to receive proposals from persons willing to supply Steam Carriages for the conveyance of Goods or Passengers on Turnpike Roads. Parties proposing to supply carriages must produce one in a state fit for work to be submitted to such test as the Directors may require, and if approved, arrangements for the construction of several for the use of the Company will be immediately made. All Communications should be addressed as above.

BY ORDER OF THE BOARD.

LOCOMOTIVE ENGINE.—TUBES WITHOUT SEAM.—GREEN'S PATENT.—These Tubes possessing great advantages over the ordinary brass tubes used in locomotive and other boilers, may now be obtained in any quantity and of any dimensions.

Testimonials from eminent Engineers and samples may be seen by application to W. C. Alston, Birmingham, or Braithwaite, Milner, and Co., New Road London.

PARTNERSHIP.—A Person who is in a considerable Business in the City, returning large profits, requires a PARTNER with Capital. Any person possessing £1,000 or £1,500, and desirous of improving it, will find this an advantageous and substantial concern.

For particulars apply by letter only, post paid, to Messrs. Ling and Harrison, 34, Bloomsbury-square.

TO EXPORTERS, RAILWAY CONTRACTORS, ENGINEERS, SHIP BUILDERS, &c. &c.—The Patent Rolling and Compressing Iron Company having their works in full operation are ready to execute orders to any extent, for the undermentioned articles:—

Boiler and Tank Rivets of every description.

Bolts for Machinery, Architectural, Agricultural, Ship and Coach Building, Gas Water, and other works, &c.

Railway Pins, Hooks, Screws, &c.

Particulars may be obtained, and specimens seen, upon application to the Secretary, at the Company's Works, Upper Ordnance Wharf, Rotherhithe.

By order of the Board,

JNO. ATLEE, Secretary.

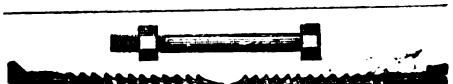
TO CAPITALISTS, ENGINEERS, MILLWRIGHTS, FOUNDERS, SMITHS, and OTHERS.—To be disposed of, an old established Engineers', Millwrights', and Founders' Concern (the present Proprietors retiring from the Manufacturing Department), situated in London; the premises and plant have been erected during the last 25 years, at a considerable cost; but from the above cause will be disposed of upon extremely favourable terms. The premises will be let on lease, and the machinery and tools disposed of at a valuation.

Apply for particulars to John Evans, Esq., 51, Lincoln's-Inn Fields.

TO ENGINEERS, PATENTEES, CONTRACTORS, AND BUILDERS.—STEAM-ENGINES ON SALE OR HIRE,—C. H. CAPPER, Iron-Founder, Manufacturer of Steam-Engines, Sugar Mills, and Mill Machinery, Broad street Foundry, Birmingham, has Engines from 6 to 20 Horse power always on hand, and any parties wishing to Hire New or Second-hand ones for a given time, to try experiments, &c., may have the same at work immediately, and upon the most moderate terms. For particulars, apply as above.

RAILWAY TRAFFIC MANAGER.—The Directors of the Birmingham and Derby Junction Railway are desirous of engaging the services of a Gentleman fully competent to perform the duties of the office of Traffic Manager. Applications in writing, stating the age and previous occupations of the Applicant, with references, to be addressed under cover to the Chairman of the Directors, at their offices, Waterloo-street, Birmingham, on or before the 10th January next.

TENDERS INVITED for the supply of IRON RAILS, required by the Royal Bavarian Commission for the construction of Railroads at Nurnberg.—Measures and Weights are Bavarian, viz.—1 foot Bavarian = 0 291859 French metre; 100 lb. Bavarian = 56 French kilogrammes.



The quantity required amounts to 120,000 quintals of 100 lbs. each, and is to be contracted for, either in several lots, or for the whole. The Rails are to be of the form of the so-called "parallel double T rails," of the weight of 12 Bavarian pounds per Bavarian foot, and of the length of 17½ Bavarian feet. However, a proportion of shorter rails, say of 14½ Bavarian feet length, will be received to the amount of 5 per cent. of the whole quantity.

The Rails must be manufactured of the best Iron known in England under the denomination of No. 3, and part of a rail of the length of three or four feet, is to be sent to the Royal Commission at Nurnberg, to serve as a pattern before the conclusion of the contract.

The detailed conditions respecting the periods of delivery, mode of payment, &c., as well as the drawing, are to be obtained on application at the Office of the undersigned Commission, in Nurnberg.

The Tenders must be delivered at Nurnberg, under seals and franked covers, on or before the 31st January, 1842, to the Royal Bavarian Commission for the Construction of Railroads.

DENIS, PAULI, DURIG.

T. H. RYLAND AND CO., OOZELL'S STREET, BROAD-STREET, BIRMINGHAM, Patentees and Manufacturers of Wood Screws and Screw Bolts, for Railways, &c.

The quality of these Screws is acknowledged to be superior to that of any other maker, and T. H. R. and Co. have, by their improved means of manufacture, so greatly reduced the price, that they will be found not to exceed in cost the common driving pin; and that they are more efficient for the purpose will be obvious, from the fact that one of these screws will require a force equal to from 2 to 4 tons weight, to tear it from the wood.

T. H. R. & Co. have to dispose of

A 12-horse high-pressure engine, metallic piston, with or without boiler.

Two boilers, quite new, 18 feet by 4 feet.

BRISTOL AND EXETER RAILWAY COMPANY.—TENDERS FOR LOANS ON DEBENTURE.—The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising therefrom, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest at the rate of Five per cent. per annum, payable half-yearly at the Bank of Messrs. Glyn, Hallifax, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Prince's street, London, or Broad-street, Bristol.

By order of the Board of Directors,

J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol.

BRISTOL AND GLOUCESTER RAILWAY. CONTRACT FOR WORKS.—NOTICE is hereby given, That the Directors will receive, at their offices, Exchange-buildings, Bristol, on or before 12 o'clock on Monday, the 3rd day of January, 1842, Tenders for the Excavation and Formation of the Earthwork, including the diversion of streams and roads, and construction of bridges, culverts, and other masonry, and the entire completion of the works, including the ballasting, but exclusive of the laying of the permanent rails, of that portion of the railway included in the following contracts:—

Contract No. 5, commencing from a point 200 feet south of the Road No. 15, in the parish of Berkeley (being the end of No. 4 Contract), and terminating in Field No. 1, in the parish of Stinchcombe, being about the distance of 2 miles and 53½ chains.

Contract No. 6, commencing from a point in Field No. 1, in the parish of Stinchcombe (the end of No. 5 Contract), and terminating in Field No. 37, in the parish of Cam, being about the distance of 3 miles and 22 chains.

Contract No. 7, commencing from a point in Field No. 37, in the parish of Cam (the end of No. 6 Contract), and terminating at a brook boundary between the parishes of Frocester and Leonard Stanley (the commencement of No. 8 Contract), being about the distance of 2 miles and 67 chains.

Contract No. 11, commencing from a point in Field No. 6, in the parish of Yate (being the end of No. 12 Contract), and terminating at the north side of the Road marked No. 87 in the same parish, being about the distance of 2 miles and 67 chains.

Contract No. 12, commencing at the junction of the Bristol and Gloucestershire Railway, and terminating in Field No. 5, in the parish of Yate (the beginning of No. 11 Contract), being about the distance of 2 miles and 58 chains.

Drawings and Specifications of the above works may be seen on and after Monday, the 6th day of December next, at the Company's offices, Exchange-buildings, Bristol.

Tenders are to be made on printed forms, provided for that purpose, which may be obtained on application at the office.

The Directors will not consider themselves bound to accept the lowest tender; and they expect the several parties to attend at the office on the 3rd of January, at 12 o'clock.

ROBERT FLETCHER, Secretary.

Bristol, 23rd Nov. 1841.

MANCHESTER AND LEEDS RAILWAY.—NOTICE is hereby given, That a Special General Meeting of the Proprietors of the Manchester and Leeds Railway will be held at the Company's Offices, Clowes' Buildings, Hunt's Bank, in Manchester, in the County of Lancaster, on Thursday, the 23rd day of December, inst., at 12 o'Clock at noon, for the purpose of taking into consideration a proposal that the said Company shall unite with certain other Railway Companies in taking a Lease, upon certain terms to be submitted to the Meeting, of a Railway which is proposed to be made from Darlington, in the County of Durham, to join the Durham Junction Railway in the same County, and of adopting such measures in reference thereto as may appear advisable. And also for the purpose of considering and determining upon the propriety of proceeding with the formation of the projected Extension of the Manchester and Leeds Railway to Hunt's Bank, in the Town of Manchester, under the powers obtained by Act of Parliament for that purpose.

Dated this 8th day of December, 1841.

H. HOULDSWORTH, Chairman.

MANCHESTER AND LEEDS RAILWAY.—NOTICE is hereby given, That the Sealed Certificates for the Quarter Shares will be ready for delivery to the Proprietors on and after Monday, the 20th day of December instant, on application at the office of Mr. Brackenbury, the Clerk of the Company, No. 9, Brown-street, Manchester.

The Mortgagees and Bondholders are also informed that Interest Warrants for the amount of their interest, payable on the 25th December and 1st January next, respectively, will be forwarded to them several days previously to the dates above-mentioned.

Manchester, 9th December, 1841.

CRANES AND HOISTING TACKLE of every description, of the best materials and workmanship, and capable of lifting from 5 cwt. to 20 tons and upwards, with or without steam power, made by ELLIS & NOTON, who take this opportunity of respectfully soliciting an inspection of their Drawings and Patterns, at the IRWELL FOUNDRY, Salford, Manchester.

SOUTH-WESTERN, GREAT WESTERN, CIRENCESTER, BRISTOL AND BRIDGEWATER, AND BRIGHTON RAILWAYS.

In connexion with the above Lines of Railway, Places can be secured by

MAILS AND COACHES,

And at the Offices of Horne and Chaplin at the several Stations.

Parcels forwarded by every train; and if for 8¼ p.m. Mail Train, are received at the above Offices until ¼ past 7 for the above places, and to all parts on the several lines of Railway, viz.:—

Bristol, Bath, Swindon, Farringdon, Reading, Windsor, Southampton, Winchester, Basingstoke, Farnham, Chertsey, Kingston, Brighton, Reigate, &c.

HORNE & CHAPLIN, Proprietors and Agents.

Omnibuses to and from every Train—Fare 6d.

Heavy Goods and Merchandise conveyed from the several Branch Offices, and Hambro' Wharf, Thames-street, to most parts of the south and western railways.

LONDON AND BRIGHTON RAILWAY COMPANY.—NOTICE is hereby given, That until further notice the Trains will start as follows:—

From London at 9, 10.45 a.m.; 1.45, 3.45, p.m.
From Brighton at 8, 10.45 a.m.; 1.45, 3.45, p.m.
Sundays—from London at 9, a.m.; 3.45, p.m.
„ from Brighton at 10.45, a.m.; 3.45, p.m.

Due notice will be given when the Goods' Trains will run. The Company will not be accountable for Passengers' Luggage, unless it is booked and paid for accordingly.

By order,

SWEET, SUTTON, EWENS AND OMMANNEY, Solicitors to the Company.

10, Angel-court, Throgmorton-street, Dec. 1, 1841.

CHELTENHAM AND GREAT WESTERN UNION RAILWAY COMPANY.—NOTICE is hereby given, That the Half-yearly Dividend of £1 per Share, declared at the last General Meeting of Proprietors, will be paid on and after the 24th instant, at the Banks mentioned in the Dividend Warrants.

By order of the Board,

A. MERRICK, Secretary.

Cirencester, 9th December, 1841.

NOTE.—These Dividend Warrants will be issued to such Proprietors only as are on the Register on the 18th instant, and have paid up in cash all calls and arrears then due on their Shares.

NATIONAL PROVIDENT INSTITUTION.—The SIXTH ANNUAL MEETING of the Members of this Institution will be held at the Office, 13, Nicholas lane, King William-street, on Wednesday, the 15th instant, at one o'clock precisely, to receive the Report of the Directors for the current year.

JOSEPH MARSH, Secretary.

December 4th, 1841.

FROM THIRTY TO FORTY SUPERIOR POWERFUL AND VALUABLE CART-HORSES.—To be Sold by Auction, by Mr. SAXBY, at Nine Elms, Vauxhall, on Wednesday, the 15th December, 1841, at 10 for 11 precisely, by desire of Mr. Hubbersty, being a part of his stock working on the South-Eastern and Dover Railway. Thirty to forty powerful, active, young, and sound good Cart Horses, in excellent working condition; they have been selected with great judgment, at high prices, are superior workers, and well deserving the attention of merchants, farmers, dealers, and others. This is an opportunity which should not be lost sight of, as it seldom occurs that so many valuable horses (of various colours) are brought to the notice of the public at one sale. The whole without reserve. Particulars will be given in the Catalogues.

Catalogues may be had three days previous to the sale, on application at the Greyhound, Croydon; White Hart, Reigate; Star, Lewes; King's Arms, Westerham; Crown, Edenbridge; White Hart, Godstone; Red Lion, Dorking; King's Head, Epsom; King's Head, Horsham; King and Queen, Brighton; and of the Auctioneer, 160, High-street, Guildford, Surrey.

LONDON AND GREENWICH RAILWAY SCRIP.—The holders are reminded that the final instalment became due on the 15th of October last, and that interest at the rate of 5 per cent. per annum is now charged on all instalments in arrear; and that unless paid in full on or before the 15th of January next, the whole of the amounts already paid *are subject to forfeiture*.

The Scrip on which the whole of the instalments have been paid, must be registered before the holders can receive any dividend thereon.

By order,

J. Y. AKERMAN, Sec.

Offices, 37, Canterbury-square, Tooley-street, 16th November, 1841.

MIDLAND COUNTIES' RAILWAY.—The Directors of this Company are receiving Money on their Loan Notes, in sums of not less than £400, for either Three, Five, or Seven Years, to be exchanged for Debentures in September next. Interest, after the rate of Five per Cent. per Annum, is allowed and paid half-yearly, on the day it becomes due.

By order,

J. F. BELL, Secretary.

Leicester, 29th November, 1841.

NORTHERN AND EASTERN RAILWAY.—NOTICE is hereby given, That a Special General Meeting of the Proprietors of this Company will be held at the London Tavern, Bishopsgate-street, on Thursday, the 6th day of January, 1842, at Two o'Clock, precisely, for the purpose of confirming the Declaration of Forfeiture made by the Directors on the 30th day of September last, of certain shares in this Company on which the calls due had not been paid.

WILLIAM MARSHALL, Deputy-Chairman.
WILLIAM BOURNE, Secretary.

Shoreditch, London, 9th December, 1841.

NEW EDITIONS of the following useful Works are just published at the *Railway Times* Office, 122, Fleet-street:

I.

ROBINSON'S RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Map, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Price 1s., in cloth.

II.

ROBINSON'S RAILWAY DIRECTORY FOR 1842, containing the Names of the Directors and principal Officers of the Railways in Great Britain, derived from authentic sources, price 1s.

III.

TUCK'S MAP OF THE RAILWAYS throughout ENGLAND and WALES to the Capital of Scotland, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s. 6d.; in paper covers, 1s.; mounted on canvass, in cloth case, 2s. 6d.; on rollers, 3s. 6d.

IV.

MAPS OF ALL THE LINES OF RAILWAY through ENGLAND and WALES, showing the country in their immediate vicinity on a larger scale than was ever before displayed in a sheet pocket map, with a compendium of Railway information. In paper cover 1s., in cloth 1s. 6d.; on canvass, 2s. 6d.

V.

TABLES OF HACKNEY CARRIAGE FARES from the BIRMINGHAM RAILWAY to all parts of the METROPOLIS, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

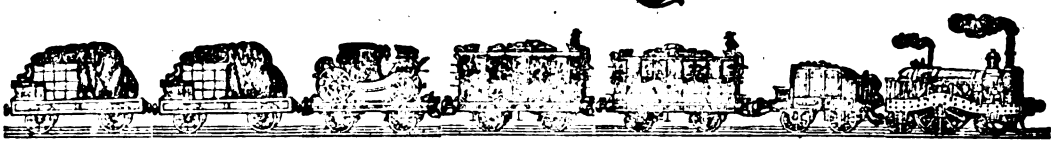
VI.

TABLES OF HACKNEY CARRIAGE FARES from the GREAT WESTERN RAILWAY to all parts of the Metropolis, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

Now ready, Demy 4to., Price 3s., Part 2 of

WILME'S HANDBOOK for MAPPING and ENGINEERING DRAWING.

J. Weale, 59, High Holborn; Mr. Wyld, Mapseller, 454, West Strand; J. Gardner, Brewer-street, Golden-square; Grant and Son, Edinburgh; Philip, 51, South Castle-street, Liverpool; Curry and Co., Dublin; and all Booksellers and Mapsellers.



As far as it goes it is deserving of every commendation; the styles selected display a great deal of taste, and in several instances no small degree of originality.—*Mechanics' Mag.*

It may be advantageously used by the Engineering Draughtsman.—*Civil Engineer and Architects' Journal.*

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Bride's, Fleet-street, Middlesex.—Saturday, December 11, 1841.

The Railway Times.

"Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 207. Vol. IV.—No. 51.] SATURDAY, DECEMBER 18, 1841. [Price 6d.

IMPROVEMENT IN THE RAILWAY SHARE-MARKET—The attention of the Proprietors of Railway Shares is requested to an important reduction in the expense of working Locomotive Engines, which, if adopted, must have the effect of improving the dividends, and of course the prices of railway property.

The economy above-mentioned is effected by the use of coal (its smoke being consumed agreeably to Act of Parliament) in lieu of the expensive article of coke.

Taking the cost of coal and coke respectively on the Midland Counties' Railway as the data for calculation £100 worth of coal will evaporate as much water, and propel a train as many miles as £235 worth of coke. For the correctness of this statement, application may be made to Jos. Kearsley, Esq., Derby, Chief Engineer, on the above Railway, and no doubt the Directors would afford all requisite information to any Railway Company.

Further particulars, with drawing, &c. &c., may be obtained of the Patentee (of the apparatus) Samuel Hall, No. 18, Kings Arms Yard, London.

LONDON AND GREENWICH RAILWAY SCRIP.—The holders are reminded that the final instalment became due on the 15th of October last, and that interest at the rate of 5 per cent. per annum is now charged on all instalments in arrear; and that unless paid in full on or before the 15th of January next, the whole of the amounts already paid *are subject to forfeiture.*

The books of the Company will be closed on 31st Dec., before which day the Scrip must be paid in full, and registered, in order to entitle the holder to any dividend which may be declared at the next general meeting.

By order of the Board,
J. Y. AKERMAN, Sec.

Offices, 37, Canterbury-square, Southwark,
14th December, 1841.

SOUTH-EASTERN LONDON AND DOVER RAILWAY COMPANY—TENDERS FOR LOANS ON MORTGAGE.—The Directors of this Company are prepared, under the powers of their Acts of Parliament, to receive Tenders for the Loan of Money for a term of Three, Five, Seven or Ten Years, at the option of the Lender, and to grant Mortgages of the Rates and Tolls of their undertaking as security for the same, bearing interest at the rate of 5 per cent. per annum, payable half yearly at the Bank of Messrs. Glyn and Co., London. The Tenders are to express the sums and term of years for which the Loan is proposed to be made, and are to be addressed to the Secretary at the Company's office, 10, Coleman-street, London.

By order of the Board of Directors,
J. S. YEATS, Secretary.

EASTERN COUNTIES' RAILWAY.—CONTRACT FOR RAILWAY PINS.—The Directors are ready to receive Tenders for the supply of a quantity of Railway Pins, to be delivered at stated periods, according to the specification and pattern to be seen at the Engineer's office, High-street, Shoreditch, until the 27th instant, after which day no Tender can be received.

Tenders to be sealed, addressed to the Directors of the Eastern Counties' Railway, High-street, Shoreditch, and indorsed, "Tender for Railway Pins." The Directors do not bind themselves to accept the lowest Tender.

By Order of the Board,
A. BULKELEY, Secretary.

Eastern Counties' Railway Offices, High-street,
Shoreditch, December 14, 1841.

TO ENGINEERS, MILLWRIGHTS, FOUNDERS, SMITHS, AND OTHERS.—To be Disposed of, an Old Established Engineers, Millwrights, and Founders Concern, (the present Proprietor retiring from the Manufacturing Department,) situated in London. The Premises and Plant are arranged for a most extensive business, and have been erected during the last 25 years, at a considerable cost, but from the above cause will be Disposed of upon extremely favourable terms; the Premises will be let on lease, and the Machinery and Tools disposed of at a valuation.

Apply for Particulars to John Evans, Esq., 51, Lincoln's Inn Fields.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secresy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

This day is published,

TUCK'S ROLLER CALENDAR FOR 1842.—This is a mode of affixing the Calendar for the whole year on two revolving cylinders, within an elegant case, so as to exhibit each day's information in a bold and novel manner, presenting Daily Memoranda indispensible to every housekeeper and man of business. It possesses the advantage of a Date Box and Almanac, and is adapted for the Library, Board Room, Counting House, Warehouse, or Parlour; and is the best application of the Calendar ever yet devised. In Mahogany Box, price 5s. 6d.; in Ornamented Box, 6s. 6d. In addition to much useful information relating to business, &c., the Calendar contains the time of High Water at London, Liverpool, Dublin, Glasgow, Leith, Bristol, and Hull, for every day in the year.

Railway Times Office, Fleet-street; Letts, Cornhill; and Ackerman, Strand.

WANTED in an Iron Foundry and Locomotive and General Engine Manufactory a PARTNER, who can advance a sum of £8,000 or £10,000.

The Establishment is in high estimation, and the present is a favourable opportunity for investing Capital.

The outgoing Partner can give satisfactory reasons for withdrawing, and will not object to leave in the concern £5,000.

Address by Letter, post paid, to A. A., *Mercury* Office, Leeds.

WANTED, an Active Person well acquainted with the Practical Business carried on upon Railways, to assist the Superintendent of a Coal line in the North of England. Salary £100 per annum.

Applications, in writing, to be forwarded post paid, with references, to Mr. Benson, No. 80, Old Broad-street.

PROPOSED PLAN for the establishment of a GENERAL OFFICE for the use of TRAVELLERS BY RAILWAY and STEAM NAVIGATION, where the public could readily obtain every species of information that might be useful to or required by Travellers, either on business or pleasure, by any of the various Railway and Steam Navigation Conveyances throughout the United Kingdom, more especially as relates to the hours of departure and arrival, the scale of fares, and the different regulations of each, for conveying Passengers and Goods; to be formed under the sanction and patronage of the several Boards of Direction and Management of the Companies now in existence.

It is proposed that a complete Register be kept of all the Railway Conveyances, systematically arranged for the convenience of immediate reference, setting forth every station at which the trains stop on the respective lines, and the several stations and booking offices from whence passengers and goods may be conveyed.

That the proposed Office be furnished with the printed placards and hand-bills from all the different Companies, for reference and distribution to the public, who should receive gratuitously every information required.

That a like Register be kept of all the Steam Navigation Conveyances, and a similar distribution be made of the hand-bills of the different Companies, and every information respecting them be given in the same manner.

That a communication be opened for correspondence with the respective Secretaries to enable the Manager of the Office to give answer to such inquiries as might arise, and which their printed hand-bills do not furnish, and that the Secretaries would from time to time give the Manager immediate notice of every alteration affecting the conveyance of passengers and goods.

The Manager of the Office would undertake to transmit by post any hand-bill or specific information, which might be required by persons residing in the country, and who could not conveniently attend personally to obtain it.

That such Office be fixed at some centrical point (being a public thoroughfare) at the West End of the Town, holding connection with a similar establishment in the City, and to be open to the public every day, Sundays excepted, and that the Office shall be furnished with geographical maps and plans of the Railways.

It is proposed that arrangements should also be made which would embrace an extension of the plan, by collecting information of the various establishments on the Continent of Europe and elsewhere, for conveyance by Railway and Steam Navigation, as it is considered that by centralizing these various objects at one place, a complete Emporium will be formed for obtaining that general information which Travellers so much require, and this concern founded upon such an enlarged and comprehensive scale as would ensure the contemplated benefit and advantage to the several Companies interested, as well as for its becoming a medium of the greatest public utility.

NATHANIEL W. SYMONDS.

Lombard Street Chambers, Clement's Lane,
27th October, 1841.

*** Any suggestion to improve or add to the usefulness of the above plan will be thankfully received.

ANDREW SMITH'S PATENT WIRE ROPES, for STANDING RIGGING, LIGHTNING CONDUCTORS, STROPPING OF BLOCKS, MINING, RAILWAY, and GENERAL PURPOSES; about half the Size and Weight of Hempen Ropes, and 25 per cent. cheaper. Testimonials to that effect, with Specimens, may be seen, and every information obtained, at the Manufactory, Mill-wall, Poplar; and also of the following Agents:

Robertson and Co., 12, Goree Piazzas Liverpool.
Mathias Dunn.....Newcastle-upon-Tyne
Joseph Bothway.....Plymouth.
John Thompson and Co.....Wigan.
J. T. Tregellas.....Truro.
Thomas Mooney and Son.....Dublin.
Coates and Young.....Belfast.
James Kibble and Co.....Glasgow.
James Gunn.....Leith.
John M. Beatte, 14, Clement's-lane, High-street, Dundee.

This Rope has been in use for standing rigging in her Majesty's navy, and a great number of merchant vessels, for upwards of six years, and is giving the highest satisfaction. It is also employed in various mines and railways in different parts of the kingdom.

THE TOLL QUESTION—CROYDON AND GREENWICH RAILWAYS.

(*Concluded from page* 176.)

London and Greenwich Railway,
London Terminus, 17th Nov., 1840

Sir,—Your letter of the 13th has been laid before the Directors, who request me to mention, that as it contains no fresh propositions on the subject lately under discussion, they have little to state in reply, not being prepared to make any other offer than the one contained in their letter of the 31st ult.; but if the Croydon Board can suggest any modification of details which would facilitate the practical operation on the terms proposed, they will give it their most attentive consideration.

The Directors further request, that in the event of its being resolved to adopt the plan mentioned in your letter of the 3rd instant, the earliest intimation will be given to them, both of such intention, and of the amount of tolls which the Croydon Railway Company are willing to take for the use of their line from New Cross to the junction at Corbett's-lane, so that they may have time to mature their arrangements consequent thereon.

I am, Sir, your most obedient servant,
(Signed) J. Y. AKERMAN, Sec.

R. S. Young, Esq.,
Secretary to the Croydon Railway Company.

London and Croydon Railway Company,
205, Tooley-street, 20th Nov., 1840.

Sir,—As the Greenwich Directors, by the terms of your letter of the 17th inst. appear to expect that the Croydon Directors should make some further modification of the terms proposed, and as the only modification which suggests itself to them is the offer of a sum certain as a compensation for the toll payable in respect of the Croydon traffic, they beg to propose, for the sake of avoiding any extreme measures, that the Greenwich Company shall receive a sum of 4,500*l.* in lieu of the Croydon toll for one year; this sum the Croydon Directors consider to be more than the Greenwich Company are likely to receive under present arrangements, and very much more than they can possibly receive, should the Croydon Directors be compelled to resort to those measures which they have in contemplation.

The Greenwich Directors must be too anxious to avoid the consequence of such proceedings to neglect any means which might seem to them likely to secure their present 3d. toll on the large number of passengers derivable from low fares on the Croydon line, and they doubtless had this object in view when they proposed to run trains to New Cross to take on passengers brought by the Croydon Company to that point. Had the Greenwich Directors really desired to co-operate on *equitable* terms with the Croydon Directors in carrying passengers between Croydon and London Bridge, at low fares, the Croydon Directors would have, for the accomplishment of that object, been ready to enter into arrangements either to New Cross or Croydon, as the Greenwich Directors might have desired; and they submit that the only equitable arrangement must be based on a uniform charge throughout the journey. But if the Greenwich Directors propose to themselves by any arrangement, with this Company to make such a charge from New Cross as would check the full development of the traffic, and give themselves an undue share of the benefit to be derived from passengers brought at low fares from Croydon, the Directors of this Company cannot, consistently with a regard to the interest of the public, or that of their own proprietors, afford the Greenwich Directors any facilities for so doing.

The only toll, therefore, which the Croydon Directors could consent to take, would be such as would divide the whole fares, less the cost of conveyance, between the two Companies in proportion to the length of line appertaining to each Company, in respect of which such fares are charged.

I am, Sir, your most obedient servant.
(Signed) R. S. YOUNG, Sec.

J. Y. Akerman, Esq., Sec.
Greenwich Railway Company.

London and Greenwich Railway Office,
London Terminus—24th November, 1840.

Sir,—I am desired to acknowledge the receipt of your letter of the 20th instant, offering to this Company the sum of 4,500*l.* for the use of this railway from Corbett's-lane to the London terminus for one year, in lieu of the toll now payable; which offer the Board instruct me to decline.

The Directors regret that the remainder of your letter is not equally explicit; they request, in the event of your proceeding with the arrangement alluded to in your letter of the 3rd instant, to be informed as early as possible, what amount in sterling money per passenger, the charge for toll will be from New Cross to Corbett's-lane, and to know the scale of fares, as soon as determined upon, from the different stations on the Croydon Railway to New Cross. (Signed) J. Y. AKERMAN, Sec.

London and Croydon Railway,
205, Tooley-street.—27th November, 1840.

Sir,—The offer last made by this Board to the Greenwich Company of 4,500*l.* in lieu of the Croydon toll for one year, having been declined by your Directors, nothing further remains to be said on that part of your letter of the 24th instant.

With regard to the latter part of your letter, I have only to refer you to the concluding paragraph of my letter of the 20th instant, which the Directors of this Company consider to be sufficiently explicit. In accordance, however, with the request of your Board, to be informed what amount in sterling money per passenger, the charge will be, from New Cross to Corbett's-lane, on principles therein laid down, I am instructed to annex the following illustration:—

TABLE.

Assumed whole fares of both Companies from Croydon to London Bridge.	Cost of conveyance to be deducted.	Net sum to be divided between the two Companies in proportion to their length.	Greenwich Company's proportion of net sum being 1-6th.	Add Greenwich portion of conveyance to New Cross.	Total share for Greenwich Company.	Assumed fare charged by Greenwich Company to New Cross.	Consequent toll to be paid to the Croydon Company in respect of distance between Corbett's-lane & New Cross	Consequent fare to be charged to the public by the Croydon Company from New Cross to Croydon.
s. d.	d. s.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.
1 0	0 3	0 9	0 1½	0 0½	0 2	0 3	0 0½	0 9
1 0	0 3	0 9	0 1½	0 0½	0 2	0 6	0 3½	0 6
1 0	0 3	0 9	0 1½	0 0½	0 2	0 9	0 6½	0 3
1 0	0 3	0 9	0 1½	0 0½	0 2	10 0	0 9½	0 0

As the terms of your last letter are evidently intended to conclude this correspondence, the Directors have only to lament such a result of the negociation, and to state, that that they shall feel it to be their duty to submit the whole to their proprietary, at their approaching general meeting.

I am, Sir, your most obedient servant,
R. S. YOUNG, Secretary.

J. Y. Akerman, Esq.
Secretary to the Greenwich Railway Company.

London and Greenwich Railway Office,
London Terminus—December 2nd, 1840.

SIR,—The Directors request me to acknowledge the receipt of your letter of the 27th ultimo, accompanied by a table indicating the toll which the Directors of the Croydon Railway Company would charge for the use of their line from Corbett's-lane to New Cross.

If this table is framed on the basis intended to be laid down in your first letter, the Directors regret to perceive they have quite misunderstood the principle you have been advocating. Your Board proposed there should be "a division of the whole sum chargeable as fare, between the toll-paying and toll-receiving Companies, in proportion to the length of their respective lines upon which such fare shall be charged, reserving to the toll-paying Company a certain sum for indemnification of the cost of conveying its passengers over the line of the toll-receiving Company. This proposition is founded upon the assumption that every Company, being a carrier upon its own line, is entitled to all profit derivable from traffic passing over such line; in other words, that it is entitled to participate, in proportion to its length of line, in the profits of all Companies using the same." This would seem to give the following result:—

	s.	d.
Suppose the whole fare from Croydon to London	1	0
Deduct, as you proposed, one-fourth for cost of conveyance	0	3
Leaving as toll for 10¼ miles, to be divided between the two Companies, "in proportion to the length of their respective lines"	0	9
The Greenwich Company would thus receive for their line, from Corbett's lane to London (1¾ miles) one-sixth, or	0	1½
Leaving for 8½ miles of the Croydon Railway	0	7½
The distance from Corbett's-laue to New Cross being barely 1¼ miles, or one-seventh of the whole Croydon Railway, the proportion for it would be	0	1 1/7

But if instead of taking the whole fare from Croydon to London for a basis, as your last letter does, your Board should insist on taking that from New Cross to London only, as being a distinct fare, the toll would be as follows:—

	s.	d.
Suppose the fare from New Cross to London to be	0	6
Deduct one fourth	0	1½
Leaving as toll for 3 miles	0	4½
If 3 miles earn 4½d. : 1¼ miles earn	0	1¾

Instead of which it is now proposed to charge upon a fare of 6d. a toll of *three-pence three farthings*, a result at which you arrive by allowing the Greenwich Railway Company their mileage proportion of toll as above (1¾d.), and the bare cost of conveyance (estimated at only *three farthings* for *three miles* of distance), and claiming all the remainder as toll for the Croydon Company, thus depriving the Greenwich Company of *all profit as carriers on their own line*, to which your original proposition regarded them as entitled.

Reverting to the original position, in which the Croydon Board commenced this correspondence, viz.—that the toll at present charged by the Greenwich Railway Company is too heavy in proportion to the fares received by the Croydon Company, the Directors beg to call the attention of your Board to the fact, that whilst the Greenwich Company are charging a toll of 3d. for the use of 1¾ miles, from London to Corbett's-lane, the Croydon Company are claiming *under the very same fares*, viz.—8d. for second class, and 1s. for first class passengers, a toll of 5¾d. on the former, and 9¾d. on the latter for the use of only 1¼ miles of their railway.

Nothing appears to the Directors of the Greenwich Company more clear than that such a scale cannot be equitable; and that it must be most injurious to the interests of both of the Railway Companies and of the public:—for so heavy a charge must be prohibitory of all traffic on the road, instead of affording that co-operation for the public convenience which the Greenwich Company are anxious to promote.

I am, Sir, your most obedient servant,
(Signed) J. Y. AKERMAN, Sec.

R. S. Young, Esq., Secretary,
Croydon Railway Company.

London and Croydon Railway Company,
205, Tooley-street—5th December, 1840.

Sir,—In acknowledging the receipt of your last letter, and in reference to the attempt there made to fasten an apparent inconsistency upon the Directors of this Company, I am desired to refer you to my letter of the 20th November, in which it is stated distinctly, thay "if the Greenwich Directors propose to them-

Digitized by Google

selves by any arrangement with this Company, to make such a charge from New Cross as would check the full developement of the traffic, and give themselves an undue share of the benefit to be derived from passengers brought at low fares from Croydon, the Directors of this Company cannot, consistently, with a regard to the interest of the public, or that of their own proprietors, afford the Greenwich Directors any facilities for so doing.

"The only toll, therefore, which the Croydon Directors could consent to take, would be such as would divide the whole fares, less the cost of conveyance, between the two Companies, in proportion to the length of line appertaining to each Company in respect of which such fares are charged."

I am desired further to observe, that the sole object of the Croydon Directors, as shown in the entire correspondence, has been to effect an equitable division of the whole sum charged as fare between the two Companies; and that the last table as well as the first, is calculated upon the basis of such division. Your Directors must have perceived, that it has reference solely to an assumed low rate of fare from Croydon to London Bridge, and that if they confine themselves to the same low rate of fare, it merely imposes the same proportionate rate of toll, which by the first table the Croydon Company proposes to pay to the Greenwich Company: it is only when the rate of charge made by the Greenwich Company, is out of proportion to the whole fares charged by both Companies, that this table calls for a refunding of the excess in the shape of toll to the Croydon Company, and if the scale were carried out upon a higher rate of fare, and the rate of charge made by the Greenwich Company were to be *less* in proportion to the whole fares charged by both Companies, the toll would be reduced still further, until the Croydon Company might even be required to refund some part of its receipts to the Greenwich Company.

The Directors of this Company are satisfied that this arrangement is perfectly equitable, and entirely in accordance with the principle laid down in their first letter. The Greenwich Directors must see, that whatever may be the amount of toll payable by that table, the sum charged to the public between Croydon and London Bridge would be precisely the same, as would also be the sum receivable by the Croydon Company for the use of their railway; and the public will not fail to perceive, that the proposition of the Greenwich Company to run their trains to New Cross is, as far as regards the public convenience, a mere pretence; and that the sole object of such proposition is to obtain a disproportionate division of profits between the two Companies, and that its effect would be, to defeat the desire of the Croydon Company, to establish a low rate of fares between Croydon and London Bridge.

I am, Sir, your most obedient servant,
(Signed) R. S. YOUNG.

J. Y. Akerman, Esq., Sec.
Greenwich Railway Company.

[Here ends the correspondence as printed by the Croydon Board and laid before the proprietors of that Company. Since we commenced republishing it, we have received the following additional letters:—]

To the Editor of the Railway Times.

Sir,—As you have published the correspondence which took place between this Company and the Croydon Railway Company last year, I am desired to forward you a copy of the letter which concluded that correspondence, with a request that you will publish that also.

I am, Sir, yours very obediently,
J. Y. AKERMAN, Secretary.

Greenwich Railway Company's Offices,
Southwark, Dec. 8, 1841.

Greenwich Railway Office,
London Terminus, Dec. 8, 1840.

Sir,—I am in receipt of your letter of 5th, and have laid it before the Board, who desire me to express their regret that the Directors of the Croydon Railway Company in carrying on a business correspondence should permit themselves to indulge in such an offensive and unfounded insinuation as the one contained in your letter, characterising their negociation for the use of a portion of your railway as "a mere pretence." Not wishing to reply in the same hasty and angry spirit which cannot conduce to a settlement of the matter in hand, they request me at once, regardless of its tone, to give the fullest refutation to such an expression by stating what they are prepared to do.

If your Board really entertains the project of stopping all the second class carriages at New Cross, and will give timely notice of such intention to this Company, the Directors will be prepared to find conveyance for your second class passengers from New Cross to London, provided you will fix the toll not higher than one penny five-eighths per passenger. This is the same rate per mile that they receive for the use of their railway by your Company; deducting from the gross amount the proportion chargeable thereon as parochial rates, which would not have to be paid by your Company in respect of the toll they would thus receive: and though they consider such a toll much too high for a line which has cost comparatively so little money, they will be prepared to pay it rather than lose the traffic of your second class passengers.

As your Board have decided on making the correspondence public the Directors trust you will give the same publicity to this letter.

I am, &c. &c.
(Signed) J. Y. AKERMAN, Sec.

R. S. Young, Esq., Secretary, &c.
Croydon Railway Company.

To the Editor of the Railway Times.

Sir,—By a notice to correspondents in your last week's journal it appears that a letter has been forwarded to you by Mr. Akerman, which you purpose to append to the correspondence between the Croydon and Greenwich Company already in your hands.

There were *two* other letters which terminated this correspondence, but as they were never published you could not be possessed of their contents; as, however, it seems that a publication of them is desired I send you copies of *both*.

I am, Sir, your very obedient servant,
R. S. YOUNG.

205, Tooley-street, Dec. 13, 1841.

[The first of these is given above, the other is as follows:]—

205, Tooley-street, 11th Dec. 1840.

Sir,—The Directors of the London and Croydon Railway Company desire me to assure the Directors of the Greenwich Railway Company that no offence was intended by the expression complained of in your letter of the 8th instant, and they can only conceive that it must have been misunderstood, since if read in connection with the words, "as far as regards the public convenience," there is really nothing which could justify the tone of your reply, as the Greenwich Directors cannot have overlooked the fact, that their plan would subject the public to a change of carriages and a higher fare.

In answer to the latter part of your letter, I am desired to state, that the Croydon Directors cannot agree to your proposal of their receiving 1¼d. as toll for their line from New Cross to Corbett's-lane, without any limit to the charge which the Greenwich Company may make to the public, for the reason so often stated in the course of this correspondence; namely, that such an arrangement would have the effect either of obliging the Croydon Directors to keep up or increase the present rate of their fares, in order to receive their proper share of income, or if they were to lower them it would transfer more than the fair proportion of such income into the hands of the Greenwich Company, which would be yielding the whole point in dispute between the two Companies. The Directors of this Company are more satisfied in coming to this determination, from the consciousness of having done all that could be expected in proof of the fairness of the proposition, when they offered the use of their whole line to the Greenwich Company upon the same terms as those which they propose to pay for the use of the Greenwich line, and they desire to conclude this correspondence by expressing their conviction that, sooner or later, the Greenwich Company will be induced to accede to the principle propounded by the Croydon Company.

The Croydon Directors would have had great pleasure in printing your letter of the 8th instant, with the previous correspondence, in order to lay the whole before their proprietors at the general meeting on Tuesday, but as that opportunity is past, and as the proposition contained therein presents no approximation to the principle advocated by this Board, and which they are assured would, if adopted, be mutually beneficial to the two Companies, they must decline printing any more of this correspondence for the present.

I am, Sir, your very obedient servant,
R. S. YOUNG, Secretary.

J. Y. Akerman, Esq., Secretary,
Greenwich Railway Company.

THE TOLL QUESTION—CROYDON AND GREENWICH RAILWAYS.

To the Editor of the Railway Times.

Sir,—The unique epistle of your irate correspondent "Verus," has led me to pen the following "Official Notification" for the use of the Greenwich Directors.

"OFFICIAL NOTIFICATION.

"The Directors of the London and Greenwich Railway Company feeling that the discussion of the toll question has already led to the enlightenment of several members of their own body, and that its further discussion *must* result in the conversion of the entire Board, and of the proprietary generally, to the startling proposition that 4 twopences are more in amount than 2 threepences, think it right for the encouragement of all ignorant prejudices, unamiable passions, and sinister motives, to notify officially 'that all further discussion on this tiresome question is now and for ever closed,' and that therefore no communication from the Croydon Company, however respectfully worded, will be courteously acknowledged — no suggestion from them, however valuable, will be attended to—nor any offer however advantageous to the Greenwich Company will be accepted."

This, I think, would meet the enlarged views of "Verus," and render it unnecessary for any member of the Greenwich Board to "abandon" his "seat" to another.

I am, Sir, your constant reader,
SEVERUS.

Railway Accident in France.—A remarkable accident occurred on the 3rd inst., upon the Nismes and Alais railway. It was half-past five in the morning, and a train of 43 waggons of coal with a locomotive going to Beaucaire, was advancing, near Conilbiere, when a sudden fall of earth took place some way in advance of the train, and blocked up the road. The watchman at the spot was aware of the fall, knew that the train was coming, and ran forward, making the usual signs to stop; but on account of a curvature in the line, the engineer was unable to stop the train in time, and the whole dashed with the utmost violence against the obstacle. The shock was so tremendous that the tender which was placed before the locomotive was driven off the rails to one side of the road, and the locomotive to the other, while fifteen waggons of coal immediately following, were driven completely over the locomotive, and broken into a thousand pieces. The stoker had disappeared altogether, and had been buried under a heap of coal, but had fortunately been protected by the overturned tender, and after two hours' digging was got out unhurt. The engineer was thrown up several yards into the air, but fell with little injury. The conductor of the train was thrown into a foss of water, but, though soon taken out, had received so severe an internal injury, that he died in a few moments.—*Galignani.*

RAILWAY COMMUNICATION WITH SCOTLAND—MEETING IN GLASGOW.

(From the *Glasgow Chronicle*, of Dec. 15.)

A PUBLIC meeting of the merchants, manufacturers, bankers, and other inhabitants of the City of Glasgow, was held to-day in the Black Bull Hall, at one o'clock, for the purpose of deliberating upon the measures which ought to be adopted in order to secure the completion of the line of railway between England and Scotland, approved of and recommended by the Government Commissioners. The Lord Provost was called to the Chair. The meeting was most numerously and respectably attended. Among those present we observed James Oswald, Esq. of Auchencruive, M.P.; Robert Wallace, Esq. of Kelly, M.P.; John Pollock, Esq.; Henry Dunlop, Esq.; William Gray, Esq., Dean of Guild; Robert Findlay, Esq.; John Houldsworth, Esq., Chairman of the Chamber of Commerce; James Lumsden, Esq.; John Mitchell, Esq.; James R. Dennistoun, Esq.; James Campbell, Esq.; William Cross, Esq.; W. L. Ewing, Esq.; James Davidson, Esq., of Ruchill; George Dick, Esq., Deacon Convener of the Trades' House, &c. &c.

The LORD PROVOST, on taking the Chair, was loudly applauded. His Lordship, after a few prefatory remarks, then introduced the deputation from Cumberland and Dumfrieshire, viz. Colonel Graham, of Mossknow, P. H. Howard, M.P. for Carlisle, and John Dixon, Esq., of Knells, late Mayor of Carlisle.

His Lordship then called on Colonel Graham to address the meeting.

Colonel GRAHAM then rose and said, I may perhaps be allowed to congratulate this meeting upon the vast interest now excited in favour of an undertaking which will, in all human probability, prove so highly advantageous to the trade and commerce of Glasgow; purposing to unite by one great trunk line of railway nearly the whole of Scotland, with the west of England; and to diminish the time and cost of land communication between the two countries by at least one half. (Hear, hear.) Any information, Gentlemen, that I am able to furnish, though perhaps of some importance, may be uttered in a very few moments of time. The Board of Management of the Grand Junction Railway Company (with whom I had the honour of an interview this day week) have, in conjunction with about half a dozen other Railway Companies, undertaken to complete a Parliamentary survey of the whole line from Lancaster to Glasgow and Edinburgh upon adequate funds being furnished them, and have for that purpose contributed to a considerable amount amongst themselves. The total sum to be raised should, if possible, exceed 2,000*l.*, of which, about one half falls to the shares of the Companies, counties, and cities to the south of the border, and a great portion of that sum has already been furnished and appropriated to the service intended. For the northern portion, Dumfries-shire has already furnished 200*l.*, and the Govan and Polloc Railway Company, in this neighbourhood, have subscribed 300*l.*, both of which sums are, I believe, transmitted to Messrs. Moss and Co. of Liverpool, the bankers of the Grand Junction Company: for I must call to the particular notice of this meeting the fact, that no unnecessary delay should be allowed to take place in the collecting or transmitting to Liverpool any sums that may be available for this purpose. The Board of the Grand Junction Company are too good men of business to take upon themselves any expensive movement, without first seeing deposited the adequate means in hard cash—(cheers and laughter)—and as the season is far advanced, and the plans and books, &c. of the survey require to be lodged by the 1st of March, no delay whatsoever is admissable; and so fully impressed with this fact was the meeting held at Carlisle on Monday last, for raising their quota of the fund for the city and county of Cumberland, that after about one-third of the amount required had been subscribed for by the persons present, a few gentlemen joined together, and became at once responsible that the whole sum should be raised, and that they immediately authorised Mr. Brown of the city bank to transmit the money to Messrs. Moss and Co., and which he actually did that evening. This gentleman, under the circumstances of the case, is one of the most business-like steps I have seen taken, and one that I could beg to recommend for imitation. (Renewed applause.) I believe it will be generally allowed that the undertaking in view has been fortunate in falling into the guidance of the Board of the Grand Junction, in unison with several other Railway Companies, for a body of men more disinterested, independent, or better informed, could perhaps not be selected; or a Company more able to assist the operations, and bear the responsibility of so great a work, could not be found; under their guidance, the whole line will be undertaken as one work; undivided in its management and interests, but for the object of the survey cost, for the present, into two or three sections; upon the first of which, extending from Lancaster to the Scotch border, the surveyors are at present in active employment, and it only remains for Scotland to do her part to carry the survey into the heart of her country. (Hear, hear.) Those Companies have engaged for the survey the able exertions of Mr. Locke, and his assistant Mr. Errington, with instructions to find and lodge plans and notices for the best and cheapest line, and they are now waiting on the Scotch border for orders to proceed with the survey. Between Lancaster and the Sark, all the arrangements are made; and I have it from Mr. Errington to state, that a cheap line can be formed over Shap, and one that will put to shame many statements made by persons adverse to the project. But this, gentlemen, is no rival line. The rivalry of any other project is excluded by the Government Commissioners' Report; other lines are proposed to meet the views of parties, but this is one recommended by highly disinterested and competent men, as the one, above all others, to be preferred as a national undertaking—preferred as the one that would save the traveller from the south to either Edinburgh or Glasgow, both time and money—preferred, as giving the shortest and cheapest route from both Edinburgh and Glasgow to Carlisle, Liverpool, Manchester, Birmingham, and London—preferred as the one uniting the trade and commerce of Scotland with the west of England—preferred as the one passing through the most populous counties and most mineral districts—and preferred as the line which can be executed at the smallest cost, and offers the best hope of remuneration. (Applause.) The mails are now conveyed along our excellent roads at a rate of ten miles per hour, where, as it is well known, that mechanical power can accomplish triple that speed, and spare one of the noblest animals in nature vast overexertion, constant accident, and premature death, for it can be shewn that not above one horse in twenty is able, be his breeding and feeding what you please, to withstand a continuance of a fair daily task at that speed, for more than a twelvemonth. On this score, I would call to the support of our project, the kind-hearted and the humane; I would ask for their assistance in suppressing this vast mass of animal suffering, by the mere substitution of mechanical power. (Renewed applause.) With the recommendation of the Government Commissioners, the support of wealthy bodies in the west of England, and the expressed wish of landowners along its course, this great national undertaking presents itself to the public under very peculiar advantages. The estimated cost of the whole work, it is clearly understood, has been fairly laid, and requires only the test of the contemplated survey to prove that fact. Certain Companies have already contemplated the propriety of investing, in their corporate capacity, large sums in the undertaking, and it is more than probable that a great moiety of the capital will be subscribed ere the share list is thrown open; and I repeat that it only now remains for Scotland to do her part with promptitude and energy, to subscribe a few hundred pounds for obtaining a Parliamentary survey of the proposed line, when the project will stand clearly before the public, and rest solely upon its own merits. Colonel Graham sat down amid loud applause.

Mr. FINDLAY of Easter-hill then rose—After the very satisfactory statement which the meeting had just heard from Colonel Graham, very little fortunately remained for him to say in introducing to the notice of the meeting the resolution with which the gentlemen who had taken charge of the business had done him the honour to entrust him. But he might be permitted to make one or two general observations, in the justice of which he was satisfied that numerous, intelligent, and influential meeting of his fellow citizens would readily concur. It was this, that the city of Glasgow, and the active, enterprising, and teeming population of the west of Scotland formed infinitely too important a portion of the empire to be left in an isolated position, either as regarded the government of the country, or the various plans which affected their peculiar interests when any improvement was in progress which affected their intercourse with other portions of the kingdom. (Applause.) They were all aware with him, that in these times of active and honourable rivalry between the manufacturing and commercial districts of this great empire, whether it referred to improvements in machinery or improvement in the mode of communication, that section of the country which did not keep pace with the spirit of the age in the march of improvement which is going on all around, must cease to advance, and when it ceased to advance, it must retrograde. It was with feeling of honest pride that he looked back to what the citizens of Glasgow had formerly done to promote this kind of improvement. It was 50 years since the citizens of Glasgow, led on by some leading men, regarding whom it was no disparagement to the men of the present day to say, that there never existed a class of citizens more active, intelligent, and enterprising than those who had then the guidance of the affairs of the city. It was under their guidance, he repeated, that the citizens of Glasgow came forward single-handed, with many thousand pounds of money to carry through an important line of road 50 or 60 miles from their own locality; and, to the astonishment of the county, gentlemen of Lanarkshire and Dumfries-shire, these ephemeral persons—these every-day merchants of the city of Glasgow—forced their way through the defiles of the Evan into the plains of Dumfries-shire, in order that they might avoid difficulties interposed by the route by Errickstane Brae, and improve their communication with England. (Loud applause.) At a still later period, viz., 1816, the citizens of Glasgow, aided by the county, commenced those important negociations which were intended to place them on a par with the districts in England and elsewhere, which had already adopted the improvement of Macadamised roads. (Applause.) And Government at that time were so much satisfied with the national importance of the object proposed, that they not only gave what had been contributed to the improvement of the Highland roads, but granted 50,000*l.* to be added to a similar sum raised by the citizens of Glasgow, and the county gentlemen around. He would now come to the important matter of the day. On that subject much might be said, but Colonel Graham had done this so well that little remained for him to allude to. He would only say that if the important towns of Liverpool, Manchester, Sheffield, Leeds, Birmingham, and others, had found it expedient to establish a rapid mode of intercourse between each other, and likewise with the metropolis of the country; and when they had the certainty that this railway communication with the west of Scotland would be extended to Carlisle, then it was certain, whether the line was remunerating or not, it was impossible that the west of Scotland could remain isolated. (Hear, hear, and loud applause.) They must come forward and obtain this rapid mode of communication between the important districts in the west of England and their own homes. He had no doubt that government would largely assist the undertaking. They knew that the great majority of the landed proprietors on the line had given their land at a moderate estimate, and taken the

Digitized by Google

value in shares. They knew, too, that this railway would be largely assisted from England, and every thing induced him to anticipate that they never could come forward at a time when they were more likely to carry successfully into effect the objects of their meeting. (Loud applause.) He was happy to say that, in addition to the sums already stated, the Chamber of Commerce had contributed 100*l.* towards the survey; and though it might not be in their power, like in the case of Carlisle, to give an immediate order for the sum of 500*l.*, still when they looked to what would be done by the meeting of the county of Lanark, which Lord Belhaven had called together for Tuesday next, he might say that the 500*l.* now deficient, would most certainly be forthcoming from the citizens of Glasgow. He would therefore beg leave to move the first resolution, which had been placed in his hands. Mr. Findlay then moved the resolution, which, with the others, will be found in our advertising columns.

The Lord Dean of Guild Gray seconded the resolution.

The Lord Provost then put the resolution from the Chair, which was carried unanimously.

John Houldsworth, Esq., Chairman of the Chamber of Commerce, said, the resolution which he had to propose naturally followed those which had been already adopted, embracing as it did the approval of the Report of the Parliamentary Commissioners; and he might say that it was in consequence of that Report being so peculiarly beneficial to Glasgow, that the present meeting had been assembled. They were all satisfied of the great importance of railway communication. In England it had advanced in the most gigantic manner within the last few years. The commercial and manufacturing communities of Liverpool and Manchester, and other great towns, had shown the paramount importance which they attached to rapid communication, and it belonged to them now not to be idle, or to while away their time in thinking whether this line or that line is practicable or not, but to try by all means in their power to establish a communication with England by railway, by that line which was in contemplation, and which he thought had been satisfactorily shewn to be the best. (Applause.) It was the more necessary that immediate steps should be taken in reference to this matter, without delay, because the Government Commissioners had recommended that provided the line by Beatock was not gone into in a given short time, that the eastern line should receive the interest and sanction of Government, and what, he would ask, would be their situation if, by their supineness, they allowed the Government support to be given to the eastern line? The line between Glasgow and Liverpool would be 340 miles, which would require 17 hours to traverse by railway, while they could already go by steam-boat to Liverpool in nearly that time. The railway to England would be a dead letter in their hands were such a plan adopted, as the communication even in point of time would be equalled by their other modes of conveyance. The utility of having a direct communication with the manufacturing and commercial districts of England was so obvious, that he had no doubt the meeting would unanimously approve of the resolution, and that they would agree to co-operate to the greatest extent possible with the landowners on the line, and the Railway Companies in England, which took an interest in the matter, in carrying forward as speedily as possible to a consummation, this very desirable object. (Applause.)

The resolution was adopted unanimously.

The other resolutions having been passed,

Mr. Lumsden subsequently proposed that Messrs. Mitchell, Henderson, and Mitchell, should be interim Secretaries, and Mr. Robert Findlay, interim Treasurer to the Committee, which was agreed to by acclamation.

Baillie Mitchell proposed, and Mr. David Bell seconded a resolution, to the effect that the thanks of the meeting should be tendered to Colonel Graham, P. H. Howard, Esq., and John Dixon, Esq., Mayor of Carlisle, and the other strangers who had favoured the meeting with their presence, which was agreed to with acclamation.

Mr. Dick, the Deacon Convener, proposed a vote of thanks to the Lord Provost for his efficient conduct in the chair.

The meeting then adjourned.

USE OF ANTHRACITE ON RAILWAYS.

To the Editor of the Railway Times.

Sir,—Not knowing whether the merits of anthracite coal as fuel for locomotives have been fully tested, I beg to suggest that you would render an essential service to railway interests by bringing the question under the notice of Managers and Directors.

You are no doubt aware that it burns without flame or smoke, gives intense heat and is extremely durable, but it has the disadvantage of being difficult to ignite, requiring a very strong draught; this however may possibly be overcome by a particular construction of the fireplace. If it could be used instead of coke, the saving in fuel on those lines of railway which get their supply of coke coastwise would be enormous, and the Directors of such lines ought to institute the most diligent inquiry as to the practicability of making use of it. Those railways which pass through coal districts, and get their coke at a low rate, would not be so much benefited by it.

As an old subscriber, I think I may take the liberty of calling your attention to a subject which appears to me to be of great importance, and to request that at your earliest convenience you will bring it before the public.

Yours, &c.

A. B.

Birmingham, December 13, 1841.

[We have reason to believe that experiments in this matter are now making by a very intelligent Engineer, and we hope at the proper time to be enabled to publish the result.—Ed. R.T.]

LONDON AND BLACKWALL RAILWAY.

To the Editor of the Railway Times.

Sir,—The capital of the above Company consists of 1,002,000*l.*, viz.:—

24,000 shares at 25*l.*	£600,000	
24,000 „ 6½	152,000	
		752,000
Debentures		250,000
Total		£1,002,000
Working expenses per week	£480	
Interest on 250,000*l.* at 5 per cent. per annum	240	

Total expenses being £720 per week, to cover these expenses and yield a dividend of 5 per cent. on the shares will require a weekly receipt of 1,443*l.* or 75,060*l.* per annum; to pay 7½ per cent. a weekly receipt of 1,805*l.* or 93,860*l.* per annum; to pay 10 per cent. a weekly receipt of 2,166*l.* or 112,660 per annum.

Your correspondent "No Shareholder," says I have not proved his statement wrong; as if my asking how it required 1,825*l.* per week, less 672*l.*, to pay a dividend of 5 per cent. on 800,000*l.* required any further proof.

I am, Sir, your obedient servant,

J. H. LONGWORTH.

December 13, 1841.

BRISTOL AND GLOUCESTER RAILWAY.

To the Editor of the Railway Times.

Sir,—Would it not be worth considering the propriety of adopting on the Bristol and Gloucester Railway, the gauge of the Birmingham and Gloucester Railway, in preference to the broad gauge? Without arguing which is the best, I as a railway proprietor should think it will be very much against the paying part of the business, to be under the necessity of removing all the goods that are to go north of Gloucester from one set of carriages to another.

I am happy to see the Direction have just awoke from their slumbers, and hope at the next meeting some proprietor will give them a friendly hint, that the proprietors are losing the interest of all the money called up, and that the sooner the railway is completed, the sooner dividends will be declared. This is unlike most other railways that have to form a traffic, for this is merely a connecting link of the grand chain, that will unite the north with the south, Bristol with Birmingham, Liverpool, Manchester, and all the great manufacturing towns, Newcastle and Scotland, so that the traffic may be said to be already formed.

A SHAREHOLDER.

December 14, 1841.

MANCHESTER AND LEEDS RAILWAY.

To the Editor of the Railway Times.

Sir,—The receipts of the Manchester and Leeds Railway for the half-year *ending 30th June*, 1841, were not 104,070*l.*, as stated by your correspondent "R." in your last number, but only 77,286,162*l.*, and in this is included "balance of rent account and interest on surplus receipts 1,704*l.* 2s. 3d.," as may be seen on inspection of the last half-yearly statement—

The receipts for the current half-year up to 27th November, are	£100,740 11 5
Odd balance of rent account, and interest on surplus receipts, about	2,000 0 0
Four weeks still remaining to complete the half-year, say up to 25th December, 1841, at 3,500*l.* per week	14,000 0 0
	£116,740 11 5

being an increase this half-year of 39,453*l.* 15s. 3d or rather more than 51 per cent.

I am, Sir, your most obedient servant,

VERITAS.

P. S.—I hope some one at the meeting to be held at Manchester on the 23rd instant, will ask the Chairman *when the Oldham branch will be opened?* as it is not likely this can be effected in January next as promised; also, *why the half-yearly meetings are so long deferred after the end of the half-year?* the last not having been held till the 16th *September*, nor was the dividend paid till the 6th of October, being more than 3 months after the termination of the half-year!—apparently an unnecessary delay, needlessly distressing small shareholders who live upon their dividends. Surely by a little extra exertion on the part of railway clerks, the half-yearly statement might be forthcoming earlier than this!

The Chairman might further be asked, whether any endeavours had been made to economise the traffic expenditure, and whether the cost of working the line was likely to exceed that of last half-year, namely, 39 per cent. on the grosss receipts?

LATE DIVIDENDS.

To the Editor of the Railway Times.

Sir,—Being a shareholder in many of the railways, I hope the proprietors in general will adopt some means so as to get the Directors to convene the half-yearly meetings as early in February as possible, so that the dividends may be made payable by the end of that month, and not for the Directors to keep the proprietors until the end of March before it is paid. The London and South-Western and the Great Western, and several others, did not pay their dividends until the end of September last half-year, being three months after the half-year had expired.

A SUBSCRIBER.

December 14, 1841.

North Midland Railway.—Arrangements have been made with the Duke of Devonshire for the purchase of additional land contiguous to the Chesterfield station, to deposit minerals thereon, the traffic in which is greatly upon the increase. The ground attached to the Eckington station will be enlarged by taking a strip from Sir George Sitwell's park, on a portion of which will be erected a dwelling for the clerk. Mr. Frost, at present in the Leeds establishment, succeeds Mr. Patteson as secretary. Plate is ordered in Sheffield, to present to the latter gentleman upon his retirement.—*Derby Mercury.*

MR. RICARDO'S PLAN FOR LESSENING THE EFFECTS OF RAILWAY COLLISIONS.

To the Editor of the Railway Times.

SIR,—During the period when accidents from collisions on railways were so frequently occurring, and when several collisions also took place between steam-boats and other vessels, in one of which cases the French steamer *Phœnix* was sunk, the public attention was much turned to the different means of lessening the shocks by gradually dissipating the momentum. Various modes were proposed, some by means of a succession of mattresses to deaden the shock,

"Like feather bed 'twixt castle wall,
And heavy brunt of cannon ball."

Others proposed the more mechanical arrangement of a succession of steel springs, permitting the opposing bodies to pass through considerable space previous to attaining the ultimate resistance. At the request of one gentleman who was much interested in steam-boat collisions, I went into a calculation of the spring power which might be practically disposed on the bows of a vessel in the form of a shield, so that even *direct* recoil might be insured without crushing, at the highest velocity, while with an indirect blow, staving-in might be rendered impossible.

Amongst the numerous mechanical plans offered for obviating railway collisions in a practical form, I believe one of the earliest was that of Mr. Ricardo, proposed for the Croydon line. That gentleman went to considerable expense and trouble in preparing models, so that his plan could not lie under the imputation cast on so many others, of being merely schemes on paper.

As it is probable Mr. Ricardo's plan may ultimately be brought to bear in practice, if not in its actual shape still with some modifications, I enclose you a sketch of it to lay before your readers, in order that it may be duly understood, in case future accidents should call for its adoption.

Fig. 1.

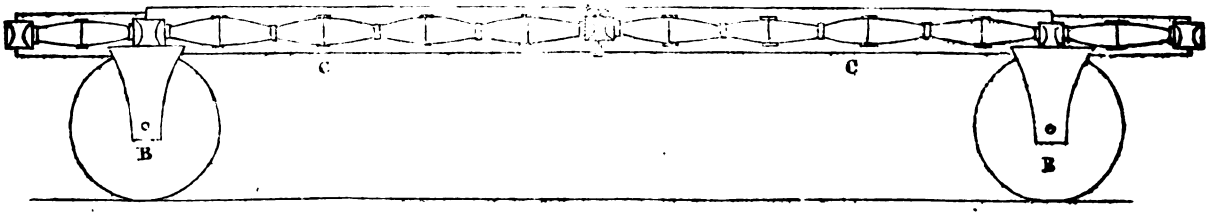

Fig. 2.

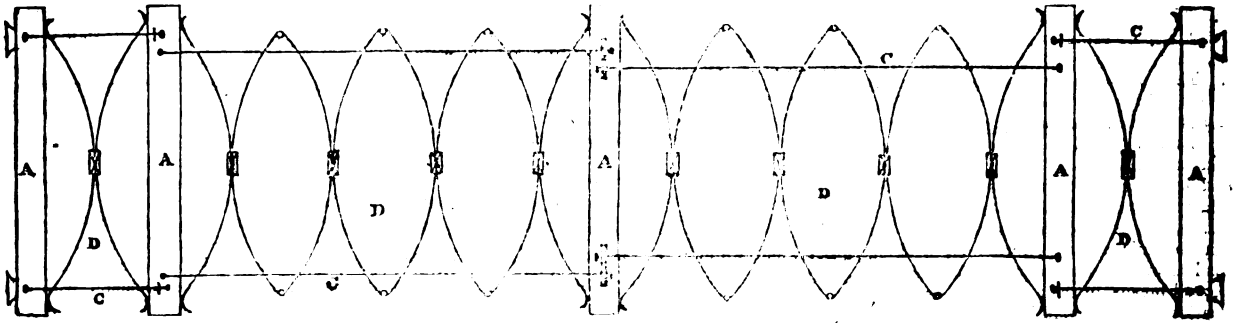

Figure 1 is the lateral elevation. Figure 2, the plan. A are cross bars, to two of which the wheels B are attached. The cross bars are connected together by rods C, on which they slide. D are elliptic or segmental springs, which, by their elastic action, keep the bars A C extended to their greatest length. In case of collision the springs will collapse until the frames are shortened to half their length, and in that position they may, if required, be retained by a ratchet in order to prevent recoil. It would, however, be essential to have strong side timbers instead of iron bars, in order to prevent the springs from buckling up or down, with the violent action of collision.

I am watching with much attention the mass of "facts" respecting locomotive engines now furnishing by your various correspondents, and if your columns be not better engaged, shall gladly contribute my remarks as to the results elicited, when the contest is further advanced.

I remain, Sir,
Your's obediently,
WILLIAM B. ADAMS.

December 6, 1841.

THIRD CLASS CARRIAGES—NORTHERN AND EASTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—I have read your own article in page 1287, and three others in page 1293, of your paper of the 11th inst., upon the subject of my having said at the meeting of the Northern and Eastern Railway Company on the 2nd inst., that "no railway establishments could be considered complete without two or three chimney-sweepers with their soot-bags. Whenever he saw an individual respectably dressed, getting into a third class carriage, he would send a sweep along with him. (Hear, hear, and a laugh)."

The words were accurately reported, as was also the "laugh" which followed. It would appear almost unnecessary to reply to the four articles, except by asking,—Can yourself, or any one else imagine that such a remark from the Chairman of a Railway Company could be intended otherwise than as jocular?

I shall not, however, screen myself under this justly admissible protection, but will say a few words upon the point which "my chimney-sweeps with their soot-bags" were proposed to remedy, namely, that of the better classes availing themselves of a mode of conveyance rendered so cheap by public Companies for the advantage of the poor, as to leave little or no emolument to the purveyors, were the whole community to adopt it.

Your own article states, that "it is doubtless much to be lamented that the accommodation provided for the poorer members of the community, should be the means of rendering the superior vehicles less profitable to the Companies; but we see no legitimate or proper remedy for the evil, except to dispatch the third class trains at different hours from the others, and at slower speed,"—which clearly indicates your own accordance in my feeling, that this accommodation on the part of Railway Companies, intended for the poor, has been improperly availed of by the rich, and that you see no legitimate or proper remedy for the *evil*, except to dispatch the third class passengers at different hours, or at a slower speed. This, Sir, I admit would be a prevention of a less dusty character to the rich than my chimney-sweep plan; but, is it more kind or charitable to the poor, to keep them longer on the road exposed to the wind, sun, or rain, in an uncovered carriage? Or, *quoad*, the number of third class passengers travelling, is it more likely to do good to the railway Companies?

In all my arguments you must allow me,—as you have taken up my plan so seriously,—to use my "chimney-sweeps" as though I had earnestly intended them as a part of a railway establishment, and I shall ask which you think would be preferable to the poor or rich,—to be next my chimney-sweep, who had been placed in juxta position to a gentleman, or to be started at an untimely hour of the morning or night, and conveyed at a slow speed, exposed as they are, in open carriages, for an unnecessarily longer period, to the inclemency of the weather?

I direct this question merely as to the charity or philanthropy of the relative plans proposed by you and myself for "correcting the evil;" and here let me remark, that there is nothing more offensive in my chimney sweep plan, than might occur without it being a part of a railway establishment; for I know of no bye-law to prevent a sweep, with his soot bag, entering a third class carriage, provided he pays his fare, any more than the itinerant fishmonger with his basket of fish.

The letter of a "Railway Proprietor" concludes his remarks by saying, that "language like that reported to be used by me is detrimental to the interests of the Northern and Eastern Railway Company, and derogatory to the character of a chairman."

Had I really and seriously proposed my chimney sweep scheme for the adoption of the meeting, or alluded to it in any but a jocular way, it would certainly be derogatory to the character of a chairman; but it could scarcely have been injurious to the Northern and Eastern Company, as I have too good an opinion of my brother-Directors and shareholders to think that they would have adopted or sanctioned my "chimney sweep scheme," though they laughed at what they knew I intended as a joke.

You must allow me to answer your correspondent, that when I enter an omnibus, there is no better place than the sixpenny one—that no superior accommodation is afforded for the rich, or inferior

Digitized by Google

for the poor. It is a mode of conveyance for a certain distance, open to "*all*" for 6d., and 6d. only; but a Northern and Eastern Railway train had three grades of accommodation at all times, adapted to the different grades of society; and on that railway, of which I hold the office of Chairman, I will venture to say that the first class accommodation is perfectly suitable; the second superior in comfort and protection to that of many, even of the celebrated Great Western; and the third class has been afforded more liberally by far than by that justly called "Best of Railways!" Until the late alteration, we ran, on the Northern and Eastern Railway, third class carriages with every train; but such was the number of "gentlemen" who were seen taking advantage of this cheap mode of conveyance, to the serious neglect of occupancy of the better carriages, that the Committee of Management, which however consists of three gentlemen only of the Board, determined (and in which decision I took no part) to drop third class carriages with all but those trains which started at such periods as were considered to be most suitable to the accommodation of the poor and working classes. As your correspondent signs himself a "Railway Proprietor," I may be allowed to doubt whether, as a railway proprietor, he really approves of gentlemen travelling in the third class carriages, and whether on the railways in which he is a proprietor there is better accommodation afforded to the second and third class passengers than on the one over which I am allowed to preside as Chairman, namely, the Northern and Eastern Railway.

On the Great Western Railway there are no third class carriages at all, except in conjunction with the luggage trains, at 9 o'clock at night, and 4 o'clock in the morning. The second class carriages are not divided into separate compartments like those on the Northern and Eastern, and while I notice this, I may be allowed to say, as I am now taken to task on account of one jocular expression for want of courtesy and consideration to passengers, that when the Northern and Eastern second class carriages first came home, they were all open like those of the Great Western, and that the moment I saw them so, I took upon myself the responsibility of ordering them immediately to be divided, and closed up in separate compartments, as I would not be accessary to the possible death or probable injury by cold, of those persons who could not afford a first class conveyance. The extract from the *Chelmsford Chronicle* contends, that the interest of "the public is the first consideration." It may be so, as far as it leads to the interest of the railway; but, in candour I ask, did ever any Railway Company embark for this object only? or further than I state, as far as its conduces to the interest of the railway? Were I, as the Chairman of the Northern and Eastern Railway, to tell the shareholders that such was the interest which their Directors studied in the management of their concern, what, I ask, would be the reply? Would this alone be a fertile source of dividend to the shareholders?

I contend that railways, in affording three distinct species of accommodation in each train, are unfairly dealt by, by those gentlemen who can afford either of the other modes, *in using that which is intended for the poor and needy only*, and when I made use of the jocular suggestion of chimney sweep as a preventive of "the evil," I meant no species of insult to those who could not afford to ride in first or second class carriages, but a jocose reproof to those who could; for if Railway Companies go to the expense of providing comfort and superior accommodation for the rich, how are they to find remuneration for their outlay of capital and enterprise, if the rich adopt the low rates of fare intended for the poor?

One Railway Company endeavours to drive parties into the first class carriages by making the second so exposed as to be dangerous to health. I, by a joke, wished to reprove the richer for using the conveyance intended for the poorer, but beyond this I meant no more, and I trust that the travellers upon the Northern and Eastern Railway of all grades, have had reason to be satisfied with the accommodation respectively afforded them, and also with the civility and attention of every servant in the employ of the Company, and whenever a complaint to the contrary may be made they may rely upon the personal attention and courtesy of the Directors, and, Sir,

Your obedient servant,
WILLIAM CRAWSHAY,
The Chairman.

Cavenham Park, Dec. 13, 1841.

P.S. Having, I trust, said sufficient to exculpate myself from the charge of uncourteous intention in the use of "the language attributed to me," I must here end my correspondence upon the subject.

FOUR-WHEELED AND SIX-WHEELED ENGINES.

To the Editor of the Railway Times.

Sir,—In continuation of the discussion on four-wheeled and six-wheeled engines, I beg to reply to the remarks of the several correspondents who have written in your journal since the date of my last letter. In doing so I propose following the order in which the various letters are placed in your journal; and if my letter extends to an unusual length, I must rely for my apology on the voluminous nature of the arguments to which I have to reply. As I must, however, omit many things which your correspondents have touched upon, I beg to assure them that in the selection of the several points I have been guided solely by what appears to me their relative importance; but if I omit anything which appears to them to be important to the elucidation of the subject, I shall be happy to discuss it fully with them in a subsequent letter, as I am quite convinced there is no one point yet touched upon by the advocates of six-wheeled engines, that is not capable of being completely answered.

Mr. Roberts's letter I have read with much attention; in the full expectation that a gentleman of his standing in the profession as a practical machinist, would not propound anything that had not received his deepest consideration, and could be substantiated by undeniable arguments: and the important nature of the several points which he states in the introductory part of his letter he is about to bring forward, also impressed me with the conviction of the value of a communication from so practical a man. The first illustrative paragraph of his letter is that wherein he explains the vertical pitching of four-wheeled engines, by the familiar example of a long plank swayed across either one or two supports placed near its centre. The magnitude of these vibrations is very clearly explained to depend upon the application of successive impulses at the proper moment; and Mr. Roberts decides that the pitching motion of the engine is identical with the vertical vibration of the plank, and the successive strokes of the pistons he compares to the successive impulses which are given to the plank by boys when playing at their well-known game of see-saw. But in order to make the cases identical, I imagine the impulses must be given in the same direction. In the boy's game, the impulses are given *vertically*, in the same direction in which the plank is moving; in the engine the motion on the contrary is given *horizontally*; and therefore if the analogy is to hold good, we have a right to conclude, that as a violent blow given horizontally at the end of the plank as it passes its centre, would almost entirely stop its gyration, so the impulse from the pistons being also horizontal must likewise stop the vertical motion of the engine! I leave to Mr. Roberts to reconcile this deficiency of the illustration, for to me it appears to be wholly inapplicable, but in a former letter I have explained the cause of the pitching motion of locomotive engines, which arises from a totally different cause.

The next statement of Mr. Roberts is, that unless the road is in bad order, each pair of wheels in a six-wheeled engine presses upon the rails with nearly a uniform weight. In all six-wheeled engines that I have ever seen, or heard of, the weight on the driving, leading, and trailing wheels, varies in the proportion of about six, four, and two tons respectively; and as the great defect of six-wheeled engines is the want of adhesion of the driving wheels to the rails, it appears to me that an engine constructed according to Mr. Roberts's plan, of equal weight on each pair of wheels, would scarcely be able to move its own weight—except under the most favourable state of the rails. Mr. Roberts claims for himself the invention of many of the modern improvements in engineering and practical mechanics; and though others have often disputed with him the honour of being the real inventors, I feel assured that in this instance he will obtain undisputed possession of all the merit which belongs to this novelty in railway locomotion.

Again, Mr. Roberts, in common with some of the other advocates of six-wheeled engines, agrees that the angle which the engine forms with the rails is twice as great with four-wheeled as with six-wheeled engines. I have already shown that this is by no means the case, as the play of the wheels is only one-half as much in four-wheeled as in six-wheeled engines. But supposing for a moment his assertion to be correct, he also asserts that as the axles of four-wheeled engines "make nearly twice as great an angle with the rails as the axles of the six-wheeled engines are liable to do, consequently at each oscillation the blows given to the rails by the four-wheeled will be more than *four* times, and may be *seven* times, as great as those given by the six-wheeled engines." This I am quite unable to comprehend, because, as the force of a moving body is well known to be in the compound ratio of the velocity and quantity of matter; and the magnitude of the stroke on the recipient body is directly as the momentum, and the sine of the angle of incidence, (*Emerson, prop.* 9, *coroll.* 1,) it follows, that with equal weights and velocities the force of the blow would be less than double under these circumstances, instead of being either four or seven times as great as stated by Mr. Roberts; for if the angles of incidence be 5° and 10° respectively, the force of the blow in the two cases would be as ·0871 is to ·1736. But if we remember that the weight of the four-wheeled engine is one-third less than the six-wheeled, and that on account of the play of the wheels being only one-half in the former to what it is in the latter, the angle will be the same; then the force of the blow will be exactly in proportion to the respective weights of the engines, or as 10 is to 15, the greater blow being given by the six-wheeled engine. Mr. Roberts has given no formula of his mode of calculation, but it is evident he is unacquainted with the difference between the *square* of the angle, and the *sine* of the angle, when he states that twice the original angle will give *four* times the primary force of the blow. How he makes out that *it may be seven times*, I am quite at a loss to imagine. Either one or the other, however, is quite as new a discovery in mathematics as the equalization of the weight of the wheels of an engine is in mechanics, or as the method of increasing the vertical vibrations of an oscillating body by a horizontal impulse is new in dynamics. These being the three principal points on which all the arguments in this letter are based, it were a work of supererogation to scrutinise further any deductions from such premises. They harmonise so well with each other, that it were a pity to disturb their perfect repose. But nothing can more clearly show the utter poverty of the arguments in favour of six-wheeled engines than the fact, that a gentleman like Mr. Roberts, who has devoted years to the study of this form of engines, and has had opportunities of learning their advantages which few can possess, is unable to bring forward in their favour even one single argument which the touch-stone of science does not so completely dissipate as to leave not behind even "the shadow of a shade."

With Mr. Whishaw's arguments I have more difficulty in dealing than with the preceding; their generality effectually prevents any refutation of them. The same arguments would do equally well to illustrate the expansive working of steam, the combustion of smoke, the toll question on railways, or the suppression of Sunday travelling; they are

Digitized by Google

arguments, in short, which would pass current on all occasions—for what they are worth. But as Mr. Whishaw is known for his labours as a collector of a considerable quantity of valuable statistical information, I would beg to point out to him a few inaccuracies in his list of railways using respectively the four-wheeled and the six-wheeled engines; for while he has carefully inserted all that use the six-wheeled he has accidentally omitted several which employ four-wheeled engines, as he may see by referring to a letter of mine on this subject of the 15th October last.

In Mr. Theodore Cruickshank's letter (who, by the bye, now spells his name differently to what he did in his former letter,) there are a few remarks which I would wish to notice. In objecting to my statement respecting the respective weights of four and six-wheeled engines, he gives a mode of calculating the power by the size of the cylinders. Although this mode of calculation is very well with engines of a similar description, it will not ascertain the real working power of two engines differing so much as the two classes under consideration. For the additional weight of the six-wheeled engines so materially reduces their relative power in ascending inclines, and even in common ascending gradients of any considerable length, in consequence of the effects of gravity, that unless many more circumstances than the mere diameter of the cylinders be taken into account, no calculation of their relative power can be obtained.

In the next paragraph your correspondent accuses me of misquoting him. I beg to state that I quoted correctly what I understood to be his meaning, and which on again reading his corrections, I still consider it to be the case. His exact sentences I scrupulously abstained from quoting, as I invariably do whenever the proper meaning and explanations can be given without it. For I consider the mode which some persons adopt, of endless quotations from an opponent's writings, to be as ungentlemanly in the writer, as it is offensive to the party against whom it is used; and it is seldom adopted by any but those who make amends for poverty of argument by violence of language. If I have failed then in giving the meaning of your correspondent, I regret the circumstance; but I cannot see that the subjects to which he alludes in the paragraph in question—namely, the question of the mode of inside framing being characteristic of four-wheeled engines, and the adoption of driving wheels without flanges, by some makers of six-wheeled engines—need be here again discussed. But in a subsequent paragraph he again considers I have intentionally misquoted his observations about six-wheeled engines going round the curves on railways; and denies that he had assumed these curves to be of a mile radius. The passage on which I commented was this:—"The same cause which contributes to their superior steadiness when passing vertical irregularities, viz., greater length of base in proportion to the length of the body carried over, and also in proportion to the distance between the rails, must in like manner produce a steadier motion also when going round curves—for a curve *of one mile radius* is practically, as far as regards the moving of a parallelogram 11 feet long, to all intents and purposes a straight line." It was on this passage then that I stated he had assumed the curves to be a mile radius; and that I was correct in this statement, the above quotation will show. But Mr. Cruickshank gives in his last letter the best refutation to his former theory of curves which it is possible to have. He states that all engines when passing curves have both their fore and aft wheels in close contact with the exterior rail. I have very recently heard this asserted by another and a very able advocate of six-wheeled engines, who states he has deduced it from actual experiments. The fact is by no means generally known, that *both* wheels are always thus in contact; and I have not met with any one else who appeared to be aware of it. But I assume the fact to be as stated; and it much simplifies the theory of engines passing round curves, as it leaves out of the question all considerations respecting the difference in the gauge of the wheels. The question then simply resolves itself into the angle which a cord line of 5½ feet will form with the tangent of the circle compared with a cord line of 11 feet. As it must be evident this angle will be double in the one case to what it is in the other, I really cannot see how any person can assert that the engines which forms the greatest angle will more easily pass round the curve. That such should be the case is alike contrary to theory and to experience: and to avoid this difficulty by asserting that such or such curves *are tantamount* to a straight line, is no solution, because if the curve be sufficient to cause the enlarged circumference of the cone of the engine wheels to press the flanges close against the exterior rail (notwithstanding the laws of gravity would make them press against the inner and lower rail), it is clear there is a tangential force then in operation of no inconsiderable amount; and whatever that amount may be, it is double in the six-wheeled to what it is in the four-wheeled engine. The argument, based upon the smallness of the versed sine of the arc, of which the cord line is represented by the distance between the extreme points of support of the engine, is therefore quite inconclusive, when we consider the high velocities with which the engines move, and the decisive evidence of the tangential force here stated. For if we are to assume, as this writer asserts, that when the versed sine which the engine wheels form with the rails is only one-eighth of an inch, it is quite immaterial, why should we stop here? Why not make it a quarter of an inch? and if we make it this amount, then the radius of the curve will be (supposing the cord line represented by the engine to be 11 feet) $5{\cdot}5^2 + {\cdot}0283 + 2 = 726$ feet, showing a radius of just 11 chains—the smallest, I believe, on any railway in the main lines, and one which certainly cannot be considered at all safe, though according to his theory it *ought* to be safe for four-wheeled engines, because the versed sine of their cord line will only be, in such a case one-eighth of an inch.

The assertion made by your correspondent, that I have avoided some of his arguments as if they had been bull terriers just let off the chain, is not very complimentary to himself. As I have never engaged in any amusements unbecoming the high bearing of a gentleman, I am quite unable to judge of the justness of his simile; but your correspondent, no doubt, best knows his own merits, though I never before met with any person who took credit for the *ferocious* character of his arguments. For myself, I can only say I have no desire to avoid any argument on this subject, so long as my opponents conduct their controversy in a proper and becoming manner; but when this ceases to be the case, I doubt not that both myself, and all who desire the discovery of truth by the calm discussion of this subject, will know how to treat such communications in the way they merit.

With respect to Mr. Gray's observations I would remark, that the statements respecting the various kinds of engines successively used on the Manchester and Liverpool Railway, are very erroneous. All the early four-wheeled engines used on that line had *outside cylinders*, and in addition were so defective that no comparison can be made between them and the present excellent form of four-wheeled engines. These engines, it is perfectly true, were not altered in their fire-boxes. But after the *Liverpool* was introduced by Mr. Bury—which was the first engine ever made with inside horizontal cylinders and crank axles, and which in fact was the model on which the modern engines are now made—his fire-box being found larger and much superior to the others then in use, new fire-boxes were added to the other engines, and other alterations were adopted which had the effect of destroying the proper balance of the engines, and caused the additional pair of wheels to be then added. Mr. Bury's fire-box was circular, while the others were either square or oblong; and it was this which increased the weight so much behind the driving wheels of the altered engines as to render additional wheels necessary, and which ultimately led to the use of the six-wheeled engines. The present form of four-wheeled engines have therefore never been fairly tried on the Liverpool and Manchester line; for although Mr. Bury's engine the *Liverpool* was used, being the first of the kind, it was not likely to be so effective as the present engines, and the crank axle was certainly deficient in strength. All the arguments therefore about the experience of this line, with four-wheeled engines *of the present construction*, is absolutely fallacious. I deny likewise the admission in the way in which Mr. Gray states I have made it, respecting the greater steadiness of the outside bearings: my expression was, that "the outside bearings would undoubtedly, *when considered simply by themselves, and without reference to other causes*, give greater steadiness." All the words in italics Mr. Gray omits; and which so completely alters the sense, that no one can avoid discovering the difference.

But there is one part of his letter in which at least we appear likely to approach more nearly towards similarity of opinion. He states that upon "a road of sufficient strength I do not contend for six wheels over four, as possessing any additional safety, except in the present form of locomotives, where it is better for various reasons. I believe that if the weight of materials in three pair of wheels and axles be put into two pair of wheels and axles, *the latter will be the safer engine of the two*, provided the extreme distance of the axles and springs be the same in both cases." Now, in the principal part of this opinion I think we shall not differ. For, granting that the same weight of materials that now exists in the three pair of wheels and axles should be put into two pair, for the same weight of engine, it follows as a necessary consequence, that if we leave the weight of the two pair of wheels and axles as they now are, and proportionably reduce the superincumbent weight, we shall arrive at precisely the same result. Now this is exactly the case with the four-wheeled engines. I have now before me the weight of all the several parts of a considerable number of both four and six-wheeled engines, and I find that the two pair of wheels and axles of the one class weigh 46 cwts., and the three pair of the other class, weigh 63 cwts., while the body of the four-wheeled engines with all its necessary complement of water, &c., weighs 8 tons, and that of the six-wheeled weighs 11 tons. If then we try these proportions we shall find that 46 : 63 :: 8 : 11, or that these several weights are exactly in the same ratio. What then remains of Mr. Gray's argument? Simply that he contends for an additional length between the axles. But this it is evident to any one conversant with the subject, would so much diminish the weight upon the driving wheels, that the engine would be comparatively inefficient.

Respecting the question of inside and outside frames, the advocates of inside framings for engines are charged with inconsistency for adopting the outside bearings for carriages. I would merely remark, if this be so, the principal advocate for outside framings, Mr. Robert Stephenson, is still more chargeable with inconsistency, in consequence of having adopted only inside framings (instead of as heretofore both inside and outside,) to his new engine just now made for the York and North Midland Railway; and which he considers far superior to all his other plans. Mr. Gray perhaps is not aware of the change which has taken place in the opinion of Mr. Stephenson in this respect, otherwise he, as an old pupil of Mr. Stephenson, would perhaps scarcely hold so tenaciously to the now exploded opinion.

On the subject of the working expenses of the different lines using four and six-wheeled engines, I shall merely remark, that my statements are strictly correct, and admit of the clearest proof from authentic sources. But my arguments are simply confined to the question of safety, and not to the economy of the two different classes of engines; and I shall therefore proceed to remark on Mr. Gray's chapter of accidents.

The Liverpool and Manchester Company will not, perhaps, much thank Mr. Gray for publishing his list of accidents; for out of the 55 cases he has

Digitized by Google

numerated, 26 have occurred on that line. This Company, however, stands too high in public estimation to suffer by such statements. I have already remarked that the four-wheeled engines formerly used on that line were not similar in construction to those of the present day, and some of the four-wheeled engines indeed which are brought forward as illustrating the liability to accident of this form of engine, were of so totally different a construction that they scarcely possess any points of similarity. But I will particularise a few of the cases in order to show whether these are fair statements or not, though of many of the other cases I know nothing whatever, and can only judge of them by reference to those with which I am acquainted.

The accident No. 1 was caused by a switch which was too narrow to allow the wheel to pass, and the engine ran up an embankment.

No. 2 is quoted as a parallel case with a six-wheeled engine; but in this case the engine ran off the rails into the bog at Chat Moss, and therefore could not upset.

No. 3. This four-wheeled engine had outside framing, and was not similar to the present form.

No. 7. This four-wheeled engine had *outside cylinders*.

No. 11. This engine ran over *three* cows instead of *one* as stated, and the last cow threw the engine off against a rock.

No. 19. This four-wheeled engine had VERTICAL *cylinders* between the wheels, and never could run at high speeds. This case does not appear to be *peculiarly* illustrative of the safety of the *present* form of engines.

Nos. 21 and 23. These engines had outside bearings.

No. 25. This four-wheeled engine ran over *five* horses, and not *one* horse, as stated, and ran off the rails, but was not upset.

No. 29. One engine caught another engine in the act of crossing over a switch.

No. 41. This engine had a third pair of wheels added to her by Mr. Hargraves, the maker.

No. 53. This engine had outside bearings.

The case No. 9 presents a remarkable circumstance connected with animal physiology. It is well known that some species of *zoophites*, and also some of the *crustaneous* tribes (of which the common lobster is a well known species), possess the power of re-producing new limbs at pleasure. It was not however known that enginemen possessed the same peculiarity. In this case Mr. Gray asserts that the engineman had *his legs cut off* by the engine running off at the points; and although this only occurred a few months since, the man is now walking about with two full grown legs precisely similar to those of any other person! This case certainly deserves the attention of the *Linnæan Society*.

Mr. Gray remarks that if 99 cases of broken axles to six-wheeled engines could be ascertained it would prove nothing but want of sufficient strength. What will he say if I argue in the same way, and assert that if he could bring forward 99 cases of four-wheeled engines running off the rails, it would prove nothing but some imperfection in those particular engines, and could not affect the character of the class to which they belong? The cases are parallel. And deducting those cases which I have stated above to be incorrectly described—and no doubt several others are equally inaccurate, though I do not happen to be acquainted with the particulars—it will be found that when we really confine our inquiries to four-wheeled engines of the present construction, they are, as Mr. Gray very justly says, "the safer engine of the two."

In the *Railway Times* of the 11th inst. another correspondent, under the signature of "Mechanicus," writes upon the same subject, and I may as well reply to his observations before closing the present letter. His style of reasoning is very amusing, though it is to be hoped he is a better mechanic than he is a logician. Proof with him seems quite an unnecessary incumbrance to his argument; and probably he would find it not a little difficult to prove such assertions as this—"with engines of the same length and weight, in curves, the tendency to go off the rails moving at a given speed, *is in an* INVERSE *proportion to the distance between the points of contact of the extreme wheels with the rails.*" Whether this is proved mathematically, practically or *conjecturally*, we are not informed; but the writer appears to have studied his philosophy in the same school as the gentleman already alluded to at the beginning of this letter, who finds that a blow given *horizontally* increases the gyrations of a body vibrating *vertically*, and that by doubling the angle of percussion we increase the force of the blow *sevenfold!* I might follow this writer through several more equally strange assertions, but I really consider the task unnecessary, except in one instance, where he charges me with a treacherous memory for stating that no instance of accidents has occurred to four-wheeled engines *from any failure of their machinery*. In proof of the incorrectness of this he mentions an accident which occurred twelve months ago by an engine running off the rails, in consequence of being driven at frightful speed down a very steep inclined plane. This accident, however, occurred from *no failure of the machinery*; for after the occurrence the engine was found quite perfect, except a hole through the fire-box caused by the rails in their disruption from the chairs. If "Mechanicus" were to employ a man to attend an engine, and he allowed the fire to go out, and the engine and machinery should consequently be stopped, what would he say to any person who should tell him that his engine was useless and his machinery had failed? The two cases are similar; whatever answer he would give in the latter case, I am content to abide by as my answer to the former.

It is not a little remarkable that all the several writers who have hitherto discussed the merits of the six-wheeled engines, have each insisted on a different point as constituting the peculiar excellence of this form of engine. The following are their several points of excellence:—

Mr. Roberts considers that the equality of weight on all the three pair of wheels is the *ne plus ultra* of perfection; and that a six-wheeled engine only strikes the rails with *one-seventh* part of the force of the four-wheeled.

Mr. Cruickshank considers the peculiar steadiness of six-wheeled engines, when passing round curves, to be their great advantage.

Mr. Gray commenced by advocating the superior safety of six wheels and outside frames; but he concludes by determining four wheels to be safer, provided they contain as much weight of materials as six wheels; though he strongly insists on the advantages of outside frames, after every body else, even Mr. Robert Stephenson, has abandoned them as far as possible.

"Mechanicus" insists that the advantage of six-wheeled engines consists in their being less liable to run off the rails at curves, the tendency to go off the rails being (according to his philosophy), *inversely* proportional to the distance between the points of contact with the rails! And one of two writers have insisted that the extra pair of wheels is the only advantage they possess over the four-wheeled engines.

Is this the state of practical science at the present day? And, are all these parties right, or are they all wrong? To those who have read the preceding remarks in this letter, I leave the decision of these questions. *Reddere quæ ferrum valet, exsors ipsa secandi.*

I am your obedient servant,

CHARLES HOOD.

Earl-street, 13th December.

THE SLIP ON THE CROYDON RAILWAY.

We learn that the gullet is nearly completed at the New Cross slip, and there is every probability of the traffic running through before the issuing of our next number. No change has taken place in the character of the slip since our last notice.

NORTHERN UNION RAILWAY—CAPTAIN WATTS.

To the Editor of the Railway Times.

Sir,—In your Editorial note appended to my letter in your journal of the 4th instant, you require me to excuse your free and extensive mutilations, upon the plea that I had made use of epithets "unnecessarily offensive to individuals," though what the equivocal phrase, "unnecessarily offensive" means, I am in doubt about. Now with every desire to give you credit for a laudable intention to do justice to every one, I cannot in this case excuse you, and for the following reasons. In the first place, the strictures appearing in my *own name*, I am sufficiently tangible to become responsible for my own acts. Secondly.—As you were requested not to curtail my letter, it ought to have been inserted entire, or not at all. Thirdly—In sparing the feelings of others, you have unwittingly, I am sure, been forgetful of mine—inasmuch as, whosoever might read your comment, would be justified in imagining that my serio-comic remarks had strongly savoured of something akin to either slander, malevolence, or scurrility—for the imagination has an illimitable margin, and its discursive wanderings often, in practice, supply the place of facts. And this last word leads me to the last and most important of my objections—namely, that in the suppression of my epithets you have likewise suppressed facts, which might authorise the exercise of the most caustic reprobation. Here is Mr. Hudson, the Chairman of the York and North Midland Railway, voluntarily addressing me at the public station in the voice of a Stentor, and with the publicity of a common crier in terms of exultation at carrying his point against me at the North Midland meeting; and when I state that my main objection to the measure arises from its being a violation of principle, his rejoinder is, "pooh, pooh, we don't mind principle in matters of business." And yet with such a fact to build my animadversions upon, you wholly suppress it, and at the same time impress a belief by your mode of expression, that the objections taken are chiefly in consequence of offensive epithets to individuals. As a constant reader of your journal from its outset, I retain a pretty lively recollection of your exposure of the "sayings and doings" of the Eastern Counties' Direction. Now in the continuous prosecution of your task, let us suppose, such a declaration as the one above quoted, had been unblushingly put forth by the Chairman of that Board, would aught have induced you to interpose your Editorial mantle in order to conceal his delinquency? Your answer must go to negative such a supposition. And why then deal out such unequal measures, to equal degrees of turpitude? To dive into the recesses of domestic life or private character in order to detect and expose the weaknesses or defects of others, is not my duty, and shall never be my practice. My strictures being applicable to railway interests in which my own are involved, were fully justified by the occasion, and you may rest assured that you never performed an act of more perfect supererogation, than in bestowing your sympathy and tenderness upon one, who in contradistinction *to principle*, makes expediency his rule of action—and when told it is wrong, only laughs in your face for your pains. Where there is shame there may still be virtue; but the man who boldly derides the observance of principle in the concerns of life can lay no claim to it, and shall never lead nor daunt me into acquiescence. All this I told him, and moreover applied personally to his conduct most of those very epithets to which you have taken an exception. And if perchance I, in addition bestowed upon him the derisive *sobriquet* of the Boanerges or Jupiter Tonans of the north—as descriptive of his noisy and tempestuous efforts to carry his point, and added, that however much he might fancy it grand and imposing, it was of no more weight than so many squibs and crackers in my estimation, and only served to strengthen my determination to resist what was there so very exceptionable in all this? Was it not sufficiently grave and didactic for your columns? Really, Mr. Editor, it is well to let people

Digitized by Google

sometimes put forth their opinions in their own style, although it may be somewhat in contravention of the conventional routine of every day colloquy, for variety constitutes the charm of life, and there seems to be no reason why your pages should not now and then supply a sample to your readers.

Before I dismiss the subject, let me call to your recollection that the project I am resisting, has for its object to enable parties to perpetrate with impunity a repetition of the very act you so strenuously and perseveringly condemned in the case of the Eastern Counties' Direction. Pecuniary embarrassment was the reason assigned for its partial abandonment, as is the case with the Great North of England, and yet in your pages I look in vain for one sentence of condemnation, or one stricture bearing the remotest affinity to those you formerly put forth. It is not for me to impute motives—but taking this fact in conjunction with your tenderness towards Mr. Hudson, it carries with it an air of partizanship, which, relying upon your candour and impartiality, I am sure you will hasten to dissipate by the publication of these remarks at your earliest convenience.

I remain, Sir, yours very faithfully,

G. G. WATTS.

Langton Grange, Darlington, Dec. 10, 1841.

NOTE BY THE EDITOR.

We have given *this* letter unabridged, and so far we trust Captain Watts is satisfied. With respect to the previous letter, we certainly have no recollection of having been requested to give it entire, and even if it were so, we do not know that we should have acted otherwise than we did—for however much we may feel honoured and obliged by the communications of intelligent correspondents like Captain Watts, we must be allowed to conduct this journal after our own fashion, giving or withholding papers or passages at our sole discretion. Captain Watts says he is in doubt as to the meaning of our phrase "unnecessarily offensive," as applied to certain expressions in his letter. We will not quarrel about a word, but what we *meant* to convey was, that Captain Watts's epithets were not necessary, nor at all likely, to add weight to his facts or cogency to his arguments. There may be cases in which it is both *necessary* and salutary that personal offence should be given, but we did not, and do not, think the case in question to be one of these. Captain Watts appears to think that because his name was attached to his letter, and as he is without question "sufficiently tangible to become responsible" for his own acts, we ought to have inserted the whole of his strictures without scruple. Our gallant correspondent greatly mistakes our motives, if he thinks that it was the dread of legal consequences that led to the suppressions complained of. But when we find a respectable individual designated "an empiric in speculation," charged with "bluster and bullying," and "inflated and self-important" notions, when we find him described as "crowing like a cock upon his own dunghill in the full plenitude of his tumultuary and noisy powers," and seeking by "threats and intimidation" to "cover his own insidious and selfish ends," when we hear sneers at "sapient Chairmen" and "York Aldermen," not even the name of Captain Watts shall induce us to "supply a sample" of *such* "opinions" to our readers. We say at once that language such as this ought not to be used by one gentleman to another, and we at least shall not be parties to it. Captain Watts speaks of passages of his letter as "serio-comic remarks;" to us they look very much like "poisoning in jest." Captain Watts may again apply personally to his opponent (as he states he has already done,) "most of those very epithets to which" we "have taken an exception;" *we* must decline becoming the medium of laying them before the public. We may add, that the only fact, or semblance of a fact, which we suppressed, was the statement now repeated by the Captain, as to Mr. Hudson's alleged scoff at "principle," in matters of business. The simple reason was, that we did not believe, nor do we now believe, that Mr. Hudson's words or meaning can have been rightly understood by Captain Watts. The allusion in Captain Watts's present letter, to the case of the Eastern Counties' Railway, we need not notice, as Captain Watts ought to know that the writer of this note, and of the note which has excited his ire, is in no way responsible for what may have been written, in the *Railway Times*, of *that* Company prior to August last. We have very unwillingly entered into this matter, and at some length, as perhaps a statement of our views in reference to "personalties" may prevent future misunderstanding.

LIVERPOOL AND MANCHESTER AND MANCHESTER AND LEEDS RAILWAYS.

To the Editor of the Railway Times.

SIR,—From your well-known impartiality to Railway Companies, and your expressed desire that the public should be accommodated, I am induced to think that some of your remarks made on the Liverpool and Manchester and Manchester and Leeds Railways, may have been formed in error. Allow me, therefore, to submit, that you will find in Whishaw's Analysis of Railways, published in 1837, page 155, that a connection railway to unite all the railways at Manchester was projected by J. U. Rastrick, Esq., Engineer, and a prospectus and plan issued, and a section lodged with the Clerk of the Peace at Preston, which project has I presume been defered *sine die*, owing to the misconceptions existing between the Directors of the railways from Manchester to Birmingham and Rugby, and latterly from the state of the money market and the depression of the price of railway shares, and not from any abandonment of this projected junction, as stated in the Manchester and Leeds Directors' Report of the 12th March, 1841. Parliament admits "An Act to *amend* an Act;" so may the Directors of railways be allowed to view things in an amendable state. I fully agree with the statements made by "A Liverpool Proprietor," which I am perfectly aware cannot be refuted, but might have been more explicit, respecting the Manchester, Bolton, and Bury Company's heavy tolls, and the extension of the line to Cross-lane, contrary to the original plan of the Manchester and Leeds Directors, (which it may be expedient to explain hereafter); but that the public may not be injured by the difference of opinion of Directors, who are ordered by Parliament to *obey* proprietors, allow me to observe that the proprietors of the Manchester and Leeds, the Manchester and Birmingham, and the Sheffield, Ashton-under-Line and Manchester Railway Companies, each hold forth to the public the necessity of an uninterrupted line to Liverpool, as the only western port of exportation, and therefore I am of opinion that a meeting of the Directors of these lines should be convened, to take into their fullest consideration what they may deem the best line of connection for the public accommodation, without respect to their individual interests, and without any reference to their by-gone errors. Should they unfortunately not agree, I respectfully submit that application be made to Government that they be pleased to direct some competent person to examine, and report what appears to him the most eligible line of junction for the benefit of the public.

I am, Sir, your obedient servant,

A PROPRIETOR OF THE MANCHESTER AND LEEDS RAILWAY.

LIVERPOOL AND MANCHESTER AND MANCHESTER AND LEEDS RAILWAYS.

[From the *Liverpool Standard.*]

OUR contemporary of the *Railway Times* is this week a little severe upon the Directors of the Manchester and Liverpool Railway Company, on account of their declining, for the present at least, to hurry on the formation of the proposed junction line between their present terminus in Water-street Manchester, and the Manchester and Leeds line for which, it will be remembered, the requisite powers have already been obtained. The Liverpool and Manchester Directors allege, it appears, as one of their objections to going on with the junction in question, that, on inquiry, they have found the estimates of the traffic likely to come upon it very much over-rated; and our contemporary—dissatisfied with the allegation itself, and with the means as well by which the estimates are said to have been tested—calls upon the Directors either to employ the same means in examining the estimates as those used in framing them, or, as the alternative, to give up the powers of their Act of Parliament for executing the line into other hands.

Now, with due submission to our able contemporary, we cannot see that the Directors of the Liverpool and Manchester line are bound to accept either of these two alternatives, or to proceed with the junction line as at present laid down, without being fully satisfied as to its being the *best* communication that can be formed through the town of Manchester. Upon this point *we* are not at all so well satisfied; and consider, besides, that circumstances and measures which are at this very moment in contemplation, may contribute to render the profitable working of *any junction line whatever* through the town of Manchester very problematical. The principal benefit which has been held out as likely to arise from the formation of a junction line has been the saving to be effected by merchandise and produce being forwarded direct from Liverpool to the manufacturing towns upon the Leeds line—the saving of unloading and reloading, cartage, porterage, &c. The supposition upon which the Companies have ever gone has been that Liverpool was to continue the depot for bonding this produce; and now, when it has become almost matter of certainty that the privilege of bonding is about to be conferred upon Manchester itself, and that a portion at least of the foreign produce for which the consumers in the manufacturing towns upon the Leeds line have heretofore looked upon Liverpool as their market, will in all probability, before long, be deposited under bond in Manchester—this saving by *through* carriage is no longer so practicable, or the advantage and profitable working of a junction line so evident.

But even conceding the fact (which we are quite prepared to do), that a junction line must ultimately be made between the Manchester and Leeds and the Liverpool lines, are there not, we ask, other lines from Manchester to the south and north which have a claim to be considered in the formation of such a junction? The Manchester and Sheffield and Manchester and Birmingham lines, seek as well as the Manchester and Leeds, a connection with Liverpool; and we think it must strike our contemporary that if it is possible to project a line which will satisfy the wants of these Companies and the reasonable claims of the Leeds Company as well, that line it is which, under existing circumstances and existing prospects, ought to be taken up by the Liverpool and Manchester Company.

That such a line *can* be made has already been shown—a line, we believe, even less expensive than the present projected line; and we are not perhaps far wrong when we state, that to the prospect ultimately of uniting themselves at once by this line with the *three railways* which seek a communication with them, is to be attributed this justifiable unwillingness to be dragged into the formation of a junction with the Leeds and Manchester solely.

SHEFFIELD AND MANCHESTER RAILWAY.

To the Editor of the Railway Times.

SIR,—The published opinion of one of the most celebrated Engineers of the day, respecting this line,* confirming the extensive character of it, and the great amount of confluent traffic which it must receive, renders it unnecessary to solicit any particular advocacy in its favour; and all that I ask for it is, that it may be left to make its own way in the railway market, and not be made a sacrifice to the unfortunate differences between its Directors and the late Engineer (Mr. Vignoles); for these in fact have been the origin of all the prevailing opinions against it. I observe that "Traveller per Rail," in your last number, exclaims—"Why, you have made only seven miles of the line; 33 miles of it are yet to make, and three miles of this is a tunnel, and you have called up 72*l.* 10s. per share of the capital" ! ! The wished-for inference from this notable paragraph is, that three-fourths of the capital have been expended in making seven miles of the line!

The "Traveller per Rail" ought to have known from Mr. Locke's printed Report already alluded to, that the works contracted for up to Glossop, which extend four miles beyond the portion recently opened, and are of a worse character than any other similar length of the whole line, can absorb only 253,000*l.*, or one-fourth, instead of three-fourths, of the estimated cost. The fact which this writer ushers forth with its false inference is therefore capable of another conclusion than the one he seeks to fasten upon it, which is, that three-fourths of the capital have been expended on the seven miles—that the undertaking is bad, and must therefore be abandoned.

The insolvency of a great number of the shareholders, I understand, has compelled the Directors of this line to make frequent and heavy calls, but this is extrinsic of the value of the undertaking, and implies no consequent sacrifice of its capital, and the road may, most undoubtedly, be completed by the same aids and resources which the most vaunted lines of the day have repeatedly made use of, for their successful termination.

Where then is the basis for the unjust and illogical detractions respecting it, and the admitted fears entertained by many about its completion? As a shareholder I feel none of these things, and my confidence in it is doubly strengthened by thd manly and dignified offer of its celebrated engineer, that he is ready to find parties who will give the guarantee required to perfect the undertaking at the estimated cost of 1,113,500*l.*, which, including stations, engines, and all appliances, makes only 27,837*l.* per mile.

Your Editorial columns have intimated that the conduct of the Directors of this line has been of a reprehensible kind. It is satisfactory to me at least as a considerable shareholder, that they have cleared the rock which has been so fatal to many undertakings of the same character—they have *not wasted my money*, and what they have done in the execution of the works has been done with laudable economy, and thus far extends my defence of these gentlemen.

ATTICUS.

Sheffield, Dec. 15, 1841.

* See Mr. Locke's Report, dated London, 8th Nov., 1841.

LIVERPOOL AND MANCHESTER RAILWAY.

To the Shareholders of the Liverpool and Manchester Railway Company.

GENTLEMEN,—I think it my duty to lay before you the following facts, which will point out to you some of the reasons why your receipts are falling off. Last week, for instance, being 338*l.* less than the corresponding week of last year, and the months of October and November, 1841, less by 1,400*l.* than the same months in 1840.

Sheffield goods are now taken round by Derby and Birmingham and by the Grand Junction to Liverpool for 25s. per ton. Of this your Company get only 3s. 9d. from Newton to Liverpool, whereas if the goods went by Manchester, their long accustomed route, and with a saving in distance of 70 miles, they would then pass over the whole length of your line, and you would get 10s. per ton; instead of which your interest is clearly sacrificed to the Grand Junction Company to the extent of 6s. 3d. on every ton of goods, viz., the difference between 3s. 9d. and 10s.

This extraordinary proceeding would appear inexplicable, but I am informed the majority of your Directors are also Directors of the Grand Junction, and hold a very large interest in the latter, but only a very insignificant interest in your Company.

Goods from Birmingham to Liverpool are now carried by the Grand Junction for 15s. per ton, a portion of which are taken by rails to Preston Brook, and then put into flats belonging to the "Bridgewater Trust," (whose representative at your Board is Mr. Loch, M.P.,) and thereby you lose even this 3s. 9d. per ton.

Repeated applications have been made to the executive of your Company to take these goods by Manchester at some reduction from 10s. per ton, and the consequences of their refusal have been clearly pointed out to them, but the applications have been of no avail whatever. Very different indeed has been the result of our communications with Mr. Loch and his agents, as regards the Bridgewater Trust; immediately on a proper representation of the case being made to them, they saw the policy of at once making the required reduction in the water rates for Sheffield and Liverpool goods, and the consequence is, that your line is entirely deprived of this traffic, which hitherto it has had exclusively.

For many years it has been most industriously circulated by your Directors, that it would have been better for the interests of your Company had they never carried goods at all, even at the rate of 4d. per ton per mile, and yet an advertisement has just appeared offering a reduction of 5 per cent. off the alleged losing rate; and, more extraordinary still, the same Directors, sitting at the Grand Junction Board, are now carrying London and Sheffield goods at about 1d. per ton per mile, namely—goods from Manchester to London 57s. 6d. per ton, out of which they have to pay the Liverpool Company for toll, &c., 3s. 9d., the London and Birmingham Company 35s., Chaplin and Horne for agency and delivering, 10s., total, 48s. 9d., which taken from 57s. 6d. leaves only 8s. 9d. per ton for carrier's risk and sheets for the whole distance and toll, locomotive power, and waggons for 98 miles being a fraction more than a 1d. per ton per mile!

Now, the most interesting part of this question as regards yourselves is, how happens it that your line pays only 9¼ per cent., with a rate of 4d. per ton per mile, whilst the Grand Junction Company, with essentially the same Direction, even at the low rates above named, pay 14 per cent. dividend!

I am, Gentlemen, your obedient servant,
A SHEFFIELD CARRIER.

Sheffield, December, 15, 1841.

RAILWAY TAXATION—EDINBURGH AND DALKEITH RAILWAY.

THE following is the Memorial referred to in another column:—

Unto the Right Honourable the Lords Commissioners of Her Majesty's Treasury: the Memorial and Statement of the Edinburgh and Dalkeith Railway Company, incorporated and established by Act of Parliament passed in the 7th year of the reign of his late Majesty King George the Fourth, cap. 98.

In the year 1839, 1840, and in the beginning of the present year, the Memorialists presented petitions to the House of Commons, and also memorials to the Chancellor of her Majesty's Exchequer, representing that the mileage tax on railway travelling as established by law was so unequal in its incidence as to amount to 12½ per cent. on the gross receipts drawn from the conveyance of passengers on this railway, and other railways in the poorer parts of the kingdom, while on railways of the first class it amounted to only about a third part of that rate.

The memorialists then proposed that, in lieu of the existing taxes, a tax might be imposed by way of a per centage on the gross receipts drawn from the conveyance of passengers, which would be the most easily and cheaply ascertained and collected, the most difficult to be evaded, and the least oppressive to the trade.

The memorialists presented also, in the beginning of the present year, a petition to the House of Commons, and a memorial to the Chancellor of her Majesty's Exchequer, representing that, on account of horses being the power employed on this railway, they were liable by law to the following assessed taxes, over and above those to which they were subject in common with railways worked by steam, viz.:—

For each coach	£4	10	
For each horse	3	6	
For each driver	1	5	

These taxes, although the horse tax is at present remitted by special authority from your Lordships, make it unprofitable to afford conveyance for extraordinary numbers of the working class of a very large population on holidays, and operate towards discouraging the use of horse power on railways, as is explained by the following statement:—

On this railway there are five or six occasions, annually, on which the working class travel in extraordinary numbers, and more than half of the carriages kept are never used except on those occasions.

One coach with a horse and driver can convey in 6 days 480 passengers, the fares of which give a gross receipt of				£14	13	4
Charges—Horse and driver	£3	13	4			
Assessed taxes—coach	4	10	0			
on driver	1	5	0			
Mileage tax	1	7	6			
Repairs and wear and tear of coach, 10 per cent. on 80*l.*	8	0	0			
				£18	15	10
Loss on each supernumerary carriage				£4	2	6

Hence it is evident that if the memorialists lose hope of being relieved from the whole of the assessed taxes, they must give up keeping more carriages than are sufficient for the every day traffic.

The memorialists respectfully submit, that it is not for the advantage of the public that the use of horse power on railways should be discontinued; because it is applicable in many cases in which steam power could not be employed without loss and inconvenience—for example, on short branches or feeders to the passing stations of great trunk lines of railway; in affording frequent communication, with a moderate traffic; in the suburbs of towns, where frequent stoppages are required; and in conveying the traffic of great steam-power railways between their principal termini in the vicinity and sub-termini in the interior of towns, without the inconvenience of changing carriages, and the nuisance and danger of steam-engines. The safety of admitting communication between horse-power railways and highways or streets has been proved by this railway, which crosses or goes along 17 highways or streets on a level, and has been open above 10 years, without any serious accident.

The Edinburgh and Dalkeith Railway Company therefore beg leave respectfully to propose to your Lordships that, in the event of any Bill being introduced by her Majesty's Government for the purpose of altering and amending the laws of taxation on railway travelling, the carriages, horses, and drivers employed in the conveyance of passengers on railways may be exempted from the assessed taxes; and that the taxes on travelling may be alike on all railways, whether worked by animal or by mechanical power; and may be imposed by the simple and equal method of a per centage on the gross receipts from the conveyance of passengers; which amendment, if carried into effect, the memorialists confidently believe will increase the traffic upon railways worked by horse power, and to that extent increase also the public revenue.

2. *Minus* toll to London and Birmingham 116*l.* 13s. 3d.

3. Main line, 53 miles; Tewkesbury branch, 2.—Total length, 55 miles.

4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone.

8. Receipts include the Northern and Eastern toll, &c. The dividend is from the time of opening.

10. The part between Glasgow and Paisley was made at the joint expense of the Glasgow Paisley and Greenock, and Glasgow Paisley and Ayr Companies, but each Company's receipts in respect of that part are now merged in the general returns of each.

11. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the L. and M. and C. and C. lines, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 134⅔ (83+21+31.)

13. The 5,231,527*l.* 9s 10d. is the amount actually raised according to latest balance-sheet. The receipts include those derived from the Cheltenham and Exeter branches; the former opened for 18 miles, and the latter for 33. The divisor employed to ascertain the daily receipts per mile is therefore 169½ (118½+18+33.)

16. Ten per cent. is the maximum dividend allowed by the Company's Act.

17. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. On the quarter shares the dividend is at the rate of 42½ per cent. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

19 The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table.

20. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company.

21. Capital of 993,300*l.* includes new capital for widening the line, &c. The dividend mentioned does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table is exclusive of Brighton and Croydon toll.

22. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount.

23. Including Toll, &c., from Sheffield Company.

24. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

omnibus charges, and payments to other Companies. The dividend is from the time of opening.

26. The receipts for goods, &c. include, carriages, 30*l.* 4s. 2d.; horses, 25*l.* 11s. 0d.; dogs, 1*l.* 8s. 6d.; parcels, 171*l.* 8s. 5d.; cattle, 68*l.* 19s. 6d.; corn, 4*l.* 8s. 1d.; heavy goods, 426*l.* 10s. 10d.; coal, 127*l.* 18s. 1d.—Total, 856*l.* 8s. 7d. The dividend is from the time of opening.

28. The details of the receipts are as follows:—Passengers, 1,769*l.* 4s. 5d.; parcels, carriages, horse, and mails, 291*l.* 6s. 8d.; merchandise, 1,146*l.* 8s. 8d.; minerals, 290*l.* 11s. 6d.; cattle, 30*l.* 9s. 2d. — Total, 3,528*l.* 0s. 5d.; including North Midland proportion of Manchester and Leeds traffic, amounting to 100*l.* 15s. 2½d. The dividend includes a sum of 31,786*l.* earned previous to the last half-year.

29. The receipts are after deduction of L. and M. toll.

30. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 26 miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

31. The capital of 533,000*l.* includes that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).

TO CORRESPONDENTS.

Le Chemin de Fer.—*Under this title a weekly newspaper has recently made its appearance at Brussels. Its objects are, as the name implies, analogous to those of our own journal. From the few numbers of it yet issued, it appears to be conducted with considerable talent, and promises to be very useful in a country where the railway system has made such rapid strides.*

A Constant Reader.—*The Edinburgh publication is, in our opinion, as good as any other—certainly much superior to the other work named by our correspondent.*

Verax.—*Enough has been said for the present.*

We have seen the first and second numbers of a publication called the Hand Book for Plain and Ornamental Mapping and Engineering Drawing, by B. P. Milne, C.E. *It is published by Mr. Weale, of Holborn. The object of the compiler appears to be to instruct by example rather than by precept. The plates are well executed, and we have no doubt the work will be acceptable to the profession.*

In the letter of A Railway Shareholder *published in our last, the word "re-quires," in the second paragraph, should have been "ac quires," and "comfort himself" should have been "comport himself."*

Viales, No. 2.—*It is quite absurd to assume that the traffic will for the next ten years at least "increase to double its present amount."*

Locomotive the First.—*Of course we would recommend the* Railway Times. *Much useful information may likewise be got from Mr. Whishaw's "Railways of Great Britain."*

Bristolian.—*No person is employed to draw designs for the improvements of Holborn Hill, the Corporation not having resolved to make them; but in 1834 Mr. H. F. Pocock of Knightsbridge submitted a plan, and within the last fortnight Mr. James Moon, of Gray's Inn Square, has also submitted a model and drawing of a level viaduct, to be 87 feet wide, extending from Thavies Inn to Sea Coal Lane, the height of the carriage way being 20 feet above the level of Farringdon street.*

A Proprietor at Poplar.—*We think it would be extremely injudicious to abridge in any way the accommodation offered to the public. Besides, the saving recommended would amount to little, if anything.*

Scrutator *was anticipated by another correspondent.*

X. N.—*The number of Directors was originally 16, but was subsequently reduced to 12. We hear that a further reduction is not unlikely. Eight properly qualified members of the Board would be ample.*

London and Birmingham Railway.—"An original promoter of the circulation of the *Railway Times* would be glad to be informed, through that periodical, whether the Directors of the London and Birmingham Railway Company are legally warranted in making *a Call of 40l. per share*, though some of them are divided into four parts."—*In reply we have to state, that the Directors, under the powers of the Company's first Act, could only call for 10l. at a time on their 100l. shares, but by their second Act, under which the 25l. shares are created—(5th and 6th of William IV, section 116)—they are empowered to make calls at such times, and for such amounts, as they may think fit.*

W. B. (*Liverpool*).—*We cannot understand what our correspondent means when he speaks of the gentleman whom he names having "resumed his late Secretaryship."*

A Shareholder of the Northern and Eastern Railway *has our best thanks.*

Occator's *jocularity is misplaced. There can be no doubt as to the facts upon which he comments.*

"Warwick's House of Commons."—*This is a very useful manual, embracing more of the personal and political history of the members of the Lower House than any similar work that has come under our notice.*

C. B.—*The Box tunnel is 9,680 feet in length; 39 feet high; and 35 feet wide to the outside of the brickwork.*

Railway Communication with Scotland.—*The letter of* C. B. *shall appear next week.*

Observator's *remarks shall have a prominent place in our next. We shall be happy to hear from him again in the same strain.*

Zeta.—*We had extracted the article before receiving our correspondent's note.*

J. T. S.—*We are much obliged to our correspondent for his suggestions. It is too late to carry them into effect in the present volume, but we shall probably carry them out in the new year. As to the matter mentioned in our correspondent's postscript—if there was any error it was not ours*

Inquirer (*Manchester*).—*The "improvement" consists in the adoption of triangular sleepers.*

Amicus (*London*).—*We should say that the* rise *is not attributable to the cause hinted at. We do not think the project is likely to be revived.*

We should be happy to receive a notice of the case referred to in a private letter dated, "Bristol, 16th December."

Several letters are in type and shall appear next week.

THE RAILWAY TIMES.

SATURDAY, DECEMBER 18, 1841.

We have much pleasure in giving in another column a copy of a Memorial addressed to the Lords Commissioners of Her Majesty's Treasury, by the Managers of the Edinburgh and Dalkeith Railway Company, in reference to certain imposts to which that Company are subjected—imposts from which most other Railway Companies are exempt.

It is necessary to premise, that the line in question is worked by horse power, and that in addition to the usual railway tax of one-eighth of a penny per passenger per mile (from which, however, the Scotch Companies have hitherto been in a great measure relieved,) this Company are liable to a heavy annual amount of assessed taxes, namely, for every coach, 4*l.* 10s.; every horse, 3*l.* 6s.; every driver, 1*l.* 5s.—making an aggregate for one vehicle of upwards of 9*l.* a year; and it is from the whole of this tax (a portion being already remitted) that they pray to be freed. The circumstances of their case are somewhat peculiar. It seems that in the district of this railway there are five or six occasions annually on which the working classes travel in extraordinary numbers, and that to accommodate these parties the Company are compelled to keep twice the number of carriages required for the ordinary working of the railway. As all these carriages are liable to the Government duty, it appears that when the assessed taxes payable in respect of them are enforced, the mileage duty paid, and a moderate per centage allowed for wear and tear, the Company are out of pocket upwards of 4*l.* upon every such supernumerary vehicle! Surely such a state of things cannot be expected to continue! and equally clear is it, that if on the extraordinary occasions above referred to, the poorer classes of the community should be subjected to inconvenience from the lack of suitable accommodation, the Company will not be to blame, but the Government, which practically puts a stop to the running of extra trains, to the great loss of the proprietors, and the serious injury of the public. We would fain hope that the plain unvarnished statement put forth by the Managers of the Edinburgh and Dalkeith Company will immediately command the attention of the Lords Commissioners, and that in this particular case the operations of the law will be suspended, the more especially as the Company are conferring a great boon upon the inhabitants of the locality, at the smallest possible rate of remuneration to themselves.

But it is not alone to the circumstances of the Edinburgh and Dalkeith line that the prayer of the Memorial is applicable. We would call attention especially to that part of it which opens up a somewhat novel subject—that of branch railways worked by horse power for the purpose of connecting the termini of *steam* railways with sub-termini in the interior of towns. We have reason to believe that the merit of suggesting this view of the matter is due to Mr. Rankine, the able and active Manager of the Dalkeith Company, whose exertions for a repeal or modification of the railway tax have been such as might have been expected from a gentleman whose observation and experience have proved how seriously the impost in question tends to hamper the efforts of the existing Companies, and to prevent an extension of the system. There is no more common complaint urged against railways than that whenever they approach towns, the occupiers of villas, and the inhabitants generally of contiguous hamlets, are inconvenienced by the withdrawing of the common-road vehicles, while no equivalent is supplied by the railway, as it is not convenient to stop the trains so frequently as would be required. There is, moreover, to be considered the great expense, and not unusually the insurmountable difficulty, of bringing the terminus of a steam-worked railway to any considerable distance within a town; whereas if these supplementary horse-railways were instituted, the travelling public would substantially receive the desired accommodation, while other parties would not be sensibly inconvenienced. Let us take the case of a most important railway in the immediate neighbourhood of the Edinburgh and Dalkeith—we mean the Edinburgh and Glasgow line. The present terminus of that undertaking is fully a mile from the centre of the city—a point to which it could be extended with great ease, were it not that the route is along the side of the Princes-street gardens, the proprietors and lessees of which are opposed to the introduction of steam engines, with their disagreeable noise, into the vicinity of those beautiful grounds. If, however, the Edinburgh and Glasgow carriages were to be drawn by horses from the existing suburban terminus through these gardens, no objection could be made, at least none that Parliament would listen to; for then there would be no greater "nuisance" to complain of than that to which the parties are at present exposed. The change of power for the last mile need not cause a loss of more than five minutes (which in a journey of two hours is next to nothing), since on the Dalkeith line a very ordinary stage-coach horse draws a coach and passengers, weighing in the gross five tons and upwards, at the rate of from 10 to 12 miles an hour, on the level and slightly inclined parts of the railway. But here the impost of which the Dalkeith Company very justly complain, comes into operation to impede a great public convenience, for in addition to the ordinary tax, the Edinburgh and Glasgow Company, after paying heavily no doubt for permission to penetrate into the town, would be liable to a further amount of upwards of 9*l.* per annum for every vehicle, horse, and driver employed upon the extension line. Except under very favourable circumstances indeed, such taxation as this must amount to a virtual prohibition of horse railways.

Nor is it solely in connection with terminal towns of a large size that horse railways might be advantageously laid down. Very many second, or third, or fourth-rate places could thus be accommodated, which will have to wait in expectation of railway facilities long enough, if they do not obtain them until steam lines upon the magnificent scale now in vogue are undertaken with hopes of realising a profit.

It may be that some of our Engineers would scarce condescend to lay out or execute so humble a work as would suffice for horse traction, but there are, we doubt not, a sufficient number who would—the rather as we suspect there will be few opportunities for some time

to come of constructing splendid lines of communication. The Tewkesbury branch (two miles in length) of the Birmingham and Gloucester Railway is, we believe, usually worked by horses, and very many other towns at the same or a greater distance from main lines, might be accommodated in the same way, with advantage to all parties. We hear daily of the injury inflicted upon particular towns by the diversion of the stream of traffic from its ancient channels—and no doubt a vast deal of distress, although inseparable from the first introduction of every great improvement, has resulted from this cause—but if the parties interested were to exert themselves in the promotion of branch lines such as are now suggested, much of the ruin which threatens them might, we are convinced, be avoided. It is no wonder that individuals should be deterred from embarking in railway speculations when they find that, under the present system, a line is reckoned cheap if its cost per mile is *estimated* not to exceed 25,000*l.* or 30,000*l.* per mile, and when they find that even that amount not unfrequently rises in the end to 40,000*l.* or 50,000*l.*, they would be indeed devoid of all prudence, were they to think of organising such schemes without the certainty of a very large traffic. If, however, the first cost could be reduced about one-half, and the same or nearly the same amount of real accommodation secured to the public, the case would wear a very different complexion. And that it would be so by the adoption of inferior lines such as might readily be worked by horse power, is the opinion of many persons more acquainted practically with the subject than we have the good fortune to be.

The matter is, we think, well worth investigation and discussion, and although in the meantime the taxes from which the Dalkeith Company entreat to be relieved would materially interfere with such projects, we have little doubt that ultimately no practical hindrance would arise from that cause. Indeed it is clear that, as the railway system becomes further developed, some very extensive alterations in the mode and amount of locomotive taxation generally must take place Already stage coach proprietors and post-masters are complaining, and not without good reason, of the extreme and unequal pressure of their burdens as compared with railways and steam navigation, (the last-named means of communication being, as our readers are aware, wholly exempt from taxation); and with the constantly increasing development of travelling generally, it is not unreasonable to suppose that, even allowing steam-boats to go free—which, however is not fair to other modes of conveyance—and without imposing any additional tax upon railways, the stage-coach and post-horse duties may, at no distant day, be materially lightened, and the public revenue still remain unhurt. There can be no real rivalry between railways and common roads, but they might be made to contribute to the benefit of each other much more effectually than is the case at present.

One of the "coolest" things of the kind that we have seen for some time is a document purporting to be an address or memorial, or something of the sort, to the Directors of the London and Greenwich Railway Company, in reference to the often-discussed claims set up by Mr. George Walter, formerly Manager of that concern. We have not had the good fortune to catch sight of the original, but the following is a verbatim copy, as given in the columns of a contemporary:—

"We, the undersigned shareholders in the London and Greenwich Railway Company, having given much consideration to the various causes which have reduced the value of the stock of the Company to 80 per cent. discount, and having also ascertained that one of the chief causes for this great and continued depression in the market price of the shares of the Company is the unsettled claim of Mr. George Walter, the late Managing Director of the Company, and the consequent series of pamphlets published by that gentleman, month by month, assuming to expose the gross mismanagement, and total incapacity of the present Managers of the Company, and the certain ruin in which the monetary system of the Company must be irretrievably involved, unless an immediate change of Directors and management takes place, are of opinion, that it is most desirable that measures shall be taken to put an end to Mr. Walter's claim, and thereby silence his attacks. And in making this recommendation, we are guided by feelings of justice towards Mr. Walter (as well as for the interests of the proprietors in general), who, we think, has been hardly and unjustly dealt by, and that in refusing to recompense him for the great service which he rendered to the Company in placing the shares at a time of urgent necessity and difficulty, the Directors have been mistaken in their judgment, and the consequences have been, that by objecting to pay Mr. Walter what we conceive his contract justly entitled him to, the proprietors have lost by the fall in the price of the stock (mainly produced by Mr. Walter's pamphlets) at least a thousand pounds for each pound which Mr. Walter has been wrongly deprived of. And we do, therefore, urge upon the Directors of the Company, for the sake of the proprietors, at once to make such an arrangement with Mr. Walter for the liquidation of his claim, as will free the management and affairs of the Company from his unceasing and destructive expositions, and thus relieve the property of the Company from attack—one of the causes of its present depression."

We make no comments upon the literary merits of the above, for in truth its manner is a very secondary consideration, compared with its matter. It is in effect an apology for extortion—a recommendation to the representatives of the "undersigned shareholders," (and not of them only, but of the shareholders at large,) to bribe to silence a party whom these representatives believe to have no just claim upon the Company whose interests they have taken upon themselves to protect and promote. Mr. Walter's claims have been argued and re-argued, decided and re-decided not only by the Directors of the Company, but by the proprietors in public meeting assembled; yet here are parties professing to be shareholders in the undertaking, who openly stand forth to counsel "an arrangement with Mr. Walter for the liquidation of his claim," with the avowed object of freeing the Company from that individual's "unceasing and destructive expositions" of the state of the Company's affairs! What is this but holding forth a premium to unscrupulous calumniators? We do not class Mr. Walter among such, for really we have not had the pleasure of seeing any one of the "series of pamphlets" alleged to be "published by that gentleman month after month," and therefore are not in a position to say whether his strictures are deserved or not. But admitting Mr. Walter to be entirely in the right and the Directors entirely in the wrong—granting "the gross mismanagement and total incapacity of the present Managers of the Company," for which it would seem Mr. Walter contends—is it to be imagined for a moment that the proposed mode of "silencing attacks," would, if carried out, be lost upon the thousand and one libellers who are the curse of overgrown towns? The memorialists, it is to be observed, say very little as to the justice of Mr. Walter's claims. They merely mention in passing that they conceive he "has been hardly and unjustly dealt by," while the whole scope of their address points to the expediency of putting a stop, after a particular fashion, to the attacks which it is said Mr. Walter is in the habit of making—the memorialists not appearing to care whether these attacks be merited or not by their objects. Mr. Walter in his "series of pamphlets," either speaks the truth or he does not. If he does *not*, then his "unceasing expositions" are but the ebullitions of a disappointed man, and his "attacks" are certain to be "destructive" to none but himself. If on the contrary Mr. Walter speaks the truth and nothing but the truth, the matter is one not to be stifled by pecuniary bribes, but to be carefully and minutely sifted. In the one case the memorialists are guilty of recommending that the funds of the Company be applied to purchase the silence of a libeller; in the other they would attempt by the same means to screen evil-doers from the well merited exposures of an honest man. We leave them to choose either horn of the dilemma.

We cannot believe that Mr. Walter himself is a party to this memorial, and certainly no *real* friend of his would countenance such a document. What a poor compliment do they pay Mr. Walter in taking it so coolly for granted that if his claim for compensation were admitted, he would cease to expose what we are bound to believe he conscientiously considers to be "gross management and total incapacity" on the part "of the present Managers of the Company"—mismanagement and incapacity, which if allowed to continue, must, he says, entail "certain ruin" on the "monetary system of the Company." What should we think of Mr. Walter's repeated protestations of deep anxiety for the well-being of his fellow proprietors, were he to allow the settlement of his own account to shut his mouth, when he has the means, in "a series of pamphlets," of exposing iniquity practised towards others? Well may Mr. Walter exclaim, "Save me from my friends!"

We should like much to know who the "undersigned shareholders" are, and their several stakes in the undertaking, who after "*much consideration*" can find no more probable cause for the "great and continued depression in the market price of the shares of the Company than "the unsettled claim of Mr. George Walter"!! We seek not to disparage the pamphleteering prowess of Mr. Geo. Walter, but the causes of the present condition of Greenwich stock lie much deeper, and (if his self-styled friends speak truth) will be more difficult to remove than "the unceasing and destructive expositions" of "the late Managing Director of the Company."

The *Liverpool Standard*—a journal which bestows more attention upon railway matters than any other general newspaper with which we are acquainted, and moreover treats them with much greater ability—has briefly noticed our last article on the Liverpool and Leeds proposed junction line. We elsewhere reprint our contemporary's observations, and embrace this opportunity of expressing our satisfaction that our comments on this subject have excited so much attention in the neighbourhood of the two lines, as we understand they have

been honoured withal. We have, and can have, no prejudice or partiality in the matter, our sole aim being the mutual benefit of the two Companies as connected with the accommodation of the public.

Our contemporary brings forward another, and to us an entirely new, reason for the singular apathy of the Liverpool Directors, namely, that there is a prospect of another junction which would connect the Liverpool line not merely with the Manchester and Leeds, but with the Manchester and Birmingham, and of necessity with the Manchester and Sheffield —a line too which our contemporary believes would be "even less expensive than the present projected line." We need scarcely say, that if such a line is likely to be carried out, it shall have our warmest support, as still further promoting the public convenience; but then we should like to see some demonstration on the part of the Liverpool Company that they are really in earnest in patronising this new project,—that it is not merely for the purpose of putting aside their own recorded agreement with respect to the Hunt's Bank junction line, that they are, or affect to be, so convinced of the superior facilities offered by another route. Are they making preparations for carrying forward this new scheme? A considerable period must necessarily elapse before the indispensable sanction of Parliament can be secured for it; whereas the Directors can at once proceed, if it so pleases them, with their moiety of the Leeds junction, and we should be glad to have some promise or pledge that they are to proceed with either. As they have suffered the Leeds Company to purchase property to a considerable amount, on the faith that the Act of Parliament would be carried out, we must be excused for dreading a repetition of the same conduct, should powers be obtained for the construction of the new line alluded to by the *Liverpool Standard*.

But our contemporary, who in one sentence readily concedes the fact "that a junction line must ultimately be made between the Manchester and Leeds and the Liverpool lines," is, in another sentence, of opinion "that circumstances and measures which are at this very moment in contemplation may contribute to render the profitable working of *any junction line whatever*, through the town of Manchester very problematical." These measures and circumstances would appear to be the prospect of having the privilege of bonding conferred upon Manchester itself, thus rendering it necessary that there should be at Manchester unloading and re-loading of all that produce intended for the manufacturing towns on the Leeds line, which being now bonded in Liverpool alone, might then be transferred to Manchester. But not to dwell upon the fact that if there were a continuous line of railway throughout, the parties putting their goods in bond, might still prefer Liverpool, and thus obviate the necessity of unloading and re-loading at Manchester, surely there must be a vast amount of traffic passing over the two lines which would not be affected by the establishment of any additional bonding depot. Be this, however, as it may, we cannot perceive how "circumstances and measures which are at this very moment in contemplation," apparently for the first time, can account for or justify the *past* apathy of the Liverpool Board; and for ourselves we are constrained to impute to the same "measures and circumstances" which have heretofore influenced them, their *present* unwillingness to be *dragged* [as our contemporary calls it, though the phrase seems rather inapplicable to a manifestly voluntary arrangement] into the formation of a junction with the Leeds and Manchester."

Mr. Crawshay, Chairman of the Northern and Eastern Railway Company, has addressed to us a letter, which will be found in another page, in reference to the terms in which, (as reported in our journal of the 4th inst.), that gentleman had spoken of third class passengers at the late meeting. Mr. Crawshay admits that his words were accurately reported, but maintains that being uttered in joke, and apparently taken in joke, we and others who found fault with their use, have been complaining without any sufficient cause. Mr. Crawshay surely does not suppose that we or any one else could for one moment have dreamt of any serious intention on his part to recommend the actual engagement on a railway of so many sweeps with their soot-bags; it was the *spirit* of his jocose proposition which *we* condemned,—a spirit which, notwithstanding the explanation now offered tends, in our opinion, most directly to sanction, and even counsel, a studied insult to the Company's customers—not only to those who, being able to pay for superior accommodation, choose to occupy a third-class carriage, but to that larger class who would gladly avail themselves of a better vehicle if they could. It is, in effect, conduct precisely analogous to that of the Company to whom Mr. Crawshay alludes in the last paragraph of his letter, and who, as he alleges, "endeavour to drive parties into the first-class carriages by making the second so exposed as to be dangerous to health." The Directors referred to (whoever they may be) seek to effect their object by attacking one class of *feelings*; Mr. Crawshay would accomplish his by attacking another. It has been remarked that an injury is frequently forgiven, but an insult never; and we should not feel surprised if many an occupant of a third class carriage would sooner submit to the infliction of physical inconvenience than to contact with the soot-bag of the sweep, when he knew for what purpose it was placed there, or to ride in the same vehicle *with pigs*, according to the (late) custom of a Company in the north.

We said, and we repeat, that it is an "evil," and a very serious one, that Companies should be deprived of their legitimate profits by the course of conduct of which Mr. Crawshay complains; but we would not for that reason remedy one grievance by the infliction of another. Mr. Crawshay argues truly that third class carriages are intended for the accommodation of the poorer members of the community, and for them alone; and it was the consideration that to such parties money is usually more valuable than time, which led us to recommend a different hour of departure, and a slower rate of speed, as tending to prevent "gentlemen" from using these trains. This arrangement has the additional recommendation, that as there need be little fear of abstracting passengers from the superior carriages, the charges by the slow trains might be reduced to a very low rate indeed. On the Northern and Eastern Railway, where there is (as yet) but a very small traffic in goods, such a disposition of third class trains as is in use on the Birmingham and Great Western lines, may not be convenient or practicable; but generally, we think this will be found to be on the whole the best for the interests of the Companies, and for the accommodation (including in this phrase the pecuniary means) of the public. Mr. Crawshay thinks that *his* plan is more charitable towards the poor than ours; *we*, for the reasons above hinted at, of course think otherwise, and our readers must decide.

Of Mr. Crawshay's anxiety to promote the public convenience in every way consistent with what he deems the true interests of the Company over which he so ably presides, we never entertained a doubt; and we are bound to say that general report speaks well of the travelling arrangements of the Northern and Eastern line. We are sorry, nevertheless, that even in joke he should have given occasion, however unintentionally, for the shadow of a suspicion that any Board of Management was neglectful of, or indifferent to, the accommodation of the masses. Such jokes may lead to very serious results.

In the *Sun*, a few days ago, appeared the following paragraph:—"The *Cork Reporter* publishes a correspondence between the Lord Lieutenant's Private Secretary and Mr. Dillon Croker, the Secretary of the Cork Railway Committee, relative to the presentation of a memorial connected with the establishment of railway communication in Ireland, from which it is evident, says that journal, that 'Government has no intention whatever of taking up the project of railways in Ireland as a great public measure.'" Not having ourselves seen the Cork paper, we cannot say how far the correspondence referred to bears out the inference with which the paragraph concludes, but we trust that the expression of the Lord Lieutenant's opinion does not imply that Government will not afford every facility to the capitalists who have come forward with a plan for (so far) effecting this important object. We would much rather that the original plan of the Commissioners were carried out in its integrity; but at the same time, any scheme that is likely to promote the prosperity of Ireland, by the improvement of the means of internal communication, ought to have the support of every friend to the country.

It appears that the Cork meeting, to which we have on previous occasions alluded, has given an impetus to the proceedings of the Dublin and Kilkenny Company, whose project has been so long in abeyance. It appears from a statement in one of the Irish papers that the Company are ready to undertake the work without charge or risk to the public. All they ask is a Government guarantee for the interest of money to be borrowed, and, as they will not have occasion to resort to a loan until, perhaps, a full fourth of the line to Kilkenny is completed, Government will have ample security in case of any default. The expense is calculated at

From Dublin to Kilkenny..... £800,000
From Kilkenny to Cork..... £1,000,000

They have upwards of 200,000*l.* already subscribed, and what they propose is, to execute the line as far as that will go. They then borrow—say 50,000*l.* or 100,000*l.*, the Government guaranteeing the payment of interest to the lenders, and the Company giving the Government as security the work that shall have been executed. When this sum is expended, the Government credit is to be again used, the Company expending on the work a further sum equal to the further loan, and giving as security the work completed, and so on until the railway is brought from the metropolis to Cork. "If (says the journal referred to) of this object the city and county approve, why not strengthen the Company by the assurance of their support? Is there any objection to the plan? It causes neither cost nor in-

Digitized by Google

convenience to the public, and it appears to us the least objectionable by which railways can be made. Government we cannot expect to undertake one. Sir ROBERT PEEL has already said that with undertakings which are properly the objects of individual enterprise he will not interfere. The principle is right, though there are occasions on which departure from it might be advisable. That, however, is a question which we are not called on to discuss just now. The offer of the Company enables us with Government assistance to dispense: all they ask is—what from the present ministry they have no reason to apprehend—that they will not, by partiality to other Companies, be damaged or interfered with. For such regulations as may be requisite to preserve the public from annoyance, injustice, or inconvenience, Government can stipulate, and we presume will."

THE mention by Mr. GRAY, in one of his recent letters, of an accident on the Eastern Counties' Railway, to one of the Company's servants, named COX, has reminded us of a circumstance which we deem as creditable to that party, as it is *dis*creditable to an individual, who we have no doubt would feel highly indignant were we to describe him otherwise than as an honourable member of an honourable profession. We would observe, however, by the way, that the injuries inflicted upon COX were by no means so serious as the statement of Mr. GRAY would imply. So far from having "lost one or both of his legs," COX has lost neither of them, and is still in the Company's service.

The circumstance to which we have alluded is this. While COX was lying in the London Hospital, he received from a professional *gentleman* a communication, recommending an action against his employers for the recovery of damages. It would be a pity to suffer so creditable a document to remain in obscurity, and therefore we take the trouble of transcribing it verbatim from the original now lying before us. It is as follows:—

"16, Cateaton-street, City,
18th May, 1841.

"Sir,—Seeing an account of the most unfortunate accident which has befallen you, and perceiving that it was occasioned through negligence, I inform you that under the circumstances I can get I should think without doubt 200*l.* at the least would be allowed by the Company to you for the injuries received.

"If you wish I shall be willing to take up your case, as your Solicitor, and if I don't succeed (which I do not think at all likely), I will charge you nothing.

"Please to drop me a line.

"Yours obediently,

"J. K. MAYO."

Addressed "Mr. COX, London Hospital."

Much to the honour of COX, he refused to have anything to do with Mr. Solicitor MAYO, declaring that he would suffer anything rather than be a party to hostile proceedings against those who had treated him with every kindness and consideration under the melancholy circumstances in which he was placed. We hope and believe that COX has not been a loser by the course which he pursued. But what shall be said of the conduct of his self-constituted legal *adviser?* Cost-hunting attorneys are, in the present state of the law of libel, dangerous game to follow up, and therefore we must leave it to our readers to supply the fitting epithets.

It is lamentable to think that Railway Companies should be so much at the mercy as experience shows them to be, of parties who live by stirring up strife between man and man. The *respectable* members of the legal profession (and we rejoice to say they form a large majority) repudiate all pettifogging practices, whether directed against individuals or public bodies.

In connection with this subject, we would direct attention to a report of a case, given in another column, in which the London and Blackwall Company were concerned. Did the plaintiff in that case receive a letter of the *Mayo* character?

WE call attention to the Report of a meeting held in Glasgow, on Wednesday last, in reference to the construction of a line of railway from England to Scotland. The influential character of the meeting, and the zeal and energy displayed, promise well for the accomplishment, at an early day, of this most desirable object.

A MEETING of the Committee upon whom devolves the duty of instituting the preliminary enquiries relative to the construction of a railway through Cornwall, held a meeting at Truro, on Wednesday week, the Earl of FALMOUTH in the Chair, for the purpose of agreeing to a Report to be submitted to a county meeting, which it is proposed shall be held at Bodmin, on the 5th of January next. We have looked in vain in the local papers for a copy or even an abstract of the Report in question; indeed we gather from one of them (the *Falmouth Packet*) that the Committee have resolved not to allow its contents to transpire previous to the meeting referred to. In common with our contemporary, we cannot but deprecate so impolitic a course as this. There seems indeed to be a great absence of judicious "management" in arranging the preliminaries for these Cornish meetings. Of what use is it that a most active and able engineer, like Captain W. S. MOORSOM, should collect a vast amount of information as to the nature of the country and the probable amount of future traffic, if the results are to be confined to a Committee-room until the very moment when the county at large is to be called upon to give a final judgment as to the propriety of embarking in the venture? Our contemporary already referred to puts this point well:—"The Report (he says) agreed to by the Committee, it appears to us, ought at once to be made public, that the inhabitants of the county at large may have the opportunity of making themselves acquainted with its details, and thus be prepared to discuss the question of proceeding without further delay to the carrying out this great work. It will be impossible to come to a calm and deliberate decision upon an affair of such vast importance, and in which so many interests and considerations are involved, upon a Report read in a public meeting. It was, too, if we recollect rightly, understood at the last county meeting that the Committee should publish their forthcoming Report previously to the holding of another meeting. We see no benefit whatever that can accrue from withholding the publication of the Report; but we perceive great public inconvenience and the loss of much valuable time by such a course of proceeding. * * * If the Committee have faithfully performed the duty with which they were charged—and we do not for a moment imagine that they have not, on the contrary, we have an assurance in their station and character that they have duly consulted the welfare of the county in the task in which they have been engaged,—they must have collected a sufficient amount of details to enable every practical-minded man to come to a sound decision on the question. Two meetings have already been held on the subject, and at the meeting about to be held all parties should be in a condition to come to a determination respecting the construction of a railway through the county—Aye or No." If publication in the local papers is not deemed desirable, it can scarcely be expected that *we* should be favoured with the Report, although we could enumerate many weighty reasons why the results of the Committee's investigations should be laid at once before the railway public, through a medium such as perhaps no existing journal but this can supply.

It is stated in the *Packet*, that although it is understood that the Committee's Report "will not be so favourable a document as some of the most sanguine of the advocates for a railway through the county may anticipate, yet it will contain sufficient evidence to show, that this *desideratum* may be accomplished at the estimated cost of *one million three hundred thousand pounds*, and that the present traffic would ensure a profit on the capital expended of *seven per cent.*" We sincerely trust that this supposition is correct. A fair prospect of *one-half* of the anticipated *seven per cent.* ought to be sufficient to arouse the landowners of Cornwall to the most vigorous exertions, *taking into account the collateral advantages which must inevitably result from the construction of such a work.* If "seven per cent." could be guaranteed, we make no question that a railway would soon be constructed through Cornwall, how apathetic soever those might be who *ought* to be the most active.

We shall look with some interest to the issue of the approaching county meeting. In the meantime, we have much pleasure in giving an extended publicity to the following sensible remarks of the journal above referred to:—

"We have met with persons who look upon the construction of railways through this county as a very fine thing to talk about, but as to its accomplishment it will not, they assert, take place in our time! and, say what you will to them with the view of removing the impression from their minds, they still look upon the affair as a mere chimera. Other persons again—the "slow coaches" of society—say, let us wait—there is no hurry—time enough yet—something may by and by be invented that will supersede the necessity of laying down iron rails—and such other sage expressions, are perpetually dropping from their lips. *We hope the Committee is not encumbered with either of these classes of people—'the drags' on the spirit of improvement.* They form, we regret to say, much too large a portion of the people of Cornwall, and they are especially to be found among the landed and agricultural interest. In this respect, in some other districts, the contrast is very remarkable. In Cumberland, for instance, which is as far north as Cornwall is west of London, we learn that the landowners are actively engaged in rousing all other classes to the construction of a railway through that county; and we hope, on the publication of the Report of the Committee, it will not appear that the landowners of Cornwall are indifferent to the immediate commencement of a railway, which is not only of vital importance to the county in general, but which must continually prove a source of incalculable profit to themselves, from

Digitized by Google

the enhanced value which their several estates would acquire."

A CORRESPONDENT of the *Scotch Reformers' Gazette*, in a letter to the Editor of that journal, gives the following account of the alleged conduct of one of the principal agitators against Sunday travelling :—

"Having occasion [he says] to be in Edinburgh the other day, I dined in a friend's house, in company with several gentlemen, and among other topics the conversation related to what has lately occupied so much of your notice, Sunday travelling —particularly in reference to the attempts of the "anco guid" to prevent railway travelling on that day. Speaking of individuals, your godly friend, Mr. John Leadbetter, of this city, was named, when one of the gentlemen present expressed his surprise to find the active part taken by Mr. L. in the exertions now being made for the "*bitter* observance of the Sabbath," because he, the gentleman in question, had seen Mr. John Leadbetter, along with his son, proceeding on a pleasure tour by the banks of Loch Tay on a Sunday, in August last; their conveyance being a *hired carriage* from Kenmore, which place Mr. Leadbetter and his son had left the same morning *(Sunday)* after inspecting the princely mansion and grounds of Taymouth. This would, to some people, have been incredible, but for the fact that the narrator of the story was personally acquainted with Mr. Leadbetter, and saw the names inscribed at Taymouth Castle, in the list of visitors. Of the fact, therefore, there can be no doubt, and for comment there is no occasion."

Upon this the Editor remarks :

"Yes, there is room for a *leetle bit* of comment on our part. We could have seen nothing very wrong on the part of Mr. Leadbetter or any other man travelling decently or respectably to visit the scenery at Taymouth on Sunday. But, when Mr. Leadbetter places himself in a prominent public position, and puts on sanctified airs in his place as Chairman of the Edinburgh and Glasgow Railway— when he deliberately votes for the stoppage of the railway on Sunday, on the special ground that it would be an act of Sabbath desecration, we are surely entitled to turn round and charge him either with hypocrisy or gross inconsistency, after he has been detected oftener than once in the very act of travelling himself *on the Sunday*, for business we presume as well as pleasure. Let him answer this if he can. We have authority to give the name of our correspondent at once."

To show the lengths to which the Puritanical party in Scotland seem disposed to go, it is only necessary to state, that they have recently excommunicated a poor man and his wife, for the heinous crime of burying a beloved child "on the Lord's-day!" What next?

—o—

LAST week a boy was run over and killed by an engine on the Dallam-lane colliery branch of the Grand Junction Railway. It appears that the public road which runs parallel to the railway is in such a bad state of repair that, notwithstanding the orders of the Directors, passengers walk along the railway. The jury returned a verdict of "Accidental death," accompanied by a recommendation to the Railway Company to summon the overseers of the highway, with a view to the proper repair of Dallam-lane. A deodand of 20s. was laid on the engine. We trust the recommendation of the jury will not be lost upon the Directors.

—o—

THE *Liverpool Standard*, after quoting the notice which appeared in our last number, of the increase of traffic on the Canterbury and Whitstable Railway since the reduction of fare, says :—

"Satisfactory as must be the above statement, as to the increase of gross receipts which results from the reduction of railway fares, the example would be far more likely to be followed if a better arrangement could be come to with the Government with respect to the mode of levying the passenger duty. The amount *per head* charged by the revenue ought surely to be proportioned to the amount levied by the Company; and we would suggest that Railway Directors could not be better employed during the approaching session than by impressing the justice of such an arrangement upon the present Chancellor of the Exchequer."

We cordially join in this recommendation.

—o—

THE *Leeds Mercury* gives another instance of the depreciation of turnpike property. It appears that at the toll-letting on the Sheffield and Wakefield turnpike-road, a few days ago, there was not a single tender delivered, and the trustees of the road were therefore compelled to take the tolls themselves. There was a similar scarcity of contractors at the letting of the iron bridge tolls on the Wakefield and Denbydale road.

RAILWAY OFFENCES AND OFFENDERS.

ON Monday a stoker named Lightfoot, in the service of the London and Birmingham Railway Company, was charged by the Directors before Mr. Rawlinson, the presiding magistrate at Marylebone police-office, with being drunk while on duty. It was proved that at the time when the nine o'clock night train, on which the prisoner was engaged, was about to start, he was discovered to be drunk, and another man was appointed in his room. By some means or other *the prisoner contrived unperceived to seat himself on the "couplings" between two carriages*, and was not discovered until the train arrived at Watford. His excuse was, that he wished to get home to his wife and family at Rugby. His Worship put out some sage remarks upon the necessity of making examples in such cases, but as usual contented himself with inflicting a fine of 40s. The man of course will be discharged, and the Railway Authorities have done *their* duty. It is a pity, however, that the offender was not taken into custody immediately it was found that he was intoxicated. Had he lost his life through his own recklessness, what a stir would have been made by the anti-railway press!

Another case of drunkenness, and in which, also, the life of the party had nearly been sacrificed, occurred last week on the Great Western Railway. The offender was a farm labourer named Shoesmith, who it appears had scrambled up an embankment near the Hanwell station, just as a train was starting, and most miraculously escaped destruction. He was "very drunk," and when ordered to quit the line became insolent. He was taken before the Brentford magistrates, who let him off with a fine of 10s.

It is high time that the attention of the Board of Trade should be attracted to these most inadequate punishments. The prompt interference of the Secretary of State, in a recent case at Croydon, leads us to believe that the following circular, recently issued by the Board of Trade, may have for one of its objects further information upon this subject. The publication of the names of the convicting magistrates cannot fail to have a good effect :—

"Railway Department, Board of Trade, Whitehall, 8th Dec., 1841.

"Sir,—The Act for Regulating Railways having imposed on the Lords of the Committee of Privy Council for Trade the duty of revising the bye-laws and regulations of Railway Companies, which impose penalties on the public, it appears very desirable that their lordships should be furnished with authentic returns of prosecutions instituted under such bye-laws or regulations, or under the corresponding provisions of any Acts of Parliament. Their lordships, therefore, request that if the Directors of the ——— and ——— Railway Company do not object to furnish this information, a return may be made to this department, according to the subjoined form, commencing with 1st October, 1841, and to be continued regularly in future as prosecutions occur.

"I am, Sir, your obedient servant,

"S. LAING.

"To the Secretary of the Railway."

"Return of prosecutions instituted by ——— Railway Company against persons, other than servants of the Company, under the Bye-Laws or Regulations or Acts of Parliament of the Company, and under the Act 3 and 4 Victoria, c. 97, for Regulation of Railways. Date of offence; description of offence; name of accused; bye-law, regulation, or clause of Act of Parliament under which the prosecution was instituted. Magistrate before whom the case was tried; date of trial; result of trial."

The *Leeds Intelligencer* of last Saturday states, that a few days previously a gate, which had been removed from a field, and a large water tub, were thrown on the North Midland line, near Woodlesford. They were discovered and removed before the passing of a train, or the consequences might have been serious. The Company have offered a reward of 5*l.* for the discovery of the perpetrator of this outrage.

THE *Aylesbury News* states, that one day last week, as a train on the London and Birmingham line was on its way, some dastard, from the bridge near Pendley station, threw a stone at it, which hit the stoker a violent blow on the face, and very much injured him. We sincerely trust the scoundrel will be discovered.

Mr. Slater, Solicitor to the Manchester and Birmingham Railway Company, applied to Mr. Walker, at the Manchester Borough Court, on Tuesday week, for a committal under Lord Seymour's Act, against a person of the name of John Wood, for assaulting one of the Company's servants in the execution of his duty, at the Manchester station, on the arrival of the seven o'clock train from Stockport, on the previous Monday evening. It appeared, from the statement made, that the prisoner had travelled from Stockport in one of the Company's carriages, without a ticket; and that, on the Company's policeman demanding his ticket, and refusing to allow him to pass the station without it, Wood assaulted the policeman by a blow on the head. Mr. Slater remarked, that the prisoner had rendered himself liable to two penalties; first, for the assault under Lord Seymour's Act, he had become liable to a penalty of 5*l.*, and in default of payment, to imprisonment; and secondly, for riding in the Company's carriage without a ticket, he had made himself liable, under the Company's own Act, to a penalty of 40s.; but that the Company were only disposed, in this instance, to press the case for the assault. After hearing the evidence, Mr. Walker, taking into consideration the apparent poverty of the prisoner, gave him a severe reprimand for his conduct, and fined him in the mitigated penalty of 20s. and costs, and in default of payment ordered him to be imprisoned in the New Bailey for one calendar month. The money was however subsequently paid and the defendant liberated.

RAILWAYS IN GERMANY.

To the Editor of the Railway Times.

SIR,—The success which attended my effort last winter, to warn the English public against Danish Railway schemes, induces me to address you again, as I am informed that an appeal is about to be made to English enterprise on behalf of a railway from Gluckstadt to Kiel. The subject of my former letter was a railway from Altona to Kiel, a long and expensive line as compared with one from Hamburg to Lubeck. Some parties in Denmark, finding that that scheme did not succeed, proposed a railway from Gluckstadt to Kiel; and a certain Mr. Holmes, who amuses himself in Denmark by decrying some that are better known than himself here, has prepared plans and estimates of works and revenue. I have not seen these, but I have no doubt the latter have not suffered from being dressed by English hands. Gluckstadt is a small Danish port, situated about half way between the mouth of the Elbe and Hamburgh. It is at present of small importance; and the hope is, to draw away the Baltic trade of both Altona and Hamburg, and establish it in this inferior town. The two pleas, on which the superiority of this line to any other is founded, are 1st., that goods may be landed and conveyed into the interior, or across the country without being subject to the Stade duties; and, 2ndly, that there is a bar at Blankanese, about five miles below Hamburg, which prevents vessels ascending except at or near high water. With respect to the first plea, the probable junction of Hanover with the Commercial League annihilates the force of the argument, by the consequent fusion of the Stade duties in those of the League, and the junction of Holstein will assimilate the countries on the opposite shores of the Elbe in that respect. As to the second plea, it is perfectly true, that the present bar is a great obstacle to the trade, and a great disgrace to the enterprise of Hamburg; but it is equally true, that it will not long be suffered to remain in its present state. An offer from a person in the north of England, to remove it and preserve a clear channel for fifteen years at a comparatively trifling expense, is now under consideration by the authorities of Hamburg. I am quite certain that something will shortly be done for the removal of the nuisance of a bar at the very entrance of this flourishing port.

Thus the sole grounds on which an argument in favour of the scheme of a railway from Gluckstadt to Kiel could be founded, are completely cut away. It is indeed a miserable scheme; and I should not have troubled you with any remarks concerning it, but that, as I have already said, I am informed that application is to be made to British capitalists in support of it. In conclusion, I say, as I did before, Let them beware!

I am, Sir, your obedient servant,

W. N.

London, Dec. 15, 1841.

RAILWAYS IN GERMANY.

[From the *Times*, December 16.]

1. The Kaiser Ferdinand's Nordbahn, from Vienna, by the way of Lundenburg (side railway to Brunn, 8 Prussian, about 38 English miles long,) Hradisch Prezau (again side railway) hence to Olmutz, 14 English miles long, Ostrau, (whence a side railway to Troppau, about 17 English miles long,) thence to Podgorze and Cracow to Bochnia. There is also another side railway in the direction from Linz to Stockerau complete for about 12 English miles. The whole length of the main line is about 60 German miles (about 280 English;) of these 26 are completed to Leipnic. The side lines are together about 20 German miles long, and those to Stockerau, Brunn, and Olmutz are finished, while a similar one is contemplated to Presburg; the 23 miles from Vienna to Brunn have cost 3,765,000 rix dollars. The first portion of this railway to Wagram was opened in 1837, and the side line to Olmutz on October 17, 1841.

2. Vienna and Raab railway, by way of Baden and Nieukirchen, finished for 8 German miles; the 10 miles to Glognitz (6½ of which have double rails) are to cost 4,550,000 rix dollars. It was opened to Nieukirchen in October, 1841.

3. Badweis and Linz, 17 German miles; from there to Graunden, 11 German miles, worked by horses. This cost 1,680,000 rix dollars. That to Linz was opened in 1832, the division to Graunden in 1836.

4. Prague and Pilsen Railway, 14 German miles long, is now complete to Lena, is 6½ miles, and has cost 210,000 rix dollars. This is also worked by horses.

5. Berlin and Potsdam, is 3½ miles long, cost 1,378,000 rix dollars. Opened on the 30th October, 1838.

6. Berlin and Anhalt, by way of Wittemberg and Dessau to Kothen, about 20 German miles long; cost 4,200,000 rix dollars. The first part opened in September, 1840; the whole length in September, 1841.

7. Berlin and Frankfort-on-the-Oder, 10¼ German miles long; computed cost 2,200,000 rix dollars; not yet finished. Most likely will be complete towards the end of 1842.

8. Berlin and Stettin, 18 miles long; computed cost 3,028,000 rix dollars; will be finished in 1843.

9. Magdeburg and Leipsic, by way of Kothen (where it meets the Berlin and Anhalt line) and Halle, is, to the Saxon frontier, 14½ German miles long; and cost 3,020,000 rix dollars. The whole line was opened in August, 1840.

10. The Upper Silesian railway begins at Breslau and goes by way of Ohlau, Brieg, Oppeln, &c., to Neuberun on the Weischel, where it is intended to unite with the Kaiser Ferdinand's Nordbahn, (or North Railway.) It will be 28 German miles long, already far advanced towards Oppeln; *i. e.*, 10¾ German miles, which will cost 1,467,000 rix dollars.

11. Rhenish Railway, from Cologne by Duren to Aix-la-Chapelle, is 94-10ths German miles long from the latter place to the Belgian frontier, 1 9-10th German miles long. Has cost to Aix-la-Chapelle 5,000,000 rix dollars, and the continuation will cost 1,567,000 rix dollars more. The whole line to Aix-la-Chapelle was opened in September, 1841.

12. Dusseldorf and Elberfield line is 3¾ German miles long; cost 1,620,000 rix dollars; was opened in its whole length in September, 1841.

13. Nuremburg and Furth, 1 German mile long; cost 124,770 rix dollars; opened in December, 1835.

14. Munich and Augsburg line is 8½ German miles long; cost 2,334,000 rix dollars; opened to Augsburg in October, 1840.

15. Saxon and Bavarian line from Leipsic, by way of Altenburg and Plauen, to the Bavarian frontier at Hoff, which is 19 German miles; will have a side line of one mile from Werdan to Zuickaw: is now in progress of construction, and is computed to cost 6,000,000 rix dollars. It will afterwards be extended over the frontier to Bamberg and Nuremburg.

16. Leipsic and Dresden line, by way of Wurzen and Riesa; is 17 miles long; cost 6,000,000 rix dollars. Opened in its whole length April, 1839.

17. The Baden line, between Manheim and Basil, and is intended to pass Heidelberg, Carlsruhe, Rastadt, Appenwier (whence is a one mile long line to Kehl on the Rhine,) Offenburg, Freiburg, and Mulheim. The cost of this line, which will be 37 German miles long, is computed at 9,698,000 rix dollars, with one rail; but at 13,138,000 for double rails. The distance from Manheim to Heidelberg was opened in September, 1840, is about two German miles long, and cost 693,000 rix dollars.

18. Taunus Railway, between Frankfort and Wiesbaden, has a side line worked by horses to Biberich; is 5½ German miles long; cost 1,831,000 rix dollars. Opened in April, 1840.

19. Brunswick and Harzburg Railway, by way of Wolfenbuttel; is 5¾ German miles long, with a side line from Vienerburg to Goslau. Opened October, 1841. The side line not yet completed. The 1 3-5th mile to Wolfenbuttel cost about 250,000 rix dollars.

20. The Hamburgh and Bergerdof Railway will be opened in 1842; is 2 1-10th German miles long, and is to cost 750,000 rix dollars.

It appears from the above that Germany has already 175 German miles of railway completed, and 166 German miles in process towards completion. The first cost 38,940,000 rix dollars—*i. e.*, on an average for the mile 222,000 rix dollars. The latter, it is expected, will cost 43,357,000 rix dollars.

II. RAILWAYS, THE BUILDING OF WHICH APPEARS PRETTY CERTAIN.

I. Magdeburg to Oschersleben, about 6¾ German miles; cost computed at 1,700,000 rix dollars. Company already formed, and shares taken.

2. Oschersleben to Wolfenbuttel, about 6½ German miles long. To be built at the expense of the Brunswick Government; will cost the same as the former.

3. Breslau and Freiburg Railway, with side line to Schweidnitz, 8½ miles long; will cost 2,000,000 rix dollars.

4. Rhine and Weser Railway, from Deutz (near Cologne), by Elberfeld, Westhofen, and Ham, to Minden, will most likely be built, as it is a highly necessary one; will be 34 German miles long, and may cost about 6,120,000 rix dollars.

5. Bonn and Cologne Railway, 4 miles long, will cost 750,000 rix dollars; has already gained the permission of the Government.

6. Nuremberg to Bamberg and Hof on the frontier continued; one of the Saxon and Bavarian lines. The expense of this line, which will be about 20 German miles long, is computed at 4,667,000 rix dollars. The part from Nuremberg to Bamberg is 7½ German miles long, and will cost 1,226,000 rix dollars.

7. Frankfort, Darmstadt, and Manheim, will be built at a cost of 2,880,000 rix dollars; will be 8½ miles long.

8. Chemnitz and Zwickau will join the side line of the Bavarian and Saxon Railway, which is about six German miles long, and cost 1,400,000 rix dollars. A part of the Company wish to build it as far as Riesa, which will cost in all 3,000,000 rix dollars, and be 15 German miles long.

9. Brunswick and Hanover Railway to Minden.—This forms a part of the Grand line from Magdeburg to Minden. A treaty is already made between the various Governments through which it passes for its erection. The divisions to Magdeburg, Oschersleben, and Wolfenbuttel are already mentioned. The Hanover division will be 17 miles long, and cost 3,230,000 rix dollars. Uncertain whether the Government of Hanover will build it or a private Company.

10. The railway from Altona to Kiel appears to be the most likely for the joining of the North Sea with the Baltic; it will also be the most profitable line. A Company already is formed and privileged. It will be 13 German miles long, and the cost is computed at 2,794,000 rix dollars.

The line mentioned in this division will have a gross length of 124 German miles, and the cost in round numbers will be 27,240,000 rix dollars.

III. RAILWAYS WHICH ARE SERIOUSLY CONTEMPLATED, ALTHOUGH NO COMPANIES HAVE BEEN FORMED, AND THERE IS NO CERTAINTY AT PRESENT ON THE SUBJECT.

(Herein are mentioned only the greater and national undertakings.)

1. Dresden, Bautzen, Lobau, Gorlitz, and Liegnitz, to Breslau, 33 German miles.

2. Frankfort-on-the-Oder to Breslau, 32 German miles long.

3. Augsburg, by Donauworth, to Nuremberg (pretty certain), 17 German miles.

4. Augsburg to Lindau, 18 German miles.

5. Munich to Salzburg, 17 German miles.

6. Dresden to Prague, 20 German miles.

7. Berlin to Bergerdorf, 30 German miles.

8. Wismar and Schwerin to Boitzenburg, 12 German miles.

9. Vienna, by Schlotswein, Gratz, Laybach, Podlige, Loitzeh, Adelburg, Prewald, St. Veit, Montfalcone, and Duino, to Trieste, 80 German miles.

Digitized by Google

10. Frankfort, by Friedberg, Giessen, and Marberg, to Cassel, 21 German miles.

11. Cassel, by Mulhausen, to Halle, 26 German miles (or by way of Eisenach, Gotha, and Erfurth.)

12. Cassel, by Carlshaven, Litstadt, to Hamm, 18 German miles.

13. Heilbronn, by Stutgard, to Ulm, 16 German miles.

14. Ulm, through the Illenthal, to Leutkirch, thence by Wagen to Friedericksbaven, 14 German miles. This division comprises 363 German miles of railway, the cost of which would probably be about 80,586,000 rix dollars.

N. B.—A German mile may be considered equal to 4¾ English.

AMERICAN ENGINES — BIRMINGHAM AND GLOUCESTER RAILWAY.

To the Editor of the Railway Times.

Sir,—When the present Chairman of the Birmingham and Gloucester Railway took upon himself the duties of his office, great expectations were raised that his proposed new system (for which he asked six months trial) would have worked well for the interest of the undertaking, and that it would have laid out a new and advantageous system of management, increasing the revenue and economising the expenditure. Indeed, one of the professed greatest savings was to be in the locomotive power by its more economical application to the combined purposes of passengers and goods traffic, and as results only establish facts it is necessary to follow the new Management from its commencement, in which it will be observed that up to the time the Executive was in the Superintendent's hands the goods trucks were tracked by the passenger trains, the same arriving at the different stations with a precision satisfactory to every one, and more particularly to those who knew the kind of material to accomplish it, inefficient for all useful purposes, and generally out of repair.

On the Superintendent leaving, the Board in its new character came into operation, the four Directors taking executive duties, and immediately commenced the irregularity so much complained of, and so prejudicial to the character of the line. This became so notorious, that it deterred many persons from availing themselves of the route, and forced upon the Directors the necessity of some fresh regulations, one of which, a month since, was to relieve the passenger trains of the goods' trucks, and put goods' trains on twice a-day each way. As this materially alters the cost of locomotive power employed, it is necessary to compare the quantity of work done under the first and last arrangement. Under the former the engines had an average load only of 28 tons, about one-half the average weight of trains on either of the leading lines, at a cost in locomotion of 1s. 10¼d. per mile (see Report), a cost much above that of lines where double the weight is trucked; still this could not be accomplished with regularity, and the new plan is in operation of sending goods' trains twice a day each way, at a low speed, twelve miles per hour. As the profit on the traffic is that only from which legitimate dividends can be made, how stands this part of the proceeds?

The earnings for the last four weeks published, say November 12 to December 3, were 882*l.* 10s. with 4,992 miles of locomotive power, which at 1s. 10¼d. per mile, adding 9d. per mile for depreciation of stock, amounts to 650*l.* 4s., as a cost in moving only, leaving a balance of 232*l.* 6s., or about 25 per cent. to cover porters, stations, trucks, cloths, and tolls. My present purpose is not so much to show the mode the Company adopt to carry on their merchandise traffic, making it a loss and not a gain, as to expose if possible the ruinous loss to the proprietors in perpetuating an evil in the employment of such machines as are now in use for no other reason than they were adopted by the present Directors or their connections. It is sufficient to show that if the Management could carry on their goods traffic with their passenger trains, as done some months since when the quantity was equal to what it is now, there would be a saving of 650*l.* monthly, or equal to 16s. 5d. per annum on each share. If such be the fact with the present miserable goods traffic, how much more forcibly will this apply if the quantity were quadrupled, which it should be, and the engines on the line were equal in power to those on other lines? The trains then would equal in weight only those tracked at twenty miles per hour on the leading lines, and this after making the allowance for the disadvantage of gradients on this line. It is true, unfortunately for the proprietors, that some 20,000*l.* has been expended on these American toys, and on being asked by a Director what they could do but use them after purchasing, my recommendation was and is, run them into the sheds and break the worst of them up, using such part of the material as can be made available. By purchasing in lieu, engines that will do the quantity of work requisite, a saving would be made equal to the cost of more engines than the line would require.

The proprietors, more particularly those having daily opportunities of seeing the inefficiency of the present arrangements have made representations without producing more than the hacknied phrase, "only have confidence until we can perfect our professed arrangements, and everything will go on well."

A general meeting will soon take place, at which every shareholder, if he does his duty, can record his vote, and I would recommend them diligently to read many valuable leading articles in your publication in reference to an unlimited confidence being placed in Boards of Directors.

I remain, Sir,
A SHAREHOLDER.

Edgbaston, Birmingham, Dec. 14, 1841.

MR. SAMUEL HALL'S LOCOMOTIVE IMPROVEMENTS.

To the Editor of the Railway Times.

Sir,—I have been requested by Mr. Hall to forward you my observations as to "the accurate consumption of smoke in the *Bee*, with any remarks" I might "think proper to make."

In reply, I beg to state, that such was the working of Mr. Hall's apparatus on the *Bee*, that it would be as great an injury to the truth, as it would be an act of injustice to Mr. H., were I to refrain from stating the *fact*, that the consumption of smoke was *very complete*.

Where suitable coal* can be reasonably purchased, I have no doubt that it will in a great measure (at least) supersede the use of coke; however, notwithstanding Mr. Hall has the consumption of smoke *at command and under control*, until the use of coal is better understood, and becomes *more general*, I am of opinion that (for a time at least) the use of coal will rather be *retarded* than promoted by its *exclusive use*; and would decidedly recommend Mr. Hall to use about one half coke when the engine has to stand for an hour or two about the principal stations. This would in a great measure supersede the use of the steam draft about the stations, and as the fire must go down more quickly by its application, that will be found nearly (if not quite) equal to the extra cost of a small quantity of coke used upon such occasions, whilst the removal of extra noise about the stations would prevent a degree of hostility and prejudice, which may prove as injurious to railway interests as it would be to Mr. Hall's invention. The difference when Mr. Hall's apparatus was on, and when it was shut off in the stationary engines, was also very conclusive as to its effects in consuming smoke.

I am, Sir, your obedient servant,
JOHN GRAY.

Hull and Selby Railway,
Kingston street, Hull, 15th Dec. 1841.

* Mr. Hall informs us that he has sent several tons of Manchester, Leeds, and Bradford coal, (including the black bed coal from the latter place,) to Derby, for trial with an engine there, to which his apparatus is applied, and that the smoke from all the sorts respectively was perfectly consumed. The Bradford black bed coal is considered to emit more smoke than any other kind.—Ed. R. T.

EDINBURGH AND GLASGOW RAILWAY—SUNDAY TRAVELLING.

To the Editor of the Railway Times.

Sir,—I have read your strictures at different times on the subject of Sunday travelling on the Edinburgh and Glasgow Railway, in all of which I most heartily concur. My immediate object in writing this letter is to suggest, that a meeting be called of the English proprietors either at Liverpool or Manchester, or both, to determine upon the steps to be taken at the general meeting in February next. The shareholders must recollect that a very large number of proxies are in the hands of Mr. Leadbetter *which were given him for another purpose*, and he should be required to return them and fresh ones be filled up and intrusted to parties who will do justice to the majority of the shareholders. It must also be recollected that notice has been given to Parliament to apply for fresh powers, and it will be highly necessary that the long and irritating question as to the appointment of Directors should be settled, and the constitution of the Board placed on a proper footing without the suspicion of squabbling for patronage.

Upon the proceedings of the meeting in February depends the future prosperity of this noble undertaking, and it is high time the proprietors should be stirring and looking after their railway, and not leave it to be swamped by the prejudices and bigotry of a body of men who have no interest whatever in the concern.

I am, Sir, your obedient servant,
A MANCHESTER SHAREHOLDER.

Manchester 13th December, 1841.

EDINBURGH AND GLASGOW RAILWAY.

To the Editor of the Railway Times.

Sir,—As a shareholder in the Edinburgh and Glasgow Railway, I should be glad if any of your correspondents would inform me when this line, which should, according to the Engineer, have been completed in August last, then in September, afterwards in October, and lastly in November or December, will actually be opened throughout?

I am, Sir, your most obedient servant,
OBSERVATOR.

LONDON AND BIRMINGHAM AND GREAT WESTERN RAILWAYS.

To the Editor of the Railway Times.

Sir,—Your correspondent, "A Great Western Proprietor," in this day's paper, is mistaken in his arithmetic. He gives the following as the receipts on the London and Birmingham and Great Western lines:—

	London and Bir.	Great Western	Differences.
	£.	£.	£.
From Sept. 4 to Sept. 25	73,170	58,358	14,812
From Nov. 7 to Nov. 28	55,157	41,849	13,308

and he reasons, that because the difference between the compared lines in the first period is 14,812*l.*, and but 13,308*l.* in the second, the Great Western is proportionably *more* productive as a winter line than the London and Birmingham.

But if he will work the following rule of three sum:—

73,170 : 55,157 :: 58,358 (: 43,991)

he will see his mistake, for it will show him that if the lines were even *equally* productive proportionably during the two assigned periods; that is, if the decrements in their respective returns were proportional to the amounts of those returns; the Great Western should have produced 43,991*l.* instead of 41,849*l.*; and has consequently lost ground on the comparison to the extent of 2,142*l.*; or, to put it in your correspondent's own way, the difference during the latter period should have been 11,166*l* instead of 13,308*l.*

He has forgotten Euclid's theorems about ratios of greater and less inequality.

I am, Sir, your obedient servant,
DEFEND ME FROM MY FRIENDS.

YORK AND NORTH MIDLAND RAILWAY.

To the Editor of the Railway Times.

SIR,—Being at all times ready to give a reason for the faith that is in me, I will, with your permission, offer a few remarks in reply to the letters of your correspondents, "Observer" and "Philo-Observer," inserted in your paper of the 11th instant.

I will first examine the *facts* embodied in "Observer's" calculation; some of which said *facts* will, I think, be found to be merely *opinions*—and not very sound ones. For instance, it cannot yet be assumed to be a fact that the working expenses of the York and North Midland Railway will not exceed 32 per cent. of the traffic receipts. On the contrary, there is every reason to believe that 32 per cent. is much too low an estimate; and in support of this view of the case, I here subjoin an account of the expenses, extracted from the Directors' two last Reports:—

	Receipts.	Working.	Per Ct.
Half-year ending 31st Dec. 1840	£. 24071	£. 7606 =	£. 31¼
Ditto ditto 30th June, 1841	31564	12014 =	38
Year ending 30th June, 1841	55635	19620 =	35

Hence it appears, that contrary to all experience on other lines, the expense of working this one has increased in a much larger ratio than the traffic; and if the same principle should hold during the current half year in the same degree, the proportion will be 47 per cent.

However, in order that I may leave myself open to no charge of unfairness, I will assume that the average per centage for the two last half-years will be sufficient, namely, 35 per cent.

The next item is interest on borrowed capital, which I believe will be rather more than last half-year—but perhaps not much; I will therefore pass it over.

"Observer's" next fact is, that 10*l.* per share is paid on the new shares; whereas I believe 15*l.* either is, or ought to have been, paid. But possibly your correspondent has forgotten to pay the last call; and if so, I have great pleasure in having the present opportunity of reminding him of the matter, and for which I doubt not he will in his next communication acknowledge himself my debtor, as it may possibly prevent the very unpleasant circumstance of a forfeiture.

With the above little corrections, "Observer's" calculation will stand thus:—

Receipts for the half-year		£42,000
Working expenses 35	£14,700	
Interest on loans	3,682	
		18,382
Net profit		£23,618
Dividend on 6,700 shares at 2*l.* 10*s.* =	16,750	
Ditto ditto at 15*s.* =	5,025	
		21,775
Surplus		£1,843

To the above calculation I would beg to call the attention of your other correspondent, "Philo-Observer"; and I apprehend he will find it to be equally as good an authority as his friend "Cocker." "Philo-Observer," unlike his *protegé*, appears not to be a dealer in plain matter of fact. He is a man of fervid imagination; and has, moreover, a predilection in favour of even numbers.

He asserts the traffic for the present half-year to exceed by nearly 50 per cent. that of the last half year, and by nearly 100 per cent. that of the preceding half year. But if he refers to the former part of this letter he will find it necessary to substitute 33 per cent. for 50 per cent., and 75 per cent. for 100 per cent.

Now, although the traffic on the York and North Midland Railway *has* increased in the above ratio. I cannot perceive, Mr. Editor, that it therefore follows of necessity that a still further increase *must* take place. Neither can any just comparison be made with any other railway in this respect, because the circumstances which regulate the period requisite for the full development of the traffic of every railway are different from those of every other.

All the railways running directly into the York and North Midland Railway are now open, and in full operation; I cannot therefore see whence any further *material* increase is to arise. On the contrary, I see many possibilities of a decrease from the projection of other lines; and it appears to me that the shareholders generally entertain the same opinion, otherwise they would not have voted an unlimited authority to their Board of Directors, to guarantee the payment of an unlimited portion of the profits of their own line, in order to secure the execution of the Northern Union Railway.

I remain, Sir, your obedient servaant,

EXAMINER.

Rotherham, December 13, 1841.

GLASGOW AND GREENOCK RAILWAY.

To the Editor of the Railway Times.

SIR,—In your last a correspondent under the signature of "A Lancashire Shareholder," disputes the accuracy of some of my statements; *that* I do not object to, but I decidedly say, that abusive language never will carry conviction to the mind of any person.

One sentence in his letter, particularly as coming from a shareholder, amuses me very much. He says, "the working expenses should not exceed 900*l.* per mile per annum, and many similar lines are worked much cheaper, *while this has the* ADVANTAGE *of being* CLOSED *on a Sunday.*" This is certainly a novel and most extraordinary method of making railways pay; why not carry the idea out further, and close the line the remaining six days of the week also? He also talks about carrying away the trade from the "devoted river," and mentions that the Directors are prepared to reduce their freights to secure this. I hope the Directors have more sense than attempt such a thing. "Live and let live" should be their motto, and were they to direct their attention to the more economical working of the line, they would be much better employed than needlessly attempting to carry either goods or passengers as cheap as the vessels on the river.

Your "Lancashire" correspondent asserts, that the cost of the line is not doubled. The Directors, at their annual meeting in December, 1838, informed the shareholders that the whole line was contracted for, and would be completed *under* the estimates, and that no more than 20*l.* per share, or 80 per cent. upon the subscribed capital, would be called up. So far from this being the fact, however, the whole 400,000*l.* was called for, 133,000*l.* borrowed, and a new Act obtained in 1841 to create new shares to the extent of 100,000*l.*, without which the works must have remained unfinished. Besides all this, the Ayrshire Company have paid one-half the cost of six or seven miles, which is used by both Companies, although it was at first intended that the whole length of the line, 22½ miles, should be completed by the Greenock and Glasgow Railway Company, and that the whole cost should not exceed 400,000*l.*

Your correspondent evidently flatters himself that a great deal more traffic will be obtained next year. No doubt the traffic will increase; and much need it has, so as to be able to meet the enormous expenditure, and also to finish the works, which it will take a great deal of money to do. He flatters himself, also, that the Greenock line "is only just surmounting" the severe competition. I am rather sure he will find, and that too before six months are over, that the *severe competition* is yet to commence.

I beg of your correspondent not to put himself in a passion, but to take things coolly. The line has been of immense advantage to the town and people of Greenock, who made a very handsome thing of it when the shares were at a *premium*, and who now look on with the greatest complacency, congratulating themselves on the enhanced value of house property, and the great facility with which they can now transact business in Glasgow and return to Greenock in time for dinner, caring nothing for the "Lancashire" and other shareholders, *who are at the expense of keeping up the accommodation.* I am, yours, &c.

DIVIDEND.

Greenock, 13th December, 1841.

RAILWAY ADJUDICATIONS.

HERBERT AND THE LONDON AND BLACKWALL RAILWAY COMPANY.

Sheriff's Court, Dec. 11.—This was a precept directed to the Sheriff to inquire what amount of compensation the claimant was entitled to receive from the above Railway Company, by reason of the damage alleged to have been sustained by him by the construction of the railway.

Mr. F. KELLY, Q. C., and Mr. BUTE appeared for the claimant, and the SOLICITOR-GENERAL and Mr. AUSTIN for the Company.

Mr. KELLY stated that the claimant, Mr. John Herbert, was lessee of certain premises in Anthony-street, St. George's in the East, and had been reduced by a moral necessity to bring his case before a jury. The Act of Parliament under which the railway was constructed was obtained by a Company of individuals on the 28th of July, 1836. This railway differed from every other that had been made in the United Kingdom, for, as they were no doubt already aware, the London and Liverpool and the Great Western Railways passed far below the level of the surrounding houses, but the Blackwall Railway, on the contrary, intersected a densely populated neighbourhood. It had, therefore, been thought by the legislature that persons occupying houses within 50 feet of the railway might be incommoded, and their property deteriorated in value, and upon this ground it had wisely considered it necessary that such parties should have an equitable claim upon the Company for compensation. The 51st section of the Company's Act, under which the jury were empanelled, provided that, although a person's property was not entirely destroyed, yet if it was damaged and lessened in value, the Company should be bound to purchase it if required so to do. The first question for their consideration, therefore, was, were the premises deteriorated in value? And the next would be, if they were, what was the value of those premises? It was not the duty of the jury to say what exact amount of damage was done to the premises, but they must assess the whole value of the premises if any portion of them were at all deteriorated or damaged. Mr. Herbert had lived to an advanced age, above eighty years old, and in consequence of the constant passing and repassing of the trains, and the noise produced by the rope, almost incessantly passing over the iron sheaves along the line, and the vibration occasioned thereby, shaking as it did the fire-places, glasses, and other articles from the top to the bottom of the adjoining houses, the claimant would be compelled to leave his premises. The claimant, whose boundary-wall was from twenty to twenty-two feet, had borne this nuisance and annoyance as long as he could, but he now found he could endure it no longer. The noise agitated his nerves, and kept him in a constant state of excitement and tremor, which his medical attendant would prove had seriously affected his health. Another annoyance arising from the railway was that the rope, by which the trains were propelled, very frequently broke, and when that occurred a shower of stones was hurled with great violence against the windows of the neighbouring houses. Indeed, it would be proved that no less than nine panes of glass had been thus destroyed in this old man's house, and upon one occasion one of the inmates received a severe contusion upon his head. It appeared that the claimant held a lease of these premises, forty-six years of the term of which were unexpired, and in 1833 he purchased them at a premium of 250*l.*, at a nominal rent of 3*l.* 3*s.* per year. He had since expended 140*l.* in converting the house from a private dwelling into a shop, in which he had carried on the trade of an oil and colourman, and where he had hoped to spend the remainder of his days. Several eminent surveyors would prove that the improved rent of the premises before the construction of the railway was 35*l.* per annum, and that it was now reduced to 26*l.* odd per year; therefore the claimant sought to recover for his loss in this respect 355*l.* 2*s.* 9*d.* Mr. Herbert had also laid out in improvements 140*l.*, which he was entitled to receive. Then there was his business. He was netting a profit of about 120*l.* per

Digitized by Google

annum down to the completion of the railway. He claimed for goodwill, therefore, two years' value, amounting to 240*l.*, and 37*l.* for fixtures, making in all between 700*l.* and 800*l.* He (Mr. Kelly) would conclude by remarking that whatever was the result of this inquiry, Mr. Herbert would be compelled, for the safety of his own life, to quit the premises, and he was sure they would therefore do him that justice which the poor as well as the rich were entitled to receive at their hands.

The lease of the premises having been put in,

Charles Herbert, a son of the claimant, proved the annoyance experienced by his father from the railway trains. The rattling and vibration caused by the passing of the trains made his father so nervous that it was sometimes quite "disheartening" to see him. The noise had made witness's head "bad" when he had been at home, and he had seen the cruets and the glasses shake upon the tables when the trains passed.

Cross-examined by the SOLICITOR-GENERAL—Witness had been annoyed by the passing of carriages in Fleet-street and the Strand when he had entered a shop in those thoroughfares. He was very nervous. He was acquainted with the Greenwich and the Eastern Counties' Railways, and had seen the locomotive engines passing along them, but they did not affect his nerves. (A laugh.) It was the constant "whiz" upon the Blackwall Railway that made him nervous.

Richard Herbert, another son of the claimant, proved that he had assisted his father in his business for the last four or five years. The noise of the trains confused him when behind the counter, and he was likely to give change for a *shilling* instead of a *sixpence*. (Much laughter.) The noise upon the railway in summer time lasted until after ten o'clock at night. It disturbed his father's comforts, for he had been in the habit formerly of taking "a nap" after his dinner, but now the trains would not allow him to sleep. (Great laughter.) The witness then stated that several of his father's windows had been smashed upon the breaking of the railway rope. Upon one occasion a stone struck his head, and made it bleed. Since the construction of the railway his father's business had considerably fallen off, and his profits decreased. (The claimant's books were here produced, and the witness underwent a lengthened cross-examination by the Solicitor-General, but nothing material was elicited.)

Mr. George Smith, surveyor to the Mercer's Company, stated that he was well acquainted with the value of property in Mr. Herbert's neighbourhood, and if the railway had not been constructed (he witness) would have estimated the value of Mr. Herbert's premises at 355*l.*, that was, taking them at 15½ years purchase. He believed the railway had deteriorated the property about 5*l.* 5s. per year, or in money 81*l.*

Mr. R. Nicholas, surgeon, stated that he had attended Mr. Herbert since 1840, and had observed that his health was much impaired of late for want of natural rest. Witness understood that in consequence of the advanced age of Mr. Herbert he had been in the habit of taking some sleep every day, but the noise of the railway had latterly prevented him doing so, and if by chance he got into a doze, he would awake in a fright, and appear to be labouring under painful nervousness. Witness had advised Mr. Herbert to remove from his present premises, as he considered it was necessary that he should have repose after dinner, owing to his suffering severe bodily affliction.

Mr. Goodfellow, a neighbour of the claimant, proved the "dancing" of the crockery-ware and glasses upon the tables of his house. Sometimes the things were shaken off and broken.

Mr. Furnell, an accountant, stated that from January, 1837, to December, 1837, the books showed a profit of 164*l.* 14s. 10d. In 1838, 91*l.* 8s. 9d. In 1839, 77*l.* 18s. 2d.; and in 1840, 101*l.* 3s. 3d.

Several witnesses were then called to show the expenses of the claimant for rent, taxes, gas, &c., which Mr. Kelly requested the jury to deduct from the amount of the gross profits.

Mr. Matthew Wharton, a retired builder and surveyor, stated that he had 300 or 400 houses belonging to him, and he knew that the houses within 50 feet of the railway were of less value than those at a greater distance from it.

The SOLICITOR-GENERAL then addressed the jury in mitigation of damages. He observed that the Company resisted this claim because they believed it was not a *bona fide* one made by Mr. Herbert, but that it was got up by some parties who speculated upon certain clauses of the Railway Company's Act. Whatever the result of this case was, the Company were not desirous of purchasing the claimant's premises, and the first question for the consideration of the jury was whether this was a case in which the Company were compelled to take the premises. Although this claim was small, yet their verdict was of very considerable importance to the Company, because if the Solicitor was successful in this, his first speculation, there would be no end to the exorbitant demands and number of actions that would be brought against the Company. The learned gentleman then contended that the Act of Parliament providing for compensation to be paid for any deterioration done to the houses within fifty feet of the railway, applied only to those cases in which substantial and permanent damage was done to the buildings. The statute awarded compensation for any damage done by the "construction" of the railway, but not by the "use" of it; and that this was the intention of the legislature was manifest from this fact, that all the noise that was now complained of might at no distant period be removed. It had never been intended to give compensation for any deterioration of value to premises by the removal of houses in the neighbourhood, and the diminution of the inhabitants. The Act of Parliament provided that all claims should be sent in within twelve months after the opening of the railway, and this clearly showed that the only deterioration that the legislature intended to refer to was substantial injury done to the freehold only. And if this was not so the statute would be imperfect, because the Company might for the first year after the opening of the railway have carried on their works without any annoyance to the neighbouring residents, and afterwards have employed locomotive engines or prosecuted their undertaking in any manner they might have thought proper, and no claim could be made upon the Company. Again the Act of Parliament referred only to "owners" and "lessees" of houses, and not to "occupiers;" thereby showing most plainly that the compensation was intended to apply to injury done to the buildings, and not to any loss, either direct or consequential, that might be sustained in trade or to individuals. The Company's Act had limited the breadth of the railway to 27 feet; but if the jury decided that the Company were compelled to take all property within 50 feet of their works, it would be, in point of fact, extending the width of the railway to 77 feet, and would exhaust the funds of any Company, however wealthy it might be. Mr. Herbert, who was old and nervous, and afflicted by a painful complaint, could not sleep after dinner; but surely the jury would not say on that account that the house was deteriorated in value. The learned Solicitor-General then commented at great length upon the evidence, and the various items of the claim, and appealed to the jury if it was right that ruinous expenses should be entailed upon the Company in trumpery cases of this kind?

The Learned UNDER-SHERIFF read to the jury 51st clause of the Company's Act, under which the claim was made, and summed up with minuteness.

The jury, after consulting together for a few minutes, returned into Court and said, "We find that the property is not deteriorated in value by the construction of the railway."

The inquiry commenced at eleven o'clock, and did not terminate until half-past seven o'clock.

In consequence of a great number of cases depending upon the result of the above claim, a very strong interest was excited.

AUDELINE *v.* THE LONDON AND SOUTH-WESTERN RAILWAY COMPANY.

Court of Exchequer (Yesterday.)—This was an action brought by the plaintiff, a French fruiterer, to recover compensation from the London and Southampton Railway Company for damage sustained by him by reason of their having converted a quantity of the defendant's goods to their own use.

The circumstances of the case were as follow:—In the month of August last the plaintiff consigned to a fruiterer in Covent-garden market a quantity of plums, which were shipped from France on board a Southampton steam-packet, and by the agent of that packet sent to the railway station to be forwarded to town. The packets containing the plums were received at the station before eight o'clock on the night of the 7th August, with an intimation that 12*l.* 10s. was to be received by the Company in London for carriage by the packet. About seven minutes after eight o'clock the agent called at the station and gave a memorandum to the clerk to the effect that the 12*l.* 10s. was to include all railway charges. The luggage train was to start at half-past eight, and at the time the agent called the way-bill had been made out. He was accordingly told that it was against the "rules" of the Company to alter the way-bill, and that their goods must wait for conveyance by the next train. They were sent by the next train, but on being presented for delivery next morning, a question arose as to the amount to be paid for their carriage, and finally the carrier took the baskets back to the railway station, where it was found that the Company's clerks had made a mistake, and that the salesman to whom they had been delivered had made a full and proper tender in payment for carriage. Finally the goods, which should have been delivered at eight o'clock in the morning, were sent to Covent Garden market at about one in the afternoon, when they were received by the salesman, with reservation for the amount of the loss incurred, which by the alteration in the state of the market, and the damage done to the plums amounted to nearly 40*l.*

For the defence it was contended first, that there was no conversion to the defendants use, and, secondly, that the fault lay with the steam packet agent at Southampton who had not complied with the Company's rules.

The Learned JUDGE, however, in summing up, expressed an opinion that a conversion had been established. On the second point, his Lordship scouted the idea that the public were to be bound by any rules a Company might choose to lay down. The Company were only common carriers, and must be bound by the law as regarded that body. It was their duty to deliver the goods committed to their charge with every due facility and care, and if through the negligence, inattention, and obstinacy or incapacity of their officers any injury was sustained by persons dealing with them, they must be bound as other carriers were to satisfy the damage.

The jury instantly found for the plaintiff damages 32*l.* 10s.

NORTH UNION AND LANCASTER AND PRESTON RAILWAYS.—We understand, that the arrangements which have hitherto subsisted between the Lancaster Railway Company and the North Union Company, by which the former agreed to take the Lancaster passengers up at the North Union station at Preston, will cease on the 31st instant. The distance between the North Union Railway and the Lancaster Railway is said to be only about 200 yards, but has cost the North Union Company a sum of about 20,000*l.* Under these circumstances the latter Company will be quite justified in making a small addition to such of their fares as may pass over that very expensive part of their line; and it may remain a question whether the Lancaster Company, in justice to those who travel northward, will make a corresponding *reduction*, as it is manifest they will save the conveyance, tolls, or whatever they may have hitherto paid the North Union Company for that short distance.—*Liverpool Courier.*

COLLISION ON THE GRAND JUNCTION RAILWAY.

An accident, which might have been attended with the most fatal consequences, took place on the Grand Junction Railway on Thursday night. About twelve o'clock the Eagle engine was dispatched from the Warrington station, at Bank-quay, for the purpose of fetching the luggage train from the Dallam-lane station. On its arrival at the Dallam-lane junction, the points were turned, and the engine and tender went on that branch. *The policeman whose duty it was to turn the points, accompanied the engineer a few yards down the line without reversing them*, and had only gone as far as Jockey-lane, which the railway crosses, when he heard the Manchester luggage train coming up, it being nearly a quarter of an hour earlier than he expected it. He immediately ran to his station to turn the points, and hoist the signal for the Manchester train to stop, but unfortunately was too late to prevent the engine coming on the Dallam line. The driver of the Manchester engine perceiving that he was going on the wrong line, immediately turned off the steam, and did all in his power to stop the engine. Notwithstanding all his efforts, the engine ran into the tender of the Eagle, which it crushed, but fortunately, indeed, we may say miraculously, the engineers and firemen of both engines escaped without injury, which is the more extraordinary as the Manchester engine had nearly its full power of steam on at the time, in consequence of having a rather heavy train behind it. After a delay of about an hour and a half, another engine was procured from the Warrington station, and the Manchester train was forwarded on its way to Birmingham. —*Manchester Courier*, Dec. 11. [Has the policeman's conduct been inquired into?—Ed. R. T.]

THE IRON TRADE.

Our attention has been called by an intelligent ironmaster, and also one extensively engaged in the trade, to the following sentences, which commence a harsh attack on the ironmasters, published in the *Staffordshire Examiner* of the 4th instant. The whole paragraph, in order that no ground for any charge of improper selection may be afforded, follows. It is—

"The Scotch have acceded to the proposition of the Staffordshire and Welsh ironmasters, *and the appearance of the sky, in this district, on the night of the 1st instant, showed that the work of blowing out furnaces had promptly commenced. One-fourth of the* immense body of *workmen employed* in the iron trade *must, consequently, be thrown out of employment;* unless, indeed, a portion should be retained, to diminish the wages of those still employed, by sharing their labour. If, taking into consideration the season of the year and other circumstances, this be not an appalling state of things, we know not what constitutes the truly horrible."

We know not, of course, from what source the writer may have obtained his information, but we are exceedingly happy to state, that every word respecting the blowing out of furnaces on the 1st instant, or subsequently, is pure and unadulterated fiction. Not a single furnace, we are, from the best authority, informed, notwithstanding the exceedingly circumstantial manner in which the alleged fact is narrated, has in this neighbourhood been blown out. Nor would "one-fourth of the workmen"—we speak from the same excellent authority—"be thrown out of employment." The number would probably be from one-eighth to one-tenth, and nearer to the latter than the former amount. It would be improper to conceal, however, that an intention exists to reduce the make of pig iron one-fourth (with some exceptions) on the 24th instant. This evil is bad enough, and needs no exaggeration from fictitious statements; but we are happy to mention, that a hope exists in some quarters—though, we sincerely regret to say, it is a slight one—that the decrease of the make may not be carried into effect.—*Wolverhampton Chronicle.*

Eastern Counties' Railway.—On Saturday morning, about 10 o'clock, the inhabitants at the lower end of the village were considerably alarmed, by the falling of one of the arches over the road leading to Coggeshall. By the perseverance of the contractors, great progress had been made when the weather permitted, and the first arch was nearly completed. At the time mentioned, about fourteen or fifteen workmen were employed on the arch, when in an instant the crown of the arch gave way, the ends collapsed, and the whole fell with a tremendous crash. The workmen fell a height of about 18 feet, and, miraculous as it may appear, no lives were lost, nor were any bones fractured. Ten of the men were more or less injured, but every attention was paid to their condition, and we are happy to learn that they are all going on favourably. We are informed, that the loss will be sustained by the contractors, on account of their not complying with the instructions they received from the engineers.—*Chelmsford Chronicle.*

Northern and Eastern Railway.—We last week related the particulars of the Rev. C. B. Marriott, whilst travelling on the Northern and Eastern Railway, having been conveyed to London instead of being left at a station on the line, for which he had taken a ticket. The Rev. gentleman applied to the secretary of the Company, and obtained payment of the hotel expences which he had incurred during his temporary detention in the metropolis; and the ready compliance of the Company with his demand will show that passengers who may be similarly aggrieved have the remedy in their own hands, though in most cases it must be a partial one. We trust also that the publicity given to the circumstance will tend to ensure increased attention on the part of all officers connected with railways. —*Chelmsford Chronicle.*

The late Fire at the Exeter Railway Station.—The claim on the fire-offices for the amount of the property destroyed by fire has been settled, and we hear that the sum of 11,550*l.* has been obtained as a compensation for the loss.—*Bristol Mirror.*

American Railways.—"The Last Link."—But eight miles remain to be finished of the railroad between Batavia and Buffalo, which, with the Boston road, will complete a continuous road from Boston to Buffalo, 600 miles, the longest in the world.—*New York Weekly Herald.*

TO RAILWAY PARTIES.—Any Person who will inform the undersigned, by Letter, of the present abode of Mr. William Brierly, who about four years since resided at Bull's Bridge, near Hayes, Middlesex, then in the employ of the Great Western Railway Company, afterwards Landlord of the Public House known by the sign of the King of Prussia, in the neighbourhood of Whitechapel, and who was subsequently engaged on the Eastern Railway, shall be rewarded for their trouble.

EDWARD WOOLLS, Uxbridge.

15th December, 1841.

RAILWAY TRAFFIC MANAGER.—The Directors of the Birmingham and Derby Junction Railway are desirous of engaging the services of a Gentleman fully competent to perform the duties of the office of Traffic Manager. Applications in writing, stating the age and previous occupations of the Applicant, with references, to be addressed under cover to the Chairman of the Directors, at their offices, Waterloo-street, Birmingham, on or before the 10th January next.

T. H. RYLAND AND CO., Ozell's Street, Broad-Street, Birmingham, Patentees and Manufacturers of Wood Screws and Screw Bolts, for Railways, &c.

The quality of these Screws is acknowledged to be superior to that of any other maker, and T. H. R. and Co. have, by their improved means of manufacture, so greatly reduced the price, that they will be found not to exceed in cost the common driving pin; and that they are more efficient for the purpose will be obvious, from the fact that one of these screws will require a force equal to from 2 to 4 tons weight, to tear it from the wood.

T. H. R. & Co. have to dispose of

A 12-horse high-pressure engine, metallic piston, with or without boiler.

Two boilers, quite new, 18 feet by 4 feet.

BERDOE'S VENTILATING WATERPROOF for rendering every description of Woollen Cloth, &c., thoroughly impervious to rain, without confining perspiration, or imparting any objectionable property whatever. After more than three years' extensive and most successful trial, public attention is again invited to this invention, and which is confidently recommended to Travellers, and all who are exposed to the rain. Many of the principal Railway and other public Companies have already adopted it for their servants' clothing.

W. B. also invites especial attention to his well-known and much approved

WATERPROOF CODRINGTON FROCK,

a light and gentlemanly garment, adapted for general use at all seasons, and described by those who have tried them as the most convenient and valuable protection from the weather ever invented. Also his

WATERPROOF SHOOTING JACKET,

made from a new, very strong, and much approved material, manufactured for this express purpose.

The above made only by

WALTER BERDOE, TAILOR, &c., 69, CORNHILL.

(Eight doors from Bishopsgate-street.)

THE THAMES TUNNEL IS OPEN DAILY, (Sunday excepted) from Nine in the morning until Six in the evening, and lighted with gas.

The present entrance is on the Surrey side of the river, close to Rotherhithe Church. The Shield has now reached the Shaft at Wapping, thus making the length of the Tunnel 1176 feet. Admittance 1s. each.

Notice.—The Tunnel will be shortly closed to the public, in order to make the necessary preparations for opening it as a thoroughfare for foot passengers.

By order of the Board,

J. CHARLIER, Clerk of the Company.

Company's Office, 2, Walbrook Buildings, City, 3rd December, 1841.

N.B. Conveyances to Rotherhithe, by Omnibus, from Piccadilly, Charing Cross, Fleet street, and Gracechurch-street; and by steam-boats from Chelsea, Vauxhall, Lambeth, Hungerford, Adelphi, Old Shades Pier, and London Bridge, to the Tunnel Pier at Wapping. Books, with Plates descriptive of the works, are sold at the Tunnel, Price One Shilling.

On the 1st January will be published,

TEMPLETON'S RAILWAY STATISTICS, containing the Names and Termini, Length in Miles and Chains, Counties through which they pass, Rail'ng Gradients, Rise in Feet per Mile, Effect of Gravity, Gauge of Way, Date of Royal Assent to Bill, Number of Shares, Total of Capital, when Opened, and Average Time in running the Trains, of all the Principal Railways in Great Britain, in a Tabular Form. Price, in Sheets, 1s. 6d.; on Canvass in Case, 2s. 6d.; mounted on Rollers and varnished, 3s 6d.

Railway Times Office, 122, Fleet-street.

Just published, 7th edition, price 3s., and sent free on receipt of a Postoffice order, for 3s. 6d.

MANHOOD: the Causes of its Premature Decline, with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects of excessive indulgence, solitary habits, or infection; followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases, &c. By J. L. CURTIS and Co., Consulting Surgeons, London.

SEVENTH EDITION.—Published by the Authors, and sold by Balliere, Medical Bookseller to the Royal College of Surgeons, 219, Regent-street; Strange, 21, Paternoster-row, London; Guest, Steelhouse-lane, Birmingham; T. Sowler, No. 4, St. Ann's square, Manchester; G. Philip, South Castle-street, Liverpool; Tannis and Co., 41, Grafton street, Dublin; Duncan, 114, High-street, Edinburgh; and to be had of all Booksellers.

The following are a few of the numerous testimonials this popular work has received, and which the limits of an advertisement will only allow of being published:—

Messrs Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it, render it invaluable.—*Magnet.*

The perusal of Messrs. Curtis's book, entitled MANHOOD, has really astonished us by developing a series of maladies, the never failing consequence of the vicious habit of which it treats. The clear connexion pointed out between the assigned cause and the effects is perceptible to every capacity. We strongly recommend the work.—*Age.*

We recommend the work, entitled MANHOOD, &c., to the careful perusal of persons of all classes. The moral as well as physical advantages sure to result from such perusal, will be most readily recognised and felt by those who stand most in need of them.—*Statesman.*

Messrs. Curtis and Company are to be consulted daily at their residence, No. 7, Frith street, Soho-square, London.

Country Patients are requested to be as minute as possible in the detail of their cases. As to the duration of the complaint, the symptoms, age, general habits of living, and occupation in life of the party; the communication must be accompanied by the usual consultation fee of £1, without which no notice whatever can be taken of their application, and in all cases the most inviolable secrecy may be relied on.

RAILWAY BETWEEN SCOTLAND AND ENGLAND.—At Glasgow, within the Hall of the Black Bull Inn, on Wednesday, the 15th day of December, 1841, at One o'Clock afternoon, at a Public Meeting of the Citizens of Glasgow, favourable to the projected line of Railway between ENGLAND and SCOTLAND, recommended by the Government Commissioners, called by the Lord Provost by Advertisement in the Newspapers, for the purpose of deliberating upon the measures which ought to be adopted for securing the completion of that Line.

On the motion of John Pollok, Esq., the Hon. James Campbell, Lord Provost of Glasgow, was unanimously called to the Chair.

The Lord Provost introduced to the Meeting a Deputation from England, consisting of Colonel Graham, of Mosskinow, P. H. Howard, Esq., M.P. for Carlisle, and John Dixon, Esq., of Knells, late Mayor of Carlisle. A letter from William Brooks, Esq., dated 14th December, 1841, was read by Mr. Andrew Mitchell, as Clerk to the meeting, and referred to the Committee after named. The meeting having heard statements by Colonel Graham, of Mosskinow, relative to the advantages of the proposed line of Railway thereafter,

It was moved by Robert Findlay, Esq., Banker in Glasgow, and seconded by William Gray, Esq., Lord Dean of Guild of Glasgow, and unanimously agreed to.

First.—That from the Report of the Royal Commissioners appointed to inquire into the various lines of railway communication between England and Scotland, it appears that after a most anxious and careful investigation into the comparative merits of each of the five different lines of which surveys and estimates were submitted to them, the Commissioners have expressed a strong and decided opinion that the line by Lockerby and Clydesdale is preferable to all the others, and deserving of the support of the Government and the Public, as being the line which will secure the greatest amount of national and general advantage, by affording the shortest and least expensive means of communication to the largest amount of population, and therefore holding out the best prospect of remuneration to the shareholders.

It was moved by John Houldsworth, Esq., Chairman of the Chamber of Commerce, and seconded by John Mitchell, Esq., Merchant in Glasgow, and unanimously agreed to,

Second.—That this meeting cordially approve of the Report of the Commissioners; and as this line is obviously and beyond all doubt calculated to benefit Glasgow and the West of Scotland, in a peculiar manner, that it is of the utmost importance that effective measures should be adopted for co-operating with the landholders and inhabitants of towns along the line, the great English Railway Companies, and others interested in embracing the favourable opportunity which is thus afforded of securing a direct communication between Glasgow and every part of England, more particularly asunless such measures be soon adopted, the support of Government will, in terms of the Commissioners' Report, be transferred to the line from Newcastle to Edinburgh by the east coast of Scotland.

It was moved by Henry Dunlop, Esq., merchant in Glasgow, seconded by James Lumsden, merchant in Glasgow, and unanimously agreed to—

Third.—1. That in these circumstances it is expedient that a Committee be appointed to co-operate with and assist the Grand Junction, and other Railway Companies, in making the necessary surveys for ascertaining the best and cheapest line of communication, and taking the other preliminary steps requisite to obtain the authority of Parliament, and the support and assistance of Government to the undertaking, with power to this Committee, of whom five shall be a quorum, to add to their number, and to appoint sub-Committees for any of the purposes aforesaid; and this meeting authorise and instruct them to call upon the public bodies and authorities of the city, and all others interested, to contribute liberally to the furtherance of a measure of such vital importance to Glasgow and the whole west of Scotland.

2. That this Committee do consist of the following gentlemen, viz.:—

James Campbell, Esq., Lord Provost of Glasgow.
James Oswald, Esq., of Auchencruive, M. P.
John Dennistoun, Esq., M.P.
Alexander Johnstone, Esq., of Shieldhall, M.P.
Messrs. Charles Gray, Chief Magistrate of Gorbals.
Robert Bartholomew, Provost of Calton.
William Gray, Lord Dean of Guild of Glasgow.
George Dick, Deacon Convener of the Trades' House of Glasgow.
John Houldsworth, Chairman of the Chamber of Commerce of Glasgow.
Kirkman Finlay, merchant, Glasgow.
Alexander Dennistoun, merchant, Glasgow.
John Pollok, merchant, Glasgow.
Robert Findlay, banker, Glasgow.
William Stirling, merchant, Glasgow.
James Baird, of Gartsherrie.
Allan Gilmour, merchant, Glasgow.
Henry Dunlop, merchant, Glasgow.
James Lumsden, merchant, Glasgow.
Laurence Robertson, banker, Glasgow.
John Fleming, merchant, Glasgow.
Alexander Baird, of Gartsherrie.
James A. Anderson, banker, Glasgow.
William Gilmour, merchant, Glasgow.
John Anderson, merchant Glasgow.
Henry Brock, Banker, Glasgow.
Archibald M'Lellan, Merchant, Glasgow.
William Cross, Merchant, Glasgow.
Humphrey E. Crum, Merchant, Glasgow.
John Whitehead, Merchant, Glasgow.
John Mitchell, Merchant, Glasgow.
Robert Rodger, Merchant, Glasgow.
William Bankier, Merchant, Glasgow.
William L. Ewing, Merchant, Glasgow.

3. That these Resolutions be published in such newspapers as the Committee may direct.

It was moved by James Lumsden, Esq., and carried by acclamation, that Robert Findlay, Esq., should be appointed Interim Treasurer, and Messrs. Mitchell, Henderson, and Mitchell, writers, should be appointed Interim Secretaries to the Committee before named.

On the motion of George Dick, Esq., convener of the Trades' House, seconded by P. H Howard, Esq., M.P., the thanks of the meeting were voted to the Lord Provost, for his conduct in the Chair.

On the motion of John Mitchell, Esq., seconded by David Bell, Esq., Merchant in Glasgow, the thanks of the meeting were voted to Colonel Graham; P. M. Howard, Esq., M.P.; John Dixon, Esq.; and the 'other strangers who have honoured the meeting with their presence.

(Signed) JAMES CAMPBELL,
Lord Provost.

TAFF VALE RAILWAY.—REPAIRS of the PERMNENT WAY, &c.—The Directors will meet at the Railway Office, Cardiff, on Wednesday, the 29th instant, to receive TENDERS for the Repairs of the Permanent Way and Works on this Railway.

The specification may be seen at the Railway Office, on and after Monday, the 20th inst.

Sealed Tenders to be addressed to the Secretary, and delivered at the Railway Office, before 12 o'clock on Tuesday, the 28th instant.

By Order,
WILLIAM BURGESS,
Secretary and Superintendent.

Cardiff, Dec. 9, 1841.

LONDON AND SOUTH-WESTERN RAILWAY.—PORTSMOUTH and GOSPORT BRANCH.—This Branch will be OPENED for the Conveyance of Goods only, on and after MONDAY, 20th December, 1841.

By Order,
ALFRED MORGAN, Secretary.

December 18, 1841.

TENDERS INVITED for the supply of IRON RAILS, required by the Royal Bavarian Commission for the construction of Railroads at Nurnberg.—Measures and Weights are Bavarian, viz.—1 foot Bavarian = 0 29·1859 French metre; 100 lb. Bavarian = 56 French kilogrammes.

The quantity required amounts to 120,000 quintals of 100 lbs. each, and is to be contracted for, either in several lots, or for the whole. The Rails are to be of the form of the so-called "parallel double T rails," of the weight of 12 Bavarian pounds per Bavarian foot, and of the length of 17½ Bavarian feet. However, a proportion of shorter rails, say of 14½ Bavarian feet length, will be received to the amount of 5 per cent. of the whole quantity.

The Rails must be manufactured of the best Iron known in England under the denomination of No. 3, and part of a rail of the length of three or four feet, is to be sent to the Royal Commission at Nurnberg, to serve as a pattern before the conclusion of the contract.

The detailed conditions respecting the periods of delivery, mode of payment, &c., as well as the drawing, are to be obtained on application at the Office of the undersigned Commission, in Nurnberg.

The Tenders must be delivered at Nurnberg, under seals and franked covers, on or before the 31st January, 1842, to the Royal Bavarian Commission for the Construction of Railroads.

DENIS, PAULI, DURIG.

PEOPLE'S EDITION OF SIR WALTER SCOTT'S NOVELS.

On Saturday, 1st January, 1842, and to be continued each Saturday till the whole is completed, No. 1, price Twopence, containing One Sheet, Royal Octavo, double columns, of

WAVERLEY; OR, 'TIS SIXTY YEARS SINCE. With all the Author's Introductions and Notes; to be immediately followed by GUY MANNERING, THE ANTIQUARY, and all the other novels and romances of Sir Walter Scott.

The Proprietors are anxious to meet the wishes of many intelligent correspondents among the working classes, who represent that, notwithstanding the great circulation and unparalleled celebrity of

THE WAVERLEY NOVELS,

thousands upon thousands of our industrious countrymen have yet to form acquaintance with Baron Bradwardines and Fergus M'Ivors, the Meg Merilees and Dominie Samsons, the Edie Ochiltrees, Old Mortalities, Die Vernons, Rob Roys, Jeanie Deanses, and numberless other immortal creations of the Prince of Novelists. The Edition now announced will, it is hoped, be allowed to put these marvellous performances within the reach of the masses.

It is expected that the entire Novels will comprize about 260 sheets; and, besides the Weekly Issue, a Monthly stitched Part, price Ninepence, will be delivered with the Magazines.

ROBERT CADELL, Edinburgh; HOULSTON and STONEMAN, London.

LOCOMOTIVE ENGINE.—TUBES WITHOUT SEAM.—GREEN'S PATENT.—These Tubes possessing great advantages over the ordinary brass tubes used in locomotive and other boilers, may now be obtained in any quantity and of any dimensions.

Testimonials from eminent Engineers and samples may be seen by application to W. C. Alston, Birmingham, or Braithwaite, Milner, and Co., New Road London.

NATIONAL LOAN FUND ASSURANCE SOCIETY, for granting Life Assurances, Deferred Annuities, &c. &c., 26, Cornhill.—Capital, £500,000.—Empowered by Special Act of Parliament.

DIRECTORS.

T. Lamie Murray, Esq., Chairman.

George Lungley, Esq.	Joseph Thompson, Esq.

Auditors—Professor Wheatstone, F. R. S.; Professor Graves, A.M., F.R.S.
Actuary—W. S. B. Woolhouse, Esq., F.R.A.S.
Physician—J. Elliotson, M.D., F.R.S.
Surgeon—E. S. Symes, Esq.
Solicitors—Messrs. Sweet, Sutton, Ewens, and Ommanney, 6, Basinghall-street.
Bankers—Messrs. Glyn, Hallifax. Mills and Co.

LIFE ASSURANCE.

Advantages.—Perfect security from a large paid up Capital and accumulations——Equitable Rates—Power to borrow two-thirds Premiums paid, without expense or forfeiture—and Profits *annually* divided.

N. B. Policies for short periods, at lower rates than at any other Office, with option of continuance for Life, at the usual rates.

DEFERRED ANNUITIES.

The best and most varied provision for after life hitherto offered,—*2l.* 12s. per annum (1s. a week,) at 20, will at 65, give the Policy-holder the choice of an Annuity of *47l.* 16s. 6d. or *349l.* 11s. cash, or Policy at death of *466l.* Similar advantages at 50, 55, and 60,—two-thirds payments lent at any time, and two-thirds returned in case of premature death.

The detailed Plans and last Annual Report to be had at the Office, at any of its Branches, or, on application, will be forwarded post-free.

F. FERGUSON CAMROUX, Secretary.

LONDON, EDINBURGH, AND DUBLIN GUARANTEED MUTUAL and PROPRIETARY LIFE ASSURANCE COMPANY, 3, Charlotte-row, Mansion House; St. Andrew's-street, Edinburgh; Fleet-street, Dublin.

DIRECTORS.

Alexander Anderson, Esq.	John Johnson, Esq., Ald.
John Atkins, Esq.	Kennett Kinsford, Esq.
James Bidden, Esq.	John M'Guffie, Esq.
Captain F. Brandreth	John Maclean Lee, Esq.
James Hartley, Esq.	J. Marmaduke Rosseter, Esq.
Vice-Admiral Robert Honyman	Alexander Robertson, Esq., Managing Director.
Benjamin Ifill, Esq.	

Solicitors—Messrs. Palmer, France, and Palmer.
Secretary—F. Edgell, Esq.

Important improvements have been introduced into Life Assurance practice by this Company.

The Policies are indefeasible and indisputable, unless they have been obtained by fraudulent misrepresentation.

The Board of Directors satisfy themselves upon the various questions proposed before they enter into contracts of Assurance; and frame their Policies in such terms as to preclude all future questions as to their validity, and thus render them indisputable and negotiable documents of future debt against the Company.

Parties may be assured either upon the participating or non-participating plan; the assured are relieved of all responsibility, and the participating class is entitled to the whole of the profits upon that branch of the business.

Table to assure £100, with addition of Profits.

Age 25.	Age 35.	Age 40.	Age 45.	Age 50.	Age 55.
£2 2 7	£2 15 10	£3 5 0	£3 15 5	£4 10 7	£5 18 8

Persons interested in the Lives of Nominees or Debtors may, for a trifling extra Premium, be relieved from the risk of their Policies being forfeited by the parties going to foreign countries.

One-half of the Premiums may remain unpaid for seven years, affording a greater facility for loan transactions and family provisions than any other plan which has been suggested.

Credit Table to assure £100, payable at death.

Age 20.	Age 25.	Age 30.	Age 40.	Age 45.	Age 50.
£0 18 0	£1 0 7	£1 3 7	£1 11 5	£1 16 6	£2 3 0

The usual Commission allowed to Solicitors and Agents; and Medical Gentlemen are in all cases remunerated for their reports.

MUTUAL LIFE ASSURANCE.

SCOTTISH WIDOWS' FUND SOCIETY.—Instituted A. D. 1815.—Head Office, Edinburgh, 5, St. Andrew-square.

The Oldest and most Extensive Life Office in Scotland.

Accumulated Fund exceeding
ONE MILLION AND FORTY THOUSAND POUNDS.

Annual Revenue exceeds
ONE HUNDRED AND EIGHTY THOUSAND POUNDS.

Bonus Additions, varying from 11 to 80 per cent. on the sum assured, according to the date of assurance.

The whole profits belong to the Assured.

Assurances effected previous to 31st December, are entitled to participate in the Profits of the current year.

JOHN MACKENZIE, Manager.

Edinburgh, September, 1841.

HUGH Mc KEAN, 7, Pall Mall,
Agent for London.

BRISTOL AND EXETER RAILWAY COMPANY.—TENDERS FOR LOANS ON DEBENTURE.—The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising therefrom, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest at the rate of Five per cent. per annum, payable half-yearly at the Bank of Messrs. Glyn, Halifax, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Prince's street, London, or Broad-street, Bristol.

By order of the Board of Directors,

J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol.

BRISTOL AND GLOUCESTER RAILWAY. CONTRACT FOR WORKS.—NOTICE is hereby given, That the Directors will receive, at their offices, Exchange-buildings, Bristol, on or before 12 o'clock on Monday, the 3rd day of January, 1842, Tenders for the Excavation and Formation of the Earthwork, including the diversion of streams and roads, and construction of bridges, culverts, and other masonry, and the entire completion of the works, including the ballasting, but exclusive of the laying of the permanent rails, of that portion of the railway included in the following contracts:—

Contract No. 5, commencing from a point 200 feet south of the Road No. 15, in the parish of Berkeley (being the end of No. 4 Contract), and terminating in Field No. , in the parish of Stinchcombe, being about the distance of 2 miles and 53¼ chains.

Contract No. 6, commencing from a point in Field No. 1, in the parish of Stinchcombe (the end of No. 5 Contract), and terminating in Field No. 37, in the parish of Cam, being about the distance of 3 miles and 22 chains.

Contract No. 7, commencing from a point in Field No. 37, in the parish of Cam (the end of No. 6 Contract), and terminating at a brook boundary between the parishes of Frocester and Leonard Stanley (the commencement of No. 8 Contract), being about the distance of 2 miles and 67 chains.

Contract No. 11, commencing from a point in Field No. 6, in the parish of Yate (being the end of No. 12 Contract), and terminating at the north side of the Road marked No. 87 in the same parish, being about the distance of 2 miles and 67 chains.

Contract No. 12, commencing at the junction of the Bristol and Gloucestershire Railway, and terminating in Field No. 6, in the parish of Yate (the beginning of No. 11 Contract), being about the distance of 2 miles and 58 chains.

Drawings and Specifications of the above works may be seen on and after Monday, the 6th day of December next, at the Company's offices, Exchange-buildings, Bristol.

Tenders are to be made on printed forms, provided for that purpose, which may be obtained on application at the office.

The Directors will not consider themselves bound to accept the lowest tender; and they expect the several parties to attend at the office on the 3rd of January, at 12 o'clock.

ROBERT FLETCHER, Secretary.

Bristol, 23rd Nov. 1841.

MANCHESTER AND LEEDS RAILWAY.—NOTICE is hereby given, That a Special General Meeting of the Proprietors of the Manchester and Leeds Railway will be held at the Company's Offices, Clowes' Buildings, Hunt's Bank, in Manchester, in the County of Lancaster, on Thursday, the 23rd day of December, inst., at 12 o'Clock at noon, for the purpose of taking into consideration a proposal that the said Company shall unite with certain other Railway Companies in taking a Lease, upon certain terms to be submitted to the Meeting, of a Railway which is proposed to be made from Darlington, in the County of Durham, to join the Durham Junction Railway in the same County, and of adopting such measures in reference thereto as may appear advisable. And also for the purpose of considering and determining upon the propriety of proceeding with the formation of the projected Extension of the Manchester and Leeds Railway to Hunt's Bank, in the Town of Manchester, under the powers obtained by Act of Parliament for that purpose.

Dated this 8th day of December, 1841.

H. HOULDSWORTH, Chairman.

LARCH TIMBER FOR SALE.—The LOW PORTION of the KNOCK PLANTATION of MONZIE, situated near Crieff, in the county of Perth, and within 16 miles of the shipping port of Perth, will be exposed to SALE by Public Roup, on the spot, on Wednesday, the 12th day of January next, at Twelve o'clock, noon. It consists of 38 imperial acres, and will be exposed in one, two, or three separate lots. There are 5,169 trees of Larch, and 991 of Scotch Fir. The other intermixed Timber is to be reserved. The Larch is of very superior quality, and is upwards of 60 years old. Much of it is of very large scantling, and well suited for Railway Sleepers, Ship-building, and other purposes requiring heavy Timber. There is a ready market in the neighbourhood for the Tops and Brush, and also a good situation adjoining for a Saw-mill, with a plentiful supply of Water.

For further particulars application may be made to Messrs. Davidsons and Syme, W.S., Edinburgh; or to Mr. William Blackadder, C.E., Glammis, Forfarshire; and the Timber will be shown by James Taylor, forester at Monzie.

November, 1841.

MIDLAND COUNTIES' RAILWAY.—The Directors of this Company are receiving Money on their Loan Notes, in sums of not less than £400, for either Three, Five, or Seven Years, to be exchanged for Debentures in September next. Interest, after the rate of Five per Cent. per Annum, is allowed and paid half-yearly, on the day it becomes due.

By order,

J. F. BELL, Secretary.

Leicester, 29th November, 1841.

LONDON AND BIRMINGHAM, GRAND JUNCTION, CHESTER, LANCASTER, MIDLAND COUNTIES', NORTH MIDLAND, YORK AND DARLINGTON RAILWAYS.

In connection with the above lines of Railway, Places can be secured by

STANDING COUNSEL—R. Ryder Dean, Esq.

SOLICITORS—Messrs. W. & S. Cotton, No. 76, Basinghall-street.

This Society presents to the Public (and particularly to Bondsmen) the following advantages:—

1. No individual need hereafter incur the responsibility of becoming security for the integrity of another.

2. Individuals who are already surety for the fidelity of others, may immediately protect themselves from loss by insuring with the Society.

3. The expense and painful obligation of obtaining approved Sureties, or of replacing them when removed by death or otherwise will be altogether obviated.

4. All risks attending irresponsible sureties will be removed.

5. The submission to the loss, or the distressing alternative of instituting legal proceedings against the friends who are surety, will be avoided.

Also to Agents, Travellers, and Clerks holding, or being desirous of holding, confidential and responsible situations, the Guarantee Society presents immediate facilities, where for a moderate premium, surety for integrity may be acquired.

The Prospectus, Form of Application, and other particulars, may be obtained at the Office, No. 28, Poultry, London.

By order,

THOMAS DODGSON, Secretary.

NEW EDITIONS of the following useful Works are just published at the *Railway Times* Office, 122, Fleet-street:

I.

ROBINSON'S RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Map, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Price 1s., in cloth.

II.

ROBINSON'S RAILWAY DIRECTORY FOR 1842, containing the Names of the Directors and principal Officers of the Railways in Great Britain, derived from authentic sources, price 1s.

III.

TUCK'S MAP OF THE RAILWAYS throughout ENGLAND and WALES to the Capital of Scotland, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s. 6d.; in paper covers, 1s.; mounted on canvass, in cloth case, 2s. 6d.; on rollers, 3s. 6d.

IV.

MAPS OF ALL THE LINES OF RAILWAY through ENGLAND and WALES, showing the country in their immediate vicinity on a larger scale than was ever before displayed in a sheet pocket map, with a compendium of Railway information. In paper cover 1s., in cloth 1s. 6d.; on canvass, 2s. 6d.

V.

TABLES OF HACKNEY CARRIAGE FARES from the BIRMINGHAM RAILWAY to all parts of the METROPOLIS, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

VI.

TABLES OF HACKNEY CARRIAGE FARES from the GREAT WESTERN RAILWAY to all parts of the Metropolis, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

CRANES AND HOISTING TACKLE of every description, of the best materials and workmanship, and capable of lifting from 5 cwt. to 20 tons and upwards, with or without steam power, made by ELLIS & NOTON, who take this opportunity of respectfully soliciting an inspection of their Drawings and Patterns, at the IRWELL FOUNDRY, Salford, Manchester.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate-street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Bride's, Fleet-street, Middlesex.—Saturday, December 18, 1841.

The Railway Times.

"Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 208. Vol. IV.—No. 52.] SATURDAY, DECEMBER 25, 1841. [Price 6d.

IMPROVEMENT IN THE RAILWAY SHARE-MARKET.—The attention of the Proprietors of Railway Shares is requested to an important reduction in the expense of working Locomotive Engines, which, if adopted, must have the effect of improving the dividends, and of course the prices of railway property.

The economy above-mentioned is effected by the use of coal (its smoke being consumed agreeably to Act of Parliament) in lieu of the expensive article of coke.

Taking the cost of coal and coke respectively on the Midland Counties' Railway as the data for calculation £100 worth of coal will evaporate as much water, and propel a train as many miles as £235 worth of coke. For the correctness of this statement, application may be made to Jos. Kearsley, Esq., Derby, Chief Engineer, on the above Railway, and no doubt the Directors would afford all requisite information to any Railway Company.

Further particulars, with drawing, &c. &c., may be obtained of the Patentee (of the apparatus) Samuel Hall, No. 18, Kings Arms Yard, London.

LONDON AND GREENWICH RAILWAY SCRIP.—The holders are reminded that the final instalment became due on the 15th of October last, and that interest at the rate of 5 per cent. per annum is now charged on all instalments in arrear; and that unless paid in full on or before the 15th of January next, the whole of the amounts already paid *are subject to forfeiture*.

The books of the Company will be closed on 31st Dec., before which day the Scrip must be paid in full, and registered, in order to entitle the holder to any dividend which may be declared at the next general meeting.

By order of the Board,

J. Y. AKERMAN, Sec.

Offices, 37, Canterbury-square, Southwark,
14th December, 1841.

SOUTH-EASTERN LONDON AND DOVER RAILWAY COMPANY—TENDERS FOR LOANS ON MORTGAGE.—The Directors of this Company are prepared, under the powers of their Acts of Parliament, to receive Tenders for the Loan of Money for a term of Three, Five, Seven or Ten Years, at the option of the Lender, and to grant Mortgages of the Rates and Tolls of their undertaking as security for the same, bearing interest at the rate of 5 per cent. per annum, payable half yearly at the Bank of Messrs. Glyn and Co., London. The Tenders are to express the sums and term of years for which the Loan is proposed to be made, and are to be addressed to the Secretary at the Company's office, 10, Coleman-street, London.

By order of the Board of Directors,

J. S. YEATS, Secretary.

TAFF VALE RAILWAY.—REPAIRS OF THE PERMANENT WAY, &c.—The Directors will meet at the Railway Office, Cardiff, on Wednesday, the 29th instant, to receive TENDERS for the Repairs of the Permanent Way and Works on this Railway.

The specification may be seen at the Railway Office, on and after Monday, the 20th instant.

Sealed Tenders to be addressed to the Secretary, and delivered at the Railway Office, before 12 o'clock on Tuesday, the 28th instant.

By order,

WILLIAM BURGESS,
Secretary and Superintent.

Cardiff, December 9, 1841.

TO ENGINEERS, MILLWRIGHTS, FOUNDERS, SMITHS, AND OTHERS.—To be Disposed of, an Old Established Engineers, Millwrights, and Founders Concern, (the present Proprietor retiring from the Manufacturing Department,) situated in London. The Premises and Plant are arranged for a most extensive business, and have been erected during the last 25 years, at a considerable cost, but from the above cause will be Disposed of upon extremely favourable terms; the Premises will be let on lease, and the Machinery and Tools disposed of at a valuation.

Apply for Particulars to John Evans, Esq., 51, Lincoln's Inn Fields.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secresy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

This day is published,

TUCK'S ROLLER CALENDAR FOR 1842.—This is a mode of affixing the Calendar for the whole year on two revolving cylinders, within an elegant case, so as to exhibit each day's information in a bold and novel manner, presenting Daily Memoranda indispensible to every housekeeper and man of business. It possesses the advantage of a Date Box and Almanac, and is adapted for the Library, Board Room, Counting House, Warehouse, or Parlour; and is the best application of the Calendar ever yet devised. In Mahogany Box, price 5s. 6d.; in Ornamented Box, 6s. 6d. In addition to much useful information relating to business, &c., the Calendar contains the time of High Water at London, Liverpool, Dublin, Glasgow, Leith, Bristol, and Hull, for every day in the year.

Railway Times Office, Fleet-street; Letts, Cornhill; and Ackerman, Strand.

CRANES AND HOISTING TACKLE of every description, of the best materials and workmanship, and capable of lifting from 5 cwt. to 20 tons and upwards, with or without steam power, made by ELLIS & NOTON, who take this opportunity of respectfully soliciting an inspection of their Drawings and Patterns, at the IRWELL FOUNDRY, Salford, Manchester.

LOCOMOTIVE ENGINE.—TUBES WITHOUT SEAM.—GREEN'S PATENT.—These Tubes possessing great advantages over the ordinary brass tubes used in locomotive and other boilers, may now be obtained in any quantity and of any dimensions.

Testimonials from eminent Engineers and samples may be seen by application to W. C. Alston, Birmingham, or Braithwaite, Milner, and Co., New Road, London.

PROPOSED PLAN for the establishment of a GENERAL OFFICE for the use of TRAVELLERS BY RAILWAY and STEAM NAVIGATION, where the public could readily obtain every species of information that might be useful to or required by Travellers, either on business or pleasure, by any of the various Railway and Steam Navigation Conveyances throughout the United Kingdom, more especially as relates to the hours of departure and arrival, the scale of fares, and the different regulations of each, for conveying Passengers and Goods; to be formed under the sanction and patronage of the several Boards of Direction and Management of the Companies now in existence.

It is proposed that a complete Register be kept of all the Railway Conveyances, systematically arranged for the convenience of immediate reference, setting forth every station at which the trains stop on the respective lines, and the several stations and booking offices from whence passengers and goods may be conveyed.

That the proposed Office be furnished with the printed placards and hand-bills from all the different Companies, for reference and distribution to the public, who should receive gratuitously every information required.

That a like Register be kept of all the Steam Navigation Conveyances, and a similar distribution be made of the hand bills of the different Companies, and every information respecting them be given in the same manner.

That a communication be opened for correspondence with the respective Secretaries to enable the Manager of the Office to give answer to such inquiries as might arise, and which their printed hand-bills do not furnish, and that the Secretaries would from time to time give the Manager immediate notice of every alteration affecting the conveyance of passengers and goods.

The Manager of the Office would undertake to transmit by post any hand-bill or specific information, which might be required by persons residing in the country, and who could not conveniently attend personally to obtain it.

That such Office be fixed at some centrical point (being a public thoroughfare) at the West End of the Town, holding connection with a similar establishment in the City, and to be open to the public every day, Sundays excepted, and that the Office shall be furnished with geographical maps and plans of the Railways.

It is proposed that arrangements should also be made which would embrace an extension of the plan, by collecting information of the various establishments on the Continent of Europe and elsewhere, for conveyance by Railway and Steam Navigation, as it is considered that by centralizing these various objects at one place, a complete Emporium will be formed for obtaining that general information which Travellers so much require, and this concern founded upon such an enlarged and comprehensive scale as would ensure the contemplated benefit and advantage to the several Companies interested, as well as for its becoming a medium of the greatest public utility.

NATHANIEL W. SYMONDS.

Lombard Street Chambers, Clement's Lane,
27th October, 1841.

*** Any suggestion to improve or add to the usefulness of the above plan will be thankfully received.

ANDREW SMITH'S PATENT WIRE ROPES, for STANDING RIGGING, LIGHTNING CONDUCTORS, STROPPING OF BLOCKS, MINING, RAILWAY, and GENERAL PURPOSES; about half the Size and Weight of Hempen Ropes, and 25 per cent. cheaper. Testimonials to that effect, with Specimens, may be seen, and every information obtained, at the Manufactory, Mill-wall, Poplar; and also of the following Agents:

Robertson and Co., 12, Goree Piazzas Liverpool,
Mathias Dunn..... Newcastle-upon Tyne
Joseph Bothway..... Plymouth.
John Thompson and Co..... Wigan.
J. T. Tregellas..... Truro.
Thomas Mooney and Son..... Dublin.
Coates and Young..... Belfast.
James Kibble and Co. ..... Glasgow.
James Gunn..... Leith.
John M. Beatts, 14, Clement's-lane, High-street, Dundee.

This Rope has been in use for standing rigging in her Majesty's navy, and a great number of merchant vessels, for upwards of six years, and is giving the highest satisfaction. It is also employed in various mines and railways in different parts of the kingdom.

RAILWAY COMMUNICATION WITH SCOTLAND.

(From the *Carlisle Journal*, December 18.)

AN adjourned meeting in favour of this project was held in the Council Chamber, Town Hall, on Monday last; the Mayor, G. G. MOUNSEY, Esq., in the Chair. It was not numerously but very respectably attended.

The MAYOR stated the object of the meeting. It was called for the purpose of taking additional steps with regard to the projected western line of railway from Lancaster to Glasgow and Edinburgh by way of Carlisle. They were all doubtless deeply impressed with the value of such a line of railway to this part of the country; but at the same time it was necessary to bear in mind that, unless they kept progressively advancing, it could not be obtained. (Hear.) At present there were circumstances very favourable to the project, but if they did not maintain them by getting forward, step by step, they would be of no avail, as they would run the risk of having another proposition brought forward by other parties. If they continued to advance, and exerted themselves, all was in their favour; but if they halted, all was lost, for the parties who wished the line to be taken in another direction would naturally take advantage of any luke-warmness that might be shown in this part of the island. A movement had been made in several places, and it behoved those who resided in Carlisle and the neighbourhood to come forward and assist in carrying the project into effect. The object now to be attained was a regular Parliamentary survey of the whole line. It had been commenced in certain parts, and their object now was to make it general, and to open a subscription for the purpose of defraying the expense. They should then be able to submit their survey to Parliament next session, and would be following up the recommendation of the Commissioners in their favour. He was happy to say that there had been a movement in Glasgow which would be of great importance to the undertaking. That, however, ought to have the effect of stimulating them, instead of rendering them lukewarm, for it was only by a movement in all parts of the line that their object could be accomplished. (Applause.) He trusted that Carlisle would do its part without difficulty. (Applause.)

Col. GRAHAM then urged the following statement to the meeting:—I may be allowed to preface what I have to say by assuring the present meeting that the object the Central Committee has in view, is of a purely disinterested nature,—that they have no personal motive to serve, and that their properties and interests will only be benefited in like proportion to that of a mass of other men, to whom, of course, great advantages will accrue by the opening of a railway communication from this city to all parts of the island; for not only would trade and employment flow by that source into a town situated in so central a position as this is, but by it will also be supplied the wants of an extensive district both to the north and south. I may also preface my observations by stating that this is no party contest,—that no jealousy of rival projects is felt here. The superiority of this line is made manifest by the Report of the Government Commissioners. They have by that clear and impartial document set the question altogether at rest, and stamped it as a great national undertaking; and now that their their opinion, so decidedly and candidly given, has had time to assume its deserved influence and weight, parties are from various quarters offering their assistance, so that it would appear only to require one combined effort to achieve the undertaking. The undertaking, gentlemen, is proposed to be one line from Lancaster to Edinburgh and Glasgow, undivided in its management and interests, though it may be apportioned into two or three sections for the purpose of facilitating its formation; it is proposed to carry it in the most direct, and at the same time, most easy route; and it is supposed that little or no opposition will be offered to its passing through the country; on the contrary, landowners in many districts stand pledged to act with liberality,—and I have authority for saying that it will be "a cheap line, and will put to shame many of the adverse statements." The project purposes to connect together by one line the whole trade and commerce of Scotland with the West of England, and has been declared (by the Commissioners) as the one to be preferred to all others by the traveller from the south, who wishes on his way to Edinburgh or Glasgow to economise his money and his time; and I hold in my hand a table drawn from the Commissioners' Report, showing its obvious advantages, proving that the distance from Edinburgh and Glasgow is shorter by it to London, Liverpool, Manchester, and Birmingham, than by any other route. I had the pleasure of meeting, on our way from this town to Liverpool, one of your most enterprising citizens, who, I suppose, consulted his comfort, and took an inside seat from this to Lancaster at a charge of 1*l.* 5s., and an expenditure of his valuable time of about six hours, the distance 64 miles; but when he got upon the railway at Lancaster to accomplish about the same distance from thence to Liverpool, he had only to pay 12s. 6d. for one of the best seats, and to spend about three hours in its accomplishment. The same calculation would hold good with respect to Glasgow, and a small effort is now only required by the inhabitants of the district to make their communication both with Liverpool and Glasgow so easy and expeditious, as to enable them to go to either of those emporiums of trade, transact business, and return home the same day. The effort to which I allude is not of a gigantic nature, seeing that the Railway Companies in Lancashire are willing to lend their assistance, and that a Parliamentary survey of part of the line is actually commenced, under the superintendence of Mr. Locke, and his able assistant Mr. Errington, with the intention of lodging the plans before Parliament in March next, and that a small but inadequate sum has been raised for that purpose by some of the Railway Companies interested. I have received a letter from the Secretary of the Grand Junction Company, stating that he has been directed to write to Mr. Locke, and ascertain the cost of completing the whole, without delay; and he adds, that "it now remains for you, and your other coadjutors in the English and Scotch counties and boroughs, to procure your part of the necessary fund, in order that the survey may not be delayed. May I suggest that, as the undertaking is assuming so tangible a shape, and the balance of the fund appears to be within your reach, you should collect all you can with as little delay as possible, so as to make it available for the purpose intended." This, gentlemen, is from the Secretary of the Grand Junction Railway, and under the orders of the Board of Management of that Company. A survey of the whole line will be made upon their being furnished with adequate funds. I consider this a most fortunate circumstance, as no body of men can be better qualified for such superintendence—alike disinterested and independent, and fully informed upon the subject, they will, under the guidance of Mr. Locke, the most correct and intelligent engineer of the day, lay down such a line of communication as would undoubtedly prove a great national benefit. The county of Dumfries has already raised for the purpose of the general survey the sum of 200*l.*, and the Pollock Railway Company has given 300*l.* A meeting, called upon the requisition of the most wealthy and influential merchants of Glasgow, is to assemble on Wednesday next, with the Lord Provost in the chair; and the county of Lanark is to be assembled under the auspices of Lord Belhaven, on the 21st inst., when the subject now before this meeting will probably meet with favourable consideration and great support. The Chamber of Commerce of Glasgow, as well as the Merchants' House and Trades' House of that city, have come forward with their influence and funds in support of this project; and several other corporations, and trading communities, are expected to follow their example. By a calculation made, it would appear that the quota which should be raised by the county of Westmoreland is 200*l.* and that by the county of Cumberland and the city of Carlisle, about 300*l.*; and to prevent delay in the great undertaking we have in view, I should beg leave to recommend that the example of the county of Dumfries be followed in this particular, viz., the money to be subscribed for the "general survey," and remitted without delay to Messrs. Moss and Co., bankers, Liverpool, who are the bankers of the Grand Junction Company, and will see that the sums are applied only to the purpose intended, and paid only to the orders of the Board of Directors. Gentlemen, identified as my interests are with this part of the country, I confess it would be with deep sorrow I should see this opportunity pass away. It would be with deep regret I should see all the influence and funds now offered in support of the project idly thrown aside. Other towns and counties have enacted their part, and subscribed their allotted sums, and I trust that Westmoreland, and Cumberland and Carlisle, will not be found wanting.

P. H. HOWARD, Esq., M.P., said their whole attention would now of course be directed towards the survey.

Colonel GRAHAM announced that the Grand Junction Railway Company had undertaken to make the survey if they were supplied with a sufficient sum of money to meet Mr. Locke's charges.

Mr. P. H. HOWARD inquired if the services of Mr. Larmer had been retained?

Colonel GRAHAM replied that those of both Mr. Larmer and Mr. M'Callum, of Glasgow had been secured. Those two gentlemen had been engaged on different parts of the line for a considerable length of time, and it was clear that they would be much better acquainted with this part of the country than any stranger could. (Hear.)

Mr. DIXON congratulated the meeting upon the formation of a Central Committee. When it was first formed they were not in possession of much information which had since been laid before them. They were much indebted, he thought, to the indefatigable exertions of Colonel Graham for the position they now occupied. When the Committee was first formed there was great lukewarmness shown in Glasgow, but since information had been diffused in that quarter great interest had been shown towards the project. Every thing that had transpired had tended to strengthen and confirm them in their opinion that the western route which was recommended by the Government Commissioners, was the best, and ought to be executed. The Grand Junction Railway Company had undertaken the management of the survey, if the money were provided, and he had no doubt that it would be efficiently done under their direction. The only thing that was now to be done was the furnishing of the requisite funds for completing the survey. Lanark and Glasgow were shortly to have meetings on the subject and would doubtless contribute a considerable sum. The sum required from Carlisle was 300*l.*, and he did not doubt that that would very speedily be raised.

P. H. HOWARD, Esq., M. P., then moved,

That this meeting, having heard the communications made to them by Colonel Graham, and taking into consideration the increasing interest which is excited in favour of the proposed western line of railroad into Scotland, from Lancaster, by Carlisle and Beattock to Glasgow and Edinburgh, as recommended by the Government Commissioners—the advantages of which, over every other, gave ground to believe that there is no doubt of its being adopted, if not anticipated by another; and impressed with the necessity of procuring, immediately, the necessary survey of the proposed line, in order to obtain during the ensuing session, the approval of Parliament, as the basis on which the public and the capitalists can safely invest the requisite funds for such an undertaking.

RESOLVE—I. That this meeting recommend in the strongest manner, to the landowners and gentlemen, and all parties interested in the counties and towns through which it will pass, to co-operate and raise a sufficient sum to have the survey completed throughout the whole extent of the line, from Lancaster to Glasgow, at once.

Mr. DIXON seconded the motion, which was put and carried.

Major MACLEAN then moved,

II. That this meeting learns with much satisfaction, that the counties of Dumfries and Lanark, and the town of Glasgow, are proceeding in this view to meet the expenses of the projected survey, which is already commenced at the southern extremity; and that a subscription list be now opened for the county of Cumberland and the city of Carlisle, in aid of this primary and most necessary measure.

Digitized by Google

No place would be more benefitted than Carlisle by the line, and he thought it would be unbecoming and illiberal if they did not come forward and contribute their quota towards the fund for a survey, for the purpose of having the question brought before Parliament.

Major WILDE seconded the resolution.

Major MACLEAN said he had received a letter from Mr. Hasell, of Dalemain, who said he fully entered into the interest excited by the project; he was convinced that it would be of great benefit to this county; and was ready to subscribe towards the project being carried into effect.

Colonel GRAHAM said he understood 800*l.* would be subscribed at the Glasgow meeting.

Mr. THOMPSON, of Kirkhouse, moved—

III. That the Secretary be requested to make the proceedings of this meeting public, and to apply, by circulars, to all parties interested, for subscriptions towards the proposed survey.

Mr. BROWN seconded the motion.

Mr. DIXON said, it would of course be understood that all money now subscribed would be a subscription to the share list.

A subscription was then entered upon, and that no time might be lost, a few gentlemen became guarantees for the whole sum, 300*l.*, which was, we understand, forwarded from Carlisle on the same evening. It was agreed that subscription lists should be opened at the City and District, and Carlisle and Cumberland Banks, Messrs. Head and Co.'s Bank, and at Mr. Thurnam's, bookseller, Carlisle; also at the Cumberland Union Bank, Workington, their agent at Penrith; Mr. S. Rigg's, Wigton; Mr. Ostell's, Maryport; and at the office of the City and District Company's agent, at Cockermouth.

A vote of thanks having been passed to the Chairman, the meeting separated.

RAILWAY COMMUNICATION WITH SCOTLAND—THE NORTHERN UNION RAILWAY.

To the Editor of the Railway Times.

SIR,—The most interesting topic discussed at present in your columns is the proposed extension of the railway system towards Scotland. I shall take the liberty of troubling you with a few remarks upon the subject—upon that part of it, however, which relates to the meditated Northern Union Railway, being convinced as I am, notwithstanding much that has been said on the other side, that the extension of the railways on the east coast of England to Newcastle, is all that we can hope to see accomplished for a very considerable period in the way of continuous railway communication with Scotland. This I know to be the opinion of far more competent judges than I wish to be considered. I was told not long ago by a first rate railway authority—"It will be years before Scotland has a railway." The difficulties in the way are serious—arising from the stubborn unyielding nature of the country—the caution and backwardness of the Scotch themselves in encouraging the enterprise—the destruction of all confidence in estimates—the indisposition of the public generally to embark in fresh railway projects—the relaxation of commerce, and the general stagnation of the money interests. Indeed, as regards railways, the occurrences of the last six or eight years have wonderfully changed men's minds, and it is not too much to say that except under peculiar circumstances, such as those under which this Northern Union Railway is brought forward—the raising of any amount of capital for any railway would be a work of great difficulty, if not altogether impracticable. Accordingly I find on referring to the list of Parliamentary Notices in one of your late journals, that there is not, with the exception of this Northern Union line, a single new Railway Bill for next session. The question then arises, in such a state of things as this—Is there to be nothing done? No farther extension of railway communication to Scotland east or west? Are things to remain as they are? And for years? Are the present termini to be Lancaster on the west, and Darlington on the east? leaving on both sides of the island many weary miles between those places and the great Scotch towns? Whatever the public may think of these matters, and in whatever degree they may feel interested in them, there are parties who believe that the interests of this same public and their own, will be greatly promoted by the immediate extension of the main east coast lines to Newcastle. These parties are, with a few dissentients, the proprietors of the various railways between Rugby and Birmingham and Darlington, whose object is, by a conjunction with other parties, to complete the communication to Newcastle at the earliest possible period. The prominent feature of this undertaking, and to which the attention of all, for various and opposite reasons is directed, is this. There can, it is thought, I suspect by *all*, be scarcely a doubt, that the east coast main trunk railway, as it will then terminate at Newcastle, must, by outstripping our friends on the west, and joining the Newcastle and Carlisle at the former town, the two railways having a common terminus and meeting on a level, attract to itself, and under the most unfavourable view of its position, retain for a long period the greater part, if not the whole, of the Scotch traffic both east and west. Whatever may be the ultimate fate of the more ambitious projects, under any possible circumstances, taking a lengthened period to complete,—this, by comparison, would be the immediate effect of the extension of the existing lines to Newcastle. I think this is *felt* to be certain. The parties promoting the scheme hope and believe it; their opponents fear it.

I need only advert, for a confirmation of this view of the subject, to the meeting of Liverpool shareholders of the Midland Counties' Railway—*a large majority of them being Grand Junction proprietors*, and as such, and to the extent of their holdings, having a direct interest in the rejection of any scheme which, as this, would most certainly mar the prosperity of this very prosperous undertaking. I confess I cannot, at this time of day, and with my share of disappointment regarding railways, bring myself to regard with any great degree of interest or attention, the long array of figures with which your pages have recently been filled in connection with this subject; to the recapitulation of curves, viaducts, tunnels, and bridges, with which each party taunts the other. I cannot divest myself of the idea of the impracticableness of either party attaining their wishes, for the reasons I have already adverted to. My views and wishes are more moderate. I advocate this line—the northern Union, a very insignificant section, I am aware, of those magnificent ones proposed by others, because I think it is feasible—that the parties promoting it are in earnest—and, better than all, that the money will be obtained to carry it into effect. Anything beyond this I do not think can be looked for—I will only say at present. The only thing that would give an impetus to either of the more extended lines, would be the pecuniary assistance of Government. This cannot be expected. We have therefore only private enterprise to look to—and private enterprise under the present adverse circumstances, discouraged by the reverses it has met with, and deceived by the "estimates" it has relied upon, cannot be brought to foster any enterprise unless it be on a moderate scale, and more than this, under a guarantee that the dividend payable to the proprietors shall not be less than the very respectable figure of 6 per cent. So much for private enterprise!

No, Sir, we must be content for the present with the Northern Union Railway.

Yours obediently,

C. R.

P.S. There appears to be to some extent a wilful error indulged in as to names and persons in connection with this Northern Union line. Some parties—I don't know why—will have it that *George* Stephenson, against whom such a strong feeling exists on account of his reckless expenditure, is to be the Engineer. Now, he is not. The Engineer is *Robert* Stephenson, of the London and Birmingham, whose calculations and estimates are regarded with a considerable degree of confidence by the railway world, and who had nothing to do with those costly lines, the North Midland and Manchester and Leeds. Whilst on this subject, it may be as well to mention that a very general feeling is gaining ground that engineers should be required to guarantee their employers against anything beyond a certain per centage of excess over their estimates. I understand Mr. Locke has entered into an engagement of this kind with regard to a line he is engaged upon. What may be the value to a Company of a guarantee like this I cannot undertake to say, but it is clear that up to this period Engineers have had it all their own way, and any plan which would have the effect of placing *some* restraint upon them is anxiously desired by the whole body of railway proprietors.

—o—

RAILWAY COMMUNICATION WITH SCOTLAND.—Conjointly with the demolition of the Western Railway case, * * * we have this week the felicity of referring to another intimation of the utmost consequence to the east line of coast betwixt this and Leith. We allude to the Harbour of Refuge about to be erected at Dunbar, the communication of the sanction of the Lords of the Treasury, to which important object, it will be seen, from the account in another column, was hailed so enthusiastically in Dunbar. We would augur from such things as this the certainty of carrying through the East Coast line in the face of apathy itself. The railway to Dunbar *must* now go forward. But will the people of Newcastle do nothing whatever? —*Berwick Warder.*

RAILWAYS AND THE SUPPLY OF WATER TO THE METROPOLIS.

A CORRESPONDENT of the *Examiner* of Sunday week (who dates from Naples) throws out the following suggestions which appear to be well deserving of consideration:—

Sir,—Having seen in several of the recent numbers of the *Examiner* communications on the subject of the "Supply of Water to the Metropolis," I take the liberty of forwarding to you a suggestion which has frequently occurred to me on witnessing the remains of the splendid works which the ancient inhabitants of this country adopted for the purpose. There would be many obvious objections to the establishment of aqueducts in England; but, in fact, we do not want them; we possess, already made to our hands, the most expensive part of the machinery required for the conveyance of water. By sinking large pipes in the railways, they might be rendered applicable to the purpose of aqueducts, without diminishing their solidity; advantage might be taken of good or abundant springs in any part of the country within reach of the railways, and commanding a sufficient tract. Reservoirs might be established in places convenient as to distance and level, and branch pipes might afford a supply to other towns on the line as well as to London. Several reservoirs, in addition to those already in use, might thus receive a constant supply of water, and the greater the draught upon them in London, so much the less danger would there be of the water in any of the reservoirs being deteriorated by remaining in a stagnant state. The supply might thus be almost unlimited; all that would be necessary would be to secure a sufficient fall to the London reservoir, where the assistance of the steam-engine would be required, as at present, to raise the water to the heights required. That there would be expense and difficulty in works of this nature I am well aware; but no plan has ever been mentioned which is not subject to these objections, and to the still more important one of not affording a hopeful prospect of adequate supply of an article so necessary to the health and comfort of all classes of the community. The tax which we now pay in London is extremely high; we are entirely at the mercy of the water companies, and the complaints both of the supply and quality of the water, and of the charge for it, are very general.

THE NORTHERN UNION RAILWAY—CAPTAIN WATTS.

To the Editor of the Railway Times.

SIR,—"Happy is the man," as Benedict says, "that can hear his detractions and put them to mending." For the kindness you have either exhibited or intended in the administration of the rod, I thank you, and for aught beyond this I freely forgive you. Apostrophizing you then in the words of the celebrated Grecian "Strike but hear!" I claim your indulgence for a few parting words of explanation and remonstrance.

I am quite of opinion, that those who substitute abuse for argument, and unscrupulous, unsupported, and illiberal assertions for facts, do in reality lose the sympathy of their fellows, and may be said "to commend the poisoned chalice to their own lips." The question then is, have I done this? Let us see. You admit "there *may* be cases in which it is both necessary and salutary, that personal offence should be given, but this is not one of them." Disclaiming as I do absolutely, every intention towards personality in *all cases*, as a leading motive, I confess this declaration of yours is to me at once astounding and curious. Astounding, that any one according to my view of the subject, can arrive at such a conclusion, and a matter of curiosity by what process of reasoning it is accomplished. For in the course of my experience, I have not been cognizant of a more flagrant instance of impropriety in a public servant than in the one I have felt it my duty denounce and expose. You taunt me for using language that ought not to be applied by one gentleman to another. Granted, if by this is meant the individual in his *private* capacity. But I have indeed lived to little purpose, and in a strange state of delusion, if such an exemption can be claimed for one holding a public, responsible, and influential office, and who availing himself of the power it confers, threatens to invade my rights, to sequestrate my property, and eventually to destroy it, as far as he is able altogether, if I and others who think with me, presume to oppose his views.

"In such a case as this, it is not meet
That every nice offence should bear his comment."

And see to his mode of accomplishing this. "If you carry the motion against me at the Midland Counties' meeting—I, (mark the potential mood)—I will not allow a passenger to be booked by that line, but will divert the whole of the traffic to the Derby and Birmingham,"—thus showing that the public convenience, which, in his official capacity, it is his bounden duty to promote and protect, is his last consideration. And when to all this is superadded, his ridicule of principle, his arrogant tone, his impetuous manner, more nearly resembling a tornado, than a common storm, I appeal, Sir, to your good sense, as the conservator of principle as well as propriety, whether I have not made out a case of turpitude deserving of the severest reprehension, and coming, moreover, strictly within the limits of your own category.

Credit me when I say, that could it by possibility be made out, that (as you charitably suppose) I had mistaken Mr. Hudson's words or meaning, I would at once promptly and cheerfully acknowledge and apologise for my error. Yes, my recantation should be as public and ample as my exposition has been. But it cannot be; my own identity is not in my belief more certain than are the facts I state. It may be questionable with you and others, whether I have performed my task in the most suitable way—for that is a matter of taste—but let it be borne in mind, that to establish my facts, it was barely possi-

[illegible] them from that degree of perso[illegible] you have taken an exception—

"Vice it e'er can be abas'hd,
Must be or ridicul'd, or lash'd."

I now dismiss the subject, together with its object to the "tomb of all the Capulets," and trust to be instrumental, if need be, in consigning his project to keep them company.

Upon that project it was my purpose to have dilated a little in answer to some letters which I have received, and to one or two of your correspondents. But I shall reserve my observations for a future letter, in the meantime, requesting leave to add a few remarks applicable to the points at issue between ourselves.

In the first place, when I penned my last letter, I did not advert to any change of Editorship since last August, and if I had, it would have made no difference. Because, until the contrary be proved, I have a right to suppose that a public journal is the exponent not of individual feeling, but of first principles, which are not only universal but unchangeable.

Secondly. I am of opinion, that it is neither birth, rank, station or wealth, that makes a "respectable individual," they are merely subsidiary. It is his propriety of conduct, his amenity of manner, and his sterling honesty; and he who exhibits such characteristics shall never, however opposite in opinion, be assailed by me in "language which one gentleman should not use to another."

Thirdly. As every one has a right to do what he pleases with his own, I am bound to admit your claim to "conduct your journal after your own fashion," to the extent of rejecting or admitting whatever may be submitted for insertion. But when you interpose an equal claim to alter or abridge, without the sanction of the writer, it presents itself to my mind in a dubious shape. Take my case as an example. There was no absolute necessity for inserting a part more than the whole of my letter. Had you merely lopped a useless expletive or two, or wholly suppressed it, I should have submitted in silence. The fact which you kept back formed the very *gravamen* of my argument, and was quoted, not for the ignoble motive of personality, but to prove to those whom it might concern, that no reliance could fairly be reposed in the specious statements of one who derided the observance of principle in the occurrences of life. If as you say you doubted the accuracy of my conviction, better have expressed yourself to that effect in your note, with an intimation that you would most gladly insert a disclaimer in your columns by the accused party.

Fourthly. The mode in which you have dissected my letter in order to justify yourself, is hardly fair. Separate in any case the subject from its context, the relative from its antecedent, and how invidious and objectionable may the most splendid effusions of the human mind be made to appear.

Lastly. The similitude of "poisoning in jest" cannot be applicable to one who acts openly and fearlessly in the cause of justice and truth. It is he who basely and secretly pours into other ears "the lep'rous distilment" of distrust, of calumny, and slander, that commits such a moral assassination. And I greatly marvel that one of your intellectual calibre should apply such phraseology to one of whom, whatever may be thought of his tact and judgment, in conducting the attack, it cannot be denied, that he is at least entitled to all the merit which can result from openness and publicity.

Before I conclude I beg to say, that I am desirous to correct an ambiguity in my letter. In the sentence, "And this last word leads me to the most important of my objections, namely, that in the suppression of my epithets you have likewise suppressed facts, which *might* authorise the exercise of the most caustic reprobation." It ought to have been, "which *I thought* fully authorised." The above reading renders it doubtful whether the castigation is applicable to the facts or the suppressor of them; whereas it was in *no way* intended for you. I think it but right to give this explanation, accompanied by my sincere apology, and which I hope you will accept as a sufficient and becoming *amende*.

This discussion is now, I hope, ended for ever, and reciprocating the wish that, with a better understanding between us, there may be no future collision.

I remain, Sir, yours, very sincerely,

G. E. WATTS.

Langton Grange, Darlington, Dec. 21, 1841.

AUDELIN v. SOUTH-WESTERN RAILWAY COMPANY.

To the Editor of the Railway Times.

SIR,—May I be permitted to inquire, through the medium of your valuable journal, whether in your report of the affair "Audelin v. South-Western Railway," (see *Railway Times*, December 17), it is to be understood as a precedent upon which to decide all future appeals that a goods train is to be detained for amended instructions, which, through the negligence of the consignee were omitted to be forwarded in the first instance.

The decision of the jury in awarding compensation for damage in a case involving principles of such paramount importance to railway interests, among which the *punctuality* of trains is not the least prominent, has induced me to transmit the above in the hope that it may be instrumental in warning others from this "judicial Maelstrom," which must evidently swamp all that is drawn within the vortex of its malevolent influence.

"Telle est la Loi, mais ou la justesse?"

Your obedient servant,

F. B.

BRISTOL AND GLOUCESTER RAILWAY.

To the Editor of the Railway Times.

SIR,—"A Shareholder," in your last number, suggests the "propriety of adopting on the Bristol and Gloucester Railway the gauge of the Birmingham and Gloucester Railway." Allow me to inform him, that no other was ever intended from the commencement, and in the opinion of the Directors no option was open to them, this line forming as it will an integrant portion of a continuous line from hence northward, the whole of which is formed on the narrow gauge.

It is not necessary here to enter into a discussion of the comparative merits of the wide and narrow gauge; public opinion has fully determined the question in favour of the former, and, in my opinion, most justly.

The advantages of the wide gauge on the Great Western are so manifest, that could the railway world with present experience commence *de novo*, I have no doubt that it would, without exception, be adopted; whether 7 feet or 6 feet is a question on which there would be difference of opinion.

The "slumbers" of the "Direction," therefore, have not been so profound as to cause this important feature to escape their notice; nor are they but just "awoke" from *these*. If "A Shareholder" is *not slumbering*, he must be aware, that the call due on the 11th instant is the third since the payment of the deposit, and he might rest assured, that the progress of the works has kept pace with, or rather anticipated, the calls.

I quite agree with your correspondent that this is unlike most other railways that have to form a traffic; the traffic is certain, and without the chance of its being diverted into any other channel.

The proprietors of this line are not the only parties interested in its completion; the Birmingham and Gloucester shareholders are equally interested. Their railway, with all its local advantages (and I believe at no distant period it will rank among the most profitable) will not, nor can it be expected to, develop the extent of its traffic, until the road from this city to Birmingham is complete.

I am, Sir, yours, &c. &c.,

GEORGE JONES.

Bristol, December 21, 1841.

SOUTH-EASTERN RAILWAY.—ASHFORD, DEC. 17.—The contractors of the South Eastern Railway, and several of the workmen, have arrived at Ashford, and active preparations are making for the commencement of the works in that district immediately. Mr. Betts, who has lately completed a large portion of the Midland Counties Railway, has taken the contract from Ashford to Marden, which is to be completed by the end of the next year, when the whole line from Ashford to London will be open.—*Kentish Observer.*

THE STOCK EXCHANGE—TRANSACTIONS IN THE FUNDS AND IN SHARES.

THE following very useful and instructive explanatory statement of the forms and regulations according to which the purchase, sale, and "carrying over" of stock and shares are effected by the brokers belonging to the "Stock Exchange," we borrow from our contemporary the *Times*.

This curious and complicated subject may be explained and discussed under three different heads,—viz., first, the parties engaged in stock transactions, whether brokers or jobbers; secondly, money and time bargains; thirdly, the rules and regulations by which these operations are conducted.

The clearing-house in Lombard-street affords the greatest facilities to the transactions of the Stock Exchange, inasmuch as, without its intervention, difficulties and embarrassments would present themselves in the final settlement on adjustment of those transactions, of an almost insurmountable character. By means of this clearing-house all the great monetary transactions of the day are brought to a close by five o'clock in the afternoon, whereas, in the ordinary mode of paying or receiving money, whether in notes or hard cash, their settlement might not be finally effected for several days afterwards, to say nothing of the security afforded to all parties concerned by the operation of the clearing-house.

The members of the Stock Exchange are divided into two distinct classes—viz., the brokers and the jobbers. It is the business of the brokers to receive and to execute the orders of merchants, bankers, capitalists, and private individuals who are out of "the house;" the Stock Exchange being amongst its own members honoured with that dignified appellation!

The jobbers remain stationary in "the house," and ready to act upon the orders thus received by the brokers. And here it may be as well to explain the nature and character of the business transacted by these jobbers, who, being men possessed of more or less capital, endeavour to turn it to account in the manner we are about to explain. It is their business to be always prepared to make a price to the brokers whenever the latter present themselves; the readiness which they display in offering to do business to large amounts at the apparently small difference of one-eighth per cent. would appear extraordinary, were it not that they are so numerous that an eager competition is excited amongst them for the favours of the brokers. When one of the latter appears in the market, he is surrounded by a knot of jobbers, who announce themselves ready to buy or sell whatever amount of stock he has to deal in, at a price varying only one-eighth per cent. For instance, if a broker has to do business in 5,000*l.* consols (the market price being about 90) the jobber offers to buy his 5,000*l.* at 90, or to sell him that amount at 90⅛, without being in the slightest degree aware whether the orders of the broker are to buy or to sell, and thus taking upon himself the risk of selling that which he does not possess, or of buying what he does not intend to keep; his only object being to undo his bargain, at a difference of one-eighth per cent. (or even less) with another broker, who may have to effect an operation the very reverse of the other, which one-eighth or even one-sixteenth constitutes his profit.

The business of the jobber is one of loss as well as profit; he would soon grow rich were he sure of realising his one-eighth per cent. on all his transactions. He runs, however, considerable risk, inasmuch as, after having concluded a bargain, and whilst endeavouring to obtain a profit thereon, the market may suddenly change, either in consequence of extended sales or of continued purchases by other individuals; he is thus exposed to a loss. A clever and experienced jobber will, however, often extricate himself from his unpleasant and awkward situation, either by borrowing stock to deliver to the broker, or money wherewith to pay for the stock (as the case may be); and thus wait for a more favourable opportunity of undoing his bargain. He may also have recourse to an "option," a transaction, however, which, besides being illegal and not recognised by the Committee of the Stock Exchange, is chiefly confined to the speculators within the house, and is, moreover, so intricate and complicated, and at the same time depends so much upon the opinion and caprice of the parties who deal in them, that any explanation respecting it would be extremely difficult, if not utterly superfluous.

Without the intervention of the jobber, therefore, it will be seen that there would exist a vast difficulty in effecting the transactions which daily take place: the jobbers are, in fact, the "middle-men," who stand in the house in the character of dealers, always ready to buy or sell, thus obviating the necessity of the broker's going in quest of a second broker, with whom he might transact his business; or in other words, whom it might suit to buy what the other broker had to sell, or *vice versa*. Again, if one were at hand, he might not be able to concur in the actual amount of stock which the other wished to deal in, whereas the jobber is ready to do business to any amount, even to the smallest fraction, and hence a great deal of time is saved. It often happens that a broker who has to dispose of shares not currently dealt in, is frequently obliged to wait for months before he can find a purchaser; whereas, in the case of stock, the jobbers offer themselves as buyers or sellers at a moment's notice, and thus offer facilities for transactions in the public funds which could not be effected without them.

Having thus endeavoured to explain the difference between broker and jobber, and confined our attention hitherto to money transactions, we next proceed to describe the nature of "time-bargains," which form so essential a feature in stock business. Indeed, the very existence of the Stock-Exchange, as at present constituted, depends upon speculations in time-bargains, for where there exists a body of 600 members, the actual *bona fide* business would not be sufficient to provide employment for them all, notwithstanding the magnitude of the national debt. Time-bargains consist of purchases and sales of stock made for a certain fixed period, regulated by the Committee. There can be little doubt that they had their origin in the business which has always been transacted in the funds during the periods when the stocks are shut. For instance, consols usually close about the beginning of June and December; that is to say, the transfer books at the Bank are shut for the space of five or six weeks, in order to afford time for the preparation of the dividend-warrants, which are paid in the following July and January. Hence it is clear that a person wishing to buy or sell that particular stock during the period referred to, would be unable to effect this object; but in order to secure the price of the day, he buys or sells the stock "for the opening"—that is, for actual transfer on the day on which the transfer books are re-opened. This mode of doing business is legitimate enough, but this practice has no doubt given rise to operations of the greatest magnitude, founded, not on actual necessities, but merely on speculation; and this method being found convenient for one period, has been continued on other occasions, without, however, possessing the same pretext for its adoption. Periodical dates have, consequently, been fixed upon by the Committee, similar to the "opening" at intervals of about six weeks, making altogether about eight "settling days," as they are called, in the course of the year. On these "settling days" are arranged and adjusted all the bargains made during the preceding six weeks, for that particular day; those who sold stock having to deliver it, on the one hand, and those who purchased having to accept and pay for it, on the other. But as the majority of the speculators have no intention of doing either the one or other, their bargains having been of a purely speculative character, founded on their anticipations of a rise or fall in the value of the securities, so whatever difference may exist between the price at which a party commenced his speculation, and that at which he finally closed it, is settled on this important day; and his operations most likely not having been confined to the same jobbers, but having been effected with several, it becomes necessary to balance them with the parties concerned, and much the same process takes place on this occasion as that practised at the bankers' clearing-house, by establishing balances between each other. Whatever balance remains unsettled is adjusted by the names of the *bona fide* purchasers of the stock (who intends to pay for it) being passed from one broker, or jobber, or speculator to another, until it comes into the hands of the party who intends to deliver or transfer the stock, by which means all the intermediate persons through whose hands it passes (the price given by the purchaser being marked on the ticket) are enabled to close their accounts with each other at that particular price, and to pay and receive the differences accordingly. In short, all transactions kept open until the settling day must then be closed, and the party who delays this operation until the last moment is often exposed to a loss, from the difficulty of finding others, who, having adjusted their own accounts, are unable or unwilling to enter into a fresh transaction on this "day of reckoning," whereby he is compelled to pay something extra in the price to those who have it in their power to afford him this facility, in order to enable him to settle his account.

But as many of the bargains made for this particular day are really *bona fide* transactions, the stock bought and sold being in point of fact delivered by the actual holder and taken by the new purchaser, but let us briefly explain how this is effected. This process is one of daily occurrence, and is not necessarily confined to a settling day, although on such occasions it usually amounts to a considerable item, from its having extended over a wider period. In either case, however, the following is the way in which the matter is settled between the broker and his principal who has sold stock: The broker usually passes his check for the proceeds of the sale to his principal, taking the precaution of crossing it—i. e., writing a banker's name across the check. When, however, Bank of England notes are demanded in lieu of crossed checks, (as is sometimes the case,) the bargain is made accordingly; in this case, the jobber who buys the stock provides them either by borrowing of those who happen to have large balances at their bankers, or from their own private bankers. The notes so borrowed by the jobber are then paid over to the broker, and by him to his principal. This operation is, however, seldom resorted to by men of business where there is no reason to doubt the credit of the party drawing the check.

The jobber, on the other hand, having sold the stock to some other broker, who buys for his principal, receives in return, his check, so that by this simple process of passing four checks,—viz., that of the purchaser to his broker, that of the broker to the jobber, that of the jobber again to the broker who first sold the stock, and that of the latter to his principal, the whole transaction is completed.

To advert to another technical peculiarity appertaining to the Stock Exchange, which may appear puzzling to the uninitiated. The terms "Bull" and "Bear" are doubtless familiar to most even of our country readers, without their being aware, probably, of their meaning. A Bull is one who speculates for a rise, whereas a Bear, on the contrary is he who speculates for a fall. The "Bull" would, for instance, buy 100,000*l.* consols for the settling day, or, as it is technically termed, "for the account," with the object of selling them again during the intervening period at a higher price. The "Bear," on the other hand, would sell the 100,000*l.* stock (which however he does not possess) "for the account," with a view of buyiug them in for the purpose of balancing the transaction at a lower price than he originally sold them at. In stirring periods, when fluctuations of 4 or 5 per cent. often occur during "one account," vast profits may be realised, or equal losses sustained, by these gambling operations.

The transactions in the foreign market are carried on much in the same way as in that of the English stocks, with the exception that the settling days are much more frequent, occurring as they do once in every fortnight. The Foreign "House" is quite of modern origin, but it is subject to the

Digitized by Google

same rules and regulations as the English, with a few exceptions. The dealings are there carried on in all the foreign stocks, as well as in railway, mining, and other shares. The jobbers are distinct from those in the English house, although there is nothing to prevent them from dealing in both, if they possess sufficient intelligence to enable them to give their attention in two places at once.

In connection with time bargains may be noticed that important branch of business which goes under the denomination of "continuation," or "carrying over." This is nothing more than interest for money borrowed or lent on security of stock. The rate of this continuation or interest varies according to the abundance or scarcity of money, and the nature of the security offered. For instance, on British stocks, even when money is very scarce, it seldom exceeds the rate of 5 per cent. per annum from one account to another; whereas, in the foreign market, where the security consists of foreign bonds of various and doubtful descriptions, it ranges from 5 to 10 per cent. or even more, on particular occasions, when it reaches 15 per cent. per annum.

There are several causes which tend to produce this extraordinary variation in the rates of continuation; for in the case of consols, which constitute the only stock for speculation in time-bargains in the English market, the price varies so little in comparison with the value of the stock, in the course of an "account," that the security is considered good in itself, and therefore no extra charge is superadded by the party who lends his money. This is not the case with regard to foreign stocks, which are constantly fluctuating in value, a fact to be accounted for by the extremely precarious nature of this description of property. Most of the bonds in circulation in the foreign house have ceased to bear any interest whatever, and many bear on them the marks of shame and disgrace in the shape of the arrears of interest, called "coupons," overdue for several years. It is not therefore to be wondered at that foreign securities of this description do not command the same credit as our own English stocks, and it must hence follow as a matter of course, that parties who wish to raise money upon them must consent to pay a higher rate of interest for the accommodation.

A great deal of business is transacted in this way, and some brokers, who possess the means of obtaining large sums of money without much difficulty, devote their entire attention to it. The process by which the operation is effected is simple, both in the English and foreign market. The present rate of continuation in the Consol market is 9-16ths per cent. until the opening; and if a person, we will suppose, wishes to lend money on that stock, from the shutting (on the 2nd of December) to the opening (on the 14th of January, 1842), his broker procures him 1,000*l.* Consols as security, for which he furnishes the money at the actual price of the day, which is 90, making 900*l.*, and re-sells, at the same time, the said 1,000*l.* stock for the opening (on the 14th of January), at 99 9-16, making 915*l.* 12s. 6d., and thereby leaving a difference in his favour of 5*l.* 12s. 6d. for the loan of 900*l.* during the above period of 44 days, which will be found to be at the rate of 5*l.* 3s. 8d. per cent. per annum. On foreign securities the principle is the same; supposing he lends on the security of Spanish Bonds, he receives as security 5,100*l.*, for which he pays on the 30th of November, at the price of 24¼ per cent., 1,249*l.* 10s., but sells it to the same party for the 15th of December (the next settling day) at 24 9-16ths, producing 1,252*l.* 13s. 9d., leaving a difference in his favour of 3*l.* 3s. 9d., or 1-16th upon the stock bought and resold, which, for 15 days, is equal to one-eighth per cent. per month, or twelve-eighths per cent. per annum, equal to 76*l.* 16s., being at the rate of about 6*l.* 2s. 6d. per cent. per annum interest. This calculation is made upon the current rate of interest for the "continuation" of that stock on the 30th of November, which was considered as extremely low.

The continuation on shares, in which a great deal of business is also done, varies but little from the above; but a difficulty here arises which offers a great obstacle to the lending of money for short periods.

The *stamps*, which by law are necessary for the due transfer of property of this description, and without which transfer of property of this description, and without which transfer there could be no security to the lender of money, are so onerous, and press so heavily on all *bona fide* transactions, that, notwithstanding the many attempts made at various times to evade them, they operate materially against the parties who lend money upon them, and, in fact, neutralise all profit for short periods.

Persons who have sold shares or stock, if they are not in immediate want of their money, frequently avail themselves of this method of "continuation" in order to obtain interest for it, until they actually deliver the stock. On the other hand, speculators for the rise are by this means able to carry over their purchases from one account to another; and although it may appear strange that they should be paying at the rate of 5 and even 10 per cent. per annum interest on a stock which, in the instance of Consols, pays them only 3 per cent., and in that of Spanish pays them actually nothing; still, when viewed solely in the light of speculations, the rise in either security, if it take place, will more than compensate for this apparent inconsistency.

The proceedings of the Stock Exchange are regulated by a Committee consisting of 30 members, who are elected from the general body every Lady-day, each member having one vote. They take care that the rules and regulations enacted for the admission and expulsion of members, and for the set tlement of disputes, are properly observed, and although some of their laws are at variance with the established laws of the country, they are not so strictly enforced by the Committee as to bring them into collision with the Courts of Justice; they fully answer the purpose for which they were intended, and all members previously to their admission subscribe to the conditions there laid down.

All members, on being admitted, are obliged to produce three securities of 300*l.* each, for the first two years of their probation, which 900*l.* becomes forfeited in the event of their failure, and goes to the creditors of the new member. In consequence of their being interdicted from engaging in any other business, on becoming members of the Stock Exchange, they are no longer subject to the bankrupt laws, and therefore, in the event of failure, all their assets are secured to the creditors *in* the house, to the exclusion of those *out* of it. This rule is enforced in order to secure the house from the loss which would ensue to its members, were the legal creditors (if any existed) to step in and lay claim to their property.

The tendency of the above regulation is to insure honesty amongst its members. Should any principal have reason to complain, he has only to appeal to the Committee, who instantly take cognizance of the matter, and subject it to the strictest investigation. Defaulters whose conduct has been dishonourable are punished, and an example is made of them by publicly affixing their names in the house on what is termed the "*black board*;" this is the heaviest disgrace which a member can possibly experience. Such is the manner in which the business of the Stock Exchange is carried on and transacted.

EASTERN COUNTIES RAILWAY.

The works have been steadily pushed forward whenever the weather has been sufficiently settled to permit an extra number of men to be placed on the line. Of course, now winter may be fairly said to have set in, it cannot be expected that any very great progress will be made until the ope nweather of spring enables the contractors to get their men steadily at work. What has been accomplished during the last few months has, however, completely redeemed the pledge of the Directors to get the line so forward as to be able to promise the shareholders that its completion should be within a much earlier period than what report had fixed. With respect to the labourers, who are, from the very nature of their occupation—thrown periodically out of work—they have hitherto conducted themselves very well, and it is due to the Directors to say, that they have done every thing to ensure good order among them, and to relieve as much as possible their temporary difficulties. On Saturday, a very exaggerated report of an accident at Kelveden was prevalent at Colchester. It was currently said that ten men had been killed at the bridge now in course of erection over the Blackwater, but on inquiry we find that the accident was even below, in importance, the reports that have appeared in contemporary journals. The facts are these:—The sub-contractor, notwithstanding express directions from the engineers, chose to disregard the indispensable precaution of loading both arches with a proportionate weight while carrying the wings of the centre arch. The consequence of this neglect was what any scientific man would have predicted—the arch fell in, and the whole of the men, including the sub-contractor, were involved in the rubbish. Fortunately, no one sustained serious injury. Five of the men resumed work, and the other five will be allowed in a short period to do the same. It is expected that the contractors will, within three or four weeks, commence operations at Colchester, and when they are fairly at work we hope the Corporation will see the necessity of meeting the judicious exertions of the Directors in a fairer and more liberal spirit than they hitherto have evinced. We hear that all the necessary proceedings for a railway from Kelvedon to Bury are sufficiently in a state of forwardness to place the projectors in such a situation that they can apply to Parliament for the necessary power the next session—a step of which they intend shortly to give the requisite notices. While we are on the subject of this railway, we may just advert to the activity of the railway constables, and to the little assistance and co-operation the rural police appear disposed to afford them. The Railway Directors, with a view of ensuring the further security of the residents along the line, from evil-disposed persons, have given orders to their constables not to confine their patrol to the line, but to extend their surveillance on both sides of it to some distance. The railway constables have acted upon these instructions, and last week one of them succeeded in taking into custody a man who had been stealing wheat. We have been told that the rural police, with a petty jealousy, which reflects, if true, great discredit on them, attempted to make out that the capture was illegal, on the ground that the railway constables were not authorised to act in the capacity of police. If the attempt was made, it completely failed, as the case was too clear to admit of doubt. The whole proceeding reflects great credit on the vigilance of the constables, and may serve in addition, to show that much of that depredation which farmers have recently complained of, may have been the work of persons in no way connected with the railway as labourers.—*Essex Mercury.*

South-Eastern Railway.—The excavations at Chart Hill, near Ashford, were commenced on Wednesday last. The works on this portion of the line, which are comparatively light, will be pushed forward vigorously for the purpose of opening the line to Ashford at the time promised by the engineer, Mr. Cubitt. The Warren and Folkestone contracts for cutting are both finished, and considerably more than half the labour is completed at the Shakspeare works. Two more falls of the Cliff have lately taken place without in the least injuring the works in progress; and we learn that all the dangerous portions of the Cliff, for the removal of which preparations had been commenced, have now fallen (with one exception at Round Down), and left so firm a facing as to prevent any fear of further danger.—*Dover Telegraph.*

RAILWAY TRAVELLING ARRANGEMENTS.

To the Editor of the Railway Times.

SIR,—In your last week's number, a correspondent, who subscribes himself a "Railway Proprietor," offers several suggestions relative to Railway Management, which are well worth the consideration of those to whom they are addressed. Amongst others, he says, "that no means of communication have yet been adopted between the guard and engine-driver during the progress of a train," and he proposes a bell for that purpose. I should however propose, as far preferable, the boatswain's whistle, which can be heard through the war of the storm, with sufficient distinctness to regulate the movements of a ship, and might therefore be applied with equal success to govern and control the train on a railway. Indeed, were it not for the mischief which might at times result from it, it would be well to provide every carriage with one, so that in case of anything happening to that particular part of the train, passengers themselves might make the engineman aware of it. The guard, however, ought by all means to be provided with one, which would at all times enable him instantly to arrest the attention of the engineman, and by means of a few signals made by the arms, give such instructions as the circumstances would require.

On another subject of equal, or, in my estimation, greater importance, your correspondent makes some observations with which I quite agree; I allude to that part of his communication which has reference to the number of timid, or rather prudent, persons to whom, so far from its being desirable, it is exceedingly disagreeable to be whirled along at the rate of 20 or 30 miles an hour; and he suggests that a train for their especial accommodation should be provided which should not travel at a greater rate than 15 or 16 miles an hour; but it would be far safer, cheaper, and infinitely more comfortable both to the passengers and proprietory, were the 15 or 16 miles an hour the *rule*, and the 20 or 30 the *exception*. With the present rate of travelling the timid and prudent are kept from the railway entirely, whereas by reducing the speed to 15 or 16 miles an hour they would at once avail themselves of it, and a very considerable accession would be made to the numbers of travellers by railway without the loss of one of those who have, I suppose, been born a little behind time, and have never since been able to overtake themselves. Had no greater speed than 15 miles an hour ever been found practicable, railways would have been much more profitable than they are now likely to be, and travelling by them would have been much cheaper and far more agreeable, and free from terror than at present. The public, too, would have been equally as well satisfied as they are now, perhaps more so, as I have more than once heard people, *apparently* in their senses, express a wish that they could always travel at the rate of 60 miles an hour!

I am, Sir, yours very respectfully,

A RAILWAY ENGINEER.

MANCHESTER AND LEEDS RAILWAY.

To the Editor of the Railway Times.

SIR,—I am induced, for the sake of information, to inquire, through the medium of your journal, from the Directors or shareholders of the Company, whether the question of the desireableness, has ever been entertained, of connecting the Leeds and Birmingham Railways by means of an extension of the former line, and bringing its terminus into the station which is now being formed by the Birmingham Company for their railway in Store-street. Two very important objects would be obtained by the formation of the junction, viz., a great saving of expenditure to the shareholders of the Leeds Company, and a manifest improvement to the town of Manchester. By bringing their terminus into the Store-street station, the Leeds Company would save the large outlay of capital which must be expended in working a separate one for themselves, and would moreover bring their line into the *best*—because the most central—station which can be found in Manchester.

The terminus of a railway has always been found the most costly part of the undertaking. It is the saving of such expenditure which has made the Grand Junction Railway the cheapest in the kingdom; and there does not appear to be any satisfactory reason why the Leeds Railway Company should not follow so good an example.

With regard to the second point, it is not necessary for me to say much. Those of your readers who are acquainted with the town, will at once admit that the station in Store-street is much superior to any which can be found at Hunt's Bank. And it is sufficiently evident, that it would conduce much to the convenience and facilities of travelling, to bring the different railways, as far as possible, to one central position.

Considering the many advantages which the Store street station would possess, it is difficult to conceive how it could escape the observation of the Directors of the Leeds Railway, and how they could fail to bring it under the consideration of their proprietors. It has indeed been said, that some of the Directors are largely interested in land over which the extension line to Hunt's Bank must pass, or what is worse, that they have been purchasing land, &c., with a fore-knowledge that the extension of their railway was determined upon by themselves; that they have been serving their "personal" interests at the expense of the Company; and that they will be unwilling to entertain the consideration of the *advantages* which would result to the shareholders, from connecting their line with the Birmingham Railway, because they might have to forego the *advantages* which will accrue to themselves from their speculations in land, &c., &c. I trust however there is no foundation for a report so seriously affecting their character as men of integrity and honour. The public will feel loath to entertain an unfavourable opinion of individuals—who have hitherto conducted their undertaking with so much spirit and credit to themselves. It is because such a report has had a more general circulation than the Directors may be themselves aware of, that I notice it. And I conceive that I am doing a service to the gentlemen by bringing it forward; in order that they may have the opportunity of disclaiming publicly any such unworthy motives.

I am, Sir, your obedient servant,

G.

Manchester December 15, 1841.

MANCHESTER AND LEEDS RAILWAY.

To the Editor of the Railway Times.

SIR,—The amount of capital upon which a dividend will have to be paid for the current half-year is not likely to be less than 2,860,000*l.*—interest upon which sum at 5 per cent. is 71,500*l.* I find the receipts for the half year are likely to amount to 115,000*l.*; deduct 40 per cent. working expences, 46,000*l.*, and we have 69,000*l.* left for dividend. I say nothing here of the usual sum put aside for depreciation of stock, and that paid for keeping the line in repair; but these two sums are not likely to amount to less than 40,000*l.* per annum, or 20,000*l.* for the half year. Where then is the 3 per cent. for the half year to come from, being at the rate of 6 per annum? This may explain to your correspondent "P." why the shares are so low. Another matter in which the public are concerned, and upon which they ought to have correct information given them, is the one concerning the new quarter shares just issued. They are to bear interest at 10 per cent. for five years, a call of 2*l.* has been paid upon them. Now, it is well known here that the Directors have no intention of calling again upon these shares, and for the best of reasons, they can borrow the remaider of the money at 5 per cent., or even less. I am told that the brokers here and in Liverpool have had a pretty picking out of these shares, since they were issued, by misrepresentation to their friends, that the Directors intended calling the whole of the money up periodically; the consequence is, that some hundreds, if not thousands, of the shares have been sold as high as 35s. to 42s. 6d. premium. Now all the interest that a holder will be entitled to at the expiration of five years is only 20s. per share, to say nothing that the probability is that the line will then barely pay five per cent. Among well-informed people it is considered that the resources of this line are nearly developed. The average receipts per week I find will be about 4,400*l.* for the half-year; any one who is sanguine enough to expect the next half year will be as great will be grievously disappointed. In March the Manchester and Birmingham line opens, when a portion of the traffic that now passes on the Leeds line will be abstracted. In three or four years, we shall have the Manchester and Sheffield line open with a branch from Pershore to the North Midland Railway near Barnsley when the distance to Leeds and the north east will be shortened eight miles; after which the Leeds line will have to depend mainly on the local traffic.

I am, Sir, your obedient servant,

WILLIAM WHITE.

Salford, December 15, 1841.

LIVERPOOL AND MANCHESTER AND MANCHESTER AND LEEDS RAILWAYS.

To the Editor of the Railway Times.

SIR,—I have read with much interest your own and correspondent's remarks on the Liverpool and Manchester *versus* Leeds and Manchester Railway respecting the junction of the two lines, both as it regards the profit or loss of the shareholders, and the public convenience. As one concerned in both these respects, perhaps you will allow me to say, that whether the hinderance to this junction lies with grave men of business or with others, I only wish they felt by experience, and that daily, the annoyance, expense, and delay of being removed, bag and baggage, from one station to the other by omnibus, cab, &c., and then they would understand that part of the question better. If, as your correspondents say, the "stick" is with a noble proprietor in the Liverpool line, the representative of this division of the county in parliament (to place him in which position the writer contributed by his vote) his constituents should look for better things, even if it were at the expense of his own interest; but really it appears to me that such loss is only imaginary. You have well exposed the pretext that the traffic on the canal did not justify the statement made—by whom? why, by the very parties most interested in opposing the junction. How can it be known, excepting by actual experiment, what the traffic would be when *connected?* Look at the saving in time, the difference in miles by canal and by railway. So well satisfied am I that the union traffic would not only equal but *exceed* any estimates ever represented to the Liverpool Company, that I would willingly be a party as proprietor to the Leeds Directors offering to *guarantee* the Liverpool Company from loss if after one year's fair trial the proceeds did not come up to the amount originally represented, on condition of course that the latter Company would hand over the excess to the Leeds Company. However, if *self-interested* fears are to predominate, then the supposed party, as a wise man, has to make a choice of evils, for the Leeds Directors being about to commence operations for joining the Mersey and Irwell Company at Manchester, and the latter company meeting them both there and at this port with similar preparations, then comes the question—shall I allow a junction with a rival navigation company, in whom I have no interest, or join a company in which I have such a preponderating influence as to decide whether this junction shall or shall not take place? I hope that public spirit and public benefit will still prevail—that the passenger traffic, which seems to be lost sight of, will be considered—and that good people are of more value than to be passed about as so many bags of cotton or bales of wool.

I am, Sir, your's respectfully,

A LEEDS PROPRIETOR.

Liverpool, 15th December, 1841.

BRIGHTON, CROYDON, AND DOVER RAILWAYS

To the Editor of the Railway Times.

SIR,—You have done the railway public good service, by giving in your valuable journal the whole of the correspondence which took place in the autumn of last year, between the Croydon and Greenwich Companies; also the whole of Mr. Wilkinson's pamphlet (the respectable and intelligent Chairman of the Croydon Board of Directors), together with various effusions from other hands—all of more or less merit bearing on the toll question; and although they have reference more especially to the railways terminating at London Bridge, yet I fully believe that, in every future case of dispute between a toll-paying and a toll-receiving Company, your pages will be examined, as recording the just standard and right principles by which contending parties may aim at truth.

It may be said that I have advanced and raised a paradox, the correspondence *pro* and *con*, though long and voluminous enough, having ended in smoke. Nothing has been done; things remain precisely in the same position as when they began to agitate the question. In one sense this is true; but this only shows the blindness or perversity of one party—in the estimation of all right-minded men. That a different result has not been come to is no fault of the correspondence; others may, and I firmly believe will, come to very different conclusions, more especially when it is recorded in the same periodical that depreciation of property and ruin followed close upon the heels of every letter which issued from the office of the toll-receiving Company. However, without indulging in reflections which are useless, and only painful to think of, my object in writing this letter is to draw the attention of my fellow sufferers in the above lines of railway to a very important point. Let us bestir ourselves, and that without loss of time, to incorporate the three Companies into the singular number, and then all our real difficulties vanish at once—then, a fig for the Greenwich obstructions, and their Management to. Let us do this, and then our property will at once assume that character and standing in the market, which will be as satisfactory to our feelings and wishes as we could desire.

This subject was discussed years ago by several correspondents at some length in the pages of the *Railway Times*, and its desirableness universally approved of; but somehow the matter dropped to the ground. I never heard but of one valid reason for its failure, and this was it was said, the proposition was premature. Granted that this was a sufficient reason *then*, it can no longer be pleaded as an excuse. The Croydon is finished and paid for; the Brighton also. The Dover is so far advanced that a very near approximation of cost may be come to. But supposing that the fitting time has not arrived for incorporating the Dover with the Brighton, or *vice versa*. Yet this is no reason why these Companies should not unite themselves with the Croydon, as a preparatory step to uniting themselves. I may here observe, that the value of the shares in both Companies is at about the same discount, all things considered, therefore in the estimation of the public, supposing they were to unite themselves to-morrow, neither would suffer loss.

At the last half-yearly meetings of the Brighton and Croydon Companies, some faint attempts were made to bring the parties together. But little was said at the Brighton meeting. At the Croydon, much was said but nothing done. The fact is, a public meeting is the worst of all possible places for doing anything but the common routine business of the day. In a matter of so much importance as the uniting of these three Companies, in which millions of money are invested, and the weal and woe of thousands of families at stake, one may well excuse the fears and apprehensions of well-meaning men, when a subject of so much moment is for the first time brought before them. There was nothing, however, passed at either meeting showing a disinclination for union.

It may be asked how I would proceed to bring about a union of these concerns, and by which the real value and efficiency of the whole would be so much enhanced. I will proceed to show: Let the Brighton and Dover Companies in the first place make the Croydon Company a *bona fide* substantial offer for their line. Not a timid hole-and-corner advance, but an honest, open, candid, offer: one that can be brought before the proprietors in a tangible form, for their deliberation. This is, undoubtedly, the first step to be taken.

There have been various opinions expressed about the value of the Croydon shares; so that without arrogance or laying myself open to the scoffs or sneers of those who may have an object in raising or depreciating their value, I may be permitted for the purpose of illustrating my proposition, to say that there cannot be a doubt about their value being somewhere between 15*l.* and 30*l.* per share. Suppose we take the medium and adopt it as the basis of the intended agreement, it would stand thus—33,000 shares of 22*l.* 10s. each, the Brighton and Dover taking upon them the bonded debt now owing by the Croydon Company. I believe it is a fact which no one will attempt to deny, that the Croydon Company would ultimately receive more than this for tollage. To provide against this additional value, the Brighton and Dover might very safely guarantee them 5 per cent. upon this amount which would secure the Croydon proprietors 1*l.* 2s. 6d. per share per annum, or 37,122*l.* 5s. gross, a sum about equal to their present earnings. They might also offer them 2s. 6d. per share additional at the end of five years; in ten years another advance, provided the receipts were paying the united Company's increased dividends. This is the only outline which I can give at the present moment, but I wish it to be distinctly understood that it is nothing more than an idea thrown out to be improved upon.

Having agreed with the Croydon the amalgamation of the Dover and Brighton might without material loss be postponed for a time, until the former was nearer completion, but the desirableness, nay the urgent necessity, for agreeing with the Croydon is too self-evident to require further comment. Can anything be more ruinous to the shareholders in the Croydon and Brighton lines, than the present system of conducting the traffic? Running the ground twice over when one engine would take double the amount of traffic passing along the line. Keeping up two complete and expensive establishments when a very little addition to either would be equally efficient!!! Now I will for the present take my leave, trusting some other and abler hands will take up the sketch which I have attempted to draw and bring it to perfection, and in the hope that the Managers of these Companies will set about reducing the plural into the singular number, and doubling our property in the estimation of ourselves and the public in general,

I am, Sir, your obedient servant,

A PRESENT SUFFERER IN THE PLURAL NUMBER.

THE TOLL QUESTION.

To the Editor of the Railway Times.

SIR,—The rapid spread of railways throughout England and Scotland, and the many instances which must in consequence necessarily occur, of the junction of one line of railway with another, render it highly important that the question of tollage should be settled upon sound and well defined principles. Unless this be speedily done, the most serious disputes will arise (as in the case of the Croydon and Greenwich Boards) between Railway Directors, and the results will be highly prejudicial to the interests of shareholders. It is of essential importance to the ultimate success of railways generally, that a friendly spirit should exist between the various Boards of Management; and, that so far from manifesting an *undue* desire to promote their own immediate interests, and indulging in unwise competitions with each other, they should rather co-operate in increasing the facilities of communication between the various parts of this great empire, and in promoting the convenience and safety of the travelling public.

The primary object of every Railway Management should be to arrange the scale of fares in such a manner as will produce the largest profitable amount of gross receipts. It would be injudicious in the extreme to determine the rate of fares by the cost of the line of road, because, were this practice to obtain, it would have the effect of virtually closing all the more expensive lines as far as the majority of the people is concerned. This principle is practically admitted by all parties, and of its justice no one can entertain any reasonable doubt. Here then we have sufficient data upon which to determine the principles by which the rates of tollage ought to be regulated. As tolls are strictly analogous in their nature to fares, it is obvious that they ought to be framed upon the same principles; that is, they should have no reference to the original cost of the line, but be charged at a rate which is calculated to produce the largest revenue. If, for instance, the Directors of the Greenwich Railway by increasing their present toll, could still retain such a portion of the Croydon traffic as would produce a larger sum than they are now receiving from this source, it would be their duty, in justice to their shareholders, to do so. If, on the contrary, by making a judicious reduction of the present charges, they could superinduce so much additional traffic as would increase the total amount of their receipts for tollage, they are equally bound to make this reduction. In order to show my meaning still more clearly, I will suppose that the Greenwich Company carries at the present time, 2,000 Croydon passengers per day, at a uniform toll of 3d. each, which would yield 25*l.* Now, if by increasing the toll to 4d., they could still retain 1620 passengers, which would produce 27*l.*, it would be evidently their interest to do so. But if, by reducing the toll to 2d., they could obtain 4,200 passengers, which would give 35*l.* as the amount of tollage, they must be exceedingly indifferent to their own interests if they did not immediately make the reduction. I would not be understood as taking any part in the dispute pending between the Greenwich and Croydon Directors, these remarks being merely made with a view to define the principles upon which I consider all charges for toll ought to be based.

It is admitted on all hands that the public determine the degree of support which they give to any railway, by its convenience, speed, safety, and fares, and not by the amount of capital expended in its construction. If then, the Directors of the more expensive lines were to adopt the latter standard in arranging their scale of fares, they need expect but little support from the public. Accordingly they wisely endeavour to fix the charges at such a rate as will yield the largest amount of profitable traffic, avoiding the evil of very excessive charges on the one hand, and of very low fares on the other. Then, as it is the interest of Directors to act upon this principle, (which it must be borne in mind is altogether independent of the outlay incurred in making), in regard to the *passengers* who travel on their several lines, I see no just reason why they should depart from it in deciding the rate of toll to be paid by any *Company* which may be necessitated to use their lines. I will assume by way of illustration, that the toll charged by the Greenwich to the Croydon Company is regulated by the cost of the former railway. It should be remembered that the public travelling on these joint lines will only pay according to the distance, irrespective of the cost of either road. The Croydon Company would therefore have to pay a *high tollage*, proportionate to the *cost* of the line, while they would only be able to charge a *moderate* fare, proportionate to the *distance*. This plan is therefore obviously unjust, and must eventually be entirely repudiated.

From these considerations, it would appear that in determining both fares and tolls, Directors should endeavour to fix them at such a rate as will induce the greatest amount of profitable traffic, setting entirely aside all considerations of the cost of con-

Digitized by Google

struction. The interest of all joint lines are inseparably connected, and any arrangement which would benefit the one, would, if judiciously carried out, also tend to benefit the other.

I am, Sir, your obedient servant,

E. D. C.

London, Dec. 20th, 1841.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

Sir,—Having seen many statements in your columns from correspondents, so various in result with regard to the dividend and prospects of the Great Western Railway, it appears to me that it would indeed be not a little puzzling to draw any accurate conclusion from such extremes. I have endeavoured by taking hold of known data to put a few figures together so as to come to a probable result for the current half-year, and first half-year of 1842.

These data I may thus state:—

Share capital, being amount called		£3,025,000
Amount expended by last report to the 30th June		5,877,120
Amount estimated by last report, as required June 30, 1841.		6,300,000 Dec. 31, 1841.
Leaving borrowed capital....	£2,852,120 ..	£3,275,000
Being interest at 5 per cent..	71,300 ..	81,850

Or 71,300*l.* for interest in the current half-year, and 83,750*l.* for next half-year, and permanently unless increased again by additional expenditure.

Tolls to Cheltenham.....	£17,000	
" Bristol and Exeter.....	34,000	
An allowance for head money, say ..	9,000	
		£59,000

Being 30,000*l.* half-year tollage to branch lines.

The traffic may be thus stated—

	1841.
July, August, September, October, and November, as published	£289,600
December, say	45,000
Gross	334,600
Expenses, say 40 per cent.	133,600
Net	£201,000
Tolls as above £30,000	
Interest ditto..... 71,100	
	101,300
Available for dividends	99,700
Say 3 per cent.....	90,750
	£6,950

1842. Weeks.	
January and Feb., 8 3-7th at 10,000 per week	£84,500
March, 4 3-7th at 11,500	51,000
April, 4 2-7th at 12,000	51,500
May, 4 3-7th at 13,000	58,000
June, 4 2-7th at 14,000	60,000
Gross.....	305,000
Expenses 40 per cent. say.....	122,000
Net.....	£183,000
Tolls as above 30,000	
Interest ditto 81,850	
	111,850
	£71,150
Available for dividend, say 2 per cent.....	60,500
	£11,650

Balance 31st Dec., 1841....	£6,950
Ditto 30th June, 1842	11,650
Ditto remaining last report	1,004
	£18,604

Being 3 per cent. for current half-year, and 2 per cent. for ensuing half-year, and a balance which would admit a further division of one-half per cent., but in that case leave only an undivided surplus of 3,300*l.* and no depreciation fund, an item for which the London and Birmingham last half-year placed aside a sum not less than 14,500*l.*, an equivalent to which would just about require the whole 18,604*l.* (the undivided surplus over the dividend of 5 per cent. on the *current year*,) to be placed to "depreciation account," for *half-year* ending 30th June, 1842; the Western requiring stock to work 168 miles against 112½ length of Birmingham. And if the principle be legitimate, which has been admitted on all the best conducted lines, and seems unquestionable in point of reason, it seems high time such an account should be opened on the Great Western, when it is considered that the whole line will by the summer of 1842 have been open a year, half the line for two years, and a considerable part for more than four years.

I have adopted the mode which all railway calculators delight to follow. I may now examine the details. The statements of interest and tolls are facts, the amount of traffic of this half-year is now almost certain and cannot err above 1 or 2000*l.* For the spring half-year, I give the plan upon which I have come to an estimate. The half-year is shorter by three days, besides being less favourable for traffic, and in giving a decrease of less than 30,000*l.* I have not exceeded the decrease on the Birmingham, and come much within the decrease on the South-Western, which was 15 per cent. in the period ending June, 1841, over the autumnal six months of 1840.

The great mystery as yet remains in the working expenses of the Great Western, which I have fixed at a rate I believe the most sanguine will hardly deny, and which of my assumed data I fear is the least likely to be realised.

A writer in your journal, "S. P." has recently tried to fix this item at 2,600*l.* per mile, as the rate on the Birmingham. I am by no means prepared to deny that this is not in some measure a legitimate mode of estimating expenditure, but then, it can only be so far as regards the expenses not appertaining to the locomotive department, such as maintenance, police, salaries, &c. and which could they be accurately ascertained, might be deducted from the gross receipts on the same principle as a fixed toll. Other expenses, as coke, oils, repairs of carriages and engines, and their depreciation, Government duty, &c., can have no reference to length of railway, but more properly to aggregate of miles run over it; and I contend therefore, that the only legitimate principle of estimating what I call locomotive expenses is by ascertaining the expense of carrying a single passenger per mile, *and calculating the per centage upon rate of fare.* Taking this as the test, I find upon examination of fare tables that the London and Birmingham Company's charge on their line is considerably higher; thus, 30s. for 112½ miles, or 3¼d., second class, 20s., 2¼d.; Great Western, 38s. and 26s. 6d. respectively, for 151 miles, or just 3d. and 2d., no inconsiderable difference when admitted as just 5 per cent., which is of course all loss on lower fare. This is apparent, for presuming all expenses to be the same, they will come to the same amount in carrying 100,000*l.* on the Great Western as 105,000*l.* on the Birmingham, nor does the matter improve with Westerns on shorter journeys, for we find fares 4s. 6d. and 2s. 6d. to Slough, a distance of 18 miles.

Nor can I perceive any item of expenditure in which the Great Western is likely to economise so as to compensate for this lower rate of fares; on the contrary, I find the article locomotive power 11¼ per cent. of the London and Birmingham Company, and 16 per cent. of expenses in last Report of the Great Western—a difference which may be reduced, but probably never equalised within 3 per cent.—coke being not only much dearer on the Great Western line, but also because a larger quantity must be consumed, from the additional weight and greater size of carriages and locomotives; as well as the fact that, from the number of short passengers, the Great Western must have a greater number of carriages to accommodate the same number of passengers. It may be also noted, that the Great Western runs many more trains per day, which is prejudicial to economy in fuel as well as requiring a greater quantity of stock to work the line, and greater depreciation by wear and tear.

Examining the South Western in comparison with Great Western, I find several of the data bearing very accurate comparison; but I confine myself to the rate of fare, which is the same exactly. I find the working expenses on the half year ending December, 1840, exceeded 42 per cent., and on half year ending June, 49 per cent., but this was evidently under the mark, as it was plainly developed at the meeting that a considerable part of the Government duty was withheld, and it was therefore but a fair presumption that where this was discovered in the only item which could be accurately checked, there was the same process of clipping and paring off other other details, when there remained but 500*l.* surplus, and 8,000*l.* of previous surplus was required to maintain the dividend, and no depreciation fund formed.

I am from these comparisons disposed to think that the Great Western expenses will exceed 40 per cent., and though less than the South Western perhaps in the spring half year, will be nearer 42 per cent. on autumn, and 44 or 45 per cent. on the spring receipts, a difference which would fully require the 18,600*l.* of surplus, and limit the dividends to 3 per cent. and 2 per cent., without any depreciation fund.

A great deal has been written upon the future developement of Great Western traffic; but I cannot agree with the sanguine, who again compare it with Birmingham. The latter has at several times had much more powerful feeders than can be looked for on the Western. I may mention the G. N. of E. and Hull and Selby, both of which must have diverted many passengers, who formerly went by coasting steamers from Hull and the northern parts of the island, as well as affording increased facilities to large mercantile cities. The Great Western has now no large town to approach, and will pass through a thinly-peopled district, while it is about to lose considerable traffic from a change of packet station from Falmouth.

Nor can it be said that it suffers from depression of trade, the population on its length being scarcely mercantile, nor likely to become so unless by a gradual process. I ought further to have noticed, that in carriage of goods at present their expenses will exceed those of the Birmingham Company, as the latter only find the locomotive power, whilst the Great Western are themselves carriers.

As to its prospects in future, it cannot be quite overlooked that as yet this railway is unfinished, and at all events has no London station; and that if able to pay more than 5 per cent. after 1842, that increased dividend must be distributed over greater share capital.

Yours, &c.,

S. H. G.

MR. SAMUEL HALL'S LOCOMOTIVE IMPROVEMENTS.

To the Editor of the Railway Times.

Sir,—Having been requested by Mr. Hall to state my opinion in reference to the consumption of the smoke of coal used in the *Bee* engine, as tried upon the Midland Counties' Railway on the 3rd instant, I beg to say, that the working of Mr. Hall's apparatus upon the same was very complete, not leaving the *least tinge* of smoke upon the steam from the chimney. With suitable coal it bids fair to become of great importance to railway proprietors. How far the steam draft when standing at a station may be approved of I leave the public to decide.*

I am, Sir, your obedient servant,

JOHN NICHOLSON.

Leicester and Swannington Railway Office,
December 20th, 1841.

Money left in Railway Carriages.—In the course of last week two instances occurred in which the sums of 7,000*l.* and 6,000*l.* were left behind in the Brighton Railway train by passengers. The money was carefully secured and faithfully restored to the owners.—*Sussex Express.*

—o—

The late Secretary of the Brighton Railway.—No trace has been yet obtained of Mr. Wood, the late Secretary to the London and Brighton Railway Company, although some old and experienced officers are on the look-out for him. His defalcations to the Company are, as already stated, small; but we regret to say that several individuals, of whom he borrowed money on the very eve of his flight, are among the sufferers by his conduct.—*Brighton Gazette.*

* As the waste steam when issuing from the safety valve makes as much noise as when passed through the chimney, we are inclined to think that there will not be found to be an objection.—Ed. R.T.

2. *Minus* toll to London and Birmingham 118*l.* 16s. 4d.

3. Main line, 53 miles; Tewkesbury branch, 2.—Total length, 55 miles.

4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone.

8. Receipts include the Northern and Eastern toll, &c. The dividend is from the time of opening.

10. The part between Glasgow and Paisley was made at the joint expense of the Glasgow Paisley and Greenock, and Glasgow Paisley and Ayr Companies, but each Company's receipts in respect of that part are now merged in the general returns of each.

11. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the L. and M. and C. and C. lines, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 134⅔ (83⅓+21+31.)

13. The 5,231,327*l.* 9s. 10d. is the amount actually raised according to latest balance-sheet. The receipts include those derived from the Cheltenham and Exeter branches; the former opened for 18 miles, and the latter for 33. The divisor employed to ascertain the daily receipts per mile is therefore 169½ (118½+18+33.)

15. The 35*l.* 5s. 8d. from goods, &c. is for toll only.

16. Ten per cent. is the maximum dividend allowed by the Company's Act.

17. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. On the quarter shares the dividend is at the rate of 42½ per cent. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

18. The returns are for six days only.

19. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table.

20. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company.

21. Capital of 993,300*l.* includes new capital for widening the line, &c. The dividend mentioned does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table is exclusive of Brighton and Croydon toll. The returns are for six days only.

22. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, an i is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount.

23. Including Toll, &c., from Sheffield Company.

24. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

25. The 3,700*l.* 10s 5d. are the receipts after deducting omnibus charges, and payments to other Companies. The dividend is from the time of opening.

26. The receipts for goods, &c. include, carriages, 24*l.* 8s. 0d.; horses, 93*l.* 3s. 0d.; dogs, 0*l.* 17s. 0d.; parcels, 215*l.* 0s. 8d.; cattle, 34*l.* 12s. 0d.; corn, 13*l.* 15s. 8d.; heavy goods, 400*l.* 13s. 0d.; coal, 147*l.* 16s. 5d.—Total, 936*l.* 5s. 4d. The dividend is from the time of opening.

28. The details of the receipts are as follows:—Passengers, 1,972*l.* 1s. 10½d.; parcels, carriages, horses, and mails, 446*l.* 10s. 8⅔d.; merchandise, 1,025*l.* 16s. 0d.; minerals, 261*l.* 8s. 5d.; cattle, 32*l.* 7s. 8½d.—Total, 3,738*l.* 4s. 8½d.; including North Midland proportion of Manchester and Leeds traffic, amounting to 98*l.* 16s. 5½d. The dividend includes a sum of 31,786*l.* earned previous to the last half-year.

29. The receipts are after deduction of L. and M. toll.

30. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 26 miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

31. The capital of 533,000*l.* includes that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).

34. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

A Shareholder *(in the Edinburgh and Glasgow Railway) has our best thanks. We had received previous to his communication a copy of the documents from another quarter.*

X.—*We shall be glad to give the list, if our correspondent can supply us with it.*

We cannot enter into a discussion of Mr. George Walter's claims on the Greenwich Railway Company, nor does our article of last week render it necessary that we should, as we pronounced no opinion on either side.

An English Shareholder —*We think the Directors are quite right in not forcing on the opening of the line at present. With respect to the anti-Sunday travelling agitation, we are entirely of our correspondent's opinion, and think the proprietors should speak out decidedly on the subject.*

A Subscriber *(Greenock).—The suggestion shall not be lost sight of.*

Errata *in Mr. Hood's letter on Four wheeled Engines—Page 1304, 2nd column, the divisor ·0283 is misprinted for ·02083. Near the conclusion of the letter "one of two" should be "one or two;" and part of the quotation at the conclusion was omitted; it should have been—*

—— Fungar vice cotis, acutum
Reddere quæ ferrum valet, exsors ipsa secandi.

A Sheffield Carrier.—*In the letter inserted under this signature last Saturday, there was an error: Page 1307, 2nd column, 43rd line, "reduction of 5 per cent." should have been "reduction of 15 per cent."*

Birmingham and Gloucester Railway—American Engines.—*The letter of* Another Shareholder, *next week.*

Four-wheeled and Six-wheeled Engines —*The letters of Mr. Adams, and other correspondents, shall be given in our next number.*

Being obliged to go to press several hours earlier than usual, in consequence of Christmas day, we have to apologise for not noticing several communications received at a late period in the week. Due attention shall be given to them in our next publication.

THE RAILWAY TIMES.

SATURDAY, DECEMBER 25, 1841.

In concluding the volume of the *Railway Times* for 1841, it is satisfactory to find that during the year the system which it is our duty to uphold has been surely, if slowly, progressing. That from its very commencement it has been compelled to run the gauntlet through a succession of trials and difficulties, such as perhaps have never been equalled, must be clear even to the most casual observer; and that it has nevertheless escaped from the midst of them, coming off, comparatively speaking, almost unscathed, is a strong proof of its having been originally founded on a sound, true, and immoveable principle. Neither the very foolish extravagance, nor the discreditable inaccuracy of Railway Engineers—the lamentable mismanagement of too many Directors and officials—the strong prejudices of the public—the unaccountable enmity of a large portion of the press—the determined opposition of Canal Proprietors and Turnpike Trustees—the extortion of the landed interest—the jealousy of the nobility and gentry—the questionable conduct of the Legislature and Government—the trickery and jobbing on the Stock Exchange—the American monetary difficulties—the troubles and revolt in Canada—the threat of war at one time with France, and afterwards with the United States—the war in Affghanistan—the Syrian war, and then that with China—the difficulty of raising 60 millions of money in the face of the bad harvest, import of corn, export of gold to the extent of 5½ millions, and consequent withdrawal of the circulating medium in 1838—again in 1839 with *a second* export of 5½ millions of bullion—further in 1840 with *a third* export of 5½ millions—and lastly in 1841, with *a fourth* large abstraction of bullion from the kingdom—no; not all these "untoward events," though assailing it on every side, have had the effect of putting a stop to, or even greatly retarding the developement of, the system. On the contrary nearly every one of the lines to which Parliament was induced to grant its tardy sanction, is—and this, too, in spite of many confident predictions to the contrary—either altogether completed and in active operation, or very soon will be. A foundation has in all human probability been laid of a state of prosperity for these realms, such as it is yet impossible fully to contemplate or fairly to appreciate. The great towns and districts of the kingdom have virtually been moved forward, and drawn so much nearer each other, by this new and most wonderful mode of locomotion, that they may be said, for all the purposes of communication, to be united, concentrated as it were in the immediate neighbourhood of London, thus greatly stimulating the energies, and adding considerably to the power of this highly-favoured nation! Lastly—and this is very far from being a matter of little consequence—it may at length be perceived that the long and anxiously looked for reward is about to be received by those spirited individuals who have ventured to advance, and have so long laid out almost without any interest—THE SIXTY MILLIONS OF MONEY TO ACCOMPLISH ALL THIS! The internal traffic of the country now greatly exceeds that which existed under the old system; the receipts on all the railway lines are gradually and considerably increasing, and each succeeding dividend proves greater than the preceding one. Indeed nothing but further bad harvests—bringing along with them, as these afflictions inevitably must, monetary difficulties—or grievous mismanagement on the part of Railway Directors, in refusing to carry out that necessary economy in the working expenses, called now so loudly for on all sides, can much longer prevent the Railway System from occupying that position amongst the other great interests of the State, to which every one must at length confess it is so well entitled.

We adverted last week to the course pursued by the Committee appointed to inquire respecting the formation of a railway through Cornwall, in declining to put forth the result of their investigations prior to the approaching meeting of the county. This decision we cannot but consider a most unwise one, and likely to prove prejudicial to the object which the Committee are so laudably anxious to promote. We have heard that their objection to the prior publication of their Report arises from a fear that such a step would destroy the interest of the public meeting. We think the effect would be just the reverse. Copious and satisfactory as we understand the Report is, there must still be much information which it cannot comprise, and which nothing but *viva voce* explanations can reach; and how are these to be elicited if parties go to the meeting totally unacquainted with the course the Committee have been pursuing, and with a general statement of the results or the recommendations that may be offered for the approval of the county? By having the Report in their hands previous to the day of meeting, the inhabitants would have an opportunity of carefully and dispassionately considering its details, of comparing one part of it with another, and of applying to its statements and inferences such tests as their own experience and local and commercial acquaintance with the peculiarities of the case might suggest. If further illustration or confirmation were required, then would be the time to ask for and obtain it; but in the bustle and excitement of a public meeting, it is difficult if not impossible to come to a cool and deliberate conclusion upon a matter of which the details have for the first time been laid before them in so hurried a way as the reading of a document of this kind must necessarily involve. Admitting, however, that the interest of the meeting, *as a meeting*, should be weakened, what then? It is not to demonstrations of the kind, likely to occur on such an occasion, that the Committee and the county have to trust for the construction of the railway. Speeches will of course be made, and appropriate resolutions passed, but it is subscription for shares which is required; and is it probable that any prudent man will venture upon such a step, without first having had an opportunity of examining minutely into the data upon which the hope of remuneration rests? He may be fully sensible of the advantages, local and general, which such a work would confer, but he will have little of the caution for which Cornishmen are famed, if he do not postpone his investment until he can give to the Committee's Report that attention which its importance demands. Deferring the publication of that document is therefore giving rise to further delay, whereas promptitude is in this case beyond most others essentially requisite. They have had meeting after meeting, and yet nothing has been done. What is wanted *now* is, that at the *next* meeting parties should come prepared to settle the matter either one way or the other.

With respect to the prospects of a profitable undertaking, we stated last week, on the authority of a local journal, that the estimates of traffic showed a probable return of 7 per cent. upon the capital required. We have since been favoured with further details, from which it would appear that the estimate of construction as given by a most competent authority, (Captain W. S. MOORSOM,) after a very careful survey, is under a million and a half sterling, but even were it to rise to two millions, the net dividend is likely to be at least 6 per cent. We have reason to believe that the traffic has been taken with the strictest attention to accuracy, and such being the case, we must confess that the prospect of so large a dividend has very agreeably surprised us. We had looked less for a direct pecuniary re-

Digitized by Google

turn to those who might embark in the scheme than to the vast and beneficial influence which such an undertaking must confer upon the property of the district. If both can be combined, there is no doubt of very speedy success in organizing a Company to carry the railway into effect.

The Report of the Committee commences, we understand, by detailing the steps taken by them to carry out the resolutions of the county meeting, held at Bodmin, in October, 1840; from which it would appear that Captain MOORSOM began the survey in the last week of November, and having carried it on with great energy and judgment during the remarkably inclement winter which followed, completed it within the specified time, and on the 27th of February last, submitted to the Committee his plans and sections of the proposed line. The Committee having decided that the preliminaries required by the Standing Orders of Parliament as to notices should be complied with, plans were deposited with the several clerks of the peace, and at the proper Parliamentary office. The Committee were induced to give these notices without delay, in consequence of the attempt then making to bring forward a much inferior line from Exeter to Plymouth, and with the hope that an inspection of the plans might lead to many valuable suggestions from the landowners and others respecting such deviations from the original line as might be required to meet local views and obviate objections. Cheaply as the survey has been made, it is stated that the subscription already entered into has been, from various causes, exhausted.

The Committee then proceed to eulogize the Report of Captain MOORSOM, which will be laid before the coming meeting, and state that from that gentleman's calculations it appears the cost of making a suitable railway from Exeter to Falmouth, and providing the requisite stock, would be about 1,397,290*l.*, an estimate which it is stated has been submitted to competent judges in the county, and by them pronounced "ample." The Report then proceeds to mention in what manner the traffic estimates have been taken, which estimates exhibit a revenue of 226,699*l.* per annum, including the traffic to and from Plymouth, over that part of the line which would form a common trunk. It is explained that the average rate which each passenger is estimated to pay is taken at 1¾d. per mile, whereas the more usual average is 2d. per mile. It is further stated that the amount of traffic included as that belonging to Plymouth, is not so large by nearly 25 per cent. as has been put forth in a publication authorised by the Plymouth Railway Committee.

The Report then enters into various interesting details relative to the increase of traffic which invariably follows increased facility of communication, specifying an instance in that immediate district, and then refers, as before stated, to the expected dividend of upwards of six per cent. upon a capital of two millions.

The Committee next go on to observe, that, however opinions may differ as to the general merits of the railway system, the county of Cornwall has no choice but to place itself in this respect on a footing with other districts. Already, it is forcibly argued, has Falmouth, nothwithstanding its great and, in some respects, unrivalled facilities, suffered from the opening of the South-Western Railway, and the transfer of the Halifax packets to Liverpool, and nothing but the most strenuous exertions can retain for it the advantages resulting from its being the port for the dispatch and receipt of the mails. The opinion of his Grace the Duke of WELLINGTON as to the great advantages which would result from the establishment of a military depot at Falmouth is quoted, and it is hoped that a consideration of these advantages will lead Government to grant every facility towards the construction of the proposed railway.

The benefits to all classes from such a work being carried out are then briefly alluded to, and the Committee come to a notice of the means whereby these benefits may be secured. They state that, in the present state of monetary matters, they do not feel justified in offering any recommendation of their own, but should a Company be formed in the usual way, they suggest that a local Committee might render much assistance, by applying to the landowners, merchants, and others, so as to induce them to subscribe for shares, and by endeavouring to prevail upon them to part with their land upon reasonable terms, and to take shares in the railway to the amount of compensation. The Report concludes by recommending promptitude, energy and perseverance as the watchword of the county in its endeavours to secure and confirm the immense nautical advantages resulting from its south-westerly position. The question, it is very properly represented, is not merely a local question, but one in which every individual residing westward of Exeter is more or less interested, and one therefore to which the united energies of ONE and ALL should be at once and vigorously applied.

Such, we are given to understand, is an outline of the Committee's Report. We wish they had been somewhat more definite as to the organization of a Company, but we trust that at the meeting something will be done in this way, were it only as a beginning. Much energy and perseverance will be required to carry out the preliminary details, and it is sincerely to be hoped that the Committee will be fortunate in their selection of parties to whom the management of such details must of necessity be entrusted.

THE more nearly the appeal to the Edinburgh and Glasgow Railway proprietors as to Sunday travelling on that line approaches to an issue, the more indefatigably do the Sabbatarian agitators exert themselves to effect their object. We wish we could say that similar energy is developed on the other side. We had hoped before this to have seen some intimation of a meeting in Liverpool or Manchester of the English shareholders, so as fully and unequivocally to have the sentiments of that body expressed. It is not enough that such meeting should be held previous to the general meeting of the Railway Company; it should be convened at once, so as in some measure to counteract the efforts of the Puritan party, who may in the meantime obtain proxies from uninformed individuals, or as is more probable from persons who would gladly oppose the fanatical pretences and practices of the "unco guid," *provided they found themselves duly upported*, but who have not sufficient moral courage to stand forth of themselves in defence of what they believe to be right, or to stem the current of narrow-minded bigotry with which Scotland seems to be cursed. We would therefore (at the risk of recurring too frequently to so hackneyed a topic) earnestly recommend the *English* shareholders of the Edinburgh and Glasgow Railway to bestir themselves without delay. The result will not affect merely this particular Scotch line—although that is a matter of no trifling importance—but should it prove such as we anticipate will strike a heavy blow at the system of which this anti-Sunday travelling crusade is but an off-shoot. We do not, we trust, go beyond our province in expressing an opinion that upon this seemingly unimportant matter, may turn consequences of the utmost importance to the comfort and the character of the nation. We have said "*seemingly* unimportant," but we might have used a much stronger phrase, for we are satisfied that should the Sabbatarian party prevail, and carry out, or attempt to carry out their schemes to any great extent, the interference of Parliament, will become indispensable, and will moreover speedily be interposed to check the inroads, and counteract the effects of so glaring a sacrifice of the privileges of the many, to the caprices of the few. It appears never to strike those anti-Sunday agitators that no one compels or seeks to compel *them* to use a railway on the "Lord's Day;" all that is asked, and all that ought to be and will be enforced, is the opportunity of allowing others to avail themselves of locomotive facilities should their consciences permit.

The Edinburgh Sabbatarians have called the LORD PROVOST of the city to their aid, and under that personage's signature have circulated an appeal to the shareholders of the Company which, but for the sacrifice of so much valuable space, we would give entire, as an excellent specimen of the hypocritical cant which is so current upon such occasions. For one or two of the concluding sentences we must, however, find room:—

"If [says the body of whom 'James Forrest, Lord Provost,' is the mouth-piece] you, as the servants of the public, may break the Sabbath for their real or fancied accommodation, why may not the shopkeeper, and the tradesman, and the caterer for public amusement, do the same? Why not "accommodate" the public with fresh bread, or meat, or groceries, on Sunday, as well as on other days of the week? Nay, if you and those who employ your trains are to be judges of what the public requires of the accommodation which you provide, why may not the publican and his customers, or the manager of the theatre and its frequenters, be allowed to determine the same thing in respect of the pursuits in which they are interested? Where, we ask you, ladies and gentlemen, is such a principle to stop? We challenge you to set any limits to it short of those at which we have hinted above. Pause, then, we entreat you, before you adopt it. Pause before you give the sanction of your high authority and example to a course which needs only to be commenced, to array in its defence all the elements of ungodliness, insubordination, and vice in our country,—to place yet unexperienced obstacles in the way of the religious instruction of the people, and to bring down upon our land all the countless evils which have ever been found to accompany the general and systematic neglect of the Sabbath.

"On the other hand, you have it now in your power, by determining to close your railway on the Lord's day, to set an example of respect for the Sabbath, and for that religion of which it is an essential institute, the effect of which may be propagated in ever-widening circles of happy influence, long after you yourselves have ceased to be interested in the affairs of earth. 'The use of the Sabbath,' as Bishop Horsley has said, 'as it began,

Digitized by Google

will end only with the world itself.' Circumstances may occur to render men for a time forgetful of its benefits, or to lead to its abuse; but as the religion of Christ extends its influence, and his righteous reign is advanced among men, THAT DAY, which is the standing memorial of His resurrection from the dead, will draw to it the reverence and love of that world for which he died."

We might apply the *argumentum ad hominem* to my LORD PROVOST, and ask how it comes that he and his worthy coadjutors Sir ANDREW AGNEW and others, can without "profanation," avail themselves of the services of man and horse, to carry them to their several churches or conventicles on Sunday, while the industrious artizan, pent up for six days in a crowded locality, may not, without offence, recreate his bodily and mental energies, and perhaps show himself in form as well as in spirit, quite as devotionally disposed as his so-called superiors. Does the LORD PROVOST of Edinburgh—does Sir ANDREW AGNEW—do the clerical and lay agitators, who dictatorially intermeddle in the management of an establishment in which they have no direct or remote interest—do these pious personages content themselves with a cold dinner and an unarranged chamber on Sundays? Are they so peculiarly scrupulous of infringing upon a "Divine command," that they give rest on the "seventh day" to their "man servant, their maid servant, their ox, and their ass?" Do they dispense with creature comforts for the sake of spiritual edification—do they in a word mete out to themselves the same measure they would mete out to others? Not they; and therefore it is that we denounce their practices and expose their pretensions.

The "appeal" of the LORD PROVOST has been circulated with the following letter, which we give as *another* specimen of the pains taken by the Sabbatarian party to effect their ends, and as a warning to the shareholders generally of the well organised opposition with which they will have to contend. We again most earnestly recommend a corresponding exhibition of zeal on the part of all who would see true piety and common sense triumphant over bigotry and pretence:—

"Edinburgh, 15th December, 1841,
23, Claremont-street, East.

"I have been directed by the Committee of the inhabitants of Edinburgh, of all religious denominations, for the prevention of Sabbath desecration on the Edinburgh and Glasgow Railway, to send the enclosed appeal to every one of the shareholders, and to request their serious and attentive perusal of it; and also to request that they will vote, at the meeting of the shareholders in February next, FOR KEEPING THE RAILWAY CLOSED DURING THE ENTIRE TWENTY-FOUR HOURS OF THE LORD'S DAY.

"I have authority for requesting you, on filling up the annexed forms of proxy, to forward them to John Henderson, Esq., Director of the Edinburgh and Glasgow Railway, Glasgow.

"Earnestly soliciting your IMMEDIATE attention to this,

I have the honour to be,
Your most obedient servant
DANIEL BAGOT,
(Minister of St. James' Chapel),
Covener to the Sub Committee.

"———— One of the proprietors of "the Edinburgh and Glasgow Railway Company," hereby appoints John Henderson, Esq., of Glasgow, one of the Directors of the said Company, to be the proxy of the said ———— to vote, or give his assent to any motion or resolution for keeping the railway closed during the entire twenty-four hours of the Lord's Day, which may be proposed at any General or Special Meeting of the said Company. In witness whereof the said ———— hath hereunto set hand, the day of eighteen hundred and forty ."

WE give to-day some further accounts of the progress of the movement for securing a railway communication between England and Scotland. In addition to the meetings already held for the furtherance of the west coast line, we understand that similar demonstrations will speedily take place in other districts, when there can be little doubt that *at least* the preliminary expenses, indispensible for bringing the question fairly before Parliament, will immediately be guaranteed by subscription.

In reference to these subscriptions, we have been requested to state, that "they are by no means to be considered as money sunk, inasmuch as when the Company is fully formed, a share-list opened, and a portion of the capital required for the work raised, the whole of the amount at present subscribed for preliminary expenses will be paid from the general fund, and allowed in the price of the shares that may be taken by the different subscribers. All, therefore [it is added], who are anxious to promote the proposed railway, or who purpose to become shareholders when it has obtained the sanction of the legislature, should now come forward and give their names, their sub scriptions, and their personal influence and exertions to an object from which they expect to reap so great and permanent an advantage."

One of the most numerous and influential county meetings recently held took place on Tuesday last at Lanark in support of the west coast line. We have not room for the details, but may state that resolutions similar to those of the Glasgow meeting which appeared in our advertising columns last week were enthusiastically carried, and a sum of 200*l.* subscribed towards the preliminary expenses.

SINCE our last publication we have seen a copy of the answer of the Lord Lieutenant of Ireland to the Memorial of the large and influential meeting recently held in Cork on the subject of Irish railways. Although much less satisfactory than we could have wished, we do not think it at all bears out the inference of the Cork paper, upon which we commented last week, namely, that Government has no intention to take up the question. Our readers may judge for themselves. The Earl of BANDON forwarded the Memorial to the Government, and the following was the answer received:—

"Vice-regal Lodge, Dec. 10, 1841.

"My Lord,—I have to acknowledge the receipt of the memorial of the inhabitants, &c., of Cork, upon the subject of railways, entered into at a meeting, with your Lordship in the chair. Without entering at the moment into the extensive and difficult subject of the question at large, I will beg your Lordship to inform the gentlemen who took an interest on the occasion, that I have received their memorial, and that I will bear in mind their suggestions whenever the occasion may arise.

"I have the honour to remain, your Lordship's most obedient servant,

"DE GREY.

"The Earl of Bandon."

THE *Yorkshire Gazette* states that one of the most singular effects of railways upon the growth of towns is to be found at Middlesborough, a shipping port, on a branch of the Stockton and Darlington Railway. This little town at the terminus of the railway has sprung completely into existence in the course of about ten years, and now numbers about 5,000 inhabitants, with a church, market, and all the appurtenances of a town of active industry and business. Many of its houses bear the appearance of being occupied by persons in very comfortable circumstances, and the town looks more like one of settled and matured habits than of recent growth. It is a good specimen of what trade induced by railways can do. As a set off to the above statement, the *Berkshire Chronicle* states, that in consequence of the ruinous effect of the Great Western Railway on the business of Thatcham, 45 houses are at this time untenanted in the parish.

—o—

THE *Morning Chronicle* states, that in the course of last week a deputation from the London Mercantile Committee on Postage, consisting of Sir G. Larpent, Messrs. Travers, Lestock, Wilson, and Moffatt, had an interview with the Postmaster-General, for the purpose of urging upon his lordship the desirability, as well for the interests of the revenue as for those of the public, of perfecting Mr. Rowland Hill's plan of penny postage. The chief points brought before his lordship were, those of increased facilities for posting and delivering letters in the metropolis and the suburbs, similar measures in the chief provincial towns, and an extension of Post-office conveniences to country districts at present destitute of them. The statements of the deputation received [it is said] every attention from the Postmaster-General, who expressed his desire to give them his best consideration, and assured them that there was equal willingness with himself as with his predecessor to carry out Mr. Hill's plan. The extension of the Railway System has given a new character to the Post-office arrangements, and we trust that the present opportunity of perfecting the details of that noble establishment will not be lost sight of That there is much room for improvement as well in regard to the Post-office authorities as to the managers of a particular railway will be gathered from the following paragraph which we extract from the *Scotch Reformer's Gazette* (a Glasgow paper.) The case bears also upon the question of Sunday travelling:—

"The Portpatrick mail bags were forwarded from Glasgow *via* Kilmarnock and Ayr, by a two-horse mail coach, until within the last fortnight; they are now sent as far as Ayr by the railway on six days of the week, and on Sunday by a mail gig; and the letter bags, instead of being sent from Ayr to Glasgow by a coach as formerly, are sent by a gig. From the alteration made as above the public suffer the following inconveniences: Having no conveyance to Ayrshire, Wigtonshire, Ireland, &c., on a Sunday (no Saintly interference caused this), passengers from the said districts, who may arrive in Ayr by the mail from Portpatrick, are obliged to remain in Ayr all night, instead of getting forward as formerly, and arriving in Glasgow about two o'clock in the morning, and who, if they wish to proceed further north or east, could do so easily by the early coaches. This is one of the disadvantages of the Ayrshire Railway, they run off the coaches on the road, and then dictate to the public their own terms: they are now trying to run the boats off the canal, and if they succeed, the public will find themselves obliged to put up with whatever accommodation the Railway Company choose to give. The Postmaster-General should be memorialised on the subject—the Railway Company should give

Digitized by Google

the same accommodation as the mail coach. The mail, we may observe, leaves Glasgow half an hour earlier than formerly."

—o—

THE Directors of the London and Greenwich Railway have, it will be seen from an advertisement in another column, determined on and after this day week to discontinue the use of second class carriages, and to reduce the fares by the first class carriages. Henceforth the trains will consist solely of "closed carriages at 9d. per passenger," and "open ditto, without seats, at 6d." These charges are still very much higher than those of the Blackwall Railway, which is of the same length.

—o—

THE Gosport branch of the South-Western Railway has been re-opened for goods traffic only. We hear that it is not intended to re-commence running passenger trains for some months.

RAILWAY OFFENCES AND OFFENDERS.

IN another page will be found a notice of a case of alleged "offence" that occurred last week on the Croydon line.

Last week a man named Joseph Nicholson, was brought before Sir Thomas Potter and Mr. Armitage at Manchester, charged with riding from Manchester to Elland, in one of the Manchester and Leeds Railway Company's first class carriages, without a ticket. James Sunderland deposed that on Tuesday afternoon, about six o'clock, the prisoner got out of the first class carriage, at the Elland station. On being asked for his ticket, he said he had got one at Manchester, and had perhaps lost it. He was brought back to Manchester, and given into custody. The prisoner in defence pleaded intoxication, and said that he had taken a third class ticket at Manchester, but after passing Rochdale, as it rained very heavily, on the invitation of some one whom he did not know, he got into a first class carriage. He had lost the ticket, not knowing that it would be demanded of him at the end of his journey. In answer to questions from the Bench, the prisoner said he was a pattern-designer, and was going to take a situation at Halifax. He was convicted, under the 126th clause of the Company's Act, in a mitigated penalty of 10s., and in default of payment was committed for 14 days.

FRENCH RAILWAYS.—There is a controversy going on between the partisans of a railway from Paris to Strasburg by Metz or Nancy, and of one to some important frontier town by Dijon. The principal towns on each line make large offers. Troyes proffers 20,000*l.* in support of the one, Nancy 20,000*l.* for the commencement of the other. Strasburg is, of course, for the more direct line; and this is abetted by the Finance Minister, who is deputy for Strasburg. The military people declare against the direct line, as too far north, and too near the Prussian frontier on the Saarre. The *Courrier Francais* says, that the present two great lines, such as that to Belgium and that to Strasburg, exclusively for the north and east, would excite the jealousies of the south and west, the deputies of which would league together to throw out the project. Better, it says, to run the indirect line to Strasburgh by Dijon, which would also be a line to Marseilles and the Rhone. This discussion is carried on with more vivacity from its being known to be the Minister's intention to devote a certain portion of the loan to one or two chief railways.—*Globe.*

LONDON AND BRIGHTON RAILWAY.—Notwithstanding the delay occasioned by the slip on the Croydon Railway, the Brighton trains now perform the whole distance from Brighton to London in two hours and a half.—*Brighton Gazette.*

YORK AND NORTH MIDLAND RAILWAY.

To the Editor of the Railway Times.

SIR,—The figures of "Examiner" in your last number, are by no means so clear as is his *animus scribendi.*

The gratitude of the proprietors is due, in an eminent degree, to Mr. Hudson, the Chairman of the Directors, for his successful exertions on their behalf, and under these circumstances neither the scurrilities of Captain Watts, nor the insinuations of "Examiner," will, I am sure, give him the smallest uneasiness.

The following will be found to be a correct account of the present half year's receipts and expenses :—

Weekly traffic to the 13th December, exclusive of two mails		£40,687
24 weeks to 31st December, say		3,300
Two mails for six months, say		300
Expenses 33*l.* 6s. 8d., or 1s. 3d. per cent.		14,762
		£29,525
Profit of the Leeds and Selby line		1,500
		£31,025
Dividend on 6,700 shares of 50*l.* each, at 55s. per share, or 11 per cent.	£18,425	
Ditto on 6,700 shares of 15*l.* (on each 6s. paid), at 16s. per share, or 11 per cent.	5,360	
Interest on loans	4,000	
		27,785
Surplus		£3,240

I have no means of judging accurately of the charge for the two mails, but have named I believe a low sum. The last call on the half shares, of 5*l.* having been made only on the 1st September last, I have said 16s. instead of 16s. 6d. per share, which latter sum would be required to pay 11 per cent. for the *whole* of the half year.

It was ascertained in October last, that for the first three months of the present half year, the profit of the Leeds and Selby line was 900*l.* net. I think, therefore, there can be no doubt that the next dividend of this Company *will be* 11 *per cent at least*; indeed 12 per cent. *might* be declared, and still leave a sufficient surplus.

I am, Sir, yours, faithfully,
SCRUTATOR.

London, December 20, 1841.

YORK AND NORTH MIDLAND RAILWAY.

To the Editor of the Railway Times.

SIR,—Your Rotherham correspondent, under the signature of "Examiner," I suspect has made a trifling mistake and parted with his shares in the above railway, otherwise he would not betray so much anxiety or labour so hard in his endeavours to depreciate that property. I advise him as a friend to lose not a moment (supposing he ever held shares in the York and North Midland Railway) in replacing them, for "Examiner" may rest assured that despite his endeavours, by erroneous statements to mislead the public, the shares will in all probability be at 50*l.* premium before the meeting in January, whereas he may now, by acting promptly, upon my advice, get them perhaps at their present price, 40*l.* premium.

I think I am warranted in coming to this conclusion from the statement of receipts and expenditure for the current half-year, given below, which after affording a dividend after the rate of 11*l.* per cent. on the shares (supposing it may be thought advisable to do so at the meeting) will leave a balance of nearly 4,000*l.* towards depreciation of stock. This is no exaggerated statement put forth to enhance the value of the shares, but furnished for the purpose of disabusing the minds of individuals, who might otherwise be induced by the apparently plausible statement of "Examiner" to part with their property, in this proverbially well-managed railway. I have assumed with "Examiner" 35*l.* per cent. as the probable charge on the gross receipts, nor do I think it likely that that per centage is likely to be exceeded—for we shall not have the heavy item for compensation this half-year, which appeared in the last half-yearly accounts. I have (as I had a right to do) taken credit for the surplus balance of last half-year, and also the charge for carrying the mails, neither of which items appear in "Examiner's" statement—and I might, though I have not, have assumed something as profit on the working of the Leeds and Selby Branch—amounting, I have no doubt, to a sum little less than 1,500*l.* for the half year. Neither will the Company have to pay the amount "Examiner" puts down as dividend *on the quarter shares*, there being only four months interest due *on the last call of* 10*l.* instead of six months dividend on 15*l.* called up, as stated by "Examiner"—

Surplus balance June 30th, 1841, see Report			£2,409 12 4
Receipts this half year to week ending Dec. 11th			39,409 0 0
Assume, receipts for 3 weeks to Dec. 31st, 1,300*l.* per week			3,900 0 0
Carriage of mails 26 weeks, at 40*l.* per week			1,040 0 0
			46,758 12 4
Deduct 35 per cent. working expenses	£16,365	0 0	
Do. interest on debent., &c.	3,682	0 0	
			26,711 12 4
Deduct at 11 per cent. on 6,700 shares of 50*l.*	18,425	0 0	
Ditto ditto, for 6 months do., 2 shares, 5*l.* paid	1,842	10 0	
Ditto, ditto, for 4 months do. 10*l.* paid	2,456	13 4	
			22,724 3 4
Leaving for depreciation of stock the sum of independent of what profit arises from Leeds and Selby.			3,987 9 0

I am, Sir, yours obediently,
A YORKSHIREMAN.

Leeds, Dec. 21, 1841.

GLASGOW AND GREENOCK RAILWAY.

To the Editor of the Railway Times.

SIR,—Since you published two short letters of mine a few weeks ago, I have been assailed by two or three writers, and especially by one under the signature of "Dividend," who very bitterly abuses the Directors for expending too much money upon the construction of the railway, and charges me with endeavouring to throw dust into the eyes of the shareholders.

The attack upon the Directors seems to me something like "a little dog barking at the moon," but since I have been the cause of this abuse, I can not allow the subject to drop. True it is that the concern has cost a very great deal more money than contemplated, but who is to blame for this? Certainly not the Directors, for they spared neither pains nor expense in endeavouring to ascertain what the actual cost would be. Before commencing the work, several of the first Engineers in the kingdom were consulted, and employed, and their opinions obtained privately, as well as in Parliament,—and I beg to quote here part of the evidence as published in a pamphlet four years ago, which "Dividend," and any body else might have seen, viz. :—

Mr. Grainger examined in Committee :—"The sum of the whole estimate, including the two branches, is 393,000*l.* :—Thinks the estimate made will ensure its being completed in a very perfect mannner, so that the expense of maintenance will be very inconsiderable."

Mr. Locke—"Has been examined as a witness on almost all the principal railways which have been before Parliament, was with Mr. Grainger when this line was selected, approves of the same; has examined the prices which Mr. Grainger has attached to the amount of the work, and is satisfied they will be sufficient. Thinks the cost of working the railway will be rather smaller than usual, in consequence of the very favourable gradients, and the great number of passengers. There is no engineering difficulty whatever on the line; it is one upon which *no extra cost* will be required."

Now, after reading the evidence of such men, who would blame the Directors? If blame be attachable any where, it must be to the Engineers.

As for myself, I am charged with representing that the concern will yield 7½ per cent. for a dividend. I deny this charge. I have only stated the plain unvarnished truth as to the traffic of the first year, assuming the *gross receipts* at 45,000*l.*, which is 7½ per cent. on the 600,000*l.* expended. Since making up that statement, however, I find that the winter traffic will be much less than I expected.

Digitized by Google

The gross receipts for the year, from the end of March, 1841, till the end of March, 1842, will be about £43,500

And allow me to assume the expenditure of the York and North Midland as fair data, the line being about same length, and much less work done upon it—13,000*l.* a half year 26,000

£17,500

To be apportioned thus—

£200,000 of loans at 5 per cent. £10,000
£400,000 of shares at 2 per cent..... 7,500

£17,500

At the time the railway was projected, December 1835, it was expected that the construction would not exceed 10,000*l.* a mile; but in order to err on a safe side, the cost was put down in the *prospectus* at 250,000*l.* When applying for a Bill, however, the Engineers recommended that the cost should be increased, and the capital put down at 400,000*l.*, which would certainly cover everything.

I am respectfully, Sir, your obedient servant,

GREENOCKIAN.

Greenock, 13th Dec. 1841.

RAILWAY REFORMS—SOUTH-WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—It is not without reason in my opinion, that much disapprobation has been very generally expressed against the Directors of Railway Companies at the manner in which the business is conducted at the half-yearly meetings. The accounts are passed in such a manner that it is impossible for any except the Directors to understand them, and the proprietors are expected to give their sanction to matters of importance of which they have only just before been informed. I write this not to complain of the South Western Directors. As far as I have any means of knowing the business of that railway, it has been well conducted, but the South-Western is the railway in which I am more concerned, and as I believe the Directors have not done anything that need be kept in darkness, they may easily fall in with the suggestion I wish to make, and which I think ought to be adopted in all Railway Companies.

What I propose is, that the Directors should meet about a fortnight previous to the general meeting, and at that previous meeting should draw up and circulate among the proprietors the Report which is intended to be submitted to the general meeting. The proprietors would then be able to approve or disapprove of the measures brought before them. In this Report there ought to be contained the heads of all the business to be done—a full statement of accounts—the dividend to be declared—the names of the Directors who go out of office, and whether they are candidates for re-election, &c. &c.

I again repeat, that this is not intended as any complaint against the South-Western Directors, who, I believe, deserve well, but to suggest what I think would be an improvement.

I am, Sir, your humble servant,

A PROPRIETOR.

SHEFFIELD AND MANCHESTER RAILWAY.

To the Editor of the Railway Times.

SIR,—Your correspondent, "Atticus," is satisfied that the entire cost of the Sheffield line will not exceed (plant included) the sum of 1,113,500*l.*, *because*, forsooth, "the Engineer has pledged himself to find contractors to undertake the lots, finding security." When "Atticus" has a little more experience in railway matters, he will find that the actual cost generally vastly exceeds the amount at which the lots are let. Is he aware that the summit tunnel on the Leeds line was let in 1838 for 105,000*l.*? The contractor, however, was forced to abandon the undertaking, forfeiting 4,000*l.*; the Directors had to take it into their own hands, and the ultimate cost was 251,000*l.* The tunnel on the Sheffield line is nearly double the length of that on the Leeds, and will in all probability cost some 450,000*l.*, if it does not even reach half a million! The *works* on the Leeds line cost about double the sum the various contracts were actually let for: so it is on most lines; for when any unforeseen difficulty occurs, the contractor either fails, or the Company indemnify him in order to secure a speedy completion of the contract.

Is "Atticus" aware that his much-vaunted estimate of 1,113,000*l.* only allows the small sum of 128,000*l.* for stations and carrying stock? Why, it will require at least double that sum. Those items have already cost the Leeds Company (which I again quote as a case in point) upwards of 320,000*l.* As the Leeds line is only 10 miles longer than the Sheffield, the cost of those items to the latter Company may be estimated at 256,000*l.*

I could say a great deal more, Mr. Editor, on this subject, but I have said enough to prevent any of your readers who are ignorant of the actual state of the case from being misled by the very favourable opinions recently expressed by several of your correspondents regarding the Sheffield line. I have seen too much misery incurred by parties buying shares on the faith of such partial and puffing statements to remain silent. If the Sheffield line is ever completed, which I consider very doubtful, it will most likely cost at least double the estimate, or say, 55,000*l.* per mile.

I am, Sir, yours respectfully,

EXPERIENCE.

December 20th, 1841.

RAILWAY ADJUDICATIONS.

ROBERTSON *v.* THE EASTERN COUNTIES' RAILWAY COMPANY.

Rolls Court, December 18.—Mr. TURNER stated that the object of this suit was to obtain an account from the defendants. It was stated, that in the year 1835, the plaintiff, in conjunction with Mr. Braithwaite, projected a scheme for making the Eastern Counties' Railway, and in doing so it was alleged that he expended large sums of money. A provisional Committee was formed, and they applied for, and in the seventh year of the reign of William the Fourth obtained, the Bill incorporating the Company. The Act provided that the full capital of the Company should be subscribed, and that the certificate of the justices should be taken as conclusive evidence of that fact. The Provisional Committee and three other persons were chosen as Directors, and Mr. Robertson was appointed as the Secretary, with a salary of 800*l.* a year, and Messrs. Blunt, Roy, and Blunt, were appointed as the Solicitors. The Directors of the Company adopted the proceedings of the Provisional Committee, and it was agreed that the capital of the Company should be 1,600,000*l.*, which was to be divided into 64,000 shares of 25*l.* each. In 1836 there was a meeting of the Directors, and it was ascertained that 61,676 shares had been subscribed for, and 2,324 shares remained to be disposed of, and there was found to be some difficulty in filling up the subscription list, in consequence of which the powers of the Act could not be put in force. To obviate this difficulty, in 1837 an arrangement was made by Mr. Robertson and Messrs. Blunt, Roy, and Blunt, through Mr. Duncan, that they should take the 2,324 shares, in order to fill up the list, and hold them in trust for the Railway Company. The plaintiff himself also subscribed for a great number of shares, and covenanted to pay the calls. By these means the Railway Company obtained the certificate of the magistrates, and proceeded to take lands to carry into effect the undertaking. In August, 1838, a question arose respecting the accounts, which were kept by the plaintiff, Mr. Robertson. Mr. Johnson, an accountant, was appointed to investigate the same; but on the 27th of February, 1839, Mr. Robertson gave up his appointment and retired, and was succeeded by Mr. Archibald Bulkeley. Mr. Robertson, upon his retirement, left all the books and papers belonging to the Company, and, as alleged, gave them all the information he could respecting the funds of the Company during the progress of the examination of the accounts in 1839 and 1840. Mr. Johnson made reports to the Directors from time to time, and on the 1st of August, 1840, the plaintiff received a letter from Mr. Bulkeley, containing two accounts, showing a balance of 904*l.* 4s. 9d. due to the Company. It was stated that Mr. Robertson was surprised at this, inasmuch as he supposed that the Company was considerably indebted to him; he therefore insisted that the accounts were wrong, and that the balance was the other way, and he requested that he might be allowed time to prepare his own accounts, and that he might have access to the papers of the Company, together with copies of the reports which had been made by Mr. Johnson to the Board of Directors. In consequence of this, some correspondence took place between the parties, and ultimately, upon the report of Mr. Davis, the accountant, who succeeded Mr. Johnson in examining the accounts, the defendants brought an action against the plaintiff for 2,500*l.* In consequence of this the present bill was filed, seeking to have an account of the expenditure of the Company, both before and after the passing of the Act of Incorporation; from the accounts which had been made out on behalf of the Company, it was said that some sums of money were due to the plaintiff for salary, but credit had been given for these. The defendants also denied that the plaintiff had subscribed for any shares for them, or that they had released him from the shares subscribed for him and Mr. Duncan; they also said that the plaintiff had transferred shares in the railway without payment of the calls, which, unless they were obtained from the plaintiff, never would be paid. The plaintiff, however, denied these statements, and by the present application sought to obtain an injunction to restrain the defendants from proceeding with the action, and also an order to compel the defendants to allow him to inspect the books and papers of the Company, to enable him to make out an account.

Mr. PEMBERTON stated that the application was irregular, as to so much as asked for an injunction, as it appeared that the plaintiff had already obtained an order for the common injunction. The plaintiff, therefore, had no right to treat that order as a nullity, and apply specially for an injunction. The defendants also denied that they ought to produce the books and papers.

Mr. TURNER submitted the plaintiff was entitled to the injunction, and also to the production of the books and papers, and asked for the cost of the application; but after giving time to search for cases as to the costs under similar circumstances.

Mr. PEMBERTON said, that the statements had been made wholly *ex parte*, and that from the course the application had taken they could not be contradicted; but he hoped the plaintiff would be made to pay the costs.

Lord LANGDALE, upon being informed that nothing could be found bearing upon this point, said that the application for a special injunction had made a great difference in the expense that had been incurred improperly, he must, therefore, refuse that part of the application. He thought, however, that the plaintiff was entitled to inspect the books and papers of the Company, but that they had a right to seal up, on oath, such parts as were not material to the plaintiff's case. The plaintiff must also pay the costs of this application.

THE ATTORNEY-GENERAL *v.* THE LONDON AND GREENWICH RAILWAY COMPANY.

Vice-Chancellor's Court, Dec. 23.—Mr. Wood on the part of the defendants, made an application to the Court to alter the words of its late decision in this case, as they appeared in the minutes of the Registrar. It appeared from the statement of Mr. Wood, that his Honour had made a certain order, adding the words, "on condition nevertheless that the Attorney General do prefer an indictment" against the Company, leaving it to the Attorney-General to proceed or not in the way specified, as he might think proper. The words, however, appeared in the minutes of the Registrar as follows:—"And let the Attorney-General proceed by indictment," which would compel him to proceed. The Registrar stated that he had copied the words of the decree, in part, from memory; and admitted that his

Digitized by Google

Honour had used the words "on condition nevertheless," although they were omitted in the minute.

Mr. Bethell (who appeared for the Attorney-General) objected to the making any alteration in the minutes of the Registrar. Such a course would establish a very inconvenient precedent.

His Honour said that he was not inclined to alter the minute. If there was anything wrong, the defendants must have the case re-heard.

Mr. Wood said that he feared the matter would certainly come to that.

The application was then dismissed, but without costs.

Manchester and Leeds Railway Company, Appellants; the Township of Stansfield, Respondents.—It will be remembered that this appeal against a rate for the relief of the poor of the township of Stansfield, was entered for hearing at the last Bradford sessions, when it was agreed by the parties to refer the matter to the award of R. B. Armstrong, Esq., Recorder of Manchester. That gentleman has recently published his decision, by which the rate is confirmed, and the form in which it is laid is found sufficient. The award is important, inasmuch as the Railway Company had appealed against all the rates laid upon the line.—*Manchester Courier.*

ACCIDENT ON THE CROYDON RAILWAY.

An accident took place on Friday evening week, on the Croydon Railway, at the Sydenham station, by which we regret to say that eight or nine persons were injured, some very severely.

The followlng may be relied on as a correct statement of the facts of the case:—The down train from London to Croydon, consisting of seven carriages and the engine started at half-past five o'clock on Friday evening, and after passing the land-slip on the line near the New Cross station, (where the passengers are obliged to walk for about a quarter of a mile,) it proceeded in safety as far as the Sydenham station. The Sydenham passengers having alighted there, the train was about to start again, when another engine, without a train, which had been employed on the line for the removal of the fallen earth, ran into the back of the train, breaking the two last carriages, and a truck which was attached to the train. It was found that four or five passengers, as well as three or four railway labourers who were returning home after their day's work, had been bruised or wounded. The principal sufferers were a Mrs. Jackson, of Croydon, who had her face severely cut and some of her teeth knocked out by being violently dashed against the back of a seat in the carriage; a man named best, who it is said has had three of his ribs broken, and had received some internal contusions, and a Mr. Coulson, who was cut very severely upon the temple. The engine which caused this serious accident was one which had been lent by the Brighton Railway Company, and the driver of it, whose name is Goldsmith, is the man who drove one of the engines at the time of the melancholy collision of the trains on the Brighton Railway last summer, by which several lives were lost. It may be remembered that Goldsmith on that occasion was found lying under the tender, covered with sand and water, and that his evidence was obliged to be taken while lying in his bed, suffering under the severe injuries he had received. On Friday night it was asserted that the accident was caused by his being drunk at the time; he was, therefore, instantly taken into custody by the Railway Police, and kept at Sydenham until the following morning, when he was removed to Croydon, and brought before the sitting magistrates there. It was then found that Sydenham, where the accident occurred, being in the parish of Lewisham, the case should be sent to the Greenwich magistrates; accordingly the prisoner was removed there, and brought before Mr. Grove, at the police-office, charged by Mr. Rallett, the Superintendent of the London and Brighton Railway, with being drunk, and for wilfully running into the carriage train. This witness deposed that he was on the engine of the Croydon train at the time when it stopped at Sydenham station; that he felt a sudden concussion and got down to discover what had caused it, when he saw that another engine without any person on it, had run into the last carriages of the train. In a few seconds the prisoner, who was the driver of the engine that had done the damage, came up; in witness's opinion he was drunk.

James Davenport, the railway constable who took the prisoner into custody, was questioned as to the prisoner's being drunk, but he could not say positively that he was so.

The prisoner in his defence denied that he was drunk, and asserted that he could not see the red light in the back of the last carriage, in consequence of a man named Adams, who was standing up in the truck attached to the carriage, and whose person interposed between him and the light,

Adams, a labourer on the line, who had been sent with the truck from the Dartmouth Arms station, swore that he was sitting and not standing when the collision took place, and that the red lamp was three feet at least above his head.

Mr. Seaman, the Superintendent of the Dartmouth Arms station, deposed that he attached the truck to the passenger train at that place. He directed Adams to go with the truck, for the purpose of detaching it speedily at an intermediate station. At the time the train started from the Dartmouth Arms station, Adams was sitting in the truck, and the red signal light was quite correct, and perfectly visible. As soon as deponent heard of the accident he proceeded to Sydenham, and had the disabled engine and carriages removed from the line.

Mr. Gregory, the Engineer of the Croydon Railway, stated the number of persons who had been hurt by the accident. The Company, he added, had given every assistance in their power to the sufferers.

Mr. Grove, at the conclusion of the evidence, said, that in justice to all parties he would give no decision on the case until Thursday, in order to obtain further evidence respecting the signal light, as it was upon the fact of the light being visible or not to the prisoner that the case principally turned; in the meantime, he would admit him to bail.

The prisoner was then held to bail, himself in 20*l.* and two sureties in 10*l.* each, to appear before the magistrates on next Thursday.

On Thursday accordingly Goldsmith was re-examined. Mr. Russell, of the firm of Russell and Mackenzie, solicitors, of High-street, Southwark, appeared for the prisoner. Mr. Sutton, of Basinghall-street, solicitor to the Brighton Railway Company, attended to watch the proceedings.

Mr. Sutton said he begged to observe, that the present prosecution was not at the instance of the Brighton Railway Company, the prisoner not being in their employ at the time of the accident.

Mr. Grove said he had received a letter from Mr. Gregory, which stated that a number of gentlemen who had just left the train at Sydenham, when the collision took place, and who had charged the prisoner with being drunk, were not willing to come forward to swear to that fact.

Robert Jobson, an engine-driver in the employ of the Croydon Company, stated, that he drove the engine that propelled the train from the slip at New Cross to the Dartmouth Arms station. The red light at the back was then distinctly visible.

Cross-examined by Mr. Russell—Was not present at the accident. Had seen the prisoner during the day, when he appeared sober. He believed that the prisoner's inclination generally was to refrain from drinking.

John Rasten, servant to Ralph Price, Esq., stated, that he went to the Sydenham station to meet his master. Saw the train come up with a truck attached, a man was in it, holding up his hand, and calling out, "hold hard! hold hard!" to an engine that was approaching. He was standing in the middle of the truck, and must have obstructed the light which was behind the train. Several persons were hurt by the collision. Witness afterwards saw the prisoner, who appeared dreadfully agitated.

Mr. Grove said, that this completely contradicted the evidence of Adams, who was in the truck, who swore that he never stood up at all.

William Tadeney, assistant guard on the Croydon Railway, was on the train at the time of the accident, saw Adams standing up in the truck before the light. Some of the trucks have places to affix light to. Does not know if this one had.

Mr. Coulson, Superintendent of Works on the Croydon line, stated that he saw the prisoner about four o'clock, two hours before the accident took place, and he then appeared "three sheets in the wind." The orders to the prisoner do not emanate from me.

Mr. Russell—If you thought the prisoner was intoxicated, as you state, was it not your duty to remove him from the engine?—If the engine had been attached to a train I would have done so. Could not say what business the prisoner had on the line at the time of the accident.

William Willis, a person employed on the railway, stated that he saw the prisoner at the Dartmouth Arms, he appeared "rather cheerful," decidedly not drunk; rode afterwards with the prisoner on the engine to the Jolly Sailor station at Norwood; they followed the half-past four o'clock train from London; the prisoner acted most cautiously.

Mr. Seaman, the Superintendent of Railway Police, said the prisoner had no business on the line, Had sent him home to Croydon, from which place he retured to the Dartmouth Arms, and called out "Let me cross, the Brighton train is coming." Saw the Brighton train, and the switches were turned to allow the prisoner to get out of the way, Saw the red light behind the half-past five o'clock down train; there was a truck behind it, in which Adams was sitting down; the light was more efficient in the carriage than on the truck; the prisoner was told to wait for the train to pass; he did not appear intoxicated.

James Devonport, the policeman on duty at the Sydenham station, stated that the prisoner was given into his custody; he appeared to be sober. There being no passengers going from Sydenham to Croydon, I held up a white light to the train that was coming, and afterwards placed it on the road between the two lines, with the light towards the Dartmouth Arms, which would be visible to the prisoner, and would signify "all right."

By Mr. Russell—There was nothing to prevent the prisoner, if the red light was not visible to caution the prisoner, from going at a very rapid pace.

Mr. George Coulson, contractor for removing the slip at New Cross, was in one of the second class carriages, and had his leg hurt by the concussion. His attention was directed to his sister and brother, who were seriously injured. After the prisoner had been taken into custody, he begged of witness to take out the fire, as the engine was not safe. He appeared much excited; witness procured a red light and proceeded towards the Dartmouth Arms to prevent any other train coming.

In answer to Mr. Grove, Mr. Sutton said, the engine and driver had been lent to the Croydon Company for the last three weeks, and he received orders from Mr. Coulson.

Mr. Seaman said, it was usual for the engines to run up and down the line for the purpose of pumping water into the boiler. He expected to see the engine return from Croydon after he had sent the prisoner home.

Mr. Rallett was then examined as to the speed at which the prisoner was going, and stated that he thought it was not more than eight or ten miles an hour. Thirty miles is the usual pace.

Mr. Grove said, he did not consider the charge of drunkenness proved. It was therefore to be considered whether the prisoner had maliciously, wilfully, or negligently done any act to the danger of the life or limb of any person.

Mr. Russell, argued with considerable force in favour of the prisoner, contending that the signal of the white light would have justified his going at the rate of 30 miles an hour. The prisoner bore an excellent character, and so far from acting

Digitized by Google

negligently, he considered that greater cautiousness could not have been adopted. He (Mr. R.) would be sorry to exculpate his client by imputing any thing to those having the inspection of the line. He would call a witness who would fully prove the innocence of the prisoner.

Jonas Copley stated, he was stoker to the prisoner. Upon arriving at Croydon, the prisoner went to see the fireman of the engines, which he failed in doing, and upon his return, he said it would be better to get some water into the engine. They went up the line for that purpose when the Brighton train came in sight, and they had no alternative but to fly before it to prevent being run down. They proceeded to the Dartmouth Arms before they could get on to the other line, and they were returning to Croydon when the accident took place. Saw a white light when about 300 yards from Sydenham station, and just as they were upon the train something moved from before the red light, and they then saw the danger. The engine was reversed and the break put on.

Mr. GROVE said, he did not consider blame attached to the prisoner, but to those who framed the regulations, and after remarking at considerable length on the evidence, said he would discharge the prisoner from any summary conviction, but he should require him to enter into his recognizances in the sum of 20*l.* to answer any complaint that might be laid against him by the Croydon Company at the next quarter sessions.

ACCIDENTS ON RAILWAYS, *NOT* "RAILWAY ACCIDENTS."

SATURDAY a fatal accident took place on the Birmingham Railway, at Cheddington, a few miles below Aylesbury. The up third class, or goods' train, had arrived within a short distance of the station, and the train had not yet stopped, when a man named William Gilley, foreman of the plate-layers of that division of the line, and who had come up as a passenger, imprudently jumped out of the train on the side next the road, at which moment the York passenger train was coming up at the rate of at least 30 miles an hour. Before poor Gilley could reach the ground he was caught in the back by the buffer of the engine by which the York train was being drawn, and of such fearful violence was the shock that his body was seen by the guards of the goods train apparently to fly to the extent of between 30 and 40 yards. It had not reached the ground the second time before his body was again caught and hurled forward by the front of the engine, the driver of which endeavoured to stop the speed, but was wholly unable to do so before the centre train, consisting of nearly 30 carriages, had passed over him. He was immediately picked up, and died a few seconds afterwards.—*Times.*

In reference to the paragraph giving an account of the accident on this railway, we have been requested to make the following correction:—When the third-class up-train stopped at Cheddington, Russell, a plate-layer, who was supposed to have joined the train at Leighton, attempted to quit the carriage on which he was riding; he was told to keep his seat by Melbourne and Wigram, the guards, and many of the passengers, but replied that he "would not keep his seat any longer," and jumped out; he had scarcely reached the ground when the buffer of the engine of the 6 p. m. down train, then coming up, struck him on the back, and sent him 20 or 30 yards at least, but the train did not go over him; he was taken to the station, and appeared to have life in him, but died shortly afterwards. *The servants of the Company constantly experience great difficulties in preventing passengers from attempting to get in and out of the carriages when the trains are in motion.* It cannot be too strongly impressed upon all parties travelling by railways that such attempts are attended with the greatest danger.—*Standard.* [We (Ed. R. T.) know from undeniable authority, that the passage which we have marked in *Italics* is strictly correct. Within a short period the firmness of the Company's servants, and their attention to the strict orders issued by their superiors, have in this way saved two persons from a premature death. One case occurred we believe at Wolverton, and the other at Rugby.]

On Saturday last, as Thomas Shipley, one of the plate-layers on the Great North of England Railway, at Northallerton, was shifting one of the iron slips, near the station-house at that place, in order for some ballast waggons to turn off the main line towards the depots, to make way for the mail train coming from the north, his foot unfortunately got fast in the iron rails, and some of the waggons passing over it, it was so fast jammed in by the pressure of the waggons, that it could not be extricated for more than half an hour by taking up some of the iron rails. He was found to be most severely injured, and mortification afterwards took place, which put an end to his earthly sufferings on Wednesday morning. He was a steady man, and much respected; he has left a pregnant widow to lament his death.—*Yorkshire Gazette.*

On Tuesday, a lad named Taylor was knocked down and killed by a train on the Liverpool and Manchester Railway near the Newton junction. He was in the act of crossing the railway, at a point where it intersects a common road.

LONDON AND GREENWICH RAILWAY.—REDUCTION OF FARE.—On and after the 1st of January next, the First Class Fare on this Railway will be reduced to nine-pence, and the Second Class Fare will be discontinued. The trains will consequently consist henceforward only of

Closed carriages at NINE-PENCE per passenger.
Open ditto without seats at sixpence ditto.

By order,
J. Y. AKERMAN, Secretary.

Offices, London Terminus, 21st December, 1841.

MIDLAND COUNTIES' RAILWAY.—The Directors of this Company are receiving Money on their Loan Notes, in sums of not less than £400, for either Three, Five, or Seven Years, to be exchanged for Debentures in September next. Interest, after the rate of Five per Cent. per Annum, is allowed and paid half-yearly, on the day it becomes due.

By order,
J. F. BELL, Secretary.

Leicester, 29th November, 1841.

GLOBE INSURANCE, Pall-Mall and Cornhill, London. Established 1803.

DIRECTORS.

EDWARD GOLDSMID, Esq., Chairman.
WILLIAM TITE, Esq., F.R.S., Deputy-Chairman.

Henry Alexander, Esq.	Boyd Miller, Esq.

John S. Brownrigg, Esq. M.P.	Fowler Newsam, Esq.
Jonathan Chapman, Esq.	William Phillimore, Esq.
Thomas Collier, Esq.	Wm. H. C. Plowden, Esq.
Boyce Combe, Esq.	John Poynder, Esq.
James Wm. Freshfield, Esq.	Robert Saunders, Esq.
George Carr Glyn, Esq.	Emanuel Silva, Esq.
Sir J. L. Goldsmid, Bart., F.R.S.	Sir Walter G. Stirling, Bart.
Robert Hawthorn, Esq.	W. Thompson, Esq. Ald. M.P.
John Hodgson, Esq.	Edward Vaux, Esq.
	Benjamin G. Windus, Esq.

FOR

FIRE AND LIFE ASSURANCE, ANNUITIES, And the Purchase of Reversions and Life Contingencies.

CAPITAL ONE MILLION STERLING.

The whole paid up and invested, and *entirely independent of the amount of premiums received*: thereby affording to persons Assured *an immediate available Fund* for the payment of the most extensive losses, without liability of partnership, and free from uncertainty as to the result of their engagements—which the Directors consider to be highly important to those who effect Insurances in the capacity of Trustees, or otherwise in the performance of a specific trust or duty.

Insurances may be effected with this Company to the extent of 10,000*l.* on a single life, if approved.

By Order of the Board,
JOHN CHARLES DENHAM, Secretary.

Rates and conditions of Fire and Life Insurance, or other information, may be obtained at the offices in London, and of the Company's agents in the country.

Fire Policies due at Christmas must be paid on or before the 9th of January.

On the 1st January will be published,

TEMPLETON'S RAILWAY STATISTICS, containing the Names and Termini, Length in Miles and Chains, Counties through which they pass, Ruling Gradients, Rise in Feet per Mile, Effect of Gravity, Gauge of Way, Date of Royal Assent to Bill, Number of Shares, Total of Capital, when Opened, and Average Time in running the Trains, of all the Principal Railways in Great Britain, in a Tabular Form. Price, in Sheets, 1s. 6d.; on Canvass in Case, 2s. 6d.; mounted on Rollers and varnished, 3s. 6d.

Railway Times Office 122, Fleet-street.

SOUTH-WESTERN, GREAT WESTERN, CIRENCESTER, BRISTOL AND BRIDGEWATER, AND BRIGHTON RAILWAYS.

In connexion with the above Lines of Railway, Places can be secured by

MAILS AND COACHES,

TO

Falmouth,	Farnham,
Devonport,	Milford Haven,
Plymouth,	Curmarthen,
Exeter,	Brecon,

Swan-Two-Necks, Lad-lane.
George and Blue Boar, Holborn.
Universal Office, Regent Circus.
Golden Cross, Charing Cross.
Griffin's, Green Man and Still, Oxford-street.
And at the Offices of Horne and Chaplin at the several Stations.

Parcels forwarded by every train; and if for 8¼ p.m. Mail Train, are received at the above Offices until ½ past 7 for the above places, and to all parts on the several lines of Railway, viz.:—

Bristol, Bath, Swindon, Farringdon, Reading, Windsor, Southampton, Winchester, Basingstoke, Farnham, Chertsey, Kingston, Brighton, Reigate, &c.

HORNE & CHAPLIN, Proprietors and Agents.

Omnibuses to and from every Train—Fare 6d.

Heavy Goods and Merchandise conveyed from the several Branch Offices, and Hambro' Wharf, Thames-street, to most parts of the south and western railways.

Just published, 7th edition, price 3s., and sent free on receipt of a Postoffice order, for 3s. 6d.

MANHOOD: the Causes of its Premature Decline, with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects of excessive indulgence, solitary habits, or infection, followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases, &c.:

By J. L. CURTIS and Co., Consulting Surgeons, London.

SEVENTH EDITION.—Published by the Authors, and sold by Balliere, Medical Bookseller to the Royal College of Surgeons, 219, Regent-street; Strange, 21, Paternoster-row, London; Guest, Steelhouse-lane, Birmingham; T. Sowler, No. 4, St. Ann's square, Manchester; G. Philip, South Castle-street, Liverpool; Tannin and Co., 41, Grafton street, Dublin; Duncan, 114, High street, Edinburgh; and to be had of all Booksellers.

The following are a few of the numerous testimonials this popular work has received, and which the limits of an advertisement will only allow of being published:—

Messrs. Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it, render it invaluable.—*Magnet.*

The perusal of Messrs. Curtis's book, entitled MANHOOD, has really astonished us by developing a series of maladies, the never failing consequence of the vicious habit of which it treats. The clear connexion pointed out between the assigned cause and the effects is perceptible to every capacity. We strongly recommend the work.—*Age.*

We recommend the work, entitled MANHOOD, &c., to the careful perusal of persons of all classes. The moral as well as physical advantages sure to result from such perusal, will be most readily recognised and felt by those who stand most in need of them.—*Statesman.*

Messrs. Curtis and Company are to be consulted daily at their residence, No. 7, Frith-street, Soho-square, London.

Country Patients are requested to be as minute as possible in the detail of their cases. As to the duration of the complaint, the symptoms, age, general habits of living, and occupation in life of the party; the communication must be accompanied by the usual consultation fee of £1, without which no notice whatever can be taken of their application, and in all cases the most inviolable secrecy may be relied on.

TO ALL MEN OF BUSINESS.

The most complete Diary for the New Year.

RICHARDS'S UNIVERSAL DAILY REMEMBRANCER for 1842; adapted to the use of Attorneys, Bankers, Merchants, Gentlemen, or the Public Offices, for the Entry of Memoranda, Appointments, daild Cash Accounts, Bills due, &c. Printed on the best hot-pressed writing paper.

Published by T. Richards, for the Exors. of the late Chas Richards, 100, St. Martin's Lane, and to be had of all Stationers.

Prices.—Small 4to. edit. sd. 3s.; do. hf.-bd. 4s.; Enlarged, 6s.; Extra-enlarged, 9s. In 8vo. 2s. 6d., 3s. 6d., 5s., and 7s.

BRISTOL AND EXETER RAILWAY COMPANY.—TENDERS FOR LOANS ON DEBENTURE.—The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising therefrom, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest at the rate of Five per cent. per annum, payable half-yearly at the Bank of Messrs. Glyn, Hallifax, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Prince's street, London, or Broad-street, Bristol.

By order of the Board of Directors,

J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol.

BRISTOL AND GLOUCESTER RAILWAY. CONTRACT FOR WORKS.—NOTICE is hereby given, That the Directors will receive, at their offices, Exchange-buildings, Bristol, on or before 12 o'clock on Monday, the 3rd day of January, 1842, Tenders for the Excavation and Formation of the Earthwork, including the diversion of streams and roads, and construction of bridges, culverts, and other masonry, and the entire completion of the works, including the ballasting, but exclusive of the laying of the permanent rails, of that portion of the railway included in the following contracts:—

Contract No. 5, commencing from a point 200 feet south of the Road No. 15, in the parish of Berkeley (being the end of No. 4 Contract), and terminating in Field No. , in the parish of Stinchcombe, being about the distance of 2 miles and 53¼ chains.

Contract No. 6, commencing from a point in Field No. 1, in the parish of Stinchcombe (the end of No. 5 Contract), and terminating in Field No. 37, in the parish of Cam, being about the distance of 3 miles and 22 chains,

Contract No. 7, commencing from a point in Field No. 37, in the parish of Cam (the end of No. 6 Contract), and terminating at a brook boundary between the parishes of Frocester and Leonard Stanley (the commencement of No. 8 Contract), being about the distance of 2 miles and 67 chains.

Contract No. 11, commencing from a point in Field No. 6, in the parish of Yate (being the end of No. 12 Contract), and terminating at the north side of the Road marked No. 87 in the same parish, being about the distance of 2 miles and 67 chains.

Contract No. 12, commencing at the junction of the Bristol and Gloucestershire Railway, and terminating in Field No. 6, in the parish of Yate (the beginning of No. 11 Contract), being about the distance of 2 miles and 58 chains.

Drawings and Specifications of the above works may be seen on and after Monday, the 6th day of December next, at the Company's offices, Exchange-buildings, Bristol.

Tenders are to be made on printed forms, provided for that purpose, which may be obtained on application at the office.

The Directors will not consider themselves bound to accept the lowest tender; and they expect the several parties to attend at the office on the 3rd of January, at 12 o'clock.

ROBERT FLETCHER, Secretary.

Bristol, 23rd Nov. 1841.

RAILWAY TRAFFIC MANAGER.—The Directors of the Birmingham and Derby Junction Railway are desirous of engaging the services of a Gentleman fully competent to perform the duties of the office of Traffic Manager. Applications in writing, stating the age and previous occupations of the Applicant, with references, to be addressed under cover to the Chairman of the Directors, at their offices, Waterloo-street, Birmingham, on or before the 10th January next.

COLES ON RAILROADS AND LOCOMOTIVE TRAVELLING.—A Description of COLES'S PATENT ANTI-FRICTION RAILWAY CARRIAGES, and Two distinct Plans of Rails, either of which will qualify the off-wheel to keep pace with the inner one. Price Twopence: published by WM. STRANGE Paternoster-row, and all Booksellers.

Side view of the inner rail, the step being lowered at A, when the inner wheel is made to run on its periphery or lesser part, whilst the outer wheel runs entirely on its flange when working a cant. (Verse 7 and 21; also Fig. 2, end view of Carriage.

ANTI-FRICTION *versus* FRICTION.

Some fifty years since, Sam. Coleridge left Ottery—
Where a waggon was burnt to the ground;
A hap'orth of oil, applied where it ought to be,
Wou'd save its owner three hundred pounds.

An action was brought, for the loss of some wine;
Why he defended it, he didn't know:
It cost him that money, minus his time,—
So very uncertain is Law.

What constitutes friction we very well know,
On Railways 'tis as hot as a piper;
Anti-friction Carriages plainly show,
That Friction's reduced to a cipher.

Their axles run level with the horizon,
They point to the centre of a curve,
They do what nothing else ever has done,
Their working wheels scarcely will move.

The off-rail of a curve is always the longest,
But why higher or *not laid level*,
Unless the off-wheel is *larger* or strongest,
Is productive of very great evil.

Let a socket be turned in the hind axle arm,
Let it pass to the opposite frame,
Let both of their wheels be key'd very firm,
The two halves one axle will form. (Fig. 1.)

Supposing both rails had a step on the edge,
The wheels would then run on their flanges;
Lower the step *here* and *there* on *the* ledge,
Fore wheels, vice versa, run changes.

Instead of raising the off-rail above level,
By this plan the rail's a step lower,
The off-wheel *runs faster*, though not bevel,
The inner one's made to *run slower*.

Not so with hind-wheels, because they would lock,
If they also ran on their flanges;
A two-wheel carriage will run true as a clock—
And be far less subject to changes.

The higher the load the more it will slant,
When the axle is rais'd at one end;
Prevent them from rocking, or reeling, they can't,
Till they find their own level again.

Some would inquire how they are united,
That depends on a rais'd or sunk rail;
It matters but little as rails are now fitted,
If they tried it I'm sure it would fail.

Elliptic spring buffers are new to the craft,
You'll find them on the ground plan;
Pulling or pushing you'll find they will waft,
Or resist it and come to a stand.

A four-wheeled carriage or an engine
Would run free upon the off-rail;
The first would run on the *step* with its rim,
The latter *not*, though a much quicker wheel.

Let one ounce stand for a one horse engine,—
Let the carriage be twelve pounds weight;
It requires forty ounces with the old plan
To draw a hundred and forty pounds net.

If thus we remove rubbing surfaces,
And introduce rollers in their stead,
Four ounces will draw it, *just ten times less*,
Which demonstrates the plan to be good.

To say nothing of the strain in their axles
When wheels run unlevel or oblique,
Their bodies are lower, which *greatly excels*
All others when running so quick.

Had we fifty carriages, all in a train,
Forty-nine should have but two wheels
I'm aware their axles would be lib'rating,—
The wheels won't run 'gainst the rails.

You'd think they ran on periphery and flange,
If you look 'twixt the wheel and the rail;
Scarcely would they experience a change,
Become centrifugal, or reel.

Besides the Friction, *in those axles of mine*,
We get rid of centrifugal force;
We'll do the work with a fifteen-horse engine,
Whilst they require one seventy-horse!

Our points of contact are not more than *two*;
How should this affect the off-wheel?
Engineers have express'd *their fears* it *won't do*,—
They are far more afraid that *it will*.

A curve, a mile long, is reduced to a cant,
We work it with periphery and rim; (A)
If we insure life, what more can *we* grant,
But assure it to our fellow-man,

A rais'd or sunk rail is invincible,
Nothing's more clearly understood;
'Tis a self-acting unerring principle,
Pray adopt it, if only a rood.

I now am addressing my master, John Bull;
'Tis said he's a very rich man,
Though he is sometimes a very great fool!
Not so when improving his land.

Does Baddeley* know how the wheels would run,
If he saw them stand on their flanges?
If the inner wheel ran on a ledge of its own,
Would their axle be subject to changes?

Look first at this Number,* then look at that,‡
Pure science can't flow in such channels;
They're too often straining at a gnat,
As often they swallow a camel.

That trams may be made for common roads too,
How few there are who can doubt it!
If Engineers should happen to say it won't do,
How many there are who will scout it!

Sharpe, Roberts,† and Co., make two engines a week,
An Anti-Friction carriage they plann'd;
Its rollers ran round, in a collar or break,
When working curves, it came to a stand.

Had they put *brakes* on the common wheels too,
Anti-Friction wheels would run faster;
In that case common wheels never would go,
Which then would have proved a disaster.

We are not to suppose the invention their own,
Mr. Garnet invented it for them;
He'd remove those impediments, *every one*,
Had he known, *like me*, where to find 'em.

Those axles a very great weight will sustain,
Garnet's were exceedingly small;
Their rollers would turn two hundred times, when
Those rollers would scarce turn at all.

They ran in Manchester, Liverpool, Birmingham,
They've gone thousands of miles *on the Sea*;
They're known in America, Germany, Belgium,
They were sent there by the *Patentee*.

These models have work'd in the Adelaide,
Others in *The Polytechnic*;
One on a large scale I also have made,
Which may run in The Pantechnic.

If Railway Directors were public protectors,
With engineers they must have a quarrel;
For nought will satisfy them but the oysters,
Whilst they are content with the shell.

Whoever attempts to teach them a lesson,
Will find it is labour in vain;
'Tis impossible to make an impression,—
The *cause* I beg here to explain.

The greatest improvement lies *in the rail*,
Whether Engineers adopt it or not;
'Tis prejudice prevents it—not their skill!
Why?—By Friction their living is got!

What is gain'd in speed is lost in power;
Craft lays *that* down as *an axiom*;
What fees are to Judges or Lawyers,
In that light Engineers regard *Friction*.

Railway Societies, to serve their own cause,
Keep improvements in the background;
Directors wink at this, every one knows;
Does this show their judgment is sound?

If engine concoctors, or Railway Directors,
Were compelled to drive their own engine,
Old Harry may drive us, and be our protectors,
A new era they sure would begin!

Not so with the driver, who ventures his neck,
Whatever he fears he dare not complain:
What if a thousand pounds were on him set?
Such sacrifices go to the Queen!

Eighty thousand men, at three-pence per head,
Would only deodand one thousand pound;
If Juries give that sum for one lying dead,
Is their judement in both cases sound?

What must we call it, LUCK, or good management,
That they havn't yet killed more than four?
'Twill be time enough to adopt improvement,
When they pick up dead men by the score.

You all have discover'd your system is bad,
That the people have got very shy,
Why barter life, when 'tis all that they had?
When they are not ready to die.

You see that your shares are in jeopardy,
That their prices are still going down,
How are you to retrieve your lost property,
But by making my system your own.

Should you subscribe to the Company,
How many shares will you take?
Move your stumbling-blocks out of the way,
A fortune you'll certainly make.

W. C.

---

* *Mechanics' Magazine*, No. 776.

† Such was the desire of the Directors of Railways to get rid of friction, that Mr. R. said there was not a principle of anti-friction wheels known, which had not been tried on railways in that quarter.

‡ The Northern Directors doubtless paid very dear for their whistle. If such boxes of rollers were now fitted into two separate frames, and two grindstones, or two fly wheels of steam-engines, were made to run with their axles in these boxes of rollers, one with its collars or brakes, the other not, it would operate upon them like a box of Grimstone's eye snuff, it would open their eyes. Mr. Moseley, of New-street, Covent-garden, has a grindstone fixed on this principle, which will (when set in motion) run almost as long as Mr. Roberts's peg top; a bit of lacquer was removed from it, because it acted as a brake on the top.—See *Mechanics' Magazine*, No. 747‡ and 776, and they will sufficiently demonstrate that peg tops cannot run too light, nor railway carriages too heavy.

ILLUSTRATIONS TO COLES'S ADVERTISEMENT.

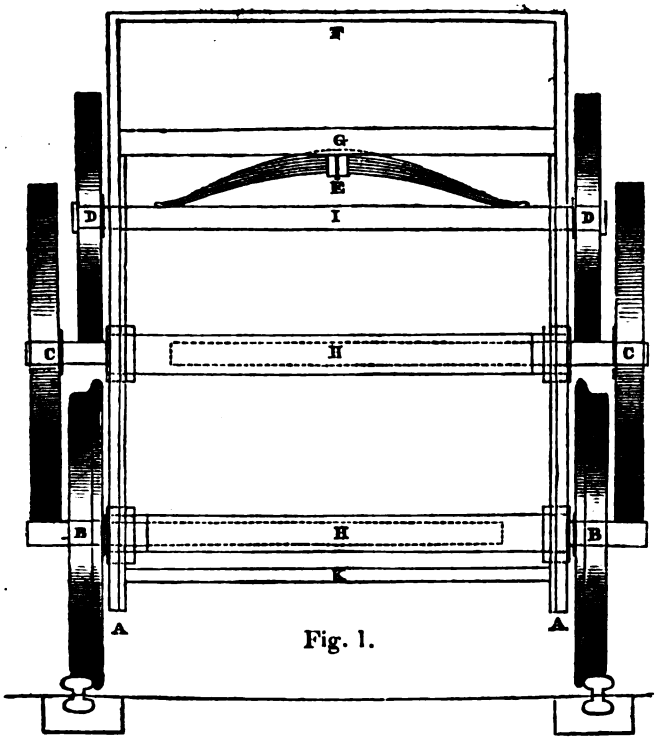

Fig. 1.

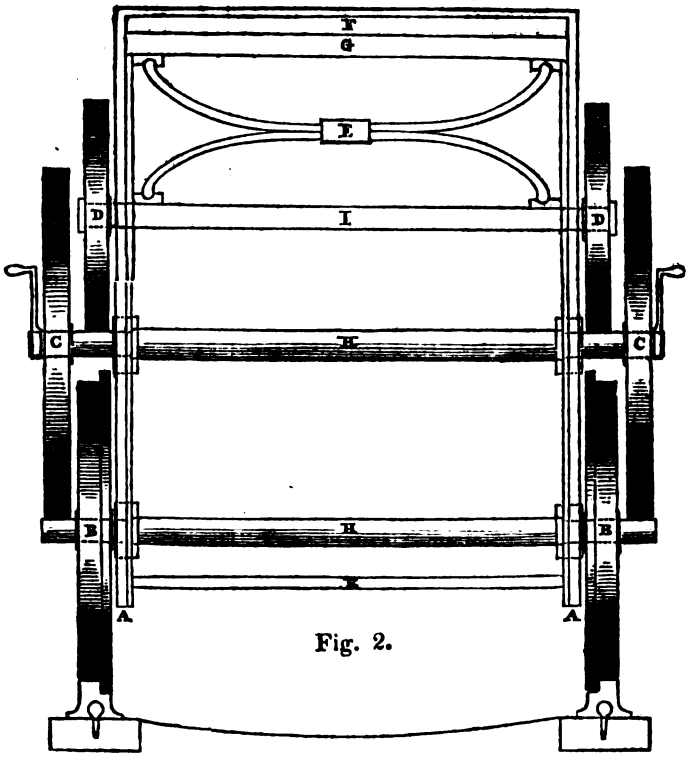

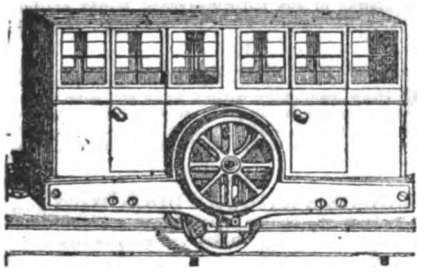

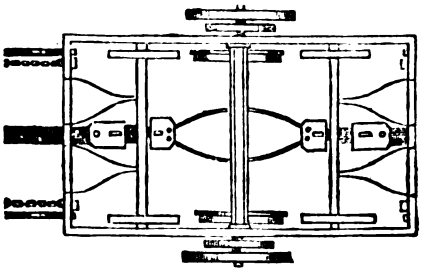

Fig. 2.

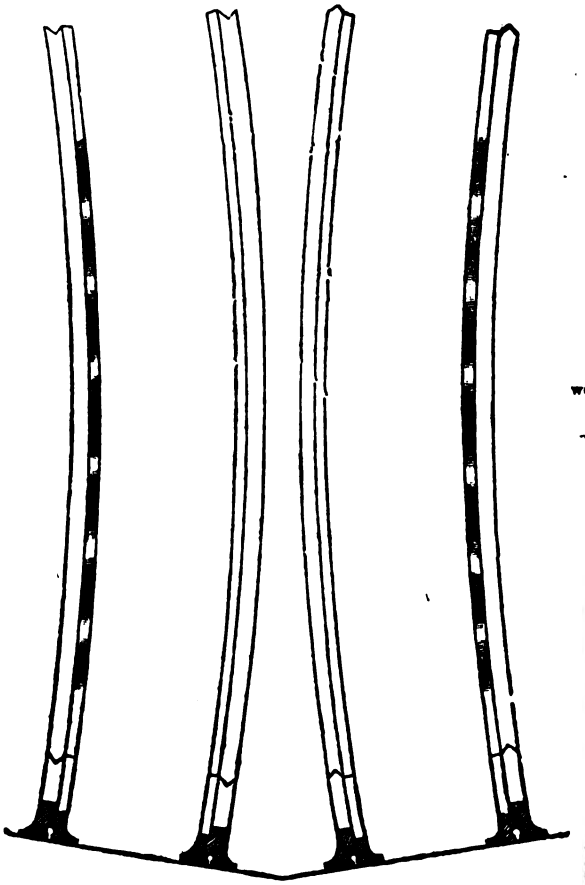
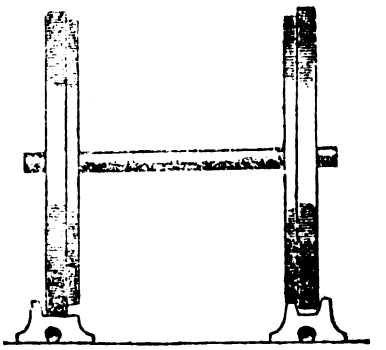
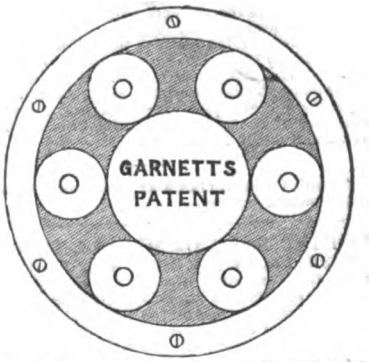


Every two-wheeled carriage would have their wheels inside the frame, not outside. It was my intention to fit up my large carriage with socket axles for common roads, when I found improvements were not wanted on railroads. (See end view, Fig. 2.)



(Vide 12th verse.)



Mr. Scales, late partner with Alderman Thompson and Co., Iron Masters, examined the models of Mr. Coles' carriages and rail; he said they employed 90 horses in their mines, and it was his firm conviction that the same work might be done with nine. He further declared that the principle was applicable to all kinds of machinery.

Undulated Step-rail, by which the outer wheel is made to run on its rim, or flange, whilst the inner one will run alternately on its flange and periphery, when working curves to the right or left. (Vide 18th verse.) (See end view of carriage, Fig. 2.)

Self-acting Rail, to qualify the off-wheels, when working a curve, to run on their largest diameters. (Vide 24th verse.)

Garnett's Rollers are fixed in the nave of a wheel, which revolves round a fixed axle. A nephew of Sir Walter Scott declared the above to be the best principle of Anti-friction Rollers in this country; but he hesitated not to say, that Coles's Patent was worth a million of them. (Vide 27th verse.)

(*Coles's Advertisement in continuation.*)

Letter from Geo. Stephenson, Esq. to Mr. Coles, in reference to his Anti-friction Wheeled Carriages.

Tipton House, October 22, 1839.

My Dear Sir,—On my arrival at home I found your letter of the 12th of October. When I saw you last I did expect that I should have been again in London ere this. As soon as I do come I will take care to call and look at your carriage; and if I can be the means of helping you on, I shall be glad to do so; but I should not be justified in leading you or any other person on to spend money without any chance to get it back again. In making your experiments, you ought to have your axletrees brought down to that thickness that would safely carry the weight. If I mistake not, your common axletree bearings were much too thick for the weight they had to carry; oil ought also to be applied to them. You must be aware that the bearings of an axletree revolving in oil are revolving on friction rollers. For the particles of oil being globular and intervening between two metallic bodies, the weight is carried upon those rollers. Now, your contrivance is to have metallic rollers, but much larger, with a great deal more machinery in the arrangement, and when brought into rough usage will be likely to get out of order. If a railway could be kept in perfect order, I think some benefit may be obtained from your carriage, although complicated; but such perfection of a rail way cannot be expected to be obtained. As you seem so anxious to have a trial made, I should have no objection to be one to subscribe to have a carriage made and tried on a railway, on a large scale. As soon as I arrive in London I shall call and discuss the point further with you.

I am, Sir, yours truly,
GEORGE STEPHENSON.

Mr. Coles's reply, January, 1842.

Dear Sir, 'Tis for the engine to complain of my axles, and not you,
For he, poor blundering devil, has all the work to do;
To furnish him with food to feed his over-crammd stomach,
Leaves shareholders without a dividend, even a "schronic."

Our names are almost immortal they say,
At least, if the world speak true;
'Twas William Cobbett immortalized me,—
Mr. Pease immortalized you.

Very few can boast as you and I've done,
Since our earnings were eightpence a day;
Whatever I get, your's is fifty to one,—
So enormous does railways pay!

Your son Robert appeared rather haughty,
He look'd on me with disdain:
His father could see with half of an eye,
Far more than I could explain.

He would'nt allow me to leave him my models,
Nor even to send him a drawing;
For many came to him with crack'd noddles,
Which occupied half of his time.

If Engineers' lathes, tools, and chissels,
Were imperfect like carriages and rail,
All the workmen would become blue devils,
Or their workshops a little hell.

I know I share the fate of all others,
Who do not belong to their clique;
Account for the apathy of shareholders
I cannot—and therefore I speak.

Mr. Coles, during twenty years, has never drawn a shilling from any man's pocket to aid him in bringing any of his valuable discoveries before the public, though he is proprietor of many useful and valuable patents. His hobby is railroads; and he is firmly persuaded, notwithstanding he has thrown away fifteen hundred pounds on one railroad,* in the short space of three years, which is not worth a groat, that there is not one railroad in ten, if managed with economy, that would not pay a handsome revenue to her Majesty, and to shareholders too. Verily the Government are too lukewarm on this subject.

☞ Further information on the subject of the Improved Railroad may be seen in *Pope's Journal of Trade, Boyle's Court Guide, The Royal Blue Book, Robson's Directory, The Railway Times* (December 25th), &c &c. A full development of the plan may be seen at the Office of the Patentee, W. COLES, No. 3, Charing Cross; or 13, Moreton Terrace, Kentish Town Road.

* South Durham, alias New South Durham, alias Weardale Junction Railway.

THIRD SALE OF MESSRS. THORNTON'S SUPERIOR DRAUGHT HORSES—MR. RIDLEY respectfully announces that he will submit for unreserved sale by Auction, on Thursday, December 30th, at eleven o'clock precisely, opposite the King and Queen Inn, Brighton, TWENTY CART HORSES, of a very superior description, particularly deserving the attention of Farmers, Carriers, Carters, and others. They have been in constant work on the London and Brighton Railroad, are all sound and young, and in excellent condition. They are the genuine property of Messrs. Thornton, the eminent contractors, and are parted with solely on account of the completion of a great portion of their work.

May be viewed early on the morning of Sale at the King and Queen Inn, or any day prior to the Sale at the Hassocks Station and Valebridge Common, and further particulars ascertained of the Auctioneer, 155, North-street, Brighton.

TWENTY-FIVE VALUABLE, YOUNG CART HORSES, AND THEIR HARNESS.—To be Sold by Auction by Mr. DIXON, at his Repository, Barbican, on Friday, December 31, 1841, commencing at one o'Clock precisely, 15 remarkable, fine-shaped, young, powerful Cart Horses, which have been employed on the Patent Coke Company's Works, Mill Wall, Poplar, and sold in consequence of the above Company being dissolved. Ten useful, powerful, seasoned Cart Horses, Brick and Rubbish Carts, Harness, &c., that have been employed on the Eastern Counties' Railway.

☞ The above lot of fine young seasoned Cart Horses are worthy the attention of Coal and Coke Merchants, Tradesmen, Brewers, Distillers, Agriculturists, Contractors, Wholesale Warehousemen, and all persons wanting them for immediate work, being in remarkable fine condition, and positively for sale without reserve.

On view, and catalogues had two days before the Sale.

RHEUMATISM.—8, Cleveland-place, Bath, 3rd December, 1840.—Sir, I have delayed writing to you upon the subject of your Medicated Bands until I had ascertained what effect they produced. I have the pleasure to say I have derived very considerable relief from them, and am enabled to walk with much less pain than before. I suppose I am right in sleeping in them. I have since recommended them to several of my friends,—I am, dear Sir, yours, &c. P. D. FELLOWES.

The Rev. Wm. Wilder, of Carlton Rectory, near Newmarket, in a note, dated 20th October, 1835, says:—That he has suffered very severely from sciatica, for more than two years, that about three weeks since he obtained one of Coles's Medicated Bands, and the pain has during the short time he has worn it, nearly, if not entirely, left him. He had tried many supposed remedies without receiving any benefit.

General Wilder has a son in the army, who has been cured by the use of the Medicated Bands, and has cured others by lending them.

Dear Sir,—With pleasure I inform you that I put on one of your Medicated Bands sent me by a friend last night, being then in great pain, which I had endured for several weeks. Extraordinary to say, it acted upon me like a charm. When I got up this morning, I found that I could stand upright, and I walked about the room without pain, and since about the city on business, which I have been able to do for the last month.—I am, dear sir, yours, &c.,
GEORGE WALTER.

North Kent Railway Office, 42, Lombard-street,
February 26th, 1841.

Hampton Villa, New Parade Road, Jersey.

Dear Sir,—I feel great pleasure in recommending your Bands, having been almost a martyr to rheumatism for ten years, during which period I have consulted the first medical men, and taken various kinds of medicine; I have for six months together employed hot sea water and vapour baths, and during the last year I have worn your Medicated Bands when in pain, and I can truly say they never failed to release me from pain; I therefore pronounce your remedy for rheumatism to be invaluable.

I am, dear Sir, your obedient servant,
WILLIAM TAYLOR,
Capt. R. M. and Major in the Army.

St. Helier's, Jersey, 15th March, 1841.

To William Coles, Truss Maker to the Forces, and Rheumatic M.D., 3, Charing Cross, London.

Read Coles's advertisements in *Boyle's Court Guide, Royal Blue Book, Robson's Directory*, and *Pope's Journal of Trade*, for 1842.

205, Tooley-street, 24th Dec., 1841.

TO EXPORTERS, RAILWAY CONTRACTORS, ENGINEERS, SHIP BUILDERS, &c. &c.—The Patent Rolling and Compressing Iron Company having their works in full operation are ready to execute orders to any extent, for the undermentioned articles:—

Boiler and Tank Rivets of every description.
Bolts for Machinery, Architectural, Agricultural, Ship and Coach Building, Gas Water, and other works, &c.
Railway Pins, Hooks, Screws, &c.

Particulars may be obtained, and specimens seen, upon application to the Secretary, at the Company's Works, Upper Ordnance Wharf, Rotherhithe.

By order of the Board,
JNO. ATLEE, Secretary.

LONDON AND BLACKWALL RAILWAY.—Those holders of New Shares who have not paid the second instalment of £2 per share, which became due on the 16th November last, are reminded, that by the conditions on which the shares were issued, they have become subject to absolute forfeiture. To avoid such forfeiture being carried into effect, the payment of the call must be made forthwith, at the Company's Office, 60, Fenchurch Street.

By order of the Board,
J. WARMINGTON, Secretary.

Offices, 60, Fenchurch-street, Dec. 23, 1841.

N.B. The sealed Certificates of the New Shares registered are now ready for delivery.

TENDERS INVITED for the supply of IRON RAILS, required by the Royal Bavarian Commission for the construction of Railroads at Nurnberg.—Measures and Weights are Bavarian, viz.—1 foot Bavarian = 0·29,859 French metre; 100 lb. Bavarian = 56 French kilogrammes.

The quantity required amounts to 120,000 quintals of 100 lbs. each, and is to be contracted for, either in several lots, or for the whole. The Rails are to be of the form of the so called "parallel double T rails," of the weight of 12 Bavarian pounds per Bavarian foot, and of the length of 17½ Bavarian feet. However, a proportion of shorter rails, say of 14½ Bavarian feet length, will be received to the amount of 5 per cent. of the whole quantity.

The Rails must be manufactured of the best Iron known in England under the denomination of No. 3, and part of a rail of the length of three or four feet, is to be sent to the Royal Commission at Nurnberg, to serve as a pattern before the conclusion of the contract.

The detailed conditions respecting the periods of delivery, mode of payment, &c., as well as the drawing, are to be obtained on application at the Office of the undersigned Commission, in Nurnberg.

The Tenders must be delivered at Nurnberg, under seals and franked covers, on or before the 31st January, 1842, to the Royal Bavarian Commission for the Construction of Railroads.

N.B. Conditions and Drawings to be obtained on application at the Bavarian Consulate General's, 11, Bury-court, St. Mary Axe.

DENIS, PAULI, DURIG.

NEW EDITIONS of the following useful Works are just published at the *Railway Times* Office, 122, Fleet-street:

I.
